## the BUSINESS SITUATION

RREVISED (45-day) estimates show that the real GNP declined $21 / 2$ percent at an annual rate in the second quarter of $1981,1 / 2$ percentage point more than in the preliminary ( 15 -day) estimates (table 1). Revisions in the major components were small: an upward revision in nonresidential fixed investment was more than offset by downward revisions in net exports and government purchases. The increase in GNP prices as measured by the fixed-weighted price index was revised up from $71 / 2$ to 8 percent.

## Corporate profits

Corporate profits from current pro-duction-profits with inventory valuation and capital consumption adjust-ments-decreased $\$ 16$ billion to $\$ 187$ billion in the second quarter of 1981 , according to preliminary estimates. ${ }^{1}$ This decrease followed an increase of $\$ 191 / 2$ billion in the first quarter, which had restored profits to their previous peak of $\$ 203$ billion (reached in the fourth quarter of 1978).

Domestic profits of nonfinancial corporations fell $\$ 81 / 2$ billion to $\$ 1431 / 2$ billion, after increasing $\$ 24$ billion in the first quarter (chart 1). The secondquarter drop was due to a decrease in real output of nonfinancial corporations and a squeeze on margins as unit costs accelerated and unit prices decelerated.
Decreases in corporate profits occurred for almost all domestic nonfinan-

1. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes in them are differences between these rates.
cial industries. The decreases were especially large for most durables manufacturing industries. Auto manufacturers, however, registered profits in the second
quarter following losses in the previous seven quarters. Although retail sales of new cars fell in the second quarter, manufacturers' sales increased, result-

Table 1.-Revisions in Selected Component Series of the NIPA's, Second Quarter of 1981

ing in large increases in dealer inventories.
Domestic profits of financial corporations decreased $\$ 5$ billion to $\$ 201 / 2$ billion in the second quarter, following a decrease of $\$ 2$ billion in the first. The decrease resulted from increased losses for savings and loan associations and

NOTE.-Price per unit is current dollar product divided by constant dollar (real) product. Costs and profits per unit are respective components of current dollar product divided by constant doliar product.
U.S. Department of Commerce, Bureau of Economic Analysis 81-8.1
smaller profits for commercial banks. Earnings of Federal Reserve banks, which are treated as part of corporate business in the national income and product accounts (NIPA's), increased.

Profits from the rest of the worldmeasured as the net inflows of dividends and reinvested earnings of incorporated foreign affiliates, and of earnings of unincorporated foreign affiliates-decreased $\$ 21 / 2$ billion to $\$ 221 / 2$ billion in the second quarter. The decrease was more than accounted for by lower profits on the overseas petroleum operations of U.S. corporations.

Other profits measures.-Profits before tax decreased $\$ 32$ billion to $\$ 225$ billion in the second quarter following an increase of $\$ 71 / 2$ billion in the first.

Profits before tax exclude the two valuation adjustments, which are designed to value inventories and fixed capital used up in production at replacement costs, the valuation concept underlying national income and product accounting, rather than at historical costs, the concept generally underlying business accounting. ${ }^{2}$ If, as in the second quarter, the historical costs of inventories used up is less than their replacement cost, profits as measured by business exceed profits as measured in the NIPA's by an amount that is called inventory profits. Inventory profits decreased $\$ 16$ billion to $\$ 23$ billion in the second quarter, following a decrease of $\$ 9$ billion in the first. If, as in the second quarter, fixed capital used up as measured by business is less than that as measured in the NIPA's, business profits exceed NIPA profits by an amount that is equal to the underdepreciation of the capital stock. The profits attributable to underdepreciation were unchanged, at $\$ 141 / 2$ billion, in the second quarter, following a decrease of $\$ 3$ billion in the first.

Corporate profits taxes, which are levied on profits including inventory profits and profits attributable to underdepreciation, decreased $\$ 13$ billion to

[^0]
$\$ 75$ billion in the second quarter following an increase of $\$ 21 / 2$ billion in the first.

The profits estimates presented above have been adjusted to incorporate changes in tax law that resulted from the enactment of the Economic Recovery Tax Act of 1981. The impact of the Act is summarized in table 2. See "Federal Budget Developments," which follows, for a discussion of the changes in tax law.

## The Federal sector

The Federal Government deficit as measured in the NIPA's increased $\$ 3$ billion in the second quarter of 1981 to $\$ 50$ billion, as receipts increased less than expenditures.

Receipts increased $\$ 2$ billion in the second quarter, compared with $\$ 471 / 2$ billion in the first, when receipts were boosted by a large increase in the windfall profits tax and increases in the social security tax rate and wage base. Corporate profits tax accruals declined over $\$ 11$ billion in the second quarter reflecting a significant decline in profits and the impact of tax reductions under the Economic Recovery Act of 1981. (See "Federal Budget Developments", which follows.) Other categories of receipts increased less than in the first; the windfall profits tax accounted for the increase in indirect business tax and nontax accruals.

Expenditures increased $\$ 51 / 2$ billion in the second quarter, compared with
$\$ 23$ billion in the first. Transfer payment to persons increased $\$ 31 / 2$ billion, including about $\$ 1 / 2$ billion for a 4.4 percent benefit increase for military and Federal civilian retirees. National defense purchases of goods and services and net interest paid increased $\$ 3$ billion each. Subsidies less the current surplus of government enterprises increased $\$ 11 / 2$ billion; a large increase in the Commodity Credit Corporation (CCC) deficit was partly offset by a decline in the Postal Service deficit that reflects the full impact of the postal rate increase effective in March. Nondefense purchases declined $\$ 5$ billion. Major offsetting changes were a $\$ 7$ billion decline in the agricultural price support operations of the CCC and a $\$ 3$ billion increase in purchases of crude oil for
the strategic petroleum reserve; all other purchases, on balance, declined $\$ 1$ billion.
High-Employment Budget.-The federal fiscal position on a highemployment budget basis moved from a surplus of $\$ 0.6$ billion in the first quarter to a surplus of $\$ 5.2$ billion in the second quarter (table 3, page 19). The surplus as a percentage of potential GNP increased from less than 0.1 per cent in the first quarter to 0.2 percent in the second quarter-the second successive quarterly move toward a more restrictive fiscal position.

## Federal Budget Developments

In mid-July, the Office of Management and Budget released, as part of its mid-session review, revised estimates
of Federal unified budget receipts and outlays for fiscal years 1981 and 1982. Those estimates reflected the administration's proposed Economic Recovery Tax Act of 1981. As signed, in midAugust, the Act did not differ substantially in its effect on receipts, and thus on the deficit, from what had been proposed in the mid-session review. The revised estimates of receipts and outlays as presented in the mid-session review are discussed immediately below, and then the features of the tax act as signed are described.

## Mid-session review

Revised estimates of Federal unified budget receipts and outlays for fiscal years 1981 and 1982 released as part of the mid-session review reflect revised

Sources: "Mid-session. Review of the 1982 Budget," and Bureau of Economic Analysis.
economic assumptions, reestimates of agency spending and tax collections based on more recent experience, legislation enacted by Congress, and policy changes announced by the administration since March, including revisions to proposed tax legislation. The new estimates do not reflect the Omnibus Reconciliation Act or, as noted above, the Economic Recovery Tax Act of 1981, both of which were passed by Congress in early August.

On the basis of the revised economic assumptions, real GNP is expected to increase substantially more in calendar year 1981 than expected earlier this year (table 3). From the fourth quarter of 1980 to the fourth quarter of 1981 , real GNP is estimated to increase 2.5 percent, over 1 percentage point more than forecast in March. According to the administration, this higher growth is the result of a stronger than expected first quarter of 1981. Real GNP is expected to increase very little through the middle of the year, accelerate somewhat in the fourth quarter, and increase strongly through 1982. From the fourth quarter of 1981 to the fourth quarter of 1982, real GNP is estimated to increase 5.2 percent, the same as estimated earlier this year. Consumer prices rise considerably less than assumed in March8.6 percent in 1981 and 6.2 percent in 1982, compared with 10.5 percent and 7.2 percent, respectively. Declines in the prices of food and non-food commodities, including oil, contribute to the slower increase in consumer prices. Interest rates on 91 -day Treasury bills are assumed to be much higher than estimated in March-2.5 percentage points more in 1981 and 1.6 percentage points more in 1982.
For fiscal year 1981, a $\$ 55.6$ billion deficit is estimated, compared with $\$ 54.9$ billion in March (table 4). Receipts are $\$ 5.4$ billion higher; a $\$ 6.4$ billion upward revision from changes in proposed tax legislation is partly offset by a $\$ 1$ billion downward revision from other administrative actions and reestimates. Outlays are $\$ 6.1$ billion higher; $\$ 5.0$ billion of the increase is for interest on the public debt, and reflects the higher interest rates mentioned earlier.

Upward revisions for agricultural price support and related programs ( $\$ 2.7$ billion), medicare ( $\$ 0.5$ billion), food stamps ( $\$ 0.5$ billion), plus smaller ones for a variety of other programs are largely offset by downward revisions in outlays for unemployment benefits ( $\$ 4.7$ billion) and defense ( $\$ 2$ billion).
For fiscal year 1982, a deficit of $\$ 42.5$ billion is estimated, compared with $\$ 45$ billion in March. Receipts are $\$ 12$ billion higher; a $\$ 14.4$ billion upward revision due to changes in proposed tax legislation is partly offset by a $\$ 2.3$ billion downward revision from the new economic assumptions. Outlays are $\$ 9.6$ billion higher. Outlays for interests on the public debt are revised up $\$ 9$ billion and outlays for a variety of other programs are revised up a total of $\$ 5.9$ billion. The major downward revision$\$ 3.8$ billion-results from proposed changes in social security; defense outlays are revised down $\$ 1$ billion and a variety of other programs are revised down $\$ 0.7$ billion. The proposed changes in social security include shifting the annual increase in benefits from July to October in 1982, revising the procedure for calculating the benefit increase, and eliminating the minimum monthly benefit-currently about $\$ 122$-in January 1982.

Revised NIPA estimates.-BEA has prepared estimates of the Federal sector on the national income and product accounting (NIPA) basis consistent with the revised unified budget estimates (table 4, and table 6 for quarterly pattern). On this basis, fiscal year 1981 receipts are $\$ 11.3$ billion higher, expenditures are $\$ 4.2$ billion higher, and the deficit is $\$ 7.1$ billion lower than estimated in March. (Details of the March estimates are discussed in the April Survey of Current Business.)

The upward revision in receipts consists of $\$ 7.3$ billion due to changes in the proposed tax legislation and $\$ 4$ billion due to the new economic assumptions. Table 5 shows the impact on NIPA receipts of the tax proposal. This proposal includes a 25 -percent reduction in individual income tax rates over 33 months and an accelerated depreciation system for business. Compared with the March estimates, all categories of receipts except indirect business tax and nontax accruals are revised up. The upward revision in personal tax and nontax receipts and in corporate profits tax accruals largely reflect the administration's changes to the tax proposal and higher incomes, particularly corporate profits. The downward revision in indirect business taxes is largely the result of lower windfall profits taxes.

| Surplus or deficit (-). | -67.9 | -46.6 | -50.0 | -27.1 | -35.7 | $-27.5$ | -26.4 | $-54.9$ |

The upward revision in expenditures for fiscal year 1981 is more than accounted for by nondefense purchases of goods and services ( $\$ 3.9$ billion) and net interest paid ( $\$ 3$ billion). In nondefense purchases, the upward revision is largely due to higher agricultural purchases by the Commodity Credit Corporation (CCC) and higher purchases of crude oil for the strategic petroleum reserve; in net interest, it is due to the higher interest rates mentioned earlier. Other expenditure categories are revised up slightly. Partly offsetting these increases are downward revisions in transfer payments to persons ( $\$ 2.3$ billion) and national defense purchases ( $\$ 1.2$ billion). The downward revision in transfer payments is more than accounted for by lower unemployment benefits, and that in defense purchases reflects failure to enact the military pay raise proposed for July of this year ( $\$ 0.4$ billion) and lower prices for fuel.

For fiscal year 1982, receipts are $\$ 13.3$ billion higher, expenditures are $\$ 12.2$ billion higher, and the deficit is $\$ 1.1$ billion lower. The upward revision in receipts consists of $\$ 11.8$ billion due to changes in proposed tax legislation and $\$ 1.5$ billion due to the new economic assumptions. Personal taxes and corporate taxes are revised up, largely reflect-
ing the changes in tax legislation. Indirect business taxes and contributions for social insurance are revised down. The revision in the former largely reflects lower windfall profits taxes. The major upward revisions in expenditures are in net interest, nondefense purchases (agricultural purchases by CCC and a variety of other programs), and grants-in-aid to State and local governments (education, highways, and public service employment). Downward revisions are in transfer payments (the proposed changes in social security are partly offset by increases in a host of programs) and in defense purchases for the same reasons cited for 1981.
High-employment surplus or defi-cit.-As measured on a high-employment basis, the Federal sector of the NIPA's was in deficit in calendar year 1980 and is forecast to be in surplus in 1981 and 1982. The swing to surplus occurs in early 1981, reflecting the large increase in social security taxes in January and an increase in the windfall profits tax resulting from the complete decontrol of oil prices in January. (For high-employment receipts and expenditures for recent quarters, see table 3 on page 19). The surplus swings to deficit in mid-1982, reflecting the additional personal tax reduction in July (table 7).

## The Economic Recovery Tax Act of 1981

The Economic Recovery Tax Act of 1981 was passed shortly before Congress adjourned and was signed in midAugust. The act provides about $\$ 1$ billion more of net tax reductions (on the NIPA basis) in calendar year 1981 than the administration's proposal in the mid-session review ; in 1982, the net reductions are about the same. Table 8 shows the impact of the act on Federal receipts on the NIPA basis for calendar year 1981 and 1982.

Major features of the act are :

- A 25 -percent across-the-board reduction in individual income tax rates over 33 months- 5 percent on October 1, 1981 and 10 percent on July 1, 1982 and 1983. Starting in 1985, income tax brackets, the zero bracket amount, and the personal exemption will be adjusted for inflation as measured by the Consumer Price Index.
- An accelerated cost recovery system that provides substantially faster depreciation write-offs for business. The new system assigns depreciable lives of 3 years for most vehicles, 5 years for most equipment, 10 years for certain public utility property, and 15 years for most depreciable real estate and some long-lived public utility property.
- Incentives for persons who put savings in specified savings accounts and repeal of the exclusion from gross income of interest and dividends.
- A substantial reduction in estate and gift taxes; and
- An increase in the windfall profits tax credit for qualified royalty recipients.

Personal tax and nontax receipts are reduced $\$ 3.9$ billion in 1981 and $\$ 41.2$ billion in 1982. Most of the reduction is in withheld income taxes, as withholding rates are cut in October of this year and again in July 1982. Smaller reductions in 1982 are from a deduction for married couples with two incomes and from increases in exclusions for foreign earned income of U.S. citizens and in a deduction for overseas housing expenses. The married couples deduction

is phased in over 2 years, beginning January 1, 1982, when it is 5 percent (up to a $\$ 1,500$ maximum) of the lower earning spouse's income. In 1983 and subsequent years, it is 10 percent (up to a maximum of $\$ 3,000$ ).

A number of provisions of the act reduce declarations and net settlements in 1981 and 1982. The largest item- $\$ 4.2$ billion-is rate reductions on income not subject to withholding; these include a reduction in the top marginal tax rate on dividends and interest from 70 percent to 50 percent on January 1, 1982 and a reduction in the tax rate on long-term capital gains from 28 percent to 20 percent retroactive to June 10 , 1981. Faster depreciation write-offs for unincorporated businesses under the accelerated cost recovery system reduces declarations and net settlements a little in 1981 and $\$ 1.7$ billion in 1982. The savings incentives, which are not effective until 1982, have little net impact on receipts in that year. Among these incentives are (1) repeal of the current exclusion from gross income of up to $\$ 200$ on a single return ( $\$ 400$ on a joint return) of interest and dividends for 1981 and 1982, and allowance after 1982, of only a dividend exclusion of $\$ 100$ on a

single return ( $\$ 200$ on a joint return), which applied before 1981 ; (2) a lifetime exclusion from gross income of $\$ 1,000$ ( $\$ 2,000$ on a joint return) of interest earned on qualified tax-exempt savings certificates; (3) other savings provisions, such as the increase in the amount of exclusion from gross income
contributions to self-employed and individual retirement accounts and modifications to employee stock ownership plans.

Estate and gift taxes are reduced $\$ 0.7$ billion in 1982 by several changes: the cumulative amount excluded from taxes is more than tripled after a 5 -year

## Constant-Dollar Estimates of Plant and Equipment Expenditures

An article presenting quarterly and annual constant-dollar estimates for 1947-80 of new plant and equipment ( $\mathrm{P} \mathrm{\& E}$ ) expenditures that are companions to the currentdollar estimates compiled from the BEA P\&E survey will be presented in the September issue of the Survey of Current Business. These estimates substantially extend and improve the information available for analysis of capital expenditures. They, like the current-dollar estimates, cover nonfarm business P\&E expenditures and are on a company basis. The constant-dollar estimates are obtained by dividing the current-dollar estimates by specially constructed implicit price deflators for industries.

Historical series of constant-dollar expenditure estimates, implicit price deflators, and fixed-weighted price indexes for establishment-based industries and for company-based industries (broken down into total, equipment, and plant) are available from BEA in computer printout form. The data for total P\&E expenditures are available quarterly and annually from 1947 on; those for plant and for equipment are available annually from 1947 on and quarterly from 1972 on. The cost of the printout is $\$ 20$. For further information, write to P\&E Survey Statistics, Business Outlook Division, (BE-52), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230, or telephone (202) 523-0701.
phase-in, the tax exclusion on gifts is increased and the tax on transfers between spouses is eliminated, and the top tax rate on cumulative estate and gift transfers is reduced in four steps from 70 percent to 50 percent.

Corporate profits tax accruals are reduced $\$ 4.8$ billion in 1981 and $\$ 10.9$ billion in 1982; the accelerated cost recovery system and modifications to the investment tax credit account for most of the reduction. The act also liberalizes the rules under which leasing com-
panies can use the investment tax credit and depreciation. The other major provisions that reduce, on balance, corporate taxes in 1982 are: (1) a 25 -percent tax credit for certain research and experimentation expenditures; and (2) a 1 percentage point reduction in the corporate tax rate, for income below $\$ 25,000$, to 16 percent in 1982 , (and to 15 percent in 1983) and, for income of $\$ 25,000-\$ 50,000$, to 19 percent in 1982 (and to 18 percent in 1983).
Indirect business tax and nontax ac-
cruals are reduced slightly in 1981 and $\$ 1.4$ billion in 1982, largely the result of an increase from $\$ 1,000$ to $\$ 2,500$ in the royalty-recipient windfall profits tax credit. Contributions for social insurance are increased slightly in 1981 and $\$ 0.5$ billion in 1982 as the result of an increase from 9.5 percent to 11.75 percent in the employer tax rate for railroad retirement contributions and a new 2-percent tax imposed on employees; both are effective October 1, 1981.

## National Income and Product Accounts Tables

The tables that follow are presented in eight groups, and the table numbers reflect these groups. The table numbers will also be used in future publications presenting national income and product account estimates. The groups are:

1. National product and income
2. Saving and investment
3. Personal income and outlays
4. Product and income by industry
5. Government receipts and expenditures
6. Implicit price deflators and price indexes
7. Foreign transactions
8. Supplementary table: Percent change from preceding period for selected items

Estimates for the first and second quarters of 1981 shown in these tables incorporate the changes in tax law that resulted from the enactment of the Ecomomic Recovery Tax Act of 1981. (See the "Business Situation" for an explanation of these changes.) The detailed series affected by the changes are: capital consumption allowances for corporations and nonfarm proprietors; the capital consumption adjustment for corporations and nonfarm proprietors; corporate profits before taxes; nonfarm proprietors' income; and Federal and State and local government corporate taxes. These series and related series that also are affected appear in tables 1.7, 1.11, 1.13, 3.2, 3.3, 5.1, 6.4, 6.20, and 7.7.

The abbreviations used in the tables are: CCAdj Capital consumption adjustment
IVA Inventory valuation adjustment
NIPA's National income and product accounts

## Table 5.8-6.9:

1. The IVA shown in this table differs from that which adjusts business income. The IVA in this table reflects the mix of methods (first-in-first-out, last-in-first-out, etc.) underlying book value inventories derived primarily from Census Bureau Statistics. The mix differs from that underlying business income derived primarily from Internal Revenue Service statisties.
Table 5.10-5.11:
2. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of QNP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change changes calculated from this table are at quarter rates, whereas CBI is stated at annual rates. Quarter-to-quarter changes calculated from the constant-dollar inventories shown in this table are at quarterly rates, whereas the constant-dollar change in business inventories com-
ponent of GNP is stated at annual rates.
3. Quarterly totals at monthly rates. Business final sales equals final sales less gross product of households and institutions, government, and rest-of-the world and includes a small
amount of final sales by farms.

Table 7.5.-Implicit Price Deflators for the Relation of Gross National Product, Net National Product, and National Income
Gross national product_-...--
$\left.\begin{array}{l}\text { Less: Capital consumption al- } \\ \text { lowances with CCAdj...... }\end{array}\right]$
Equals: Net national product.-
Less: Indirect business tax and nontax liability
plus business transfer payments less subsidies plus current surplus of Statistical discrepancy.-
Equals: National income...
Table 7.8:
Table 7.3:

1. Gross domestic purchases equals GNP less exports plus imports; final sales to domestic purchasers equals final sales less exports plus imports.
Table 7.7:
2. Equals the deffator for gross domestic product of nonfinancial corporate business with the decimal point shifted two places to the left.
Table 7.8:
3. Consists of final sales and change in business inventories of new autos produced in the
United States. 2. Consists of personal consumption expenditures, producers' durable equipment, and government purchases.
Table 7.9:
4. Includes new trucks only.

Table 8.l.-Percent Change From Preceding Period in Gross National Product in Current and Constant Dollars, Implicit Price Deflator, and Price Indexes

Note.-The implicit price deflator for GNP is a weighted average of the detailed price of constant-dollar output in that period In other words the price inded for the composition 100 ) is weighted by the ratio of the quantity of the item valued in 1972 prices to the total $1972=$ in 1972 prices. Changes in the implicit price defiator reflect both changes in prices and changes 18
in the composition of output. The chain price index uses as weights the composition of output in the prior period, and therefore reflects only the change in prices between the two periods. However, comparisons of percent changes in the chain index also reflect changes in the comin 1972. Accordingly, comparisons over any time span reflect only changes in prices.

NOTE.-These estimates are not comparable with those published in the November 1980 SUv © EY of Current Business due to revisions of potential GNP by the Council of Economic Advisers and the comprehensive revisions of the national income and product accounts. For comparable annual estimates for 1979 and 1980 , and for quarterly estimates of 1980 , see $\mathbf{p}$. 3 of the May 1981 Survey.

# U.S. Direct Investment Abroad in 1980 

MAJOR developments related to U.S. direct investment abroad in 1980 were:

- The U.S. direct investment position abroad increased 14 percent, to $\$ 213.5$ billion, following a 15 -percent increase in 1979. It increased 21 percent in petroleum, 13 percent in manufacturing, and 12 percent in "other" industries.
- The $\$ 26.7$ billion addition to the position consisted of capital outflows of $\$ 18.5$ billion and unusually large valuation adjustments of $\$ 8.2$ billion. Capital outflows-the sum of equity and intercompany account outflows and reinvested earnings of incorporated affili-ates-were concentrated in developed countries. Valuation adjustments were concentrated in developing countries.
- Equity and intercompany account outflows declined $\$ 3.4$ billion, to $\$ 1.5$ billion-the second lowest level of outflows since 1959. Large inflows from the Middle East branch of a U.S.-incorporated petroleum company and from Netherlands Antillean finance affiliates substantially offset outflows to other affiliates.
- Reinvested earnings of incorporated foreign affiliates declined 10 percent, to $\$ 17.0$ billion. Much of the decline was in the United Kingdom, where reinvested earnings had been boosted in 1979 by a tax change.
- Direct investment income declined 4 percent, to $\$ 36.8$ billion. Shifts to negative income from automobile man-

[^1]ufacturing affiliates in developed areas, and from the previously mentioned Middle East branch of a U.S. petroleum company, more than offset increases in income from all other affiliates combined.

- Fees and royalties increased 14 percent, to $\$ 5.7$ billion. The increase was primarily in royalties, license fees, and other fees for the sale or use of intangible property.
The preliminary estimates for 1980 and revised estimates for 1977-79 published in the accompanying tables incorporate the results of BEA's 1977 benchmark survey of U.S. direct investment abroad. ${ }^{1}$ Previously published estimates were linked to the preceding benchmark survey, which covered 1966. A technical note at the end of the article explains the procedure used to expand sample data collected in nonbenchmark years to universe estimates and summarizes the major differences in concepts, definitions, and presentation between the previous and revised series.

## U.S. Direct Investment Position

At yearend 1980, the U.S. direct investment position abroad was $\$ 213.5$ billion (table 1). The position is the

[^2]book value of U.S. direct investors' equity in, and net outstanding loans to, their foreign affiliates. ${ }^{2}$

By industry, 22 percent of the position was in petroleum, 42 percent in manufacturing, and 36 percent in "other" industries (table 2). Within manufacturing, the position was largest in "other manufacturing" (mainly paper, instruments, rubber, and textiles), chemicals, and nonelectrical machinery. Within "other" industries, the position was largest in finance (except banking), insurance, and real estate, and in trade.
By area, 74 percent of the position was in developed countries, 25 percent in developing countries, and 2 percent in "international" (for definition of the latter area, see technical note). Within the developed countries, over 60 percent of the position was in Europe, where the United Kingdom and Germany had the largest shares. Within the developing countries, almost three-fourths of the position was in Latin America; the largest shares were in Bermudamainly in finance affiliates-and Brazil.

Incorporated affiliates accounted for 84 percent of the position, and unincorporated affiliates for 16 percent. Most of the investment in incorporated affiliates was equity (capital stock and retained earnings) rather than debt (intercompany accounts) (table 3).

[^3]The intercompany account component of the position in incorporated affliates is the net of U.S. parenis' accounts receivable from affiliates and accounts payable to affiliates. At yearend 1980, receivables were about twice as large as payables. The largest receivables were those due from European manufacturing affiliates, while the largest payables were those owed to Latin American affiliates in "other" industries. Most of these payables were owed to Netherlands Antillean finance affiliates, which were established to borrow funds abroad and relend them to their U.S. parents. The payables more than offset the other, positive, components of the position, and, consequently, U.S. parents had a large negative direct investment position in the Netherlands Antilles. (For discussion of the previous and present treatment of Netherlands Antillean finance affiliates, see technical note.)

## 1980 Addition

The addition to the position was $\$ 26.7$ billion, or 14 percent, in 1980, compared with $\$ 24.0$ billion, or 15 percent, in 1979. The 1980 addition consisted of capital outflows of $\$ 18.5$ billion and valuation adjustments of $\$ 8.2$ billion. In the absence of the unusually large valuation adjustments, the position would have increased about 10 percent in 1980.

Capital outflows consisted of equity and intercompany account outflows of $\$ 1.5$ billion and reinvested earnings of incorporated affiliates of $\$ 17.0$ billion. About 95 percent of capital outflows were to developed countries, primarily in Europe. Within Europe, outflows to the United Kingdom, Germany, Switzerland, and France were largest. The much smaller capital outflows to developing countries reflected large equity and intercompany account inflows from both Netherlands Antillean finance affil-
iates and the Middle East branch of a U.S.-incorporated petroleum company.

Valuation adjustments were concentrated in developing countries, where a large adjustment was made to reflect a change in the nature and status of the operations of the above-mentioned Middle East branch of a U.S. petroleum company, and to conform to a change in accounting for the branch as reported to BEA by the U.S. company. During 1980, the U.S. parent transferred the branch's oil production facilities and most of its refinery facilities to the host government, which paid the balance of the consideration for such assets. However, the branch continued to exist, principally as a trade and service company.
Before the facilities were transferred, the branch was primarily engaged in crude oil production. In producing the oil, it incurred tax and royalty liabilities to the host government and, subse-

D Suppressed to avoid disclosure of data of individual companies.
quently, in selling the oil, acquired accounts receivable due from the U.S. purchasers. Because the receivables were transferred to the U.S. parent for settlement, while the tax and royalty liabilities remained with the foreign branch, a negative U.S. direct investment position in the branch resulted.

Since the facilities were transferred, the foreign branch, as part of its trading operations, purchases oil from the host government and incurs accounts payable to the government; when the oil is resold, the branch acquires accounts receivable due from the purchasers. The accounts payable as well as the accounts receivable are transferred to the U.S. parent for settlement. Thus, no significant direct investment position, either positive or negative, arises from the branch's trading operations. The above-mentioned valuation adjustment reflected the removal of the accounts payable from the direct investment account and their transfer to the account of U.S. nonbanking concerns as commercial liabilities to unaffiliated foreigners.

n.a. Not applicable.
*Less than 0.5 percent ( $\pm$ )

1. Includes valuation adjustments to the position in in-
corporated affiliates.

Equity and intercompany account outflows declined $\$ 3.4$ billion, to $\$ 1.5$ billion (table 4). They were at the second lowest level since 1959. (Outflows were smaller in 1974, when sharp increases in crude oil prices resulted in large inflows from affiliates in petroleum producing areas.)

By type of affiliate and account.-The $\$ 3.4$ billion decline in outflows was more than accounted for by a $\$ 3.8$ billion shift from outflows to, to small inflows from, unincorporated affiliates. Flows to or from these affiliates are shown as a single summary account consisting of the parents' total claims, both equity and debt, on the affiliates' net assets.

Partly offsetting was a $\$ 0.4$ billion increase in outflows to incorporated affiliates. The increase reflected a $\$ 1.5$ billion increase in outflows for capital stock, partly offset by a $\$ 1.1$ billion shift to inflows on intercompany accounts. The increase in outfows for capital stock-

Table 3.-U.S. Direct Investment Position Abroad, by Type of Affiliate and Account, 1979-80
IMillions of dollars!

1. Includes valuation adjustments to the position in incorporated affiliates.
the net of increases and decreases in U.S. parents' holdings of stock in affili-ates-occurred because increases in stock were larger, and decreases smaller, than in 1979. The shift to inflows on intercompany accounts stemmed from smaller increases in U.S. parents' receivables from, partly offset by smaller increases in their payables to, affiliates. ${ }^{3}$

By industry and area.-By industry, a large shift from equity and intercompany account outflows to inflows occurred in petroleum, while outflows tripled in manufacturing and increased slightly in "other" industries. By area, outflows to developed countries increased $\$ 2.3$ billion, to $\$ 5.1$ billion;
3. Increases (decreases) in receivables are intercompany account outflows (inflows), while increases (decreases) in payables are infows (outflows). The change in intercompany account outflows is thus the second-order change (i.e., the change in the change) in receivables minus the sec-ond-order change in payables.
there was a $\$ 6.2$ billion shift to inflows from developing countries, and a $\$ 0.4$ billion decline in inflows from "international."

In petroleum, there was a $\$ 5.9$ billion shift from a $\$ 3.1$ billion outflow in 1979 to a $\$ 2.8$ billion inflow in 1980. Most of the shift was accounted for by a $\$ 5.1$ billion shift to inflows from developing countries. The latter was almost entirely in "other" developing countries, primarily in the Middle East. In 1979, large outflows to this area were associated with a shortening-in compliance with host government requests-of the credit terms that affiliates extended to purchasers of crude oil. In 1980, large inflows were associated with the previously mentioned final payment by a Middle East government for the facilities of the branch of a U.S. petroleum company.

For developed countries, there was a $\$ 0.9$ billion shift to small inflows. The shift was in Europe and "other" developed countries. In Europe, it was entirely in transactions with unincorporated British affiliates operating in the North Sea area and in intercompany account transactions with incorporated affiliates. In "other" developed countries, it was largely in intercompany account transactions with incorporated affiliates, mainly in Japan. In both Europe and "other" developed countries, particularly the latter, the shifts to inflows were primarily in U.S. parents' receivables; they probably reflected changes in such factors as the prices and volume of oil sold by the parents to affiliates in these areas, and the timing of both the sales and the affiliates' payments for the oil.

Table 4.-Equity and Intercompany Account Outflows, by Type of Affliate, 1979-80

* Less than $\$ 500,000( \pm)$.

1. Includes outflows to purchase capital stock in affiliates from unaffiliated foreigners and inflows from the sale of such stock to unaffliated foreigners. Although such flows are not ac-
tually "to" foreign affiliates, they are so classified because they change the U.S. direct invest-

Outflows to Canada increased, primarily because decreases in U.S. parents holdings of capital stock in affiliates were larger in 1979 than in 1980. Canada's National Energy Program, which was proposed in October 1980 and was designed to encourage increased domestic ownership of the Canadian petroleum industry, did not result in significant U.S. disinvestments until 1981. (However, partly in response to other Canadian policies, several disinvestments did occur in the few years before the program's announcement, and, as mentioned below in the section on outflows by status of affiliate, a disinvestment in an indirectly owned petroleum affliate earlier in 1980 resulted in inflows in "other" industries.)

Outflows to manufacturing affiliates increased $\$ 2.4$ billion, to $\$ 3.5$ billion. Affiliates in developed countries, particularly Europe, more than accounted for the increase; outflows to affiliates in developing countries declined slightly.

For Europe, a shift from small in-
flows to sizable outflows occurred, mainly because of changes in flows to and from British and German automotive affiliates. These affiliates had made large loans to their U.S. parents in the second half of 1979 and, on a slightly reduced scale, in the first three quarters of 1980 . The loans were repaid in the fourth quarter, causing the large year-to-year shift, and then new loans were extended in the first quarter of 1981.

Outflows to affiliates in "other" industries increased $\$ 0.1$ billion, to $\$ 0.8$ billion. The increase reflected several much larger, but offsetting, changes. Outflows to developed countries increased $\$ 0.6$ billion, to $\$ 1.9$ billion; inflows from developing countries increased $\$ 0.8$ billion, to $\$ 1.0$ billion; and inflows from "international" declined $\$ 0.2$ billion, to $\$ 0.1$ billion.

Within developed countries, outflows to Europe increased $\$ 1.4$ billion, mainly reflecting the acquisition of an affiliate. In contrast, there was a $\$ 0.9$ billion shift to inflows from Canada, largely
as a result of the sale of several affiliates by U.S. direct investors.
Almost all of the increase in inflows from developing countries was in Latin America. Netherlands Antillean finance affiliates more than accounted for the increase. Inflows from these affiliates largely represented relending to U.S. parents of funds borrowed abroad by the affiliates. The inflows were large in both 1979 and 1980- $\$ 1.2$ billion and $\$ 2.4$ billion, respectively. Acceleration of the inflows reflected generally more favorable conditions in Eurobond markets, where much of the borrowing originated.

By status of affliate.-Table 5 shows equity and intercompany account outflows to new affiliates, to affiliates liquidated or sold, and to all other affiliates. The table shows, for affiliates whose status changed, both the flows associated with the change in status-such as outflows that financed an acquisition or inflows that reflected the proceeds of a liquidation or sale--and all other flows.

Table 5.-Equity and Intercompany Account Outflows, by Status of Affiliate, 1979-80
[Millions of dollars; inflows ( - )]

Inflows from affiliates that were liquidated or sold were $\$ 1.9$ billion, and outflows to new affiliates were $\$ 0.2$ billion. (The comparable figures for 1979 were $\$ 1.5$ billion and $\$ 0.8$ billion, respectively.)

Outflows to newly acquired affiliates were $\$ 1.0$ billion, and there were inflows of $\$ 0.8$ billion from newly established affiliates. Outflows to newly acquired affiliates were largest in "other" industries, and included outflows to finance the acquisition of a large British insurance company. Inflows from Latin American affiliates in "other" industries more than accounted for the inflows from newly established affiliates; they reflected the transfer to U.S. parents of the proceeds of foreign borrowing by new Netherlands Antillean finance affiliates. Outflows to newly established affiliates were largest in petroleum; in that industry, several affiliates engaged in oil and gas exploration and extraction in "other" developing countries largely accounted for the outflows.

Inflows from affiliates that were sold were $\$ 1.7$ billion, and inflows from affiliates that were liquidated were $\$ 0.2$ billion. Seventy percent of the inflows from affiliates that were sold were in "other" industries. Within "other" industries, the inflows were concentrated in Canada, where a coal mining affiliate, a holding company through which a U.S. parent owned a number of public utility affiliates, and several other affiliates were sold in 1980. Inflows from the coal mining affiliate reflected the proceeds of two transactions : first, the U.S. parent's sale, toward the end of the year, of its remaining minority interest in the affiliate, which it had once wholly owned, and second, the affiliate's sale earlier in the year of a petroleum affiliate that it owned.

## Reinvested earnings

Reinvested earnings of incorporated affiliates declined 10 percent, to $\$ 17.0$ billion (table 6). Reinvested earnings consist of earnings (i.e., U.S. parents'
shares in the net income) of incorporated affiliates less gross dividends (i.e., dividends before deduction of foreign withholding taxes) on common and preferred stock held by U.S. parents. The decline in reinvested earnings primarily reflected a 15 -percent increase in gross dividends. By area, reinvested earnings declined 15 percent in developed countries, increased 6 percent in developing countries, and declined 5 percent in "international." By industry, they declined in petroleum and manufacturing, and increased slightly in "other" industries. The reinvestment ratio-the fraction of earnings reinvest-ed-declined from 0.65 , which was a record high for the years 1950 forward, to 0.59 .

British affiliates accounted for over 70 percent of the decline in reinvested earnings and for about one-half of the decline in the reinvestment ratio. These affiliates' reinvested earnings and reinvestment ratios were affected by changes in taxation in both 1979 and 1980. In 1979, their earnings were boost-

[^4]ed as a result of new legislation that permitted them, along with other British companies, to eliminate certain deferred tax liabilities. ${ }^{4}$ The legislation had been widely anticipated, and the elimination of the liabilities generally did not give rise to increased dividend payments. Consequently, both reinvested earnings and the reinvestment ratio were raised above what they otherwise would have been. In 1980, U.S. parents received tax refunds, which were included in both the earnings and gross dividends of their incorporated affiliates. Since earnings and gross dividends were increased by equal amounts, reinvested earnings were not affected, and the reinvestment ratio was lowered. The refunds-of the Advance Corporation Tax-were made as a consequence of a new tax treaty between the United States and the United Kingdom. They permitted U.S. stockholders of British corporations to benefit retroactively from a tax credit that previously had been available only to British stockholders.

Reinvested earnings of petroleum affiliates declined 16 percent, to $\$ 4.6$ billion. They declined 7 percent in developed countries and 45 percent in developing countries. The decline in developed countries was centered in Europe, particularly in the United Kingdom and the Netherlands; in both countries, the declines were attributable to increases in dividends. The decline in developing countries was concentrated in the Bahamas and Bermuda, and was due to declines in earnings in both countries.

Reinvested earnings of manufacturing affiliates declined 16 percent, to $\$ 6.4$ billion. They declined 32 percent in developed countries and increased 79 percent, from a much smaller base, in developing countries.

Over 85 percent of the decline in developed countries was in Europe. Sharp declines, particularly in transportation equipment manufacturing, occurred in the United Kingdom and Germany as a result of declines in earnings.

[^5]The increase in developing countries was almost entirely in Latin America, where, in turn, nearly all of the increase was in Brazil, Mexico, and Argentina. In Brazil and Argentina, increases reflected both increases in earnings and declines in dividends, while in Mexico, almost all of the increase was attributable to an increase in earnings.

In "other" industries, reinvested earnings increased 2 percent, to $\$ 6.1$ billion. They increased 4 percent in developed countries and declined 3 percent in developing countries. In developed countries, increases in Canada and "other" developed countries more than offset a decline in Europe; all of these changes were primarily attributable to changes in earnings. In developing countries, a decline in "other" developing countries, where a Middle East affiliate paid an unusually large dividend, more than accounted for the decline in reinvested earnings.

## Income

Income, the return on the U.S. direct investment position abroad, declined 4 percent, to $\$ 36.8$ billion (table 7). Income consists of earnings-i.e., U.S. parents' equity in the net income (after foreign income taxes) of their foreign affiliates-plus net interest received on intercompany accounts, less withholding taxes on dividends and interest (table 8). Alternatively, it is the sum of (1) interest, dividends, and earnings of unincorporated affiliates and (2) reinvested earnings of incorporated affiliates.

Income declined 1 percent in developed countries and 11 percent in developing countries; it more than doubled, from a relatively small base, in "international." The decline in developed countries was in Europe, and that in developing countries was in "other" developing countries.

Income from petroleum affiliates declined 3 percent, to $\$ 13.0$ billion. It increased 23 percent in developed countries and declined 35 percent in developing countries. It nearly tripled, from a relatively small 1979 base, in "international."

Within developed countries, European affiliates had the largest increasemore than 30 percent. The increase was accounted for by British, Norwegian, and Netherlands affiliates engaged primarily in oil and gas extraction and, in several countries, by refining and marketing affiliates having access to relatively low-priced Saudi Arabian crude oil. Income also increased in both Canada and "other" developed countries. The increase in Canada would have been significantly larger had 1979 income not been inflated by capital gains on oil- and gas-producing properties sold by two unincorporated affiliates in that year.

Within developing countries, the decline was centered in "other" developing countries. In that area, income declined 36 percent. The decline was more than accounted for by the previously mentioned change in the nature and status of the operations of the Middle East branch of a U.S. petroleum company. As a result of this change, the branch experienced a loss, caused by a reduction in operating income and a nonrecurring capital loss. Income from other affiliates in this area, particularly those operating in Indonesia, increased. In Indonesia, the increase apparently reflected higher crude oil prices.

Income from affiliates in Latin America declined more than 30 percent. Offshore trading affiliates largely accounted for the decline. These affiliates' earnings had increased sharply in 1979, when the prices at which they could resell oil increased faster than the prices specified in their contracts with the oil producing countries from which they purchased it. In 1980, in contrast, increases in contract prices generally could not be fully passed on, and affiliates' profit margins narrowed.

Income from manufacturing affiliates declined 14 percent, to $\$ 11.3$ billion. It declined 22 percent in developed countries and increased 33 percent in developing countries. The decline in developed countries was concentrated in Europe, where income declined 27 percent. There were smaller declines in Canada and "other" developed countries.

Table 7.-Income and Rate of Return, 1979-80

D Suppressed to avoid disclosure of data of individual companies.

1. Income divided by the average of the beginning- and end-of-year direct investment positions.

The declines in developed countries reflected a general slowing in economic activity as well as several factors specific to the automobile industry. The latter included rising fuel priceswhich dampened demand for automobiles generally and shifted it toward smaller, less profitable models-and increased competition from Japaness imports. Of the $\$ 2.5$ billion decline in income from affiliates in developed countries, $\$ 2.2$ billion was in transportation equipment, where income shifted from positive to negative. The largest change-a shift to negative incomeoccurred in Germany. A large decline occurred in the United Kingdom, and smaller declines in several other countries.
Income from affiliates in developed countries also declined in food products, chemicals, and nonelectrical machinery.

The largest declines were in the United Kingdom, and perhaps reflected both a more pronounced economic slowdown there than in most other developed countries and the effects of the previous-

Table 8.-Income and Related Items: Source and Relationship [Millions of dollars]

Note.-"Reported" refers to universe estimates derived from reported sample data.
ly mentioned tax changes. (Income was probably boosted significantly more in 1979 by elimination of the deferred tax liabilities than in 1980 by the Advance Corporation Tax refunds.)

Almost all of the increase in income from manufacturing affiliates in developing countries was in Latin America. Within Latin America, Brazil and Mexico accounted for over threefourths of the increase; Argentina accounted for a large share of the remainder. Although Brazil had the sharpest increase, it represented only a partial recovery from 1979 , when income had declined sharply because of unfavorable economic conditions and a large devaluation of the cruzeiro; a substantial portion of the increase was in transportation equipment, where, partly as a result of increased sales by affiliates, income shifted from negative to posi-
tive. In Mexico, the increase was more evenly dispersed among industries, and reflected continued economic growth, spurred by the development of its petroleum resources.
Income from affiliates in "other" industries increased 6 percent, to $\$ 12.6$ billion. It increased 7 percent in developed countries, 3 percent in developing countries, and 44 percent-from a very small base-in "international." The increase in developed countries was in Canada and "other" developed countries, particularly the latter. The increase in Canada was largest in mining; part of it reflected a nonrecurring capital gain on the previously mentioned coal mining affiliate's sale of its petroleum affiliate. (If the U.S. parent had owned the petroleum affiliate directly, the capital gain would have accrued directly to the parent and would not have been included in income from foreign affiliates.) The increase in "other" developed countries was concentrated in Japan and Australia. In the former, it was centered in banking and trade, while in the latter, it was spread over several industries. Income from European affiliates declined; the decline was in banking and trade.

In developing countries, income from affiliates in "other" industries increased slightly in both Latin America and "other" developing countries. In Latin America, increases in trade and banking were largely offset by a decline in finance (except banking), insurance, and real estate. The latter partly reflected an increase in interest payments by U.S. parents to their Netherlands Antillean finance affiliates, which, as noted above, had substantially increased their lending to the parents in 1979 and, to an even greater extent, in 1980. (The increase in interest payments did not result in a comparable, offsetting increase in the earnings component of income from these affiliates because they, in turn, had to make increased interest payments to foreign lenders.)

The rate of return on the direct investment position is defined as the ratio of income to the average of the begin-ning- and end-of-year positions. The rate is an average for existing investments, at historical book value, and can
thus be of only limited use in predicting the profitability of prospective new investments.

The rate of return declined from 22 percent--a very high rate by historical standards-to 18 percent, because of both a 4-percent decline in income and a 15 -percent increase in the average position. The rate of return declined in all three major industries-from 39 to 30 percent in petroleum, from 18 to 13 percent in manufacturing, and from 18 to 17 percent in "other" industries.
The very high rates of return in petroleum in "other" developing coun-tries- 579 percent in 1979 and 78 percent in 1980-cccurred because a few large affiliates either had substantial accounts receivable due from their U.S. parents or had transferred accounts receivable due from third parties to their parents for collection. In both cases, the parents' direct investment position in the affiliates was reduced, but income was essentially unaffected. The sharp decline in the rate of return from 1979 to 1980 largely reflected the reduction in income from, and the elimination during 1980 of the negative position in, the previously mentioned Middle East branch of a U.S. petroleum company.

## Fees and Royalties

Fees and rovalties increased 14 percent, to $\$ 5.7$ billion (table 9 ). Royalties, license fees, and other fees for the sale or use of intangible property--such as patents, industrial processes, trademarks, and copvrights-increased 20 percent, to $\$ 3.6$ billion. Service charges and charges for the rental of tangible property increased 12 percent, to $\$ 1.8$ billion. Film and television tape rentals declined 22 percent, to $\$ 0.3$ billion.

Fees and royalties from petroleum affiliates declined 27 percent, to $\$ 0.2$ billion. The decline was in service charges and rentals from affiliates in "international" and in "other" developing coun-tries-primarily the Middle East.

Fees and royalties from manufacturing affiliates increased 16 percent, to $\$ 4.0$ billion. Over two-thirds of the increase was in Europe, mostly in royalties and license fees. Within Europe, the increase was concentrated in chemicals.

Fees and royalties from affliates in "other" industries increased 21 percent, to $\$ 1.5$ billion. The increase was concentrated in developing countries, where fees and royalties increased 50 percent. Within the developing countries, most of the increase was in service charges and rentals.

## Technical Note

For years beginning with 1977, estimates of the U.S. direct investment position abroad and of transactions between U.S. parents and their foreign affliates have been revised to incorporate the results of the 1977 benchmark survey of U.S. direct investment abroad. The purpose of the survey was to obtain complete and accurate information on such investment in 1977. The survey was a census, intended to cover the investment universe. Reports for 3,540 U.S. parent companies and their 24,666 foreign affiliates were received. ${ }^{5}$
The 1977 survey was the first benchmark survey of U.S. direct investment abroad conducted under the International Investment Survey Act of 1976 . The act requires that a benchmark survey be conducted at least once every 5 years. Previous benchmark surveys, conducted under authority of the Bretton Woods Agreements Act of 1945, were less frequent and less comprehensive in terms of the types of information collected. The last such survey covered 1966. Current estimates for the years 1967-76 and previous estimates for the years 1977 forward were linked to that survey.

Table 10 shows five major items for 1977 on two bases-as reported in the 1977 benchmark survey and as previously estimated by linking to the 1966 benchmark survey. Tables 11-18 show four of these items in greater detail for 1979 and 1980; data for 1977 are shown in this same detail in U.S. Direct Investment Abroad, 1977, and for 1978 are available upon upon request. ${ }^{6}$

The remainder of this note is divided into two sections. The first explains the procedure used to expand the sample data collected in nonbenchmark years to universe estimates, and the second summarizes the major differences between the previous and revised series.
5. An additional 11,123 very small affliatesthose with total assets, sales, and net income of less than $\$ 500,000$-were exempted from the survey in order to reduce the reporting burden on companies. Despite their large number, exempt affiliates accounted for 1 percent or less of the assets, sales, and net income of all affiliates. Thus, coverage of the universe in terms of value was virtually complete.
6. As explained below, the 1977 data on equity and intercompany account outflows differ from those published in conjunction with the benchmark surver. Detailed 1977 data for this item, as well as the detailed 1978 estimates for other items, may be obtained by writing the Bureau of Economic Analysis (BE-50), U.S. Department of Commerce, Washington, D.C. 20230.

## Estimation procedure

For 1977, the data are those reported in the benchmark survey. For all items except equity and intercompany account outflows, the data cover the universe of affiliates. For equity and intercompany account outflows, the data cover only affiliates that were reported in both the benchmark survey and the quarterly sample surveys; therefore, data for the benchmark year are consistent with those for the nonbenchmark years, which, as discussed below, are the sum of reported sample data. In principle, this permitted a better estimate of year-to-year changes in outflows than would have been possible if the data for the universe reported in the benchmark survey and published in U.S. Direct Investment Abroad, 1977 had been used instead. ${ }^{7}$

For years beginning with 1978, universe estimates were obtained by extrapolating forward the 1977 benchmark survey data, based on quarterly sample data collected in those years. Universe estimates were generally obtained as the sum of three components: (1) current-period data for a matched sample of affiliates-i.e., for affiliates reported in both the prior and current periods, (2) currentperiod data for affiliates new to the sample, and (3) an estimate of current-period data for affiliates that existed in both periods but were not in the matched sample. ${ }^{8}$ The third component was, in turn, obtained as the product of two factors: (1) the prior-period uni-
7. Because it was measured directly in the benchmark survey, rather than being constructed as a cumulation of capital outflows and valuation adjustments, the U.S. direct investment position abroad at yearend 1977, as published in this article, was not affected by the coverage of 1977 equity and intercompany account outflows.
8. For 1978 and 1979, the prior period was the previous year; for 1980, it was the same quarter of the previous year. For 1978 and 1979, annual estimates were obtained first; then quarterly estimates for those items that are included in the U.S. international transactions accounts were prepared by (1) allocating among quarters the difference between the annual estimate for a given year and the sum of reported quarterly data, and (2) adding these allocated amounts to the reported sample data for each quarter. For 1980, quarterly estimates were prepared directly and summed to yield annual estimates. The method used for 1980 is the one BEA uses to prepare quarterly estimates on a current basis. That method could not be used for 1978, partly because quarterly universe data for 1977 were not available to serve as a benchmark that could be extrapolated to quarterly universe estimates for subsequent years. (Only annual data were collected in the benchmark survey; thus, for all years, the distribution of universe estimates among quarters reflects only the quarterly distribution of reported sample data.) In addition, the method used for 1978 and 1979 was more economtcal to apply than the one used for 1980, and its use enabled BEA to adhere to its customary publication schedule despite the added task of linking the sample data to a new benchmark survey. Although from a conceptual standpoint, producing quarterly estimates directly has certain advantages over deriving them residually, the choice of method was inconsequential from a practical standpoint, because, once all reports were received, the reported sample data accounted for a very large proportion of the universe estimate based on either method.
verse estimate, adjusted to exclude data for affiliates sold or liquidated since the prior period, less prior-period data for affiliates in the matched sample, and (2) the ratio of cur-rent- to prior-period data for the matched sample. The first factor is an estimate of prior-period data for affliates existing in both periods but not in the matched sample. Its multiplication by the second factor assumed, in effect, that the data for these affliates grew at the same rate as the data for affiliates in the matched sample. Adjustments were made where this assumption seemed unlikely to hold.

Universe estimates were computed for each country-industry cell shown in the published tables. Universe estimates of interest. dividends, earnings of unincorporated affiliates, earnings of incorporated affiliates, royalties and license fees, service charges and rentals, and film and television tape rentals were computed as described above. Universe estimates of withholding taxes on dividends were obtained by multiplying the universe estimates of dividends by foreign withholding tax rates derived from data reported in the benchmark survey. Equity and intercompany account outflows and valuation adjustments were as reported in the sample surveys; no estimates were made for unreported data. ${ }^{\text {a }}$ Universe estimates of reinvested earnings; the sum of interest, dividends, and earnings of unincorporated affiliates; earnings ; income ; capital outflows; and fees and royalties were derived from the estimates of items mentioned previously. Universe estimates of the direct investment position were obtained as the sum of the previous year's position, current-year capital outfiows, and currentyear valuation adjustments.

## Changes in concepts, definitions, and presentation

In preparation for the benchmark surver, a thorough review was made of direct investment concepts and definitions, and of the table formats used for data presentation. Major differences in concepts, definitions, and presentation between the previous and the revised series are summarized below. Additional details may be found in U.S. Direct Investment Abroad, 1977.

Less-than-10-percent ownership interests.In both the previous and revised series, a private U.S. investment abroad was con-
9. Reported sample data on equity and intercompany account outflows tended to be extremely volatile and were characterized by frequent sign reversals; thus, they could not be used as a basis for providing reliable estimates of unreported transactions, particularly for individual countries and industries. Use of the reported sample data alone assumed, in effect, that unreported transactions netted to zero-i.e., that outflows to some affiliates were exactly offset by inflows from others. To the extent that this assumption did not hold in fact, published outflows are biased. In revised data, the bias is probably small, because, once all reports have been received. the sample has generally been found to account for a large proportion of the universe.
sidered a direct, rather than a portfolio, investment if a single U.S. person owned at least 10 percent of the voting securities (or the equivalent) of a foreign business enterprise. However, in the previous series, an interest of a U.S. person of less than 10 percent was also included in direct investment in two cases: (1) when another U.S. person held an interest of at least 10 percent in the same foreign business enterprise, and (2) when, in the case of a publicly held foreign company, the combined interest of all U.S. persons was at least 50 percent. In the revised series, direct investment is defined strictly from the viewpoint of a single owner, and all less-than-10-percent interests are included in portfolio investment. (In actuality, reclassification of investment in publicly held companies made little difference because U.S. ownership in the only such companies of significant size fell below 50 percent before 1977 .)
"International" category.-In the revised series, the "international" category consists of affiliates that have operations spanning more than one country and that are engaged in petroleum shipping, other water transportation, petroleum trading, and oil and gas drilling. (Affiliates in these industries that have operations entirely in one country are classified in that country.) In the previous series, the "international" category was defined more broadly; it included, for example, Netherlands Antillean finance affiliates (see below) and some affiliates engaged in nonpetroleum trading, other finance and insurance, and construction.

Petroleum trading companies.-Most U.S. petroleum parent companies have trading subsidiaries, mainly incorporated in the United States, that purchase foreign-produced petroleum and resell it to customers in both the United States and third countries. In the previous series, these subsidiaries were classified as foreign or domestic, depending largely upon the reporting and consolidation practices of the U.S. parent companies. In processing the 1977 benchmark survey, BEA attempted to classify these subsidiaries more consistently, based on objecitve criteria; these criteria were also applied in deriving the extrapolated series for 1978 forward.

If a petroleum trading subsidiary met any of the following criteria, it was usually classified as a foreign affiliate: (1) the subsidiary had employees or property, plant, and equipment located abroad, (2) the buying and selling of petroleum took place from a foreign location, (3) the subsidiary paid taxes to a foreign government, or (4) the subsidiary was incorporated in a foreign country. If none of these criteria were met, the subsidiary was usually treated as domestic (United States) and was included as part of the consolidated U.S. company. In most cases, the application of these criteria resulted in the reclassification of the trading subsidiaries from foreign to domestic.

In the typical case of a subsidiary that was
reclassified from foreign to domestic, capital and income transactions with U.S. persons were considered foreign-to-domestic (United States) in the previous series and included in the direct or portfolio investment accounts, the account depending upon whether the transactions were with the U.S. parent, as previously consolidated, or with unaffiliated U.S. persons; in the revised series, the transactions are considered purely domestic and are, therefore, not included in either investment account. On the other hand, the subsidiary's transactions with foreign persons were considered purely foreign in the previous series and were, therefore, not included in either investment account; in the revised series, they are considered domestic (United States)-to-foreign and are included in the direct or portfolio investment accounts, the account depending upon whether the transactions were with foreign affiliates of the U.S. parent, as newly consolidated, or with unaffiliated foreigners.
Netherlands Antillean finance affiliates.In the previous series, beginning in 1968, intercompany accounts excluded funds that Netherlands Antillean finance affiliates (N.V. were borrowed from unaffiliated foreigners, and then transferred to U.S. parents, by affiliates). Instead, this borrowing was treated as direct borrowing abroad by the U.S. parents, and was included in the portfolio investment accounts.

## (Continued from p. 30)

Most N.V. affiliates were established by U.S. companies in response to the U.S. mandatory controls on direct investment, which were in effect from 1968 to 1974. The controls encouraged U.S. companies to finance their direct investments with foreign- rather than U.S.-source funds. N.V. affiliates' borrowing abroad provided certain advantages-such as tax benefits and lower costs of incorpora-tion-over direct borrowing by U.S. parents. Except for these advantages, the U.S. parents themselves would probably have borrowed abroad, either directly or through their domestic (United States) finance subsidiaries. Almost all of the proceeds of the N.V. affiliates' borrowing was in fact transferred to their U.S. parents for further disposition, often to other foreign affiliates. At the time, it was thought that, instead of recording transfers of the proceeds to U.S. parents as direct investment intercompany account inflows from Latin America, such transfers should be recorded in the portfolio investment account as increases in the U.S. parents' liabilities to unaffiliated foreigners in Europethe ultimate source of nearly all of the borrowed funds. Subsequent reductions in U.S. parents' liabilities to the N.V. affiliates were recorded as payments of principal by the U.S. parents to unaffiliated foreigners in Europe, and interest payments on the borrowing by the N.V. affiliates were recorded as interest payments by U.S. parents to unaffiliated foreigners in Europe. Other capital transactions between U.S. parents and their N.V. affiliates, such as increases or decreases in equity, and dividends or other income flows to U.S. parents, were included in the direct investment accounts but were classified in "in-
ternational and unallocated" rather than in the Netherlands Antilles.

In the years immediately following the dismantling of the direct investment controls in 1974, new borowing by N.V. affiliates declined and a smaller proportion of the proceeds were transfered to U.S. parents. Recently, borrowing by N.V. affiliates again accelerated because of favorable conditions in the Eurobond markets.

The distinction between N.V. affiliates and other finance affiliates has been dropped in the revised series. All transactions of U.S. parents with N.V. affiliates are included in the direct investment accounts, where they are classified in the Netherlands Antilles. One advantage of this treatment is that it facilitates the integration of the two major types of databalance of payments data and financial and operating data-for such affiliates collected in BEA's benchmark surveys.

Airline and ship operators.-In the previous series, forreign stätions, ticket offices, and terminal port facilities of a U.S. airline or ship operator that provided services only to the airline's or ship operator's own operations were considered foreign affiliates and were included in U.S. direct investment abroad. They are excluded from the revised series in cases where most of the revenues-such as passenger fares and freight charges-collected by these facilities were generated by the travel and transportation services rendered by the airlines and ship operators of which they are a part. and not by the activities of these facilities per se. However, if the facilities provided services primarily to unaffiliated persons rather than to the airlines or ship operators that own them, they are considered affiliates and are included in direct investment.

Industry classification.-In the previous series, the industry classification of any given affiliate was as reported in the 1966 benchmark survey. In the revised series for 1977 forward, each affiliate is classified in the industry in which its sales (or gross operating revenues) were largest in 1977, as reported in the 1977 benchmark survey.
Format of published tables.-In tables 1118, the detail by industry has changed slightly from previous publications. Nonelectrical machinery, electrical machinery, and banking, which previously were combined or included in another category, are now shown separately. Transportation, communication, and public utilities, which was previously shown separately, is now included in "other industries."
The detail by country has been expanded from that previously published. In addition, the metbod of grouping countries within Latin America has changed. Latin American countries are now grouped strictly along geographical lines, according to whether they are located in South America, Central America, or "Other Western Hemisphere." 10 In previous publications, they were grouped according to whether or not they were one of the 20 countries designated as "Latin American Republics:" A complete listing of countries, which shows the individual countries contained in the subtotals and residual ("other") categories in table 11-18, may be found in table B, pages 6 and 7, of U.S. Direct Investment Abroad, 1977.
10. Although the differences are relatively minor, it should be noted that "Other Western Hemisphere' in tables 11-18 does not refer to exactly the same set of countries as the category by the same name in previous publications.

# Foreigñ Direct Investment in the United States in 1980 

HIGHLIGHTS of foreign direct investment in the United States in. 1980 were:

- The foreign direct investment position increased 20 percent, to $\$ 65.5$ billion, following a 28 -percent increase in 1979. The position increased 24 percent in petroleum, 16 percent in manufacturing, and 23 percent in other industries.
- Capital inflows declined moderately, to $\$ 10.9$ billion, following a 50 percent increase in 1979. The decline was entirely in equity and intercompany account inflows; reinvested earnings of incorporated affiliates increased substantially.
- Equity and intercompany account inflows declined 41 percent, to $\$ 4.7$ billion, after a 49 -percent increase. The decline was entirely attributable to a large shift to net outflows for intercompany account transactions; inflows for capital stock and other equity remained at about the same high level as in 1979-an indication that foreign direct investors' interest in the United States remains strong.
- Reinvested earnings of incorporated affiliates increased 57 percent, to $\$ 6.2$ billion, following a similar increase in 1979. The increase reflected larger earnings and, to a lesser extent, higher reinvestment ratios.

[^6]- Direct investment income increased 47 percent, to $\$ 9.3$ billion, following a 51 -percent increase.

## Foreign Direct Investment Position

At yearend 1980, the foreign direct investment position in the United States was $\$ 65.5$ billion (table 1). The position is the book value of foreign direct investors' equity in, and net outstanding loans to, their U.S. affiliates. (A U.S. affiliate is a U.S. business enterprise in which one foreign person owns, directly or indirectly, 10 percent or more of the voting securities, or the equivalent.)

By area of foreign parent, the composition of the position did not change significantly from yearend 1979. ${ }^{1}$ About 66 percent of the position continued to be accounted for by parents in Europe, 15 percent by those in Canada, and 6 percent by those in Japan (table 2). The remainder was mostly accounted

[^7]for by parents in Latin America, particularly in the Netherlands Antilles.

As in 1979, ownership was highly concentrated by country. Almost 90 percent of the total was accounted for by the eight countries with the largest positions. The Netherlands accounted for 25 percent, the United Kingdom for 17 percent, and Canada for 15 percent. Germany, the Netherlands Antilles, Japan, and Switzerland each accounted for from 6 to 8 percent, and France for 4 percent. The members of the Organization of Petroleum Exporting Countries (OPEC) together accounted for less than 1 percent of the total, unchanged from 1979. Their position was largely in real estate and trade.

By industry of affiliate, 37 percent of the position was in manufacturing, about 20 percent each in trade and petroleum, 8 percent in insurance, and 16 percent in "other" industries. In manufacturing, about 33 percent was in chemicals, 17 percent each in food and machinery, and 15 percent in metals.

Real estate, which is included in "other" industries, accounted for about 4 percent of the total position; the positions of parents in Canada, the Netherlands, and "other Western Hemisphere" were particularly large. However, this estimate does not represent the total asset value of U.S. real estate owned by foreign parents. It includes only direct investment in U.S. affiliates that are classified in the real estate industry. Direct investment in affiliates in other industries, which may also hold real estate, is classified in the industries of those affiliates. Furthermore, the position in real estate affiliates reflects
only the portion of total real estate held by such affiliates that is financed with funds from foreign parents. That portion may be small relative to the total because real estate investments usually are highly leveraged-the ratio of loans (largely from unaffiliated sources) to investors' funds used for equity purchases normally is high.

Investment in incorporated affiliates accounted for 94 percent of the position; it was mostly equity (capital stock and retained earnings) rather than debt (intercompany accounts) (table 3). Investment in unincorporated affiliatesshown as a single summary account representing the parents' total claims, both equity and debt, on affiliates' net as-sets-accounted for the remainder.

## 1980 Addition

The addition to the position was $\$ 11.0$ billion, compared with $\$ 12.0$ billion in 1979. The addition consisted of capital inflows of $\$ 10.9$ billion and valuation adjustments of $\$ 0.2$ billion. Capital inflows, in turn, consisted of equity and intercompany account inflows of $\$ 4.7$ billion and reinvested earnings of incorporated affiliates of $\$ 6.2$ billion.

By country of foreign parent, the eight countries with the largest additions accounted for 93 percent of the total. The Netherlands accounted for 32 percent, Canada for 24 percent, and the United Kingdom for 14 percent. The Netherlands Antilles and Japan accounted for 8 and 7 percent, respec-
tively, and France, Belgium and Luxembourg, and Switzerland for about 2 to 3 percent each.

Compared with 1979, the composition of the addition changed significantly by area. The share accounted for by affiliates with parents in Canada increased from 8 percent to 24 percent, and the shares accounted for by affiliates with parents in Europe and "other" countries declined-from 69 percent to 55 percent and from 17 percent to 14 percent, respectively. The share accounted for by Japanese-owned affiliates, at 7 percent, was about the same as in 1979.
The composition of the addition changed less significantly by industry than by area. Manufacturing continued

*Less than $\$ 500,000( \pm)$. D Suppressed to avoid disclosure of data of individual companies.
to account for about 30 percent of the addition, and trade and "other" for about 20 percent each. The share of petroleum increased moderately to 21 percent, and that of insurance declined to 8 percent.

By component, the shares of capital inflows and valuation adjustments remained about the same as in 1979-98 and 2 percent, respectively. The composition of capital inflows changed significantly; the share of equity and intercompany account inflows declined from 66 percent to 42 percent, and that of reinvested earnings increased from 33 percent to 56 percent. These changes reflected both a sharp increase in reinvested earnings, which was concentrated in petroleum, and a decline in equity and intercompany account inflows. In dollar amounts, reinvested earnings exceeded equity and intercompany account inflows for the first time since $1974 .{ }^{2}$

## Equity and intercompany account inflows

Equity and intercompany account inflows were $\$ 4.7$ billion, down $\$ 3.3$ billion from 1979 (table 4). ${ }^{3}$ Inflows to incor-
2. Comparisons to years prior to 1974 are not made here because of a break in series between pre1974 estimates and estimates for 1974 forward. Estimates for years since 1974 are linked to the 1974 benchmark survey, while estimates for years prior to 1974 are linked to the 1959 benchmark survey, of foreign direct investment in the United States.
3. Equity and intercompany account inflows for 1979 were revised upward by $\$ 1.9$ billion from the
porated affiliates were $\$ 4.1$ billion; they consisted of $\$ 4.2$ billion of inflows for capital stock, partly offset by $\$ 0.1$ billion of outflows for intercompany account transactions. Inflows to unincorporated affiliates were $\$ 0.6$ billion.

Compared with 1979, inflows to incorporated affiliates were down $\$ 3.2$ billion, and those to unincorporated affiliates were down $\$ 0.1$ billion. The decline in inflows to incorporated affiliates was more than accounted for by a shift from net inflows to very small net outflows on intercompany accounts. Inflows for capital stock increased slightly, to $\$ 4.2$ billion, from a high 1979 level. In both years, these inflows financed a number of large acquisitions of new affiliates, as well as expansions of existing affiliates. ${ }^{4}$
estimate that was published in the August 1980 issue of the Survey of Current Butsiness. The upward revision mainly reflected the inclusion of late reports.
4. BEA recently initiated a survey on new acquisitions and establishments of U.S. business enterprises by foreign direct investors. It covers the full cost of such acquisitions and establishments, regardless of how or by whom they were financed, presents selected operating and financial data of the acquired or established enterprises, and provides information on ultimate beneficial ownership. In contrast, this article covers existing U.S. affiliates as well as U.S. business enterprises acquired or newly established. Thus, while the capital flow data in this article include inflows from foreign parents to acquire or establish U.S. business enterprises, these inflows cannot be entirely separated from other capital flows between foreign parents and their U.S. affiliates. Also, they represent only the portion of the total cost of acquisitions and establishments that is financed by foreign parents. For findings of the new survey for 1980 , see "U.S. Business Enterprises Acquired or Established by Foreign Direct Investors in 1980" on page 57.

1. Includes inflows to purchase capital stock in affiliates from unaffiliated U.S. persons
are not actually "to" U.S. affiliates they are so classified because they change the foreign diand outflows from the sale of such stock to unaffiliated U.S. persons. Although such flows 2. Includes the net change in additional paid-in capital

The continued high level of equity inflows reflected continued strong foreign direct investors' interest in the United States.

The shift to outflows on intercompany accounts consisted of a $\$ 2.1$ billion decline in affiliate payables due to their foreign parents and a $\$ 1.2$ billion increase in affiliate receivables due from their parents (table 5). The decline in payables was mostly in manufacturing; the increase in receivables was primarily in manufacturing and petroleum. These changes were probably a response by affiliates to foreign parents' need for funds to finance their own domestic operations, particularly in Europe.

The decline in inflows to unincorporated affiliates was more than accounted for by a sizable shift to net outflows by trade affiliates and a decline in inflows to affiliates in "other" industries, particularly real estate; partly offsetting was a large increase in inflows to insurance affiliates.

By area of foreign parent, the decline in equity and intercompany account inflows was centered in inflows from Europe, particularly Germany and the United Kingdom; partly offsetting was a sizable increase in inflows from Canada.

Inflows declined in all major indus-

Table 5.-Composition of Inter company Account Inflows: U.S. Affiliates' Payables and Receivables, 1979-80

*Less than $\$ 500,000( \pm)$.
tries. In manufacturing, they declined $\$ 1.0$ billion, to $\$ 1.7$ billion. About onehalf of the decline was accounted for by affiliates in "other" manufacturing. The remainder was largely concentrated in chemicals, machinery, and primary and fabricated metals.
In "other" manufacturing, the decline in inflows was more than accounted for by a shift to net outflows by German-owned affiliates. This shift was mainly due to large increases in outflows from affiliates manufacturing automobiles, primarily in the form of receivables due from parents. In contrast, inflows for capital stock in "other" manufacturing increased substantially. The increase, which was largely accounted for by affiliates of parents in the United Kingdom and the Netherlands, was primarily for acquisitions of U.S. companies in various industries, including plastic products, nonelectrical machinery, building material supplies, and publishing and related businesses.

As in "other" manufacturing, the declines in inflows to affiliates in chemicals, machinery, and metals were also largely on intercompany accounts. Inflows for capital stock in these industries increased. The increase in chemicals was largely accounted for by affili-
ates of parents in the Netherlands and in Belgium and Luxembourg; it was associated with the acquisition of a number of chemical companies. In machinery, the increase was primarily in inflows to Canadian-owned affiliates for the construction of a plant and the purchase of companies manufacturing communications equipment. The increase in metals mainly reflected the acquisition of companies by Britishowned affiliates and a joint venture by a Swedish-owned affiliate for production of nonferrous metals.

In petroleum, there was a shift of $\$ 0.8$ billion, to net outflows of $\$ 0.3$ billion. The shift was entirely in intercompany account transactions. It was partly accounted for by British-owned affiliates, which registered a sizable increase in receivables due from, and a
decline in payables due to, their parents. Also contributing to the shift was the fact that a large reduction in a Bermu-dan-owned affiliate's receivables from its British parent in 1979 was not repeated in 1980.

Inflows to insurance affiliates declined $\$ 0.7$ billion, to $\$ 0.5$ billion. A large share of the decline was in inflows for capital stock, mostly to affiliates of parents in Germany and the Netherlands. It reflected the acquisition of several major insurance companies in 1979, but not in 1980 .

Inflows to trade affiliates declined $\$ 0.5$ billion, to $\$ 1.2$ billion. Affiliates of parents in Europe, particularly Germany and the United Kingdom, more than accounted for the decline; partly offsetting was an increase in inflows from "other Middle East." Flows to

German-owned affiliates shifted to net outflows, reflecting declines in inflows for capital stock and increases in outflows on intercompany accounts. The decline in inflows to British-owned affiliates was mostly in intercompany account transactions. It was more than accounted for by several affiliates that trade in precious metals; they had substantial declines in payables, perhaps because of sharp declines in the value of, and demand for, such metals in 1980. Partly offsetting was an increase in inflows for capital stock to British-owned affiliates for the acquisition of a nationwide restaurant and hotel chain. The increase in inflows from "other Middle East" was primarily accounted for by intercompany account transactions of a new affiliates that had an increase in orders from its foreign parent (the host

Table 6.-Reinvested Earnings and Reinvestment Ratios of Incorporated Affiliates, 1979-80

*Less than $\$ 500,000( \pm)$. D Suppressed to avoid disclosure of data of individual companies.

1. Reinvestment ration not defined because reinvested earnings are negative.
government) for procurement of supplies needed in the parent's petroleum operations. The affiliate was previously owned by a U.S. petroleum company operating in the Middle East; it purchased U.S. parts, equipment, and engineering services and sold them to the Middle East company. In 1980, the U.S. company transferred the assets of its Middle East operations to the host government. As part of that transfer, this trade affiliate was acquired by the government.
Among "other" industries, inflows declined slightly in real estate from a high 1979 level and increased $\$ 0.2$ billion in finance. The decline in real estate was the result of large declines in inflows
from the United Kingdom and "other Western Hemisphere," which were almost offset by increases in inflows from the Netherlands and Canada. In finance, inflows to affiliates of parents in Europe and Canada increased substantially, as a result of several major acquisitions. Particularly large was an increase in inflows to Netherlandsowned affiliates.

## Reinvested earnings

Reinvested earnings-the difference between earnings (i.e., foreign parents' shares in net income), and gross dividends, of incorporated affiliates-increased 57 percent, to $\$ 6.2$ billion (table
6). The increase reflected a faster increase in earnings than in gross divi-dends- 51 percent compared with 30 percent. (See the following section for a discussion of changes in income, of which earnings is the major component.) The reinvestment ratio-the fraction of earnings reinvested-rose from 0.78 to 0.81 , continuing its uptrend.

Reinvested earnings increased substantially in all major industries. In petroleum, they increased 62 percent, to $\$ 2.7$ billion. The increase was primarily attributable to an increase in earnings; the reinvestment ratio, at 0.83 , remained about the same as in 1979.

Reinvested earnings of manufactur-

${ }^{*}$ Less than $\$ 500,000( \pm)$. D Suppressed to avoid disclosure of data of individual companies.

1. Income divided by the average of the beginning- and end-of-year direct investment positions.

Note.-" Reported" refers to universe estimates derived from reported sample data.
ing affiliates increased 57 percent, to $\$ 1.6$ billion. The increase was more than accounted for by affiliates manufacturing food products. The increase in food, in turn, was primarily accounted for by a Canadian-owned affiliate that realized an unusually large profit from the sale of its petroleum subsidiary in 1980. Excluding this affiliate, reinvested earnings of manufacturing affiliates would have declined. There were shifts to negative reinvested earnings in "other" manufacturing and machinery, and large declines in reinvested earnings in chemicals and metals. These changes were due to declines in earnings and in reinvestment ratios.

Reinvested earnings of trade affiliates increased 53 percent, to $\$ 1.0$ billion. The increase, which was largely accounted for by Japanese-owned affiliates, was attributable to increases in both earnings and the reinvestment ratio. In insurance, reinvested earnings increased 77 percent, to $\$ 0.4$ billion. Affiliates of parents in the United Kingdom and Germany accounted for most of the increase.

## Income

Income, the return on the direct investment position, increased 47 percent,
to $\$ 9.3$ billion (table 7). Income consists of foreign parents' equity in the net income (after deduction of U.S. income tazes) of their U.S. affiliates, plus interest on intercompany accounts, less withholding taxes on dividends and interest (table 8). Alternatively, it is the sum of (1) interest, dividends, and earnings of unincorporated affiliates, and (2) reinvested earnings of incorporated affiliates.
The increase in income was widespread among major industries. Income of petroleum affiliates increased sub-stantially-61 percent, to $\$ 3.3$ billionfollowing a 64 -percent increase in 1979. The increase primarily reflected higher petroleum prices, both because of price increases by OPEC countries and the gradual decontrol of crude oil prices in the United States beginning in the third quarter of 1979. Netherlandsowned affiliates accounted for much of the increase. Income of affiliates with parents in the Netherlands Antilles also increased substantially, partly reflecting the operations of a new affiliate.
In manufacturing, income increased 46 percent, to $\$ 2.5$ billion. There was an unusually large increase in income in food products, which was more than accounted for by the Canadian-owned affiliate mentioned above. Excluding this affiliate, income in manufacturing would have declined 62 percent. Declines were sizable in chemicals and machinery. In the latter, Canadianowned affiliates manufacturing heavy construction vehicles and agricultural equipment incurred large losses. Income declined moderately in "other" manufacturing. The decline was more than accounted for by German-owned affiliates producing automobiles and related products; these affliates suffered large losses in operations as a result of sluggish sales, high interest rates, and work stoppages due to labor disputes.

Income of trade affiliates increased 30 percent, to $\$ 1.4$ billion. The increase was largely accounted for by Japaneseowned affiliates and reflected a rise in the volume of these affliates' trade with Japan, particularly their imports of

Japanese automobiles and parts. Brit-ish-owned affiliates also had a sizable increase.

Insurance affiliates' income increased 34 percent, to $\$ 0.8$ billion. Affiliates with parents in the United Kingdom and Germany had large increases. The increase in income of affiliates in "other" industries was mostly in finance, largely accounted for by affiliates of parents in the Netherlands and Canada.
The rate of return on the direct investment position-income divided by the average of the beginning- and end-of-year positions-rose from 13 percent to 16 percent, as income increased faster than the average position- 47 compared with 24 percent. The rate of return rose in all major industries and on investment in all areas. The rise in petroleum was particularly large-from 23 percent to 30 percent--as was the rise on Canadian investment-from 9 percent to 21 percent, reflecting the transaction of the previously mentioned affiliate in the food industry.

## Fees and Royalties

Fees and royalties consist of net payments by U.S. affiliates to their foreign parents for the sale or use of intangible property, such as patents, industrial processes, trademarks, and copyrights; rentals for the use of tangible property; service charges; and film and television.
tape rentals. Net payments of fees and royalties, at $\$ 0.5$ billion, remained about the same as in 1979 (table 9). There were offsetting changes by industry ; increases in petroleum and manufacturing, largely machinery and chemicals, were virtually offset by a decline in trade. The increase in petroleum reflected per-barrel royalty charges against production above certain levels from the North Slope. The increase in
manufacturing was largely attributable to a rise in the use of patents held by foreign parents. The decline in trade was mostly due to increases in receipts of service fees by an affiliate from its parent in the Middle East and of management and service fees by Jap-anese-owned affiliates for warranty work performed for, and training given by the affiliates to executives from, their parent companies.

By RUSSELL B. SCHOLL

# The International Investment Position of the United States: Developments in 1980 

THE net international investment position of the United States increased a record $\$ 27.7$ billion in 1980, compared with an increase of $\$ 17.6$ billion in 1979 (table 1). U.S. assets abroad increased an extraordinary $\$ 94.7$ billion, compared with a $\$ 61.1$ billion increase; foreign assets in the United States increased $\$ 67.0$ billion, compared with a $\$ 43.5$ billion increase.

The major factors contributing to the increase in U.S. assets abroad were an $\$ 84.8$ billion capital outflow, largely reflecting a step-up in U.S. bank lending, and an increase in U.S. official foreign currency holdings. These outflows were augmented by $\$ 9.9$ billion in valuation and other adjustments, mainly due to a change in treatment of certain trade payables of a U.S. direct investor's overseas operations. The increase in foreign assets in the United States was largely accounted for by recorded capital inflows of $\$ 50.3$ billion, reflecting a shift to inflows for foreign official assets (mainly from Organization of Petroleum Exporting Country (OPEC) members) and a slowdown in the increase of U.S. bank liabilities to foreigners. These inflows were augmented by $\$ 16.8$ billion in valuation and other adjustments, mainly reflecting a 24 -percent rise in U.S. stock prices and the previously mentioned change in treatment of certain trade payables, that increased liabilities to unaffiliated foreigners reported by U.S. nonbanking concerns.

The net U.S. international investment position was $\$ 122.7$ billion at yearend 1980. U.S. assets abroad were $\$ 603.6$ billion, up 19 percent, and foreign assets in the United States were $\$ 480.9$ billion, up 16 percent.

Relationship of capital flows to the current account

In terms of accounting entries, the net capital flow component of the U.S. in-
ternational investment position is the mirror image of the balance on current account in U.S. international transactions, plus the allocation of special drawing rights (SDR's) by the International Monetary Fund (IMF), and an entry for the statistical discrepancy in the accounts. However, because capital flows and current account transactions are simultaneously determined and interact through exchange rates and other factors, there is no simple cause and effect relationship between them.

The U.S. current-account surplus was $\$ 3.7$ billion in 1980 , compared with $\$ 1.4$ billion in 1979. Despite the slowdown in economic activity abroad, exports remained relatively strong, spurred by earlier depreciation of the dollar against most major currencies and continued strength in agricultural exports. Sluggishness in the U.S. economy in the first half of the year limited increases in both petroleum and nonpetroleum imports. In the services accounts, net receipts of income on direct and portfolio investment combined were about unchanged, after being a source of substantial growth for the past few years.

Reflecting the difference between recorded capital outflows of $\$ 84.8$ billion and inflows of $\$ 50.3$ billion, net recorded capital outflows were $\$ 34.5$ billion compared with $\$ 23.7$ billion in 1979 . Alternatively, net capital outflows equaled the sum of the $\$ 3.7$ billion current-account surplus, the $\$ 1.2$ billion SDR allocation, and the $\$ 29.6$ billion statistical discrepancy (table 1).

For the second consecutive year, the statistical discrepancy indicated large unrecorded inflows- $\$ 29.6$ billion in 1980 following $\$ 21.1$ billion in 1979. To the extent that these unrecorded inflows were in the capital accounts, the increase in the net investment position in
both years would have been less. The large unrecorded inflows in 1979 and 1980 were probably boosted by recurrent international political and military tensions. (In addition, it should be noted that the Interagency Committee on Balance of Payments Statistics established a work group in September 1980 to investigate possible sources of the large statistical discrepancy in the past two years. The initial focus of the group was on financial market developments, where some evidence suggested that U.S. nonfinancial firms' borrowings from banks abroad were underreported or unreported by the firms or the banks. As a result of the investigation, modification and clarification of reporting instructions will be implemented. The group will next review reporting by nonbank financial institutions.)

## Changes in U.S. Assets Abroad

## Bank claims

Claims on foreigners reported by U.S. banks reached $\$ 204.0$ billion at the end of 1980, 30 percent higher than in 1979. The record $\$ 47.0$ billion increase accounted for almost half the increase in the value of total U.S. assets abroad (table 2). Much of the rise was in banks' own claims on their own foreign offices. U.S.-owned banks, in particular, became large net lenders to their foreign offices in 1980, a marked shift from their small net borrowed position in 1979 (table 2a).

Interest rate developments and official monetary measures were important factors influencing transactions between U.S.-owned banks and their foreign offices. When an 8 -percent marginal reserve requirement was imposed in October 1979 on increases in managed liabilities, including Eurodollar borrowings,
U.S. banks shifted some loans to their foreign offices to reduce the net deposit position to which the requirements were applied. This lending accelerated when additional marginal reserve requirements and domestic credit controls were imposed in March 1980 before being removed in July.

Another factor encouraging U.S. bank lending to foreigners was the more rapid decline of Eurodollar interest rates than the U.S. prime (and related borrowing) rates from their peaks in early April. U.S. banks increasingly quoted and booked their loans at London interbank offer (LIBOR) rates with their foreign offices and supplied funds to these same offices to make the loans. Some of the funds were, in turn, lent to U.S. nonbank residents, especially in the second quarter, because it was cheaper for U.S. corporations to borrow from foreign rather than domestic banking offices.

In response to these economic developments, claims of U.S.-owned banks on their foreign offices increased $\$ 12.8$ billion, compared with a $\$ 3.5$ billion decrease in 1979. By contrast, claims of foreign-owned banks in the United States on their offices abroad increased only $\$ 4.9$ billion, compared with a $\$ 9.3$ billion increase in 1979. Claims on foreigners, other than those on bank's forcign offices, rose strongly.

The geographic distribution of outstanding bank claims at the end of 1980 reflected the growth in lending by U.S.owned banks to Eurodollar centers in the Caribbean, raising the latter's share of total U.S. lending to foreigners to 23 percent, compared with 19 percent in 1979. The share of claims on Western Europe declined to 23 percent from 26 percent. The Canadian and Japanese shares were unchanged at 5 and 11 percent, respectively. Claims on Latin America remained at 27 percent of the total.

Worldwide, banks in the United States and U.S. bank branches overseas accounted for a large share of international bank credit in 1980. Either directly, or indirectly through interbank lending, they supplied an estimated 25 percent of gross external lending, compared with 17 percent in 1979.

1. Data for $1976-79$ are revised; data for 1980 are preliminary.

At yearend, U.S. bank assets abroad accounted for 34 percent of total U.S. assets abroad, up from 31 percent in 1979 and 29 percent in 1978 (table 3).

## Foreign securities

Holdings of foreign securities by U.S. residents increased $\$ 5.5$ billion in 1980 to $\$ 62.1$ billion at yearend, compared with an increase of $\$ 3.2$ billion in 1979. Holdings of foreign stocks increased substantially; bond holdings increased moderately.
U.S. residents' holdings of foreign stocks increased $\$ 4.1$ billion. Record net purchases of $\$ 2.3$ billion and price appreciation in most major foreign markets accounted for the increase. U.S.held Japanese stocks increased $\$ 1.8$ billion, $\$ 1.0$ billion of which reflected a 15 -percent appreciation of the Japanese yen against the dollar and a 9 -percent rise of the Tokyo stock exchange index. The Japanese Government also removed some restrictions on capital inflows. U.S.-held Canadian stocks increased $\$ 2.3$ billion, due both to an 18 percent rise in share prices and a $\$ 0.8$ billion increase in purchases, primarily in the first half of the year. The rise in share prices reflected Canada's position in energy and raw materials. Purchases of Canadian equities dropped sharply after October when U.S. investors re-
acted adversely to the Canadian Government's National Energy Program. The rise in stock values was partly offset by a 2 -percent depreciation of the Canadian dollar against the U.S. dollar. Purchases of Western European stocks, primarily of French and Dutch equities, increased $\$ 0.5$ billion after no net purchases in 1979. Price appreciation added another $\$ 0.4$ billion, but was partly offset by exchange rate losses. At yearend, the value of foreign stocks held was $\$ 18.9$ billion, up 28 percent from 1979.
U.S. residents' holdings of foreign bonds increased $\$ 1.4$ billion. New issues were $\$ 3.3$ billion, the lowest level since 1974, when the Interest Equalization Tax was removed from purchases of certain foreign securities by U.S. residents. High interest rates and rapid inflation in the United States limited all but the highest rated foreign borrowers from tapping the U.S. market. New issues of Canadian bonds were $\$ 1.8$ billion, unchanged from 1979. New issues from Western Europe, at $\$ 1.0$ billion, were down $\$ 1.0$ billion. Placements by developing countries, especially Israel, increased $\$ 0.4$ billion. Redemptions of foreign bonds, principally of World Bank issues, were stepped-up to $\$ 2.5$ billion, while net trading in outstanding bonds remained small.

At yearend 1980, U.S. holdings of foreign securities accounted for 10 percent of total U.S. assets abroad, down from 11 percent in 1979.

## U.S. direct investment abroad and other private assets

U.S. direct investment abroad increased 14 percent, or $\$ 26.7$ billion, to
$\$ 213.5$ billion, following a similar percentage increase in 1979. ${ }^{1}$ The rise consisted of $\$ 18.5$ billion in capital outflows, down $\$ 5.4$ billion from the previous year, and an unusual $\$ 8.2$ billion valuation adjustment. The latter reflected a change in the nature and status

1. For details, see the article "U.S. Direct Investment Abroad in 1980," in this issue.
of the operations of a Middle East branch of a U.S.-incorporated petroleum company that resulted in a change in accounting for the branch as reported to BEA by the company. As a result, the accounts payable of the branch were removed from the direct investment account and transferred to the account of U.S. nonbanking concerns as com-

Table 2.-Changes in the Net International Investment Position of the United States Reconciled with International Transactions Capital Flows

mercial liabilities to unaffiliated foreigners (line 39 , table 3 ); this transfer largely accounts for the adjustment in that line.

The lower level of direct investment capital outflows in 1980 was in part due to the final payment by a Middle East government to the U.S. petroleum company referred to above for purchase of the company facilities in the host country, and in part to increased payables in the form of U.S. parent firms' borrowings from finance affiliates in the Netherlands Antilles. Due to their need for funds, U.S. parents drew over $\$ 2.4$ billion from these foreign affiliates who, in turn, acquired funds primarily from new issues in the Eurobond market. Reinvested earnings were also lower, especially in industrial countries. At yearend, the book value of U.S. direct investment abroad accounted for about 35 percent of total U.S. assets abroad, down from 37 percent in 1979.

Claims on unaffiliated foreigners reported by U.S. nonbanking concerns increased $\$ 2.7$ billion. The rise consisted of a $\$ 0.9$ billion increase in financial claims, largely on Caribbean banking centers, and a $\$ 1.8$ billion increase in trade receivables. Combined, these claims accounted for 6 percent of total U.S. assets abroad at yearend.

## U.S. official reserve assets and other U.S. Government assets

U.S. official reserve assets increased a record $\$ 7.8$ billion, largely due to exchange market intervention purchases of German marks and, to a much lesser extent, of Japanese yen. The negative valuation (exchange rate) adjustment reflected the 13 percent appreciation of the dollar against the mark. Included in the net $\$ 6.3$ billion increase in foreign currency holdings were the $\$ 1.2$ billion in proceeds from the January sale of a Treasury mark-denominated note issued to German residents.

An exchange of special drawing rights (SDR's) for an increase in the U.S. reserve position with the International Monetary Fund (IMF) was associated with an increase in IMF quotas, 25 percent of which was to be subscribed in SDR holdings of member countries. Earlier in the year, there had

been an allocation of SDR's by the IMF. At yearend, U.S. official reserve assets were $\$ 26.8$ billion, accounting for 4 percent of U.S. assets abroad, slightly changed from 1979.
U.S. Government outflows for other than reserve assets were $\$ 5.1$ billion and reflected increased Export-Import Bank lending and stepped-up longterm credits to finance military sales contracts, especially to the Middle East. At $\$ 63.5$ billion, they comprised 11 percent of total U.S. assets abroad, unchanged from 1979.

## Changes in Foreign Assets in the United States

## Foreign official assets in the United States

Foreign official assets in the United States increased $\$ 16.2$ billion in 1980, primarily reflecting an increase in OPEC holdings. Foreign official assets had decreased $\$ 13.3$ billion in 1979 , due to large intervention sales of dollars in exchange markets by several major industrial countries.

Official dollar assets of OPEC members increased $\$ 12.7$ billion, more than double the 1979 increase, reflecting the 1979-80 surge in petroleum prices. Revenues from the sale of higher priced petroleum resulted in an OPEC current-account surplus of nearly $\$ 110$ billion, about 11 percent of which was placed in the United States, up from last year's 8 percent. The increase was in U.S. Treasury and agency bonds, and corporate stocks and bonds. There was a slight reduction in OPEC deposits in U.S. banks.

Official dollar assets of industrial countries increased $\$ 0.9$ billion; this net figure reflected mostly offsetting transactions among several countries. There were large decreases in dollar holdings of Germany, Italy, and Switzerland. Decreases for the first two countries were related to increased currentaccount deficits; the decrease in Swiss holdings mainly reflected swap dealings with domestic (Swiss) banks. Official dollar holdings of the Netherlands, France, and Belgium in the United States increased. Japan's dollar holdings increased sharply on an improved current-account balance, removal of some restrictions on capital inflows, and an appreciating yen. U.K. dollar holdings also increased substantially, reflecting its increased petroleum revenues and current-account surplus.
Official dollar assets of nonpetroleum developing countries increased $\$ 1.8$ billion.

## Other foreign assets

Other foreign assets in the United States increased $\$ 50.8$ billion in 1980 , to $\$ 305.2$ billion, compared with a $\$ 56.8$ billion increase in 1979. Capital inflows were lower, due to a reduction in U.S. bank borrowing from foreigners. Inflows and valuation adjustments were significantly larger for both foreign holdings of U.S. corporate stocks and nonbank liabilities.
The pronounced slowdown in the growth of U.S. bank liabilities to foreigners was attributable to a shift in relative costs of funds. The increase in

8. Maturity breakdown is not available: see line 43
central banks to domestic residents in country of issue foign currencies sold through foreign transferability.
liabilities was $\$ 10.7$ billion, compared with $\$ 32.6$ billion in 1979 . Following the imposition of the previously mentioned marginal reserve requirements on Eurodollar borrowings and a drop in domestic demand for funds, U.S. banks relied less on foreign source funds. U.S.-owned banks repaid $\$ 2.8$ billion to their foreign offices in 1980 , utilizing lower cost domestic source funds to finance U.S. loan demand in the last half of the year. Foreign-owned banks in the United States also reduced their utilization of funds from foreign offices-such borrowing increased $\$ 7.6$ billion, compared with a $\$ 14.0$ billion increase in 1979. Foreign-owned banks accounted for $\$ 46.5$ billion, or about one-third, of total liabilities to private foreigners reported by U.S. banks. By area, the largest slowdown occurred with the United Kingdom and the Caribbean, chiefly with foreign offices of U.S.-owned banks. These centers accounted for only 14 percent of the 1980 increase in bank-reported liabilities, compared with more than 75 percent in 1979. In contrast, there was a large increase in interoffice liabilities of U.S.based Canadian banks, which utilized lower cost funds from Canada. Bankreported assets, at $\$ 121.1$ billion, accounted for 25 percent of total foreign assets at yearend, down from 27 percent in 1979.

Foreign holdings of U.S. Treasury securities, excluding official holdings, rose $\$ 1.9$ billion in 1980 . The rise was largely accounted for by the $\$ 1.2$ billion placement of U.S. Treasury markdenominated notes with German residents in January. Among other foreign holdings of U.S. Treasury issues, there were increased purchases from Western Europe, partly offset by a reduction in holdings of the World Bank.

Record net foreign purchases of U.S. stocks, combined with rising stock prices, raised the value of equity holdings by $\$ 16.2$ billion. Private foreigners purchased $\$ 4.2$ billion in corporate stocks during the year. Combined with
a $\$ 12.0$ billion adjustment for price appreciation, the value of foreign holdings of U.S. corporate stocks jumped 34 percent to $\$ 64.5$ billion at yearend.

Combined holdings of the two most significant investors, the United Kingdom and Switzerland, which comprised two-thirds of all Western European holdings, increased 35 percent to $\$ 44.7$ billion by yearend. United Kingdom accounts increased 57 percent to $\$ 13.5$ billion at yearend. Appreciation of the pound against the dollar and the lifting of U.K. foreign exchange controls on portfolio investment in October 1979 allowed British residents and institutions to expand their foreign portfolios. Swiss holdings increased 26 percent to $\$ 16.7$ billion, almost entirely due to price appreciation. Also, there were larger net purchases by Germany and France. Canadian holdings increased substantially, and Japanese holdings moderately.
Net private foreign purchases of U.S. corporate and agency bonds were $\$ 1.2$ billion; an increase in purchases was more than offset by a $\$ 1.9$ billion negative adjustment for a decline in bond prices. U.S. corporations issued $\$ 0.4$ billion in Eurobonds directly, in addition to the $\$ 2.2$ billion issued through their finance affiliates incorporated in the Netherlands Antilles. (The latter issues are now included in the direct investment accounts. See Technical Note.) The increase in foreign purchases was faciliated by the use of convertible issues, particularly in energy related industries, and floating rate notes.

Combined foreign bonds and stock holdings, at $\$ 74.0$ billion, accounted for 15 percent of total foreign assets in the United States, up slightly from 1979.

Foreign direct investment in the United States increased 20 percent to $\$ 65.5$ billion at yearend, following a record 28 -percent increase in 1979. By area, there was a 37 -percent increase in inflows from Canada and a 16 -percent increase from Western Europe. Equity capital inflows, at $\$ 4.2$ billion, continued
at last year's record pace. However, there was a shift to small net outflows on intercompany accounts from net inflows of $\$ 3.2$ billion in 1979. Reinvested earnings increased 57 percent, largely reflecting higher earnings. ${ }^{2}$
Liabilities to foreigners reported by U.S. nonbanking concerns increased $\$ 11.7$ billion to $\$ 28.6$ billion at yearend. About $\$ 3.5$ billion was in the form of Eurodollar borrowings, particularly in the fourth quarter. In addition, commercial liabilities increased $\$ 1.6$ billion. There was a $\$ 6.2$ billion positive adjustment, primarily due to the previously mentioned change in the reporting of certain trade payables.

## Technical Note

Estimates for U.S. direct investment abroad and foreign portfolio holdings of U.S. securities have been revised to incorporate recently completed benchmark surveys by the Bureau of Economic Analysis and the Department of the Treasury. Changes affecting these accounts are discussed in detail in "U.S. International Transactions, First Quarter 1981," in the June 1981 Surver and "U.S. Direct Investment Abroad in 1980" in this issue.

For the investment position, there was little difference in the total value of foreign holdings based on the 1978 Treasury survey results for private and official U.S. corporate stocks, compared with the previous estimates of foreign stock holdings in the international investment position that had been based on a similar 1974 Treasury Survey. There was some reallocation of the geographic distribution of holdings.

The value of foreign bond holdings required significant adjustment to account for items not included in the Treasury survey. Eurobonds issued by U.S. corporations in bearer form were not included, but have been estimated by BEA and included in the international investment position. Eurobonds issued by Netherlands Antilles finance subsidiaries are no longer part of the portfolio capital estimates but are included in the U.S. direct investment abroad estimates (see Technical Note in June 1981 SURVEY.)

Foreign holdings of marketable U.S. Treasury bonds have been revalued at market prices beginning with the 1978 Treasury survey results.

[^9]
# U.S. Business Enterprises Acquired or Established by Foreign Direct Investors in 1980 

BB ASED on preliminary results of a BEA survey, foreign direct investors, either directly or through their U.S. affiliates, acquired or established 1,373 U.S. business enterprises in 1980, at a cost of $\$ 9.9$ billion. Details from that survey, and revised data for 1979, are presented below. Other highlights of the survey :

- Acquisitions of existing TJ.S. business enterprises accounted for $\$ 8.1$ billion of total investment outlays in 1980. Most of the outlays were by U.S. affiliates.

Note.-This survey was conducted under the supervision of James L. Bomkamp, Chief, Direct Investment in the United States Branch, International Investment Division. Joseph F. Cherry was project leader for editing and processing the forms. Richard Mauery designed the computer programs for data retrieval and analysis.

> The scope of this article is different from that of "Foreign Direct Investment in the United States in 1980," (page 40 of this issue). This article covers the full cost to foreign direct investors of acquiring or establishing U.S. business. enterprises, regardless of how or by whom financed, presents selected operating and financial data of the acquired or established enterprises, and provides information on ultimate beneficial ownership. "Foreign Direct Investment in the United States in 1980" covers existing U.S. affiliates as well as U.S. business enterprises acquired or newly established in 1980 . Capital flow data in that article include inflows from foreign parents to acquire or establish U.S. business enterprises. Those inflows, however, cannot be entirely separated from other capital flows between foreign parents and their U.S. affiliates, and, in any event, represent only the portion of the total cost of acquisitions and establishments that is financed by foreign parents.

- Outlays were well below the revised 1979 level of $\$ 15.3$ billion. Most of the year-to-year decrease was explained by the fact that there was no counterpart in 1980 to an unusually large (almost $\$ 4$ billion) 1979 acquisition in the petroleum industry.
- More than one-half of the number of 1980 investments were in real estate. Outlays were largest in manufacturing ( $\$ 3.4$ billion), real estate ( $\$ 2.7$ billion), retail trade ( $\$ 0.9$ billion), and petroleum ( $\$ 0.7$ billion).
- When classified by the country of the foreign parent-i.e., the country of the first foreign person in the ownership chain of the acquired or established U.S. business enterprise-more than 80 percent of total outlays were accounted for by parents in developed countries. The largest outlays were accounted for by parents in the United Kingdom ( $\$ 2.6$ billion), the Netherlands ( $\$ 1.6$ billion), Germany ( $\$ 1.3$ billion), and Canada ( $\$ 1.2$ billion). Among developing countries, the largest outlays ( $\$ 1.2$ billion) were accounted for by parents in the Netherlands Antilles.
- When classified by the country of the ultimate beneficial owner, outlays accounted for by investors in the Netherlands and the Netherlands Antilles were much lower, and those accounted for by investors in Canada, the Middle East, and the Far East much higher, than when classified by country of foreign parent.
- Foreign-source funds financed nearly two-thirds of total investment outlays.
- Total assets of all U.S. business enterprises acquired or established in 1980 were $\$ 40.5$ billion. Nearly one-half of the total was in banking.
- Acquired enterprises had total assets of $\$ 37.0$ billion and sales of $\$ 21.0$ billion; they employed 261,000 workers and owned 1.7 million acres of U.S. land.
- Newly established enterprises had total assets of $\$ 3.5$ billion and sales of $\$ 0.7$ billion; they employed 6,000 workers and owned 0.3 million acres of U.S. land.

These findings are from a BEA survey that covers two types of foreign direct investment in the United States: (1) acquisitions of existing U.S. business enterprises, including business segments or operating units of existing U.S. business enterprises, and (2) establishments of new U.S. business enterprises. ${ }^{1}$ Investments of either type may be made directly, by the foreign direct investor itself, or indirectly, by an existing U.S. affiliate of the foreign direct investor. The data cover investments in U.S. business enterprises that had total assets of over $\$ 500,000$, or that owned at least 200 acres of U.S. land at the time of acquisition or establishment. ${ }^{2}$

Data for 1979 have been revised upward substantially from those previ-

[^10]ously published. ${ }^{3}$ (A technical note at the end of this article discusses the revisions.) Data for 1980 are prelimi-nary-they are expected to be revised upward when late reports are included. ${ }^{4}$ Because of improvements in the timeliness and quality of reported data, revisions for 1980 should be much smaller than those for 1979. The 1980 revisions are likely to raise the number of investments and investors proportionately more than dollar values, because emphasis was placed on ensuring that large investments were included in the preliminary data.

Dollar values for new investments in a given year may be dominated by a relatively small number of large transactions, mainly acquisitions. Changes in the number or size of such large investments, or in their industry or country classification, from one year to the next may obscure any year-to-year changes in the underlying pattern of investment. Because of this, and because of the expected upward revisions for 1980, comparisons of preliminary 1980 data with revised 1979 data should be made with caution, especially for individual industries or countries. In this article, the primary focus is on 1980 data; limited comparisons with 1979 data are included.

The article is divided into two major sections. The first discusses investment transactions, including their number and type, their cost to investors, and the means by which they were financed. The second presents data on the operations of the U.S. business enterprises acquired or established.

## Investment Transactions ${ }^{\text {T}}$

Foreign direct investors, either directly or indirectly through their U.S. affiliates, acquired or established 1,373 U.S. business enterprises in 1980 (table

[^11]Table 1.-Investments, Investors, and Investment Outlays

r Revised.
p Preliminary
1). Investment outlays-the cost to investors of the equity interests acquired or established-were $\$ 9.9$ billion.

Most of the outlays- $\$ 8.1$ billionfinanced the 631 acquisitions of existing U.S. enterprises made during the year. The remainder financed the establishment of 742 new U.S. enterprises, mainly purchases of U.S. real estate.

The 1,373 investments were made by 1,498 investors- 940 foreign direct investors and 558 existing U.S. affiliates of foreign direct investors. ${ }^{6}$ Most of the

If the establishment and acquisition were made simultaneously, or if it was made clear to BEA that they were both part of a single investment transaction, only one report, reflecting the acquisition of a U.S. business enterprise by a foreign direct investor, would be required. In this case, the effect on the data would be the same as if the foreign direct investor acquired the enterprise directly, without first establishing the holding company. If either of the above conditions was not met, however, two investments-the establishment of a U.S. holding company by a foreign direct investor and the acquisition of a U.S. enterprise by a U.S. affiliate (i.e., the holding company)-would be reflected in the data (if the holding company met BEA's reporting requirements for a full-rather than par-tial-report). The distribution of investment outlays by source of financing, shown in table 8, is also affected by the structure of investment transactions, because it reflects the reporting entity's immediate, rather than original, source of funds.
6. The number of investors was larger than the number of investments because groups of two or more investors participated in some investments. For example, if two foreign direct investors-or a foreign direct investor and one of its U.S. affli-ates-jointly acquired direct investment equity interests in the same U.S. business enterprise, each investor was counted separately.
An investor making more than one investment during the year was counted once for each separate investment.
investments by foreign direct investors were to establish new enterprises, while most of those by U.S. affiliates were to acquire existing enterprises. Outlays by foreign direct envestors were $\$ 3.2$ billion, less than one-half of those by U.S. affiliates.

Investment outlays in 1980 were well below the 1979 level of $\$ 15.3$ billion, largely because of a decline-from $\$ 13.2$ billion to $\$ 8.1$ billion-in outlays for acquisitions. A major factor in the decline was an unusually large petroleum acquisition in 1979 that had no counterpart in 1980. Outlays for that acquisi-tion-at the time, the most expensive in U.S. history-were nearly $\$ 4$ billion; in contrast, outlays for the largest acquisition in 1980 were less than $\$ 0.7$ billion. Excluding the 1979 petroleum acquisition, outlays for acquisitions in 1980 were roughly $\$ 1.5$ billion below the adjusted 1979 total. The year-to-year decrease probably was not substantial if account is taken of expected upward revisions to the 1980 data because of late reports.

Again excluding the 1979 petroleum acquisition, the number (16) and cost ( $\$ 3.3$ billion) of large acquisitionsthose involving outlays of $\$ 0.1$ billion or more-were identical in 1979 and 1980.

The underlying strength of foreign direct investment in the United States persisted in 1980 despite a combination

Table 2.-Investments and Investors, by Industry of U.S. Business Enterprise

: Revised.
$>$
Preliminary.
of economic factors that worked to weaken such investment. The U.S. economy was slack through much of the year and economic activity slowed substantially in Europe. The resulting downward pressure on the earnings of foreign multinational companies reduced the amount of internally generated funds available for new investments, while soaring interest rates in this country made acquisitions more expensive for investors who required financing in U.S. capital markets.
The failure of these adverse short-run developments to produce a substantial slowing in the pace of foreign acquisitions underlines the importance of favorable long-run considerations, especially the size of the U.S. market and the relative stability of economic and political conditions in the United States. Also, the decline in the foreign currency value of the dollar during the past decade lowered the cost to foreigners of acquisitions in the United States.

## Industry

More than one-half of all 1980 investments were in real estate (table 2). Most of the remainder were in manufacturing and in agriculture and forestry. In both real estate and agriculture and forestry, the investments were largely purchases of unimproved land (classified as "establishments").

Investment outlays were highest in manufacturing ( $\$ 3.4$ billion), real estate ( $\$ 2.7$ billion), retail trade ( $\$ 0.9$ billion), and petroleum ( $\$ 0.7$ billion)
(table 3). Within manufacturing, $\$ 1.5$ billion of the outlays were in "other" and about $\$ 0.4$ billion each in food and nonelectrical machinery.

Roughly one-third of the outlays in "other" manufacturing were to acquire a controlling interest in a U.S. tobacco company that also produced and dis-
tributed other consumer products, including beverages. The company was acquired by the U.S. affiliate of a British conglomerate. The British firm had previously held a small (less than $10^{\circ}$ percent) equity interest in the U.S. company and had a marketing agreement with it for U.S. distribution of

spirits imported from the United Kingdom. The British firm sought control. initially contested by the U.S. company, to establish a direct marketing presence in the United States. (Outlays for this acquisition were the second largest for any single investment in 1980.)

Three other large acquisitions accounted for another one-third of the outlays in "other" manufacturing. The largest was the acquisition of a substantial minority interest in a U.S. auto manufacturer by a government-owned French auto manufacturer. (The French firm has an option to obtain a majority interest in the future.) The investment followed a series of production, marketing, and financing agreements between the two firms over the preceding 2 years, including loans to, and a less-than-10-percent equity investment in, the U.S. firm by the French firm. The French firm was primarily interested in expanding its U.S. sales through the U.S. firm's dealer network. The substantial increase in its equity position in the U.S. firm followed deterioration of the U.S. auto market in 1980 and the U.S. firm's resulting need for capital. The two other large acquisitions in "other" were a U.S. cement manufacturer acquired by a German-owned U.S. affiliate and a U.S. textile manufacturer acquired by a British-owned U.S. affiliate. Most of the remaining outlays in "other" were for acquisitions in printing and publishing and in plastics.

In food, four acquisitions accounted for almost all 1980 outlays. The two largest were in beverages. One was the acquisition of a large independent soft drink bottler by the U.S. affiliate of a Japanese company, the other the acquisition of a distiller by the U.S. affiliate of a French company. (The latter was related to the acquisition of the U.S. tobacco company mentioned above; the distiller was sold by the U.S. tobacco company in an unsuccessful attempt to fend off its own acquisition by the British firm.) The other two major acquisitions in food were of a grain milling firm by a Canadian company and of
a meat packer by the U.S. affiliate of a British company.

In nonelectrical machinery, most of the outlays were for small- and medium-sized investments, including several acquisitions of U.S. manufacturers of office computing and accounting machines. Only one investmentthe acquisition of a construction and mining machinery manufacturer by the U.S. affiliate of a Canadian conglomer-ate-involved outlays of as much as $\$ 0.1$ billion.

Other major investments in manufacturing included acquisitions of: a minority interest in a large pulp and paper manufacturer by a Britishowned U.S. affiliate; an industrial chemicals manufacturer by a Germanowned U.S. affiliate; and an electric motor manufacturer by a British-owned U.S. affiliate.

Investment outlays in real estate were $\$ 2.7$ billion. Most were for small investments in U.S. land. Of the 772 real estate investments, only 51 involved outlays larger than $\$ 10$ million; together, they accounted for $\$ 1.2$ billion of total outlays in real estate. The largest were acquisitions of a major office building in New York City; an industrial complex, including plants, offices, and warehouses, in New Jersey; and a shopping center in California, all by Netherlands investors or their U.S. affiliates.

Roughly two-thirds of the $\$ 0.9$ billion of outlays in retail trade were for a single acquisition, the largest in 1980. The U.S. affiliate of a diversified British manufacturing company acquired a nationwide restaurant and hotel chain. The U.S. chain, which relied to a large extent on automobile travel for business, had been weakened by rising oil prices and the subsequent reduction in such travel in the United States. The British conglomerate had accumulated large cash reserves from several divestitures in 1979, and had been seeking a major U.S. acquisition.

In petroleum, nearly one-half of total outlays were for the acquisition of an integrated U.S. petroleum company by a Canadian petroleum company's U.S. affiliate. The acquired company had
been a subsidiary of a U.S. conglomerate whose investments were mainly outside petroleum; the conglomerate's decision to sell its petroleum operations was part of a program to restructure its holdings and improve its cash position. Other outlays in petroleum were primarily to acquire U.S. firms engaged in oil and gas extraction.

Most of the remaining 1980 outlays were in financial industries- $\$ 0.4$ billion each in banking and insurance, and $\$ 0.3$ billion in finance, except banking. Two major investments resulted in acquisitions of minority interests in a U.S. bank, which was among the 15 largest in the Nation, and in a U.S. securities brokerage firm; two U.S. insurance companies and a U.S. commercial credit company were also acquired.

## Country of foreign parent

Tables 4 and 5 show, respectively, investors and investment outlays by country of foreign parent; table 6 shows investments and investment outlays by country of foreign parent. ${ }^{7}$ (The foreign parent is the first foreign person in the ownership chain of the acquired or established U.S. business enterprise.)

In 1980, almost 60 percent of all investors were classified in developed countries; they accounted for more than 80 percent of investment outlays. Most of their outlays were to acquire existing enterprises, mainly by U.S. affiliates. Most of the outlays of investors classified in developing countries were to establish new enterprises-mainly real estate purchases-and were by foreign direct investors themselves.

Of the $\$ 8.0$ billion in outlays classified in developed countries, parents in four countries-the United Kingdom,

[^12]the Netherlands, Germany, and Can-ada-had by far the largest totals. Parents in the United Kingdom accounted for $\$ 2.6$ billion of outlays, almost all for acquisitions by their U.S. affiliates. The two largest 1980 transac-tions-the acquisitions of the U.S. tobacco company and the nationwide restaurant and hotel chain discussed above-were both by U.S. affiliates of British parents; together, they accounted for nearly one-half of all outlays associated with British parents. Most other outlays were in manufacturing and in finance, except banking. Within manufacturing, they were mainly in nonelectrical machinery, electric and electronic equipment, textiles and apparel, and paper.

Parents in the Netherlands accounted for $\$ 1.6$ billion of outlays. About $\$ 1.0$ billion of the total was in real estate, including $\$ 0.3$ billion for the three largest 1980 real estate investments mentioned above, and roughly $\$ 0.5$ billion for the nearly 100 investments by the U.S. affiliates of two Netherlands holding companies. Outside real estate, outlays accounted for by Netherlands parents were concentrated in manufacturing and banking.

Outlays accounted for by German parents were $\$ 1.3$ billion. About onehalf of the total was in manufacturing; the largest outlays were in chemicals and cement. Outlays were over $\$ 0.1$ billion each in petroleum, mining (all in coal), and real estate.
Outlays accounted for by Canadian parents were $\$ 1.2$ billion. More than one-third of the total was in petroleum, almost all for a single acquisition. Another one-third was in manufacturing, mainly in food and nonelectrical machinery. Canadian parents were also active in real estate investments, which accounted for outlays of more than $\$ 0.2$ billion.

Foreign parents in the Netherlands Antilles accounted for outlays of $\$ 1.2$ billion-two-thirds of the total for all developing countries. Most of the outlays financed the nearly 400 investments in U.S. real estate by Netherlands Antillean parents.

## Country of ultimate beneficial owner

In the previous section, each investor and its outlays were classified by country of foreign parent-the first foreign person in the ownership chain of the acquired or established U.S. business enterprise. Each foreign parent may be owned by other persons. The ultimate beneficial owner (UBO) is the person in the ownership chain, beginning with the foreign parent, that is not owned more than 50 percent by another person. The country of the UBO may be the same as that of the foreign parent, a different foreign country, or the United States. If the foreign parent is not owned more than 50 percent by another person, the foreign parent and the UBO are the same.

As shown in the table below, a UBO and its country were identified for the investments of most investors and for more than 90 percent of investment outlays in both 1979 and 1980. Over 16 percent of total outlays in 1980, and 10 percent in 1979, were for investments for which the UBO and foreign parent countries differed.

|  | Investors |  | $\begin{gathered} \text { Investment } \\ \text { outlays } \\ \text { (millions of } \\ \text { dollars) } \end{gathered}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1979 | 1980 | 1979 | 1980 |
| Total...---........- | 1,770 | 1,498 | 15,317 | 9,865 |
| Investments with UBO identiffed. | 1,516 | 1,182 | 14,323 | 8,949 |
| Investments for which UBO and foreign parent countries differed... | 447 | 372 | 1,569 | 1,622 |

In table 7, distributions of investors and investment outlays by country of foreign parent are compared with those by country of UBO. Where the UBO could not be identified, countries of the foreign parent and of the UBO were assumed to be the same.

When data were classified by country of UBO, rather than by country of foreign parent, only the Netherlands; Bermuda and British Islands, Caribbean; and the Netherlands Antilles had lower outlays in 1980. (This was true in 1979 as well.) The largest differences were in the Netherlands ( $\$ 0.7$ billion) and the Netherlands Antilles ( $\$ 0.5$ bil-

- Revised.
${ }^{2}$ Preliminary.

1. The foreign parent is the first foreign person in the ownership chain of the acquired or established U.S. business enterprise. Where more than one investor participated in a given investment, the investment and investment outlays are classifitd by the country of the forefgn parent with the largest investment, i.e., the largest percent equity interest.
lion). Advantages to UBO's of holding their U.S. investments indirectly through these countries may include minimization of taxes, avoidance of regulatory constraint, and protection of privacy.

When classified by country of UBO, outlays were significantly higher for Canada, the United Kingdom, Switzerland, "other Middle East," and "other Africa, Asia, and Pacific." The largest differences were for Canada (mainly reflecting roughly 100 real estate investments made through Netherlands holding companies by two large Canadian real estate development companies) and for "other Africa, Asia, and Pacific" (reflecting a bank acquisition by Hong Kong interests, also through a Netherlands holding company).

The difference for "other Middle East" was accounted for by UBO's in member States of the Organization of Petroleum Exporting Countries (OPEC). Outlays by UBO's in all OPEC countries were $\$ 239$ million in 1980, down from $\$ 324$ million in 1979. In each year, they were 2 percent of outlays by all investors. Almost all OPEC outlays were to purchase real estate, including agricultural land.

## Sources of financing

Investment outlays, disaggregated by U.S. and foreign sources of financing,
are shown in table 8. All funds are classified by the investor's immediate, rather than original, source. Thus, for example, "other funds from foreign direct investors" (which are funds supplied by foreign direct investors to U.S. affiliates making investments) may include funds that foreign direct investors originally generated internally or borrowed from unaffiliated foreign sources.

Foreign-source funds financed $\$ 6.2$ billion-nearly two-thirds-of total investment outlays. Foreign direct investors accounted for $\$ 5.2$ billion of the total- $\$ 3.3$ billion of funds supplied to U.S. affiliates making investments, and $\$ 1.9$ billion of internally generated funds of foreign direct investors making investments. Most of the remainder was borrowed from unaffiliated foreign sources.
U.S.-source funds financed $\$ 3.7$ billion of total investment outlays. Funds borrowed from unaffiliated U.S. persons were $\$ 2.3$ billion, of which $\$ 0.4$ billion were from U.S. sellers of shares and $\$ 1.9$ billion from other unaffiliated persons, primarily financial institutions. Outlays financed by internally generated funds of U.S. affiliates making investments were $\$ 0.7$ billion. Funds from affiliated U.S. persons (which, for a U.S. affiliate making an investment, are funds from other U.S. affiliates of its foreign parent), and
funds from "other U.S. sources" were each $\$ 0.3$ billion.

The percentage of total outlays financed by U.S.-source funds was much lower in 1980 than in 1979. However, the distribution of 1979 outlays by source of financing was greatly affected by the financing of the large 1979 petroleum acquisition previously mentioned. A sizable share of the outlays for that acquisition was financed with loans from unaffiliated U.S. sources. Excluding that acquisition, the shares of total outlays financed by U.S.- and foreignsource funds, and by each of the sources within U.S.- and foreign-source funds, were almost identical in the 2 years. Thus, significantly different economic conditions in 1980, including sharply
higher U.S. interest rates and slower economic growth in the United States and abroad, did not alter the pattern of financing of new foreign direct investments.

Table 9 shows investment outlays for acquisitions of incorporated U.S. business enterprises, disaggregated by the method used to acquire the ownership interests. Such outlays were $\$ 5.4$ billion, two-thirds of those for all acquisitions. (The remaining one-third involved acquisitions of unincorporated enterprises, including business segments and operating units of incorporated enterprises.)

Of the $\$ 5.4$ billion total, $\$ 1.5$ billion were outlays to acquire ownership interests in U.S. business enterprises di-
rectly from the enterprises. Almost all of the remainder were outlays to acquire ownership interests in enterprises from unaffiliated U.S. sources: $\$ 1.4$ billion by tender offer, less than $\$ 0.1$ billion through open market purchases, and $\$ 2.2$ billion from other U.S. sources, mainly private purchases of large blocks of stock.

## Operations of Acquired or Established U.S. Business Enterprises

Two types of data on the operations of acquired or established U.S. business enterprises are presented in this section: (1) selected operating and financial data, such as assets, sales, and employment, disaggregated by industry of

Table 7.-Investors and Investment Outlays, by Country of Each Foreign Parent and by Country of Each Ultimate Beneficial Owner ${ }^{1}$

$r$ Revised.
${ }^{p}$ Preliminary.

## + Revised.

- Preliminary.
n.a. Not applicable.

1. Funds supplied by foreign direct investors to U.S. affliates making investments.
U.S. business enterprise and by country of foreign parent; and (2) data on land and mineral rights owned and leased, and the gross book value of land and plant and equipment, disaggregated by primary use. Unlike the data on investment outlays, which relate only to the equity interests obtained as a result of the investment transactions, these data cover the total operations of the acquired or established enterprise.
For acquired enterprises, data are for (or as of the end of) the full year preceding the year of acquisition; for newly established enterprises, they are projections for (or as of the end of) the first full year of operation. To show the size of all U.S. business enterprises acquired or established in the year, data on total assets of both are aggregated and discussed first, without regard to this difference in coverage. Data for acquisitions and establishments are then presented and discussed separately.
Total assets of all U.S. business enterprises acquired or established in 1980 were $\$ 40.5$ billion (table 10). Nearly one-half- $\$ 19.4$ billion-was in banking. (Four-fifths of the banking total were assets of the large U.S. bank acquired by a Netherlands parent whose

UBO is in Hong Kong.) Most of the remaining assets were in manufacturing (\$6.6 billion), finance, except banking ( $\$ 4.9$ billion), and real estate ( $\$ 4.1$ billion).

By country of foreign parent, assets, like investment outlays, were concentrated in developed countries. Assets of enterprises with parents in the Netherlands were the largest, at $\$ 17.8$ billion. They were concentrated in banking and real estate; most were assets of enter-
prises with UBO's in other countries. Assets of enterprises with Canadian parents were $\$ 5.7$ billion. More than one-half were in finance, except banking, mainly the assets of an acquired securities brokerage firm.
Enterprises with British parents had assets of $\$ 5.2$ billion. Of the total, $\$ 2.2$ billion was in manufacturing-by far the largest amount in manufacturing of all the countries or country groups shown in the table. Remaining assets

were concentrated in banking; finance, except banking; and retail trade.

About one-half of the $\$ 2.9$ billion of assets of enterprises with French parents were in manufacturing, mainly in autos; assets in banking and finance, except banking were also large. Assets of enterprises with German parents, at $\$ 1.6$ billion, were also concentrated in manufacturing, while those of enterprises with Swiss parents, at $\$ 2.0$ billion, were concentrated in banking and insurance.

Of the $\$ 4.3$ billion of assets for all developing countries combined, more than one-half were assets of enterprises with parents in the Netherlands Antilles. Enterprises with parents in OPEC countries had assets of $\$ 0.5$ billion. More than one-half were assets of a U.S. wholesale trade company that was previously owned by a U.S. petroleum company with operations in the Middle East. The wholesale trade company purchased and shipped U.S. parts, equipment, and engineering services to the Middle East operations. In 1980, the U.S. petroleum company transferred its oil production facilities and most of its refinery facilities in the Middle East to the host government. In conjunction with this transfer, the host government acquired the U.S. wholesale trade company. Most of the other assets of U.S. enterprises with OPEC parents were in real estate and in agriculture and forestry, largely reflecting purchases of U.S. land.

Total assets of all acquired or newly established enterprises were $\$ 3.8$ billion higher in 1980 than in 1979. By industry, they were concentrated more in banking and in finance, except banking, and less in petroleum, manufacturing, retail trade, and insurance.

The year-to-year increase in total assets occurred despite a decrease in investment outlays. For acquisitions, the relationship between total assets and investment outlays depends on several factors. For an acquisition of 100 percent of an enterprise, the cost of acquisition (i.e., investment outlays) is usually substantially less than the enterprise's total assets, because the purchaser is acquiring, and paying for, equity. Equity is equivalent to net assets
(assets less liabilities), not total assets. Where less than 100 percent ownership is acquired, cost will be even smaller relative to total assets because it reflects only the portion of net assets acquired. In addition, for both acquired and newly established enterprises, differences may exist between the market value of the enterprise and the value carried on its books.

The increase in total assets from 1979 to 1980 , despite the decrease in investment outlays, was mainly due to acquisitions in banking. In 1979, outlays to acquire banks were $\$ 0.9$ billion, and the banks had total assets of $\$ 13.1$ billion; in 1980, the comparable figures were $\$ 0.4$ billion and $\$ 19.4$ billion, respectively. (For banks, assets and liabilities reflect substantial loans and deposits that arise in the normal course of their business; thus, the difference between their total assets and net assets can be very large.) Contributing to the wider difference between outlays and assets in 1980 was the fact that, in 1979 , almost all of the outlays and assets in banking were associated with acquisitions of equity interests of 75 percent or more; in 1980 , on the other hand, the largest bank acquisition, which accounted for about one-half of outlays and 80 percent of assets in banking, was for a lessthan 50 -percent equity interest. ${ }^{8}$

Outside banking as well, acquisitions of majority equity interests (interests of larger than 50 percent) accounted for much larger shares of outlays for, and assets of, all acquisitions in 1979 than in 1980, as shown in the table below. In

[^13]particular, acquisitions of 100 -percent equity interests accounted for much larger shares of both outlays and assets in 1979.

## Acquisitions

U.S. business enterprises acquired in 1980 had assets of $\$ 37.0$ billion, more than 90 percent of the total for all acquired or established enterprises (table 11). Because assets of acquired enterprises accounted for such a large share of the total, their distributions by industry and by country of foreign parent are similar to those discussed above. By industry, assets were concentrated in banking ( $\$ 19.1$ billion), manufacturing ( $\$ 6.3$ billion), and finance, except banking (less than $\$ 5.0$ billion). Within manufacturing, total assets were largest in "other" manufacturing-mainly in autos and tobacco-and in nonelectrical machinery. By country of foreign parent, total assets were heavily concentrated in enterprises with parents in developed countries, mainly in the Netherlands, Canada, and the United Kingdom.

Enterprises acquired in 1980 had plant and equipment (P\&E), net of accumulated depreciation, of $\$ 3.9$ billion. Net P\&E accounted for only 11 percent of total assets because a large share of the latter was accounted for by financial assets of acquired banking, other finance, and insurance companies. By industry, net P\&E was concentrated in manufacturing, real estate, and retail trade. By country of foreign parent, it was concentrated in the United Kingdom, Canada, France, Germany, the Netherlands, and the Netherlands Antilles.
Net sales (or gross operating revenues) of acquired U.S. business enterprises were $\$ 21.0$ billion; about one-half of the total was in manufacturing. Acquired enterprises in wholesale trade, retail trade, banking, and "other" industries had sales of about $\$ 2.0$ billion each. Net income was $\$ 0.7$ billion, just over 3 percent of sales. As in 1979, many of the acquired enterprises had losses. This reflected the fact that firms in

weak financial condition, with presumably depressed market values, are attractive to potential buyers who believe that profitability can be substantially improved after the takeover.

Acquired enterprises employed 261,000 workers in 1980, and paid employee compensation of $\$ 4.2$ billion. More than one-half of both the employment and compensation were in manufacturingmainly in nonelectrical machinery, electric and electronic equipment, and "other." Outside manufacturing, the largest employment was in retail trade.

Acquired enterprises owned $1,679,000$ acres of land; nearly 90 percent of the total was timberland, almost all of which was held by the major paper manufacturer acquired in 1980 (table 12). Land used for agriculture totaled 61,000 acres. Most of the remaining land was used for coal mining, or "other industrial" purposes, mainly manufacturing, or was unimproved land held for investment. Acquired enterprises also owned about 20,000 acres of mineral rights, and leased 390,000 acres of land and mineral rights; both the mineral rights owned and the land and mineral rights leased were primarily used for
extraction of crude petroleum and natural gas.

The gross book value of property was $\$ 1.3$ billion. Unimproved land held for resale, residential property other than for transient lodging, and property for "other commercial and business" uses (mainly office buildings, warehouses, and shopping centers) each accounted for about $\$ 0.3$ billion. The gross book value of P\&E, at $\$ 5.7$ billion, was primarily for "other industrial" and "other commercial and business" uses.

## Establishments

Assets of U.S. business enterprises established by foreign direct investors or their U.S. affiliates in 1980 were $\$ 3.5$ billion (table 13). About one-half of the total was in real estate. Assets were large in manufacturing, banking, and finance, except banking. Within manufacturing, they were largest in nonelectrical machinery and in "other," mainly in instruments.

By country of foreign parent, assets of established enterprises were split almost evenly between parents in de-
veloped and developing countries, largely reflecting the country distribution of real estate investments.

Net P\&E was $\$ 0.6$ billion and was heavily concentrated in real estate. Sales or net revenues were $\$ 0.7$ billion, and were mainly in manufacturing, wholesale trade, and real estate. Small net losses were concentrated in manufacturing. Employment of established enterprises was 6,000, and employee compensation was $\$ 0.1$ billion; both were concentrated in manufacturing and "other" industries.

Newly established U.S. business enterprises owned 322,000 acres of U.S. land (table 14). About one-half of the land was used for agricultural purposes; most of the remainder was timberland. Establishments leased 121,000 acres of land and mineral rights, almost all of which was used for extraction of crude petroleum and natural gas. The gross book value of property was $\$ 1.1$ billion; the property was largely unimproved land held for investment or was for agricultural and "other commercial and business" uses. The gross book value of P\&E, which was mainly for "other commercial and business" uses, was $\$ 0.7$ billion.

## Technical Note

As shown in the table below, data for 1979 have been revised upward substantially :

|  | 1979 |  |
| :---: | :---: | :---: |
|  | Preliminary | Revised |
| Number of investments. <br> Investment outlays (millions of dollars) $\qquad$ | 792 11,532 | 1,568 15,317 |
| Total assets of U.S. business enterprises acquired or established (millions of dollars) | 29,588 | 36,627 |

By industry, revisions were concentrated in real estate and manufacturing; by country of foreign parent, they were concentrated in developed countries, particularly the European Communities (9).

The revisions reflected the fact that 1979 was the first year for which BEA collected these data, and, consequently, many reporters were unfamiliar with reporting requirements. Reports for many investments were filed too late for inclusion in the preliminary data; others were not included because the uneven quality of initially reported data required extra time for review and editing.

The timeliness and quality of reports on 1980 investments improved substantially,
compared with 1979, as reporters gained awareness of reporting requirements and experience in completing the forms, (Many 1979 reporters were also required to report in 1980. Moreover, many reports are completed by agents of investors-e.g., legal or accounting firms-rather than by the investors themselves. Such agents may have been responsible for reporting the investments of several investors, and their experience with 1979 reports may have resulted in improved reporting of 1980 investments.) In addition, BEA increased its emphasis on the timely filing and processing of reports on large investments. As a result, revisions for 1980 are expected to be much smaller than those for 1979.

## Quarterly and Monthly Constant-Dollar Manufacturing and Trade Inventories and Sales

Quarterly estimates of constant-dollar inventories, sales, and inventory-sales ratios for manufacturing and trade, for 1981: I-1981: II and monthly estimates for February 1981-June 1981 are shown below. Manufacturing and wholesale trade sales and inventory-sales ratios have been revised beginning with 1972 to incorporate revised Census Bureau shipments and sales series. Estimates for earlier periods are available on request from the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230.

## ${ }^{\mathrm{r}}$ Revised-See note above tables.

Preliminary.
ucts; instruments 2. Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.
Note.-Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory. Trade inventories are classified by the type of product sold by the establishment holding the inventory.
I-s ratios by 1972 sales. For manufacturing were obtained by weighting detailed industry I-S ratios by 1972 sales. For manufacturing, 20 industries were used; for merchant whole-
salers, 20 kinds of business; and for retail trade, 8 kinds of business.

## CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1977 edition of Business Statistics, biennial statistical supplement to the Survey of Current Business. That volume (available from the Superintendent of Documents for $\$ 6.25$ ) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1973 through 1976 ( $1966-76$ for major quarterly series), annually, 1947-76; for selected series, monthly or quarterly, 1947-76 (where available).

The sources of the data are given in the 1977 edition of Business Statistics; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 181-182. Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

| Unless otherwise stated in footnotes below, data through 1976 and descriptive notes are as shown in the 1977 edition of BUSINESS STATISTICS | 1978 | 1979 | 1980 | 1978 |  | 1979 |  |  |  | 1980 |  |  |  | 1981 |  |  |

1. Estimates (corrected for systematic biases) for Apr.-June and July-Sept. 1981 based on planned capital expenditures of business. Planned capital expenditures for the year 1981 appear on p .30 of the June 1981 Surver.
$\dagger$ The estimates for plant and equipment expenditures have been revised. An article describing that revision and containing revised estimates for 1947-77 begins on p. 24 of the Oct. 1980 Survey.

TI Data for the individual durable and nondurable goods industries appear in the Mar., June, Sept., and Dec. issues of the Surver.

## Page S-2

$\dagger$ Revised series. Estimates of personal income have been revised as part of the 1980 benchmark revision of the national income and product accounts. An article describing that revision appears in the Dec. 1980 Survey. Data for 1976-79 are available in a special supplement to the Survey. Pre-1976 data will be published in The National Income and Product Accounts of the United States, 1929-76: Statistical Tables.
\# Includes inventory valuation and capital consumption adjustments.

* New series. Detailed descriptions begin on p. 18 of the Nov. 1979 Survey. See note " $\dagger$ " for this page for information on historical data.
§ Monthly estimates equal the centered three-month average of personal saving as a percentage of the centered three-month moving average of disposable personal income.
\# Includes data for items not shown separately.
I Revised data for 1976-78 will be shown in the 1979 BUSINESS STATISTICS.

## Page S-3

1. Based on data not seasonally adjusted.

- See note "T" for p. S-2.
\# Includes data not shown separately.
$\ddagger$ Revised series. Data for both the manufacturing and retail sectors have been revised. For manufacturing see note " $\psi$ " for $p$. S-4. For retail see note " $\psi$ " for p. S-10.
$\dagger$ See note " $\dagger$ " for $\mathrm{p} . \mathrm{S}$-4.
§ See note " $t$ " for p. S-10
(a) See note " $\dagger$ " for p. S-9.
* New series. Data back to 1967 are available from the National Income and Wealth Division, Bureau of Economic Analysis.

## Page S-4

1. Based on data not seasonally adjusted.
$\ddagger$ Revised series. Data for both the manufacturing and retail sectors have been revised. For manufacturing see note " $\dagger$ " for this page. For retail see note " $\dagger$ " for p . S-10.
$\dagger$ Revised series. Data revised back to 1958 to reflect (1) benchmarking of shipments and inventories to the 1974, 1975, and 1976 Annual Surveys of Manufacturers, (2) recalculation of new orders estimates, and (3) updating of the seasonal factors. A detailed description of this revision and historical data appear in reports "Manufacturers' Shipments, Inventories, and Orders"'M3-1.7 (1958-1977), M3-1.8 (1967-1978), M3-1.9 (1977-1979), and M3-1.10 (1972-1980), available from the Bureau of the Census, Washington, D.C. 20233.
§ See note " $\dagger$ " for p. S-10
@ See note " $\dagger$ " for p. S-9.

* New series. Data back to 1967 are available from the National Income and Wealth Division, Bureau of Economic Analysis.
\# Includes data for items not shown separately.

## Page S-5

1. Based on data not seasonally adjusted.
$\dagger$ See note " $\dagger$ " for p. S-4.
\# Includes data for items not shown separately.
$\ddagger$ Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; unfilled orders for other nondurable goods industries are zero.

I For these industries (food and kindred products, tobacco, apparel and other textile products, petroleum and coal, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

## Page S-6

1. Based on unadjusted data.
2. This series has been discontinued.
$\ddagger$ Compiled by Dun \& Bradstreet, Inc.
\# Includes data for items not shown separately.
$\S$ Ratio of prices received to prices paid (parity index).
Ii Data through 1977 are for urban wage earners and clerical workers; beginning Jan. 1978, there are two indexes, all wage earners and clerical workers, revised (CPI-W), and all urban consumers (CPI-U). These indexes reflect improved pricing methods, updated expenditure patterns, etc.; complete details are available from the Bureau of Labor Statistics, Washington, D.C. 20212.

* New series. Earlier data are available from The Bureau of Labor Statistics, Washington, D.C. 20212.
$\dagger$ Beginning Jan. 1978, CPI-U.

## Page S-7

1. Annual average computed by BEA.
2. Indexes are no longer available.
§ For actual producer prices of individual commodities see respective commodities in the Industry section beginning p. S-22. All data subject to revision four months after original publication.
$\dagger$ Revised series. Stage-of-processing producer price indexes have been revised back to 1976 to reflect updated industry input-output relationships and improved classification of some products
\# Includes data for items not shown separately.
$\ddagger$ Effective Mar. 1980 Survey, data have been revised back to 1967 to reflect new seasonal factors. Effective Feb. 1981, data have been revised back to 1976 to reflect new seasonal factors.

* New series. Data back to 1975 will be shown in the 1979 BUSINESS STATISTICS.

## Page S-8

1. Computed from cumulative valuation total.
2. Data shown here are based on 1980 seasonal factors. Effective Jan. 1981, data are no longer seasonally adjusted.
T Beginning Jan. 1979 Survey, monthly and annual data he e been restated to reflect the purchasing power of the dollar as measured by finished goods; comparable data for periods prior to November 1977 will be shown in the 1979 BUSINESS STATISTICS.
$\ddagger$ Beginning Jan. 1978, based on CPI-U; see note " $\ddagger$ " for p. S-6.
\# Includes data for items not shown separately
§ Data for July and Oct. 1980, and Jan., Apr., and July 1981 are for five weeks; other months four weeks.
(a) Data for new construction have been revised back to Jan. 1975 and are available from the Bureau of the Census, Washington, D.C. 20233.
@@ Monthly revisions back to Jan. 1975 will be shown in the 1979 BUSINESS STATISTICS.
$\ddagger \ddagger$ Monthly data back to Jan. 1970 on the $1972=100$ base will be shown in the 1979 BUSINESS STATISTICS.

## Page S-9

1. Index as of Aug. 1, 1981: building, 313.5; construction, 332.8.

I Home mortgage rates (conventional first mortgages) are under money and interest rates on p. S-15.
§ Data include guaranteed direct loans sold.
@ Monthly data back to 1972 on the $1972=100$ base are available upon request.
$\dagger$ Effective April 198! Surver, wholesale trade data have been revised for Jan. 1973-Jan. 1981. Revised data are available upon request.

Page S-10

1. Advance estimate.
2. Effective Jan. 1979 data, sales of mail-order houses are included with department store sales.
$\dagger$ Effective April 1981 SURVEY, retail trade data have been revised for the years 1971-1980. Effective April 1979 SUrvey, data have been revised from 1967-1970. Revised data and a summary of the changes are available from the Census Bureau, Washington, D.C. 20233.
\# Includes data for items not shown separately.

## Page S-11

1. As of July 1.
2. The accounts receivable series have been discontinued.
\# Includes data for items not shown separately.
$\ddagger$ Revisions for Jan. 1977-Oct. 1979 appear in "Current Population Reports," Series P-25, No. 870. Revisions for July-Dec. 1976 appear in "Populations: Estimates of the Population of the United States and Components of Change-1940-79," P-25 No. 802 (June 1979), Bureau of the Census.
$\dagger$ Effective July 1981 SURVEY, data have been revised to reflect new benchmarks and new seasonal adjustment factors. Effective July 1980 Survey, data have been revised based on March 1979 benchmark levels and updated seasonal adjustment factors; they are not comparable with previously published data. Effective Oct. 1979 Survey, data have been revised based on March 1978 benchmark levels and updated seasonal adjustment factors; effective Oct. 1978 Survey, data have been revised to conform to the 1972 SIC and adjusted to March 1977 benchmark levels, therefore, data are not strictly comparable with earlier periods. See "BLS Establishment Estimates Revised to March 1979 Benchmarks," in the July 1980 issue of Employment and Earnings. See also Oct. 1979 and Oct. 1978 issues of Employment and Earnings for similar articles.
II Effective with the Feb. 1981 SURVEY, the labor force series reflect new seasonal factors. Data have been revised back to 1976; comparable monthly data for 1976-80 appear in the Feb. 1981 issue of Employment and Earnings, U.S. Department of Labor, Bureau of Labor Statistics.

* New series. The participation rate is the percent of the civilian noninstitutional population in the civilian labor force. The employment-population ratio is employment as a percent of the total noninstitutional population, 16 years and over.

## Page S-12

$\dagger$ See corresponding note on $\mathrm{p} . \mathrm{S}$ - 11
§ Effective October 1978 SURVEY, includes data formerly shown separately under ordnance and accessories,
(a) Formerly shown as Electrical equipment and supplies
$\pi$ Production and nonsupervisory workers.
$\ddagger$ This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision.

T Production and nonsupervisory workers.
$\ddagger$ Earnings in 1967 dollars reflect changes in purchasing power since 1967 by dividing by Consumer Price Index; effective Mar. 1979 Survey, data reflect new seasonal factors for the CPI.
§ Wages as of Aug. 1, 1981: Common, \$13.09; Skilled, \$16.98.
\# Includes data for items not shown separately.
@ Insured unemployment (all programs) data include claims filed under extended duration provisions of regular State laws; amounts paid under these programs are excluded from state benefits paid data
@(@) Insured unemployment as a percent of average covered employment in a 12-month period

## Page S-15

1. Average for Dec.
2. Average for the year
3. Daily average.
4. Beginning Jan. 1981, data are for top-rated only. Prior data cover a range of top-rated and regional dealer closing rates
\# Includes data for items not shown separately
§ For demand deposits, the term "adjusted" denotes demand deposits other than domestic commercial bank and U.S. Government, less cash items in process of collection; for loans, exclusive of loans to and Federal funds transactions with domestic commercial banks and include valuation reserves (individual loan items are shown gross; i.e. before deduction of valuation reserves).
II Adjusted to exclude domestic commercial interbank loans and Federal funds sold to domestic commercial banks.
$\ddagger$ Data beginning Dec. 1978 reflect a reduction in the number of banks reporting (from 317 to 171) and changes in consolidation basis as well as content of several asset and liability items. Unless otherwise stated, comparable data for earlier periods will be available later.

* New series. Beginning Dec. 1978, data are for all investment account securities; compaable data for earlier periods are not available.
$\dagger$ Revised series. Data are now monthly averages and the coverage has been expanded. Comparable data back to Dec. 1972 are available from the Federal Reserve Board, Washington, D.C. 20551.
$\ddagger \ddagger$ Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent. Data through Oct. 1979 show a maturity for 120-179 days. Beginning Nov. 1979, maturity is for 180 days.
@ Data through Oct. 1979 show a maturity for 150-179 days. Beginning Nov. 1979, maturity is for 180 days.

## Page S-16

1. Data are for fiscal years ending Sept. 30 and include revisions not distributed to the months.
$\dagger$ Beginning Jan. 1979 SURVEY, the consumer credit group has been completely restructured; comparable data for periods prior to Nov. 1977 are available from the Federal Reserve Board, Washington, D.C. 20551.
\# Includes data for items not shown separately
§ The Department of Health, Education, and Welfare was redesignated as the Department of Health and Human Services by the Department of Education Organization Act.

## Page S-17

1. Total for Jan.-May and Oct.-Dec.
2. Total for 11 months; production not available for Aug
§ Or increase in earmarked gold ( - ).
$\dagger$ The Federal Reserve has redefined the monetary aggregates. The redefinition was prompted by the emergence in recent years of new monetary assets-for example, negotiable order of withdrawal (NOW) accounts and money market mutual fund shares-and alterations in the basic character of established monetary assets-for example, the growing similarity of and substitution between the deposits of thrift institutions and those of commercial banks. Monthly
data from 1959 to date are available from the Banking Section of the Division of Research and Statistics at the Federal Reserve Board, Washington, D.C. 20551.
$\ddagger$ Composition of the money stock measures is as follows:
MI-A.-This measure is currency plus demand deposits at commercial banks. It is essentially the same as the old M1 except that it excludes demand deposits held by foreign commercial banks and official institutions.
MI-B.-This equals M1-A plus interest-earning checkable deposits at all depositary institutions-namely NOW accounts, automatic transfer from savings (ATS) accounts, and credit union share draft balances-as well as a small amount of demand deposits at thrift institutions that cannot, using present data sources, be separated from interest-earning checkable deposits.
M2.-This measure adds to MI-B overnight repurchase agreements (RP's) issued by commercial banks and certain overnight Eurodollars (those issued by Caribbean branches of member banks) held by U.S. nonbank residents, money market mutual fund shares, and savings and small-denomination time deposits (those issued in denominations of less than $\$ 100,000$ ) at all depositary institutions. Depositary institutions are commercial banks (including U.S. agencies and branches of foreign banks, Edge Act corporations, and foreign investment companies), mutual savings banks, savings and loan associations, and credit unions.
M3.-This measure equals M2 plus large-denomination time deposits (those issued in denominations of $\$ 100,000$ or more) at all depositary institutions (including negotiable CD's) plus term RP's issued by commercial banks and savings and loan associations.
L.-This broad measure of liquid assets equals M3 plus other liquid assets consisting of other Eurodollar holdings of U.S. nonbank residents, bankers acceptances, commercial paper, savings bonds, and marketable liquid Treasury obligations.
$\ddagger \ddagger$ Includes ATS and NOW balances at all institutions, credit union share draft balances and demand deposits at mutual savings banks.

* Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.
(a) Small time deposits are those issued in amounts of less than $\$ 100,000$. Large time deposits are those issued in amounts of $\$ 100,000$ or more and are net of the holdings of domestic banks, thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions.
\# Includes data for items not shown separately.

. Average for crop year; Aug. 1-Jul. 31
3. For five weeks; other months four weeks.
4. Monthly average.
5. Average for 11 months; no price for Oct.
6. Less than 500 bales.

Bales of 480 lbs.
T Based on $480-\mathrm{lb}$. bales, preliminary price reflects sales as of the 15 th ; revised price reflects total quantity purchased and dollars paid for the entire month (revised price includes discounts and premiums).
\# Includes data not shown separately.
(a) Effective Apr. 1979 SURVEY, data include 600 additional firms; comparable data back to Jan. 1977 (except for slacks, jean cut, casual, shown on p. S-36) will appear in the 1979 BUSINESS STATISTICS.

## Page S-36

1. Annual total includes revisions not distributed to the months.
2. Estimates of production, not factory sales.
3. Effective Jan. 1980, passenger vans previously reported as passenger cars are now included with trucks.
4. Effective Jan. 1979, data are not directly comparable with data shown for earlier periods because of the inclusion of Volkswagens produced in the U.S.
5. Monthly data for 1980 exclude exports for off-highway trucks; not strictly comparable with data shown for other periods.
(a) See note "@" p. S-35.
\# Total includes backlog for nonrelated products and services and basic research.
$\S$ Domestics comprise all cars assembled in the U.S. and cars assembled in Canada and imported to the U.S. under the provisions of the Automotive Products Trade Act of 1965. Imports comprise all other cars.
§ Courtesy of R.L. Polk \& Co.; republication prohibited. Because data for some states are not available, month-to-month comparisons are not strictly valid.
$\ddagger$ Excludes railroad-owned private refrigerator cars and private line cars.
$\dagger$ Effective Feb. 1981 SURVEY, data have been restated to reflect new seasonal factors. Annual and monthly data back to 1967 are available upon request.

## BUSINESS STATISTICS 1979

BUSINESS STATISTICS 1979 is the 22nd biennial supplement to the monthly SURVEY OF CURRENT BUSINESS.
Annual data for most of the approximately 2,600 series are shown from 1947 to 1978 . Quarterly series are shown from 1968 to 1978 , and monthly series from 1975 to 1978 . For about 400 key series, a longer historical period of monthly or quarterly data is shown in an appendix.

The 1979 edition, like its predecessors, contains detailed explanatory notes describing sources, definitions, methods of compilation, revisions, and the time span for which the data are available. The explanatory notes reflect information available in October 1980. The footnotes in current issues of the SURVEY of Current Businessprovide information that has become available since that time.

BUSINESS STATISTICS 1979 can be ordered from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington,D.C. 20402 at a price of $\$ 8.50$. Order by stock number 003-010-00089-9; enclose check or money order payable to Superintendent of Documents. BUSINESS STATISTICS 1979 may be ordered by telephone (202) 783-3238 and charged to Master Charge, VISA, or deposit account at the Superintendent of Documents.

[^0]:    2. The capital consumption adjustment also places the using up in production of fixed capital on a consistent basis with respect to service lives ( 85 percent of Internal Revenue Service Bulletin F for equipment and nonresidential structures) and depreciation formulas (straight-line).
[^1]:    Note.-Patricia C. Walker supervised the preparation of the revised estimates published in this article and wrote part of the technical note. Patricia E. DiVenuti and Ralph Kozlow prepared the estimates. Saletha D. Corbin, Edward L. Simons, and Russell O. Tutt assisted in tabulating the data. Smith W. Allnutt III designed the necessary computer programs.

[^2]:    1. Detailed findings and a methodology of the 1977 benchmark survey were published in U.S. Direct Investment Abroad, 1977, U.S. Department of Commerce, Bureau of Economic Analysis. Copies may be obtained from the Superintendent of Documents, U.S. GPO, Washington, D.C. 20402, price $\$ 10.00$, stock number 003-010-00079-1. Two types of data were collected in the 1977 survey: first, direct investment position and balance of payments data. which are the subject of this article, and second, U.S. parent and foreign affiliate fnancial and operating data, which were summarized in International Investment Division, " 1977 Benchmark Survey of U.S. Direct Investment Abroad," Survex of Current Business 61 (April 1981): 29-37.
[^3]:    2. The position is sometimes confused with, and should be distinguished from, total assets of the affiliates themselves, which are the sum of total owners' equity held by, and total liabilities owed to, both U.S. direct investors and all other persons. According to the 1977 benchmark survey, foreign affiliates had total assets of $\$ 829.6$ billion, compared with a U.S. direct investment position abroad of $\$ 146.0$ billion, at yearend 1977. Banking affiliates accounted for just over one-half of the difference between the two figures. For nonbank affiliates, the comparable figures were $\$ 494.6$ billion and $\$ 141.6$ billion, respectively.
[^4]:    D Suppressed to avoid disclosure of data of individual companies.

[^5]:    4. The legislation and its accounting treatment are summarized in Obie G. Whichard, "U.S. Direct Investment Abroad in 1979," Surver 60 (August 1980) : 20-21.
[^6]:    Note.-The quarterly survey from which these annual estimates were derived was conducted under the supervision of James $L$. Bomkamp, Chief, Direct Investment in the United States Branch, International Investment Division. Project leader Gregory G. Fouch was responsible for preparing estimates. Marie Colosimo edited and processed the forms. Ronald Reed designed the computer programs for data retrieval and analysis.

[^7]:    1. The foreign parent is the first foreign person in the chain of ownership of a U.S. affiliate. However, the data in this article cover positions and transactions of U.S. affiliates, not only with their foreign parents, so defined, but also with foreign affiliates of their foreign parents. Thus, to simplify terminology in this article, the term "foreign parent" is used more broadly to include foreign affiliates of foreign parents as well.

    In classifying data by country of foreign parent in this article, the country used is that of either the foreign parent, as strictly defined, or of the foreign affiliate of the foreign parent with whom the transaction occurred. It should be noted that the country of the foreign parent may differ from that of the ultimate beneficial owner (UBO). The UBO is that person, beginning with the foreign parent, that is not owned more than 50 percent by another person. Affliates whose foreign parents are in the Netherlands Antilles, Panama, Bermuda, and, to a lesser degree, the Netherlands, are especially likey to have UBO's in other countries.

[^8]:    ( Text continued on page 51 )

[^9]:    2. For details, see the article "Foreign Direct Investment in the United States in 1980," in this issue.
[^10]:    1. Foreign direct investment in the United States is the ownership or control, directly or indirectly by one foreign person, of 10 percent or more of the voting securities of an incorporated U.S. business enterprise or an equivalent interest in an unincorporated U.S. business enterprise. A foreign person is any individual, branch, partnership, association, trust, corporation, government, or government enterprise resident outside the United States. A business enterprise is defined to include the ownership of real estate. However, residential real estate held exclusively for personal use is excluded from coverage.
    2. Investments not meeting either of these criteria had to be reported, but only limited information was required, primarily for identification purposes. There were 1,116 such "partially exempt" investments reported for 1980; total assets of the U.S. enterprises acquired or established were less than $\$ 0.5$ billion. For 1979, there were 742 such investments reported; assets were less than $\$ 0.3$ billion.
[^11]:    3. See International Investment Division, "U.S. Business Enterprises Acquired or Bstablished by Foreign Direct Investors in 1979," Survey of Current Business 61 (January 1981) : 28-39.
    4. Revised data for 1980, and preliminary data for 1981, will be published in spring 1982.
    5. The number of investments and investors, their distributions by type of investment and by type of investor, and the distributions of investment outlays by type of investment and by type of investor, shown in tables 1 through 9 , are affected by the structure of investment transactions. For example, a foreign direct investor may establish a U.S. holding company to acquire a U.S. business enterprise.
[^12]:    7. Where more than one investor participated in a given investment: (1) each investor-and its outlays-were classified by the country of each individual foreign parent, and (2) the investmentand total outlays associated with the investmentwere classified by the country of the foreign parent with the largest equity interest in the U.S. business enterprise. In 1980, as in 1979, there were only a few investments with foreign parents in more than one country, and, in all these cases, outlays were small. The following discussion focuses on investors and outlays classified by the country of each foreign parent.
[^13]:    8. Before the end of 1980 , the foreign parent acquired sufficient additional equity in the U.S. bank to give it a controlling interest. Outlays associated with that transaction are not included in these data because they were to acquire an addi-
[^14]:    tional equity interest, rather than an initial interest of 10 percent or more, in the U.S. business enterprise.

[^15]:    - Revised.

[^16]:    r Revised.
    ${ }^{\text {P P Peliminary. }}$.
    D Supspressed to avoid disclosure of data of individual companies.
    D Suppressed to avoid disclosure of data of individual companies.

    1. The foreign parent is the first foreign person in the ownership chain of the established U.S. business enterprise. Where more than one investor participated in a given investment, data for the established U.S. business enterprise are classified by the country of the foreign parent with the largest investment, i.e., the largest percent equity interest.
    2. Sales or gross operating revenue, excluding sales taxes.
