# the BUSINESS SITUATION 

ECONOMIC performance was lackluster in the third quarter. BEA's composite index of coincident indica-tors-which reflects the movements of nonagricultural employment, real personal income less transfer payments, industrial production, and real manufacturing and trade sales-fell at monthly rates of 0.3 percent in July and 0.6 percent in August. The index had fallen in 2 of the 3 months of the second quarter, and for the quarter as a whole was down 0.7 percent. Real GNP also showed little strength. On a revised basis, it increased 2 percent at an annual rate in the second quarter and, on the basis of information available in midSeptember, it appears to have increased again in the third quarter, but less than in the second. ${ }^{1}$

- Real personal consumption expenditures (PCE) increased less than 1 percent at an annual rate in the third quarter. Weakness was widespread and particularly apparent in durables, where each major category declined. The weakness occurred despite sizable increases in real disposable personal income in both the

[^0]second and third quarters (see the following discussion of "Personal Income").

- Although information on fixed investment other than residential construction is sketchy, it is clear that fixed investment registered a substantial drop in the third quarter. In producers' durable equipment, there were large declines in purchases of trucks, aircraft, and computers. Further weakening was evident in purchases of equipment-such as agricultural machinery, construction machinery, and mining and oil field equipment-used in industries that have been hard hit in the recession. Nonresidential structures declined, largely due to a further decline in oil and gas well drilling. Other components remained flat. The article on the quarterly BEA plant and equipment expenditures survey, which appears later in this issue, throws additional light on business fixed investment.
- Residential investment again registered a moderate increase. As described in the following discussion of "Housing and Mortgage Markets," much of the third-quarter increase reflected activity on government-assisted multifamily projects. Housing starts and financial conditions suggest that the long slide in residential investment is over.
- Little information is yet available about the other components of final sales-net exports and government purchases. It appears that together they contributed a small plus to the third-quarter change in final sales. The total of these sales appears to have shown little change in the third quarter.
- For the change in business inventories, reasonably complete information is available only for motor vehicles (see the following discussion of "Motor Vehicles"). Accumulation of motor vehicle inventories was at a slightly higher rate in the third quarter than in the second, so that the
contribution to the change in GNP was a plus-about $\$ 2$ billion. ${ }^{2}$ This contribution contrasts sharply with that in the second quarter, when-as motor vehicle inventories swung sharply from a substantial decumulation in the first quarter to accumulation in the second-these inventories added about $\$ 12 \frac{1}{2}$ billion.

Prices.-After increasing at annual rates of only about $4 \frac{1}{2}$ percent in the first half of the year, the GNP fixedweighted price index accelerated about 2 percentage points in the third quarter. A substantial part of the acceleration was in the prices of PCE. PCE energy prices were the single most important factor. After a $131 / 2$ percent decline in the second quarter, they were up in the third, reflecting gasoline price increases late in the second quarter and early in the third. Food prices decelerated from a 4-percent increase registered in the second quarter, and prices for PCE other than food and energy accelerated from a 6 -percent increase, mainly due to an acceleration of residential rents.

## Personal Income

Personal income increased $\$ 491 / 2$ bil-lion-the largest increase in recent quarters (table 1). The step-up in the third quarter was largely due to transfer payments. These payments included a $\$ 12$ billion cost-of-living increase under several Federal transfer payment programs; about $\$ 11$ billion was in social security benefits. A smaller increase than in the second quarter in unemployment insurance benefits was due to a decline in payments under extended benefit programs. The increase in wage and salary disbursements was again weak. In the commodity-producing industries, disbursements declined again; in

*Projected.
the third quarter, as in the second, the decline centered in mining. An acceleration in government and government enterprise disbursements was due to the second of three annual lump-sum payments to Postal Service employees under a collective-bargaining agreement signed last year. Personal interest income increased a little less than in the second quarter, reflecting lower interest rates.

In the third quarter, as in the previous three quarters, the impacts of changes in legislation on personal taxes helped insulate disposable personal income from the weakness in personal income. These impacts are detailed in table 2. In the fourth quarter of 1981, withheld income taxes were reduced $\$ 15$ billion under the Economic Recovery Tax Act of 1981 (ERTA). In the first quarter, a $\$ 10 \frac{1}{2}$ billion reduction included the impact of the ERTA rate changes on declarations and net settlements ( $\$ 5$ billion), and temporary reductions under. ERTA (\$1 billion for a windfall profit tax credit), and under the Crude Oil Windfall Profit Tax Act of 1980 ( $\$ 3$ billion for the partial exclusion of in-
terest and dividends). An additional ERTA provision-the authorization of all savers' certificates-temporarily reduced declarations and net settlements $\$ 1$ billion in the second quarter. In the third quarter, the second rate reduction on withheld income taxes under ERTA, currently estimated at $\$ 25$ billion, became effective. Its impact on the change in personal taxes was partly offset by the termination of the temporary reductions. Net, the impact of this legislation held down personal taxes about $\$ 20$ billion in the third quarter.
Personal taxes declined in the third quarter, even though the continuing effect of the increase in the tax base partly offset legislative impact. Accordingly, disposable personal income increased more than did personal income. The percentage increase in disposable income, $10 \frac{1}{2}$ percent at an annual rate, was substantially larger than in other recent quarters. However, the increase in prices of PCE as measured by the implicit price deflator was substantial-about 8 percent, the largest since the recession began. As a result, the increase in real disposable income was held to $21 / 2$ percent, compared with a second-quarter increase of 3 percent.
The personal saving rate appears to have moved up several tenths of a percentage point from 6.7 percent in the second quarter. The rate, although down from 7.5 percent in the fourth quarter of 1981, has averaged higher this year than in any of the preceding 5 years.

## Housing and Mortgage Markets

Real residential investment increased moderately in the third quarter. Single-family structures posted a small increase for the third consecutive quarter; multifamily structures increased sharply, following two quarters of almost no change. The "other" component-which includes mobile homes, additions and alterations, and brokers' commissions on the sale of new and used residences-was flat in the third quarter.

The recent sharp decline in shortterm interest rates and the 234,000 unit increase in housing starts from the fourth quarter of 1981 to JulyAugust 1982 suggest that the long slide in residential investment is over. These and other developments in housing and mortgage markets are reviewed below. First, estimates of real residential investment are examined, largely in terms of their relationship to housing starts. Next, financial factors are discussed; these include interest rate movements and conditions in the savings and loan industry.

Residential investment. - The month-to-month path of housing starts this year has been erratic (chart 1). Compared with their fourthquarter 1981 averages, however, single-family units started in JulyAugust were up 81,000 units and multifamily units started were up 153,000 . The July-August level of single-family starts, although much above the depressed fourth-quarter level, was nonetheless very low. Multifamily starts in May and July were boosted by issuance by the Department of Housing and Urban Development (in March) of commitments to purchase almost $\$ 1$ billion of belowmarket rate mortgages under the section 8 rental assistance program. Further stimulus from this mortgage-purchase program is not expected, because funds have not been requested for fiscal year 1983. Thus, the increase in multifamily starts does not appear to represent a lasting, marketinduced response to economic conditions. A July increase in rent subsidies under the section 8 program may, however, give a further boost to multifamily starts in the autumn.

Real residential investment usually tracks the course of housing starts. The relationship is far from perfect, however, even after removal of the

"other" component from residential investment-this component now accounts for more than two-fifths of real residential investment-and even after separation of the rest of residential investment into its single-family and multifamily structures components.
Housing starts is the number of housing units on which construction begins during a particular period, whereas real investment in residential structures is the value (in 1972 dollars) of housing units put in place during a period. For single-family structures, the number of starts is combined with the value of new single-family construction (based on the Building Permits Survey) to derive the value of starts in a given month. Weights are then applied to the value of starts to generate estimates of the value of construction put in place that month and in subsequent months. These progress weights stretch forward 11 months from the date of the starts; more than one-half of the value of starts is assumed to be put in place in less than 3 months, however, and 90 percent within 6 months. The put-in-place series is then seasonally adjusted. Real investment estimates are obtained by deflation of the series by an index based on the prices of new one-family houses sold. Thus, lags between starts and construction put in place, changes in the average value of starts, and changes in the deflator can all contribute to disparities be-
tween the movements of starts and investment in single-family structures.

In the first quarter of this year, for example, the number of single-family housing starts increased about $101 / 2$ percent. The effect of this increase on real investment was muted substantially by a decline ( $5 / 2 / 2$ percent) in the average value of starts and an increase ( $/ 2$ percent) in the deflator. Lags between starts and construction put in place had a similar effect, with the result that real investment in single-family structures rose only 1 percent. (Percent changes in this paragraph are not at annual rates.)

For multifamily structures, the value of construction put in place, rather than being derived using starts, is from a survey of a sample of builders. However, in principle, the same factors that give rise to disparate movements in single-family starts and construction put in place are responsible for such movements in the two multifamily series. Because multifamily construction ranges from two-unit duplexes to high rise condominiums, the lag between starts and construction put in place is even more likely to give rise to disparate movements in the multifamily series.

Financial developments.-Shortterm interest rates started a steep decline in mid-July. The prime rate, for example, dropped 300 basis points by the end of August, and rates on Treasury bills dropped by similar amounts. (Interest rates on construc-
tion loans are tied to the prime rate, and ceiling rates on short-term retail certificates of deposit are linked to Treasury bill rates.) Many long-term interest rates also declined, although not as sharply; corporate bond yields, for example, fell 156 basis points from late June to mid-September.

The Federal Home Loan Bank Board's mortgage commitment rate series declined 21 basis points from early July to early August, the latest period for which data are available (chart 2). Although this decline was much smaller than the declines just mentioned, it was the largest in the series this year. Further declines in mortgage rates are likely. Over the past decade, changes in mortgage rates have generally lagged changes in other long-term rates by several months. The July-September drop in other long-term rates, therefore, may presage a substantial drop in mortgage rates this autumn. Moreover, yields at Federal National Mortgage Association (FNMA) auctions, which are widely viewed as indicating future changes in mortgage rates, declined in each of the last five bi-weekly auctions, by a total of 182 basis points. In fact, the Federal Home Loan Mortgage Corporation's mortgage commitment rate series, which is available weekly, showed a decline of 137 basis points-comparable in magnitude to the decline in corporate bond yieldsfrom mid-July to mid-September. ${ }^{3}$
The Bank Board's series stood at 16.5 percent in early August, and the Mortgage Corporation's at 15.6 in mid-September. It is not clear whether further declines, assuming they materialize, will carry the mortgage rate below the 13-14 percent generally regarded as the threshold that will bring borrowers back to the market in large numbers. Mortgage lenders may be reluctant to reduce rates sharply. They had done so in the summer of 1980 when other market rates plummeted, only to find themselves locked into unprofitable commitments when rates turned back up in the autumn. Competitive forces, however, may drive mortgage rates down regardless of the concerns of particular lenders.

[^2]Selected Interest Rates

'Ceiling rate at savings and loans associations.
U.S. Deparment of Commerce, Bureau of Economic Analysis

The decline in short-term rates is unalloyed good news for savings and loan associations (S\&L's) and other depository institutions. S\&L's have been especially hard hit by the very high interest rates that have prevailed until recently. S\&L net worth, which is used as an indicator of operating profit or loss, has fallen more than $\$ 5$ billion-more than 15 per-cent-since the end of the third quarter of 1981. Losses such as these have thinned the ranks of S\&L's substantially. During the first 7 months of this year, for example, 318 associations (with combined assets of $\$ 43$ billion) disappeared through mergers, almost as many associations as disappeared in all of 1981. The number of associations that disappeared in each period was more than 8 percent of the total number of associations at the start of each period.

The recent declines in short-term interest rates should provide S\&L's with considerable relief. Most S\&L liabilities are now either linked to market rates or not regulated at all. In addition to 6 -month money market certificates (MMC's), 30 -month small savers' certificates (SSC's), and taxexempt all savers' certificates, the recently authorized 1 -month and 3 -
month certificates are linked to yields on U.S. Treasury securities. Jumbo certificates (which are issued in denominations of $\$ 100,000$ and more), $1 \frac{1}{2}$-year individual retirement account balances, and $31 / 2$-year "wild card" accounts have no ceilings. MMC's, SSC's, and jumbo certificates alone make up more than two-thirds of total S\&L deposit liabilities. If Treasury bill rates remain in the singledigit range, S\&L's can expect substantial relief from the cost pressures they have experienced for the past several years. For example, if the $\$ 180$ billion in outstanding MMC's at S\&L's at the
end of July are rolled over at $9 / 2$ percent yields, the reduction in interest costs to S\&L's would average approximately $\$ 1 / 2$ billion per month during the next 6 months.
Furthermore, S\&L earnings should improve somewhat as mortgage demand picks up. The Supreme Court ruled in June that "due-on-sale" clauses are enforceable even if States have passed laws prohibiting their enforcement. House buyers will not be able to assume low-rate mortgages taken out years earlier by sellers. S\&L's will be relieved of these lowrate mortgages and replace them with higher yielding new mortgages. (The non-assumability of old mortgages, on the other hand, can be expected to reduce the demand for housing below the level that it would otherwise have been. For this reason, representatives of builders and real estate brokers opposed the Court's decision.)

## Motor Vehicles

Motor vehicle output increased much less in the third quarter than it had in the second- $\$ 1$ billion (1972 dollars) compared with $\$ 10$ billion (table 3). Auto output increased less than in the second quarter, and truck output declined following an increase. Auto sales to domestic purchasers were flat in the third quarter; an increase in final sales was traceable to net exports. Truck sales were down. During the quarter, domestic inventories of both autos and trucks built up to high levels relative to sales.
Total new car sales were about the same as the 7.5 million units (seasonally adjusted annual rate) registered in the second quarter (chart 3). Domestic sales were down slightly from 5.5 million: Sales of large (full-size and intermediate) cars retreated fol-

[^3]lowing a second-quarter advance, and sales of small (compact and subcompact) cars changed little. Imported car sales were up slightly from 2.0 million; the share of total sales accounted for by imports moved close to the record 30 percent.

The lackluster performance of new car sales occurred despite the strong third-quarter increase in disposable personal income and a downturn in interest rates on new auto install-

CHART 3
Retail Sales of New Passenger Cars

NoTE. - The components may not add to the total because each category was separately adjusted for seasonal variation. Data for the most recen quarter are projected
Data: Motor Vehicle Manufacturers Association of the United States,
Inc. and Ward's Automotive Repors; seasonal adiustment Inc. and Ward's Automotive Reports; seasonal adjustment by BEA. U.S. Department of Commerce, Bureau of Economic Analysis
ment loans. Apparently, consumers remained wary after the prolonged period of poor economic performance: Job uncertainty persisted as the unemployment rate reached a postwar high during the quarter. The downturn in auto installment rates was slow; in August, the rate charged by commercial banks was still above 17 percent.

Domestic car production increased to 6.1 million units (seasonally adjusted annual rate) from 5.4 million in the second quarter and 4.2 million in the first. Schedules at the beginning of the third quarter indicated a larger increase, but production was cut back as the quarter progressed. The cutbacks were induced by the lackluster sales, which resulted in a rapid inventory buildup of 1982 models as the model year drew to a close. End-ofAugust inventories were $1,486,000$ (seasonally adjusted), up from $1,247,000$ at the end of the second quarter, and the inventory/sales ratio was 3.3, up from 2.7. The cutbacks were accomplished by extending the downtime for model changeover and by reducing the rate of production of 1983 models.

Total new truck sales declined from 2.5 million (seasonally adjusted annual rate) in the second quarter to about 2.3 million in the third. Sales of both domestic light (under 10,000 pound) and "other" (over 10,000 pound) trucks declined. Inventories began to build up, and production was cut to try to bring them back into line with sales. Sales of imported trucks rebounded from the 4 -year low in the second quarter.

## Second-quarter corporate profits

Corporate profits from current pro-duction-profits with inventory valuation and capital consumption adjust-ments-were $\$ 155 \frac{1}{2}$ billion in the second quarter, down only $\$ 1 \frac{1}{2}$ billion from the first quarter of 1982 but down $\$ 45$ billion from the first quarter of 1981. (The second-quarter estimate is $\$ 1 / 2$ billion higher than the one published a month ago. An upward revision in profits from the rest of the world more than offset a downward revision in profits of domestic corporations.) The second-quarter decline was in profits of domestic nonfinancial corporations; profits from the rest
of the world and profits of domestic financial corporations increased. In the first quarter, when the total had decreased $\$ 27$ billion, profits of each of these major groups had decreased.

Profits from the rest of the world increased $\$ 1 \frac{1}{2}$ billion to $\$ 18$ billion in the second qurarter, following a decrease of $\$ 9$ billion. The increase occurred as a decrease in the profits of foreign petroleum operations of U.S. corporations was more than offset by an increase in nonpetroleum profits. The nonpetroleum increase occurred despite weakness in the economies of most other industrial countries and appears to have been centered in the profits of Canadian affiliates of U.S. motor vehicle manufacturing corporations. These profits reflected a sharp increase in U.S. imports of Canadianmade motor vehicles and parts. Over the last two quarters, rest-of-theworld profits contributed substantially to the volatility of the total, as they have done in some other recent periods as well. One component of these profits, reinvested earnings of incorporated affiliates, was first included at the time of the comprehensive revision of the national income and product accounts in 1980 . The definition of these earnings, the sources and methods used to prepare estimates, and their course in recent years are described in a Special Note beginning on page 6 .
Profits of domestic financial corporations increased $\$ 21 / 2$ billion to $\$ 221 / 2$ billion in the second quarter, following a decrease of less than $\$ 1 / 2$ billion. The increase occurred despite a decrease in commercial banks' profits and was primarily due to reduced losses of savings and loan associations. The reduced losses reflected decreasing interest rates, which lowered the costs of attracting deposits; because about three-fourths of savings and loan associations' assets are longterm mortgages, most of which have fixed interest rates, reductions in interest rates improve profitability. Increased profits of insurance carriers also contributed to the increase in financial profits.

Profits of domestic nonfinancial corporations decreased $\$ 5 \frac{1}{2}$ billion to $\$ 115$ billion in the second quarter, following a decrease of $\$ 18$ billion. Decreases in the profits in most nonmanufacturing industries accounted

[^4]
## Special Note.-Reinvested Earnings of Incorporated Affiliates in the National Income and Product Accounts

PROFITS from the rest of the world is a sizable part of corporate profits: It was 12 percent of the total in 1981 and was among the largest of the components shown in the detail of profits by industry. Further, rest-of-the-world profits accounted for a disproportionate share-almost one-third-of the last 3 years' profits slide.

Rest-of-the-world profits is the net receipts by the United States of dividends, earnings of unincorporated affiliates, and reinvested earnings of incorporated affiliates. The receipts are those of U.S. corporations and persons, and the payments are those to all foreigners. The dividends component consists of both the dividends in direct investment income and those in portfolio investment income, an income classification based on the extent of ownership by a foreign resident in the case of investment in the United States and by a U.S. resident in the case of investment abroad ( 10 percent or more for direct, less than 10 percent for portfolio). Earnings of unincorporated affiliates are part of direct investment income, as are the reinvested earnings of incorporated affiliates.
This Special Note discusses the reinvested earnings component, which, in 1981, accounted for over one-third of rest-of-the-world profits. The definition of reinvested earnings, and the sources and methods used to implement it, point to the factors that underlie the sharp changes in reinvested earnings in recent years (see chart 4).

As a component of rest-of-the-world profits in the national income and product accounts (NIPA's), reinvested earnings is the difference between U.S. residents' share (generally in proportion to equity participation) of reinvested earnings of incorporated foreign affiliates of U.S. direct investors (receipts) and foreign residents' share of reinvested earnings of U.S. affiliates of foreign direct investors (payments). Receipts are included in
"national" aggregates, such as national income-that is, aggregates referring to production attributable to factors of production supplied by U.S. residents-but payments are excluded. For "domestic" aggregates, such as gross domestic product-that is, aggregates referring to production attributable to factors of production located in the United States-the opposite is the case: Payments are included but receipts are excluded.

In addition to appearing as part of profits in type-of-income classifications, reinvested earnings is part of the rest-of-the-world sector in sector-of-origin classifications. In GNP by type of product, receipts of reinvested earnings are in the factor income component of exports, and payments are in the corresponding component of imports. Further, reinvested earnings is in gross investment (as net foreign investment) and in gross saving (as undistributed corporate profits).

Reinvested earnings of incorporated affiliates was first included in the NIPA's as part of the comprehensive revision of 1980 . These earnings had been included in the U.S. international transactions accounts several years earlier. Expansion in the early 1970's in the item coverage of BEA's surveys of international investment facilitated preparation of estimates for both sets of accounts. ${ }^{1}$ As a result of the inclusion of both dividends and reinvested earnings of incorporated affiliates in the NIPA's, rest-of-the-world profits was made essentially invariant to the form in which earnings of incorporated affiliates are attributed to direct investors.

1. In June 1976, BEA introduced estimates of reinvested earnings of incorporated affiliates as memoranda to the quarterly U.S. international transactions accounts. Two years later, receipts and payments became line items in those accounts, consistent with guidelines established by the International Monetary Fund. Estimates of reinvested earnings appear in payments and receipts of income on direct investment and, with sign reversed, in the direct investment capital accounts. As shown in NIPA table 4.5, the estimates of direct investment income in the international transactions accounts include, but those in the NIPA's exclude, capital gains net of losses.

## CHART 4 <br> Rest-of-the-World Corporate Profits

Billion \$

1. For definition, see text.

NOTE-In 1977, estimates include capital gains.
U.S. Department of Commerce, Bureau of Economic Analysis.

## Sources and methods

For both receipts and payments, the estimates of reinvested earnings are calculated as the difference between earnings and dividends (on common and preferred stock). In this calculation, the dividends item is dividends paid in the accounting period before host-country withholding taxes on dividends. The earnings item is the net income for the accounting period, net of host-country income taxes. (Because the dividends item is on an "as paid" basis, it, and hence reinvested earnings, cannot in general be related only to the earnings of a single accounting period.)

Data on earnings and dividends are collected by BEA from the universe of incorporated affiliates in benchmark surveys of foreign direct investment in the United States and of U.S. direct investment abroad. Estimates for benchmark years are extrapolated using quarterly sample surveys. In the extrapolation, account is taken of affiliates not covered by the sample surveys; adjustments are made to include new affiliates and to exclude those liquidated or sold. Data are aggregated by country and industry, and published annually, usually in the August issue of the Surver. Annual and quarterly estimates are incorporated in the NIPA's (and in the U.S. international transactions accounts) in more aggregated form. Beginning with estimates for 1978, reinvested earnings in the NIPA's, likeother NIPA components, exclude capital gains and losses; for earlier years, data needed to exclude them are not available. Neither an inventory valuation nor a capital consumption adjustment is made, also because data are not available.

Receipts and payments of reinvested earnings are deflated as part of factor income in the NIPA's using the implicit price deflator for net domes-
tic product. Lack of detailed price data by country and industry necessitates the use of such a broad domestic price measure. Its use can be justified partly because exchange rate movements over time tend to offset changes in relative prices among countries, and because the degree of industrial concentration of direct investment is not great.

## Reinvested earnings, 1977-81

In the 1970's through 1977, reinvested earnings of incorporated affiliates varied between $\$ 3$ and $\$ 7$ billion. Thereafter, it increased sharply to a peak of $\$ 15 \frac{1}{2}$ billion in 1979 , and then declined $\$ 3 / 1 / 2$ billion in 1980 and in 1981. Fluctuations can be traced in terms of factors affecting earnings and payments of dividends. Among those affecting dividends are recent years' earnings, changes in homecountry taxation, and host-country restrictions and taxes on dividends.
In recent years, fluctuations in re-ceipts-that is, in reinvested earnings of foreign affiliates of U.S. direct in-vestors-rather than in payments, have been the source of most of the fluctuations in the net. Movements in exchange rates were one factor that played a major role in determining the pattern of receipts. Earnings abroad, which firms generally calculate initially in foreign currencies, are reported to BEA, and expressed in the NIPA's, in dollars. Thus, dollar depreciation against the currency of a country where the earnings are generated generally raises the dollar measure; dollar appreciation generally lowers it. A trade-weighted index of the foreign currency price of the dollar, based on 22 currencies, declined 9 percent in 1978, steadied in 1979, and then rose 3 percent in 1980 and $13 / 1 / 2$ percent in 1981. Developments in the petroleum industry
worldwide were another major factor determining the pattern of receipts.
On the up side of the 1979 peak in receipts, increases in 1978 and 1979 reflected sharp increases in earnings in combination with less than proportional increases in dividends. Earnings were boosted in 1978 by depreciation of the dollar and in 1979 by increased prices and production of petroleum products and by continuing high worldwide inflation. In both years, much of the earnings tended to be reinvested, probably in part to finance the replacement of physical assets at costs exceeding allowances calculated under historical cost accounting. Also, a 1979 change in the United Kingdom in the tax treatment of inventory profits prompted affiliates there to reinvest newly available funds.
On the downside of the peak in receipts, the 1980 decline reflected a decline in earnings in combination with an increase in dividends, and the 1981 decline, a decline in earnings. In 1980, much of the decline occurred in the reinvested earnings of affiliates in the United Kingdom, where, as previously noted, a tax change caused a one-year jump in reinvested earnings in 1979. The decline in earnings in 1981 was due to slowing foreign economic activity as well as appreciation of the dollar against major foreign currencies.
As can be seen from the chart, payments were much more stable than receipts. Increases in 1978, 1979, and 1980 reflected increases in earnings in combination with a decline (in 1978) or less than proportional increase (in 1979 and 1980) in dividends. These increases were centered in petroleum affiliates, where earnings rose at extremely high rates. A decline in 1981 reflected a sharp decline in earnings in combination with a sharp increase in dividends.

CHART 5

## Corporate Profits and ConstantDollar Sales for Manufacturing: Percent Change From Preceding Quarter

"Corporate profits with IVA and without CCAdj.
U.S. Department of Commerce, Bureau of Economic Analysis
for most of the second-quarter decrease. In manufacturing, quarter-toquarter changes in profits have been closely related to quarter-to-quarter changes in constant-dollar manufacturing sales in recent years (chart 5). In the second quarter, manufacturing profits decreased slightly, following large decreases in each of the two previous quarters, while constant-dollar sales increased slightly, following large decreases. The second-quarter decrease in manufacturing profits was largely traceable to decreased profits for petroleum, chemicals, fabricated metals, and nonelectrical machinery manufacturers and increased losses of primary metals manufacturers. Offsetting these were a swing from substantial losses to profits for motor vehicle manufacturers and increased profits in most other manufacturing industries.

Other measures of profits.-Profits before tax were unchanged at $\$ 171 / 2$ billion in the second quarter, following a decrease of $\$ 45$ billion in the first. These profits exclude the inventory valuation adjustment and capital consumption adjustment. ${ }^{4}$ Inventory
4. The IVA and CCAdj are defined in National Income and Product Accounts of the United States, 1929-1976: Statistical Tables. U.S. Department of Commerce, Bureau of Economic Analysis (Washington, D.C.: U.S. GPO, 1981).
profits-the IVA with sign reversedincreased $\$ 5$ billion to $\$ 91 / 2$ billion in the second quarter, following a decrease of $\$ 121 / 2$ billion. Profits attributable to underdepreciation-the CCAdj with sign reversed-decreased $\$ 3$ billion to $\$ 7$ billion in the second quarter, following a decrease of $\$ 51 / 2$ billion. Somewhat more than $\$ 2$ billion of each decrease in the CCAdj was due to provisions of the Economic Recovery Tax Act of 1981, which have progressively reduced profits attributable to underdepreciation. The second-quarter decrease is also consistent with rates of inflation in prices for fixed nonresidential investment that were lower than those experienced over the service lives of the assets: such lower rates of inflation lead to less negative values for the portion of the CCAdj that values fixed capital used up in production at replacement costs rather that at historical costs.

Corporate profits taxes.-Corporate profits taxes, which are levied on
profits including inventory profits and profits attributable to underdepreciation, decreased $\$ 11 / 2$ billion to $\$ 55 \frac{1}{2}$ billion in the second quarter, following a decrease of $\$ 15$ billion in the first. The first- and second-quarter levels were each increased $\$ 1$ billion by some provisions of the recently enacted Tax Equity and Fiscal Responsibility Act of 1982 that were retroactive to the beginning of the year. (For a discussion of the act, see the article on Federal budget developments later in this issue of the Survey.) The levels of profits after tax were correspondingly lowered by the provisions of the act (to $\$ 115$ and $\$ 116 / 2$ billion in the first and second quarters, respectively). Profits before tax were not affected.

## Second-quarter NIPA revisions

The 75 -day revisions of the national income and product account estimates for the second quarter of 1982 are shown in table 4.

1. Not at annual rates.

Note--For the second quarter of 1982, the following revised or additional major source data became available: For personc. consumption expenditures, revised retail sales for June, consumer share of new car purchases for June, and consumption of electricity for June; for nonresidential fixed investment, revised manufacturers'shipments of equipment for June, revised electricity for June; for nonresidential fixed investment, revised manufacturers shipments of equipment for June, revised
construction put in place for June, and business share of new car purchases for June; for residential investment, revised construction put in place for June; for change in business inventories, revised book values for manufacturing and trade for June; for net exports of goods and services, revised merchandise trade for June, and revised service receipts for the quarter; for government purchases of goods and services, revised construction put in place for June; for wages and salaries, revised
employment, average hourly earnings, and average weekly hours for June; for net interest, revised net interest received from employment, average hourly earnings, and average weekly hours for June; for net interest, revised net interest received from
abroad for the quarter; for corporate profits, revised domestic book profits for the quarter, and revised profits from the rest of the world for the quarter; and for GNP prices, revised residential housing prices for the quarter, and revised producer price indexes for April.

## National Income and Product Accounts Tables

New estimates in this issue: 1. Second quarter 1982, revised. 2. Federal Government corporate profits tax liability and related items (tables 1.11, 1.13, 3.2, and 5.1) for first quarter 1982, revised to incorporate effects of Tax Equity and Fiscal Responsibility Act of 1982.

The tables that follow are presented in eight groups, and the table numbers reflect these groups. The same numbers are used in other publications presenting national income and product account estimates. The groups are:

1. National product and income
2. Personal income and outlays
3. Government receipts and expenditures
4. Foreign transactions
5. Saving and investment
6. Product and income by industry
7. Implicit price deflators and price indexes
8. Supplementary table: Percent change from preceding period for selected items

Capital consumption adjustment
Inventory valuation adjustment
IVA
NIPA's National income and product accounts

## Table 5.10-5.11:

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in busistocks, each valued at their respective end-of-quarter prices. The latter is between two inventory cal volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarter rates, whereas CBI is stated at annual rates. Quarter-to-quarter changes calculated from the constant-dollar inventories shown in this table are at quarterly rates, whereas the constant-dollar change in business inventories component of GNP is stated at annual rates.
2. Quarterly totals at monthly rates. Business final sales equals final sales-less gross product of households and institutions, government, and rest-of-the-world and includes a small amount of
final sales by farms.

Table 5.8-5.9:

1. The IVA shown in this table differs from that which adjusts business income. The IVA in this table reflects the mix of methods (first-in-first-out, last-in-first-out, etc.) underlying book derlying business incomed primarily fromily from Bareau Statistics. She mix difistics. from that un

Nore.-The implicit price deflator for GNP is a weighted average of the detailed price indexes used in the deflation of GNP. In each period, the weights are based on the composition of con-stant-dollar output in that period. In other words, the price index for each item $(1972=100)$ is prices. Changes in the implicit price deflator reflect both changes in prices and changes in the
composition of output. The chain price index uses as weights the composition of output in the prior period, and therefore reflects only the change in prices between the two periods. However, comparisons of percent changes in the chain index also reflect changes in the composition of
output. The fixed-weighted price index uses as weights the composition of output in 1972. Accordingly, comparisons over any time span reflect only changes in prices.

## Reconciliation and Other Special Tables

# Federal Budget Developments 

AYEAR after Congress passed the largest tax reduction in history-the Economic Recovery Tax Act of 1981the Federal government was faced with mounting deficits over the next 3 years. As a means of reducing these deficits, Congress passed, in midAugust, the Tax Equity and Fiscal Responsibility Act of 1982; it was signed in early September. Over a 3 -year period-calendar years 1982-84-the act provides $\$ 75$ billion in additional receipts, $\$ 6$ billion in net expenditures reductions, and hence a reduction of $\$ 81$ billion in the Federal deficit on the national income and product accounting (NIPA) basis (table 1).

Major features of the act are:

- Withholding of 10 percent on interest and dividend payments, effective July 1, 1983.
- Strengthening of compliance provisions, such as the reporting of State and local government income tax refunds.
- Modification of the deductions for medical expenses and casualty losses, generally effective January 1,1983 .
- Repeal of modified coinsurance transactions, effective January 1, 1982, and introduction of other changes that reduce insurance industry taxes.
- Repeal of safe-harbor leasing, effective January 1, 1984, and enactment of various other modifications and restrictions for leasing that are generally effective July 1, 1982.
- Modification and tightening of regulations governing long-term contract accounting, effective January 1, 1983 for new contracts.
- Temporary increases in airport and airway taxes, cigarette taxes, and telephone taxes.
- An increase in the wage base and tax rate for unemployment taxes, effective January 1, 1983.
- Extension of coverage to Federal employees of hospital insurance under medicare, effective January $1,1983$.
- Payment of supplemental unemployment benefits up to 10 additional weeks, effective September 12, 1982, through March 31, 1983; and
- Reduction in medicare and medicaid spending, generally effective October 1, 1982.

## Receipts

Receipts are increased in each of the 3 years: $\$ 2.3$ billion in 1982 (mostly in corporate profits tax accruals), $\$ 31.9$ billion in 1983 , and $\$ 40.9$ billion in 1984.

## Personal tax and nontax receipts

Personal tax and nontax receipts are increased $\$ 13.0$ billion in 1983 and $\$ 15.7$ billion in 1984 . Withheld income taxes account for a significant part of the 1983 increase and more than account for the 1984 increase, largely due to the 10 -percent withholding of interest and dividend payments. Various other compliance provisions, including the reporting of State and local income tax refunds, interest, and tips, also increase withholdings. The exemption of certain independent contractors, such as real estate agents, from withholding reduces taxes slightly.

Declarations and net settlements are increased by a number of provisions, although on balance they decline after 1983 due to the withholding provision for interest and dividends. As individuals pay taxes on interest and dividends throughout the year, their declarations and net settlements will be reduced.

Among the provisions increasing declarations and net settlements are the modifications to the deductions
for medical expenses and casualty losses. The act repeals, effective January 1,1983 , the deduction for one-half of health insurance premiums (up to $\$ 150$ ) and increases to 5 percent from 3 percent the amount by which medical expenses must exceed adjusted gross income to be deductible. The deduction for prescription drug costs exceeding 1 percent of adjusted gross income is also repealed, effective January 1,1984 . Thereafter, only legally prescribed drugs and insulin are deductible. The act establishes a new floor for casualty losses at 10 percent of adjusted gross income. Combined, these two provisions increase taxes $\$ 2.3$ billion in 1984 . Repeal of the 15 percent add-on minimum tax and revision of the alternative minimum tax increases taxes $\$ 0.7$ billion. The reduction of the income thresholdsfrom $\$ 20,000$ to $\$ 12,000$ for single returns and from $\$ 25,000$ to $\$ 18,000$ for joint returns-that limits the inclusion of unemployment benefits in adjusted gross income increases taxes $\$ 0.6$ billion.

## Corporate profits tax accruals

Corporate profits tax accruals are increased $\$ 9.9$ billion in 1983 and $\$ 15.2$ billion in 1984 . A few of the provisions, particularly those relating to insurance (retroactively effective to January 1, 1982), affect taxes in 1982. The safe-harbor leasing modifications and restrictions, including restrictions on the amount of deductions for accelerated depreciation and the investment tax credit (generally effective July 1, 1982), increase corporate taxes $\$ 3.7$ billion in 1984 . Other major provisions increasing these taxes are: (1) limitations on the tax benefits that arise from mergers and acquisitions; (2) modification and tightening of regulations governing long-term contract accounting; (3) requiring the amortization of construction interest and taxes over 10 years instead of allow-
ing deduction on a current basis; (4) modification to the investment tax credit, such as requiring deduction of one-half of the value of credits before computing depreciation for a new asset, instead of allowing the depreciation of the full value; and, (5) a 15 percent reduction, generall'y effective January 1, 1983, in several corporate tax preferences, such as deductions for mining exploration and development and for depletion of coal and iron ore.

## Indirect business tax and nontax accruals

Indirect business tax and nontax accruals are increased $\$ 5.1$ billion in

1983 and $\$ 5.7$ billion in 1984 . Various changes, generally effective from September 1, 1983 through December 31, 1987, increase airport and airway taxes; these changes include: (1) the 5percent tax on domestic air passenger tickets is increased to 8 percent; (2) the 4-cents-per-gallon tax on other noncommercial aviation fuels is increased to 12 cents; (3) the imposition of a 14-cents-per-gallon tax on other noncommercial aviation fuels; (4) the reimposition of the 5 -percent tax on air freight waybills; and (5) the reimposition of the $\$ 3$ per person international departure tax. Other excise tax increases are for cigarettes and telephone services. The tax of 4 cents per
package of cigarettes is doubled, effective January 1, 1983, through September 30, 1985. A special tax is also imposed on cigarette floor stocks removed before the effective date, and held for sale on that date. The current 1-percent telephone tax (which was scheduled to expire after 1984) is increased to 3 percent for calendar years 1983-85. The act also repeals a windfall profit tax adjustment for certain Alaskan oil, effective January 1, 1983.

## Contributions for social insurance

Contributions for social insurance are increased $\$ 3.9$ billion in 1983 and $\$ 4.3$ billion in 1984 . The increase in

Table 1.-Impact of the Tax Equity and Fiscal Responsibility Act of 1982 on Federal Receipts and Expenditures, NIPA Basis
[Billions of dollars]

the unemployment tax wage base (to $\$ 7,000$ from $\$ 6,000$ ) and in the basic Federal tax rate (to 0.8 percent from 0.7 percent) increases contributions $\$ 2.3$ billion in 1984. The provision requiring Federal employees to pay the current 1.3 percent hospital insurance tax under medicare (on a wage base of $\$ 35,100$ ) will be matched by employing agencies, therefore doubling the impact on NIPA contributions. The act also provides for a temporary suspension of the limitation on annual increases in supplementary medical insurance premiums, effective July 1, 1983 and 1984.

## Expenditures

Expenditures are increased $\$ 0.9$ billion in 1982 due to the temporary supplemental unemployment benefits, but are reduced $\$ 2.0$ billion in 1983 and $\$ 5.1$ billion in 1984 .

The largest expenditure reduction is in transfer payments to persons, due to a number of provisions reducing medicare benefits. The largest of these is a limit on reimbursements to hospitals. Other provisions provide for private-sector utilization review and eliminate duplicate payments. Grants-in-aid to State and local governments are also reduced, largely in medicaid. Medicaid grants are reduced primarily by permitting States to place liens on the property of permanently institutionalized beneficiaries in order to recover the cost of medical services,
and by limiting hospital reimbursements. Net interest paid is also reduced through various debt management techniques, including variable interest rates on savings bonds.

Purchases of goods and services and also subsidies less the current surplus of government enterprises are increased as a result of the extension of medicare hospital coverage to Federal employees. Under this provision (on the NIPA basis), the compensation of Federal employees will increase by the amount of the employer matching payments. It is very likely that agencies will have to absorb the matching payment and that these expenditures will not increase.

## Other Budget Developments

Congress also passed in mid-August the Omnibus Budget Reconciliation Act of 1982, providing for an additional $\$ 13.3$ billion reduction in spending over the next 3 fiscal years. The major features of the act are: a $\$ 4.5$ billion reduction (over the next 3 fiscal years) in farm programs; a $\$ 4.1$ billion reduction in Federal employee retirement payments; and a $\$ 1.9$ billion reduction in food stamps.
The largest farm program reduction ( $\$ 4.2$ billion) is for dairy price supports, or direct purchases of dairy products by the Commodity Credit Corporation. The savings will be achieved by freezing price supports
for fiscal years 1983 and 1984 and by reducing payments up to $\$ 1$ from the current price-support level of $\$ 13.10$ per hundred pounds in fiscal years 1983 and 1984, unless dairymen cut production sharply. The other farm program savings ( $\$ 0.3$ billion) require new payments to farmers for not growing crops (wheat, feed grain, and rice). Detail was not available for a NIPA translation, but these reductions would reduce nondefense purchases and increase subsidies.

The reduction in Federal employee retirement payments will be achieved by a number of provisions. (1) Cost-ofliving adjustments (COLA's) are reduced by 50 percent during the next 3 fiscal years for retirees below age 62 . (2) The effective date of the COLA's in each of the next 3 years is delayed a month. Intead of paying COLA's on March 1 annually, they will be paid in April 1983, May 1984, and June 1985. (3) "Double-dipping" by military retirees who obtain Federal civilian jobs is eliminated by reducing the individual's civilian pay by the amount of the military COLA. (These provisions reduce NIPA transfer payments to persons.)

The reduction in food stamps will be achieved through a host of program changes, including a 1-percentage point reduction in COLA's in October 1982-84, and rounding benefits down to the next lowest dollar. (These provisions would also reduce NIPA transfer payments to persons.)

# Accounting for Regional Differences in Per Capita Personal Income Growth, 1929-79 

FROM 1929 to 1979 , when per capita personal income grew more than ninefold in each of the eight BEA regions, regional differences in per capita income narrowed. Per capita income increased from 64 to 91 percent of the national average in the low-income regions (Southeast, Southwest, Plains, and Rocky Mountain), and declined from 127 to 107 percent of the national average in the highincome regions (Mideast, Far West, New England, and Great Lakes).

This article provides measures of the relative regional contributions of the per capita income components to the narrowing of regional differences in each of six timespans included in 1929-79: 1929-40, 1940-50, 1950-59, 1959-69, 1969-73, and 1973-79. ${ }^{1}$ The choice of years for the first three timespans is based solely on data availability, and that for the subsequent timespans is based on national business cycle peaks in order to separate trend from cyclical changes. Chart 6 shows that, in each of the six timespans, per capita income increased as a percent of the national average in the lowincome regions and declined as a percent of the national average in the high-income regions. The disparity between the rates of change, however, varied over time (table 1). Further, it will be shown that the components of

[^5]per capita income that governed the rates of change also varied over time.
Per capita personal income may be separated into three major components, each on a per capita basis: (1) labor and proprietors' income, (2) personal dividend, interest, and rental income, and (3) transfer payments. Each component contributed to the narrowing of regional differences in most of the timespans. Labor and proprietors' income per capita is further subdivided in order to identify and measure the contributions to the narrowing of other factors, such as the mix of employment by industry, wage rates by industry, and employmentpopulation ratios. Some of these subcomponents could not be estimated for the early timespans because data prior to 1950 , especially for 1929 , are limited. Accordingly, the following overview discusses the contributions of the components (and subcomponents) of per capita income for 1940-79 rather than 1929-79.

## Overview, 1940-79

From 1940 to 1979, when each major component contributed to the narrowing of regional differences in per capita personal income, the contributing factors, and the shares of the narrowing that they accounted
for, were: (1) more uniform regional industrial mixes of employment, accounting for about one-half of the narrowing; (2) more uniform regional distributions of personal dividend, interest, and rental income per capita, for about one-eighth; (3) more uniform regional distributions of transfer payments per capita, also for about oneeighth; (4) more uniform regional ratios of employment to working-age population, for about one-tenth; and (5) reduced regional differentials in wage rates (adjusted for regional differences in industrial mix), also for about one-tenth. Factors 1, 4, and 5, which are directly related to employment income, together accounted for about three-quarters of the narrowing. The discussion that follows emphasizes these three factors.

The trend toward more uniform regional industrial mixes of employment (factor 1) was, in large part, a result of a reallocation of redundant farm workers. In 1940, in the low-income regions, farming, which was a relatively low-paying industry, accounted for a large share of total employment. In the early 1940's, large-scale mechanization began to reduce employment opportunities in farming. During and after World War II, nonfarm employment opportunities grew rapidly, and workers shifted from farm to nonfarm

Table 1.-Percent Change in Per Capita Personal Income, Selected Timespans, 1929-79, United States and BEA Regions

1. Southeast, Southwest, Plains, and Rocky Mountain.

3. Based on unrounded data.
employment. ${ }^{2}$ The reallocation of farm workers had the effect of raising the incomes of persons who remained in farming, as well as of persons who shifted to higher paying employment in other industries.
The trend toward more uniform ratios of employment to working-age population (factor 4) also was, in part, a result of the reallocation of farm workers. In the 1950's and 1960's, in the low-income regions, the growth of nonfarm employment opportunities was not sufficient to absorb fully the redundant farm workers and new entrants to the labor force. Work-force outmigration from the low- to the high-income regions resulted, and regional ratios of employment to work-ing-age population-which had been below the average in the low-income regions and above the average in the high-income regions-converged toward the national average. In the 1970's, in contrast, regional ratios of employment to working-age population diverged from the national average. Nonfarm employment opportunities grew much more rapidly in the low- than in the high-income regions, and substantial numbers of workers migrated to the low-income regions. Work-force inmigration to the lowincome regions did not fully offset the rapid growth in nonfarm employment opportunities, and the ratio of employment to working-age population rose above the national average for the first time. Conversely, work-force outmigration from the high-income regions did not fully offset the slow growth or declines in nonfarm employment opportunities, and the ratio of employment to working-age population fell below the national average.
For 1940-79 as a whole, the reduction of regional wage rate differentials (factor 5) was small, and so was its contribution to per capita income convergence. Neoclassical economic theory would have predicted convergence. Inmigration to high-wage regions would put downward pressure on wage rates; as labor reserves de-
4. In 1940-79, farm employment as a percent of total employment in the low-income regions declined more than 25 percentage points. Two-fifths of the decline occurred in 1940-50. In 1940-50, regional differences in per capita personal income narrowed more than in any other timespan, and the farm-nonfarm employment shift was a major contributing factor. In 1950-79, regional differences in per capita income continued to narrow, but the farm-nonfarm shift appears to have accounted for no more than one-fifth of the narrowing.
clined in low-wage regions, upward pressure would be put on wage rates in order to hold workers. ${ }^{3}$
The persistence of regional wage rate differentials can be reconciled with this theory if it is recognized that firms choose locations for differ-
5. J. R. Hicks, The Theory of Wages, (London: MacMillan, 1932).
ent reasons than workers do. In choosing between two locations, firms tend to locate where wage rates and other costs, relative to selling prices, are lower. Workers tend to locate where wage rates, relative to the cost of living, are higher. Studies have shown that about two-thirds of the explained variation among regions in wage rates reflects regional differ-

ences in the cost of living, and about one-third reflects regional differences in work-force characteristics. Because labor is an imperfectly mobile resource, insofar as migration entails moving costs, the persistence of wage rate differentials for homogeneous labor largely reflects cost-of-living differentials and a premium associated with moving costs. The two-track view of location incentives helps explain (1) why the growth of nonfarm employment opportunities was faster in the low-income regions, with low wage rates, than in the high-income regions, with high wage rates, and (2) why some workers may have migrated from the high-income regions, where high costs of living more than offset the beneficial effects of high wage rates, to the low-income regions, where low costs of living more than offset the adverse effects of low wage rates.

In the 1940-79 timespan, 1973-79 was the only subperiod in which the reduction of regional wage rate differentials was a major contributor to the narrowing of regional differences in per capita personal income. The reduction of the differentials coincided with regional convergence in relative costs of living; in particular, housing costs increased faster in the low- than in the high-income regions. ${ }^{4}$

The reduction of regional wage rate differentials also coincided with net work-force migration from the highto the low-income regions. Migration in the reverse direction apparently was not a necessary condition for the reduction of the differentials. ${ }^{5}$ The reductions in both wage rate and cost-of-living differentials, moreover, were not inconsistent with net inmigration to the low-income regions. As firms responded to the rapid growth of energy-related activity in the lowincome regions, they increased the level of capital investment in these

[^6]regions and provided more high-wage jobs, thereby tending to increase relative wage rates and to attract working migrants. The net inmigration of workers led, in part, to the relative increase in housing costs. This increase, in turn, may have been a cause, as well as an effect, of the increase in relative wage rates.

If recent trends in the narrowing of regional wage rate and cost-of-living differentials were to continue, neoclassical theory, as elaborated by the two-track view of location incentives discussed above, would predict a slowing of differences in employment growth. For long-run equilibrium among regions, it is necessary that no factor of production could be profitably relocated. Regional differentials have narrowed in variable costs of production and distribution other than wage rates. As an example, owing to Federal deregulation of transportation, freight rates have tended to become more uniform among regions. The narrowing differentials would tend to result in reduced relative marginal efficiencies of investment in those labor-intensive industries that accounted for much of the relative growth in employment in the low-income regions during the 1940-79 timespan, and the rate of net work-force inmigration to these regions would be expected to slow. Thus far in the 1980's, data indicate such a slow-down. ${ }^{6}$ Nevertheless, because it is unlikely that all of the theoretical conditions required for nonprofitability of factor relocation can be met, it is not possible to predict the end of interregional migration of labor and industrial relocation of facilities.

The trend toward more regional uniformity in transfer payments per capita (factor 3), which consist mainly of social security benefits, reflects changes in social security coverage. As the industrial coverage of the social security system expanded and as regional industrial mixes of employment became more uniform, regional differences in social security benefits received, as well as personal contributions for social insurance, per capita narrowed. Migration of retirees from high- to low-income regions also contributed to the narrowing.

The trend toward more uniform regional distributions of personal divi-

[^7]dend, interest, and rental income per capita (factor 2 ) suggests that regional differences in wealth have narrowed; this is consistent with the narrowing of the other components of per capita personal income noted above.

## Per Capita Income Components

## Estimates

Table 2 shows the components of per capita personal income for 1929, $1940,1950,1959,1969,1973$, and 1979. Table 3 shows detailed breakdowns of the components for $1940-50$ and for the four subsequent timespans. A detailed breakdown for 1929-40 was not possible due to lack of data. For both detailed breakdowns shown in table 3, per capita personal income was broken into labor and proprietors' income (wages and salaries, other labor income, and farm and nonfarm proprietors' income) per capita and other income components (personal dividend, interest, and rental income, transfer payments, less personal contributions for social insurance, plus residence adjustment) per capita. In the breakdown for the four most recent timespans, labor and proprietors' income per capita was broken into 10 subcomponents; such a breakdown for 1940-50 was not possible due to lack of data.

The breakdown into the subcomponents of labor and proprietors' income per capita permits the measurement of the contributions to the narrowing of regional per capita income differences that are due to factors such as the mix of employment by industry and wage rates by industry. Subcomponent 1 , which is expressed on a per employee/proprietor basis, is the wage and salary and farm proprietors' income that would have originated in a region if all wage and salary employees in each industry in the region had been paid at the national average rate in the corresponding industry and if all farm proprietors in the region had been paid at the national average rate for farm proprietors. When this subcomponent is calculated for two or more regions, the same national distribution of wages and salaries per employee, by industry, and of farm proprietors' income per proprietor is multiplied by each region's distribution of employment, by industry. Thus, regional dif-
ferences in this subcomponent reflect regional differences in the distribution (mix) of employment among industries with varying wage rates nationally. The industrial mix of employment includes the number of farm proprietors; in all regions, this number is substantially larger than
the number of farm wage and salary employees.
Subcomponent 2, which also is expressed on a per employee/proprietor basis, is the ratio of the wage and salary and farm proprietors' income originating in a region to hypothetical wage and salary and farm propri-

1. The labor and proprietors' income obtained by (1) multiplying total employment in each industry in a region by labor and proprietors' income per employee in the corresponding industry nationally, (2) summing the results across all industries, and (3) dividing by total employment.
2. The wage and salary and farm proprietors' income obtained by (1) multiplying wage and salary employment in each industry in a region by wages and salaries per employee in the corresponding industry nationally, (2) multiplying the number of farm proprietors in the region by farm proprietors' income per proprietor nationally, (3) summing the results across all wage and salary industries and the farm proprietors' income component, and (4) dividing by total employment, excluding nonfarm proprietors.
3. The residence adjustment was not estimated for 1940-50.

Nore.-In column 1, labor and proprietors' income per capita is the product of components a-d, and per capita personal income is the sum of labor and proprietors' income per capita and components, e-g. In column 2, wages and salaries and farm proprietors' income per capita is the product
of components 1-5, nonfarm proprietors' income per capita is the product of components $7-10$, and per capita personal income is the sum of wages and salaries and farm proprietors income per capita, other labor incorne per capita, nonfarm proprietors' income per capita, and components 11-14.
Note on Sources.-The Regional Economic Measurement Division (REMD) provided estimates from its Regional Economic Information System of: (1) total personal income, by component, and total population for 1940, 1950, 1959, 1969, 1973, and 1979, (2) labor and proprietors' income, by industry, for 1940 and 1950, (3) wages and salaries, by industry, for 1950, 1959, 1969, 1973, and 1979, and (4) wage and salary employment, by industry, and the number of farm and nonfarm proprietors for 1969, 1973, and 1979. In addition, REMD prepared special estimates of wage and salary employment, by industry, and the number of farm and nonfarm proprietors for 1950 and 1959. The Regional Economic Analysis Division prepared estimates based on Census Bureau data of (1) population, by age group, for 1940, 1950, 1959, 1969, 1973, and 1979, and (2) total employment, by industry, for 1940 and 1950 .

[^8]etors' income (subcomponent 1). When subcomponent 2 is calculated, the region's industrial mix of employment is multiplied by (1) the region's industrial distribution of wage and salary and farm proprietors' income per employee/proprietor (for the numerator) and (2) the corresponding national industrial distribution (for the denominator). Thus, this subcomponent reflects region/Nation differences in industrial wage rates, apart from those due to region/Nation differences in the industrial mix of employment.
Subcomponents 3 and 8 are the percents of total employment accounted for by wage and salary employees and farm proprietors and by nonfarm proprietors, respectively. Subcomponent 4 , and also subcomponent 9 , is the percent of the working-age population (ages 15-64) that is employed. Subcomponent 5 , and also subcomponent 10 , is the percent of the total population that is of working age. Subcomponent 7 is the earnings rate of nonfarm proprietors. For 1940-50, labor and proprietors' income per capita is broken into four subcomponents; these measure the mix of employment by industry, earnings rates by industry, the percent of the working-age population that is employed, and the percent of the total population that is of working age.

## Component contributions

Tables 4 and 5 show for 1940-50 and for the four most recent timespans, respectively, percent changes in per capita personal income, by component. For each region in each timespan, these data provide the basis for measuring the contribution of the change in each component of per capita income to the change relative to the national average in total per capita income. For each region in table 4, the contributions can be measured as follows: (1) Adjust each subcomponent of labor and proprietors' income per capita (columns 2-5) so that, when summed, they equal the percent change in labor and proprietors' income per capita. This adjustment consists of multiplying a logarithmic factor for the subcomponent by the percent change in labor and proprietors' income per capita. ${ }^{7}$ (2)
7. In general terms, the factor is:
$\log (1+$ rate of change in subcomponent $)$
$\log (1+$ rate of change in labor and proprietors' income per capita).

Multiply, i.e., weight, each adjusted percent change from step 1 by the share of total personal income in 1940 accounted for by labor and proprietors' income, and multiply the percent changes of the other income components per capita (columns 6, 7, and 8) by the shares of total personal income in 1940 accounted for by personal dividend, interest, and rental income, by transfer payments, and by personal contributions for social insurance, respectively (see table 6). (3)

Subtract the corresponding national percent change, which also has been adjusted and/or weighted, from each weighted percent change from step 2. The contributions, that is, the per-centage-point differences, which sum to the region/Nation difference in the percent change in total per capita income, are shown in table 7.
For each region/timespan in table 5 , the contributions can be measured as follows: (1) Adjust each subcomponent of wages and salaries and farm
proprietors' income per capita (columns 2-6) and each subcomponent of nonfarm proprietors' income per capita (columns 5, 6, 8 , and 9) so that, when summed, they equal the percent change in wages and salaries and farm proprietors' income per capita and the percent change in nonfarm proprietors' income per capita, respectively. These adjustments consist of multiplying logarithmic factors for the subcomponents by the percent change in wages and salaries and

farm proprietors' income per capita and by the percent change in nonfarm proprietors' income per capita. ${ }^{8}$ (2) Multiply, i.e., weight, the adjusted percent changes from step 1 by the shares of total personal income in the base year accounted for by wages and salaries and farm proprietors' income and by nonfarm proprietors' income, respectively, and multiply the percent changes of other labor income per capita (column 7) and of the other income components per capita (columns $10,11,12$, and 13 ) by the shares of total personal income in the base year accounted for by other labor income, by personal dividend, interest, and rental income, by transfer payments, by personal contributions for social insurance, and by the residence adjustment, respectively (see table 6). (3) Subtract the corresponding national percent change, which also has been adjusted and/or weighted, from each weighted percent change from step 2. The contributions are shown in table 8.
In the discussions of per capita income growth patterns based on these measures that follow, hypothetical wages and salaries per employee, including farm proprietors (for the four most recent timespans) and hypothetical labor and proprietors' income per employee (for 1940-50) are referred to as the "industrial mix component." The ratio of actual to hypothetical wages and salaries per employee, including farm proprietors (for the four most recent timespans) and the ratio of actual to hypothetical labor and proprietors' income per employee (for 1940-50) are referred to as the "adjusted (for region/Nation differences in industrial mix) wage rate differential component." A brief discussion of the 1929-40 timespan, for which lack of data precludes a detailed breakdown of the per capita income components, also is included.
8. In general terms, the factors are:
$\log (1+$ rate of change
in subcomponent)
$\log (1+$ rate of change in wages and salaries and farm proprietors') income per capita)
and
$\log (1+$ rate of change in subcomponent)
$\log (1+$ rate of change in nonfarm proprietors' income per capita).

Note.-Column 1 is the sum of columns 2-8, except for differences due to rounding.

## Per Capita Income Growth Patterns <br> 1929-40

Per capita personal income declined in every region. It declined 3.8 percentage points less than nationally in the low-income regions and 1.3 percentage points more than nationally in the high-income regions. In the low-income regions, below-average declines in the Southeast, Southwest, and Rocky Mountain regions more than offset an above-average decline in the Plains. In the Southeast, Southwest, and Rocky Mountain regions, below-average declines or little change occurred in personal dividend, interest, and rental income per capita, in nonfarm proprietors' income per capita, and, except in the Rocky Mountain region, in wages and salaries per capita. In the Plains, wages and salaries per capita declined at an above-average rate.
In the high-income regions, aboveaverage declines in per capita personal income in the Mideast and Great Lakes regions more than offset belowaverage declines in the Far West and New England. In the Mideast and Great Lakes regions, above-average
declines occurred in wages and salaries per capita, in nonfarm proprietors' income per capita, and in personal dividend, interest, and rental income per capita. In the Far West, below-average declines occurred in wages and salaries per capita and nonfarm proprietors' income per capita; and in New England, a belowaverage decline occurred in personal dividend, interest, and rental income per capita.

## 1940-50

Regional differences in per capita personal income narrowed substantially more than in any other timespan. Per capita income increased 48.7 percentage points more than nationally in the low-income regions and 21.1 percentage points less than nationally in the high-income regions. Each low-income region had an aboveaverage increase. Major contributing factors were above-average increases in the industrial mix component and increases, except in the Rocky Mountain region, in the adjusted wage rate differential component. The increase in the industrial mix component reflected large shifts in employment from farming, which was a relatively
low-paying industry nationally, to manufacturing, trade, and the transportation group, which were relatively high-paying industries nationally. Increases in the adjusted wage rate differential reflected above-average increases in wage rates in nearly every industry. In the Rocky Mountain region, another major factor was an increase that was larger than in any other region in the percent of the working-age population that was employed.
Each high-income region had a below-average increase in per capita personal income. Major contributing factors were well-below average increases in the industrial mix component, except in the Great Lakes region, and declines in the adjusted wage rate differential component, except in the Far West. In the Mideast and New England, the small increases in the industrial mix component reflected employment increases that were smaller than in any other region in the high-paying manufacturing, trade, and transportation-group industries. In the Far West, the small increase reflected an employment increase that was larger than in any other region in services and government, which was a relatively lowpaying industry nationally. In the Great Lakes region, the industrial mix benefited during World War II from the conversion of the motor vehicle industry to the production of military durable goods and, after the war, from strong catch-up demand for consumers' durables. In the Mideast, New England, and Great Lakes regions, declines in the adjusted wage rate differential reflected below-average increases in wage rates in nearly every industry.

## 1950-59

Per capita income increased 3.2 percentage points more than nationally in the low-income regions and 2.3 percentage points less than nationally in the high-income regions. In the lowincome regions, above-average increases in the Southeast and Southwest more than offset below-average increases in the Plains and Rocky Mountain regions. In the Southeast and Southwest, a major factor contributing to the strength in per capita income was an above-average increase in the percent of the working-age population that was employed; employment increases were above average in most nonfarm industries. Another
major factor was a below-average decline in the percent of the total population that was of working age. The postwar baby boom, which, in every region, led to increases in the ratio of pre-working-age to total population and, conversely, to declines in the ratio of working-age to total population, lowered the average age of the population less in the Southeast than in other regions. In the Southeast, an increase that was larger than in any other region in the adjusted wage rate
differential component mainly reflected a large increase in the earnings rate of farm proprietors. In the Southwest, an above-average increase in personal dividend, interest, and rental income per capita reflected large increases in each of these three income components. In the Plains and Rocky Mountain regions, major factors in the below-average increases in per capita income were declines in the adjusted wage rate differential component and below-average increases in
the industrial mix component. Declines in the adjusted wage rate differential component mainly reflected large declines in the earnings rate of farm proprietors; in contrast, this income source increased or changed little in all other regions. In the Rocky Mountain region, the small increase in the industrial mix component reflected above-average increases in employment in trade, services, and government, which were relatively low-paying industries nationally.

Each high-income region except New England had a below-average increase in per capita personal income. In the Mideast and Great Lakes regions, a major contributing factor was a below-average change in the percent of the working-age population that was employed; employment declined or increased at below-average rates in nearly all industries. Another major factor was an above-average decline in the percent of the total population that was of working age. In the Far West, major factors were a decline that was larger than in any other region in the percent of total employment accounted for by nonfarm proprietors and an increase that was smaller than in any other region in transfer payments per capita. Weakness in transfer payments per capita reflected a below-average increase in the percent of the total population aged 65 and over; this age group receives the bulk of social security and other retirement payments, which account for the largest share of total transfer payments. In New England, major factors contributing to strength in per capita income were an increase in the adjusted wage rate differential component and an above-average increase in the industrial mix component. The industrial mix benefited from a large shift in employment from nondurables (in particular, textiles) to durables manufacturing; the shift was to the highest paying industry nationally.

## 1959-69

Regional differences in per capita personal income narrowed more than in any other timespan except 1940-50. Per capita income increased 7.7 percentage points more than nationally in the low-income regions and 4.1 percentage points less than nationally in the high-income regions. In the lowincome regions, above-average increases in the Southeast and Plains more than offset below-average increases in the Southwest and Rocky Mountain regions. In the Southeast, major factors contributing to the strength in per capita income were above-average increases in the percent of the working-age population that was employed, the industrial mix component, and transfer payments per capita. The employment/workingage population ratio benefited from above-average increases in employment in most industries; the industrial mix benefited from especially large
relative increases in employment in manufacturing, construction, and the transportation group, which were relatively high-paying industries nationally. Transfer payments per capita, consisting mainly of retirement payments, benefited from an increase that was larger than in any other region in the percent of the total population aged 65 and over. In the Plains, major factors were large increases in the industrial mix component, in the adjusted wage rate differential component, and in personal dividend, interest, and rental income per capita. The increase in the industrial mix component reflected a large decline in employment in farming, which was a relatively low-paying industry nationally, and below-average increases in employment in the lowpaying trade, services, and government industries. The increases in the other two components reflected aboveaverage increases in the earnings rate of farm proprietors who remained in the region and in farm-related rental income per capita, respectively. In the Southwest and Rocky Mountain regions, a major factor in the weakness in per capita income was a decline in the adjusted wage rate differential, which reflected below-average increases in wage rates in most industries. In the Rocky Mountain region, another major factor was a change that was smaller than in any other region in the employment/workingage population ratio, reflecting belowaverage increases in employment in construction and private service-type industries.

Each high-income region had a below-average increase in per capita personal income. In the Mideast and New England, major contributing factors were below-average increases in the industrial mix component and the percent of the total population that was of working age. The industrial mix was adversely affected by especially small relative increases in employment in the high-paying manufacturing industry. The increases in the ratio of working-age to total population were smaller than in any other region. In New England and the Far West, a major factor was a belowaverage increase in the percent of the working-age population that was employed. In the Far West, other major factors were a below-average increase in the industrial mix component, which reflected slumps in the highpaying aircraft and construction in-
dustries, and weakness in personal dividend, interest, and rental income per capita, which reflected increases that were smaller than in any other region in both interest income and rental income per capita. In the Great Lakes region, a major factor was a below-average increase in transfer payments per capita, which reflected an especially small increase in the percent of the total population aged 65 and over.

## 1969-73

Per capita personal income increased 7.1 percentage points more than nationally in the low-income regions and 3.4 percentage points less than nationally in the high-income regions. Each low-income region had an above-average increase in per capita income. A major contributing factor was an above-average increase in the industrial mix component. The industrial mix benefited from large increases in employment in manufacturing and, except in the Plains, in construction and the transportation group; each was a relatively highpaying industry nationally. In the Southeast and Rocky Mountain regions, another major factor was an increase, compared with a decline nationally, in the percent of the work-ing-age population that was employed. In the Plains, other major factors were increases that were larger than in any other region in the adjusted wage rate differential component and in personal dividend, interest, and rental income per capita; the increases mainly reflected an increase in the earnings rate of farm proprietors to an unusually high level in 1973 and a large increase in farm-related rental income per capita. In the Southwest, strength in personal dividend, interest, and rental income per capita reflected above-average increases in each of these three income components.

Each high-income region had a below-average increase in per capita personal income. Major contributing factors were above-average declines in the percent of the working-age population that was employed and belowaverage increases in the industrial mix component. The employment/ working-age population ratio was adversely affected by declines or belowaverage increases in employment in most industries; the industrial mix
was adversely affected by large declines or especially small relative increases in employment in the highpaying manufacturing, construction, and transportation-group industries. In the Far West, another major factor was a decline that was larger than in any other region in the adjusted wage rate differential component; increases in wage rates in nearly every industry were below average.

## 1973-79

In 1973-79, regional differences in per capita personal income narrowed less than in any other timespan, mainly reflecting divergences from the national average in the Plains and Far West regions. In 1969-79, in contrast, per capita income converged toward the national average in the Plains and Far West regions. In the low-income Plains, strength in farming in the early 1970's more than offset weakness in the late 1970's. In the high-income Far West, weakness in the aircraft industry in the early 1970's more than offset strength in the late 1970's.

In 1973-79, per capita income increased 1.8 percentage points more than nationally in the low-income regions and 0.4 percentage point less than nationally in the high-income regions. Each low-income region except the Plains had an above-average increase in per capita income. In the Southeast and Southwest, major contributing factors were increases that were larger than in any other region in the adjusted wage rate differential component; increases in wage rates in nearly every industry were above average. In the Southeast, in addition, a major factor was an above-average increase in transfer payments per capita; the percent of the total population aged 65 and over increased more than in any other region. In the Southwest, in addition, and in the Rocky Mountain region, major factors were above-average increases in the percent of the working-age population that was employed, the industrial mix component, and nonfarm proprietors' income per capita. The employment/ working-age population ratio benefited from above-average increases in employment in all industries; the industrial mix benefited from especially
large relative increases in employment in mining, construction, and manufacturing, which were relatively high-paying industries nationally. In the Plains, major factors in the weakness in per capita income were a decline that was larger than in any other region in the adjusted wage rate differential component and an increase that was smaller than in any other region in the industrial mix component. The decline in the adjusted wage rate differential mainly reflected a decline in the earnings rate of farm proprietors from the unusually high 1973 level.
In the high-income regions, belowaverage increases in per capita personal income in the Mideast and New England more than offset an aboveaverage increase in the Far West and no change in the Great Lakes region. In the Mideast and New England, a major factor contributing to the weakness in per capita income was a decline in the adjusted wage rate differential component; increases in wage rates in nearly every industry were below average. In the Mideast, another major factor was a below-average increase in the percent of the working-age population that was employed; employment declined or had a small increase in nearly every industry. In the Far West, major factors in the strength in per capita income were above-average increases in the percent of the working-age population that was employed and in the industrial mix component. The employ-ment/working-age population ratio benefited from above-average increases in employment in nearly every industry; the industrial mix benefited from especially large relative increases in employment in the high-paying construction, manufacturing, and transportation-group industries. An increase in personal dividend, interest, and rental income per capita was larger than in any other region; an increase in rental income per capita was especially large, in part due to an above-average increase in housing prices.

## Availability of Additional Data

Tables that show estimates of the subcomponents of labor and propri-
etors' income per capita, as well as related estimates, for the years covering the five timespans from 1940 to 1979 , are available on request. Table A shows, for 1940 and 1950, actual labor and proprietors' income per employee (the product of subcomponents a and b in table 3 of the article), hypothetical labor and proprietors' income per employee (subcomponent a), and the ratio of actual to hypothetical labor and proprietors' income per employee (subcomponent b); table A also shows the percent of the working-age population that is employed (subcomponent c). Tables B and C show, for 1940 and 1950, national and regional distributions, by industry, of (1) labor and proprietors' income per employee and (2) employment, both of which are used in calculating subcomponents a and b. Table D shows, for 1950 forward, actual wages and salaries per employee, including farm proprietors (the product of subcomponents 1 and 2), hypothetical wages and salaries per employee, including farm proprietors (subcomponent 1), and the ratio of actual to hypothetical wages and salaries per employee, including farm proprietors (subcomponent 2); table D also shows nonfarm proprietors' income per proprietor (subcomponent 7). Tables $E$ and $F$ show, for 1950 forward, national and regional distributions, by industry, of (1) wages and salaries per employee, including farm proprietors, and (2) employment, including farm proprietors, both of which are used in calculating subcomponents 1 and 2. Table G shows, for 1950 forward, the distribution of employment by type of employee (including subcomponents 3 and 8) and the percent of the working-age population that is employed (subcomponents 4 and 9); table G also shows, for 1940 forward, the distribution of population by age (including subcomponents 5,10 , and d). Estimates of the components of per capita personal income other than those relating to labor and proprietors' income per capita (components e-g and 11-14), as well as other labor income per capita (subcomponent 6), can be found in table 2 of the article. Address all data inquiries to the U.S. Department of Commerce, Bureau of Economic Analysis, Regional Economic Analysis Division, Washington, D.C. 20230.

# Plant and Equipment Expenditures, the Four Quarters of 1982 

NONFARM business in the U.S. plans to spend $\$ 323.7$ billion for new plant and equipment in 1982, 0.7 percent more than in 1981, according to the BEA quarterly survey conducted in late July and August (table 1 and chart 7). ${ }^{1}$ Spending totaled $\$ 321.5$ billion in 1981, 8.7 percent more than in 1980.

The planned spending increase for 1982 is 1.5 percentage points lower than the 2.2 -percent increase reported in June and 6.6 points lower than the 7.3-percent increase reported in March. The latest downward revision in 1982 programs is in the second half of the year; it is widespread among the various industries, but is largest in manufacturing. Manufacturing industries revised planned spending down by 2.4 percent-durable goods by 2.7 percent and nondurables by 2.1 percent. Nonmanufacturing revised planned spending down by 0.9 percent; all major nonmanufacturing industries reported downward revisions except public utilities and air transportation.

The spending plans, after adjustment by BEA for price changes, indicate a decline of 4.4 percent from 1981 to 1982 (table 2). ${ }^{2}$ Real spending in 1981 was unchanged from 1980. BEA now estimates that the price de-

[^10]flator for capital goods will increase 5.5 percent in 1982. (Three months ago the estimate was 4.8 percent; the change in the estimated deflator resulted almost entirely from revisions in the national income and product accounts.) In 1981, the price deflator increased 8.5 percent.

Capital spending in current dollars declined 1.4 percent in the second quarter of 1982 , to a seasonally adjusted annual rate of $\$ 323.2$ billion,

about the same as planned spending reported 3 months ago; manufacturers spent less than planned and nonmanufacturers spent more. Plans in the latest survey indicate a 0.9 -percent decline in the third quarter and a 1.3 percent increase in the fourth. In real terms, spending declined 3.1 percent in the second quarter; plans indicate a 1.9-percent decline in the third quarter and little change in the fourth.
Other highlights of the survey are:

- The rate of capacity utilization in manufacturing was 71 percent, 1 percentage point below the rates reported for March and December (table 3); the June rate is 4 points below the recession low in March and June 1975 and is the lowest recorded since BEA began its survey in 1965 .

- The value of new investment projects started by manufacturers increased by $\$ 1.3$ billion-or 4.7 per-cent-to $\$ 29.0$ billion in the second quarter, and starts by public utilities totaled $\$ 6.0$ billon compared with a negative $\$ 4.3$ billion in the first quarter (table 4).
- Spending in current dollars for new plant in the second quarter declined 1.1 percent from the first quarter and spending for new equipment

${ }^{r}$ Revised.

1. Based on plans reported in July-August Surver.
declined 1.6 percent (table 5). Real spending for plant declined 2.6 percent and real spending for equipment declined 3.3 percent (table B).

The downward revision in spending programs between the January-February and July-August surveys is the sharpest cutback recorded in the quarterly survey for a 6-month period. Previously, the largest downward revision for a 6 -month period4.1 percentage points-was in 1969. The continued weakness in 1982 spending plans indicated by the latest survey is consistent with other gages of future investment activity and with recent economic developments having an influence on investment decisions. Among the former, net new capital appropriations in manufacturing declined 28 percent from the first quarter to the second, and new orders for nondefense capital goods declined 5 percent; the proportion of manufacturers reporting a need for more capacity declined 2 points from March to June (table 6). Indicators of continued sluggishness of the economy in the second quarter include: the de-

[^11][^12]cline in real final sales, the decline in capacity utilization, the continued poor performance of profits, and the persistence of high long-term interest rates on corporate debt. It is unlikely that plans reported by business in the latest survey would have reflected the recent declines in short-term interest rates.

## Manufacturing Programs

Manufacturing industries' currentdollar spending in the second quarter
fell 3.5 percent, to a seasonally adjusted annual rate of $\$ 123.8$ billion, after a 1.1-percent increase in the first quarter. Plans are for small decreases in the second half of 1982-0.5 percent in the third quarter and 0.2 percent in the fourth. Spending in both durables and nondurables declined in the second quarter- 3.0 and 4.1 percent, respectively. In the third quarter, durables plan a 1.6 -percent increase and nondurables, a 2.5 -percent decline; in the fourth quarter, nondurables plan a 1.6 -percent increase and durables, a 2.0-percent decline.

For the year 1982, manufacturers plan a 2.0 -percent decrease in cur-rent-dollar spending. Durable goods industries plan a 3.8-percent decrease and nondurable goods, a 0.3-percent decrease. In durables, decreases are planned by motor vehicles, nonferrous metals, stone-clay-glass, fabricated metals, aircraft, and "other durables"; increases are planned by iron and steel, nonelectrical machinery, and electrical machinery. In nondurables, decreases are planned by textiles, paper, food-beverage, and rubber; in(Continued on p. 40)

## REVISED ESTIMATES OF CONSTANT- DOLLAR EXPENDITURES FOR PLANT AND EQUIPMENT, 1977-82

The tables below present revised estimates of plant and equipment expenditures (1972 dollars). These estimates are based on deflators that reflect the revisions of the national income and product accounts released in July. For the methodology and estimates prior to 1977, see "Constant-Dollar Estimates of New Plant and Equipment Expenditures, 1947-80," Survey of Current Business, September 1981, pp. 26-41.

1. In deflating the planned expenditures reported by survey respondents, it is assumed that the eported plans for each industry reflect a price increase equal to the average quarterly growth rate of that industry's deflator from the second quarter of 1981 to the second quarter of 1982.
2. Includes industries not shown separately
3. Includes construction; social services and membership organizations; and forestry, fisheries, and agricultural services.

1. According to respondent companies' characterization of their plant and equipment facilities, taking into account their current and prospective sales for the next 12 months.
2. Includes industries not shown separately.
3. Includes machinery, transportation equipment, and fabricated metals.
creases are planned by chemicals, petroleum, and "other nondurables." ${ }^{3}$

In real terms, manufacturers plan a 6.6 -percent decline in 1982 spending; the decline is 6.5 percent in durables and 6.7 percent in nondurables. In 1981, manufacturers increased real spending 1 percent.
Manufacturers started new investment projects during the second quarter of 1982 totaling $\$ 29.0$ billion- $\$ 1.3$ billion, or 4.7 percent, more than in the first quarter. The second-quarter increase was in durable goods industries, which reported an increase of $\$ 1.6$ billion; nondurable goods reported a decrease of $\$ 0.3$ billion. The value of new projects started by man-
3. The 1982 estimate of planned spending for petroleum was lowered because of adjustments for mergers that occurred since the latter part of 1981, and the estimates for iron and steel and for chemicals were increased.

1. Estimates are based on planned capital expenditures reported by business in late July and August 1982. The planned expenditures for 1982 have been corrected for biases. The adjustment procedures are described in the October 1980 SURVEY. Before adjustment, plans for 1982 were for nonmanufacturing.
Includes industries
2. Includes industries not shown separately.
ufacturers in the second quarter was less than their capital expenditures, resulting in a decrease in carryover. Carryover totaled $\$ 87.5$ billion at the end of June, $\$ 1.9$ billion less than at the end of March.

## Capacity utilization

The utilization of manufacturing capacity was 71 percent in June; this is 1 percentage point lower than the rates in March and December, 4 points lower than the recession rates in March and June 1975, and is the lowest rate reported since the survey was initiated in 1965 .
The decline in the utilization rate from March to June reflected sizable offsetting changes for some industry groups. Primary metals declined 9 points, to 52 percent. Stone-clay-glass declined 6 points, to 62 percent, and nonelectrical machinery declined 3 points, to 82 percent. Chemicals and paper each declined 2 points, to 70 and 81 percent, respectively. Motor vehicles increased 6 points, to 67 percent, and petroleum increased 5 points, to 75 percent. Rubber increased 4 points, to 76 percent, and food-beverage increased 3 points, to 78 percent.
The utilization rate in June for ad-vanced-processed goods industries rose 1 point, to 74 percent; the rate for pri-mary-processed goods declined 4 points, to 66 percent.

The rate for large firms (assets of $\$ 100$ million and over) declined 1 point, to 72 percent. Medium-sized firms (assets of $\$ 10$ million to $\$ 100$ million) declined 2 points, to 72 percent, and small firms declined 1 point, to 69 percent.

Manufacturing companies owning $231 / 2$ percent of fixed assets reported a need for more facilities as of the end of June, 2 percentage points lower than at the end of March; the decline was centered in the primary metal and food-beverage industries. Facilities viewed as adequate declined onehalf of 1 percentage point, to $531 / 2$ percent, and those viewed as exceeding needs increased $21 / 2$ points, to 23 percent.

## Nonmanufacturing Programs

Current-dollar spending by nonmanufacturing industries was at an annual rate of $\$ 199.5$ billion in the second quarter; this rate is about the same as in the first quarter and followed a 0.8 -percent decline from the fourth quarter to the first. Plans indicate a 1.2-percent decline in the third quarter and a 2.2-percent increase in the fourth. In the second quarter, increases in air transportation, electric utilities, and railroads were offset by declines in mining, "other transportation," and "communication and other." In the third quarter, planned
increases for air transportation and "communication and other" are more than offset by declines for railroads, "other transportation," mining, gas utilities, and trade and services. In the fourth quarter, all industry groups except trade and services contribute to the planned increase.
Planned current-dollar spending by nonmanufacturing firms for the year 1982, $\$ 199.4$ billion, is 2.4 percent larger than in 1981; actual spending increased 8.3 percent in 1981. The largest increases this year are planned by electric utilities, $81 / 2$ percent, and railroads, $61 / 2$ percent. Smaller increases are planned by "communication and other," air transportation, and trade and services. Small decreases are planned by mining, "other transportation," and gas utilities.

In real terms, nonmanufacturing industries plan a 3.1-percent decline in spending for 1982. The largest decline is in mining, $121 / 2$ percent; smaller declines are planned by "communication and other," transportation, trade and services, and public utilities.

Investment projects started by public utilities totaled $\$ 6.0$ billion in the second quarter, compared with a negative $\$ 4.3$ billion in the first quarter. Carryover of utility projects totaled $\$ 107.4$ billion at the end of June, $\$ 4.3$ billion less than at the end of March.

# Capital Expenditures by Majority-owned Foreign Affiliates of U.S. Companies, 1982 and 1983 

MMAJORITY-OWNED foreign affili-
tes of U.S. companies plan to inates of U.S. companies plan to increase capital expenditures less than one-half of a percent, to $\$ 46.6$ billion, in 1983, following a planned 6 -percent increase this year. In 1981, spending increased 3 percent (table 1 and chart 9). ${ }^{1}$ In each of the 3 years 1981-83, spending in real terms would probably show a decline.
The slowdown in 1981-83 reflects generally sluggish business conditions abroad and high interest rates. Spending by manufacturing affiliates is expected to be depressed throughout the period. Spending by petroleum affiliates is expected to be weak except in 1982, when a strong increase is largely for development of alternative energy sources.
The slowdown follows record increases in 1979 and 1980, when affiliates in manufacturing significantly expanded capacity in response to strong demand abroad; affiliates manufacturing transportation equipment had particularly strong increases. In 1980, petroleum spending also increased strongly, largely as a result of intensified exploration for, and production of, petroleum following a near-doubling of crude oil prices in

[^13][^14]1979 by members of the Organization of Petroleum Exporting Countries.
In recent surveys, spending estimates have generally been revised down. The latest estimate for 1982, based on the BEA survey taken in June 1982, is much lower than the estimate made 6 months earlier, which indicated expenditures would increase 11 percent. Although estimates for every industry were revised down, most of the revision was in petroleum and in chemical manufacturing. For 1981, the latest estimate is also lower than the earlier one; most of the revision was in petroleum.
Manufacturing affiliates plan to increase spending 2 percent, to $\$ 19.5$ billion, in 1983; no change in spending is planned this year. Affiliates in trade plan a 7 -percent increase, to $\$ 4.5$ billion, following a 2 -percent decline. In contrast to these increases, petroleum affiliates plan a 3 -percent decline, to $\$ 18.6$ billion, following a 21-percent increase.
By area, affiliates in developed countries plan a 2 -percent spending increase, to $\$ 33.1$ billion, in 1983, following a 4 -percent increase. In developing countries, a 1 -percent decline, to $\$ 12.4$ billion, is planned, following a 12-percent increase. Affiliates in "international"-those that have operations spanning more than one country and that are engaged in petroleum shipping, other water transportation, petroleum trading, or operating oil and gas drilling equipment that is moved from country to country during the year-plan a 16 -percent decline, to $\$ 1.1$ billion, compared with a 3 -percent decline last year.

## Petroleum

Petroleum affiliates plan to reduce spending 3 percent, to $\$ 18.6$ billion, in 1983, following a planned 21-percent increase this year. This will be the

first decline in petroleum expenditures since 1960. The decline reflects several factors, including weak worldwide industrial activity, continued energy conservation and substitution, and oil refining capacity in excess of projected needs. Also, some petroleum companies may be shifting some spending from abroad to the United States; the U.S. Government has sought to encourage domestic spending, partly by granting exploration and production rights in previously restricted territories and partly by decontrolling the domestic price of oil, in order to reduce U.S. dependence on foreign oil.

The strong spending increase this year largely reflects increased spending by petroleum affiliates to develop alternative energy sources. Increases in Colombia and Australia are largely for extracting coal; in Germany and the Netherlands, the increases are partly for constructing facilities that convert coal into coke.

Smaller spending increases, or shifts to spending declines, are expected in every geographic area in which there is sizable petroleum investment. In developed countries, affiliates plan to reduce spending 5 percent, to $\$ 11.2$ billion, after a 20 -percent increase in 1982 (tables 2-4). Canadian affiliates plan to lower spending slightly, after a 26 -percent increase this year. The decline is largely attributable to an affiliate that, in mid-1982, indefinitely postponed participation in an oil sands project; partly offsetting are spending increases on several upstream and downstream projects by other affiliates. ${ }^{2}$ Spending by Canadian affiliates in each of the years 1981-83 would have been higher if U.S. companies had not sold several large oil and gas properties in 1981.
2. Spending on another recently postponed oil sands project is not included in the data, because the compa ny established to carry out the project is not majority owned by U.S. companies.

These sales were partly in response to anticipated and actual changes in Canadian energy policies. One objective of these policies is to increase Canadian participation in the petroleum industry. By providing preferential treatment of locally owned or controlled companies in, for example, the granting of exploration subsidies and production rights, these policies have tended to make petroleum properties in Canada more valuable to local than to U.S. (and other non-Canadian) investors.
In the North Sea area, British affiliates plan to reduce spending 13 percent, to $\$ 3.6$ billion, after a 2 -percent increase. This decline will be the largest since 1969. It partly reflects the response of oil companies to the smaller-than-expected reduction in the United Kingdom's taxes on North Sea operations. Norwegian affiliates plan a 17 -percent increase, to $\$ 1.7$ billion, after a 20 -percent increase this year. Both increases are for continued

Less than $\$ 500,000$.
Suppressed to avoid disclosure of data of individual companies

1. Based on the BEA survey taken in June 1982.
development of offshore oil and gas fields.

In several other areas of Europe, where affiliates are engaged primarily in refining and distribution, reductions in spending are planned in 1983; the reductions follow several years of strong increases. Following a more than doubling of expenditures this year, expenditures by Netherlands affiliates are to decline 8 percent. The decline largely reflects completion of several projects in 1982, including development of a new gasfield and construction of a facility that converts coal into coke. Following a planned 76 -percent increase this year, German affiliates plan to reduce spending 13 percent. This year's increase is primarily for upgrading and expanding several refineries; these projects are expected to be completed in 1982.

After 3 years of strong increases, Australian affiliates plan virtually no change in spending next year. The increase in 1982 is for the development of a new coal operation by a petroleum affiliate and significantly expanded exploratory drilling.
In developing countries, affiliates plan a 4 -percent increase, to $\$ 6.5$ billion, after a 24 -percent increase this year. The increase next year is centered in "other Asia and Pacific"particularly in Indonesia and Malaysia, where offshore oil and gas fields are being developed.
In "other Africa," spending is expected to remain at this year's level of $\$ 1.8$ billion, as increases in some areas offset decreases in others. A 26percent increase, to $\$ 0.8$ billion, is expected next year in Saharan Africa, primarily in Libya and Tunisia. In Libya, the increase is mainly for exploration and development; expenditures declined in 1982, largely because several affiliates ended operations there in response to growing political tensions between Libya and the United States. In Sub-Saharan Africa, spending is to decline 13 percent, to $\$ 1.0$ billion; the decline is centered in Cameroon, where development of a newly discovered oilfield will be completed this year.

Affiliates in "international" plan to cut spending 19 percent, to $\$ 0.9$ billion, in 1983, following a 20 -percent increase. The decline reflects reduced spending on tankers, which, in turn, reflects the slowing of petroleum shipments in response to sluggishness in worldwide business activity.

## Manufacturing

Manufacturing affiliates plan to increase spending 2 percent, to $\$ 19.5$ billion, following no change this year. Small or moderate increases are planned in all industries within manufacturing except transportation equipment, in which spending is to decline.

Much of next year's increase is accounted for by affiliates in nonlectrical machinery; their expenditures are expected to increase 10 percent, to $\$ 5.6$ billion, following a slight decline this year. Nearly all of the increase is by affiliates manufacturing computers.

Affiliates in primary and fabricated metals plan a 9-percent spending increase, to $\$ 1.2$ billion, following a 37 percent increase this year; an expansion project undertaken by a bauxite mining and aluminum manufacturing affiliate in Brazil largely accounts for increases in both years. Affiliates in electric and electronic equipment and "other manufacturing" each plan 6percent increases, compared with increases of 8 and 13 percent, respectively, this year. Affiliates in chemicals plan a 3 -percent increase, to $\$ 3.3$ billion, following a 9 -percent increase. In food products, affiliates plan a small increase, to $\$ 1.5$ billion, following a 7 -percent increase.

In contrast, spending by affiliates in transportation equipment is expected to decline 14 percent, to $\$ 3.5$ billion, in 1983; a 22-percent decline in spending is planned this year. Both declines partly reflect completion of new facilities in the preceding year and deferral of nonessential spending due to the current weak worldwide demand for autos.

In developed countries, manufacturing affiliates plan a 5-percent increase, to $\$ 15.8$ billion, following a 3 percent decline in 1982. Canadian affiliates plan to increase spending 17 percent, to $\$ 3.9$ billion, compared with a 12-percent spending decline this year. Although increases are planned in every industry within manufacturing, the largest is in "other manufacturing'; it is mainly for plant expansion by a paper manufacturer.

In Europe, German affiliates plan a 13-percent increase in spending, to $\$ 2.8$ billion, following a 7 -percent decline this year. Most of the increase is in nonelectrical machinery, and is largely for increased capitalization of
computers for rental. French affiliates plan a 10 -percent increase, to $\$ 1.4$ billion; a small decline in food products is more than offset by increases in every other industry within manufacturing. The 5 -percent increase by British affiliates, to $\$ 2.9$ billion, is centered in "other manufacturing"; it reflects increased leasing of copiers. In "other Europe," affiliates plan to cut spending 44 percent, to $\$ 0.8$ billion, following a 5 -percent decline this year. Over three-fourths of next year's cutback is in transportation equipment, primarily in Spain and Austria; it reflects the completion of new facilities in 1982.

In developing countries, affiliates plan to cut spending 9 percent, to $\$ 3.7$ billion, following an 8 -percent increase this year. The largest declines, which are in Mexico and Singapore, result from completion of expansion projects in 1982. In Mexico, the decline is largely accounted for by tire and photographic equipment manufacturers; in Singapore, it is largely accounted for by a petrochemical affiliate.

## Other industries

Mining affiliates plan to cut spending 9 percent, to $\$ 0.9$ billion, following a 26 -percent decline this year. The cut is centered in Canada, where development of several large potash mines is expected to be completed by mid- 1983 .
Trade affiliates plan a 7-percent rise, to $\$ 4.5$ billion, following a 2 -percent cut. The rise is mainly in several European countries, Canada, and Australia, and is largely accounted for by affiliates that market computers.
Spending by affiliates in finance (except banking), insurance, and real estate is to remain at $\$ 0.3$ billion next year; this reflects small offsetting increases and decreases among several geographic areas.
Affiliates in "other industries"-agriculture, construction, transportation, communication, public utilities, and other services-plan a 3-percent increase, to $\$ 2.8$ billion, after a 7-percent spending decline this year. The largest increases are in Hong Kong, largely for construction of an electric power plant, and Canada, largely for modernization of a telecommunications system. Partly offsetting is a decline in Saudi Arabia, where a new affiliate performing city sanitation services plans to make sizable expenditures in 1982, but not in 1983.

By RUSSELL C. KRUEGER

# U.S. International Transactions, Second Quarter 1982 

THE U.S. current-account surplus increased $\$ 1.0$ billion to $\$ 2.1$ billion in the second quarter, largely due to a rise in net receipts of income on portfolio investment. Continued increases in U.S. bank claims on foreigners, together with high U.S. interest rates, resulted in a sharp increase in portfolio income receipts; income payments showed a smaller increase.

The merchandise trade deficit decreased $\$ 0.1$ billion to $\$ 5.8$ billion.

In the private capital accounts, both U.S. bank claims and liabilities remained at high levels, reflecting activities of International Banking Facilities (IBF's) and the ongoing transfer of U.S. banks' international lending and borrowing from offshore branches to their IBF's. Among other private capital accounts, U.S. corporations used their finance affiliates in the Netherlands Antilles and elsewhere to raise substantial funds in the Eurobond market, resulting in large net intercompany account inflows for U.S. direct investment abroad. Inflows for foreign direct investment in the United States in-
creased strongly. Net U.S. purchases of foreign securities changed little, as high interest rates discouraged new foreign bond issues in the United States. Net foreign purchases of U.S. securities increased, largely due to purchases of outstanding high-yield U.S. corporate bonds.

In the official capital accounts, foreign official assets in the United States shifted to an increase, as industrial countries' dollar sales slowed, and dollar holdings of a few OPEC members and other developing countries increased.

The statistical discrepancy (errors and omissions in reported transactions) was an inflow of $\$ 1.4$ billion. (The first-quarter discrepancy has been changed to an inflow of $\$ 5.0$ billion, compared with a preliminary estimate of $\$ 11.2$ billion, largely because previously unavailable data indicated a large reduction in claims on unaffiliated foreigners by U.S. nonbanking concerns, table 1-2, lines 52 and 53 . This account consists largely of deposits and commercial credits.)

## The U.S. dollar in exchange markets

The dollar appreciated 4 percent in the second quarter on a trade-weighted basis against the currencies of 10 industrial and 22 OECD countries (chart 10). The appreciation reflected continued high interest rates in the United States and political disturbances abroad, especially in the Middle East and in Latin America.

Fluctuations in the dollar's exchange value during the quarter generally paralleled those of U.S. shortterm interest rates. Following a strong rise in interest rates and the dollar from January through April, interest rates and the dollar dipped in May, with the dollar down as much as 5 percent against some major currencies. Interest rates rose again in late May and June because of renewed concerns about the size of Government borrowing, possible increases in the money supply because of July tax cuts, and strong commercial borrowing. Concurrently, the dollar appreciated nearly 9 percent. At the end of the quarter, the dollar was at postWorld War II highs against the Ital-

[^15]ian lira, the French and Belgian francs, and the Canadian dollar.

The strength of the dollar may have contributed to strains among currencies within the European Monetary System (EMS), but inflation differentials between member countries and divergent fiscal policies were probably more important. The EMS realigned its central rates in midJune, devaluing the French franc and Italian lira and revaluing the German mark and Dutch guilder. The United States intervened on a small scale to support the realignment. The Canadian dollar was under selling pressure throughout the quarter despite a significant increase in Canadian interest rates and heavy official intervention by Canadian authorities. Heavy selling pressure on the Mexican peso reflected growing market sentiment of more troubles ahead for the peso.

## Merchandise trade

The merchandise trade deficit decreased in the second quarter, to $\$ 5.8$ billion from $\$ 5.9$ billion in the first. Petroleum imports decreased $\$ 2.2$ billion, more than offsetting a $\$ 1.5$ billion increase in nonpetroleum imports. Exports decreased $\$ 0.7$ billion, as nonagricultural exports declined for the fourth consecutive quarter.

Imports decreased $\$ 0.8$ billion, or 1 percent, to $\$ 60.9$ billion. The decrease was more than accounted for by lower prices; volume increased 3 percent. Petroleum and products imports decreased $\$ 2.2$ billion, or 14 percent, to $\$ 13.4$ billion. The average price per barrel declined 5 percent to $\$ 30.53$ from $\$ 32.17$, continuing a year-long downtrend. The average number of barrels imported daily declined to 4.82 million from 5.33 million, the lowest level since the second quarter
of 1972. The drop in imports was reflected in a large decrease in inventories.

Nonpetroleum imports increased $\$ 1.5$ billion, or 3 percent, to $\$ 47.3$ billion; volume increased 4 percent. Automotive imports increased $\$ 1.3$ billion, or 17 percent, to a record $\$ 8.9$ billion. Volume increased 24 percent to a level slightly higher than the previous peak in the fourth quarter of 1978. The increase was primarily due to a $\$ 1.1$ billion, or 41 percent, increase to $\$ 3.8$ billion in imports from Canada. The increase in parts imports followed the opening in Canada of a major facility to produce engines for U.S. assembly plants. This arrangement departs from the traditional pattern of exporting parts to Canada for assembly into complete automobiles for subsequent shipment to the United States. Automotive imports from other areas rose slightly,

also reaching a record value. Japanese imports increased.
Nonpetroleum industrial supplies and materials imports decreased $\$ 0.8$ billion to $\$ 13.4$ billion. The decrease was concentrated in iron and steel products and in steelmaking materials, down $\$ 0.9$ billion in total. Iron and steel import volume has declined moderately in each of the past three quarters due to the recession, but the import share of total supply has remained close to historical highs of about 23 percent because of a sharp drop in domestic shipments (chart 11). Imports may also have been discouraged when the domestic steel industry filed a series of antidumping complaints in the first quarter that charged that imports were being sold at less than fair value because of foreign subsidies. An International Trade Commission ruling in June
found violations by a number of companies in Europe, South Africa, and Brazil and required that importers post cash bonds equivalent to the estimated underpricing. Penalties averaged $20-25$ percent of f.o.b. value and ranged up to 40 percent; about 20 percent of steel imports was involved.

Among other imports, foods, feeds, and beverages increased $\$ 0.6$ billion to $\$ 4.3$ billion. Increases in this category were widespread; the exception was sugar, which fell $\$ 0.1$ billion, largely because of the imposition of import quotas in mid-May. Capital goods increased $\$ 0.3$ billion to $\$ 9.1$ billion; electrical machinery and business machines each increased over $\$ 0.1$ billion. Consumer goods decreased $\$ 0.6$ billion to $\$ 9.5$ billion, due to a decline in durables.
With the exception of capital goods, import prices, as measured by the

Census Bureau's unit value indexes, declined moderately for all major commodity groups, primarily reflecting appreciation of the dollar.
Exports decreased $\$ 0.7$ billion, or 1 percent, to $\$ 55.1$ billion; volume increased 1 percent. Agricultural exports increased $\$ 0.2$ billion to $\$ 10.7$ billion. Increased exports of soybeans and feed grains offset lower wheat shipments to Eastern Europe. Prices of most major commodity groups declined, but more slowly than in the first quarter.
Nonagricultural exports decreased $\$ 0.8$ billion, or 2 percent, to $\$ 44.4$ billion, reflecting price declines in all major categories; volume was unchanged. Nonagricultural industrial supplies and materials decreased $\$ 0.9$ billion, or 6 percent, to $\$ 14.5$ billion. Petroleum exports, which had more than doubled in value following the

removal of export controls in October, fell $\$ 0.3$ billion, or 19 percent, to $\$ 1.5$ billion; metallurgical coal exports fell $\$ 0.4$ billion, or 25 percent, reflecting a general glut in the market because of the decline in steel production. Capital equipment exports were unchanged but included substantial offsetting changes in components. Automotive exports increased slightly to $\$ 4.2$ billion; exports to Canada continued to recover somewhat after the weak fourth quarter, and those to the rest of the world slowed. Consumer goods increased $\$ 0.2$ billion to $\$ 3.8$ billion, primarily in nondurables.

Over the past six quarters, the merchandise trade balance has deteriorated steadily with four areas: Canada, Latin America and Other Western Hemisphere, Western Europe, and Japan (table D, table 3B). Nonagricultural exports to Canada, to the rest of the Western Hemisphere, and to Western Europe declined because of recession abroad and the appreciation of the dollar; agricultural exports to Canada, the rest of the Western Hemisphere, and Japan also weakened steadily. Nonpetroleum imports from all four areas increased strongly in the last half of 1981, but leveled off or decreased in the first half of this year. In contrast, the balance with Eastern Europe has moved with changes in agricultural exports, which declined in the last half of 1981 and recovered strongly in the first half of 1982. The sharp improvement in the balance with all other areas was concentrated with OPEC members, almost entirely due to the large decline in petroleum imports and a slight increase in exports.

## Service transactions

Net service receipts increased $\$ 0.6$ billion to $\$ 9.6$ billion in the second quarter. Receipts increased $\$ 1.8$ billion to $\$ 36.2$ billion; payments increased $\$ 1.2$ billion to $\$ 26.6$ billion.

Receipts of income on U.S. direct investment abroad increased $\$ 0.2$ billion to $\$ 5.9$ billion, as a small pickup in income was partly offset by increased capital losses, probably currency translation losses due to strong appreciation of the dollar. By industry, income of nonpetroleum affiliates increased, especially in manufacturing; income of petroleum affiliates re-
flected stagnant demand and price weakness. By area, income was higher in Latin America, following capital losses in Mexico in the first quarter related to the devaluation of the peso, and in Canada, probably because of increased production of automobiles and parts. Income elsewhere was generally weaker, especially in the developed countries. Despite lower earnings and negative reinvested earnings, petroleum affiliates in Western Europe paid sharply higher dividends.

Payments of income on foreign direct investment in the United States increased $\$ 0.1$ billion to $\$ 1.5$ billion. Income increased for petroleum affiliates and finance and trade affiliates.

Receipts of income on other private investment increased strongly, up $\$ 1.7$ billion to $\$ 15.8$ billion, reflecting high U.S. interest rates and large increases in U.S. bank claims on foreigners over the past three quarters. Payments also showed a strong increase, up $\$ 1.0$ billion to $\$ 9.2$ billion. U.S. Government income receipts and payments each declined $\$ 0.1$ billion, to $\$ 1.0$ billion and $\$ 4.4$ billion, respectively.

Net travel receipts shifted to a $\$ 0.5$ billion deficit from near balance in the first quarter. Receipts were $\$ 2.7$ billion, down from $\$ 3.2$ billion, due to a decline in travel from Mexico after the February devaluation. Expenditures were unchanged.

Passenger fare receipts were unchanged at $\$ 0.8$ billion; payments declined $\$ 0.1$ billion to $\$ 1.2$ billion, partly due to a drop in the number of passengers on foreign carriers traveling to the United Kingdom and Latin America.

Other transportation receipts were unchanged at $\$ 3.0$ billion; payments increased $\$ 0.1$ billion to $\$ 2.7$ billion.

Transfers under U.S. military agency sales contracts were $\$ 3.4$ billion, up $\$ 0.4$ billion, mostly due to deliveries of armored vehicles to the Middle East and increased construction receipts. Shipments of aircraft and ships were reduced. Direct defense expenditures abroad were $\$ 3.0$ billion, up $\$ 0.2$ billion, largely due to increased payments to NATO and foreign personnel expenditures. Unilateral transfers decreased $\$ 0.3$ billion to $\$ 1.7$ billion, as U.S. Government grants fell from a high first-quarter level.

## U.S. assets abroad

U.S. official reserve assets increased $\$ 1.1$ billion, about the same as in the first quarter. Acquisitions of special drawing rights (SDR's) and the increase in the U.S. reserve position with the International Monetary Fund (IMF) together accounted for $\$ 0.9$ billion of the increase. Both reflected continued heavy use of the dollar in IMF transactions. Transactions in foreign currencies included an official swap acquisition of $\$ 0.6$ billion in Mexican pesos, which was repaid during the quarter; another $\$ 0.2$ billion swap acquisition of pesos,
which remained outstanding; and a $\$ 0.4$ billion equivalent German mark note redemption.
U.S. claims on foreigners reported by U.S. banks increased $\$ 33.9$ billion, compared with $\$ 32.7$ billion in the first quarter. U.S. bank claims for their own account increased substantially. Ample bank reserves and increased deposits at IBF's provided substantial funds for U.S. banks to meet an increase in international loan demand.

Since the establishment of IBF's in December, U.S. banks have recorded sharply increased direct lending and borrowing in the Eurodollar market; lending to (claims on) unaffiliated foreign banks in each of the last three quarters was more than twice as high as in any quarter prior to the establishment of IBF's, and lending to nonbank foreigners was also substantially higher. Much of this activity apparently represented a shift in some business from U.S. banks' foreign branches (especially those in offshore
banking centers and London) to parent banks' IBF's. U.S. banks' own claims on unaffiliated foreigners abroad increased $\$ 21.3$ billion and $\$ 24.3$ billion in the first two quarters of 1982, respectively. In contrast, foreign branches of U.S. banks reduced their claims on unaffiliated foreigners by $\$ 9.4$ and $\$ 12.8$ billion in the same periods. A similar pattern can be seen in liabilities where U.S. banks' liabilities to unaffiliated foreigners were up $\$ 14.4$ billion and $\$ 13.5$ billion in the first and second quarters, respectively, while liabilities to unaffiliated foreigners of foreign branches of U.S. banks declined $\$ 8.5$ billion and $\$ 11.1$ billion.

In contrast to a large increase in the first quarter, banks' custody claims-largely Eurodollar certificates of deposit (CD's) held for accounts of U.S. money market mutual funds-declined. The decline may have reflected perceptions of greater risk in Eurodollar CD's due to unsettled international financial conditions.

n.a. Not available.

Note.-Table shows only transactions with affiliates established primarily to borrow funds abroad and relend them to their U.S. parents.
U.S. direct investment abroad shifted to an inflow of $\$ 2.4$ billion from an outflow of $\$ 0.1$ billion, as U.S. corporations relied on foreign affiliates to obtain funds abroad to meet domestic financial requirements. For the fourth consecutive quarter, there were heavy intercompany account inflows of funds raised in the Eurobond market by Netherlands Antilles finance affiliates (table E). There were similar inflows from affiliates in Western Europe. Outflows to petroleum affiliates remained high, especially to the United Kingdom. Reinvested earnings increased $\$ 0.4$ billion to $\$ 1.2$ billion.

Net U.S. purchases of foreign securities were $\$ 0.4$ billion, down from $\$ 0.5$ billion. New foreign bond issues in the United States declined $\$ 0.6$ billion to $\$ 0.8$ billion; Canadian issues fell to $\$ 0.2$ billion from $\$ 1.3$ billion, as borrowers shifted to the less expensive Eurobond market. The only other new issues were those of the World Bank and the Inter-American Development Bank, and of Israel. Net U.S. purchases of foreign stocks were $\$ 0.1$ billion, compared with net sales of $\$ 0.4$ billion in the first quarter, as weak economic conditions abroad continued to discourage investment in foreign stocks.

## Foreign assets in the United States

Foreign official assets in the United States increased $\$ 1.9$ billion, compared with a decline of $\$ 3.1$ billion. Assets of industrial countries declined less than in the first quarter when foreign official intervention in exchange markets was heavy. Assets of OPEC members increased at a slower rate than in the first quarter, reflecting lower petroleum revenues; most of the increase was from Venezuela. Assets of other developing countries increased $\$ 0.9$ billion, compared with a $\$ 1.3$ billion decline.
U.S. liabilities to private foreigners and international financial institutions reported by banks increased $\$ 24.1$ billion, compared with $\$ 26.7$ billion. Liabilities to affiliated foreign offices increased $\$ 7.9$ billion, primarily to U.S. branches in the United Kingdom. Since the establishment of IBF's

## Footnotes to U.S. International Transactions Tables 1-10

General notes for all tables:
${ }^{r}$ Revised.
${ }^{p}$ Preliminary.
*Less than $\$ 500,000( \pm)$.
n.a. Not available.

Table 1-2:

1. Credits, +: exports of goods and services; unilateral transfers to United States; capital inflows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets.

Debits, -: imports of goods and services; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets.
2. Excludes transfers of goods and services under U.S. military grant programs (see line 16). 3. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 3
4. For all areas, amounts outstanding June 30, 1982 , were as follows in millions of dollars: line
, line $41,6,062$; line $42,8,999$. $38,30,671$; line $39,11,149$; line $40,4,461$; line $41,6,062$; line $42,8,999$.
5 . Includes sales of foreign obligations to foreigners.
6. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
7. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
8. Includes, primarily, U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies; see table 4 .
9. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.
10. Beginning with estimates for the second quarter of 1978 , the distinction between short- and long-term liabilities is discontinued.
11. Conceptually, the sum of lines 79 and 74 is equal to "net foreign investment" in the National Income and Product Accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) excludes capital gains and losses of foreign affiliates of U.S. parent companies from the NIPA's measure of income receipts from direct investment abroad, and from the corresponding income payments, and (c) beginning with 1973-IV, excludes shipments and financing of military orders placed by Israel under Public Law 93-199 and subsequent similar legislation. Line 77 differs from "net exports of goods and services" in the NIPA's for the same reasons with the exception of the military financing, which is excluded, and the additional exclusion of U.S. Government interest payments to foreigners. The latter payments, for NIPA's purposes, are excluded. from "net exports of goods and services" but included with transfers in "net foreign investment." A reconciliation table of the international accounts and the NIPA's foreign transactions account appears in the "Business Situation" in this issue of the Survey of Current Business.
12. The maturity breakdown is available only on the limited basis shown in table 7.
13. The maturity breakdown is available only on the limited basis shown in table 8 .
14. Includes foreign currency denominated notes sold to private residents abroad. See table 9 , line 35 , footnote 7 .

Table 3:

1. Exports, Census basis, represent transaction values, f.a.s. U.S. port of exportation; imports, Census basis, represent transaction values, f.a.s. foreign port of exportation for 1981. In 1982, imports reflect f.a.s. Customs values. The unadjusted figures for exports and imports shown in lines figures in lines A1 and A10; Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries. The seasonally adjusted figures in lines D1 and D56 are prepared by BEA and represent the summation of seasonally adjusted 4-digit end-use categories (see Technical Notes in the June 1980 Surver).
2. Beginning in 1970, adjustments in lines A5, A12, B9, B26, and B43 reflect the Census Bu rchandise trade statistics published by the United States and the counterpart statistics published in Canada. These adjustments also have been dis tributed to the affected end-use categories in section $C$.
3. Exports of military equipment under U.S. military agency sales contracts with foreign gov ernments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A13), to the extent such trade is identifiable from Customs declarations. These exports are includ ed in tables 1,2 , and 10 , line 3 (transfers under U.S. military agency sales contracts); and the imports are included in tables 1, 2, and 10, line 19 (direct defense expenditures).
4. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and cov erage adjustments for special situations in which shipments were omitted from Census data.
5. Correction for discrepancy between sum of four quarters, seasonally adjusted, and the unadjusted annual totals, plus the difference between Census published seasonally adjusted totals and the summation of seasonally adjusted 4 -digit end-use categories.
6. Addition of inland freight on U.S. merchandise imports from Canada; addition of electrica energy; deduction of coreign charges for repair of U.S. vessels abroad, which are included in tables 1, 2 and 10, line 22 (other transportation); net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and coverage adjustments for special situations in which shipments were omitted from Census data.
7. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2 and 18, except that trade with international organizations, namely, pur chases of nonmonetary gold from the IMF and transfers of tin to the International Tin Council (ITC), are included in data for other countries in Asia and Africa. The memorandum items are defined as follows: Industrial countries: Western Europe, Canada, Japan, and Australia, New Zealand, and South Africa; Members of OPEC: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, Gabon; Other countries: Latin American Republics, Other Western Hemisphere, and other countries in Asia and Africa, less OPEC, the IMF and the ITC.
8. The statistical identification of automotive products exports to Canada (line D43) is not as complete and comprehensive as the identification of imports under the U.S.Canada Automotive Products Trade Act. However, the underestimation of automotive shipments to Canada due to unidentified auto parts and unreported exports, amounting to about $\$ 1,842$ million in 1981 , has been largely corrected in line C24.
9. Includes nuclear fuel materials and fuels.

Table 4:

1. Expenditures to release Israel from its contractual liability to pay for defense articles and services purchased through military sales contracts-authorized under Public Law 93-199, section

4, and subsequent similar legislation-are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A3 items, part of the military expenditures is applied in lines A38 and A41 to reduce short-term assets previously recorded in lines A36 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A3 expenditures finances future deliveries under military sales contracts and is applied directly and other countries from commercial suppliers, is included in line A32.
2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partially estimated from incomplete data.
3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.
4. Line A33 includes foreign currency collected as interest, and lines A38 and B2 include foreign currency collected as principal, as recorded in lines A13 and A14 respectively.
5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contraentry for cludes expenditures of appropriations available to release foreign purchasers from liability to cludes expenditur
6. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C .
7. Receipt on short-term Commodity Credit Corporation asset financing U.S. merchandise export.

Table 5:

1. Acquisition of capital stock of existing and newly established companies, capitalization of intercompany accounts, and other equity contributions.
2. Sales and liquidations of capital stock and other equity holdings, total and partial.
3. Petroleum includes the exploration, development and production of crude oil and gas and the transportation, refining, and marketing of petroleum products exclusive of petrochemicals. Manufacturing excludes petroleum refining. "Other" industries includes mining; trade; banking; finance (except banking), insurance, and real estate; agriculture, fore
tion; transportation, communication, and public utilities; and services.

Table 6:

1. As published in Treasury Bulletin. Treasury data are based on transactions by foreigners reported by banks and
2. Redemptions consist of scheduled retirements and identifiable premature retirements of residents based on Canadian statistics. Unidentifiable nonschs of Canadian issues held by U.S. 31.
3. Consists of International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (IDB).
4. Mainly reflects exclusion of investments by foreign official agencies in U.S. corporate stocks and in debt securities of U.S. Government corporations and agencies, private corporations and and in debt securities of U.S. Government corporations and agencies, private corporat

Table 7:

1. Amounts outstanding were reduced by an increase in the reporting exemption level from $\$ 2$ million to $\$ 10$ million, effective March 31. Capital flows omit this drop in reporting coverage.
2. Consists of Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
3. Mainly in the Bahamas and Cayman Islands.
4. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries.

Table 8:

1. Consists of Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
2. Mainly in the Bahamas and Cayman Islands.
3. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries.
4. Includes central governments (central banks, departments, and agencies), state, provincial and local governments, and international and regional organizations.

## Table 9:

1. Negotiable certificates of deposit issued to foreigners by U.S. banks are included with U.S. banks' custody liabilities, and are shown in the memorandum
2. Mainly negotiable and readily transferable instruments; excludes U.S. Treasury securities.
3. Consists of Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
4. Mainly in the Bahamas and Cayman Islands.
5. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oilexporting countries.
6. Mainly the International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development
Bank (ADB), Inter-American Development Bank (IDB), and the Trust Fund of the International Bank (ADB), Int
Monetary Fund.
7. Consists of U.S. Treasury notes denominated in foreign currencies, sold through foreign cenral bank to domestic residents in country of issue; notes are subject to restricted transferability
8. Valuation of foreign currency indebtedness based on market exchange rates at end of month.

Table 10:
For footnotes 1-9, see table 1.
10. See footnote 11 to table 1.
11. The "European Communities (10)" includes the "European Communities (6)," the United Kingdom, Denmark, Ireland, and Greece
12. The "European Communities (6)" includes Belgium, France, Germany, Italy, Luxembourg,
the Netherlands, the European Atomic Energy Community, the European Coal and Steel Community, and the European Investment Bank.
13. Includes transactions with U.S. affiliated shipping companies operating under the flags of Honduras, Liberia, and Panama, and U.S. affiliated multinational trading companies, finance, and insurance companies, not designated by country.
14. See footnote 12 to table 1.
15. See footnote 13 to table 1 .
16. Details not shown separately; see totals in lines 57 and 64.
17. Details not shown separately are included in combined lines 72 and 73.

in December, U.S. banks' foreign branches have accepted more funds from U.S. residents, much of which was then lent to the parent banks' IBF's (IBF's may not deal directly with U.S. residents except their parent banks and other IBF's). Branch borrowing from U.S. residents increased $\$ 10.5$ billion in the first quarter and $\$ 9.9$ billion in the second; branch claims on the United States increased $\$ 12.2$ billion and $\$ 7.7$ billion, respectively, mainly on their parent bank. Banks' own liabilities to unaffiliated foreigners increased $\$ 13.3$
billion, as IBF's accepted deposits mainly from Latin America (particularly Venezuela), the Caribbean, and Europe.

Net foreign purchases of securities other than U.S. Treasury securities were $\$ 2.5$ billion, compared with $\$ 1.4$ billion, largely due to purchases of U.S. corporate bonds. High U.S. interest rates spurred heavy purchases from Western Europe, especially Germany. Foreign purchases of U.S. stocks increased $\$ 0.1$ billion to $\$ 0.8$ billion, with continued large purchases from the United Kingdom.

Foreign direct investment in the United States increased to $\$ 2.7$ billion from $\$ 1.2$ billion, but remained below the unusually high quarterly inflows in 1981. The increase was more than accounted for by equity and intercompany account inflows. There was a shift to small inflows from Canada, in contrast to large outflows in the first quarter associated with a special transaction. Inflows from Japan increased; inflows from Western Europe decreased, especially from the United Kingdom. Reinvested earnings were unchanged at $\$ 0.5$ billion.

## Now Available!

## Latest Edition of the

This updated edition of the Statistical Abstract presents both current and historical data on the social, economic, and governmental characteristics of the United States and contains:

- Over 1600 tables and graphic charts based on data from over 300 government and private agencies
- A Guide to Sources listing over 1,000 statistical publications, by subject area, for further reference

102d Edition
Use the GPO Order Form in this announcement.

- 101 new tables and a section on recent trends presenting social and economic data in table and chart form.
- Introduction of 1980 Census data.
- An appendix on "Statistical Methodology and Reliability" providing users with information on how the data were collected and measures of their reliability
- A subject index spanning 41 pages
- 1,047 pages

# FOOTNOTES FOR PAGES S-1 THROUGH S-32 

## General Notes for all Pages:

r Revised
p Preliminary.
e Estimated
c Corrected.

## Page S-1

$\ddagger$ Revised series. See Tables 2.6-2.9 in the July 1982 Survey for revised estimates back to 1977. Pre-1977 estimates are available in The National Income and Product Accounts of the United States, 1929-76: Statistical Tables.
$\ddagger$ Includes inventory valuation and capital consumption adjustments.

* New series. Detailed descriptions begin on p. 18 of the Nov. 1979 SURvey. See note " $\dagger$ " for this page for information on historical data.
§ Monthly estimates equal the centered three-month average of personal saving as a percentage of the centered three-month moving average of disposable personal income.

## Page S -2

1. Based on data not seasonally adjusted
\# Includes data not shown separately.
$\ddagger$ Revised series. For wholesale see note " $\ddagger$ " for $p$. S-8. For manufacturing see note " $\dagger$ " for p. S-3. For retail see note " $\dagger$ " for p . S-8.
$\dagger$ See note " $\dagger$ " for $p . S-3$.
\$ See note " $\uparrow$ " for p. S-8.
(a) See note " $\ddagger$ " for p. S- 8 .

* New series. Data back to 1967 are available from the National Income and Wealth Division, Bureau of Economic Analysis.

## Page S-3

$\ddagger$ Revised series. For wholesale see note " $\ddagger$ " for $p$. S-8. For manufacturing see note " $\dagger$ " for this page. For retail see note " $\uparrow$ " for p. S-8.
$\dagger$ Revised series. Data have been revised back to 1972. A detailed description of these revisions and historical data appear in the reports "Manufacturers' Shipments, Inventories, and Orders" M3-1.10 (1972-1980) and M3-1.11 (1977-81), available from the Bureau of the Census, Washington, D.C. 20233.
§ See note " + " for p. S-8.
(a) See note " $\ddagger$ " for $\mathrm{p} . \mathrm{S}-8$

* New series. Data back to 1967 are available from the National Income and Wealth Division, Bureau of Economic Analysis
\# Includes data for items not shown separately.

## Page S-4

1. Based on data not seasonally adjusted
$\dagger$ See note " + " for p. S-3.
\# Includes data for items not shown separately.
$\ddagger$ Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; unfilled orders for other nondurable goods industries are zero.
IF For these industries (food and kindred products, tobacco, apparel and other textile products, petroleum and coal, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

## Page S-5

1. Based on unadjusted data.

+ See note " $\uparrow$ " for p . S-3.
(a) Compiled by Dun \& Bradstreet, Inc.
\# Includes data for items not shown separately.
$\$$ Ratio of prices received to prices paid (parity index)
f Revisions, back to 1975 for some commodities, are available upon request.
$\ddagger$ See note " $\ddagger$ " for p. S-4.

## Page S-6

§ For actual producer prices of individual commodities see respective commodities in the Industry section beginning p. S-19. All data subject to revision four months after original publication.
$\dagger$ Revised series. Stage-of-processing producer price indexes have been revised back to 1976 to reflect updated industry input-output relationships and improved classification of some products.
\# Includes data for items not shown separately.
$\ddagger$ Effective Feb. 1982, data have been revised back to 1977 to reflect new seasonal factors.

## Page S-7

1. Computed from cumulative valuation total.
2. Index as. of Sept. 1, 1982: building, 332.9; construction, 361.0
\# Includes data for items not shown separately.
$\$$ Data for July and Oct. 1981, Jan., Apr., and July 1982 are for five weeks; other months four weeks.

## Page S-8

1. Advance Estimate.
\| Home mortgage rates (conventional first mortgages) are under money and interest rates on p. S-14.
§ Data include guaranteed direct loans sold.
$\ddagger$ Effective April 1982 Surver. wholesale trade data have been revised for Jan. 1972-Dec. 1981. Revised data are available upon request.
$\dagger$ Effective April 1982 Survey, retail trade data have been revised for the years 1972-1981. Revised data and a summary of the changes are available from the Census Bureau, Washington, D.C. 20233.
\# Includes data for items not shown separately.

## Page S-9

1. Advance estimate
2. Effective Jan. 1979 data, sales of mail-order houses are included with department store sales.
3. As of July 1 .
\# Includes data for items not shown separately.
$\ddagger$ Revisions for Jan. 1977-Oct. 1979 appear in "Current Population Reports," Series P-25, No. 870, Bureau of the Census.

- Effective with the February 1982 Survey, the labor force series have been revised back to 1970 to reflect the 1980 Census of Population. Seasonal adjustment factors were revised accordingly. Revised monthly series appear in the February 1982 issue of Employment and Earnings. Revised annual series will appear in the March 1982 issue of Employment and Earnings, U.S. Department of Labor, Bureau of Labor Statistics.
* New series. The participation rate is the percent of the civilian noninstitutional population in the civilian labor force. The employment-population ratio is employment as a percent of the total noninstitutional population, 16 years and over.
+ See note "t" for p. S-8.

## Page S-10

$\dagger$ Effective June 1982 Survey, data have been revised back to 1977 based on March 1981 benchmark levels and updated seasonal adjustment factors. See "BLS Establishment Estimates Revised to March 1981 Benchmarks," in the June 1982 issue of Employment and Earnings. Effective July 1981 Survey. data have been revised back to 1974 to reflect new benchmarks and new seasonal adjustment factors. See "BLS Establishment Estimates Revised to March 1980 Benchmarks," in the July 1981 issue of Employment and Earnings.

* See note " $\boldsymbol{q}^{\prime}$ " for p . S-9.

## Page S-11

$\dagger$ See note "t" on p. S-10.
$\ddagger$ This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision.

- Production and nonsupervisory workers.

## Page S-12

1. This series has been discontinued.

+ See corresponding note on p. S-10
TI Production and nonsupervisory workers.
$\ddagger$ Earnings in 1977 dollars reflect changes in purchasing power since 1977 by dividing by Consumer Price Index.
\$ Wages as of Sept. I. 1982: Common, \$14.64; Skilled, \$18.99.

## Page S-13

1. Average for Dec.

- Effective April 1982 Survey, the series for work stoppages involving six or more workers have been discontinued and have been replaced by series for work stoppages involving 1,000 or more workers.
\# Includes data for items not shown separately.
\$ For demand deposits, the term "adjusted" denotes demand deposits other than domestic commercial bank and U.S. Government, less cash items in process of collection; for loans, exclusive of loans to and Federal funds transactions with domestic commercial banks and include valuation reserves (individual loan items are shown gross; i.e. before deduction of valuation reserves).
* New series. Beginning Dec. 1978, data are for all investment account securities; comparable data for earlier periods are not available.
(a) Insured unemployment (all programs) data include claims filed under extended duration provisions of regular State laws; amounts paid under these programs are excluded from state benefits paid data.
(a.c) Insured unemployment as a percent of average covered employment in a 12-month period.

## Page S-14

1. Data are for fiscal years ending Sept. 30 and include revisions not distributed to the months.
2. Average for the year.
3. Daily average.
4. Beginning Jan. 1981, data are for top-rated only. Prior data cover a range of top-rated and regional dealer closing rates. See also note 3 for this page.
5. Beginning Oct. 1981, data represent the total surplus or deficit (budget surplus or deficit plus off-budget surplus or deficit).
6. Interest rate charged as of Sept. 1, 1982 was 13.21.
\# Includes data for items not shown separately.
§ The Department of Health, Education, and Welfare was redesignated as the Department of Health and Human Services by the Department of Education Organization Act.
If Adjusted to exclude domestic commercial interbank loans and Federal funds sold to domestic commercial banks.
$\ddagger$ Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent. Data through Oct. 1979 show a maturity for 120-179 days. Beginning Nov. 1979, maturity is for 180 days.
(a) Data through Oct. 1979 show a maturity for 150-179 days. Beginning Nov. 1979, maturity is for 180 days.
$\ddagger \ddagger$ Courtesy of Metals Week.

## Page S-15

1. M1-A has been discontinued. M1-B will now be designated "MI."

+ Effective Feb. 1982 Survey, the money stock measures and components have been revised back to 1959. The Federal Reserve has redefined the monetary aggregates. The redefinition was prompted by the emergence in recent years of new monetary assets-for example, negotiable order of withdrawal (NOW) accounts and money market mutual fund shares-and alterations in the basic character of established monetary assets-for example, the growing similarity of and substitution between the deposits of thrift institutions and those of commercial banks. Monthly data from 1959 to date are available from the Banking Section of the Division of Research and Statistics at the Federal Reserve Board, Washington, D.C. 20551.
$\ddagger$ Composition of the money stock measures is as follows:
MI.-This measure is currency plus demand deposits at commercial banks and interest-earning checkable deposits at all depositary institutions-namely NOW accounts, automatic transfer from savings (ATS) accounts, and credit union share draft balances-as well as a small amount of demand deposits at thrift institutions that cannot, using present data sources, be separated from interest-earning checkable deposits.
M2. -This measure adds to M1 overnight repurchase agreements (RP's) issued by commercial banks and certain overnight Eurodollars (those issued by Caribbean branches of member banks) held by U.S. nonbank residents, money market mutual fund shares, and savings and small-denomination time deposits (those issued in denominations of less than $\$ 100,000$ ) at all depositary institutions. Depositary institutions are commercial banks (including U.S. agencies and branches of foreign banks, Edge Act corporations, and foreign investment companies), mutual savings banks, savings and loan associations, and credit unions.
M3.-This measure equals M2 plus large-denomination time deposits (those issued in denominations of $\$ 100,000$ or more) at all depositary institutions (including negotiable CD's) plus term RP's issued by commercial banks and savings and loan associations.
L. -This broad measure of liquid assets equals M3 plus other liquid assets consisting of other Eurodollar holdings of U.S. nonbank residents, bankers acceptances, commercial paper, savings bonds, and marketable liquid Treasury obligations.
$\ddagger \ddagger$ Includes ATS and NOW balances at all institutions, credit union share draft balances, and demand deposits at mutual savings banks.
* Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.
(a) Small time deposits are those issued in amounts of less than $\$ 100,000$. Large time deposits are those issued in amounts of $\$ 100,000$ or more and are net of the holdings of domestic banks, thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions.
\# Includes data for items not shown separately.
§ Number of issues represents number currently used; the change in number does not affect the continuity of the series.

## Page S-16

1. Beginning Jan. 1981 data, U.S. Virgin Islands trade with foreign countries is included.
§ Number of issues represents number currently used; the change in number does not affect the continuity of the series.
$\ddagger$ For bonds due or callable in 10 years or more.
\# Includes data for items not shown separately.
(a) Data may not equal the sum of the geographic regions, or commodity groups and principal commodities, because of revisions to the totals not reflected in the component items.
2. Before extraordinary and prior period items.
3. For month shown.
4. Domestic trunk operations only (averaging about 90 percent of domestic total).
5. See note 2 for p . S-17.
\# Includes data for items not shown separately.
§ Total revenues, expenses, and income for all groups of carriers also reflect nonscheduled service.
$\ddagger$ Beginning Jan. 1977, defined as those having operating revenues of $\$ 50$ million or more.

- Average daily rent per room occupied, not scheduled rates.
(a) Effective January I, 1980, contract carriers are not included because the data filed by these carriers were substantially reduced in scope, in accordance with the ICC revised reporting regulations.

## Page S-19

1. Reported annual total; monthly revisions are not available.
2. Data withheld to avoid disclosing operations of individual companies.
3. Beginning Jan. 1981, data represent gross weight (formerly phosphoric acid content weight) and are not comparable with data shown for earlier periods.
4. A portion of data is being withheld to avoid disclosing information for individual companies; not comparable with other published data.
5. Beginning Jan. 1980 data, another company is included.
\# Includes data for items not shown separately.
§ Data are reported on the basis of 100 percent content of the specified material unless otherwise indicated.
$\ddagger$ Revisions, back to 1977 for some commodities, are available upon request.
Ti Data for Jan. 1977-June 1979 exclude potassium magnesium sulfate; not strictly comparable with data shown for other periods.

## Page S-20

1. Reported annual total; monthly revisions are not available.
2. Annual total includes Hawait; not distributed to the months.
3. Beginning 1982, the reporting frequency has been changed from a monthly to a quarterly basis. Revised quarterly data for 1979 through 1981 are available upon request.
$\$$ Data are not wholly comparable from year to year because of changes from one classification to another.
$\ddagger$ Revisions back to 1977 are available upon request.

## Page S-21

1. Average for three months, price not available for Apr.-Dec.
2. Crop estimate for the year.
3. Stocks as of June 1.
4. Stocks as of June 1 and represents previous year's crop; new crop not reported until

June (beginning of new crop year).
5. Previous year's crop; new crop not reported until Oct. (beginning of new crop year).

7. Data are no longer available.
8. See note 4 for p . $\mathrm{S}-22$.
9. August I estimate of the 1982 crop.
10. September I estimate of the 1982 crop.
§ Excludes pearl barley.
\# Bags of 100 lbs .

* Revised crop estimates back to 1975 are available upon request.
(a) Revisions, back to 1977, for some commodities, are available upon request.
$\ddagger$ Revisions back to 1975 are available upon request.
© (6) Data are quarterly except for June (covering Apr, and May) and Sept. (covering June-Sept.).

## Page S-22

1. Average for 11 months; price not available for Dec.
2. Average for nine months; index not available for Apr.-June.
3. Data are no longer available.
4. Effective with this reporting, data are for three-month intervals.
§ Cases of 30 dozen.
T. Bags of 132.276 lbs
$\ddagger$ Revisions for Jan.-July 1979 (back to 1975 for grindings of wheat) are available upon request.
(a) Revisions back to 1977 are available upon request.
\# Effective Apr. 1981 Survey. the wholesale price of smoked hams has been discontinued and has been replaced with the comparable price index. Annual indexes prior to 1979 and monthly indexes prior to Feb. 1980 are available upon request.

## Page S-23

1. Crop estimate for the year
2. Average for seven months; price not available for July, Aug., and Oct.-Dec.
3. Annual total; monthly revisions are not available.
4. Data are no longer available.
5. August 1 estimate of the 1982 crop.
6. September I estimate of the 1982 crop.
§ Monthly data reflect cumulative revisions for prior periods.
$\ddagger$ Revisions back to 1975 are available upon request.

* New series. Source: Bureau of Labor Statistics.
\# Totals include data for items not shown separately.

## Page S-24

1. Annual data; monthly revisions not available.
2. Less than 500 short tons

## Page S-25

1. Annual data; monthly revisions are not available
2. For month shown
3. Effective Jan. 1981, data are revised back to Jan. 1980. Inventory data formerly calculated by the Bureau of the Census are now based on the Steel Service Center Institute monthly Business Conditions report.

## Page S-26

1. Annual data; monthly revisions are not available
2. Less than 50 tons.
T. Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.
(a) All data (except annual production figures) reflect GSA remelted zinc and zinc purchased for direct shipment.
$\ddagger$ Source for monthly data: American Bureau of Metal Statistics. Source for annual data Bureau of Mines.
\# Includes data not shown separately.
$\dagger$ Effective July 1980 SURVEY, data are revised and shown on a new base. The sample size has been restored to 100 firms and the base has been changed to $1977=100$. The revised series are not comparable to previously published data.

* New series. These indexes are based on shipments of hydraulic and pneumatic products reported by participating members of the National Fluid Power Association. Data back to 1959 are available upon request.

## Page S-27

1. Effective Jan. 1980, total stocks for bituminous coal and lignite exclude residential and commercial stocks and are not comparable with data shown for earlier periods.
2. Data are for five weeks; other months 4 weeks.
3. Based on new 1981 stock level. See also note " $\ddagger$ " for this page.
4. For month shown.
\# Includes data for items not shown separately.
@ Beginning July 1977, data are representive of those manufacturers reporting and are not an average of the total industry; they are not directly comparable with earlier data

* New series. Annual data prior to 1978 and monthly data prior to April 1979 are available upon request.
§ Includes nonmarketable catalyst coke.
I Includes small amounts of "other hydrocarbons and hydrogen refinery input," not shown separately.
$\dagger$ Revisions for 1978 are available upon request.
$\ddagger$ Effective with 1981 petroleum data, the Energy Information Agency has changed some definitions and concepts to reflect recent developments in refining and blending practices. These changes include adding a category for gasohol production to motor gasoline production and accounting more precisely for distillate and residual fuel oil processed further after initial distillation. A description of these changes appears in the May 1981 issue of Monthly Energy Review, U.S. Department of Energy, Energy Information Administration.

## Page S-28

1. Based on new 1981 stock level. See also note " $\ddagger$ " for $p . S-27$.
2. See note 5 for p. S-29.
3. Reported annual totals; revisions not allocated to the months
4. Simple averages of prices are no longer available

- Prices are mid-month, include taxes, and represent full service; comparable prices prior o Jan. 1979 are not avaitable.
\# Inciudes data for items not shown separately.
* New series. See note "ब" for this page.
$\ddagger$ Except for price data, see note " $\ddagger$ " for p. S-27.

## Page S-29

1. Reported annual total; revisions not distributed to the months
2. Effective Jan. 1980, data are no longer available.
3. Average for 11 months; no price for Aug. 1980 or June 1981.
4. Average for 11 months; no price available for Nov. 1980 or for Oct. 1981.
5. Monthly data will be discontinued as of April 1982 Surver, due to budgetary limitations. The related annual report, MA26A, will continue to be published,
if Source: American Paper Institute. Total U.S. estimated consumption by all newspaper users.
$\$$ Monthly data are averages of the 4 -week periods ending on the Saturday nearest the end of the month; annual data are as of Dec. 31.
$\ddagger$ Data are monthly or annual totals. Formerly weekly averages were shown.

## Page S-30

1. Reported annual total; revisions not allocated to the months.
2. Crop for the year
3. Data cover five weeks; other months, four weeks.
4. Data are not available prior to Jan. 1980.
5. Shipments of wide-mouth containers for "chemical, household and industrial" are included in shipments for "medicinal and toilet" containers
6. See note " $\ddagger$ " for this page.
7. For the period November and December 1981, shipments of wide-mouth containers for "chemical, household and industrial" are included in shipments for "medicinal and toilet" containers.

* New series. Data for finishing mills have replaced data for weaving mills, which are no longer available.
\# Includes data for items not shown separately.
9I Cumulative ginnings to the end of month indicated.
§ Bales of 480 lbs
$\ddagger$ Beginning Jan. 1982, shipments include those for direct export; such shipments for 1980-81 were (thous. gross): 2,316 and 2,165 respectively.

## Page S-31

1. Effective Jan. 1, 1978, includes reexports, formerly excluded.
2. Annual total includes revisions not distributed to the months.
3. Average for crop year; Aug. 1-Jul. 31.
4. For five weeks; other months four weeks
5. Monthly average.
6. Less than 500 bales
§ Bales of 480 lbs
4 Based on $480-\mathrm{lb}$. bales, preliminary price reflects sales as of the 15 th; revised price reflects total quantity purchased and dollars paid for the entire month (revised price includes discounts and premiums).
\# Includes data not shown separately

## Page S-32

1. Annual total includes revisions not distributed to the months
2. Estimates of production, not factory sales.
3. Beginning Jan. 1979, data reflect the inclusion of Volkswagens produced in the U.S. Beginning Jan. 1980, passenger vans (previously reported as passenger cars) are included with trucks.
4. Monthly data for 1980 as published in earlier issues of the SURVEY, exclude exports for off-highway trucks; not strictly comparable with data shown for other periods.
5. Based on unadjusted data.
6. See note " $\ddagger$ " for this page
7. Effective with the September 1982 SURVEY, retail sales of trucks have been restated back to Jan. 1982 to include U.S.-built Mercedes-Benz trucks (19,501-33,000 lbs.); comparable stock data, prior to Aug. 1982, are not available.
\# Total includes backlog for nonrelated products and services and basic research
$\S$ Domestics comprise all cars assembled in the U.S. and cars assembled in Canada and imported to the U.S. under the provisions of the Automotive Products Trade Act of 1965. Imports comprise all other cars.
\$1 Courtesy of R.L. Polk \& Co.; republication prohibited. Because data for some states are not available, month-to-month comparisons are not strictly valid.
$\ddagger$ Excludes railroad-owned private refrigerator cars and private line cars.
$\ddagger$ Revisions, back to 1967 for some commodities, are available upon request. Effective with the July 1982 Surver, seasonally adjusted data for passenger cars have been revised back to Jan. 1977 and are available upon request.
(a) In the 1979 BUSINESS STATISTICS, 4th Qtr. 1977 should read " 13,946 " mil. \$.
$\ddagger \ddagger$ In the 1979 BUSINESS STATISTICS, annual data for 1977 should read " $2,604.8$ " mil. \$.
\#\# Revisions back to 1977 are available upon request.

# SELECTED DATA ON U.S. DIRECT Investminn ABROAD, 1950-76 

A new publication by the Bureau of Economic Analysis provides historical estimates on U.S. direct investment abroad for the years 1950-76. The publication, Selected Data on U.S. Direct Investment Abroad, 1950-76, provides estimates for selected countries crossclassified by summary industries. Two hundred tables contain estimates for U.S. direct investment position abroad; equity and intercompany account outflows; reinvested earnings of incorporated affiliates; interest, dividends, and earnings of unincorporated affiliates; income; earnings; fees and royalties; and royalties and license fees. For all of the items, other tables show estimates for 1966-76 for every country in which there is investment; these detailed country estimates are not crossclassified by industry.

## In the second quarter

- Real GNP increased 2 percent
- Real final sales declined 1 percent
- GNP fixed-weighted price index increased 4 percent
- Real disposable personal income increased 3 percent

Real GNP

GNP Fixed-Weighted Price Index

Real Final Sales

Real Disposable Personal Income

[^0]:    1. The 75 -day revision of the second-quarter estimates (see table 4) was larger than usual. The revisions centered in the foreign military sales and direct investment income components of net exports and in change in business inventories. The revision in the former reflected new information; in the latter, it reflected revised data on wholesale inventories.
    The major source data that shed light on third-quarter GNP are limited to 1 or 2 months of the quarter, and in some cases are preliminary. These data are: For personal consumption expenditures (PCE), July and August retail sales, unit sales of new autos through the first 10 days of September, and sales of now trucks for July and August; for nonresidential fixed investment, the same data for autos and trucks as for PCE, July construction put in place, July manufacturers' shipments of equipment, and business investment plans for the quarter; for residential investment, July construction put in place, and July and August housing starts; for change in business inventories, July book values for manufacturing and trade, and unit auto inventories for July and August; for net exports of goods and services, July merchandise trade; for government purchases of goods and services, Federal unified budget outlays for July, State and local construction put in place for July, and State and local employment for July and August; and for GNP prices, the Consumer Price Index for July and the Producer Price Index for July and August.
[^1]:    2. Quarterly estimates of the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes in them are differences between these rates.
[^2]:    3. The Bank Board's series is for 25 -year mortgages with a loan to price ratio of 0.75 , and covers all mortgage lenders. The Mortgage Corporation's series covers 30 -year mortgages with a loan to price ratio of 0.80 , and is based on a sample of savings and loan as sociations. Both series, as well as the FNMA auction yields, are for conventional, level payment mortgages.
[^3]:    *Projected. Based on unit production in July and August and scheduled production for September, unit sales of autos through the first 10 days of September and of trucks for July and August, and unit inventories for July and August.

    Note.-For estimates through 1982: II, see tables 1.14-1.15 and 1.16-1.17 of the National Income and Product Accounts Tables. Auto output includes dealers' margins on their used car transactions; truck output includes new trucks only.

[^4]:    (Continued on p. 8)

[^5]:    Note.-Robert Bretzfelder and Bruce Levine, assisted by Ronald Catzva, made substantial contributions in implementing the methodology and in preparing and analyzing the tables. Frank de Leeuw and Ray Grimes contributed to the development of the methodology and to the analysis of the findings. Elizabeth Queen, Kenneth Berkman, and Robert Brown, all under the direction of Edwin Coleman, and Kenneth Johnson developed special estimates and statistical techniques.

    1. The measures are based on estimates of State personal income published in the July 1981 Survey of Current Business. Use of the revised estimates published in the August 1982 Survey, which was precluded because of time constraints, would have little effect on the findings of this article.
[^6]:    4. Regional wage rate and cost-of-living differentials are not independent of each other, insofar as wages may account for a large fraction of the costs of production and distribution. This is particularly true for housing and services, both of which tend to be consumed in the vicinities of their production.
    5. See G. H. Borts, "The Equalization of Returns and Regional Economic Growth," American Economic Review, L (June 1960), pp. 319-47. In 1960, Borts found that from 1919 to 1953, migration flows from low- to high-wage regions had occurred but, apparently, the flows had not been large enough to result in substantial interregional wage rate convergence; he concluded that continued migration in the "right direction" was a necessary, although not a sufficient, condition for convergence.
[^7]:    6. It should be noted, however, that in previous periods of recession, the migration rate also slowed.
[^8]:    1. See table 3 , footnote 1 .
[^9]:    1. Hypothetical wages and salaries and farm proprietors' income $\div$ wage and salary employ-
[^10]:    1. Plans have been adjusted for biases (table 7, footnote 1). The adjustments were made for each industry Before adjustment, plans for 1982 were $\$ 127.2$ billion for manufacturing and $\$ 196.3$ billion for nonmanufac turing. The net effect of the adjustments was to lower manufacturing $\$ 2.94$ billion and to raise nonmanufac turing $\$ 3.18$ billion.
    2. Respondents to the quarterly survey are not asked to report information on price changes reflected in actual or planned spending figures. To estimate real spending, the figures reported by survey respond ents are adjusted using implicit price deflators developed by BEA based on unpublished data in the national income and product accounts. Real spending since 1977 has been reestimated based on deflators that reflect the revisions of the national income and product accounts released in July. Real spending plans for 1982 are based on the assumption that plans for each industry reflect price expectations equal to the average rate of change for that industry's deflator during the latest four quarters for which it is available.
[^11]:    1. The survey asks manufacturers to report actual and preferred rates of capacity utilization for the last month of each quarter. Utilization rates for industry and asset-size groups are weighted averages of individual company rates. See "The Utilization of Manufacturing Capacity, 1965-
    73," Survey of Current Business, July 1974, p. 47.
    2. Also includes lumber, furniture, fabricated metals, instruments, and miscellaneous
    3. Also includes other transportation equipment.
[^12]:    4. Also includes tobacco, apparel, printing-publishing, and leather.
    5. Consists of lumber; stone, clay, and glass; primary metals; fabricated metals; textiles; paper; chemicals (at $1 / 2$ weight); petroleum; and rubber.
    6. Consists of furniture, electrical machinery, machinery except electrical, motor vehicles, aircraft, other transportation equipment, instruments, food including beverage, tobacco, apparel, printing-publishing, chemicals (at $x_{2}$ weight), leather, and miscellaneous.
[^13]:    Note.-Patricia E. DiVenuti and Edward L. Simons assisted in preparing the estimates. Smith W. Allnutt III designed the computer programs for data retrieval and analysis.

[^14]:    1. Capital expenditures estimates are for majorityowned nonbank foreign affiliates of nonbank U.S. par ents. (An affiliate is majority owned when the combined ownership of all U.S. parents exceeds 50 percent.) Capital expenditures are expenditures that are made to acquire, add to, or improve property, plant and equipment, and that are charged to capital accounts. They are on a gross basis; sales and other dispositions of fixed assets are not netted against them. Capital expenditures are reported to BEA in current dollars; they are not adjusted for price changes in host countries or for changes in the value of foreign cur rencies, because the data needed for these adjustments are unavailable.
