# SURVEY of Current Business 

Survey of Current Business (issn 0039-6222). Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, Survey of Current Business, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Subscriptions to the Survey of Current Business are maintained, and their prices set, by the Government Printing Office, an agency of the U.S. Congress. Postmaster: Send address changes to:

Superintendent of Documents, U.S. Government Printing Office,

Washington, DC 20402.
The GPO order desk number is (202) 512-1800. The subscription complaint desk number is (202) 512-1806.

Subscription and single-copy prices:
Second-class mail: $\$ 49.00$ domestic, $\$ 61.25$ foreign.
First-class mail: $\$ 90.00$.
Single copy: $\quad \$ 11.00$ domestic, $\$ 13.75$ foreign.
Make checks payable to the Superintendent of Documents.

Second-class postage paid at Washington, DC and at additional mailing offices. (USPS 337-790).

The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department.

this issue of the Survey went to the printer on February 11, 1997.
It incorporates data from the following monthly bea news releases: U.S. International Trade in Goods and Services (January 17), Gross Domestic Product (January 31), and
Personal Income and Outlays (February 3).

# TABLE OF CONTENTS 

## $\mathcal{S}_{\text {pecial in this issue }}$

## 23 U.S. Intrafirm Trade in Goods

Transactions between affiliated units of multinational companies (MNC's) account for a major share of U.S. international trade in goods-for more than one-third of U.S. exports in 1994 and for more than two-fifths of U.S. imports. For both exports and imports, this intrafirm trade has mainly consisted of shipments from parents to their affiliates rather than shipments to parents from their affiliates. By industry, most of the intrafirm trade of U.S. mNC's has been between U.S. manufacturing parents and their foreign manufacturing affiliates, and most of the intrafirm trade of foreign MNC's has been between U.S. wholesale trade affiliates and their foreign parent groups.

## Regular features

1 Business Situation
Real GDP increased 4.7 percent in the fourth quarter of 1996 after increasing 2.1 percent in the third quarter; the acceleration was more than accounted for by a sharp turnaround in exports and by a pickup in personal consumption expenditures. The price index for gross domestic purchases increased 2.5 percent after increasing 1.9 percent; the step-up was more than accounted for by an upturn in energy prices.

7 Personal Income by State and Region, Third Quarter 1996
Personal income in the Nation increased 1.4 percent in the third quarter of 1996. In all States, the increase in personal income exceeded the 0.4 -percent increase in the prices paid by U.S. consumers. Nevada had the largest increase in personal income, 2.3 percent, and Alaska had the smallest increase, 0.6 percent.

## LOOKING AHEAD

- Real Gross Product of Foreign Affiliates of U.S. Companies. An upcoming issue of the Survey will contain an article that presents and analyzes estimates of real gross product of U.S. companies' majority-owned affiliates in manufacturing for 1982-94. These estimates, which bea has prepared for the first time, have been adjusted to remove the effects of changes in prices and in exchange rates.

## B U S I N E S S

S I T U A T I O N

This article was prepared by Daniel Larkins, Larry R. Moran, Ralph W. Morris, and Deborah Y. Sieff.

$\varepsilon$CONOMIC GROWTH accelerated in the fourth quarter of 1996, according to the "advance" estimates of the national income and product accounts (NIPA's), as real gross domestic product (GDP) increased 4.7 percent after increasing 2.1 percent in the third quarter (chart 1 and table 1 ). ${ }^{1}$ Real final sales of domestic product accelerated even more-to a 4.9 -percent increase from a 0.5 -percent increase. The price index for gross domestic purchases increased 2.5 percent after increasing 1.9 percent; the step-up was accounted for by an upturn in energy prices.

The strength of the economy in the fourth quarter was especially evident in exports and in personal consumption expenditures (PCE). Exports increased sharply after a small third-quarter decrease; the upturn largely reflected exports of

1. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarter-to-quarter dollar changes are differences between these estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data. Real estimates are expressed in chained (1992) dollars. Price indexes are chain-type indexes.
nonautomotive capital goods. ${ }^{2}$ PCE accelerated after a small third-quarter increase; durable goods turned up, and nondurable goods and services increased more than in the third quarter. The acceleration in real GDP growth also reflected, to a lesser extent, changes in government spending and in residential investment. The acceleration was moderated by changes in inventory investment and in nonresidential fixed investment. Inventory accumulation slowed after a substantial step-up; the slowdown was concentrated in retail trade. Nonresidential fixed investment increased much less than in the third quarter; structures increased considerably more than in the third quarter, but producers' durable equipment (PDE) posted its first decrease in 5 years after increasing sharply in the third quarter.

Motor vehicles.-Real motor vehicle output decreased 15.6 percent in the fourth quarter after decreasing 3.3 percent in the third; the fourthquarter decrease was more than accounted for by autos (table 2). According to data on units, domestic auto production decreased to 5.7 million (seasonally adjusted annual rate) in the fourth quarter from 6.7 million in the third.
Final sales of motor vehicles to domestic purchasers decreased 1.8 percent in the fourth quarter after decreasing 3.7 percent in the third. Auto sales more than accounted for the decrease in both quarters; truck sales increased considerably more in the fourth quarter than in the third.
Motor vehicle sales to consumers decreased less in the fourth quarter than in the third; in the fourth quarter, increased sales of new autos and trucks were more than offset by a decrease in sales of used autos. ${ }^{3}$ General factors frequently considered in analyses of consumer spending were mixed in the fourth quarter: The growth in real disposable personal income slowed to 2.5 percent from 4.8 percent, but the Index of Consumer Sentiment (prepared by the University of Michigan's Survey

| NoTE.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the correspond- |  | ing chained-dollar estimates usually are not additive. Chained (1992) dollar levels for motor vehicle output, auto and truck output, and residuals, which measure the extent of nonadditivity in each table, are found in NIPA tables 1.4, 8.5, and 8.7. |  |  |  |  |  |  |  |

Research Center) increased from an already high level; the unemployment rate was unchanged at 5.3 percent. Among factors specific to motor vehicle purchases, interest rates on new-car loans changed little from the third quarter.

Motor vehicle sales to businesses decreased after a sharp increase; new domestic autos more than accounted for the decrease. Sales to government increased slightly in the fourth quarter; autos accounted for the increase.

Exports of motor vehicles increased less in the fourth quarter than in the third; trucks accounted for the fourth-quarter increase. Imports turned down in the fourth quarter; both autos and trucks decreased.
Motor vehicle inventory investment decreased substantially in the fourth quarter, reflecting a swing in both auto and truck inventories from accumulation to liquidation. Nevertheless, the inventory-sales ratio for new domestic autos, which is calculated from units data, edged up to

## Fourth-Quarter 1996 Advance gdp Estimate: Source Data and Assumptions

The "advance" GDP estimate for the fourth quarter is based on preliminary and incomplete source data; as more and better data become available, the estimate will be revised. The advance estimate is based on the following major source data. (The number of months for which data were available is shown in parentheses.)
Personal consumption expenditures: Sales of retail stores (3) and unit auto and truck sales (3);

Nonresidential fixed investment: Unit auto and truck sales (3), construction put in place (2), manufacturers' shipments of machinery and equipment other than aircraft (3), aircraft shipments (2), and exports and imports of machinery and equipment (2);
Residential investment: Construction put in place (2) and single-family housing starts (3);

Change in business inventories: Manufacturing and trade inventories (2), and unit auto and truck inventories (3);
Net exports of goods and services: Exports and imports of goods and services (2);

Government consumption expenditures and gross investment: Department of Defense outlays (3), other Federal outlays $(3)$, State and local construction put in place (2), and State and local employment (3);
gdP prices: Consumer Price Index (3), Producer Price Index (3), price indexes for nonpetroleum merchandise exports and imports (3), and values and quantities of petroleum imports (2)。
bea made assumptions for source data that were not available. Table A shows the assumptions for key series; a more comprehensive list of assumptions is available on the Department of Commerce's Economic Bulletin Board or from bea.

1. Assumed.
2. Nonmonetary gold is included in balance-ot-payments-basis exports and imports but is not used directly in the estimation of NIPA exports and imports.
2.2 at the end of the fourth quarter from 2.1 at the end of the third; the traditional industry target is 2.4 .

## Prices

The price index for gross domestic purchases, which measures the prices paid for goods and services purchased by U.S. residents, increased 2.5 percent in the fourth quarter after increasing 1.9 percent in the third (table 3). ${ }^{4}$ The acceleration was accounted for by imported petroleum. Excluding the relatively volatile food and energy components, prices of gross domestic purchases increased 2.0 percent, the same as in the third quarter (chart 2).

PCE prices increased 2.9 percent after increasing 1.7 percent. Energy prices increased 6.9 percent after decreasing 7.8 percent; prices of fuel oil and coal and of gasoline and oil turned up. Food prices increased 4.2 percent after increasing 4.9 percent; most food prices slowed. "Other" PCE prices increased 2.5 percent after increasing 1.7 percent; prices of medical care and of transportation services stepped up, and prices of clothing and shoes increased after a decrease.

Prices of nonresidential fixed investment were unchanged after increasing 1.8 percent; prices of

## CHART 2

nonresidential structures increased less than in the third quarter, and prices of pDE decreased after increasing. In PDE, prices of transportation and related equipment turned down, and prices of computers and peripheral equipment posted a larger decrease than in the third quarter. Prices of residential investment increased 0.8 percent after increasing 3.3 percent.
Prices of government consumption expenditures and gross investment increased 2.6 percent, about the same as in the third quarter. Prices paid by the Federal Government increased 2.0 percent after increasing 0.9 percent; both national defense and nondefense prices accelerated. Prices paid by State and local governments increased 2.9 percent after increasing 3.6 percent.
The GDP price index, which measures the prices paid for goods and services produced in the United States, increased 1.8 percent after increasing 2.0 percent. The GDP price index, unlike the price index for gross domestic purchases, includes the prices of exports and excludes the prices of imports. Export prices decreased 2.2 percent after decreasing 1.8 percent; the fourth-quarter decrease was mainly accounted for by foods, feeds, and beverages and by nonautomotive capital goods. Import prices increased 3.7 percent after decreasing 2.0 percent; petroleum more than accounted for the increase.

## Personal income

Real disposable personal income (DPI) increased 2.5 percent in the fourth quarter after increasing 4.8 percent in the third (chart 3). Current-dollar DPI increased $\$ 72.7$ billion, or 5.3 percent, after increasing $\$ 87.1$ billion, or 6.4 percent. The personal
saving rate (saving as a percentage of current-dollar DPI) decreased to 5.1 percent from 5.3 percent, reflecting a larger increase in personal outlays than in DPI.

Personal income increased $\$ 87.4$ billion in the fourth quarter after increasing $\$ 89.0$ billion in the third (table 4). The difference between the changes in personal income and those in DPI reflect personal tax and nontax payments, which increased $\$ 14.6$ billion after an unusually small third-quarter increase of $\$ 1.9$ billion. ${ }^{5}$

Wage and salary disbursements increased $\$ 56.3$ billion after increasing $\$ 53.1$ billion. Disbursements in the services and distributive industries increased more in the fourth quarter than in the third, and disbursements in the commodity-

[^3]
producing industries and in government increased less in the fourth quarter than in the third.

Farm proprietors' income decreased $\$ 2.8$ billion after increasing $\$ 6.0$ billion. The downturn resulted from a sharper decrease in crop prices, a sharp deceleration in livestock prices, and a slowdown in crop production. Nonfarm proprietors' income increased $\$ 7.9$ billion after increasing $\$ 5.2$ billion; about half of the step-up was the result of an acceleration in the services industries.

Transfer payments to persons increased $\$ 11.7$ billion after increasing $\$ 9.5$ billion. Half of the step-up was the result of social security lump-sum payments to recent retirees based on recalculated benefits.

IVA Inventory valuation adjustment
CCAdj Capital consumption adjustment

Personal dividend income increased $\$ 3.3$ billion after increasing $\$ 2.2$ billion, and rental income of persons increased $\$ 3.5$ billion after increasing $\$ 2.5$ billion. "Other labor income" increased $\$ 4.3$ billion, slightly less than in the third quarter. Personal interest income increased $\$ 7.0$ billion after increasing $\$ 9.8$ billion; the slowdown was due to lower interest rates in the fourth quarter.

Personal contributions for social insurance, which is subtracted in the calculation of personal income, increased $\$ 4.0$ billion, about the same as in the third quarter.

## The Year 1996

Production growth stepped up, income growth slowed, and inflation remained low in 1996. Real GDP increased 2.5 percent, up from a 2.0 -percent increase in 1995. Real DPI increased 2.9 percent, down from a 3.5-percent increase. The price index for gross domestic purchases increased 2.1 percent, down from a 2.4 -percent increase.

The increase in real GDP in 1996 was primarily accounted for by PCE and by nonresidential fixed investment. In PCE, increases were widespread; some of the largest increases were posted by furniture and household equipment (including computing equipment), by clothing and shoes, and by medical care services. In nonresidential fixed investment, PDE, especially computers and peripheral equipment, accounted for most of the rise.

Residential investment, government spending, and exports also contributed to the 1996 increase in real GDP. In residential investment, the increase was spread across single-family structures, multifamily structures, and "other." In government
spending, the increase was more than accounted for by State and local government spending. In exports, most of the increase was accounted for by nonautomotive capital goods. (Imports, which are subtracted in the calculation of GDP, increased somewhat more than exports.)
Real GDP growth in 1996 was dampened by a decrease in inventory investment, as the rate of inventory accumulation slowed; the slowdown was widespread, but was especially pronounced in retail trade.
The slowdown in real DPI mainly reflected a slowdown in current-dollar personal income, which, in turn, reflected a sharp deceleration in personal interest income. Interest income increased $\$ 20.9$ billion in 1996 after increasing $\$ 53.4$ billion in 1995; the growth in interest-earning assets of the personal sector slowed in 1996, and the rate of return on those assets turned down. Personal tax and nontax payments, which increased a little more than in 1995, also contributed to the slowdown in real DPI.
The price index for gross domestic purchases increased 2.1 percent, down from a 2.4-percent increase. The slowdown was widespread. PCE prices increased 2.2 percent after increasing 2.4 percent, as step-ups in food and energy prices were more than offset by a deceleration in prices of "other" PCE. In nonresidential fixed investment, prices of structures increased 2.2 percent after increasing 3.3 percent, and prices of PDE edged down 0.1 percent after edging up 0.2 percent. Prices of residential investment increased 1.6 percent after increasing 3.1 percent. Prices paid by the Federal Government increased 2.3 percent after increasing 3.8 percent, and prices paid by State and local government increased 2.9 percent after increasing 3.0 percent.

# Personal Income by State and Region, Third Quarter 1996 

This article was written by Duke Tran. The quarterly estimates of State personal income were prepared by the Regional Economic Measurement Division.

$\mathcal{P}$ErSonal income in the Nation increased 1.4 percent in the third quarter of 1996 after increasing 1.7 percent in the second quarter. ${ }^{1}$ The third-quarter increase exceeded the 0.4 -percent increase in the prices paid by U.S. consumers (as measured by the chain-type price index for personal consumption expenditures). By State, the increase in personal income exceeded the increase in U.S. prices in all 50 States.

[^4]Table 1 at the end of this article presents the quarterly estimates of total personal income for each State and region, beginning with the first quarter of 1994; table 2 presents the quarterly estimates of personal income by major source and of earnings by Standard Industrial Classification division, beginning with the first quarter of 1995 .

## Fastest growing States

In four States-Nevada, Arizona, Georgia, and Washington-personal income in the third quarter increased at least 0.5 percentage point more than the U.S. average (table A and chart 1).
In Nevada, personal income growth was boosted by above-average increases in earnings in

construction, in government, and in durable goods manufacturing (table B). ${ }^{2}$
In Arizona, Georgia, and Washington, personal income growth was boosted by above-average increases in earnings in services and in farming. In Washington, personal income growth was also boosted by an above-average increase in earnings in durable goods manufacturing.

## Slowest growing States

In seven States-Montana, Missouri, Michigan, Indiana, West Virginia, Hawaii, and Alaskapersonal income increased at least 0.5 percentage point less than the U.S. average.

[^5]Table A.-Personal Income for Selected States and the United States, 1996:11-1996:III
[Percent change]

| Rank |  | Personal income | Net earnings by place of residence ${ }^{1}$ | Dividends, interest, and rent | Transfer payments |

| 49 | Hawaii ......................... | . 7 | .4 | 1.3 | 1.0 |
| 50 | Alaska ........................... | . 6 | . 7 | . 8 | . 1 |

1. Net earnings by place of residence is calculated as earnings by place of work less per-
sonal contributions for social insurance plus the adiustment for residence. Earnings by place of work is calculated as the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

In Montana, personal income growth was dampened by declines in earnings in farming, in construction, in transportation and public utilities, and in wholesale trade and by a below-average increase in earnings in retail trade.

In Missouri, Michigan, and Indiana, personal income growth was dampened by declines in earnings in durable goods manufacturing. In Missouri, personal income growth was also dampened by a below-average increase in earnings in government. In Indiana, personal income growth was also dampened by a decline in earnings in government and by below-average increases in earnings in nondurable goods manufacturing and in transportation and public utilities. In Michigan, personal income growth was also dampened by a below-average increase in transfer payments.

In West Virginia, Hawaii, and Alaska, personal income growth was dampened by declines or no change in earnings in government. In West Virginia, personal income growth was also dampened by declines in earnings in mining and in transportation and public utilities. In Hawaii, personal income growth was also dampened by a decline in construction earnings. In Alaska, personal income growth was also dampened by a decline in mining earnings, by no change in earnings in finance, insurance, and real estate, and by below-average increases in retail trade earnings and in transfer payments.

## U.S. DIRECT INVESTMENT ABROAD: Operations of U.S. Parent Companies and Their Foreign Affiliates

## Revised 1993 Estimates

This new publication presents the revised 1993 results of BEA's annual survey of the worldwide operations of U.S. multinational companies. It provides an overview of the operations and financial structure of U.S. parent companies and their foreign affiliates. The tables in this publication, which are shown by country and/or by industry, present the following:
-Balance sheets and income statements

- Employment and employee compensation
- Research and development expenditures
- Merchandise trade
- Sales of goods and services
- Foreign income taxes

This publication provides some of the most detailed information on U.S. multinational companies collected by the U.S. Government and will be of interest to economists and other researchers, corporate executives, public officials, and others. Order your copy today!

Note: The estimates are also available from BEA on diskette. For further information, or for information on how to obtain estimates for 1983-92, write to: International Investment Division, Direct Investment Abroad Branch, BE-69, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230 USA, or call (202) 606-9827 or go to http://www.bea.doc.gov/bea/data-i2.htm on the Internet.

# U.S. Intrafirm Trade in Goods 

By William J. Zeile

Cross-border transactions between affiliated units of multinational companies account for a major share of U.S. international trade in goods. In 1994, these transactions-commonly referred to as "intrafirm trade"-accounted for more than one-third of U.S. exports of goods and for more than two-fifths of U.S. imports of goods.
As an aspect of the growing integration of the world economy, intrafirm trade has attracted considerable interest in recent years, particularly in the wake of the surge in international direct investment in the late 1980 's. ${ }^{1}$ Intrafirm trade plays a critical role in the operations of multinational companies (MNC's): It may help an MNC to reduce the costs of distributing goods abroad or of acquiring inputs from abroad or to integrate production processes on a global scale. Intrafirm trade may respond differently than trade between unrelated parties to changes in economic conditions; for example, it may-at least in the short term-be more insulated from competitive forces in particular markets or from overall changes in prices, exchange rates, or general economic conditions. Furthermore, the prices-often termed "transfer prices"-that govern intrafirm trade may have their own unique characteristics and determinants.

In a previous Survey of Current Business article, BEA presented aggregate estimates of U.S. intrafirm exports and imports of goods and services for $1982-93 .{ }^{2}$ A disaggregation of the intrafirm-export and -import totals into the trade between U.S. parent companies and their foreign affiliates and the trade between foreign-owned U.S. affiliates and their foreign parent groups showed that intrafirm exports largely consisted of trans-

[^7]actions by U.S. mnc's, whereas intrafirm imports largely consisted of transactions by foreign mNc's.
This article presents a more detailed examination of U.S. intrafirm trade in goods by U.S. MNC's and by foreign mNc's operating in the United States. ${ }^{3}$ The intrafirm transactions are disaggregated by industry of affiliate, by country of destination or origin, and for foreign mNc's, by country of ownership.
In much of the discussion, the U.S. intrafirm trade of U.S. MNC's and of foreign MNC's is examined separately. This separation is warranted not only by the difference in the ownership of the investments (that is, whether it is U.S. or foreign) but also by a fundamental difference in the role that intrafirm trade has played in the operations of the MNC's: The intrafirm trade of U.S. mNc's has mainly been connected with manufacturing production by foreign affiliates, while the U.S. intrafirm trade of foreign mNc's has mainly been connected with marketing and distribution activities.
The following are highlights from the article:

- The intrafirm-trade shares of U.S. exports and imports of goods have changed little over the past two decades. For U.S. exports, the intrafirm-trade shares of both U.S. MNC's and foreign MNC's have fluctuated, with no sustained trend. For U.S. imports, an increase in the share of foreign mnc's was offset by a decrease in the share of U.S. MNC's.
- The intrafirm-trade share of the total trade of U.S. parent companies has increased markedly since 1982. However, because of a pronounced decline in the parents' share of total U.S. trade in goods, the share of U.S. goods trade accounted for by the intrafirm trade of U.S. MNC's has remained relatively flat.
- Since 1982 , the intrafirm trade of U.S. mNc's has mainly been with their foreign manufacturing affiliates. However, the manufacturing

[^8]affiliates' share of the intrafirm exports of U.S. mNC's has decreased somewhat, while their share of the intrafirm imports has increased.

- The U.S. intrafirm trade of foreign mnc's has mainly been with their U.S. wholesale trade affiliates. The share of intrafirm trade with manufacturing affiliates has increased substantially since the mid-1980's, but it still accounted for less than one-third of both the U.S. intrafirm exports and imports of foreign MNC's in 1994.
- The intrafirm-trade shares of U.S. exports and imports of goods vary widely by trading partner. Among the top six U.S. export markets in 1992, the share ranged from 70 percent for Japan to 12 percent for Taiwan. Among the top six source-countries for U.S. imports, the share ranged from 71 percent for Japan to less than 10 percent for China and Taiwan.

The remainder of this article consists of three parts. The first part discusses trends in the shares of U.S. exports and imports of goods that are accounted for by intrafirm trade and in the shares accounted for by the intrafirm trade of U.S. Mnc's and of foreign mnc's. The second part discusses industry patterns in the intrafirm trade of U.S. mNc's and foreign mNc's and examines the industry patterns of intrafirm trade of foreign MNc's by country of ultimate beneficial owner (Uво). ${ }^{4}$ The final part discusses the variation in intrafirm trade shares among U.S. trading partners and explores the relation between these shares and the per capita income levels of the partner countries.

## Trends in Intrafirm Trade

Although fluctuating moderately during the past two decades, the shares of intrafirm trade-both by U.S. MNC's and by foreign MNC's-in U.S. exports and imports of goods have changed very little. In 1977 (the earliest year for which trade data for both U.S. mnc's and foreign mnc's are available), intrafirm trade accounted for 35 percent of U.S. exports and 44 percent of U.S. imports. From 1982 to 1993, the share for exports fluctuated between 32 percent and 40 percent (chart 1 );

[^9]the share for imports-having dropped sharply between 1977 and 1982-increased in most years in the 1980's (chart 2). By 1994 (the latest year for which data are available), the share for exports had risen slightly, to 36 percent, while the share for imports had declined slightly, to 43 percent (table 1, column 7). ${ }^{5}$
5. The data for 1994 are preliminary.

## CHART 1

Shares of US Exports Accounted for by Intrafim Expoits

## CHART 2

Shares of U.S. Impoits Accounted for by Intrafirm imports

[^10]For both exports and imports, intrafirm trade has mainly consisted of shipments from parents to their affiliates rather than shipments to parents from their affiliates. U.S. intrafirm exports have mainly been accounted for by the intrafirm trade of U.S. MNC's-that is, shipments from U.S. parent companies to their foreign affiliates; the share in most years has ranged from two-thirds to three-fourths. Since 1982, U.S. intrafirm imports have mainly been accounted for by shipments from foreign parents and other member-firms of the foreign parent group to their U.S. affiliates. ${ }^{6}$
The share of total U.S. goods exports that is accounted for by the intrafirm trade of U.S. mNC's has fluctuated between 22 percent and 28 percent (table 1, column 8). The share increased substan-

[^11]tially in 1982-85, decreased gradually in the late 1980's, and then increased gradually after 1990.?
The share of total U.S. goods imports that is accounted for by the intrafirm imports of U.S. MNc's has consistently been smaller than the corresponding share of exports. The share dropped sharply from 24 percent in 1977 to 16 percent in 1982; the drop can be largely attributed to a reduction in intrafirm imports from petroleum affiliates, partly as a result of transfers in the ownership of petroleumproducing assets in Middle Eastern countries to

n.a. Not available.

1. Data are from the Bureau of the Census.
the host governments. ${ }^{8}$ Since 1982, the import share has been quite stable (in the range of 15 to 18 percent).
Because the U.S.-parent-company share of total U.S. goods trade has declined since the early 1980's (chart 3), the share of U.S. goods trade accounted for by intrafirm trade of U.S. mNc's has not increased substantially, even though the share of total goods trade by U.S. parent companies accounted for by intrafirm trade has increased markedly. From 1982 to 1994, the share of U.S.-parent-company exports that were shipped to their foreign affiliates increased from 31 percent to 42 percent, while the share of U.S.-parent-company imports that were sourced from their foreign affiliates increased from 36 percent to 50 percent (chart 4 and table 1 , column 11). The share of U.S. goods exports accounted for by U.S. parent companies decreased substantially in the late 1980's (when the U.S. dollar was depreciating in world currency markets), perhaps as a result of an increased export orientation on the part of smaller U.S. firms in response to new market opportunities overseas. The share of U.S. goods imports accounted for by U.S. parent companies (which include most major U.S. petroleum companies)
[^13]
## CHART 3

decreased in the early 1980 's, when the share of total U.S. goods imports accounted for by petroleum imports declined as a result of a decline in oil prices.
U.S. intrafirm exports of foreign mNC's have accounted for about 10 percent of total U.S. goods exports since 1977; the share has fluctuated between 7 percent and 12 percent (table 1, column 9). In most years before 1986, the share exceeded ${ }^{11}$ percent, primarily reflecting the longstanding, dominant role played by Japanese-owned wholesale trade affiliates (particularly affiliates of Japan's largest general trading companies) in handling U.S. exports to Japan. (Japanese-owned affiliates accounted for most of the U.S. intrafirm exports of foreign MNC's throughout 1977-94.) The share dropped below 10 percent in 1986-90, despite the surge in direct investment in the United States, and it has hovered around 10 percent since then.

The U.S. intrafirm imports of foreign mNC's have accounted for a much larger share of total U.S. goods imports-about 20 percent or more-since 1977. The share of imports increased substantially in 1984-90-from 21 percent to 28 percent-but has declined somewhat since. Like exports, a very large share of the U.S. intrafirm imports of foreign mnc's has been accounted for by Japanese-owned affiliates.

## CHART 4

## Industry Patterns of Intrafirm Trade

The U.S. intrafirm trade of U.S. mnc's and the U.S. intrafirm trade of foreign mnc's have taken fundamentally different forms and have had quite different industry compositions. The intrafirm trade of U.S. mnc's can be viewed as an aspect of the international division of manufacturing production between affiliated parts of the mNC: For both exports and imports, most of this trade has been between U.S. manufacturing parents and their foreign manufacturing affiliates. The intrafirm exports to these manufacturing affiliates have mainly consisted of materials and components for further processing or assembly. ${ }^{9}$ (Data on the intended use of U.S. imports from these foreign affiliates are not available.) In contrast, U.S. intrafirm trade of foreign mNc's has been

[^14]connected largely with distribution and marketing activities: For both exports and imports, this trade has mainly been accounted for by U.S. wholesale trade affiliates. The imports by these affiliates from their foreign parent groups have consisted almost exclusively of goods for resale by the affiliates without further manufacture. ${ }^{10}$ (Data on the intended use of exports by these affiliates are not available.)

The rest of this section presents added detail on the pattern of U.S. intrafirm trade associated with U.S. and foreign mNc's by industry of affiliate. In this section, the discussion of the intrafirm trade of U.S. MNC's is necessarily restricted to the intrafirm trade between U.S. parent companies and their majority-owned foreign affiliates (MOFA's); however, in the aggregate, intrafirm trade with mofa's
10. The data on the intended use of U.S. goods imported by foreign-owned U.S. affiliates are collected in BEA's benchmark surveys of foreign direct investment in the United States. In each of the benchmark survey years-1980, 1987, and 1992 -more than 90 percent of the imports received by U.S. wholesale trade affiliates from their foreign parent groups were goods for resale. In contrast, goods for resale accounted for less than one-third of the intrafirm imports by manufacturing affiliates.

MOFA Majority-owned foreign affiliate
accounts for a very high share of U.S. intrafirm trade with all foreign affiliates. ${ }^{11}$

## Intrafirm trade with mofa's

Since 1982, MOFA's in manufacturing have consistently accounted for a dominant share of both U.S. intrafirm exports to MOFA's and U.S. intrafirm imports from mofa's (table 2). The share of intrafirm exports to mofa's that is accounted for by manufacturing affiliates has declined somewhat since the mid-1980's, when it exceeded 70 percent, while the share of exports to wholesale trade affiliates has increased. In contrast, the share of intrafirm imports from MOFA's that is accounted for by manufacturing affiliates has increased markedly-from less than 50 percent in 1977 to more than 80 percent in

[^15]1994-while the share of imports from petroleum affiliates has declined.

Much of the intrafirm trade with manufacturing affiliates has consisted of trade with motor vehicle affiliates: In 1982-94, the share of total intrafirm trade with manufacturing mofa's that was accounted for by motor vehicle affiliates ranged from 38 to 48 percent for exports and from 44 to 54 percent for imports. Much of this trade was with affiliates in Canada, reflecting the large volume of auto-related trade since the U.S.-Canada Automobile Agreement of 1965. Intrafirm trade with affiliates in machinery industries (industrial and electronic and other electric machinery manufacturing) has also been substantial, accounting for 27 to 32 percent of intrafirm exports to, and for 30 to 37 percent of intrafirm imports from, manufacturing MOFA's.

The share of intrafirm exports that was to MOFA's in wholesale trade increased substantially

in 1984-94-from 25 percent to 37 percent. Much of this trade was in machinery products. ${ }^{12}$

In 1977, petroleum affiliates accounted for 49 percent of total intrafirm imports from mofa's; however, by 1982, their share had dropped to 35 percent, partly as a result of the transfers in the ownership of petroleum-producing assets in Middle Eastern countries to host governments. The share continued to decline in 1982-86, reflecting a fall in the U.S.-import price of crude oil.

## Intrafirm trade of U.S. affiliates

Unlike the intrafirm trade of U.S. mnc's, which has been dominated by trade with manufacturing affiliates, the intrafirm trade of foreign MNC'sbetween U.S. affiliates and their foreign parent groups-has been mostly with wholesale trade affiliates. Through the mid-1980's, these affiliates accounted for more than three-fourths of the intrafirm exports and imports of foreign-owned U.S. affiliates; in more recent years, the share has been closer to two-thirds (table 3).

Until recently, the intrafirm exports by wholesale trade affiliates largely consisted of homogeneous commodities-such as food and crude materialsshipped by affiliates of Japan's general trading companies or by French-owned affiliates specializing in farm products. ${ }^{13}$ The share of the intrafirm

[^16] Companies (Boulder, Colorado: Westview Press, 1979).

D Suppressed to avoid the disclosure of data of individual companies.
exports of wholesale trade affiliates that was accounted for by food and crude materials was 59 percent in 1980 and 50 percent in 1987 (table 4). By 1992, however, this share had declined to 41 percent, reflecting an increase in the importance of manufactured goods in intrafirm exports.

In contrast, the intrafirm imports of wholesale trade affiliates have mainly consisted of heterogeneous manufactured products, such as machinery products or road vehicles and parts.' For such products, a local presence in the form of wholesale trade affiliates may be required to provide specialized after-sales service or to obtain continuous feedback on customer requirements and tastes. Most of these affiliates were set up by foreign manufacturers to facilitate the marketing of their own products; in most years, intrafirm imports from their foreign parents have accounted for more than three-fourths of the total imports by these affiliates (table 3 , column 11).

The shares of U.S.-affiliate intrafirm exports and imports accounted for by manufacturing affiliates have increased substantially. For exports, the share increased gradually from 12 percent in 1977 to 27 percent in 1994. For imports, the increase largely coincided with the surge in foreign direct investment in U.S. manufacturing industries in

the mid-to-late 1980's; the share increased from 15 percent in 1985 to 27 percent in 1992. ${ }^{14}$
Within manufacturing, the industry composition of intrafirm trade with U.S. affiliates has been somewhat more diversified than that of intrafirm trade with mofa's; however, affiliates in chemicals and in electronic and other electric equipment have generally accounted for the largest shares of intrafirm exports and imports by U.S. manufacturing affiliates. ${ }^{15}$

[^17]By country of UBo.-Since 1977, affiliates with Ubo's in Japan have accounted for a dominant share of U.S.-affiliate intrafirm exports: The share has fluctuated in the range of 55 to 68 percent-many times larger than their share of U.S.-affiliate gross product (chart 5). Since 1982, Japanese-owned affiliates have also accounted for more than one-half of U.S.-affiliate intrafirm imports. For both exports and imports, this dominance mainly reflects trade by Japanese-owned wholesale trade affiliates, which function as intermediate agents for much of Japan's trade with the United States.

Within wholesale trade, Japanese-owned affiliates have accounted for about three-fourths of U.S.-affiliate intrafirm exports and for nearly twothirds of U.S.-affiliate intrafirm imports (table 5).

D Suppressed to the avoid disclosure of data of individual companies.
*Less than $\$ 500,000$ or less than . 05 percent, as appropriate.
UBO Ultimate beneficial owne

French-owned affiliates, mainly farm-product trading companies, have generally accounted for the second-largest share of the intrafirm exports; German-owned affiliates, mainly wholesale trade affiliates of motor vehicle manufacturers, have generally accounted for the second-largest share of the intrafirm imports.

In manufacturing, the shares of the intrafirm trade of affiliates have been much more evenly distributed among investing countries. Japaneseowned affiliates accounted for the largest shares of both intrafirm exports and imports in 1994, but their share of exports was less than onefourth, and their share of imports was less than one-third. German-owned affiliates accounted for the second-largest shares-about one-sixth of both exports and imports. In the 1980's, the shares of Japanese-owned affiliates were substantially smaller: In 1984, their share of exports was exceeded by the shares of German-, British-, and Canadian-owned affiliates, and their share of imports was exceeded by the shares of Canadianand German-owned affiliates. The increased share of Japanese-owned affiliates after 1984 reflects the large increase in Japanese ownership in U.S. manufacturing industries in the late $1980^{\prime}$ 's. ${ }^{16}$

## Geographic Patterns of Intrafirm Trade

The importance of intrafirm trade in total U.S. international trade in goods varies widely by trading partner. This section examines the shares of total U.S. trade in goods with major trading-partner countries that are accounted for by total intrafirm trade, by intrafirm trade between U.S. parent companies and mofa's, and by intrafirm trade between U.S. affiliates and their foreign parent groups. The shares are computed for 1992, the most recent year for which geographic data on U.S.-affiliate intrafirm trade are available. ${ }^{17}$
The presentation is in two parts. The first part discusses differences in the intrafirm-trade shares for trade with 62 major partner countries, and the second explores the relation between these shares and the income levels of the partner countries. ${ }^{18}$

[^18]
## Intrafirm trade shares

Exports.-In 1992, the share of U.S. exports accounted for by intrafirm exports varied widely across countries of destination. For example, among the top six U.S. export markets-Canada, Japan, Mexico, the United Kingdom, Germany, and Taiwan-the intrafirm share ranged from 70 percent for Japan to 12 percent for Taiwan (chart 6 and table 6 , column 7). In addition, the intrafirmtrade shares were particularly high for Switzerland ( 74 percent) and Russia ( 64 percent). For 24 of the 62 countries, the intrafirm share was less than 10 percent.
For most countries, U.S. intrafirm exports consisted mainly of exports by U.S. parent companies to their mofa's rather than exports by U.S. affiliates to their foreign parent groups. Intrafirm exports to MOFA's accounted for more than 20 percent of total U.S. exports to 13 countries, many of which were among the largest U.S. export markets (table 6, column 8). The shares were highest for Switzerland ( 56 percent), Canada ( 37 percent), and the United Kingdom ( 34 percent). The intrafirm exports to mora's in Switzerland were mainly shipped to wholesale trade affiliates (table 7). Exports to manufacturing affiliates accounted for a dominant share of intrafirm exports to mofa's in most other countries, including Canada and the United Kingdom.

${ }^{\text {D }}$ Suppressed to avoid the disclosure of data of individual companies.

* Less than $\$ 500,000$ or less than .05 percent, as appropriate.

Notes. The countries listed in this table are the U.S. trading partners in table 6 for which intrafirm exports or
imporst by U.S. aftiliates was at least $\$ 500$ milion in 1992 .
Size ranges are given in the percentage cells that are suppressed; these ranges are A-0.1 to $19.9 ; \mathrm{B}-20.0$
to $39.9 ;-40.0$ to $59.9 ; \mathrm{E}-60.0$ to $79.9 ; \mathrm{F}-80.0$ to 100 .

For all but a few countries, the share of U.S. exports accounted for by intrafirm exports by foreign-owned U.S. affiliates was small-less than 10 percent (table 6, column 9). However, for Japan, the second largest U.S. export market in 1992, the share was 54 percent. The large share for Japan underscores the importance of wholesale trade affiliates in handling Japanese trade with the United States: About 90 percent of total U.S.affiliate intrafirm exports to Japan was accounted for by Japanese-owned wholesale trade affiliates (table 8). Intrafirm exports by U.S. affiliates also accounted for a majority of U.S. exports to Russia and for about one-fourth of U.S. exports to Nigeria; however, these exports were all shipped by affiliates with owners in other countries. ${ }^{19}$ The exports to Russia were mainly by French-owned wholesale trade affiliates, and the exports to Nigeria were mainly by European-owned affiliates in the petroleum industry. ${ }^{20}$
Imports.-The intrafirm-trade share of U.S. imports also varied substantially across countries. Among the top six source-countries for U.S. imports-Canada, Japan, Mexico, Germany, China, and Taiwan-the share ranged from 71 percent for Japan to less than 10 percent for China and Taiwan (table 6, column 7). For Germany, the share was 61 percent. In addition to Japan and Germany, intrafirm trade accounted for a majority of U.S. imports from seven other countries; the share was highest for Switzerland ( 76 percent). In addition to China and Taiwan, intrafirm trade accounted for less than 10 percent of U.S. imports from 19 other countries.

For slightly more than one-half of the countries shown in table 6, imports by U.S. affiliates from their foreign parent groups accounted for a majority of U.S. intrafirm imports. The share of total U.S. imports that was accounted for by U.S.affiliate intrafirm imports ( 26 percent) was much higher than the share accounted for by U.S. intrafirm imports from mofn's ( 16 percent). This difference in shares reflects the large U.S.-affiliate shares for a few countries, including some of the largest source-countries for U.S. imports: Intrafirm imports by U.S. affiliates accounted for 69 percent of U.S. imports from Japan and 52 percent

[^19]of U.S. imports from Germany (table 6, column 9). The shares were also very large for Switzerland ( 71 percent), Sweden ( 62 percent), and the Netherlands ( 48 percent). The imports from Switzerland were mainly by manufacturing affiliates (particularly affiliates in the pharmaceutical industry), and the imports from Japan, Germany, Sweden, and the Netherlands were mainly by wholesale trade affiliates (table 8). ${ }^{21}$ For Germany and Sweden, a large share of the imports were by wholesale trade affiliates of motor vehicle companies headquartered in those countries.

Intrafirm imports from mofa's accounted for a substantial share of U.S. imports from a number of major trading partners, including Canada, Mexico, and three rapidly industrializing countries in Southeast Asia-Singapore, Hong Kong, and Malaysia (table 6, column 8). The shares were particularly high for Singapore ( 53 percent) and Canada ( 37 percent). Most of the intrafirm imports from Canada and Mexico were from manufacturing affiliates, particularly affiliates in the motor vehicle industry (table 7). Manufacturing affiliates also accounted for virtually all of the intrafirm imports from Singapore and Malaysia; most of these imports were from MOFA's in the computer and electronic components industries. In contrast, the intrafirm imports from Hong Kong were mainly from mofa's in wholesale trade.

## Relation to trading-partner income levels

Intrafirm transactions-particularly shipments flowing from parent companies to their affiliatestend to be relatively more important in U.S. trade with higher income countries. Among 59 major trading partners, there is a pronounced tendency for the shares of both U.S.-MNC intrafirm exports in total U.S. exports and foreign-mNC intrafirm imports in total U.S. imports to increase as the per capita gross national product (GNP) of the trading partners increases (table 9). For U.S.-mNC intrafirm trade, the average share of U.S. exports increases from 4 percent for the 11 trading partners with a per capita GNP of less than $\$ 1,000$ to 23 percent for the 14 trading partners with a per capita GNP of at least $\$ 20,000$. For foreign-MNC intrafirm trade, the average share of U.S. imports increases from less than 3 percent for the 11 countries with

[^20]the lowest per capita GNP to 35 percent for the 14 countries with the highest per capita GNP.
The positive relation between the intrafirmtrade shares and trading-partner income levels partly reflects shipments by parent firms to their wholesale trade affiliates: The shares in trade of both exports by U.S. parent companies to their wholesale trade mora's and imports by U.S. wholesale trade affiliates from their foreign parent groups are strongly correlated with the per capita GNP of U.S. trading partners (table 10). A local presence in overseas markets through the establishment of wholesale trade affiliates-and the associated replacement of arm's-length transactions with intrafirm trade-is often required for the marketing of sophisticated, heterogeneous manufactured products (such as automobiles and advanced machinery products), which tend to be both supplied from and sold to higher income countries. ${ }^{22}$
For U.S. mnc's, most intrafirm trade is between U.S. parents and their manufacturing mofa's. The share of U.S. exports accounted for by intrafirm exports to manufacturing MOFA's is positively correlated with the per capita GNP of U.S. trading partners; however, the relation is not as strong as that for intrafirm exports to wholesale trade mofa's. The positive correlation is consistent with the fact that U.S.-MNC manufacturing production is largely concentrated in high-income countries:
22. As mentioned earlier, these products may require the establishment of wholesale trade affiliates to monitor customer requirements or tastes and to provide on-site after-sales service.

Table 9.-Average Intrafirm Shares of U.S. Trade in Goods with Trading Partners Grouped by Per Capita GNP, 1992

|  | Number of countries | Intrafirm trade of U.S. MNC's |  | Intrafirm trade of foreign MNC's |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | As a per-centage of exports to | As a per-centage of U.S. imports from country | As a per-centage of U.S. exports to country | As a per-centage of U.S. imports from country |
| All countries ............................ | 59 | 13.0 | 10.8 | 6.2 | 14.5 |
| 10,000 to 19,999 .............................................. | 9 | 22.1 | 21.7 | 4.5 | 13.4 |
| 2,000 to 9,999 .......................... | 15 | 9.6 | 10.5 | 7.9 | 12.9 |
| 1,000 to 1,999 .......................... | 10 | 5.9 | 6.8 | 1.2 | 2.3 |
| Less than 1,000 ......................... | 11 | 4.3 | 6.1 | 5.3 | 2.6 |

NOTES.-Countries are grouped by their per capita GNP. The average intrafirm-trade shares shown are unweighted averages for all countries in a given size group.
The 59 countries consist of all of the trading partiners shown in table 6 except the Nether lands Antilles, Angola, and Kuwait (countries for which 1992 data on per capita GNP are not available).
The data on GNP per capita for all of the countries except Taiwan are from the World Bank Win GNP Gornment sources, was provided by the International Trade Administration. GNP Gross national product

In 1992, 74 percent of the gross product of manufacturing MOFA's was accounted for by mofa's in Canada and Europe. Among the 59 trading partners, Canada and several high-income countries in Europe had the highest shares of U.S. exports accounted for by intrafirm exports to manufacturing mofa's. The share was also sizable for a few middle-income countries (most notably Mexico and Brazil), but it was generally very small for low-income countries.
In contrast, the share of U.S. imports accounted for by intrafirm imports from manufacturing MOFA's is not significantly related to the per capita GNP of the trading partners. This result reflects the local-market orientation of U.S. multinational production in most high-income countries: The intrafirm share of imports, in contrast to that of exports, is substantially lower for a number of high-income countries in Europe, where affiliates produce mainly for the local market, and substantially higher for the several middle-income countries where affliates tend to export much of their output to the United States. ${ }^{23}$ Like intrafirm exports, intrafirm imports from manufacturing affiliates generally account for a small share of U.S. imports from the trading partners
23. To illustrate this contrast, the share of U.S. goods trade with Germany that is accounted for by intrafirm trade with manufacturingMOFA's is 21 percent for exports and 8 percent for imports. For U.S. trade with Malaysia, the shares are 14 percent for exports and 26 percent for imports. According to 1992 data from BEA's annual survey of U.S. direct investment abroad, the share of sales that were to the United States was 3 percent for manufacturing mofa's in Germany and 56 percent for manufacturing MOFA's in Malaysia.

Table 10.-Cross-Country Correlations Between Per Capita GNP and the Intrafirm Share of U.S. Trade in Goods with Trading Partners

|  | U.S. <br> exports to <br> country | U.S. <br> imports <br> from <br> country |
| :---: | :---: | :---: |
| Coefficient of correlation across 59 countries between |  |  |
| per capita GNP and the percentage of U.S. exports to |  |  |
| or imports from country accounted for by: |  |  |

*+ Statistically significant at the 99 -percent confidence level.

* Statistically significant at the 90 -percent confidence level.

Staistically significant at the 90 -percent confidence level.
NOTE.-The sample of 59 countries consists of all of the trading partners shown in table 6 except the Netheriands Antilles, Angola, and Kuwait (see note to table ${ }^{9}$ ).
GNP Gross national product
with the lowest incomes. If some U.S. companies rely extensively on low-income countries for production operations requiring low-skilled labor, it would appear that the associated trade flows commonly take the form of market transactions with unrelated parties rather than intrafirm trade.

For foreign MNC's, the share of U.S. imports accounted for by intrafirm imports by U.S. manufacturing affiliates is strongly correlated with the per capita GNP of U.S. trading partners, reflecting the fact that foreign direct investment in U.S. manufacturing has come largely from high-income countries. Much of this investment has been in advanced manufacturing industries, such as chemicals or electronic equipment, where firms might be expected to possess some proprietary technology. In such industries, the parent firms may pro-
duce specialized materials or components that they then supply to their affiliates through intrafirm trade. ${ }^{24}$

Although the correlation for the share of intrafirm exports by manufacturing affiliates is also positive and significant, the overall correlation for intrafirm exports by U.S. affiliates is insignificant, because of the very weak correlation for wholesale trade affiliates (which account for the bulk of U.S.-affiliate trade). The insignificant correlation for exports by wholesale trade affiliates partly reflects intrafirm exports to lower income countries by French-owned trading companies.

## National Data

## A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on January 31, 1997 and include the "advance" estimates for the fourth quarter of 1996 and year 1996.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most tables, the annual estimates are also shown. (Some of the lines in tables 1.10 and 1.16 are not yet available and are shown as leaders; they will be shown in a forthcoming issue.) These tables are available electronically on the day of the gross domestic product (GDP) news release by subscription from STAT-USA's Economic Bulletin Board and Internet services; for information, call (202) 482-1986. The tables are also available on printouts or diskettes; for subscription information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230 or call (202) 606-9700.

For a guide to which issues of the Survey contain the complete set of NIPA tables for the period 1991-96, see the headnote and list of tables that appeared on pages 15-17 of the August 1996 issue.

Note.-The "Selected nipa Tables" are prepared by the National Income and Wealth Division and the Government Division.

| State and local .............. | 788.6-.6 | $\begin{array}{r} 804.5 \\ -1.6 \end{array}$ | 791.5.3 | 794.4-6 | 792.6-.2 | $805.5$ |  |  |
| Residual .................................. |  |  |  |  |  | -1.6 | -1.5 | -3.3 |

NOTE.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, oivided by 100. Because the formula for the chain-ype quantity indexes uses weignts of more than one period, the corresponding chained-doliar esumates are usualy not additive.
The residual line is the difference between the first line and the sum of the most detailed lines.
Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the percent change in real gross domestic product are shown in table 8.2.

Table 1.16.-Gross Domestic Product of Corporate Business in Current Dollars and Gross Domestic Product of Nonfinancial Corporate Business in Current and Chained Dollars

1. Chained-dollar gross domestic product of nonfinancial corporate business equals the current-dollar product deHated by the implicit price deflator for goods and structures in gross domestic product.
2. Chained-dollar consumption of fixed capital of nonfinancial corporaie business is calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 .
3. Chained-dollar net domestic product of nonfinancial corporate business is the difference between the gros product and the consumption of fixed capital.

NOTE-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residuad line is the difference between the first line and the sum of the most datailed lines.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transierred to toreign countries by the Federal Government.
3. Compensation of government employees engaged in new forceaccount construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addenda.
measure of the value of the serve depreciation, is included in government consumption expenditures as a partial net return on these assets.

Table 3.8B.—Real Government Consumption Expenditures and Real Gross Investment by Type
[Billions of chained (1992) dollars]

NoTE--Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive The residual line is the dfference between the first line and the sum of the most detailed lines, excluding the See footnotes to to

TE-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the line in the addendum.

## 4. Foreign Transactions

Table 4.1.-Foreign Transactions in the National Income and Product Accounts
[Billions of dollars]

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment were reclassified from goods to services.

Table 4.2.-Real Exports and Imports of Goods and Services and Receipts and Payments of Factor Income [Billions of chained (1992) dollars]

| Goods ${ }^{1}$................................................ | 744.7 | 796.8 | 745.6 | 750.0 | 768.4 | 789.9 | 810.0 | 819.0 |
| Durable ..................................... | 507.1 | 548.7 | 506.0 | 514.0 | 529.7 | 542.1 | 556.9 | 566.2 |
| Nondurable .................................. | 237.2 | 248.0 | 239.3 | 235.8 | 238.5 | 247.7 | 253.0 | 252.7 |
| Services ${ }^{1}$....................................... | 138.8 | 144.1 | 139.4 | 138.5 | 142.8 | 143.2 | 144 | 146.1 |
| Payments of factor income ................... | 199.7 |  | 206.8 | 202.4 | 202.3 | 211.1 | 221.4 |  |

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Govemment, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.
NoTE.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table 4.3.-Exports and Imports of Goods and Services by Type of Product
[Billions of dollars]

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods 10 services.
2. Includes parts of foods, feeds, and beverages; of nondurabie industrial supplies and materials; and of nondurable nonaitomotive consumer goods.

Table 4.4.-Real Exports and Imports of Goods and Services by Type of Product
[Billions of chained (1992) dollars]

Nore.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity
indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following the detail for exports is the difference between the aggregate "exports of goods and services" and the sum of the detailed lines for exports of goods and export of services. The residual line following the detail for imports is the difference between the aggregate "imports of goods and services" and the detailed ines for imports of goods and imports of services.
See footnotes to table 4.3.

| Nonfarm inventories to final sales of goods and structures | 4.16 | 4.17 | 4.11 | 4.07 | 4.08 | 4.05 |

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from cur-rent-dollar inventories in this table is not the current-doliar change in business inventories (CBi) component of GDP. The former is the difference between two inventory stocks, each valued at their respective end-oi-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition. changes calculated from this table are at quarterly rates; whereas, CBB is stated at annual rates.
2. Quartirty totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government and includes a small amount of final sales
by farm.

## 7. Quantity and Price Indexes

Table 7.1.—Quantity and Price Indexes for Gross Domestic Product
[Index numbers, 1992=100]

NOTE:- Chain-type quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Implicit price detlators are weighted averages of the detailed price indexes used io prepare each aggregate and component and are calculaied as ine ratio of current- to chained8.1.

NOTE.-See footnote to table 5.12.
8. Supplementary Tables

Table 8.1.-Percent Change From Preceding Period in Selected Series
[Percent!

NoTE.-Except for disposable personal income, the quantity and price indexes are calcuiated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Prior to the third quarter and current years. Beginning with the third quarter of 1995, these indexes use weights that reflect the composition
of output in 1995. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each
aggregate and component and are calculated as the ratio of current- to chained-dollar output multiplied by 100 .
(Contributions to the percent change in real gross domestic product are shown in table 8.2.)

| 1. The current-dollar statistical discrepancy equals gross domestic product (GDP) measured as the sum of expenditures less gross domestic income-that is, GDP measured as the cosis incurred and profits earned in domestic production. The chained (1992) doilar statistical discrepancy equals the current-dollar discrepancy deflated by the implicit price defiator tor gross domestic product. <br> NOTE.-Estimates in this table are based on the 1987 Standard Industrial Classification. The table is derived from tables 10 and 14 in "Improved Estimates of Gross Product by Industry, 1959-94" in the August 1996 SuRver of CURRENT BUSINESS. <br> 2. Equals GDP in chained (1992) dollars less the statistical discrepancy and the sum of GPO of the detailed industries. |  |  |  |  |  |  |  |  |  |  |  |  |  |

1. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotells, dining and buffet cars, schools, school fratennities, institutions, clubs, and industrial lunchrooms. In-
cludes meals and beve
2. Includes luggage.
3. Consists of watch, clock, and jewelry repairs, costume and dress suit rental, and miscelaneous personal serv-
ices. Consists of rent for space and for heating and plumbing facilites, water heaters, lighting fixtures, klichen cabinets. linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and urniture and purchases of fuel and electricity.
4. Consists of space rent (sese footnote 4 ) and rent for appliances, furnishings, and furniture.
5. Consists of transient hotels, motelis, clubs, schools, and other group housing.
6. Consists of reftigerators and treezers, cooking ranges, dishwashers, laundry equipment, stoves, room air condtioners, sewing machines, vacuum cleaners, and other appliances.
7. Includes such house furrishings as floor coverings, comforiers, quilts, blankets, pillows, picture frames, mirrors, rr products, portable lamps, and clocks. Also includes writing equipment and hand, power, and garden tools. includes lamp shacess, brooms, and brushes.
8. Consists of maintenance services for appliances and house furnishings, moving and warehouse expenses, postage and express charges, premiums for fire and theft insurance on personal property less benefits and dividends, and miscellaneous household operation services.
9. Exciudes drug preparations and related products dispensed by physiciens, hospitals, and other medical serv${ }^{i c e s}$.
10. Consists of osteopathic physicians, chiropractors, private duty nurses, chiropodists, podiatrists, and others providing health and allied services, not elsewhere classified.
 homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.
dismemberment insurance provided by commercial insurance, cariers, and hospitaization, and accidental death and sumption of fixed capital) of Blue Cross and Blue Shield plans and of other independent prepaid and self-insured heaith plans.
11. Consists of premiums, less benefits and dividends, for income loss insurance.
12. Consists of premiums, less benefits and dividends, tor privately administered workers' compensation.
13. Consists of (1) operating expenses of liif insurance carriers and private noninsured pension plans, and (2) premiums, less benefits and dividends, of fraternal benefit societies. Excludes expenses allocated by commercia carriers to accioent and health insurance.
ciations, emoloyment agency fees, money order fees, spending for classififed of tradere unions and professional associations, employment agency fees, money order
senvices, and other personal business services.
14. Consists of premiums, less benefits and dividends, for motor vehicle insurance.
15. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, and airport bus fares.
16. Consists of admissions to professional and amateur athletic events and to racetracks.
17. Consists of dues and fees excluding insurance premiums.
18. Consists of billiard pariors; bowing alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golt courses; sightseeing buses and guides; private flying operations; casino gambling; and other
commercial participant amusements commercial participant amusements.
TV, film processing, photographic studios, sporting and recreation purchases of pets and pet care senvices, cable Ter fices, not elsewhere classified.
19. For private institutions, equals current expenditures (including consumption of fixed capital) less receiptssuch as those from meals, rooms, and entertainments-accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For government institutions, equals student payments of tuition.
20. For private institutions, equals current expenditures (including consumption of fixed capital) less raceiptssuch as those from meals, rooms, and entertainments-accounted for separately in consumer expenditures. For government institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare activities.
21. Consists of (1) fees paid to commercial, business, trade, and correspondence schools and for educational services, not elsewhere classified, and (2) current expenditures (including consumption of fixed capital) by research organizations and foundations for educauon and research
cial welfare foreign relifef and political current expenditures (including consumption of fixed capital) of religious, social wefare, toreign relief, and political organizations, museums, libraries, and foundations. The expenditures are penditures, and excludes relief payments within the United States and expenditures by foundations for education and research. For proprietary and government institutions, equals receipts from users.

NOTES.-Consumer durable goods are designated durable goods (d.), nondurable goods (n.d.), and services (s.).
Estimates of foreign travel by U.S residents (ine 108) expenditures were $\$ 0.3$ billion in 1981. Beginning with 1984 estimates of toreign travel by U.S. residents (line 108) expenditures were $\$ 0.3$ billion in 1981. Beginning with travel and passenger fare expenditures. Estimates of expenditures in the United States by nonresidents (iline 110) include, beginning with 1981, nonresidents' student and medical care expenditures in the United States. Student expenditures were $\$ 2.2$ billion, and medical expenditures were $\$ 0.4$ billion in 1981 . Beginning with 1984 , estimates
of expenditures in the United States by nonresidents include substantially improved estimates of nonresidents' travel expenditures. Expenditures in the United States by nonresidents are subtracted trom tal personal consumption exexpenditures (ine 110) because they are included in detailed thee of expenditure estimates elsewhere in personal consumption expenditures.
Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 currentdollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes residual line is the difference between the first line and the sum of the most detailed lines.

| Residual ................................................. |  |  |  | 0 | . 2 | -. 1 |

1. Consists of office buillings, except those constructed at industrial sites and those constructed by utilities for their own use.
2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings
used for commercial purposes. used for commercial purposes.
elsewtere classified, such as passenger terminais, greanhouses, and animal hospitals.
3. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields.
4. Consists primarily of dormitories, fraternity and sorority houses, and nurses' homes.

NOTE.-Chained (1992) doliar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Table B.6.—Private Purchases of Producers' Durable Equipment by Type

|  | Billions of dollars |  |  | Billions of chained (1992) dollars |  |  |

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in
each industry is the product of the total number of employees and the ratio of average weekly hours per employee each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.
2. Consists of museums, botanical, zoological gardens; engineering and management services; and services, not elsewhere classified.
3. Includes Coast Guard.

NOTE.-Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

NoTE.-Chained (1992) dollar series are calculated as the procuct of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity
indexes uses weights of more than one period, the comesponding chained-dollar estimates are usually not additive. indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. CCAdj Capital consumption adjustmen

## C. Historical Tables

Table C. 1 is derived from the "Summary National Income and Product Series" tables that were published in the January/February 1996 Survey of Current Business; tables C. $2-\mathrm{C} .25$ are derived from nipa tables published in that issue. All the tables in this section include revised data for 1993-96 from the annual revision of the NIPA's published in the August 1996 Survey.

Table C.1.-Historical Measures of Real Gross Domestic Product, Real Gross National Product, and Real Gross Domestic Purchases

See footnotes at the end of table F.3.

Table F.3.-Selected U.S. International Transactions, by Area
[Mililions of dollars]

[^25]2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and refiects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis.
3. Includes some goods: Mainly miltary equioment in line 4. mior equipment other materials, supplies and petro 3. Includes some goods: Mainly military equipment in ine 4; major equipment, other materials, suppies, and petro-
eum products purchased abroad by U.S. miltary agencies in line 18; and fuels purchased by airline and steamship operators in lines 7 and 21 .
4. Includes transters of goods and services under U.S. military grant programs.
5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition
of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

Table F.3.-U.S. International Transactions, by Area-Continued
[Millions of dollars]

6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
line $35,11,050$; line $36,10,177$; line 37 , 15,421 ; line $38,38,862$. Data are preliminary 8. Includes sales of foreign obligations to foreigners.
9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies.
12 . Consists of investments in U.S. corporate stock
12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.
13. Conceptually, the sum of lines 70 and 62 is equal to "net foreign investment" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical
treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconcliation of the balance on goods and services from the intermational accounts and the NIPA net exports appears in Appendix A of this section of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the August issue

Table F.3-W.S. International Transactions, by Area-Continued [Millions of dollars]

14. The "European Union" induudes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finland, and Sweden.
15. The
15. The "EUropean Union (6)" includes Belgium, France, Germany (which includes the former German Democratic Enepubicy (Eass Germany) beginning in the fouith quarter of 1990), Hathy, Luxembourg, Nethertands, European Atomic Energy. Community, European Coal and Steel Community, and European Investment Bank.
in international shipping and in operating oil and gas driling equipment internationally.Also includes taxes withheld,
current-cost adjustments associated with U.S. and foreign direct investment, and small transactions in business services that are not reported by country.
17. Details not shown separately; see totals in lines 49 and 56
18. Details not shown separately are included in line 61.

NOTE.-The data in tables F. 2 and F. 3 are from tables 1 and 10 in "U.S. International Transactions, Third Quarter $1996^{\prime \prime}$ in the January 1997 issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates
from the balance of payments accounts.

[^27]NOTE. -The data in this table are from tables A1 and A2 in Foreign Direct Investment in the
United States: Operations of U.S. Affliates of Foreign Companies, Preliminary 1994 Estimates.

## Regional Data

## G. Selected State and Regional Estimates

Table G. 1 is derived from table 1 in "Comprehensive Revision of State Personal Income, 1969-95" in the October 1996 Survey of Current Business and table 1 in "Personal Income by State and Region, Third Quarter 1996" in this issue of the Survey. Table G. 2 is from tables 2 and 4 in "Comprehensive Revision of State Personal Income, 1969-95."

NOTE,-Totals shown for the United States differ from NIPA estimates because State data exclude wages and
salaries of Federal civilian and military personnel stationed abroad and because of differences in revision schedules.

# Appendix A <br> Additional Information About BEA's NIPA Estimates 

## Statistical Conventions

Changes in current-dollar gDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

Except for the most recent period, the annual and quarterly changes in real GDP and prices are "chaintype" measures that are both based on the "Fisher Ideal" formula that incorporates weights from two adjacent years. For example, the 1992-93 percent change in real GDP uses prices for 1992 and 1993 as weights, and the 1992-93 percent change in price uses quantities for 1992 and 1993 as weights. Because the quantity and price index numbers calculated in this way are symmetric, the product of the annual change in real GDP and the annual change in prices equals the annual change in current-dollar GDP.

In the most recent period, a variant of the formula is used because only 1 year's information is available for computing the index number weights. Accordingly, BEA uses a single year's weights and, as a consequence, the product of the percentage changes in the price and quantity indexes does not equal the current-dollar change during this period. For this reason, another measure, known as the "implicit price deflator," is presented in the nipa tables. The implicit price deflator is calculated as the ratio of current-dollar value to the corresponding chained-dollar value multiplied by 100 .

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1992) dollar estimates." These estimates are computed by multiplying the 1992 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled $\$ 100$ in 1992 and if real output for this component increased by 10 percent in 1993, then the "chained (1992) dollar" value of this component in

1993 would be $\$ 110(\$ 100 \times 1.10)$. Note that percentage changes in the chained (1992) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.
Because of the formula used for calculating real GDP, the chained (1992) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A "residual" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. In cases where the residual is large, the table of contributions of the major components to the change in real GDP provides a better basis for determining the composition of GDP growth than the chained-dollar estimates.
For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths-for example, quarters and years-may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these changes requires a variant of the compound interest formula:

$$
r=\left[\left(\frac{X_{t}}{X_{o}}\right)^{m / n}-1\right] \times 100
$$

where $r$ is the percent change at an annual rate; $X_{t}$ is the level of activity in the later period; $X_{o}$ is the level of activity in the earlier period; $m$ is the yearly periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and
$n$ is the number of periods between the earlier and later periods (that is, $t-o$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year-for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

## Reconciliation Tables

## Mid-Decade Strategic Plan

bea has published the following articles in the Survey of Current Business on the development and implementation of its strategic plan for improving the accuracy, reliability, and relevance of the national, regional, and international accounts.
"Mid-Decade Strategic Review of bea's Economic Accounts: Maintaining and Improving Their Performance" (February 1995)*
"Mid-Decade Strategic Review of bea's Economic Accounts: An Update" (April 1995)*
"bea's Mid-Decade Strategic Plan: A Progress Report" (June 1996)*

Mid-Decade Strategic Review of bea's Economic Accounts: Background Papers (1995) presents seven background papers that evaluate the state of the U.S. economic accounts and that identify the problems and the prospects for improving the accounts.

## Methodology

bea has published a wealth of information about the methodology used to prepare its national, regional, and international estimates.

## National

National income and product accounts (NIPA's)
nIPA Methodology Papers: This series documents the conceptual framework of the NIPA's and the methodology used to prepare the estimates.

An Introduction to National Economic Accounting (Nipa Methodology Paper No. 1, 1985) [Also appeared in the March 1985 issue of the Survey]
Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (nipa Methodology Paper No. 2, 1985)
Foreign Transactions (nipa Methodology Paper No. 3, 1987)
gnp: An Overview of Source Data and Estimating Methods (nipa Methodology Paper No. 4, 1987) [Also appeared in the July 1987 issue of the Survey] Government Transactions (nipa Methodology Paper No. 5, 1988)
Personal Consumption Expenditures (nipa Methodology Paper No. 6, 1990)

[^30]The methodologies described in these papers are subject to periodic improvements that are typically introduced as part of the annual and comprehensive revisions of the nIPA's; these improvements are described in the Survey articles that cover these revisions.
"Annual Revision of the U.S. National Income and Product Accounts": This series of Survey articles, the latest of which was published in the August 1996 issue,* describes the annual nipa revisions and the improvements in methodology.

The most recent comprehensive revision of the nIPA's is described in the following series of Survey articles.
"Preview of the Comprehensive Revision of the Na tional Income and Product Accounts: bea's New Featured Measures of Output and Prices" (July 1995)*
"Preview of the Comprehensive Revision of the National Income and Product Accounts: Recognition of Government Investment and Incorporation of a New Methodology for Calculating Depreciation" (September 1995)*
"Preview of the Comprehensive Revision of the National Income and Product Accounts: New and Redesigned Tables" (October 1995)*
"Improved Estimates of the National Income and Product Accounts for 1959-95: Results of the Comprehensive Revision" (January/February 1996) ${ }^{*}$
"Updated Summary Methodologies" (August 1996 Survey)* identifies the principal source data and estimating methods that are used to prepare the estimates of gross domestic product (GDP).

Information on the sources and methods used to prepare the national estimates of personal income, which provide the basis for the State estimates of personal in-

## Availability

For the availability of some of these publications, see the inside back cover of this issue. See also the User's Guide to bea Information: To request a copy, write to the Public Information Office, be-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington DC 20230, call 202-606-9900, or visit bea's Internet site at http://www.bea.doc.gov.
come, can be found in State Personal Income, 1929-93 (1995).*
"Gross Domestic Product as a Measure of U.S. Production" (August 1991 Survey) briefly explains the difference between GDP and gross national product.
The conceptual basis for the chain-type measures of real output and prices used in the NIPA's are described in the following Survey articles.
"Alternative Measures of Change in Real Output and Prices" (April 1992)
"Economic Theory and bea's Alternative Quantity and Price Indexes" (April 1992)
"Alternative Measures of Change in Real Output and Prices, Quarterly Estimates of 1959-92" (March 1993)
"Preview of the Comprehensive Revision of the National Income and Product Accounts: bea's New Featured Measures of Output and Prices" (July 1995)*
"Reliability and Accuracy of the Quarterly Estimates of GDP" (October 1993 SURVEY)* evaluates GDP estimates by examining the record of revisions in the quarterly estimates.
"A Look at How bea Presents the nipa's" (May 1996 SURVEY)* explains how to locate the NIPA estimates and some of the conventions used in their presentation.

## Gross product by industry

"Improved Estimates of Gross Product by Industry, 1959-94" (August 1996 Survey)* describes the most recent comprehensive revision of the estimates of gross product by industry.

## Input-output accounts

Benchmark Input-Output Accounts of the United States, 1987 (1994)* describes the concepts and methods used in the generation of the benchmark input-output tables for 1987.

## International

## Balance of payments accounts (bPA's)

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990)
describes the methodologies used in preparing the estimates in the bPA's and of the international investment position of the United States. These methodologies are subject to periodic improvements that are typically introduced as part of the annual revisions of the bpa's.
"U.S. International Transactions, Revised Estimates": This series of Survey articles, the latest of which was published in the July 1996 issue,* describes the annual bPA revisions and the improvements in methodology.

## Direct investment

The coverage, concepts, definitions, and classifications used in the benchmark surveys of U.S. direct investment abroad and of foreign direct investment in the United States are presented in the publications of the final results of the most recent benchmark surveys.
U.S. Direct Investment Abroad: 1989 Benchmark
Survey, Final Results (1992)*
Foreign Direct Investment in the United States: 1992
Benchmark Survey, Final Results (1995)*

The types of data on direct investment that are collected and published by bea and the clarifications of the differences between the data sets are presented in the following Survey articles.
"A Guide to bea Statistics on U.S. Multinational Companies" (March 1995)*
"A Guide to bea Statistics on Foreign Direct Investment in the United States" (February 1990)*

## Regional

## Personal income

State Personal Income, 1929-93 (1995)* includes a description of the methodology used to prepare the estimates of State personal income. [Also available on the State Personal Income 1969-95 CD-ROM]

Local Area Personal Income, 1969-92 (1994)* includes a description of the methodology used to prepare the estimates of local area personal income. [Also available on the Regional Economic Information System CD-ROM]

## Gross state product

"Gross State Product, 1977-90" (December 1993 SurVEY)* summarizes the sources and methods for bea's estimates of gross state product.

## BEA INFORMATION

#### Abstract

The economic information prepared by the Bureau of Economic Analysis (BEA) is available in news releases, in publications, on computer diskettes, on CD-ROM's, and on the Internet. For a description of these products in the free User's Guide to bea Information, write to the Public Information Office, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230, or call (202) 6069900. The User's Guide and other information are also available on Bea's home page at http://www.bea.doc.gov.

In addition, the following publications are available from the Superintendent of Documents of the Government Printing Office (GPO). To order, write to Superintendent of Documents, p.O. Box 371954, Pittsburgh, PA 15250-7954, call (202) 512-1800 or fax (202) 512-2250. Pay by check to the Superintendent of Documents or charge to a gPo deposit account, to VISA, or to MasterCard.

Benchmark Input-Output Accounts of the United States, 1987. (1994) Presents summary and detailed make and use tables for industries and commodities; tables showing commodity- and industry-output-requirements per dollar of commodity demanded; and tables showing the inputoutput ( $\mathrm{I}-\mathrm{O}$ ) commodity composition of personal consumption expenditures and producers' durable equipment expenditures in the national income and product accounts. Presents concepts and methods used in the 1987 benchmark accounts; concordance beween 1-0 and 1987 Standard Industrial Classification codes; description of the components of the measures of output, intermediate inputs, and value added; and mathematical derivation of total requirements tables. (468 pages) $\$ 29.00$, stock no. 003-010-00251-4.
State Personal Income, 1929-93. (1995) Presents detailed annual estimates for States and regions of personal income for 1929-93, including estimates of per capita personal income, personal income by major source, and earnings by industry. Also presents annual estimates of disposable personal income and per capita disposable personal income for 1948-93 and quarterly estimates of personal income for 1969-93. Provides information about the sources and methods used to prepare the estimates for 1987-93 and samples of all the detailed tables of personal income and employment that are available for regions, States, counties, and metropolitan areas. (444 pages) \$27.00, stock no. 003-010-00257-3.

Local Area Personal Income, 1969-92. (1994) Presents the estimates of personal income and per capita personal income for 1969-92 for the United States, regions, States, counties, and metropolitan areas. Also presents the Census Bureau's estimates of population that were used in the derivation of per capita personal income. Provides information about the sources and methods used to prepare the estimates for 1987-92 and samples of all the detailed tables of personal income and employment that are available for regions, States, counties, and metropolitan areas. ( 784 pages) $\$ 41.00$, stock no. 003-010-00249-2.

Foreign Direct Investment in the United States: 1992 Benchmark Surrey, Final Results. (1995) Presents detailed data on the financial structure und operations of U.S. affiliates of foreign direct investors, on the foreign direct investment position in the United States, and on the balance-ofpayments transactions between U.S. affiliates and their foreign parent companies in 1992. Includes data for items, such as employment covered by collective bargaining agreements and merchandise trade by product and country of destination and origin, that are only collected in benchmark surveys. Benchmark surveys are conducted every 5 years and are BEA's most comprehensive surveys in terms of both the number of companies covered and the amount of information gathered. The data are classified by industry of affiliate and by country of ultimate beneficial owner, and selected data are classified by State. Provides information about the coverage, the concepts and definitions, and the classifications used in the survey. (312 pages) $\$ 20.00$, stock no. 003-010-00259-0.

Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies. (1996) Two publications: One presents the revised estimates for 1993, and the other, the preliminary estimates for 1994 from BEA's annual surveys of the financial structure and operations of nonbank U.S. affiliates of foreign direct investors. The estimates are presented by industry of the U.S. affiliate and by country of the ultimate beneficial owner (Ubo) and for selected estimates, by industry of uво and by State. Preliminary 1994 Estimates ( 108 pages), \$8.50, stock no. 003-010-00261-1; Revised 1993 Estimates (108 pages), $\$ 8.50$, stock no. 003-010-00260-3.

Foreign Direct Investment in the United States: Establishment Data for Manufacturing, 1991. (1994) A joint effort by bea and the Bureau of the Census. Presents the most recently available data for foreign-owned U.S. manufacturing establishments (plants) by detailed industry (up to 459 industries), by State, and by country of investor. Includes data on the number of plants, value added, shipments, employment, total employee compensation, employee benefits, the hourly wage rates of production workers, the cost of materials and energy used, inventories by stage of fabrication, and expenditures for new plant and equipment. ( 220 pages) \$14.00, stock no. 003-010-00250-6.

Nevi
U.S. Direct Investment Abroad: 1994 Benchmark Survey, Preliminary Results. (1997) Presents preliminary results from the latest benchmark survey of the worldwide operations of U.S. multinational companies. Contains detailed 1994 data on the operations of U.S. parent companies and their foreign affiliates in 103 tables organized by country and by industry. (140 pages) $\$ 14.00$, stock no. 003-010-00263-8.

## $2{ }^{4}$

U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates, Revised 1993 Estimates. (1996) Provides revised results for 1993 from BEA's annual survey of the worldwide operations of U.S. multinational companies. Contains information on the financial structure and operations of U.S. parent companies and their foreign affiliates. Data are classified by country and industry of affiliate and by industry of U.S. parent. ( 120 pages) $\$ 11.00$, stock no. 003-010-00262-0.
U.S. Direct Investment Abroad: Balance of Payments and Direct Investment Position Estimates, 1982-88. (1995) Presents estimates of the U.S. direct investment position abroad valued at historical cost and of the balance-of-payments transactions between U.S. parent companies and their foreign affiliates for calendar years 1982-88, disaggregated by country and industry of foreign affiliate. Balance-of-payments transactions consist of capital outflows and its components, income, royalties and license fees, and charges for other services. The estimates are linked to BEA's 1982 and 1989 benchmark surveys, or censuses, of U.S. direct investment abroad. ( 96 pages) $\$ 6.00$, stock no. 003-010-00258-1.

[^0]:    2. Exports and imports of nonautomotive capital goods include both parts and equipment. In contrast, parts are not included in the producers' durable equipment component of business fixed investment and in the equipment component of government investment.
[^1]:    3. Used autos in PCE is defined as consumer purchases of used autos from business, government, and foreigners less consumer sales of used autos to these sectors. PCE used autos has two components: Net transactions-consumer purchases less sales valued at wholesale prices-and dealers' margins, the difference between the retail and wholesale value of purchases by consumers from these sectors. The sum of the net transactions of all sectors is zero, and does not affect total GDP; dealers' margins do affect total GDP.
[^2]:    4. The implicit price deflator for gross domestic purchases increased 2.0 percent in the fourth quarter after increasing 1.5 percent in the third. In the estimates for the most recent quarters, the deflator reflects changes in prices and in the composition of output; in contrast, chain-price measures reflect only changes in prices. (For more information, see the box "Calculation of Implicit Price Deflators" on page 31 of the October 1995 issue of the Survey of Current Business.)
[^3]:    5. The third-quarter increase was small because the second-quarter level was unusually high. The Omnibus Budget Reconciliation Act of 1993 had retroactively increased tax rates for high income taxpayers for tax year 1993; the additional tax could be paid in three annual installments, the last of which came due in the second quarter of 1996.
[^4]:    1. The estimate of personal income for the Nation in this article is derived as the sum of the State estimates; it differs from the estimate of personal income in the national income and product accounts (NIPA's) because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. It can also differ from the NIPA estimate because of different revision schedules.

    In this article, percent changes are at quarterly-not at annual-rates.

[^5]:    2. In this article, an increase in a component of personal income or an increase in an industry's earnings in a State is "above average" (or "below average") if it is more than (or less than) the increase in personal income in the State.
[^6]:    See footnotes at end of table

[^7]:    1. For a discussion of the worldwide surge in direct investment after 1985, see Edward M. Graham and Paul R. Krugman, "The Surge in Foreign Direct Investment in the 1980s," in Foreign Direct Investment, edited by Kenneth A. Froot (Chicago: University of Chicago Press, 1993): 13-36. For examples of the attention given to intrafirm trade by international organizations, which have shown particular interest in this phenomenon, see United Nations Conference on Trade and Development, Division on Transnational Corporations and Investment, World Investment Report 1995 (New York: United Nations, 1995): Chapter Iv; and Marcos Bonturi and Kiichiro Fukasaku, "Globalization and Intra-firm Trade: An Empirical Note," in oecd Economic Studies 20 (Spring 1993): 145-159.
    2. See "An Ownership-Based Disaggregation of the U.S. Current Account, 1982-93," Survey of Current Business 75 (October 1995): 52-61.
[^8]:    3. As shown in the October 1995 article, trade in goods has consistently accounted for more than 80 percent of U.S. intrafirm exports of goods and services and for more than 90 percent of U.S. intrafirm imports of goods and services.
[^9]:    4. The ubo is that person, proceeding up a U.S. affiliate's ownership chain beginning with and including the foreign parent, that is not owned more than 50 percent by another person. "Person" is broadly defined to include any individual, corporation, branch, partnership, associated group, association, estate trust, or other organization and any government (including any corporation, institution, or other entity or instrumentality of a government). The foreign parent is the first foreign person in the affiliate's ownership chain. Unlike the foreign parent, the ubo of an affiliate is identified to ascertain the person that ultimately owns or controls the U.S. affiliate and that, therefore, ultimately derives the benefits from owning or controlling the affiliate.
[^10]:    

[^11]:    6. The foreign parent group consists of (1) the foreign parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, up to and including the ubo, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.
[^12]:    7. The increase in share in 1982-85, when the dollar was appreciating in world currency markets, and the subsequent decrease in share in 1985-89, when the dollar was depreciating, might suggest that intrafirm exports were less sensitive to exchange-rate changes than were "arm's-length" exports (that is, exports involving unaffiliated parties). For 1985-89, however, Subramanian Rangan and Robert Z. Lawrence have determined that the apparent insensitivity at the aggregate level is due to industry-mix effects, so that once industry mix is taken into account, there is virtually no difference between the growth rates of intrafirm exports and of arm's-length exports; see "The Responses of U.S. Firms to Exchange Rate Fluctuations: Piercing the Corporate Veil," Brookings Papers on Economic Activity 2 (1993): 341-379.
[^13]:    8. In 1977, imports from petroleum affiliates accounted for 42 percent of the total goods imported by U.S. parents from their foreign affiliates. Although total U.S. imports of petroleum and products increased $\$ 17$ billion from 1977 to 1982 , imports by U.S. parents from petroleum affiliates decreased from $\$ 13.8$ billion to $\$ 12.6$ billion, and intrafirm imports from petroleum affiliates located in the member countries of the Organization of Petroleum Exporting Countries dropped from $\$ 7.9$ billion to $\$ 5.0$ billion.
[^14]:    9. The data on the intended use of U.S. goods exported to majority-owned foreign affiliates are collected in bea's benchmark survey of U.S. direct investment abroad. In each of the most recent benchmark survey years-1982, 1989, and 1994-at least three-fourths of the exports by U.S. parents to their majority-owned manufacturing affiliates were goods for further manufacture by the affiliates. In contrast, more than 90 percent of the intrafirm exports to majority-owned affiliates in wholesale trade were goods for resale without further manufacture.
[^15]:    11. In beA's annual surveys of U.S. direct investment abroad, intrafirm-trade data by industry and by country of affiliate are collected only for MOFA's. (The data on intrafirm trade with all foreign affiliates, not broken down by industry or country of affiliate, are collected on reports for U.S. parent companies.) In 1977 and 1982-94, intrafirm trade between U.S. parents and their moFA's accounted for more than 90 percent of the intrafirm exports to, and for more than 85 percent of the intrafirm imports from, all foreign affiliates.
[^16]:    12. In each of the most recent benchmark survey years-1982, 1989, and 1992-machinery exports accounted for more than one-half of the intrafirm exports to mopa's in wholesale trade. (Data on U.S. trade with mofn's by product are collected only in benchmark survey years.)
    13. lapan's largest general trading companies have historically handled a substantial share of Japan's imports of bulk commodities from other countries. See Alexander K. Young, The Sogo Shosha: Japan's Multinational Trading
[^17]:    14. The share of total U.S. goods imports that was accounted for by the intrafirm imports by U.S. manufacturingaffiliates also increased-from 4 percent in 1985 to 7 percent in 1992. The share of intrafirm exports by U.S. manufacturing affiliates increased from i percent in 1977 to 3 percent in 1994.
    15. In 1977-94, the share for affiliates in chemicals remained in the range of 27 to 37 percent for exports and 18 to 22 percent for imports. The share for affiliates in electronic equipment was less stable, fluctuating in the range of 12 to 30 percent for exports and 17 to 25 percent for imports.
[^18]:    16. During 1987-90, the share of Japanese-owned manufacturing affiliates in the gross product of all manufacturing affiliates doubled-from 6 percent to 12 percent.
    17. The data for intrafirm trade of U.S, affiliates are from the 1992 benchmark survey of foreign direct investment in the United States. Data on U.S.-affiliate trade by country of destination and by country of origin are collected in benchmark surveys, but not in annual surveys.
    18. In this section, as in the previous section, total intrafirm trade is defined as the sum of the intrafirm trade between U.S. parents and mofn's and the intrafirm trade between U.S. affiliates and their foreign parent groups (see footnote 11).
[^19]:    19. Intrafirm trade between a U.S. affiliate and its foreign parent group need not be trade with the country of the affiliate's ubo, because some member firms of the foreign parent group may be located in other countries.
    20. Exports to France accounted for only 15 percent of the intrafirm exports by French-owned affiliates.
[^20]:    21. As shown in the addendum to table 8, the U.S.-affiliate intrafirm imports from these five countries were predominantly by affiliates with ubo's in those countries. In addition, imports originating in the UвO country accounted for a dominant share of the intrafirm imports by affiliates with ubo's in all of the countries except the Netherlands: Imports from the UBO countryaccounted for more than 90 percent of the intrafirm imports by Japanese- and German-owned affiliates and for more than 70 percent of the intrafirm imports by Swiss- and Swedish-owned affiliates.
[^21]:    24. Although most foreign direct investment in the United States has taken the form of acquisitions of existing companies rather than the establishment of new companies, the reliance of foreign-owned manufacturing affiliates on their foreign parents for intermediate products is considerable: In 1992, intrafirm imports accounted for 12 percent of the total purchased inputs of U.S. manufacturing affiliates.
[^22]:    ures.

[^23]:    NOTE.-See footnotes to table 3.7B.

[^24]:    1. Consists of museums, botanical, zoological gardens; engineering and management services; and services, not Isewhere classified.
    2. Includes Coast Guard.

    NoTES.-Estimates in this table are based on the 1987 Standard Industrial Classitication (SIC).
