SURVEY of CURRENT BUSINESS

SURVEY OF CURRENT BUSINESS. Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, SURVEY OF CURRENT BUSINESS, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Subscriptions to the SURVEY OF CURRENT BUSINESS are maintained, and their prices set, by the Government Printing Office, an agency of the U.S. Congress. Postmaster: Send address changes to:

Superintendent of Documents,
U.S. Government Printing Office,
Washington, DC 20402.

The GPO order desk number is (202) 512-1800. The subscription complaint desk number is (202) 512-1806.

Subscription and single-copy prices:

Second-class mail: \$34.00 domestic,
\$42.50 foreign.

First-class mail: \$71.00.

Single copy: \$9.00 domestic,
\$11.25 foreign.

Make checks payable to the Superintendent of Documents.

Second-class postage paid at Washington, DC and at additional mailing offices. (USPS 337-790).

The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department.

Ernestine T. Gladden, Eric B. Manning

THIS ISSUE of the SURVEY went to the printer on April 11, 1995.
It incorporates data from the following monthly BEA news releases:
Gross Domestic Product (March 31),
Personal Income and Outlays (April 3), and
Composite Indexes of Leading, Coincident, and Lagging
Indicators (April 5).

Special in this issue

38 A Guide to BEA Statistics on U.S. Multinational Companies

BEA's statistics on U.S. multinational companies (MNC's) provide a comprehensive and integrated data set for empirical analysis of MNC's. Balance of payments data measure transactions between U.S. parents and their foreign affiliates, and direct investment position data measure the cumulative value of parents' investments in their affiliates. Financial and operating data provide a wide variety of indicators of the overall domestic and foreign operations of U.S. MNC's. BEA's statistics can help to answer such questions as "Where are U.S. MNC's investing?" "Are U.S. companies shifting their operations abroad?" and "What portion of U.S. cross-border trade is between U.S. parents and their foreign affiliates?"

Regular features

1 Business Situation

The "final" estimate of real GDP for the fourth quarter of 1994 showed an increase of 5.1 percent; the "preliminary" estimate had shown a 4.6-percent increase. Fixed investment was revised up, and imports were revised down. Corporate profits increased \$4.3 billion after increasing \$9.6 billion in the third quarter. In the government sector, an increase in the Federal Government deficit more than offset an increase in the State and local government surplus.

33 State and Local Government Fiscal Position in 1994

The surplus of State and local governments in 1994, at \$26.2 billion, changed little from 1993. Receipts accelerated slightly, reflecting a pickup in the U.S. economy; expenditures also accelerated slightly, reflecting a step-up in purchases. The outlook for 1995 suggests an increase of \$5-\$10 billion in the State and local government surplus.

— Continued on next page —

56 U.S. International Transactions, Fourth Quarter and Year 1994

In the fourth quarter of 1994, the U.S. current-account deficit increased \$4.0 billion, to \$44.8 billion. A decrease in the deficit on merchandise trade and an increase in the surplus on services were more than offset by an increase in the deficit on investment income and by larger net unilateral transfers. For the year 1994, the current-account deficit increased \$51.8 billion, to \$155.7 billion. A jump in the deficit on merchandise trade, as imports increased more than exports, was augmented by a sizable shift to a deficit on investment income.

LOOKING AHEAD

- ❁ **Selected Annual NIPA Tables.** The April SURVEY will contain 23 of the “annual only” tables that usually appear in the July issue as part of the annual revision of the NIPA’s. This year, the annual revision will be combined with the comprehensive NIPA revision scheduled for late 1995. The 23 tables will provide detailed annual estimates for 1993–94 on personal consumption expenditures, gross private domestic investment, and other NIPA measures.
-

THE BUSINESS SITUATION

Larry R. Moran prepared the first section of this article, Daniel Larkins prepared the section on corporate profits, and Michael W. Webb prepared the section on the government sector.

THE "FINAL" estimate of growth in real gross domestic product (GDP) for the fourth quarter of 1994 is 5.1 percent, 0.5 percentage point higher than the "preliminary" estimate reported in the February "Business Situation" (table 1).¹ The "final" estimates show a picture of stronger

1. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes are differences between these rates. Quarter-to-quarter percent changes are annualized. Real, or constant-dollar, estimates are expressed in 1987 dollars and are based on 1987 weights.

economic activity, with higher fixed investment and lower imports, than was shown in February. In the fourth quarter, personal consumption expenditures and producers' durable equipment more than accounted for the increase in real GDP. Net exports of goods and services, nonresidential structures, and residential investment also increased; government purchases and inventory investment decreased.

The largest upward revisions were to net exports of goods and services (\$2.5 billion) and to nonresidential fixed investment (\$2.3 billion); the largest downward revision was to government purchases (\$0.8 billion). In net exports, nearly all the revision was to imports, mainly to imports of travel services. In nonresidential investment, three-fourths of the revision was to producers' durable equipment, mainly to aircraft and to motor vehicles. In government purchases, the revision was more than accounted for by Federal nondefense purchases.

The final estimate of real gross domestic purchases shows a 4.2-percent increase, 0.3

GDP price index (fixed weights) ¹	2.6	2.6	0

1. Based on 1987 weights.

NOTE.—Final estimates for the fourth quarter of 1994 incorporate the following revised or additional major source data that were not available when the preliminary estimates were prepared.

Personal consumption expenditures: Revised retail sales for December.

Nonresidential fixed investment: Revised construction put in place for November and December, revised manufacturers' shipments of equipment for December, and revised shipments of complete civilian aircraft for December.

Residential investment: Revised construction put in place for November and December.

Change in business inventories: Revised manufacturing and trade inventories for December.

Net exports of goods and services: Revised exports and imports of goods for December; revised exports and imports of services for the quarter; and revised territorial adjustments.

Government purchases: Revised State and local government construction put in place for November and December.

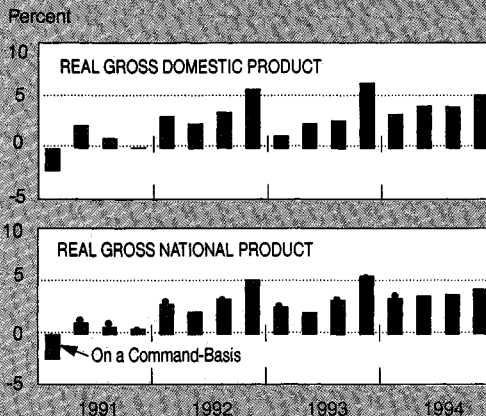

Net interest: Financial assets held by households for the quarter and net interest from the rest of the world for the quarter.

Corporate profits: Domestic book profits and profits from the rest of the world for the quarter.

GDP prices: Revised housing prices for the quarter and revised export and import prices for the quarter.

CHART 1

**Selected Product Measures:
Change From Preceding Quarter**

Note.—Percent change at annual rate from preceding quarter, based on seasonally adjusted estimates.

U.S. Department of Commerce, Bureau of Economic Analysis

percentage point higher than the preliminary estimate.

The final estimates of the fixed-weighted price indexes for both gross domestic purchases and GDP show increases of 2.6 percent, little changed from the preliminary estimates.

The increase in real disposable personal income was revised down 0.2 percentage point to 7.5 percent. The personal saving rate was unrevised at 4.6 percent.

Alternative measures.—In the fourth quarter, BEA's chain-type annual-weighted measure of real GDP increased 4.0 percent, 1.1 percentage points less than the fixed-1987-weighted measure of GDP; the benchmark-years-weighted alternative measure of real GDP increased 4.1 percent. About three-fifths of the difference between the fixed-weighted measure and the alternative measures was accounted for by a strong increase in purchases of computers, a product whose prices have decreased steadily since 1987.

Both of the alternative measures of gross domestic purchases prices increased less in the fourth quarter than the fixed-1987-weighted measure. The chain-type measure increased 2.4 percent—0.2 percentage point less than the fixed-weighted measure; the benchmark-years-weighted measure increased 2.5 percent.

Table 2.—Relation of Gross Domestic Product, Gross National Product, and Command-Basis Gross National Product in Constant Dollars

[Seasonally adjusted at annual rates]

	Billions of 1987 dollars			Percent change from preceding quarter	
	Level	Change from preceding quarter		1994:III	1994:IV
	1994:IV	1994:III	1994:IV		
Gross domestic product	5,433.8	52.9	66.8	4.0	5.1
<i>Plus:</i> Receipts of factor income from the rest of the world	143.2	10.7	5.4	38.2	16.6
<i>Less:</i> Payments of factor income to the rest of the world	161.0	14.2	16.1	51.1	52.4
Equals: Gross national product	5,416.0	49.4	56.1	3.8	4.3
<i>Less:</i> Exports of goods and services and receipts of factor income from the rest of the world	841.1	33.3	36.8	18.4	19.6
<i>Plus:</i> Command-basis exports of goods and services and receipts of factor income	853.8	28.0	35.2	14.9	18.3
Equals: Command-basis gross national product	5,428.7	44.1	54.5	3.4	4.1
Addendum: Terms of trade ¹	101.5	-.7	-.3	-2.7	-1.2

1. Ratio of the implicit price deflator for exports of goods and services and receipts of factor income to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.

NOTE.—Levels of these series are found in NIPA tables 1.10 and 1.11.

Gross national product (GNP).—Real GNP increased 4.3 percent in the fourth quarter, 0.8 percentage point less than the increase in real GDP (chart 1 and table 2).² Payments of factor income to the rest of the world increased more than receipts of factor income; interest income accounted for nearly all the increase in both payments and receipts.

Real GNP on a command basis increased slightly less than real GNP in the fourth quarter—4.1 percent, compared with 4.3 percent—reflecting a deterioration in the terms of trade.³ In the third quarter, command-basis GNP also increased less than GNP—3.4 percent, compared with 3.8 percent.

Corporate Profits

Profits from current production increased \$4.3 billion in the fourth quarter after increasing \$9.6 billion in the third (table 3).⁴ (The Census Bureau has accelerated the schedule for tabulation of fourth-quarter profits reports in the Quarterly Financial Report (QFR) program; as a result, the national income and product accounts (NIPA) estimates of corporate profits published in March include complete QFR tabulations and will not be revised next month.)

The fourth-quarter increase was more than accounted for by domestic operations of nonfinancial corporations. Real gross product of these corporations increased, and unit profits edged up, as unit costs decreased slightly and unit prices were unchanged.

Cash flow from current production, a profits-related measure of internally generated funds available to corporations for investment, decreased \$3.3 billion after increasing \$3.9 billion. The ratio of cash flow to nonresidential fixed investment—a measure of the share of current levels of investment that could be financed by

2. GNP equals GDP plus receipts of factor income from the rest of the world less payments of factor income to the rest of the world.

3. In the estimation of real GNP, the current-dollar value of exports of goods and services is deflated by export prices, the current-dollar value of imports of goods and services is deflated by import prices, and the current-dollar values of receipts and payments of factor income are deflated primarily by the implicit price deflator for net domestic product. In the estimation of command-basis GNP—a measure of U.S. production in terms of its purchasing power—the current-dollar value of exports of goods and services and receipts of factor income is deflated by the implicit price deflator for imports of goods and services and payments of factor income. The terms of trade is measured by the ratio of the implicit price deflator for exports of goods and services and receipts of factor income to the corresponding implicit price deflator for imports, with the decimal point shifted two places to the right.

4. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment (IVA), and the capital consumption adjustment (CCAdj); it is shown in NIPA tables 1.14, 1.16, and 6.16c as "Corporate profits with IVA and CCAdj."

internally generated funds—decreased to 77.6 percent; the decrease was the fifth in succession.

Related measures.—Industry profits increased \$2.9 billion after increasing \$9.5 billion.⁵ Among nonfinancial industries, increases in manufacturing and in the transportation and public utilities group more than offset small decreases in trade and in “other” nonfinancial industries. In manufacturing, the largest increases were in chemicals and allied products, in industrial machinery and equipment, and in “other” durable goods. In the transportation and public utilities group, the largest increase was in communications. The small decrease in trade was accounted for by wholesale trade; retail trade was virtually unchanged, as decreases in general merchandise and in food stores were offset by increases in auto dealers and in “other retail.”

5. Industry profits are estimated as the sum of profits before tax and the inventory valuation adjustment; they are shown in NIPA table 6.16C. Estimates of the capital consumption adjustment by industry do not exist.

Table 3.—Corporate Profits

NOTE.—Levels of these and other profits series are found in NIPA tables 1.14, 1.16, 6.16C, and 7.15.

IVA Inventory valuation adjustment
CCAdj Capital consumption adjustment

Profits of financial industries decreased \$5.4 billion after increasing \$6.2 billion. The decrease was accounted for by commercial and mutual depository institutions.

Profits from the rest of the world decreased \$0.6 billion after decreasing \$0.4 billion. This component of profits measures receipts of profits from foreign affiliates of U.S. corporations less payments of profits by U.S. affiliates of foreign corporations. Both receipts and payments increased a little in the fourth quarter.

Profits before tax increased \$15.4 billion. The difference between this increase and the \$4.3 billion increase in profits from current production mainly reflects an increase in inventory profits, which (with the sign reversed) are measured in the NIPA's as the inventory valuation adjustment.

Government Sector

The fiscal position of the government sector deteriorated in the fourth quarter of 1994, as the combined deficit of the Federal Government and of State and local governments increased \$2.2 billion, to \$132.3 billion (table 4). The deterioration was more than accounted for by the Federal Government deficit; the State and local government surplus increased.

Federal

The Federal Government deficit increased \$7.1 billion in the fourth quarter, to \$161.1 billion, after increasing \$8.9 billion in the third. Receipts and expenditures both accelerated, but the pickup in receipts exceeded that in expenditures.

Receipts.—Receipts increased \$20.0 billion in the fourth quarter after increasing \$8.1 billion in the third. The acceleration was mostly accounted for by personal tax and nontax receipts.

Personal tax and nontax receipts increased \$7.3 billion after decreasing \$4.2 billion. The third-quarter decrease followed a second-quarter boost in tax receipts from the effects of the Omnibus Budget Reconciliation Act of 1993 that retroactively increased tax rates for high-income taxpayers. Withheld personal income taxes increased \$8.3 billion after increasing \$5.1 billion, reflecting an acceleration in wages and salaries.

Contributions for social insurance increased \$7.0 billion after increasing \$4.6 billion. The step-up reflected the acceleration in wages and salaries.

Corporate profits tax accruals increased \$5.7 billion after increasing \$6.1 billion. Excluding

payments to the U.S. Treasury by Federal Reserve banks (which are treated as taxes in the NIPA's), corporate profits tax accruals increased \$5.5 billion after increasing \$5.0 billion, reflecting the acceleration in corporate profits.

Expenditures.—Expenditures increased \$27.1 billion in the fourth quarter after increasing \$16.9 billion in the third. An upturn in subsidies less current surplus of government enterprises and a

pickup in transfer payments were partly offset by a downturn in purchases.

Subsidies less the current surplus of government enterprises increased \$8.9 billion after decreasing \$10.4 billion. The upturn was mostly attributable to agricultural subsidies, which increased \$8.3 billion after decreasing \$8.4 billion.

Transfer payments increased \$16.2 billion after increasing \$6.8 billion. Transfer payments to the rest of the world and to persons both contributed to the acceleration. Transfer payments to the rest of the world increased \$10.3 billion after increasing \$1.7 billion. The fourth-quarter increase was more than accounted for by \$12.0 billion (annual rate) in economic support payments and other payments to Israel. Transfer payments to persons increased \$6.0 billion after increasing \$5.0 billion. Step-ups in social security benefits (old-age, survivors, and disability insurance) and in supplemental security income were partly offset by decreases in unemployment benefits.

Net interest paid increased \$9.1 billion after increasing \$5.6 billion. The pickup was mainly attributable to interest paid on the public debt, which increased \$9.5 billion after increasing \$6.8 billion.

Purchases decreased \$12.4 billion after increasing \$9.2 billion. Defense purchases decreased \$15.2 billion after increasing \$8.8 billion, the largest increase since 1991; the drop resumed a downtrend in defense purchases, which have decreased in 11 of the last 15 quarters, and it was the largest percentage decrease in defense purchases since the second quarter of 1954. All major categories of defense purchases contributed to the drop. Services decreased \$7.0 billion after increasing \$5.5 billion; most of the downturn was accounted for by weapon support, installation support, and research and development. Military durable goods decreased \$8.4 billion after increasing \$1.0 billion. Most of the downturn was accounted for by aircraft and ships; within aircraft, B-2 bomber deliveries decreased from two in the third quarter to one in the fourth.

Nondefense purchases increased \$2.8 billion after increasing \$0.3 billion. The acceleration was more than accounted for by step-ups in services and structures and by an upturn in non-durable goods. The step-up in services was more than accounted for by compensation of non-defense employees, which increased \$0.9 billion after decreasing \$2.6 billion; within compensation, incentive payments ("buyouts") for civilian employees who voluntarily leave Federal service

NOTE.—Dollar levels are found in tables 3.2 and 3.3 of the "Selected NIPA Tables."

increased \$1.0 billion after decreasing \$2.1 billion. Other services turned down, notably research and development for the National Aeronautics and Space Administration. The upturn in nondurable goods was more than accounted for by a downturn in sales of Commodity Credit Corporation inventories.⁶

Grants-in-aid to State and local governments increased \$5.2 billion after increasing \$5.9 billion. Downturns in education, medical research, food and nutrition programs, and highways were partly offset by an upturn in medicaid.

State and local

The State and local government surplus increased \$4.9 billion in the fourth quarter, to \$28.8 billion, after decreasing \$3.1 billion in the third. The

⁶ Sales, except those by government enterprises for goods and services similar to those provided by the private sector, are treated as deductions from government purchases.

turnaround was attributable to an acceleration in receipts and a deceleration in expenditures.

Receipts increased \$17.4 billion after increasing \$14.7 billion. Indirect business tax and non-tax accruals increased \$6.7 billion after increasing \$5.3 billion. Personal tax and nontax receipts increased \$3.3 billion after increasing \$2.0 billion. Reflecting the acceleration in corporate profits, corporate profits tax accruals increased \$1.3 billion after increasing \$0.8 billion. Federal grants-in-aid increased \$5.2 billion after increasing \$5.9 billion; the deceleration was more than accounted for by downturns in education, medical research, food and nutrition programs, and highways.

Expenditures increased \$12.5 billion after increasing \$17.8 billion. Most of the deceleration was accounted for by purchases, which increased \$9.3 billion after increasing \$13.0 billion. Structures accounted for half of the slowdown in purchases.

that preserves the look and feel of the printed version*

NOW SURVEY OF CURRENT BUSINESS readers who have access to the World Wide Web can get the latest issue at least a week before the printed version. The electronic SURVEY is available by subscribing to **STAT-USA's** World Wide Web system, which offers the SURVEY as one of its information products. In addition to full issues, selected current and back SURVEY articles are offered by subject area.

The SURVEY is published electronically in portable document format (PDF), a graphically oriented format that preserves document fidelity across all major computer platforms—including Windows, Macintosh, and Unix—and printers. With the widely available free PDF reader and an issue of the SURVEY in PDF, a user can view and print pages as well as

- *Copy and paste text.*
- *Search for words and phrases.*
- *Follow hypertext links connecting references to footnotes, tables, and charts.*
- *Easily follow the SURVEY's multicolumn format on screen by jumping into predefined article "threads."*
- *Hyperlink between the data tables and charts in the "Business Cycle Indicators" section.*
- *Quickly locate any portion of an article by looking through the article's "bookmarks."*

To subscribe to **STAT-USA**, go to <http://www.stat-usa.gov>. BEA's page is at <http://www.stat-usa.gov/BEN/Services/beahome.html>. In addition, for free access to BEA's *User's Guide* and other information about BEA, go to <http://www.doc.gov/resources/beahome.html>

Subscriptions for single-user unlimited access to **STAT-USA** are \$24.95 for 3 months or \$100 for 1 year. For further information, contact the **STAT-USA** Help Line on (202) 482-1986 Monday through Friday, 8:30 AM–4:30 PM Eastern Time.

NATIONAL INCOME AND PRODUCT ACCOUNTS

Selected NIPA Tables

New estimates in this issue: "Final" estimates for the fourth quarter of 1994. Note: The NIPA estimates of corporate profits for the fourth quarter will not be revised next month, because of a speedup in the availability of key source data.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. (In most tables, the annual estimates are also shown.) These tables are available on the day of the gross domestic product (GDP) news release on printouts and diskettes on a subscription basis or from the Commerce Department's Economic Bulletin Board. For order information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230 or call (202) 606-9700.

Tables containing the estimates for 1929-87 are available in the two-volume set *National Income and Product Accounts of the United States*; see inside back cover for order information. For 1988-93, the complete official time series of NIPA estimates can be found as follows:

	1988	1989	1990	1991-93
Most tables.....	NIPA's, vol. 2	July 1992 SURVEY	Aug. 1993 SURVEY	July 1994 SURVEY
Tables 1.15, 1.16, and 7.15.....	"	"	Sept. 1993 SURVEY	"
Tables 3.15-3.20 and 9.1-9.6....	"	Sept. 1992 SURVEY	"	Sept. 1994 SURVEY
Tables 7.1, 7.2, 7.3, and 8.1....	Aug. 1994 SURVEY	Aug. 1994 SURVEY	Aug. 1994 SURVEY	Aug. 1994 SURVEY
Tables 7.4-7.12.....	Apr. 1993 SURVEY	Apr. 1993 SURVEY	Aug. 1993 SURVEY	July 1994 SURVEY

Summary NIPA series back to 1929 are in the September 1994 issue of the SURVEY. Errata to published NIPA tables appear in the September 1992, April 1993, October 1993, March 1994, and November 1994 issues. NIPA tables are also available, most beginning with 1929, on diskettes. For more information on the presentation of the estimates, see "A Look at How BEA Presents the NIPA's" in the February 1995 SURVEY.

NOTE.—This section of the SURVEY is prepared by the National Income and Wealth Division and the Government Division.

Price indexes for national defense purchases:								
Chain-type annual weights	125.3	129.9	125.6	126.6	127.8	129.5	130.7	131.7
Benchmark-years weights	125.3	129.9	125.6	126.7	127.9	129.5	130.6	131.6

1. Includes utilities, communications, rental payments, maintenance and repair, and payments to contractors to operate installations.

2. Includes depot maintenance and contractual services for weapons systems, other than research and development.

3. Includes compensation of foreign personnel, consulting, training, and education.

Table 7.13.—Implicit Price Deflators for the Relation of Gross Domestic Product, Gross National Product, Net National Product, and National Income

[Index numbers, 1987=100]

Gross domestic product	123.5	126.1	123.7	124.1	125.0	125.9	126.5	126.9
Plus: Receipts of factor income from the rest of the world ¹	125.1	127.8	125.3	125.7	126.6	127.5	128.2	128.6
Less: Payments of factor income to the rest of the world ²	127.8	129.9	128.1	128.3	129.1	129.7	130.2	130.4
Equals: Gross national product	123.5	126.0	123.7	124.1	124.9	125.8	126.5	126.9
Less: Consumption of fixed capital	111.6	113.8	111.9	112.0	113.3	113.6	114.2	114.3
Equals: Net national product	125.1	127.7	125.3	125.7	126.6	127.4	128.1	128.5
Less: Indirect business tax and nontax liability plus business transfer payments less subsidies plus current surplus of government enterprises	129.4	133.3	131.8	130.0	131.1	132.8	135.7	133.6
Statistical discrepancy	121.8	124.1	122.0	122.3	123.0	123.9	124.5	124.8
Equals: National income	124.6	127.1	124.6	125.2	126.1	126.9	127.3	128.0
Addenda:								
Net domestic product	125.1	127.7	125.3	125.7	126.6	127.5	128.2	128.6
Domestic income	124.7	127.1	124.7	125.3	126.1	126.9	127.4	128.0

1. Consists largely of receipts by U.S. residents of interest and dividends and reinvested earnings of foreign affiliates of U.S. corporations.

2. Consists largely of payments to foreign residents of interest and dividends and reinvested earnings of U.S. affiliates of foreign corporations.

NOTE.—Except for disposable personal income, the quantity and price indexes in this table are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. The fixed-weighted measures use as weights the composition of output in 1987. For the alternative indexes, the chain-type indexes with annual weights use weights for the preceding and current years, and the indexes with benchmark-years weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, 1987, 1992, and the most recent year.

^p Preliminary.
^r Revised.
1. Disposable personal income in 1987 dollars equals the current-dollar figure divided by the implicit price deflator for personal consumption expenditures.

2. Monthly estimates equal the centered 3-month moving average of personal saving as a percentage of the centered 3-month moving average of disposable personal income.

^p Preliminary.^r Revised.

1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and

definitions used to prepare BEA's international and national accounts.

2. Contains goods that cannot be separately identified.

Constant-Dollar Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade

Tables 1, 2, and 3 present quarterly and monthly constant-dollar inventories, sales, and inventory-sales ratios, respectively. Table 4 presents quarterly fixed-weighted constant-dollar inventory-sales ratios—that is, ratios obtained by weighting detailed industry ratios by 1987 sales. Table 5 presents quarterly and monthly inventories for manufacturing by stage of fabrication.

* Revised.

^p Preliminary.

1. Includes lumber and wood products; furniture and fixtures; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing industries.

2. Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.

NOTE.—Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory. Trade inventories are classified by the type of product sold by the establishment holding the inventory.

Table 4: The I-S ratios shown in this table were obtained by weighting detailed industry I-S ratios by 1987 sales. For manufacturing, 21 industries were used; for merchant wholesalers, 20 kinds of business; and for retail trade, 8 kinds of business.

Data Availability

Quarterly constant-dollar estimates for manufacturing and trade inventories, sales, and inventory-sales ratios for 1977–89 were published in the January 1993 SURVEY OF CURRENT BUSINESS; estimates for 1990 were published in the September 1993 SURVEY; and estimates for 1991–94 were published in the September 1994 SURVEY. Quarterly and monthly constant-dollar estimates for 1967–94, as well as constant-dollar manufacturing inventories by stage of fabrication, are available on printouts and diskettes. To order, write to the National Income and Wealth Division, BE-54, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230. Specify Constant-Dollar Manufacturing and Trade Inventories, Sales, and Ratios (Accession No. BEA 54-90-21-205 for printouts or BEA 54-91-40-409 for diskette), and include a check or money order for \$55.00 for printout or \$20.00 for diskette, payable to the Bureau of Economic Analysis. To order by telephone, call (202) 606-9700; MasterCard and VISA are accepted.

State and Local Government Fiscal Position in 1994

By David F. Sullivan

THE SURPLUS of State and local governments measured on a national income and product accounts (NIPA) basis was \$26.2 billion in 1994, little changed from 1993 (table 1, chart 1). Within the State and local government surplus, the social insurance funds surplus, at \$65.6 billion, and the "other funds" deficit, at \$39.3 billion, both changed little in 1994.¹ In 1994, both receipts and expenditures accelerated slightly. In 1993, both receipts and expenditures had decelerated.

Receipts

State and local government receipts increased 5.9 percent in 1994 after increasing 5.7 percent in 1993 (table 2). General own-source receipts—that is, receipts excluding contributions for social insurance and Federal grants-in-aid—increased 5.9 percent in 1994, 0.8 percentage point more than in 1993; the step-up reflected an acceleration in economic activity in 1994.

Personal tax and nontax receipts increased 6.3 percent in 1994 after a 4.4-percent increase in 1993. Personal income taxes increased

6.7 percent after increasing 4.4 percent. Legislative actions reduced income taxes modestly in 1994 and 1993, about \$0.7 billion and \$0.6 billion, respectively. The acceleration in personal income taxes reflected a pickup in personal income, which increased 6.1 percent in 1994 after a 4.3-percent increase in 1993. Personal nontax receipts and personal taxes other than income taxes both accelerated in 1994.

Corporate profits tax accruals increased 16.8 percent in 1994, following a 25.2-percent increase in 1993. The deceleration reflected a slowdown in corporate profits before tax, which increased 13.4 percent after a 16.8-percent increase.²

2. Dollar levels are found in table 1.14 of the "Selected NIPA Tables."

1. This article discusses the State and local fiscal position as published in the NIPA's. As noted in the November 1994 SURVEY OF CURRENT BUSINESS, BEA has determined that corrections will need to be made to the NIPA estimates of property tax receipts and of related aggregates beginning with the first quarter of 1994. These corrections arise because the effects of changes to Michigan's property tax law were not recorded in accordance with NIPA accounting conventions. In the government accounts, the corrections will reduce State and local government indirect business tax and nontax accruals, receipts, and the NIPA surplus by about \$3.4 billion. The corrections will be made to the NIPA estimates in the next comprehensive revision, which is scheduled for late 1995. For more information, see "Corrections To Be Made to the Estimates of Property Tax Receipts," SURVEY 74 (November 1994): 10.

Table 1.—State and Local Government Receipts, Expenditures, and Surplus or Deficit, NIPA Basis

	Calendar years				
	1990	1991	1992	1993	1994
Receipts	730.0	783.6	842.9	891.0	943.2
Expenditures	704.9	766.6	818.1	864.7	917.0
Surplus or deficit (-)	25.1	17.0	24.8	26.3	26.2
Social insurance funds	60.7	63.4	66.4	66.3	65.6
Other funds	-35.6	-46.5	-41.6	-40.0	-39.3

NOTE.—The estimates for 1993 and 1994 are in table 3.3 of the "Selected NIPA Tables" in this issue; the estimates for 1990-93 are in table 3.3 in "National Income and Product Accounts Tables" in the July 1994 Survey of Current Business.

CHART 1

State and Local Government Surplus or Deficit, NIPA Basis

U.S. Department of Commerce, Bureau of Economic Analysis

Indirect business tax and nontax accruals increased 5.0 percent in 1994, up from a 4.2-percent increase in 1993. Sales taxes increased 6.5 percent after a 5.1-percent increase. Legislative actions added about \$1.8 billion to sales taxes in 1994 after adding \$1.0 billion in 1993. Excluding legislative actions, sales taxes would have increased 6.0 percent in 1994 and 5.0 percent in 1993; retail sales, the tax base for a large portion of sales taxes, increased 7.7 percent in 1994 and 6.3 percent in 1993. Property taxes increased 3.7 percent in 1994, the same as in 1993. "Other" indirect business tax and nontax accruals accelerated to a 3.8-percent increase from a 1.8-percent increase; the acceleration was widespread among the components of "other" indirect business tax and nontax accruals.³

Contributions for social insurance increased 4.6 percent in 1994, down from a 5.1-percent increase in 1993. The deceleration was most marked in contributions for temporary disability insurance and for workers' compensation; contributions for employee retirement also decelerated.

Federal grants-in-aid decelerated for the third consecutive year. The deceleration has been largely accounted for by grants for medicaid, which increased 4.6 percent in 1994, 13.4 percent in 1993, 21.1 percent in 1992, and 32.4 percent

in 1991. Excluding medicaid, Federal grants increased 7.2 percent in 1994 and 4.6 percent in 1993.

Expenditures

State and local government expenditures accelerated in 1994, following a deceleration in 1993; expenditures increased 6.0 percent in 1994, 5.7 percent in 1993, and 6.7 percent in 1992 (table 3). The acceleration was largely attributable to purchases.

Purchases.—Purchases increased 4.7 percent in 1994, following a 4.2-percent increase in 1993. Compensation of employees and "other" purchases both accelerated; purchases of structures decelerated.

Compensation of employees increased 4.8 percent in 1994, up from a 4.6-percent increase in 1993. The acceleration was more than accounted for by an increase in employment: Full-time-equivalent employment for State and local general government increased 1.6 percent, following a 1.0-percent increase. Compensation per employee, in contrast, decelerated to a 3.2-percent increase from a 3.6-percent increase.

"Other" purchases increased 4.8 percent in 1994 after a 1.7-percent increase in 1993. Purchases of durable goods increased 4.3 percent after a 3.4-percent increase, and nondurable goods increased 5.0 percent after a 4.5-percent increase. Purchases

3. The detailed estimates of indirect business tax and nontax accruals for 1990-93 are shown in table 3.5 of the NIPA tables in the July 1994 SURVEY.

Table 2.—State and Local Government Receipts, NIPA Basis

	Calendar years								
	Billions of dollars					Percent change			
	1990	1991	1992	1993	1994	1991	1992	1993	1994

Contributions for social insurance	58.3	61.0	64.5	67.8	70.9	4.6	5.7	5.1	4.6
Federal grants-in-aid	132.3	153.3	172.2	186.1	197.6	15.9	12.3	8.1	6.2
Addendum—Receipts excluding selected law changes:¹									
Total	725.5	770.2	822.6	870.3	921.4	6.2	6.8	5.8	5.9
General own-source receipts	534.9	555.9	585.9	616.4	652.9	3.9	5.4	5.2	5.9

1. Estimates of the effect on receipts of law changes are calculated as follows. For changes of which BEA is aware (hence the use of "selected" in the line title in the table), the estimate is of the amount of the change over the 12-month period after the change is introduced. For personal taxes, the change is introduced when the tax is paid/refunded or when withholding is changed. For indirect business taxes, the change is introduced to coincide with the transaction affected. The calculations are made by months for personal taxes and nontaxes (because they are used to prepare monthly estimates of disposable personal income) and by quarters for other taxes. Two characteristics of the resulting estimates should be noted. First, aggregation of the monthly or quarterly estimates to calendar years may give results that appear anomalous. For example, a sales tax imposed for 1 year beginning July 1 would be recorded as follows: (a) for quarters, an increase in receipts by the amount of the 12-month yield in the third quarter of that

year and a decrease by the same amount in the third quarter of the following year, and (b) for calendar years, an increase in receipts by the amount of the 12-month yield divided by 2 in the year that the increase takes place, no change in receipts in the following year, and a decrease by the amount of the 12-month yield divided by 2 in the year after that (i.e., 2 years after the increase). Second, a law change after July, which is the beginning of the fiscal year for many States, would have more impact on receipts of the next calendar year than on those of the calendar year in which it occurs.

The effects of tax law changes that are excluded from receipts to derive the addenda items in the table cover the changes beginning with those introduced in 1989. The 12-month effects, recorded for calendar years as described above, are cumulated.

of services other than employee compensation increased 4.4 percent after a 7.8-percent decrease; the turnaround was attributable to a deceleration in government sales of services. (In the NIPA's, purchases are net of receipts for certain goods and services provided by government that are defined as government sales and are subtracted in the estimation of purchases.) Government sales of services increased 8.3 percent after a 10.4-percent increase; the deceleration is largely attributable to a slowdown in prices. Gross purchases of services increased 7.7 percent after a 7.2-percent increase.⁴

Purchases of structures increased 4.2 percent in 1994, following a 5.4-percent increase in 1993. The deceleration was most pronounced in non-building construction, which increased 0.7 percent in 1994 after an 8.6-percent increase in 1993; within this category, conservation and development, water supply, electric and transit facilities, and miscellaneous nonbuilding construction (such as parks, airports, gas utilities, and parking facilities) all decelerated. Highway construction, in contrast, accelerated to a 9.4-percent increase from a 7.1-percent increase. Construction of buildings increased 2.8 percent after a 2.6-percent increase; within this category,

there were decelerations in educational buildings and hospitals.

Measured in constant (1987) dollars, State and local government purchases increased 2.1 percent in 1994, following a 1.7-percent increase in 1993 (table 4). Among the components of State and local government purchases, compensation of employees increased 1.4 percent after a 1.0-percent increase, structures increased 1.0 percent after a 3.0-percent increase, and "other" purchases increased 4.9 percent after a 3.2-percent increase, reflecting accelerations in most categories.

Transfer payments to persons.—Transfer payments to persons increased 9.1 percent in 1994, about the same as in 1993. Benefits from social insurance funds increased 9.9 percent in 1994, following a 10.7-percent increase; State and local government employee retirement and workers' compensation both decelerated. Medical care (primarily medicaid)—which accounts for about three-fourths of public assistance—increased 10.7 percent, about the same as in 1993. These medical care increases are smaller than those in 1990–92, when medical care increased more than 20 percent annually. "Other" transfer payments, such as those for education and for employment and training, decelerated in 1994.⁵

4. For a description of the NIPA treatment of government sales, see Robert P. Parker, "A Preview of the Comprehensive Revision of the National Income and Product Accounts: Definitional and Classificational Changes," SURVEY 71 (September 1991): 24. Estimates of gross purchases and sales of services for 1990–93 are shown in table 3.9B of the NIPA tables in the July 1994 SURVEY.

5. The detailed estimates of government transfer payments to persons for 1990–93 are shown in table 3.12 of the NIPA tables in the July 1994 SURVEY.

Table 3.—State and Local Government Expenditures, NIPA Basis

Addendum:									
Government sales	101.6	114.0	127.2	139.7	150.8	12.2	11.6	9.8	7.9

Other expenditures.—Net interest paid declined more in 1994 than in 1993, largely reflecting an acceleration in interest received. Interest paid accelerated slightly, reflecting the rising level of interest rates during the year and an increase in new borrowing by State and local governments. Interest received also accelerated, reflecting a smaller decline in “other” interest received. Dividends received, primarily by State and local government pension funds, increased more than in 1993. A deceleration in the current surplus of enterprises was primarily attributable to lottery sales and to Federal subsidies received by certain State and local enterprises (such as housing and transit).

Outlook for fiscal position in 1995

A major factor in the outlook for the State and local fiscal position in 1995 will be the pace of economic activity. This discussion uses the administration’s forecast of 2.8-percent growth in real gross domestic product in 1995, which is less than the 3.9-percent growth recorded in 1994. The discussion of receipts also incorporates the effects of tax law changes that have already been enacted and that will become effective in 1995; it does not attempt to predict additional changes that might be made during the year.⁶

Total receipts are likely to increase about \$55-\$60 billion, to about \$995-\$1,000 billion, in 1995. Reflecting the slower growth in economic activity, personal tax and nontax receipts are likely to increase somewhat less than in 1994; tax law

changes, which reduced the growth in 1994, are expected to have a smaller impact in 1995. Also reflecting the slower economic growth, sales taxes are likely to decelerate; tax legislation already enacted is likely to add less to the increase in sales taxes in 1995 than in 1994. Property tax accruals are likely to increase about the same as in 1994.⁷ Further, assuming a slowdown in corporate profits tax accruals in 1995, general own-source receipts are likely to increase at a slower rate than in 1994.

Federal grants-in-aid are expected to increase about 10 percent in 1995, as indicated by the Federal budget transmitted to Congress in early February 1995. This large increase, if realized, would contrast with the decelerations in the previous 3 years. Unlike the previous decelerations, which were concentrated in medicaid, the large 1995 increase is expected to be spread across many of the grant programs, including medicaid, education, community development, health care, and mass transit. Contributions for social insurance are assumed to increase at about the same rate as in 1994.

Total expenditures are likely to increase about \$45-\$50 billion, to about \$965-\$970 billion, in 1995. Purchases are likely to decelerate slightly; evidence from proposed State and local government budgets suggests slight decelerations in expenditures for current operations. Purchases of structures are also likely to decelerate in 1995; new borrowing by State and local governments

6. Most of the proposals for State tax law changes in 1995 are for tax reductions, which, if enacted, would reduce the growth of tax receipts.

7. However, if the 1994 NIPA estimates had correctly reflected the effects of tax law changes in 1994, the 1994 increase would have been smaller, and the 1995 increase would represent an acceleration. See footnote 1.

Table 4.—State and Local Government Purchases

	Calendar years								
	1990	1991	1992	1993	1994	1991	1992	1993	1994
	Billions of 1987 dollars					Percent change			
State and local government purchases	548.5	557.2	563.3	573.1	585.2	1.6	1.1	1.7	2.1
Compensation of employees	353.3	357.2	360.1	363.6	368.8	1.1	.8	1.0	1.4
Structures	79.4	83.6	85.7	88.3	89.2	5.3	2.5	3.0	1.0

	Index numbers, 1987=100								
Addenda:									
Fixed-weighted price index, total purchases	113.2	117.0	120.3	123.4	126.6	3.4	2.8	2.6	2.6
Quantity indexes, total purchases: ¹									
Fixed 1987 weights	110.5	112.2	113.4	115.4	117.8	1.5	1.1	1.8	2.1
Chain-type annual weights	110.5	112.2	113.3	115.1	117.5	1.5	1.0	1.6	2.1
Benchmark-years weights	110.5	112.2	113.3	115.2	117.5	1.5	1.0	1.7	2.0

1. The indexes and percent changes for 1993 and 1994 are shown in tables 7.1 and 8.1, respectively, in the “Selected NIPA Tables” in this issue; the estimates for 1990-93 are in tables 7.1 and 8.1 in “Quantity and Price Indexes, 1988-94” in the August 1994 Survey. For a discussion of the indexes, see “Alternative Measures of Change in Real Output and Prices, Quarterly

Estimates for 1959-92” in the March 1993 Survey.

NOTE.—The constant-dollar estimates for 1993 and 1994 are in table 3.8B of the “Selected NIPA Tables” in this issue; the estimates for 1990-93 are in table 3.8B in “National Income and Product Accounts Tables” in the July 1994 Survey.

increased in 1994, but expected slowdowns in Federal grants for capital purposes, particularly for highway construction, make a smaller increase in construction likely in 1995.

Transfer payments are likely to decelerate in 1995. The largest component of transfer payments, payments for medical care, is likely to register a smaller increase than in 1994. The other categories of transfer payments are assumed to increase at about the same rate as in 1994.

Net interest paid is likely to decrease somewhat faster than in 1994. Interest paid is likely to

accelerate, reflecting the rise in interest rates in 1994 and increased new borrowing by State and local governments. Interest received is also likely to accelerate in 1995, reflecting the pattern of interest rates. The other categories of expenditures are assumed to increase at about the same rate as in 1994.

The changes in receipts and expenditures just discussed would result in a NIPA surplus of \$30-\$35 billion in 1995. The social insurance funds surplus is likely to remain about the same as in 1994, and the "other funds" deficit is likely to decrease, to the \$30-\$35 billion range. 

A Guide to BEA Statistics on U.S. Multinational Companies

By Raymond J. Mataloni, Jr.

STATISTICS ON U.S. multinational companies (MNC's) produced by the Bureau of Economic Analysis (BEA) provide a comprehensive and integrated data set for empirical analysis of MNC's and of the effects of MNC's on the economies of home and host countries. When this data set began in 1929, its scope was limited to one data item—the value of foreign commercial assets controlled by U.S. companies. Since then, the scope of these statistics has greatly expanded in step with the growth in MNC's and the increasing integration of the global economy.¹ BEA's current data on U.S. MNC's are among the most diverse in the world, ranging from traditional balance-of-payments items that most countries produce to “financial and operating” items that few other countries produce but that allow a much broader understanding of U.S. MNC's (see box “Note on International Comparability”). This article provides an introductory guide to these statistics.

The statistics on U.S. MNC's support numerous activities by the government and the private sector, including the following:

- Compilation of the U.S. economic accounts by BEA;
- Conduct of bilateral and multilateral negotiations to reduce barriers to investment and trade;
- Studies by academic and government researchers to assess the impact of U.S. investment abroad on the U.S. and foreign economies; and
- Strategic planning by U.S. businesses.

1. From 1929 to 1950, the Commerce Department conducted five surveys of U.S. MNC's to determine the book value of American business investments in foreign countries. A census covering 1957 represented a significant expansion in the scope and purpose of these surveys. Its goal was to evaluate “...the full effects of U.S. business investments both on our domestic economy and on the economies of foreign countries...” (U.S. Department of Commerce, Office of Business Economics, *U.S. Business Investments in Foreign Countries: A Supplement to the SURVEY OF CURRENT BUSINESS* (Washington, DC, U.S. Government Printing Office, 1962): iii). To fulfill this goal, the data items collected were greatly expanded to include, for instance, condensed balance sheets and income statements, employment, and U.S. merchandise trade of foreign affiliates. In both form and function, the 1957 survey can be regarded as the prototype for all of BEA's later U.S.-MNC surveys.

This guide is intended to familiarize the reader with the statistics available on U.S. MNC's (sections I and II), some of the major questions they can and cannot answer (section III), and some details on their presentation (section IV). Many topics are covered in less than full detail; a more detailed and technical methodology can be found in *U.S. Direct Investment Abroad: 1989 Benchmark Survey, Final Results*.²

In this guide, the following terms are used extensively. *Direct investment* is investment in which a resident of one country obtains a lasting interest in, and a degree of influence over the management of, a business enterprise in another country. In the United States, the criterion used to distinguish *U.S. direct investment abroad* (USDIA) from other types of investment abroad is the ownership of at least 10 percent of a foreign business enterprise; thus, USDIA is the ownership or control, directly or indirectly, by one U.S. resident of 10 percent or more of the voting securities of an incorporated foreign business enterprise or the equivalent interest in an unincorporated foreign business enterprise.³ A *U.S. parent company* (also referred to as “U.S. parent” or “parent”) is a U.S. business that undertakes USDIA; a *foreign affiliate* (also referred to as “affiliate”) is a foreign business in which the U.S. parent has a direct investment interest; and a *U.S. MNC* is the combined operations of the parent and its affiliates.

BEA produces two broad sets of data on U.S. MNC's: (1) Balance of payments and direct investment position data and (2) financial and operating data. The *balance of payments and direct investment position data* focus solely on the value of transactions between U.S. parents and

2. *U.S. Direct Investment Abroad: 1989 Benchmark Survey, Final Results*, U.S. Department of Commerce, Bureau of Economic Analysis (Washington, DC: U.S. Government Printing Office, October 1992).

3. This definition is consistent with guidelines established by the International Monetary Fund (IMF) and the Organisation for Economic Co-operation and Development (OECD). See IMF, *Balance of Payments Manual*, 5th ed. (Washington, DC: IMF, 1993): 86–87 and OECD, *Detailed Benchmark Definition of Foreign Direct Investment*, 2nd ed. (Paris: OECD, 1992).

their foreign affiliates and the cumulative value of parents' investments in their affiliates. The *financial and operating data*, in contrast, provide a wide variety of indicators of the overall domestic and foreign operations of U.S. MNC's, irrespective of the degree of intra-MNC funding. For example, total foreign-affiliate assets (which can be funded by internal affiliate funds, by funds received from foreigners and unaffiliated U.S. persons, as well as by funds received from U.S. parents) were \$1.7 trillion in 1992, and the direct investment po-

sition (which measures the portion of affiliate assets that are funded by U.S. parents) was \$499 billion.

Both types of data are collected in mandatory surveys conducted regularly by BEA. Benchmark surveys (or censuses), which are currently conducted every 5 years, are the most comprehensive surveys in several respects: (1) They collect both types of data, (2) they cover virtually the entire population—or universe—of U.S. MNC's in terms

Note on International Comparability

International guidelines for the compilation of balance of payments and direct investment position data have been set forth by several international organizations. Recently, these guidelines have undergone major revisions, as part of an internationally coordinated effort to modernize and extend international standards for economic accounting and to improve harmonization among the recommendations of different organizations. The BEA data on direct investment discussed in this article conform closely with these guidelines. The data of other countries generally conform less closely, and thus often are not comparable with BEA's data, but efforts to improve conformity are under way in many countries. As a result, the international comparability of direct investment statistics, while incomplete, is improving and should continue to improve as these efforts continue.

The most detailed recommendations specifically pertaining to direct investment appear in the International Monetary Fund's (IMF) *Balance of Payments Manual* and the Organisation for Economic Co-operation and Development's (OECD) *Detailed Benchmark Definition of Foreign Direct Investment*; recommendations consistent with these are employed in the external sector of the international *System of National Accounts 1993 (SNA)*.¹ As now constructed, this body of recommendations provides comprehensive and detailed international standards for recording both positions (stocks) and flows related to direct investment.² The recommendations cover a wide range of issues, including concepts and definitions, time of recording, geographical allocation, and valuation.

Direct investment statistics are currently available for roughly 100 countries. However, many of these countries' statistics deviate significantly from international guidelines.³ One of the most common deviations is the lack of information on reinvested earnings. Although a major source of financing for direct investment—

accounting for almost 60 percent of capital outflows for U.S. direct investment abroad in 1994—reinvested earnings are not covered in the statistics of the many countries that must use central bank statistics, rather than survey information obtained from direct investors or their affiliates, as their primary data source. (Unlike equity capital flows or distributions of dividends, reinvested earnings do not give rise to foreign exchange transactions that would flow through the banking system.) Japan and France, for example, are among the many countries lacking information on reinvested earnings. As efforts to improve conformity with international guidelines proceed, perhaps the most important task, as well as one of the most difficult, will be achieving more widespread coverage of reinvested earnings.

Another common deviation is the use of a percentage-ownership threshold different from the recommended 10-percent level for identifying an investment as "direct." For example, the United Kingdom and Germany use a threshold of 20 percent. In addition, some countries do not use ownership percentages as the sole criteria for defining direct investment; instead, they attempt to evaluate individual investments subjectively in determining whether the degree of influence or control is consonant with the general concept of direct investment.

A few other variances from international guidelines may be observed in the statistics of some countries. For instance, some countries exclude certain types of intercompany debt from direct investment, while others may exclude investment in certain industries. Still other countries base their statistics on government approvals of investments rather than on actual flows of funds.

Compared with direct investment balance of payments and position data, financial and operating data for MNC's are much less widely available. In fact, the United States is one of only a very few countries that now produce such data. However, the need for such data is becoming more widely recognized, and several countries are trying to find ways to develop them. Major factors that have heightened interest in these data include the increasing economic interdependence of world economies, the adoption by many companies of global business strategies and internationally integrated production processes, and the increasingly common practice of broadening bilateral and multilateral commercial agreements to cover not only trade issues, as in the past, but also investment issues. Among the financial and operating data items that appear to be of primary interest are intra-firm trade flows and local sales by foreign affiliates (sometimes termed "establishment trade"). Because of the pioneering role of the United States in developing financial and operating data for MNC's, BEA is frequently consulted by national statistical offices and international organizations in connection with attempts to develop such data for other countries.

1. See *System of National Accounts 1993* (Brussels/Luxembourg, New York, Paris, and Washington, DC: Commission of the European Communities, IMF, OECD, United Nations, and World Bank, 1993).

2. The new (5th) edition of the IMF *Manual* is the first to deal with the measurement of stocks of investment; previous editions dealt only with flow items included in balance of payments accounts. This change not only was an improvement in its own right, but it also improved harmonization between the *Manual* and the SNA. (A major change introduced in the latest revision of the SNA was improved integration in the treatment of stocks and flows.) Other major changes introduced in the revised *Manual* include provision of more detailed guidance for recording trade in services and transactions involving new and emerging financial instruments.

3. The United Nations recently published a compendium of direct investment statistics worldwide; see United Nations Conference on Trade and Development, *World Investment Directory*, vol. I-VI (New York: United Nations, 1994). For more detailed information on direct investment definitions used by OECD members, see OECD, "Technical Notes," *International Direct Investment Statistics Yearbook 1994* (Paris: OECD, 1994): 266-312.

of dollar value, and (3) they obtain more data items than are collected in the other surveys.

In addition to the benchmark surveys, BEA conducts quarterly and annual sample surveys. The balance of payments and direct investment position estimates are based on data collected in the quarterly surveys, and the financial and operating estimates are based on data collected in the annual surveys. In the sample surveys, reports are not required for small affiliates, in order to reduce the reporting burden on the U.S. companies that must file. Instead, BEA estimates the data for these affiliates by extrapolating forward their data from the most recent benchmark survey on the basis of the movement of the sample data. Thus, coverage of the U.S.-MNC universe is complete in nonbenchmark, as well as benchmark, periods.

Balance of Payments and Direct Investment Position Data

Balance of payments and direct investment position data track transactions between U.S. parents and their foreign affiliates and the cumulative value of parents' investment in their affiliates, respectively. These data are essential inputs to the U.S. economic accounts; they contribute to the balance of payments accounts, the U.S. international investment position (IIP), the national income and product accounts (NIPA's), and the input-output (I-O) accounts.

The balance of payments accounts measure economic transactions between U.S. and foreign residents and consist of two major accounts: The current account, which covers transactions in goods, services, income, and unilateral transfers, and the capital account, which covers changes in financial claims and liabilities. Direct investment *current-account flows* measure receipts and payments between parents and affiliates for the use of capital or the provision of services, such as royalties paid by affiliates to their U.S. parents for the use of a production process. Direct investment *capital-account flows* measure movements of capital between parents and affiliates, such as equity investment by parents in their affiliates or loans between parents and affiliates.

The IIP measures the accumulated stocks of U.S. assets abroad and foreign assets in the United States. One important component of the IIP is the *U.S. direct investment position abroad*, which measures the value of the net accumulated stock of capital that U.S. parents have provided to their foreign affiliates.

The NIPA's measure the Nation's output of goods and services. Direct investment current-account flows are included in two key summary NIPA measures—gross domestic product (GDP) and gross national product (GNP). All U.S.-parent receipts under current-account flows enter GNP because they reflect the value of output of labor and property supplied by U.S. residents (regardless of the location of the labor or property—in the United States in a U.S. parent company or abroad in a foreign affiliate).⁴ However, only those U.S.-parent receipts under current-account flows that reflect the output of labor and property located in the United States (that is, U.S.-parent exports of goods and services) enter GDP.⁵

The I-O accounts depict the economic interactions between industries in the U.S. economy. They show, for each industry, the amount of its output that goes to each other industry as raw materials or semifinished products, and the amount that is sold to the final markets of the economy, placed in inventory, or exported; U.S.-parent exports of goods and services are included in the exports. From a different perspective, the I-O accounts show each industry's contribution to the production process—in the form of value added as well as its consumption of the products of other domestic industries and imported products; U.S.-parent imports of goods and services are included in the imports.⁶

Current-account flows

As mentioned earlier, direct investment current-account flows measure receipts and payments

4. GNP measures the output of labor and property (located either here or abroad) supplied by U.S. residents.

5. GDP measures the output of labor and property located in the United States.

6. For a more detailed explanation of the structure and concepts of the I-O accounts, see "Benchmark Input-Output Accounts for the U.S. Economy, 1987," SURVEY OF CURRENT BUSINESS 74 (April 1994): 73-115.

Table 1.—Current-Account Flows on U.S. Direct Investment Abroad, 1993

[Millions of dollars]

Income	57,515
Earnings	56,117
Distributed earnings	28,552
Reinvested earnings	29,565
Interest	1,398
U.S. parents' receipts	3,746
U.S. parents' payments	2,349
Royalties and license fees	14,926
U.S. parents' receipts	15,158
U.S. parents' payments	232
Other services	4,908
U.S. parents' receipts	10,497
U.S. parents' payments	5,589

NOTE.—Income includes a current-cost adjustment. All estimates are before deduction of withholding taxes.

that accrue between U.S. parents and their foreign affiliates in return for providing capital to, or performing services for, one another.⁷ These receipts and payments fall into three categories: Direct investment income, royalties and license fees, and charges for other services (table 1). *Direct investment income* is the U.S. parents' return on capital that they have provided to their foreign affiliates. It comprises (1) U.S. parents' claims on the earnings (or profits) of foreign affiliates and (2) U.S. parents' interest receipts on loans to their foreign affiliates, less the parents' interest payments on loans from their foreign affiliates.⁸ The earnings component of direct investment income is computed after foreign income taxes and excluding capital gains and losses. No distinction is made between earnings that are distributed to the parent and those that are reinvested; both are included in direct investment income.

EXAMPLE: A U.S. parent has an 80-percent equity interest in a Korean affiliate, and the affiliate has after-tax earnings of \$100 million. The affiliate distributes one-half of its earnings to its owners and reinvests the remainder. In this case, assuming there are no interest receipts and payments between the parent and the affiliate, the parent's direct investment income from that affiliate would be \$80 million, or 80 percent of the \$100 million in after-tax earnings.

The remaining direct investment current-account flows—royalties and license fees and charges for other private services—represent receipts and payments that accrue between U.S. parents and foreign affiliates for providing services to one another. *Royalties and license fees* represent charges for intangible property or rights, such as patents, trademarks, copyrights, franchises, manufacturing rights, and other intangible assets or proprietary rights. For example, a U.S. parent in the computer industry may collect royalties from its foreign affiliate when the affiliate sells computer networks that use operating systems developed by the parent. *Charges for other services* cover fees for management, professional, or technical services; rentals for the use of tangible property; and film and television tape rentals. For example, a U.S. automobile company may collect fees from its foreign affiliate when it provides technical assistance in introducing new

manufacturing systems and techniques or when it performs research and development on behalf of its affiliate.

The data on direct investment current-account flows that are collected in BEA surveys are adjusted before they are incorporated into the balance of payments accounts and the NIPA's. Direct investment income is converted from a financial accounting basis to an economic accounting basis, so that its earnings component will reflect the contribution of direct investment capital to current-period production.⁹ In addition, the effect of withholding taxes is removed from all reported current-account flows.¹⁰

Capital-account flows

Direct investment capital flows measure funds that U.S. parent companies provide to their foreign affiliates (outflows), *net of* funds that affiliates provide to their parents (inflows) during a given period.¹¹ These funds can be supplied in three forms: Equity capital, intercompany debt, and reinvested earnings (chart 1).

Equity capital outflows occur when a U.S. parent increases its equity investment in one of its existing foreign affiliates or makes a new equity investment in a foreign business enterprise, either by acquiring an existing foreign business or by establishing a new one (chart 1, first arrow). Equity capital inflows occur when a U.S. parent reduces its equity interest in an existing affiliate (chart 1, second arrow).

EXAMPLE: If a U.S. company acquires a British company by purchasing all of that company's

9. The conversion is accomplished through four adjustments. First, as noted earlier, capital gains and losses are removed from reported earnings, because they represent changes in the dollar value of existing assets, not charges against current production. Second, a capital consumption adjustment is made to convert depreciation charges from a historical-cost basis to a current- (or replacement-) cost basis. Third, charges for the depletion of natural resources are added back to earnings because these charges are not treated as production costs in the NIPA's. Fourth, expenses for mineral exploration and development are reallocated across time periods to ensure that they are written off over their economic lives rather than all at once. Except for the removal of capital gains and losses, these adjustments are made to direct investment income only at the global level; the other adjustments cannot be made below the global level because the required data are not available. For additional information, see "U.S. International Transactions: First Quarter 1992 and Revised Estimates for 1976-91," SURVEY 72 (June 1992): 72-75.

10. Withholding taxes are taxes withheld by governments on income or other funds that are distributed or remitted, such as payments for services.

The direct investment current-account flow totals that enter the balance of payments accounts and NIPA's are gross of withholding taxes, in accordance with international guidelines. However, detailed estimates of these flows by country and by industry are net of withholding taxes because country-specific information on some types of withholding taxes is not available.

11. A rare exception to this rule occurs when a foreign affiliate has an equity interest in its U.S. parent. In this case, changes in the affiliate's equity interest in its U.S. parent are not recorded as capital inflows on USDIA, but rather as capital inflows on foreign direct investment in the United States if the interest is at least 10 percent or on foreign portfolio investment in the United States if the interest is less than 10 percent.

7. Receipts and payments between U.S. parents and foreign affiliates for providing goods to one another (U.S. merchandise exports and imports) also are included in the current account, but they are not separately identified. (They are, however, separately identified in the direct investment financial and operating data; see the section "Financial and Operating Data.")

8. In all the examples in this article, the voting interest (the basis for distinguishing direct investment) is assumed to be the same as the financial interest (the basis for apportioning claims on earnings) that the U.S. parent has in its foreign affiliate. This is usually the case, but the two sometimes differ.

stock for \$500 million, a \$500 million equity capital outflow would be recorded. If, after a time, the U.S. company sells this stock to a foreign resident for \$500 million, a \$500 million equity capital inflow would be recorded.

Intercompany debt flows are of two types: U.S.-parent receivables and U.S.-parent payables. U.S.-parent *receivables* represent loans that a U.S. parent extends to its foreign affiliate.¹² An outflow on U.S.-parent receivables occurs when the parent extends a new loan to its affiliate (chart 1, third arrow); an inflow occurs when an affiliate repays part or all of a loan from its U.S. parent (chart 1, fourth arrow).

EXAMPLE: If a U.S. parent makes a \$50 million loan to its Canadian affiliate in the first quarter of the year and the affiliate repays one-half of the principal in the second quarter, a \$50 million outflow in the first quarter and a \$25 million inflow in the second quarter would be recorded under U.S.-parent receivables.

12. The word "loan" is used loosely to signify all classes of financial obligations, which include trade accounts, notes payable, and dividends payable as well as loan obligations.

U.S.-parent *payables* represent loans that a foreign affiliate extends to its U.S. parent. An outflow on U.S.-parent payables occurs when the parent repays part or all of a loan from its foreign affiliate (chart 1, fifth arrow); an inflow occurs when an affiliate extends a new loan to its U.S. parent (chart 1, sixth arrow).

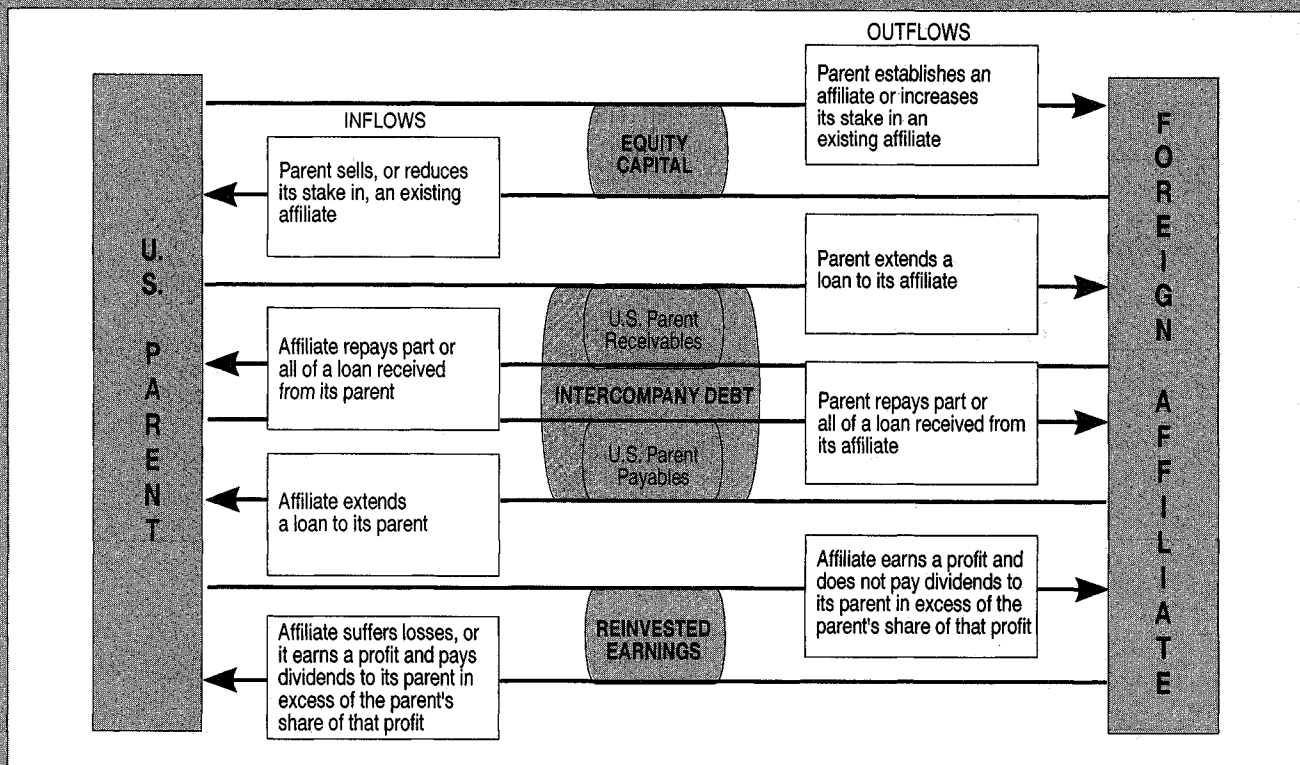

Reinvested earnings are the U.S. parent's claim on the undistributed after-tax earnings of its foreign affiliate. They are computed as the difference between a parent's claim on its affiliate's current earnings and the dividends that the affiliate pays to its parent in a given period.¹³ Reinvested earnings are positive when a parent has a claim on positive current earnings of its affiliate in excess of the dividends that it receives from its affiliate (chart 1, seventh arrow).

EXAMPLE: A wholly owned French affiliate earns \$100 million after taxes and pays a \$20 million dividend to its U.S. parent; the \$80 million dif-

13. The word "dividend" is used loosely to signify all distributions from cumulative retained earnings, including earnings distributions from unincorporated affiliates as well as dividends from incorporated affiliates.

CHART 1

Components of Capital Inflows and Outflows on U.S. Direct Investment Abroad

ference between earnings and dividends would be recorded as reinvested earnings.

Reinvested earnings are negative when an affiliate's current earnings are negative or the parent receives dividends in excess of its claim on current earnings (chart 1, eighth arrow).¹⁴

Direct investment position

In contrast to the current- and capital-account items discussed above, which measure flows during a given period of time, the U.S. *direct investment position* abroad (also referred to as the "position") is a stock item. As such, it measures the total outstanding level of USDIA at a given point in time. The position is measured as the yearend value of U.S. parents' equity (including retained earnings) in, and net outstanding loans to, their foreign affiliates.

Three alternative valuations of the position are available: Historical cost, current cost, and market value. The historical-cost position measures USDIA at its book value, which in most cases is the initial acquisition price. Book value is the standard valuation method for financial accounting and thus is used by MNC's when reporting direct investment data to BEA. Its analytical usefulness is limited, however, because it reflects prices of various years and thus cannot be interpreted as either a constant- or a current-dollar value.

To meet the need for measures that are valued at prices of the current period, BEA has devel-

14. Dividends may exceed current earnings because they are paid out of cumulative retained earnings, and thus they may reflect prior-period, as well as current-period, earnings.

oped current-cost and market-value estimates of the position.¹⁵ The direct investment position at *current cost* revalues that portion of the position that represents U.S. parents' claims on the tangible assets of affiliates (such as plant, equipment, and inventories), using price indices appropriate to each of a few broad asset classes. The direct investment position at *market value* revalues both the tangible and intangible assets on which U.S. parents have claims, using aggregate stock price indices for foreign countries.¹⁶ Market-value estimates tend to be more volatile than those based on historical or current cost (chart 2) because of the high volatility of stock market prices.

The current-cost and market-value estimates are produced only at the global level and not by country or industry.

Year-to-year change in the position.—The year-to-year change in the position is the sum of direct investment capital flows and *valuation adjustments* (table 2). Valuation adjustments are broadly defined to include all changes in the position other than capital outflows; they result from price changes, exchange-rate changes, and other factors. Valuation adjustments to the historical-cost position consist of translation adjustments, other capital gains and losses, and other adjustments. Valuation adjustments to the

15. These two measures not only enhance the analysis of direct investment but also put direct investment on valuation bases consistent with those used for other types of assets included in the IIP. See "Valuation of the U.S. Net International Investment Position," SURVEY 71 (May 1991): 40-49.

16. These indices are from Morgan Stanley Capital International. BEA's market-value estimates revalue only the owners' equity portion of the position; the intercompany debt portion is assumed to be approximately valued at current-period prices.

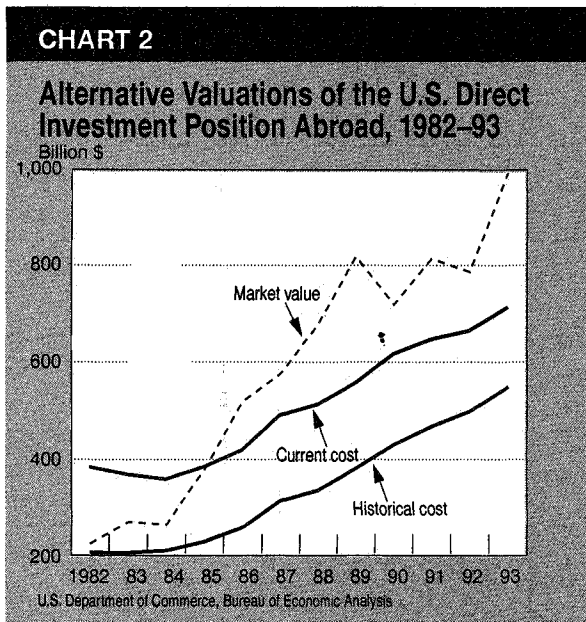

Table 2.—Change in the U.S. Direct Investment Position Abroad by Account

(Millions of dollars)

Line		Historical cost	Current cost	Market value
1	Position, yearend 1992	498,991	668,181	785,903
2	Capital outflows, 1993	58,094	57,870	57,870

n.a. Not applicable.

current-cost and market-value positions consist of translation adjustments, price changes, and other adjustments.

Translation adjustments reflect the effects of movements in exchange rates on the dollar value of affiliate assets and liabilities (on which the parent has a claim) between the periods for which the position is calculated. These adjustments are made to the position on all three valuation bases because all three require translation of foreign-currency-denominated affiliate assets (and liabilities) into dollars.

EXAMPLE: A U.S. parent company has a wholly owned affiliate in the United Kingdom and the affiliate's assets are valued at £100 million, both at yearend t and yearend $t-1$. If, at yearend $t-1$, the exchange rate is £1=\$2, the dollar value of the parent's position in the affiliate would be \$200 million. If there are no direct investment capital flows in year t , but if at yearend t , the pound has strengthened to £1=\$4, the dollar value of the parent's position would double during year t from \$200 million to \$400 million. In this case, the change in the parent's position would be fully accounted for by a \$200 million translation adjustment made to reflect the rise in the investment's dollar value that resulted from the appreciation of the pound.

In the historical-cost position, *other capital gains and losses* represent the revaluation of the assets (on which the parent has a claim) of ongoing affiliates for reasons other than exchange-rate changes. Other capital gains and losses may occur for a variety of reasons, but they most commonly result from the partial sale of an affiliate's assets for an amount different from the assets' historical cost.

EXAMPLE: At yearend $t-1$, a U.S. parent's direct investment position in its French affiliate is \$100 million—\$80 million in an automobile assembly plant and \$20 million in an engine plant. If the affiliate sells the engine plant in year t for \$30 million, realizing a gain of \$10 million, and then reinvests the sale proceeds in its assembly plant, a \$10 million valuation adjustment (to reflect the gain) would be recorded to raise the direct investment position to \$110 million.

In the current-cost and market-value positions, *price changes* represent the revaluation of the assets (on which the parent has a claim) of ongoing affiliates from one year's prices to the next.

Other valuation adjustments reflect any changes in the value of affiliates' assets (on which the parent has a claim) that are not reflected in capital flows or the preceding adjustments. For historical-cost estimates, these adjustments most commonly reflect capital gains and losses booked by U.S. parents when they sell their full interest in a foreign affiliate. For the current-cost

and market-value estimates, they are also related to capital gains and losses on the sale of affiliate assets; however, rather than reflecting the full amount of the capital gain or loss, they only reflect any difference between the realized current value of the investment and what BEA had estimated it to be.

Financial and Operating Data

The financial and operating data provide a wide variety of indicators of the overall operations of U.S. MNC's and of the separate operations of U.S. parents and foreign affiliates. These data are collected to address questions about the economic impact of MNC's on home and host countries that cannot be addressed by the balance of payments data alone. Some of these questions—such as “How many people do U.S. MNC's employ in the United States or abroad?”—can be answered with a single data item. Others require several data items, perhaps in combination with data from outside sources; for example, “Are U.S. MNC's producing less of what they sell and becoming more reliant on outside suppliers?” To answer such questions, data are needed on the activities of U.S. MNC's as a whole, regardless of the U.S. parent's ownership share or the source of financing. Therefore, the foreign-affiliate financial and operating data are not adjusted for the percentage of U.S.-parent ownership.

Financial and operating data are separately tabulated for two foreign-affiliate groups: All foreign affiliates and *majority-owned foreign affiliates* (MOFA's). MOFA's are foreign affiliates in which the combined ownership of all U.S. parents exceeds 50 percent. Some types of analysis require MOFA data. For example, MOFA data should be used when examining the distribution, between the United States and abroad, of the worldwide resources that U.S. parents control.¹⁷ In addition, MOFA data must be used to analyze some aspects of affiliate operations because the necessary data items are not collected for other affiliates.

Financial and operating data include the following: (1) Balance sheets and income statements, (2) sales by type (such as goods or services) and destination (such as local or nonlocal), (3) employment and employee compensation, (4) U.S. merchandise trade, (5) technology, and (6) external financing (table 3). Each of these categories includes many more individual data items; for example, detailed components of the

¹⁷ Although effective control can sometimes be obtained with a minority interest, unambiguous control requires a majority interest.

balance sheet (inventories, net property, plant, and equipment, etc.) are available annually for MOFA's. The amount of additional detail available within many of the categories is much greater in benchmark survey years than in other years.

One of the most useful measures of U.S.-MNC operations, *gross product*, is derived from financial and operating data. U.S.-MNC gross product measures the value of goods and services produced by MNC's, either in the United States (U.S.-parent gross product) or abroad (MOFA gross product) (table 3).¹⁸ For a firm, gross prod-

uct (or value added) differs from sales because sales include the inputs that the company purchases from outsiders as well as what it produces itself.

MNC gross product estimates have a variety of uses. For instance, they can be used to measure the contribution of U.S.-parent and MOFA production (U.S.-parent and MOFA gross product) to total home- or host-country production (U.S.- or foreign-country GDP). In addition, the ratio of gross product to output (sales plus inventory changes) for parents and MOFA's measures the extent to which parents and MOFA's produce

18. Estimates for U.S. parents are available only in benchmark survey years, because the data items necessary to derive them are not collected in other years; estimates for MOFA's are available annually.

n.a. Not available.

1. Some parents and MOFA's, primarily those in finance and insurance, include investment income in sales or gross operating revenues. Most parents and MOFA's not in finance or insurance consider investment income an incidental revenue source and include it in their income statements in a separate "other income" category, rather than in sales. BEA collects separate data on investment income to ensure that—where it is included in total sales—it is not misclassified as sales of services.

2. Sales among parents and affiliates that belong to the same MNC. Because U.S. parents represent the fully consolidated domestic operations of a U.S. MNC, they have no sales to affiliated U.S. persons.

3. External funds (debt and equity) exclude MOFA retained earnings; thus, they represent financing that is not internally generated.

MOFA Majority-owned foreign affiliate

what they sell rather than relying on outside suppliers.¹⁹

Frequently Asked Questions About U.S. MNC's

This section discusses some of the most frequently asked questions about U.S. MNC's—such as “Where are U.S. MNC's investing?” “Are U.S. companies shifting their operations abroad?” and “What portion of U.S. cross-border trade is between U.S. parents and their foreign affiliates?” This section identifies the various BEA data that can be used to address these and other questions, as well as the limitations of the data.

Where are U.S. MNC's investing?—The balance of payments and direct investment position data and the financial and operating data can both be used to measure the extent of U.S.-MNC investment in a particular country. The choice of data set depends on whether one wants to know the amount of funds that a country received from U.S. direct investors in a given period or cumulatively or whether one wants to know the size of U.S.-owned business operations in a country. If one wants to know the amount of funds that a country received during a given period from U.S. direct investors, capital outflows (a balance of payments data item) during that period would be the appropriate measure. If one wants to know the cumulative amount of funds that a country received from U.S. direct investors (together with any subsequent valuation adjustments), the direct investment position at yearend would be the appropriate measure. In 1992, for instance, the historical-cost U.S. direct investment position abroad was largest in the United Kingdom (\$83 billion), Canada (\$69 billion), and Germany (\$34 billion). If, however, one wants to know the size of U.S.-owned business operations in a country, a financial and operating data item (such as employment, total assets, or property, plant, and equipment) or gross product of affiliates would be a good indicator. In 1992, for instance, affiliate employment was largest in the United Kingdom (917,000), Canada (873,000), and Mexico (661,000).

Direct investment capital flows passing through third countries—such as offshore financial centers—en route to their ultimate destination can cause the balance of payments and direct

investment position data to be grossly out of proportion to the financial and operating data for those countries. In Bermuda, for example, the direct investment position was \$26 billion in 1992, but affiliate employment was only 2,800; thus, U.S. parents had invested \$9 million per affiliate employee in that country, compared with a worldwide average of \$74,000. This anomaly occurs because direct investment capital flows (and thus the direct investment position) are attributed to the country of immediate destination, whereas the financial and operating data are always attributed to the country in which an affiliate's physical assets are located or in which its primary activity is carried out.

EXAMPLE: A U.S. manufacturer sends \$100 million to its holding-company affiliate in Panama, which, in turn, sends the funds to Germany to build a factory. The capital flow and position are recorded against Panama, because that is the country with which the U.S. company had a direct transaction. By contrast, the property, plant, and equipment (a financial and operating data item) associated with the new factory is recorded in Germany because that is where the U.S.-controlled operations are located and the funds are ultimately spent.

Except for the small group of countries that tend to serve as offshore financial centers, however, a host country's level of affiliate activity can usually be determined using either data set—the direct investment position or the financial and operating data.

What are the primary factors determining the location of manufacturing affiliates?—In choosing locations for their manufacturing affiliates, U.S. parents seek to optimize the conditions that will affect their return on investment. Two desirable conditions are access to large and prosperous markets and access to low-wage labor. Data on manufacturing affiliate employment and sales suggest that access to markets is the more important condition. In 1992, 65 percent of employment by manufacturing MOFA's was in relatively high-wage countries (table 4). In that same year (as in previous years), Europe was the most popular location for newly acquired or established affiliates. The popular notion that manufacturing affiliates are established abroad primarily in low-wage countries to produce for U.S. markets appears unfounded; in 1992, only 12 percent of sales by manufacturing MOFA's were to U.S. customers.²⁰

19. For more information on the derivation and uses of U.S.-MNC gross product estimates, see “Gross Product of U.S. Multinational Companies, 1977–91,” SURVEY 74 (February 1994): 42–63.

20. For a discussion of the factors determining the location of manufacturing MOFA's and for an analysis of shifts in their location among high-wage and low-wage countries during 1982–91, see “U.S. Multinational Companies: Operations in 1991,” SURVEY 73 (July 1993): 47–49.

Are U.S. MNC's shifting production (and employment) abroad?—Gross product and employment data for U.S. parents and MOFA's can be summed to measure the global production and employment of MNC's over which U.S. parents exert unambiguous control. Changes in the U.S.-parent share of these measures indicate changes in the domestic (U.S.) share of worldwide U.S.-MNC production. On the whole, only slight changes have occurred over the last decade. Between 1982 and 1989 (the latest year for which data are available), the U.S.-parent share of worldwide U.S.-MNC gross product edged down 1 percentage point to 77 percent, as a decrease in manufacturing was largely offset by an increase in other industries (table 5).²¹ Between 1982 and 1992, the U.S.-parent share of worldwide U.S.-MNC employment declined 2 percentage points to 77 percent (table 6).

Some analysts have wondered whether it would be possible for U.S. MNC's to shift some foreign-affiliate production *back to* the United States; that is, to what extent can exports by U.S. parents substitute for affiliate production? Such questions cannot be answered using BEA (or other) data alone; the answers depend on what would happen in the absence of foreign-affiliate production, which is unknown. To address these questions, therefore, analysts must use BEA data in combination with *assumptions* about the relationship between parent and affiliate production. However, this relationship may be quite variable from one MNC to another: For some firms, domestic and foreign production may be equally viable al-

21. For further discussion of these changes, see "Gross Product of U.S. Multinational Companies, 1977-91," SURVEY 74 (February 1994): 42-63.

ternatives, while for others, it may be possible to compete effectively abroad or to sustain domestic operations only if at least some output is produced overseas. Results of analyses of the impact of USDIA have thus varied widely, both in magnitude and direction, depending upon the assumptions chosen and methods of analysis used.²²

What percentage of U.S. merchandise trade is accounted for by U.S. MNC's?—Because U.S. parents have a significant presence in the U.S. economy and because they account for many of the largest and most globally oriented U.S. firms, they naturally account for a large share of U.S. merchandise trade. U.S.-MNC-associated merchandise trade encompasses (1) intra-MNC trade, or trade between U.S. parents and their foreign affiliates, and (2) MNC trade with others, or trade between U.S. parents and unaffiliated foreigners and trade between foreign affiliates and unaffiliated U.S. persons. In 1992, U.S.-MNC-associated trade accounted for 58 percent of U.S. merchandise exports and for 41 percent

22. See, for example, G.C. Hufbauer and F.M. Adler, *Overseas Manufacturing Investment and the Balance of Payments*, U.S. Treasury Department Tax Policy Research Study No. 1 (Washington, DC: U.S. Government Printing Office, 1968); United States Senate Committee on Finance, *Implications of Multinational Firms for World Trade and Investment and for U.S. Trade and Labor* (Washington, DC: U.S. Government Printing Office, 1973); and Robert E. Lipsey, "Outward Direct Investment and the U.S. Economy," National Bureau of Economic Research Working Paper No. 4691 (March 1994).

Table 7.—U.S. Merchandise Trade Associated with Nonbank U.S. MNC's, 1992

[Millions of dollars]

	1992
MNC-associated U.S. exports, total	261,051
Intra-MNC trade	104,679
Shipped by U.S. parents to MOFA's	99,140
Shipped by U.S. parents to other foreign affiliates	5,539
MNC trade with others	156,372
Shipped by U.S. parents to other foreigners	140,796
Shipped to foreign affiliates by other U.S. persons	15,576
To MOFA's	14,999
To other foreign affiliates	577
MNC-associated U.S. imports, total	216,479
Intra-MNC trade	92,614
Shipped by MOFA's to U.S. parents	85,139
Shipped by other foreign affiliates to U.S. parents	7,475
MNC trade with others	123,865
Shipped by other foreigners to U.S. parents	107,244
Shipped by foreign affiliates to other U.S. persons	16,621
By MOFA's	13,711
By other foreign affiliates	2,910
Addenda:	
All U.S. merchandise exports	448,166
MNC-associated U.S. exports as a percentage of total	58
Intra-MNC exports as a percentage of total	23
All U.S. merchandise imports	532,663
MNC-associated U.S. imports as a percentage of total	41
Intra-MNC imports as a percentage of total	17

MNC Multinational company
MOFA Majority-owned foreign affiliate

of U.S. merchandise imports. Intra-MNC trade accounted for 23 percent of U.S. merchandise exports and 17 percent of U.S. merchandise imports (table 7). (A significant share of the remaining trade is associated with U.S. affiliates of foreign MNC's.²³)

Through what channels do U.S. MNC's serve foreign markets?—Despite their large share of U.S. merchandise exports, the ultimate delivery of goods and services to foreign markets by U.S. MNC's is primarily through sales by affiliates rather than through U.S. exports. Of all U.S.-MNC sales to unaffiliated foreigners in 1992, 85 percent were sales by MOFA's and the remainder were exports by U.S. parents (table 8).²⁴ The dominance of sales by MOFA's reflects many factors, such as the following: (1) Many sales to foreigners would not be feasible through exporting from the United States, because of trade barriers and transportation costs, (2) sales of many services (such as lodging) require a local presence, and (3) MOFA's are often better positioned than their parents to design, manufacture, distribute, and service products for the special requirements of the host-country markets. Recognition of the size and significance of sales by MOFA's has spurred recent work on the development of supplemental

23. For a discussion of the pattern of U.S. affiliates' trade in 1977–91, see "Merchandise Trade of U.S. Affiliates of Foreign Companies," SURVEY 73 (October 1993): 52–65.

24. These ratios understate the role of U.S.-parent exports in serving foreign markets, to some extent, because all U.S.-parent exports to MOFA's (table 8, lines 2 and 4) are counted as MOFA sales (table 8, line 9). When a MOFA simply resells goods and services received from its U.S. parent, credit for the sale is, in effect, accorded to the MOFA; yet, in many, if not most, such cases, the MOFA is merely an intermediary that facilitates sales by its U.S. parent.

Table 8.—Channels for Delivering Goods and Services to Foreign Markets by Nonbank U.S. MNC's, 1992

[Millions of dollars]

Line		1992
	Cross-border sales to unaffiliated foreigners by U.S. parents:

balance of payments accounts that more fully incorporate, or more fully illustrate, the returns to U.S. persons from sales by MOFA's.²⁵

What is the investment climate in a particular foreign country?—BEA does not collect information on the investment climate or other aspects of the host countries for USDIA. Other public and private sources provide this type of information. For example, the International Trade Administration (ITA)—a separate agency of the U.S. Department of Commerce—provides summaries of foreign market conditions.²⁶ Additionally, some private consulting firms produce extensive information on doing business in foreign countries.

How much do U.S. MNC's spend to acquire or establish affiliates in a particular foreign country?—At present, BEA does not collect data on outlays by U.S. MNC's to establish or acquire affiliates in foreign countries. Direct investment capital flows capture only the portion of these investments that are funded by U.S. parents; they do not measure funds from other sources, such as funds supplied by foreign affiliates, that are used to establish or acquire new affiliates. Moreover, these flows are not always attributed to their ultimate country of destination. For these reasons, direct investment capital outflows should not be used as a proxy for gross spending on new investments by U.S. MNC's in a particular country.

On the basis of financial and operating data, new foreign affiliates are identified each year, and a summary of their distribution by area and by industry, as measured by their assets or employment, is presented in the SURVEY.²⁷ However, these data do not indicate the amount of U.S. MNC's initial investments in these affiliates.

Data Presentation

Confidentiality

Information collected by BEA is protected against public disclosure by the International Investment and Trade in Services Survey Act (P.L. 94-472, 90 Stat. 2059, 22 U.S.C. 3101-3108, as amended), which provides the legal authority for BEA's investment surveys. Under the act, information collected by BEA cannot be published or released in such a manner that the person or company

that furnished it can be specifically identified.²⁸ Furthermore, the information collected may be used only for statistical and analytical purposes. Use of an individual company's data for tax, investigative, or regulatory purposes is prohibited. Ensuring confidentiality is essential to securing the cooperation of respondents and maintaining the integrity of the statistical system.

To ensure confidentiality, the data are aggregated and then tested before publication to determine if they should be shown or if they should be suppressed. In the published tables, "(D)" is placed in any data cell that might disclose individual company data. The published data are sufficient for most types of analysis, but BEA can make special tabulations, or perform regressions on the company-specific data, at cost, within the limits of available resources and subject to the legal requirements to avoid disclosure of data of individual companies.²⁹

Industry classification

BEA classifies U.S.-MNC activities into 135 International Surveys Industry (ISI) groups adapted from the *Standard Industrial Classification (SIC) Manual, 1987*, the all-inclusive industry classification system used in Federal economic statistics. To facilitate the comparison of MNC data with data that are classified according to the SIC, BEA has prepared a concordance between its ISI codes and the corresponding SIC codes (table 9).

The precision of industry-level MNC data may be limited by the degree of consolidation in U.S.-parent and foreign-affiliate data. U.S.-parent and foreign-affiliate data are not collected for individual *establishments* (or plants) or even for individual business *enterprises* (or companies), which may consist of a number of establishments.³⁰ Rather, they are collected for a group of

28. BEA frequently receives requests for the names of U.S. MNC's, but the act prohibits it from providing the information. Such requests are sometimes directed to private sources that have produced publicly available directories of U.S. MNC's. One such publication is the *Directory of American Firms Operating in Foreign Countries* 13th ed. (New York, NY: Uniworld Business Publications, Inc., 1994), which provides a list of the names and addresses of U.S. companies that have foreign affiliates, by host country. Additionally, the *International Directory of Corporate Affiliations* (New Providence, NJ: National Register Publishing Company, 1994) provides a list of the names and addresses of major companies worldwide that have foreign affiliates, by company.

29. Data users requiring special tabulations should submit their requests in writing, including a justification of need, and BEA will consider each request on a case-by-case basis. Requests for, or questions about, special tabulations should be directed to the International Investment Division (BE-50), Data Retrieval and Analysis Branch, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

30. A business establishment is a business or industrial unit at a single geographic location (such as a sporting goods store) that produces or distributes goods or performs services.

A business enterprise is a business organization consisting of one or more establishments that are part of the same legal entity (such as a company-owned chain of sporting goods stores). A *consolidated business enterprise* is

enterprises under common control (referred to as “a consolidated business enterprise”). Enterprises can be consolidated to different degrees.³¹ U.S.-parent-company data tend to be more consolidated than foreign-affiliate data; U.S. parents represent the fully consolidated domestic operations of a U.S. MNC. The data for highly diversified U.S. parent companies may include a wide variety of activities conducted by many different establishments. Foreign-affiliate data tend to be less consolidated because under BEA’s reporting requirements, foreign-affiliate operations can be consolidated only if they are in the same country and in the same three-digit industry or if they are integral parts of the same business operation.

EXAMPLE: A U.S. company’s German unit A manufactures tires and a majority of its sales are to its German unit B, which assembles automobiles. In this case, units A and B may be consolidated into one foreign affiliate. If the two units’ operations are unrelated (such as an insurance company and a tire manufacturer), then each is recorded as a separate affiliate with its own industry classification.

In most tabulations, all of the operations of a given U.S. parent or foreign affiliate are assigned to one primary industry, even if the parent or affiliate has secondary activities in other industries. The primary industry is assigned in the following manner:

(1) A U.S. parent or foreign affiliate is first classified in the major industry that accounts for the largest percentage of its sales. The major industry groups used for this purpose are (a) agriculture, forestry, and fishing, (b) mining, (c) petroleum, (d) construction, (e) manufacturing, (f) transportation, communication, and public utilities, (g) wholesale trade, (h) retail trade, (i) finance, insurance, and real estate, and (j) services.

(2) Within the major industry group, the parent or affiliate is classified in the two-digit *ISI* subindustry in which its sales are largest.

(3) Within this two-digit industry, the parent or affiliate is classified in the three-digit *ISI* subindustry in which its sales are largest.

This procedure ensures that the parent or affiliate is not assigned to a three-digit subindustry that is outside its major industry group.

a group of enterprises under common ownership or control. For example, a corporate conglomerate consisting of a holding company and its majority-owned manufacturing and financial services subsidiaries is a consolidated business enterprise.

31. For example, suppose a corporation called “Acme Inc.” owns an ice cream manufacturing company (with several plants, or establishments) and a wholesale distribution subsidiary (with multiple depots, or establishments). All three business entities are enterprises, but Acme Inc. is the most consolidated.

The following example illustrates the three-stage classification procedure. Suppose a parent’s or an affiliate’s sales were distributed as follows:

Industry code	Sales (Percentages of total)
351	} 30
352	
353	
367	
508	} 25
	} 45

5	} 30
10	
15	

where industry codes 351, 352, 353, and 367 are in manufacturing and code 508 is in wholesale trade. Because 55 percent of the parent’s or affiliate’s sales were in manufacturing and only 45 percent were in wholesale trade, the parent’s or affiliate’s major industry is manufacturing. Because 30 percent of its sales within manufacturing were in two-digit industry 35 (nonelectrical machinery)—that is, the sum of the percentages in 351, 352, and 353 is 30 percent—and 25 percent were in two-digit industry 36 (electrical machinery), the parent’s or affiliate’s two-digit industry is 35. Finally, because its sales within industry 35 were largest in subindustry 353, the parent’s or affiliate’s three-digit subindustry is 353. Thus, the three-stage classification procedure results in the parent or affiliate being assigned to subindustry 353, even though its sales in that subindustry were smaller than its sales in either subindustries 508 or 367.

Consolidating diverse activities into one primary industry weakens the precision of industry-level data for parents and affiliates, but the degree of imprecision depends on the number of different activities that are consolidated. For this reason, the industrial classifications of U.S. parents tend to be less precise than those of foreign affiliates.

Tabulating data on the parents’ and affiliates’ sales by industry of sales, rather than by industry of affiliate, yields greater precision. BEA collects sales data by three-digit *ISI* code for each of a U.S. parent’s eight largest industries of sales and for each of a foreign affiliate’s five largest industries of sales. When classified this way, a parent’s or affiliate’s sales in secondary industries are shown in those industries rather than in the parent’s or affiliate’s primary industry.

Several key data items for affiliates (such as assets, sales, and employment) are tabulated by *industry of U.S. parent* as well as by *industry of affiliate* in BEA’s published data. Nonduplicative affiliate data (such as gross product, capital expenditures, or employment) by industry of

parent can be added to parent data by industry in order to obtain data on the worldwide operations of U.S. MNC's by industry of parent.

EXAMPLE: A U.S. automobile manufacturer has an affiliate A in the United Kingdom that assembles automobiles, an affiliate B in Canada that casts automobile wheel rims, and an affiliate C in Mexico that manufactures automobile audio components. By industry of affiliate, data for affiliate A would be classified in motor vehicles and equipment manufacturing; those for affiliate B, in metal cans, forgings, and stampings manufacturing; and those for affiliate C, in audio, video, and communications equipment manufacturing. By industry of U.S. parent, however, data for all three affiliates would be classified in motor vehicles and equipment manufacturing.

Table formats

U.S.-MNC data are presented in a variety of table formats in order to provide the fullest possi-

Table 10.—Revision Sequence for U.S.-MNC Data Sets

Estimate	Usual release date
Balance of payments data:	
Quarterly releases:	
Preliminary estimate	10 weeks after end of quarter ¹
First revision	22 weeks after end of quarter ¹
Annual releases ² :	
Preliminary estimate	10 weeks after end of year ¹
First revision	6 months after end of year
Second revision	1 1/2 years after end of year
Third revision	2 1/2 years after end of year
Benchmark revision	Approximately 3 1/2 years after end of benchmark survey year
Financial and operating data:	
Preliminary estimate	1 1/2 years after end of year ³
Final estimate	2 1/2 years after end of year ³

1. This is a press release date. The data are subsequently published in the SURVEY OF CURRENT BUSINESS; see table 11 for details.

2. In annual and benchmark revisions, all quarters for the year are revised.

3. In benchmark survey years and immediately following years, data are generally released 1 to 4 months later.

ble detail by country and by industry, while ensuring the confidentiality of company-specific information. For foreign affiliates, BEA publishes tables on selected data items (such as the direct investment position and affiliate employment) that show each country in which there is USDIA, along with regional subtotals (but with no cross-classification by industry). Likewise, tables showing data by each three-digit ISI code, along with two-digit subtotals (but with no cross-classification by country) are also published.³² Tables showing data crossclassified by country and industry are less detailed; tables 13 and 14 (at the end of the article) illustrate the level of detail available.

Revision sequence

Preliminary estimates of the U.S.-MNC data are released as soon as the accuracy of the estimates can be reasonably ensured. Preliminary balance of payments flow estimates for a quarter are released 10 weeks after the end of the quarter; preliminary annual financial and operating data are generally released 1½ years after the end of a year (table 10). The data are then periodically revised as reported data are substituted for BEA estimates of missing data or as reported data are revised.

32. Balance of payments and direct investment position data are shown in these formats in an annual article in the SURVEY (usually in the August issue) that presents detail for historical-cost position and related capital and income flows. Financial and operating data are shown in these formats in separate publications (see "Data Availability").

Table 11.—U.S.-MNC Data Series: Types of Information and Publications

U.S.-MNC data series	Types of information	SURVEY OF CURRENT BUSINESS articles and related publications
Balance of payments and direct investment position data	Direct investment income; royalties and license fees; and other services transactions between U.S. parents and their foreign affiliates; direct investment capital flows; and the direct investment position.	Quarterly data on direct investment capital, income, and other flows appear in the March, June, September, and December SURVEY articles on U.S. international transactions. Annual direct investment position data appear in the June SURVEY article on the direct investment positions on a historical-cost basis. Detailed annual data on the position and related capital, income, and other flows between parents and affiliates generally appear in the August SURVEY. Some historical data are available in separate BEA publications (see table 12). ¹
Financial and operating data	U.S. parents' and foreign affiliates' balance sheets and income statements; sales by type and destination; employment and employee compensation; U.S. merchandise trade; gross product (value added) ² ; and technology. Also external financing for MOFA's.	Summary annual financial and operating data appear in articles on U.S. multinational companies' operations, usually in the June SURVEY. More detailed data appear in separate BEA publications (see table 12).

1. It should be noted, however, that the data prior to 1982 do not reflect certain definitional changes that BEA instituted in recent years. For details on these changes, see "U.S. Direct Investment Abroad: Detail for Position and Balance of Payments Flows, 1989," SURVEY 70 (August 1990): 57 and "U.S. International Transactions: First Quarter 1992 and Revised Estimates for 1976-91," SURVEY 72

(June 1992): 70-77.

2. U.S. parent gross product data are only available in the benchmark survey years of 1977, 1982, and 1989.

Data availability

BEA makes its U.S.-MNC data available through a variety of media: In publications (both in the SURVEY and in separate data publications), on diskette, on CD-ROM (the National Trade Data Bank CD-ROM), and on the Internet.³³ Table 11

33. Full issues of the SURVEY, individual Survey articles on MNC's, and the data from the National Trade Data Bank CD-ROM are on STAT-USA's World Wide Web system, which is available for a modest subscription fee. To access this information, go to <http://www.stat-usa.gov/BEN/Services/beahome.html>. For further information, contact the STAT-USA Help Line on (202) 482-1986.

summarizes the availability of published BEA data on U.S. MNC's, and table 12 provides ordering information for specific publications and diskettes. Additionally, a comprehensive list of articles, publications, and diskettes on direct investment is available from the International Investment Division, Bureau of Economic Analysis, U.S. Department of Commerce, BE-50, Washington, DC 20230.

* Less than 50 employees.

† Suppressed to avoid disclosure of data of individual companies.

1. "International" affiliates are those that have operations in more than one country and that are engaged in petroleum shipping, other water transportation, or operating movable oil- and gas-drilling equipment.

2. "Eastern Europe" comprises Albania, Armenia, Azerbaijan, Belarus, Bulgaria, Czechoslovakia, Estonia, Hungary, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Poland, Romania, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

Uzbekistan.

3. European Communities (12) comprises Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, and the United Kingdom.

4. OPEC is the Organization of Petroleum Exporting Countries. Through yearend 1992, its members were Algeria, Ecuador, Gabon, Indonesia, Iran, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.

U.S. International Transactions, Fourth Quarter and Year 1994

By Christopher L. Bach

FOURTH QUARTER 1994

THE U.S. current-account deficit increased to \$44.8 billion in the fourth quarter from \$40.8 billion (revised) in the third (table A).¹ The deficit on merchandise trade decreased and the surplus on services increased. However, these changes were more than offset by an increase in the deficit on investment income and larger net unilateral transfers.

In the capital account, net recorded capital inflows decreased to \$45.8 billion in the fourth quarter from \$54.4 billion in the third. A step-up in outflows for U.S. assets abroad more than offset a step-up in inflows for foreign assets in the United States.

1. Quarterly estimates of U.S. current- and capital-account components are seasonally adjusted when statistically significant seasonal patterns are present. The accompanying tables present both adjusted and unadjusted estimates.

The statistical discrepancy—errors and omissions in recorded transactions—was an outflow of \$1.0 billion in the fourth quarter, compared with an outflow of \$13.6 billion in the third.

The following are highlights for the fourth quarter of 1994:

- The merchandise trade deficit fell, as exports accelerated while imports slowed from their rapid increases in recent quarters.
- The surplus on services increased, but less strongly than in recent quarters.
- The deficit on investment income increased sharply.
- Net unilateral transfers increased as a result of a bunching of U.S. Government grants.
- The step-up in outflows for U.S. assets abroad was mostly attributable to a shift to an increase in U.S. bank-reported claims.

Table A.—Summary of U.S. International Transactions

[Millions of dollars, seasonally adjusted]

^r Revised.

^P Preliminary.

- The step-up in inflows for foreign assets in the United States was attributable to sharply higher inflows for nearly all major types of private assets.
- The U.S. dollar depreciated slightly in the foreign exchange markets.

U.S. dollar in exchange markets

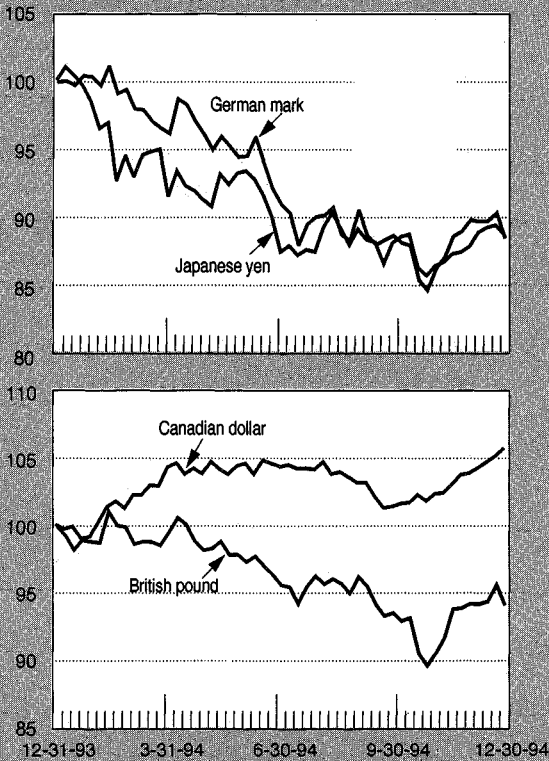

In the fourth quarter, the U.S. dollar depreciated 1 percent on a trade-weighted quarterly average basis against the European, Japanese, and Canadian currencies and appreciated strongly against the Mexican peso (table B, chart 1).

Early in the quarter, the dollar weakened further amid concerns that U.S. interest rates had

not yet risen sufficiently to restrain U.S. economic growth and potential inflation. Following especially intense selling pressure on the dollar in late October, U.S. monetary authorities purchased \$800 million against sales of German marks and an equal amount against sales of Japanese yen on November 2 and purchased \$500 million against sales of German marks and an equal amount against sales of Japanese yen on November 3. After the Federal Reserve's decision to raise the federal funds rate and the discount rate by 75 basis points in mid-November, the dollar rebounded and continued to appreciate through the end of the year. These interest rate increases added further to large, positive interest-rate differentials in favor of U.S. dollar assets and contributed to the dollar's appreciation and to dollar inflows through yearend (charts 2 and 3). (Early in 1995, the dollar's depreciation resumed.)

The U.S. dollar was unchanged against the Canadian dollar for the quarter. However, the U.S. dollar appreciated after the mid-November rise in U.S. interest rates, when interest-rate differentials in favor of the U.S. dollar widened substantially.

From the beginning of the quarter through December 19, the Mexican peso depreciated 2 percent against the dollar, staying within the per-

missible range set by the Mexican Government. On December 20, Mexican authorities reduced the peso's lowest permissible value against the dollar, and the peso immediately fell by the full 12 percent permitted by the new range. On December 22, with heavy market pressure against the peso, the Mexican Government permitted the peso to fluctuate freely in exchange markets. The peso immediately declined another 16 percent, bringing the total decline to 30 percent by the end of the quarter. Also on December 22, Mexican and U.S. monetary authorities jointly announced that they had activated a pre-existing swap facility of \$6.0 billion, in order to provide short-term financial resources to the Mexican Government.

Current Account

Goods and services

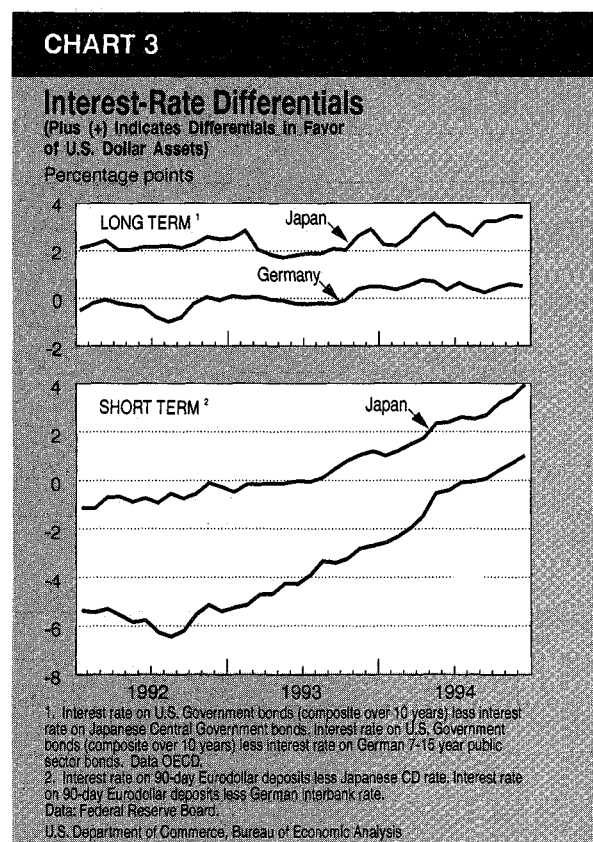

The deficit on goods and services decreased to \$26.7 billion in the fourth quarter from \$28.7 billion in the third. The deficit on merchandise trade decreased and the surplus on services increased.

Merchandise trade.—The U.S. merchandise trade deficit decreased to \$43.0 billion in the fourth quarter from \$44.6 billion in the third. The smaller deficit reflected stronger growth in exports than in imports.

Exports.—Merchandise exports increased \$7.1 billion, or 6 percent, to \$134.7 billion. Volume, measured in constant (1987) dollars, increased 5 percent. Nonagricultural exports accounted for most of the increase in current dollars, and agricultural exports also increased.

Nonagricultural exports increased \$5.2 billion, or 5 percent, to \$121.1 billion. The increase was widespread among major commodity categories, with capital goods accounting for over two-fifths of the increase. Nearly all types of capital goods increased, led by semiconductors, by computers, peripherals, and parts, and by telecommunications equipment. Increases were also sizable in automotive vehicles, engines, and parts (mostly engines and parts to Canada) and in nonagricultural industrial supplies and materials.

Agricultural exports increased \$1.9 billion, or 16 percent, to \$13.6 billion. Corn, wheat, and soybeans all rose; the largest increase was in corn. Meats and other processed food products increased even more rapidly than in the third quarter.

Imports.—Merchandise imports increased \$5.5 billion, or 3 percent, to \$177.7 billion in the fourth quarter. Volume, measured in constant (1987) dollars, also increased 3 percent. Nonpetroleum imports more than accounted for the increase in current dollars.

Nonpetroleum imports increased \$7.8 billion, or 5 percent, to \$164.9 billion. The largest increase was in capital goods, which accounted for over two-fifths of the increase. This increase mainly reflected continuing demand for computers, peripherals, and parts and for semiconductors. Imports of civilian aircraft, engines, and parts also increased, rebounding from low levels in the third quarter. Nonpetroleum industrial supplies and materials (mostly metals and chemicals), consumer goods (mostly durables), and automotive vehicles, engines, and parts (mostly from Canada and Mexico) also increased.

Petroleum imports decreased \$2.4 billion, or 16 percent, to \$12.8 billion. The average price per barrel decreased to \$15.40 from \$16.22, and the average number of barrels imported daily decreased to 9.08 million from 10.23 million. Domestic production and consumption increased, and inventory was unchanged.

Services.—The surplus on services increased to \$16.3 billion in the fourth quarter from \$15.9 billion in the third. Service payments, paced by a strong rise in travel and passenger fares, increased less than service receipts, within which travel, passenger fares, and other transportation accounted for nearly all of the increase.

Foreign visitors spent \$15.8 billion in the United States, up 4 percent. Receipts from overseas increased 3 percent to \$12.9 billion; receipts from Canada, 9 percent to \$1.6 billion; and receipts from Mexico, 3 percent to \$1.3 billion. U.S. travelers spent \$11.3 billion abroad, up 8 percent. Payments to overseas increased 9 percent to \$9.0 billion; payments to Canada, 10 percent to \$1.0 billion; and payments to Mexico, less than 1 percent to \$1.3 billion. For both Mexican receipts and payments, the impact of the sharp decline of the Mexican peso in late December will be reflected in 1995.

Other transportation receipts increased to \$6.6 billion from \$6.3 billion, as ocean port expenditure receipts were pushed higher by a strong increase in export volume carried by foreign-flag vessels. Other transportation payments decreased slightly to \$6.6 billion after two consecutive quarters of strong growth, but remained at a high level.

Other private services receipts were unchanged at \$14.8 billion. Other private services payments decreased to \$8.5 billion from \$8.8 billion, partly because reduced activity in financial markets abroad lowered commission payments.

Investment income

The deficit on investment income increased to \$7.5 billion in the fourth quarter from \$4.0 billion in the third. Increases in direct investment payments and portfolio payments outweighed an increase in portfolio receipts.

Direct investment income.—Income receipts on U.S. direct investment abroad were down slightly to \$18.0 billion, but remained high as a result of continued economic recovery in continental Europe and Japan.

Income payments on foreign direct investment in the United States were \$9.1 billion, up from \$7.9 billion. The increase was mostly from higher interest payments, which were attributable to interest-rate swap transactions; earnings continued to climb in response to continued expansion in the U.S. economy.

Portfolio investment income.—Receipts of income on other private investment were \$18.3 billion, up from \$16.6 billion, largely as a result of higher interest rates. Payments of income on other private investment were \$22.7 billion, up from \$19.9 billion, as a result of both higher interest rates and larger liabilities outstanding.

Receipts of income on U.S. Government assets were up slightly to \$1.1 billion. Payments of income on U.S. Government liabilities were \$13.2 billion, up strongly from \$11.8 billion, as a result of both the sharp rise in interest rates and larger liabilities outstanding.

Unilateral transfers

Net unilateral transfers were \$10.6 billion in the fourth quarter, compared with \$8.1 billion in the third.

U.S. Government grants were \$5.7 billion, up from \$2.8 billion. The step-up was due to the fourth-quarter disbursement of cash to Israel (\$1.2 billion), which was drawn completely in the first quarter of the U.S. Government's fiscal year as soon as funds were appropriated by Congress, and to additional funds (\$1.8 billion) disbursed to Israel to finance military purchases.

Capital Account

Net recorded capital inflows—that is, net changes in U.S. assets abroad less net changes in foreign assets in the United States—decreased to \$45.8 billion in the fourth quarter from \$54.4 billion in the third. A step-up in outflows for U.S. assets abroad more than offset a step-up in inflows for foreign assets in the United States.

U.S. assets abroad

U.S. assets abroad increased \$44.1 billion in the fourth quarter, compared with an increase of \$25.8 billion in the third. The step-up occurred mostly as a result of a shift to an increase in U.S. bank-reported claims.

U.S. official reserve assets.—U.S. official reserve assets decreased \$2.0 billion in the fourth quarter, following a \$0.2 billion increase in the third. The decrease was more than accounted for by sales of \$2.6 billion in German marks and Japanese yen in exchange market intervention operations in early November (table C). These operations were part of coordinated intervention activities with monetary authorities of another country.

U.S. Government assets other than official reserve assets.—U.S. Government assets other than official reserve assets increased \$1.0 billion in the fourth quarter, up from a \$0.3 billion increase in the third. U.S. credits and other long-term assets increased \$2.2 billion, compared with an increase of \$1.2 billion. The step-up resulted from the extension of new credits to the Government of the Russian Federation, reflecting the consolidation and rescheduling of certain debts of the former Soviet Union that were owed to, or guaranteed by, the U.S. Government.

U.S. foreign currency holdings and other short-term assets decreased \$0.4 billion in the fourth quarter, reflecting the disposition of \$0.8 billion in unpaid claims (under the Commodity Credit Corporation's export credit guarantee program) on the former Soviet Union that were acquired from private U.S. banks. These unpaid claims were consolidated and rescheduled into a new U.S. Government long-term credit.

Claims reported by banks.—U.S. claims on foreigners reported by U.S. banks increased \$17.3 billion in the fourth quarter, compared with a decrease of \$1.3 billion in the third.

Interbank claims increased \$9.1 billion in the fourth quarter, following an \$8.1 billion decrease in the third. Interbank lending to Western Europe, the Caribbean, and Japan was moderate, both during the quarter and at yearend. This increase was augmented by an \$11.2 billion increase in deposits on behalf of banks' U.S. customers; these deposits were largely overnight deposits placed with branches of U.S. banks in the Caribbean in December and were not reversed after the beginning of the new year.

Foreign securities.—Net U.S. purchases of foreign securities were \$13.9 billion in the fourth quarter, up from \$8.1 billion in the third.

Net U.S. purchases of foreign stocks were \$8.1 billion, up from \$6.0 billion, as most overseas stock markets halted their downward slide or rose at yearend. U.S. institutional investors, primarily mutual funds, stung by heavy losses on Asian and Latin American stock market investments early in the year, resumed their overseas investments in the fourth quarter. Investors also resumed their purchases of Japanese securities, though Japanese stock prices continued to decline.

^r Revised.

^P Preliminary.

1. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

2. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.

3. Consists of transactions of the Federal Reserve System and the U.S. Treasury Department's Exchange Stabilization Fund.

Net U.S. purchases of foreign bonds recovered to \$5.8 billion from \$2.1 billion. Transactions in outstanding bonds shifted to net purchases of \$1.6 billion from net sales of \$6.3 billion; most of the turnaround was in Western Europe, as bond prices in the United Kingdom and several other West European markets rebounded somewhat from their nearly year-long decline.

New foreign bond issues in the United States declined to \$7.2 billion from \$9.8 billion, as the U.S. corporate AAA bond rate increased 42 basis points from the third-quarter level. More than half of the value of new issues was privately placed, and the maturities were shorter: Approximately 87 percent mature in 10 years or less, up from 79 percent in the third quarter.

Direct investment.—Net capital outflows for U.S. direct investment abroad were \$14.0 billion in the fourth quarter, compared with \$11.2 billion in the third. An increase in reinvested earnings and a shift to net intercompany debt outflows accounted for most of the step-up.

Foreign assets in the United States

Foreign assets in the United States increased \$89.9 billion in the fourth quarter, compared with an increase of \$80.3 billion in the third. The step-up was attributable to sharply higher inflows for nearly all major types of private assets; these inflows were only partly offset by a large shift to outflows for official assets.

Foreign official assets.—Foreign official assets in the United States decreased \$1.0 billion in the fourth quarter, compared with a \$19.5 billion increase in the third (table C). Dollar assets of industrial countries decreased \$7.7 billion in the fourth quarter, largely reflecting sharp decreases in assets of European countries. Dollar assets of non-OPEC developing countries increased \$5.6 billion; included were a large increase by a single Asian country and a decrease of about the same size by a single Latin American country.

Liabilities reported by banks.—U.S. liabilities to foreigners reported by U.S. banks, other than U.S. Treasury securities, increased \$27.1 billion in the fourth quarter, compared with an increase of \$18.4 billion in the third.

Interbank liabilities increased \$25.1 billion, compared with an increase of \$7.2 billion; inflows in the fourth quarter were sharply higher in response to U.S. banks' borrowing from foreign sources to finance domestic (U.S.) lending and to substantial interest-rate differentials in favor of U.S. short-term assets. U.S.-owned banks'

branches in Western Europe and the Caribbean accounted for 90 percent of the inflows. Liabilities to Asian banking centers and to Japan decreased.

U.S. Treasury securities.—Net foreign purchases of U.S. Treasury securities were a record \$26.0 billion in the fourth quarter, compared with net purchases of \$5.1 billion in the third. Rapidly rising interest rates and an appreciating dollar for part of the quarter contributed to the strength in net foreign purchases. In addition, rates on 1- and 2-year maturities were nearly as high as those on long-term maturities, making the shorter-term maturities especially attractive investments at a time of wide fluctuations in longer-term rates and in foreign exchange markets. Especially large were net purchases from the United Kingdom at \$12.3 billion, from the Caribbean at \$11.7 billion, and from Japan at \$5.5 billion.

Other U.S. securities.—Net foreign purchases of U.S. securities other than U.S. Treasury securities were \$10.0 billion in the fourth quarter, down from \$14.2 billion in the third. Little change in stock prices and only a limited recovery in the corporate bond market discouraged purchases in U.S. markets. Abroad, new issues of Eurobonds by U.S. corporations were especially strong, despite the rise in interest rates.

Net foreign transactions in U.S. stocks shifted to net sales of \$3.1 billion from net purchases of \$0.8 billion. An acceleration in net sales by British and Swiss investors accounted for much of the change, and there was a sudden slowdown in net purchases by Japanese investors.

Net foreign purchases of corporate and other bonds were \$13.0 billion, compared with \$13.3 billion. New issues sold abroad by U.S. corporations increased to a record \$12.7 billion from \$10.3 billion, easily exceeding the previous record quarterly total of over a year ago. Outstanding bonds decreased, mostly reflecting lower net purchases by British investors.

Direct investment.—Net capital inflows for foreign direct investment in the United States were \$27.9 billion in the fourth quarter, compared with \$14.7 billion in the third. The step-up was more than accounted for by a step-up in net equity inflows to \$18.0 billion from \$3.4 billion, reflecting both a resurgence in large acquisitions and numerous mid-sized acquisitions. This quarterly equity inflow approached in size some of the large quarterly inflows during the acquisition boom of the late 1980's. The inflows were largely from Western Europe and were dominated by inflows

into manufacturing (especially pharmaceuticals) and wholesale trade.

THE YEAR 1994

The U.S. current-account deficit increased to \$155.7 billion in 1994 from \$103.9 billion in 1993. An increase in the merchandise trade deficit accounted for much of the increase; it was augmented by a sizable shift to a deficit on investment income and by a small increase in net unilateral transfers. The surplus on services increased (table D).

In the capital account, the increase in U.S. assets abroad slowed in 1994 from 1993; sharply lower outflows for net U.S. purchases of foreign securities more than accounted for the slowdown. The increase in foreign assets in the United States was much larger in 1994 than in 1993; the step-up in net inflows was attributable to sharply higher inflows for foreign direct investment in the United States and to a very large step-up in U.S. liabilities reported by U.S. banks. Increases in foreign official assets slowed.

The statistical discrepancy—errors and omissions in recorded transactions—was an outflow of \$33.3 billion in 1994, compared with an inflow of \$21.1 billion in 1993.

The following are highlights for the year 1994:

- The merchandise trade deficit increased by a substantial amount. Export growth accelerated strongly as economies of industrial countries recovered from recessions. However, the increase was less than that in imports, which accelerated in response to the third year of expansion in the U.S. economy.
- The services surplus increased by a small amount after little change.
- The balance on investment income shifted to a deficit from a surplus; the surplus had been declining since 1990.
- Net U.S. purchases of foreign securities were one-half the exceptionally high net purchases of last year, and net foreign purchases of U.S. securities slowed by one-fifth.
- U.S. banks' liabilities to foreigners increased by an exceptionally large amount, as the result of strong demand for funds to finance domestic (U.S.) bank lending and U.S. interest rates that by yearend greatly exceeded rates available on comparable foreign assets.
- Net inflows for foreign direct investment in the United States reflected the resurgence of large acquisitions.
- The U.S. dollar depreciated 7 percent in foreign exchange markets on a trade-weighted average basis.

U.S. dollar in exchange markets

From the fourth quarter of 1993 to the fourth quarter of 1994, the U.S. dollar depreciated 8–11 percent against the European currencies and 9 percent against the Japanese yen. In contrast, the dollar appreciated against the Canadian dollar and the Mexican peso (table B, chart 1).

As the U.S. economy entered its third year of expansion, the Federal Reserve in mid-February took the first of several actions to raise the federal funds rate and discount rate. This credit-tightening measure led to sharp drops in bond and stock prices, both here and abroad, and to declines in the foreign exchange value of the dollar. Considerable uncertainty in the financial markets was evidenced by greater price volatility, as market participants differed on their assessments of both the size and timing of additional tightening measures.

^r Revised.

^P Preliminary.

During the spring and early summer, the Federal Reserve raised interest rates and tightened bank reserve positions several more times. Despite these actions, concerns about the persistent strength of the U.S. economy and pessimism about future inflation tended to offset the effect on the dollar of higher U.S. interest rates. In addition, signs that a recovery in economic activity was under way in continental Europe indicated that further reductions in European short-term interest rates were unlikely.

In this environment, pressures on the dollar were especially intense in late April and early May and in the second half of June. The U.S. Treasury and the Federal Reserve made substantial dollar purchases on three occasions during this period in coordination with monetary authorities of a large number of other countries. These actions were in response to volatile trading conditions and movements in the dollar that were judged to be inconsistent for a country with such strong real growth, low inflation, and rising interest rates.

Despite a 50-basis-point rise in U.S. interest rates by the Federal Reserve in mid-August, the dollar reached new lows against the German mark and Japanese yen in September and October. Concerns remained that U.S. credit-tightening measures were not yet sufficient to keep anticipated inflation in check, and an economic recovery firmly in place for Germany and the other continental European countries was accompanied by a small rise in foreign interest rates. With the dollar at new lows in late October against both the German mark and Japanese yen, the Federal Reserve, in coordination with the monetary authorities of another country, intervened in the exchange markets to purchase dollars in early November. In mid-November, the Federal Reserve again raised interest rates—by 75 basis points—substantially widening interest-rate differentials in favor of dollar assets; this action contributed to capital inflows and provided support for the dollar through yearend. (Early in 1995, the dollar's depreciation resumed.)

For the year, the U.S. dollar appreciated 3 percent against the Canadian dollar. U.S. dollar appreciation occurred despite strong expansion in the Canadian economy and particularly sharp increases in Canadian interest rates in the first and fourth quarters.

Following political unrest in the State of Chiapas early in the year and reports of weak first-quarter corporate earnings, the Mexican peso depreciated 6 percent against the dollar in the first quarter. Despite rising inflation and sev-

eral political problems, the peso remained within the controlled trading range permitted by the Government through most of the summer. In August, the peso appreciated briefly when foreign investors placed funds into Mexican financial markets in advance of Mexican presidential elections and after the favorable conclusion of Mexico's annual wage and price agreement among business, labor, and government. However, faced with continuing large outflows of official reserve assets and private capital flight, the Mexican Government on December 20 reduced the peso's lowest permissible value against the dollar, and the peso immediately fell by the full 12 percent permitted by the new range. On December 22, the Government permitted the peso to fluctuate freely in exchange markets, and the peso immediately depreciated another 16 percent.

Against the currencies of the newly industrialized countries in Asia, the U.S. dollar depreciated 8 percent against the Singapore dollar and 2 percent against both the South Korean won and the Taiwan dollar. The U.S. dollar was unchanged against the Hong Kong dollar.

Current Account

Goods and services

The deficit on goods and services increased to \$106.4 billion in 1994 from \$75.7 billion in 1993. The merchandise trade deficit more than accounted for the increase; the surplus on services increased.

Merchandise trade.—The merchandise trade deficit increased to \$166.4 billion in 1994 from \$132.6 billion in 1993 (tables E and F). U.S. export growth accelerated strongly, following 6 successive years of deceleration, in response to economic recovery in industrial countries. Depreciation of the dollar (measured on a trade-weighted basis year over year) in 1994 may have had a slight stimulative effect on exports. U.S. import growth also accelerated, as the U.S. economy completed its third year of expansion.

U.S. exports were spurred by increases in demand and output abroad in 1994. Germany, other continental European countries, and Japan recovered from recessions in 1993; expansions were already under way in Canada and the United Kingdom (chart 4). Growth in the developing countries of Asia and Latin America was just under the pace in 1993. U.S. imports increased strongly for the third consecutive year, reflecting increases in U.S. real gross domestic product of

4.1 percent in 1994, 3.1 percent in 1993, and 2.3 percent in 1992.

Domestic prices of exports increased more than last year, with the largest step-up in industrial supplies and materials (table G). Price increases for all major categories were lower when converted into foreign currencies, as appreciation of foreign currencies offset much of the increase in domestic prices (table H).

Dollar prices of most imports also increased more than last year; prices for industrial supplies and materials excluding petroleum increased after declining last year, and prices of capital goods other than computers and civilian aircraft and of automotive products increased more strongly than last year. In contrast, petroleum prices declined further—for the third consecutive year.

Exports.—Nonagricultural exports increased \$42.4 billion, or 10 percent, to \$455.6 billion in 1994, compared with a 4-percent increase in 1993. Volume increased 11 percent, following a 7-percent increase. Growth accelerated strongly for capital goods, consumer goods, and industrial supplies and materials. Growth slowed for automotive products, but remained strong (chart 5). Slightly more than one-half of the export growth was to industrial countries, and slightly less than one-half was to developing countries.

Capital goods increased \$23.2 billion, or 13 percent, to \$205.6 billion, up sharply from an increase of 4 percent. Volume increased 18 percent, following an increase of 9 percent. This is the first time in the last 5 years that the growth of capital goods has accelerated. Semi-

conductors and telecommunications equipment together accounted for over two-fifths of the increase in 1994. The annual growth rates of both have accelerated each year since 1992. Semiconductor shipments were particularly strong to Asia. Telecommunications equipment and parts increased to almost all major areas, with substantial increases to Asia, mainly China, and to Latin America. Canada and Mexico continue to rank closely as the largest export markets for these products. Computer shipments jumped in 1994. Exports in the broad category of other in-

^{*} Revised.
^P Preliminary.

dustrial, agricultural, and service machinery have also grown steadily in recent years and were an important contributor to the acceleration in total exports in 1994. Civilian aircraft continued to decline from high levels in 1992 (table I).

Nonagricultural industrial supplies and materials increased \$7.4 billion, or 7 percent, to \$112.5 billion, compared with a 3-percent increase. Volume increased 1 percent, compared with a 3-percent increase. Chemicals, largely to Asia and Latin America, showed an unusually strong increase, accounting for 70 percent of the increase in supplies and materials. Paper and paper-based products also increased, as did textiles and some metals. Some of the rise in the value of these exports was attributable to price increases, particularly for raw and intermediate materials and for metals (table J).

Consumer goods (nonfood) increased \$5.3 billion, or 10 percent, to \$60.0 billion, compared with a 6-percent increase. Volume increased 9 percent, compared with a 6-percent increase. Nondurable goods accounted for three-fifths of the increase in current dollars. The addition of Mexico to the North American Free Trade Agreement probably encouraged some exports of consumer goods, particularly textiles. Canada and Mexico combined accounted for nearly 40 percent of the increase in consumer goods.

Automotive products increased \$4.8 billion, or 9 percent, to \$57.2 billion, down from an increase of 11 percent. Volume increased 8 percent, following an increase of 6 percent. Passenger car exports were exceptionally strong to Canada—up 17 percent, compared with a 6-percent increase. By contrast, parts to Canada and Mexico slowed to a 4-percent increase from an 18-percent increase.

CHART 4

Major Industrial Countries: Real GDP

Percent change from four quarters earlier

Data: International Monetary Fund.

U.S. Department of Commerce, Bureau of Economic Analysis

Agricultural products increased \$3.4 billion, or 8 percent, to \$47.2 billion, compared with a 1-percent decrease. Volume increased 4 percent, following a 3-percent decrease. Much of the strength was attributable to meat products, poultry, fruits, and vegetables, which have now increased annually for the last 9 years. Exports have benefited from increased market access and from income growth that have contributed to a shift in food consumption patterns abroad—from dietary staples (such as rice and other starches) to a variety of meats, fruits, and vegetables. Meat exports were boosted by the removal of beef import tariffs by Mexico early in the year; U.S. exports of beef to Mexico subsequently increased 80 percent.

Exports of cotton increased especially strongly, mainly to China and the newly industrialized countries in Asia. During 1994, China and Pak-

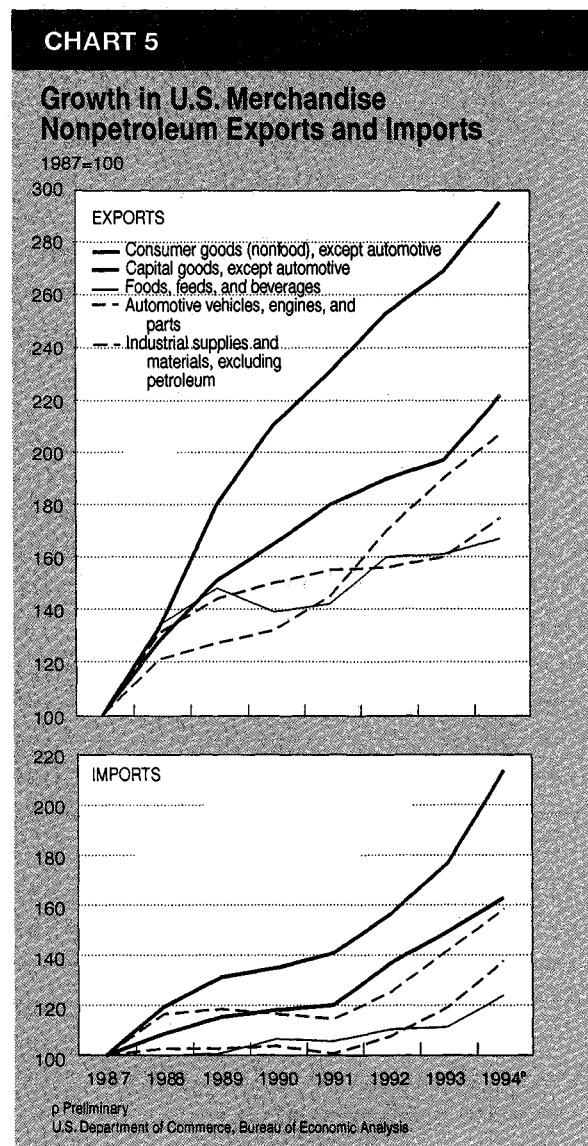

istan, two of the world's largest producers of cotton, suffered substantial crop shortfalls.

In contrast to the strength in meat products and cotton, grains and preparations declined for the second consecutive year and for the fourth year out of the last five; the declines were mainly in wheat, corn, and soybeans. Corn declined for the fifth consecutive year in both value and volume. A significant part of the decrease in grain shipments reflected the loss of sales to the Newly Independent States. The remainder is due to reduced supply caused by flood damage to the 1993 corn and soybean crops in the United States and to increased competition from major exporters.

Imports.—Nonpetroleum imports increased \$79.9 billion, or 14 percent, to \$617.9 billion in 1994, compared with an increase of 11 percent in 1993. Volume increased 13 percent, compared with an 11-percent increase. Capital goods and automotive products accelerated for the third successive year and now exhibit exceptionally strong annual increases by historical standards. Nonpetroleum industrial supplies and materials and consumer goods were also strong (chart 5). Imports from industrial countries accounted for slightly more than one-half of the increase, and those from developing countries for slightly less than one-half.

Capital goods increased \$32.3 billion, or 21 percent, to \$184.6 billion, compared with an increase of 14 percent. Volume increased 26 percent, following a 21-percent increase. This is the third consecutive year of substantial gains in this category, paralleling the expansion in the U.S. economy: The gain in 1994 was close to double the annual gains in 1992–93. Most of the strength was in high-technology products, such as computers, peripherals, and parts and semiconductors. Over two-thirds of domestic demand for computers is met by imports from the newly industrialized countries (NIC's) in Asia and from Japan. Semiconductors reflected a step-up in purchases from Japan, the NIC's, and Malaysia. An additional source of strength in 1994 was telecommunications products, largely from Asia and Mexico. Further strength was attributable to other industrial, agricultural, and service machinery, largely from Western Europe and Canada; this category has increased strongly for 3 years now. Civilian aircraft was unchanged (table I).

Automotive products increased \$16.2 billion, or 16 percent, to \$118.6 billion, following an increase of 12 percent. Volume increased 12 percent, following a 10-percent increase.

Automotive parts remained especially strong, rising 17 percent, up from 14 percent, as a result of strong domestic production. Mexico's share increased 1 percent, Japan's share was unchanged, and Canada's share decreased 1 percent.

Passenger cars from Japan were up at a substantially faster pace than last year and accounted for one-half of the increase; cars from Canada were up at about the same pace as last

year and accounted for the other half. For Japanese cars, "transplant" sales fell 14 percent (the first decrease since Japanese transplant facilities opened in 1982), but they still exceeded Japanese imports. The market share of domestic nameplates increased to 65 percent from 59 percent, while the Japanese share, including imports and transplants, declined to 31 percent from 33 percent.

^P Preliminary.

been virtually unchanged for 4 consecutive years. The average price per barrel fell for the fourth consecutive year to \$14.80, offsetting a rise in volume related to the strengthening of U.S. economic activity. Volume increased 5 percent, as the number of barrels imported daily increased to 9.47 million from 8.99 million; this increase was smaller than the 10-percent increase in 1993. The volume of imports from OPEC increased only 1 percent, and the OPEC share of imports declined to 47 percent from 51 percent. The volume of imports from Saudi Arabia, Nigeria, and Venezuela was virtually unchanged from 1993, while that from Mexico increased (chart 6).

U.S. consumption of petroleum and products increased to 17.7 million barrels per day from 17.3 million, reflecting increased U.S. economic activity. Imports as a percent of consumption increased to 54 percent from 52 percent.

Balances by area.—The U.S. merchandise trade deficit increased to \$166.4 billion in 1994 from \$132.6 billion in 1993.

The deficit with Western Europe increased to \$17.6 billion from \$9.7 billion; exports of capital goods responded strongly to the economic recovery, but imports were larger in all major categories, especially capital goods and consumer goods (table K, chart 7).

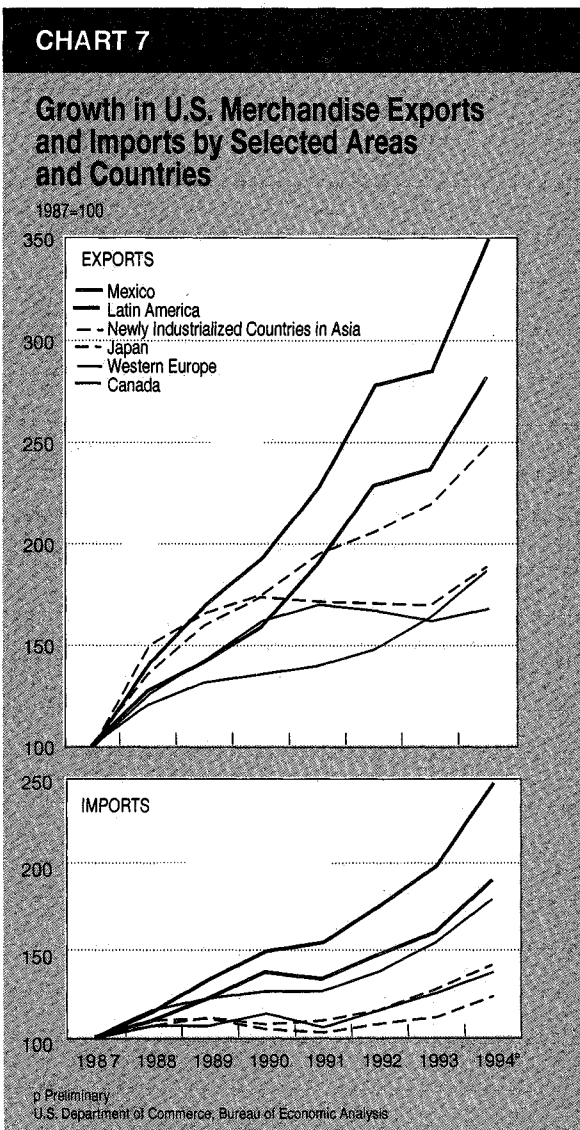

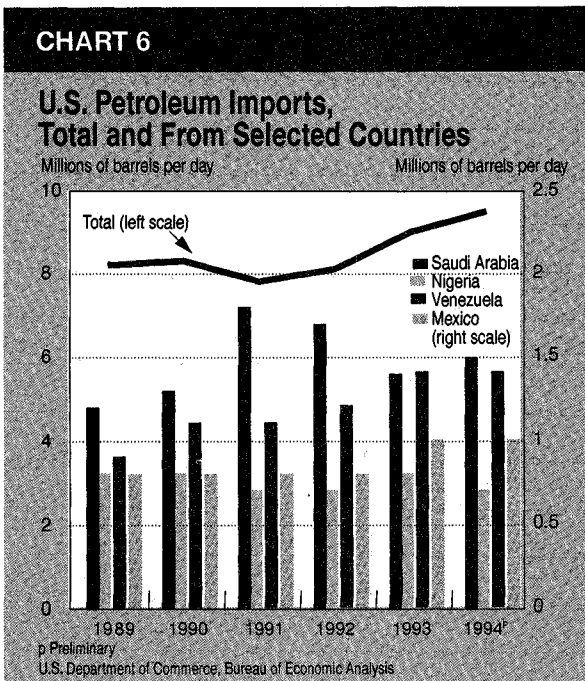

An increase in the deficit with Japan—to \$67.3 billion from \$60.5 billion—resulted from an increase in exports of capital goods (in contrast to no increase in the previous 3 years) and from a

much larger increase in imports of capital goods and automotive products than in recent years.

The increase in the deficit with the developing countries in Asia—to \$69.4 billion from \$54.7 billion—was also larger than in recent years. Exports of capital goods and industrial supplies were slightly higher, but imports of capital goods and consumer goods increased by very substantial amounts.

Services.—After little increase in 1993, the surplus on services moved higher to \$60.0 billion in 1994 from \$56.9 billion in 1993, but the increase was far less than the sizable annual advances of 1987–92 (table L). In 1994, service receipts increased to \$195.3 billion from \$184.8 billion, and service payments increased to \$135.3 billion from \$128.0 billion.

Foreign visitors spent \$60.0 billion for travel in the United States in 1994, up 4 percent, but

down from a 6-percent growth rate in 1993 and a 12-percent growth rate in 1992. Receipts from overseas were \$48.7 billion, up \$3.7 billion. Although foreign economies recovered and foreign currencies appreciated in 1994, growth in the number of visitors slowed further, particularly from Western Europe and Oceania, the same areas for which the slowdown had been greatest in 1992 and 1993. The only area of growth was visitors from Japan, which increased 16 percent, following a decrease of 3 percent. Receipts from Canada were \$6.3 billion, down \$1.1 billion. The drop in the number of Canadian visitors to the United States has accelerated over the past 2 years—from 3 percent in 1992, to 13 percent in 1993, and to nearly 19 percent (or 12 million fewer visitors) in 1994. Over the same period, the value of the Canadian dollar dropped 12 percent, 3 percent of which was in 1994, making travel to the United States considerably more expensive. The introduction of taxes on goods purchased in the United States by Canadians and taken back to Canada also made it less advantageous to enter the United States for gasoline, food, and other shopping. Receipts from Mexico were \$4.9 bil-

lion, down \$0.2 billion as a result of a drop in border travel. Even before the peso's sharp drop in late December, receipts were down 6 percent.

U.S. travel payments increased to \$43.1 billion in 1994, up 6 percent, following increases of 4 percent in 1993 and 10 percent in 1992. Travel expenditures overseas accounted for nearly all of the \$2.5 billion rise in 1994. After 2 years of virtually no growth, the number of travelers increased 8 percent to Europe and 9 percent to Asia (other than Japan); these two areas accounted for three-fourths of the growth in U.S. travelers in 1994. Payments to Canada increased 4 percent to \$3.8 billion, as the number of U.S. travelers increased 7 percent. Payments to Mexico fell 2 percent to \$5.1 billion, as a result of a 6-percent decrease in expenditures in the border area.

Other transportation receipts were \$24.7 billion in 1994, up \$1.6 billion, or 7 percent, following 3 consecutive years of 2-percent growth or less. Air freight receipts grew steadily throughout 1991–94, as air export volume rose and U.S. airlines increased market share at the expense of foreign airlines. However, ocean freight and ocean port expenditure receipts were flat until 1994, when recovery in foreign economies led to significant increases in export volume, particularly with trading partners in Western Europe and Japan.

Other transportation payments were \$25.7 billion in 1994, up \$1.2 billion. In 1994, when the U.S. and foreign economies both expanded, import and export volumes both rose substantially. In 1993, when expansion was limited to the United States, only import volume rose. The continued rise in import volume in 1994, combined with an acceleration in export volume, produced a 16-percent increase in ocean port service payments, following a 6-percent increase in 1993. For several years prior to 1993, ocean port services were held down by stable or declining import and export volumes.

Other private services receipts were \$58.5 billion in 1994, up from \$54.9 billion in 1993. Among receipts, business, professional, and technical services increased the most. Financial services also increased, but less strongly than in the previous year, as growth slowed in commissions received on securities transactions.

Other private services payments were \$34.8 billion in 1994, up from \$32.1 billion in 1993. Financial services payments increased the most, but grew less strongly than last year because of slower growth in commissions paid on securities transactions. Payments for business, professional, and

technical services also increased, but not nearly as strongly as on the receipts side of the accounts.

After many years of growth, transfers under U.S. military agency sales contracts fell—to \$10.8 billion in 1994 from \$11.4 billion in 1993. Shipments of missiles and equipment to the Middle East were down, reflecting the end of numerous programs initiated after the Persian Gulf War, particularly with Kuwait, Saudi Arabia, and Israel. Other programs, such as those for F-16 and F-18 fighter aircraft deliveries that were not a direct consequence of the war effort, also ended in late 1993. Only the continuation of Egypt's F-16 delivery program through 1994 checked the downward trend. Partly offsetting these decreases was a small step-up in deliveries to Asia that occurred amid the buildup in tensions surrounding North Korea's nuclear programs and the potential of a shrinking American presence in the region.

Direct defense expenditures abroad were \$10.6 billion in 1994, down sharply from \$12.2 billion in 1993 and down for the fourth consecutive year. Expenditures for contractual services, personnel, and pay to foreign nationals were all down, as U.S. bases continued to be closed in Western Europe, mainly in Germany, and troops returned to the United States. The drawdown, which is now approaching the size initially projected when reductions began in 1990, is nearly complete. (This drawdown did not affect troops in South Korea and in Japan. In addition, the Japanese Government has taken on covering the cost of Japanese employees at U.S. military installations as part

of its defense-burden-sharing agreement with the United States.)

Investment income

The balance on investment income shifted to a deficit of \$15.2 billion in 1994 from a surplus of \$3.9 billion in 1993. As recently as 1990, there was a surplus on investment income of \$20.7 billion. Much of the shift in 1994 was attributable to direct investment (table D).

Direct investment income.—Receipts of income on U.S. direct investment abroad were \$66.6 billion in 1994, up from \$57.5 billion in 1993 (table M, chart 8). The increase reflected economic recovery from the 1993 recessions in the major countries of continental Europe and in Japan, as well as reductions in major restructur-

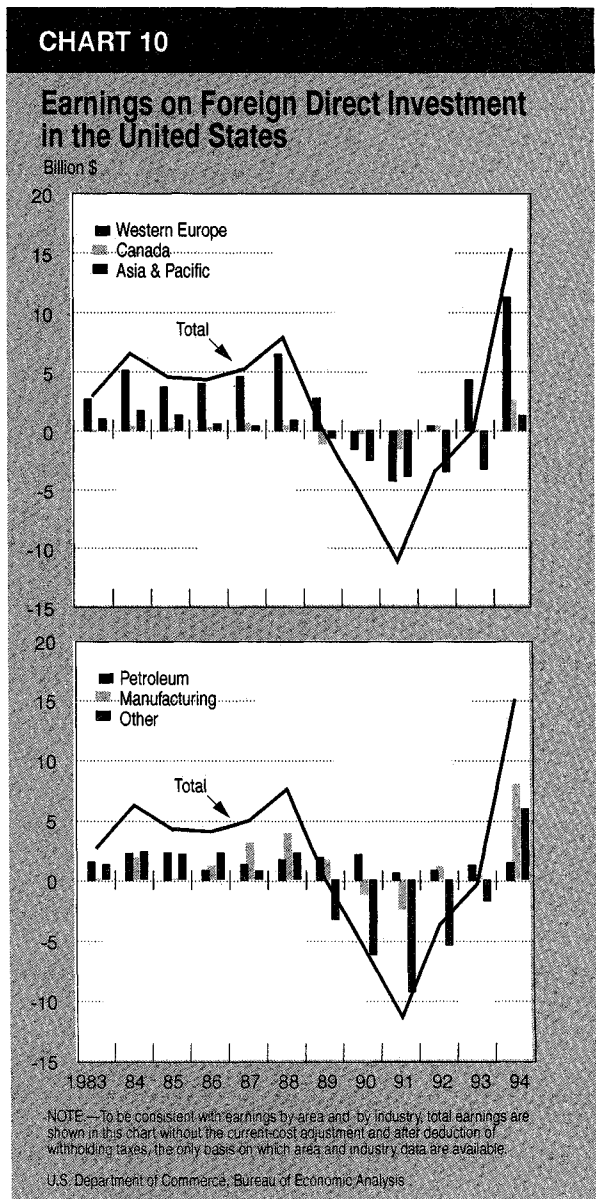

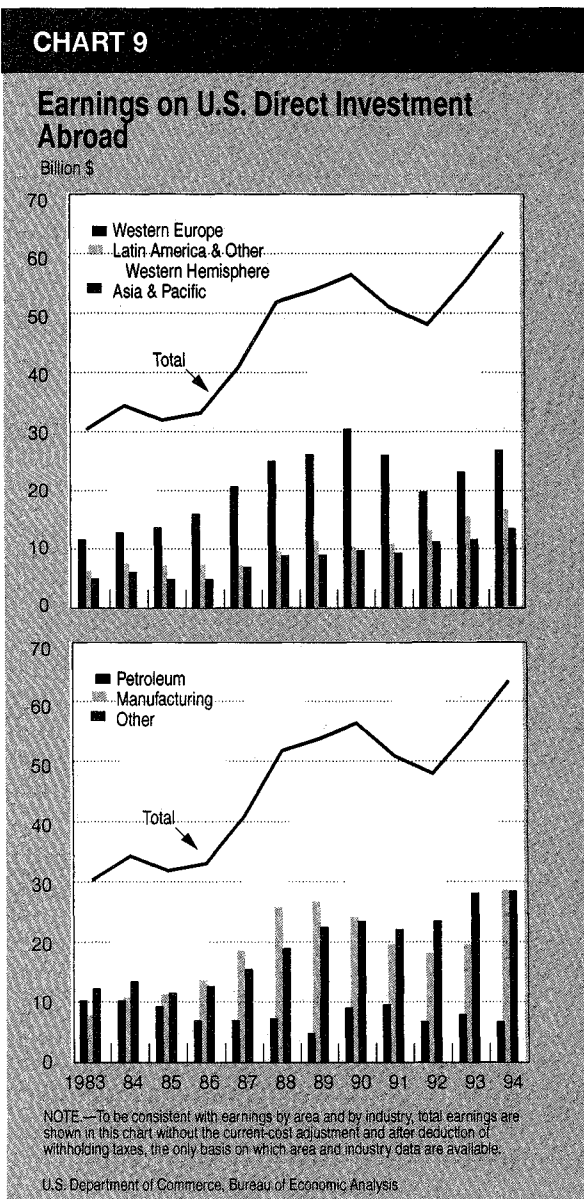

ing charges against income for affiliates located in those countries.

Earnings for affiliates in Canada and the United Kingdom combined recovered strongly in 1993 and, when combined with the increase in earn-

NOTE.—Excludes direct investment income receipts and payments.

ings in Latin America (primarily Brazil), more than offset declining earnings in continental Europe and Japan that were attributable to recessions in those countries. By 1994, earnings in continental Europe and Japan turned up as the recessions ended, and earnings in Canada and the United Kingdom combined continued to rise. By industry, earnings of banking and finance affiliates were particularly strong in 1993 as a result of increased activity in banking and securities markets. In 1994, manufacturing earnings accounted for all of the increase in total earnings (chart 9).

Payments of income on foreign direct investment in the United States were \$25.2 billion in 1994, up from \$5.1 billion in 1993 (table M). The step-up was the result of a shift in earnings to profits of \$15.2 billion from a loss of \$1.0 billion; exceptionally strong increases occurred in manufacturing (especially computers, semiconductors, metals, and chemicals), as well as in wholesale trade and banking. This level of profits far exceeded the previous peak of \$6.8 billion in 1988. In addition, interest payments increased to \$10.0 billion from \$6.2 billion. The increase in interest payments reflected, in addition to higher interest payments on intercompany debt, increased interest payments on swap transactions, especially in the fourth quarter.

Earnings have responded to 3 years of growth in the U.S. economy. Losses in 1991 of affiliates of European parents quickly turned to profits in 1992—the first year after the U.S. recession—and accelerated strongly in 1993–94. However,

continued heavy losses in 1992–93 by affiliates of Japanese parents (largely concentrated in real estate and service industries, such as hotels) kept total earnings for all affiliates negative in those years, both because affiliates took large restructuring charges against income and because recoveries in these industries were slow. By 1994, earnings of Japanese affiliates showed only small profits. By industry, earnings of wholesale (which includes some automotive manufacturing), banking, and retail affiliates have shown the greatest response to 3 years of expansion in U.S. economic activity, while real estate and service industries continued to show very sizable losses (chart 10).

Portfolio investment income.—Receipts of income on other private investment increased to \$64.2 billion in 1994, up from \$51.3 billion in 1993 (table N, chart 8). The increase was due to higher receipts on bank and nonbank claims, reflecting sharply higher interest rates. Strong U.S. demand for foreign securities, though substantially less than in 1993, led to higher interest and dividend receipts.

Receipts of income on U.S. Government assets decreased to \$4.0 billion from \$5.1 billion, mostly as a result of lower holdings of foreign currencies (table O).

Payments of income on other private investment increased to \$77.8 billion in 1994, up from \$63.2 billion in 1993. Most of the rise was attributable to higher payments on bank and nonbank liabilities, reflecting higher interest rates

^r Revised.^P Preliminary.

and larger liabilities outstanding. Strong foreign demand for U.S. securities, though somewhat less than in 1993, led to higher interest and dividend payments.

Payments of income on U.S. Government liabilities increased to \$47.0 billion from \$41.6 billion, reflecting both higher interest rates and larger liabilities outstanding (table O).

Unilateral transfers

Net unilateral transfers were \$34.1 billion in 1994, compared with \$32.1 billion in 1993. Nearly all of the increase was attributable to private remittances and other transfers, which were boosted by higher net tax payments. U.S. Government grants were slightly lower. Disbursements fell for some programs and rose for others, including those for debt forgiveness (primarily to Poland and Jordan) (table O).

Capital Account

Net recorded capital inflows—that is, net changes in U.S. assets abroad less net changes in foreign assets in the United States—increased to \$188.9 billion in 1994 from \$82.8 billion in 1993. In 1994, increases in foreign assets in the United States were sharply higher, especially for U.S. bank liabilities and for foreign direct investment. Increases in U.S. assets abroad slowed, largely as a result of sharply lower net U.S. purchases of foreign securities.

U.S. assets abroad

U.S. assets abroad increased \$125.7 billion in 1994, compared with an increase of \$147.9 billion in 1993. The slowdown was more than accounted for by sharply lower outflows for net U.S. purchases of foreign securities.

U.S. official reserve assets.—U.S. official reserve assets decreased \$5.3 billion in 1994, following an increase of \$1.4 billion (table C). The decrease in 1994 was more than accounted for by intervention sales of German marks and Japanese yen in exchange markets (\$3.5 billion in German marks and \$2.6 billion in Japanese yen) when the U.S. dollar was under heavy pressure in the second and fourth quarters. Other transactions in foreign currencies included the liquidation of Swiss franc, French franc, and British pound holdings in the second quarter.

U.S. Government assets other than official reserve assets.—U.S. Government assets other than official reserve assets increased \$0.3 billion in

1994, unchanged from last year's increase. U.S. Government credits and other long-term assets increased \$5.2 billion, down from a \$6.1 billion increase. Disbursements for most loan programs were lower, as were disbursements for debt reschedulings. Disbursements were augmented by \$0.8 billion in new credits to the Government of the Russian Federation, representing the consolidation and rescheduling of certain debts that the former Soviet Union owed to the U.S. Government (table O). Similar transactions occurred in 1993.

U.S. Government short-term assets reflected the acquisition from U.S. banks of outstanding claims on the former Soviet Union over the course of the year, and their consolidation and rescheduling as a new U.S. Government long-term credit in the fourth quarter.

Claims reported by U.S. banks.—U.S. claims on foreigners reported by U.S. banks increased \$2.0 billion in 1994, compared with a \$32.2 billion decrease in 1993 (tables P and Q).

Banks' own claims payable in dollars decreased for the third consecutive year, but the reduction in 1994 was one-fourth that in either 1992 or 1993. The smaller reduction in 1994 reflected a turnaround in financial and economic conditions abroad, particularly in the second half of the year, when economic recoveries were well under way in most foreign countries. Nonetheless, foreign economies operated well short of output potentials, limiting the demand for funds, including U.S. bank credit.

Rapidly rising U.S. interest rates were also a deterrent to borrowing in the United States. U.S. rates were lower than foreign rates early in the year, but by yearend, they exceeded foreign rates, and funds were available more cheaply in banking and securities markets abroad.

Finally, the shift away from traditional bank intermediation into securities continued strongly in 1994. Securities markets abroad, particularly the Euro medium-term note market, were important sources of short- and intermediate-term funds for foreign borrowers in 1994, even more so than in 1993. Despite the substantial rise in borrowing rates, borrowing from these facilities grew rapidly in 1994.

Interbank claims increased \$8.1 billion, compared with a \$28.9 billion decrease. Most lending was by foreign-owned banks in the United States to unaffiliated banks in Western Europe, Japan, and Mexico to support brief periods of midyear and yearend credit demand. U.S.-owned banks

provided only limited funds to their affiliated offices in the Caribbean.

Claims on foreign public borrowers and other private foreigners decreased \$12.1 billion, following a \$12.7 billion increase. A reduction in claims on foreign public borrowers in Brazil resulted largely from debt-restructuring programs.

Banks' customers' claims increased \$11.3 billion, following a decrease of \$13.4 billion. The increase occurred mostly in the fourth quarter, when U.S. nonbanks sharply stepped up their level of overnight deposits with Caribbean branches of U.S. banks; these deposits were largely re-lent to U.S.-owned banks to finance domestic (U.S.) loan expansion. This increase in U.S. banks' claims was partly offset by a decrease in placements of foreign commercial paper in the U.S.

market that was due to a more rapid rise in U.S. rates than in foreign rates; placements decreased \$10.7 billion, compared with a decrease of \$0.4 billion.

Banks' own claims payable in foreign currencies decreased \$5.2 billion, compared with a \$2.6 billion decrease. Lending in the first quarter, when the dollar fell sharply in exchange markets, was mostly to Japan; these loans were largely repaid in the second quarter. There was little lending in foreign currencies in the last half of the year.

Foreign securities.—Net U.S. purchases of foreign securities dropped sharply to \$60.6 billion from the exceptionally high \$120.0 billion reached in 1993. Net purchases of foreign bonds accounted

for two-thirds of the drop, and stocks for one-third (table P and chart 11).

Net U.S. purchases of foreign bonds dropped sharply to \$17.6 billion from \$59.4 billion. Most of the drop was the result of a large shift to net sales of \$26.9 billion of British (mainly gilt-edged) bonds from net purchases of \$39.6 billion. The drop was partly offset by larger net purchases of outstanding bonds from other countries. Sharply higher interest rates resulted in large capital losses on bonds, even when converted into dollars at increasingly favorable exchange rates as the year progressed.

Foreign new bond issues in the United States were \$35.4 billion, down from a record \$46.8 billion in 1993. Despite sharply higher interest rates that contributed to a slowdown in refinancings and a shortening in maturities, this was the second highest volume of new issues ever placed in the United States. There were 239 foreign bond issues placed in the United States in 1994, slightly lower than the 250 issues placed in 1993. Transactions in 1994 were bolstered by an exchange of U.S. bank-held Brazilian loans for

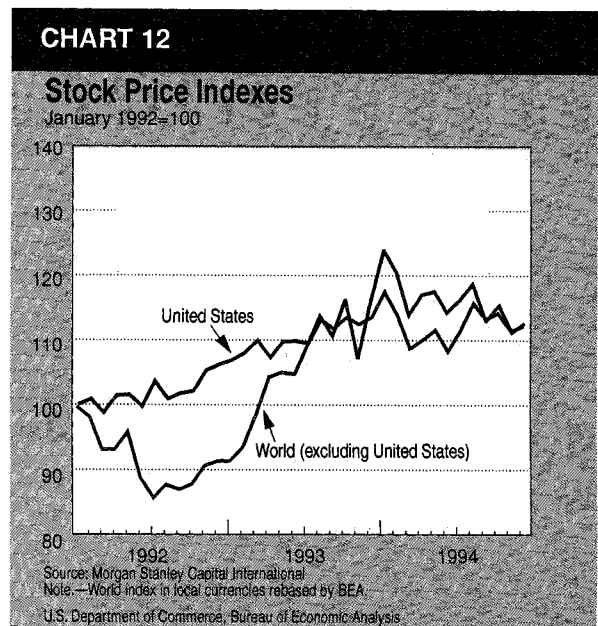

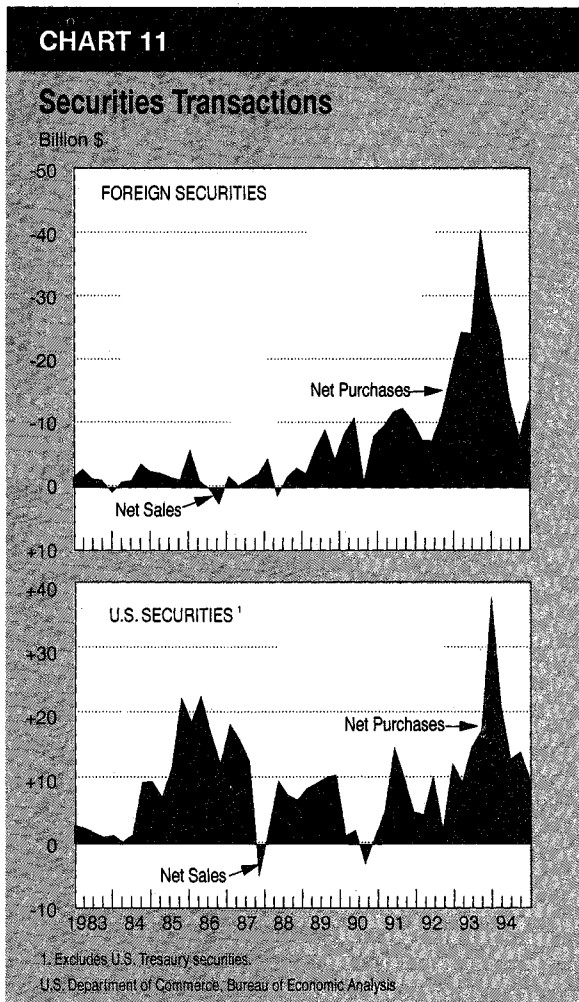

long-term Brazilian bonds as part of a program to restructure Brazilian debt.

Net U.S. purchases of foreign stocks were \$43.0 billion, compared with \$60.6 billion. In contrast to 1993 when foreign stock markets increased especially strongly and outperformed the U.S. market, foreign markets in 1994 were flat or down while the U.S. market changed little. Despite economic recovery in industrial countries, stock prices abroad were held down by sharply higher interest rates and uncertainties about anticipated rates of inflation—the same factors that held down stock prices in the United States (chart 12).

More than half of the decline in net U.S. purchases was with Western Europe, where markets dropped 5–10 percent. Despite these declines, the appreciation of most European currencies against the dollar permitted U.S. holders to offset many of the losses when converted into dollars. The sharp rise in holdings of Japanese stocks was nearly all attributable to purchases in the first half of the year when Japanese stock prices surged; net purchases slowed in the second half as prices fell.

The emerging markets in Latin America and Asia accounted for the remainder of the decline. Purchases were sharply lower in Argentina and Mexico, where stock prices were down 25 percent and 40 percent, respectively, as well as in Asia, where Hong Kong and Malaysian stock prices were down 31 percent and 21 percent, respectively.

Direct investment.—Net capital outflows for U.S. direct investment abroad were \$58.4 billion in 1994, compared with \$57.9 billion in 1993 (table M).

The increase was more than accounted for by a rise in reinvested earnings to \$33.8 billion from \$29.6 billion, reflecting growth in profits, and by an increase in net intercompany debt outflows to \$12.0 billion from \$10.9 billion. In contrast, net equity capital outflows dropped suddenly to \$12.6 billion from \$17.4 billion. The drop was mostly with manufacturing affiliates in Western Europe and reflected a return to more moderate levels of financing of these affiliates after several years of strong outflows. Despite the drop, equity outflows in 1994 included several sizable acquisitions.

Foreign assets in the United States

Foreign assets in the United States increased \$314.6 billion in 1994, compared with an increase of \$230.7 billion in 1993. The step-up in inflows was attributable to sharply higher inflows for foreign direct investment in the United States and to a very large step-up in U.S. liabilities reported by U.S. banks. Increases in foreign official assets slowed.

Foreign official assets.—Foreign official assets in the United States increased \$38.9 billion in 1994, compared with a \$71.7 billion increase in 1993. Dollar assets of industrial countries increased strongly in the first three quarters, then decreased in the fourth; for the year, assets of European countries increased somewhat less than in 1993 (table C). Dollar assets of non-OPEC developing countries increased substantially less than in 1993, but included a large shift to outflows for a single Latin American country in the second and fourth quarters and inflows of about the same size from a single Asian country.

Liabilities reported by U.S. banks.—U.S. liabilities reported by U.S. banks, excluding U.S. Treasury securities, increased \$106.2 billion in 1994, compared with an \$18.5 billion increase in 1993. (tables P and Q).

The exceptional strength of inflows in 1994 was partly attributable to the third year of expansion in the U.S. economy. The related rise in demand for credit, which in 1994 was obtained largely through banks, led to an increase of \$60 billion in commercial and industrial (c&i) loans extended by U.S. banks, in contrast to decreases in c&i loans in the previous 2 years. The reserve base for these loans was obtained mostly from abroad, where supplies of funds in the interbank market were plentiful compared with funds available from domestic deposit sources. Most funds were obtained from banks' own branches abroad.

An additional factor that contributed to inflows, particularly in the first half of the year, was uncertainty in the stock, bond, and foreign exchange markets that accompanied the initial and subsequent actions by the Federal Reserve to tighten bank reserve conditions. These actions led to rapid reassessments, and to considerable differences of opinion, by market participants as to how much interest rates had to rise in order to slow the economy. The uncertainty was evidenced by wide fluctuations in stock, bond, and foreign exchange prices. In this rapidly changing environment, foreign investors shifted their asset composition toward short-term bank deposits from long-term instruments.

Finally, interest-rate differentials against holding U.S. dollar assets narrowed rapidly in the first half of the year and then shifted to positive differentials in favor of U.S. assets in the second half, providing a strong incentive to attract deposits to the United States. By yearend, U.S. deposit rates were as much as 400 basis points above the return on short-term Japanese assets and 100 basis points above the return on German assets. The very substantial flattening of the yield curve also encouraged a shift to short-term assets.

U.S. banks' own liabilities, payable in dollars, increased \$96.6 billion. Inflows from own foreign offices increased \$78.3 billion, and inflows from unaffiliated banks increased \$10.2 billion. In much of 1992 and some of 1993, most inflows

were to foreign-owned banks in the United States; in contrast, more than 85 percent of inflows in 1994 were to U.S.-owned banks, which used the funds to support domestic (U.S.) loan expansion. Inflows were from both affiliated and unaffiliated banks in United Kingdom and Caribbean financial centers.

Banks' own liabilities, payable in foreign currencies, increased \$11.1 billion, compared with a \$4.8 billion increase. Most of the rise was at-

tributable to inflows from Japan. Banks' custody liabilities decreased \$1.6 billion, compared with a \$12.3 billion increase.

U.S. Treasury securities.—Net foreign purchases of U.S. Treasury securities were \$32.9 billion in 1994, compared with net purchases of \$24.8 billion in 1993. Most of the 1994 increase was in the fourth quarter.

Credit-tightening measures led to sharply higher short- and long-term interest rates that

^D Suppressed to avoid disclosure of data of individual companies.

^r Revised.

^P Preliminary.

^{*} Less than \$500,000 (⁺).

1. OPEC members are Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela. Beginning in January 1993, excludes Ecuador. Individual country information

is not available for all accounts; therefore, some accounts are estimated from regional data.

2. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

3. Break in series. See Technical Notes in June 1989 and June 1990 SURVEY.

ated banks in United Kingdom and Caribbean financial centers.

Banks' own liabilities, payable in foreign currencies, increased \$11.1 billion, compared with a \$4.8 billion increase. Most of the rise was attributable to inflows from Japan. Banks' custody liabilities decreased \$1.6 billion, compared with a \$12.3 billion increase.

U.S. Treasury securities.—Net foreign purchases of U.S. Treasury securities were \$32.9 billion in 1994, compared with net purchases of \$24.8 billion in 1993. Most of the 1994 increase was in the fourth quarter.

Credit-tightening measures led to sharply higher short- and long-term interest rates that created large capital losses in bonds and kept demand to moderate levels in the first three quarters of the year. A declining dollar in foreign exchange markets also moderated demand.

By the fourth quarter, however, most price declines had been completed, and the dollar turned up in November and December. Also by this time, the difference between short- and long-term rates on U.S. Government securities had diminished to 15 basis points from more than 200 basis points at the beginning of the year; this reduction made 2-year bonds especially attractive in relation to long-term maturities and brought rates on short-term maturities to 7.69 percent, their highest level in 4 years. These conditions led to exceptionally strong inflows for the quarter.

By country, British investors made net purchases of \$22.6 billion, mostly in the second half of the year; Japanese investors made net purchases of \$13.7 billion, which were spread throughout most of the year; and Netherlands Antilles investors made net purchases of \$10.1 billion, mostly in the fourth quarter.

Other U.S. securities.—Net foreign purchases of U.S. securities other than U.S. Treasury securities were \$58.6 billion in 1994, down from \$80.1 billion in 1993. Most of the drop was attributable to a decline in stocks; the decline in bonds was limited by record new issues in the Eurobond market (table P and chart 11).

Net foreign purchases of U.S. stocks dropped sharply to \$2.8 billion from a record \$18.6 billion. Sharply higher interest rates led to little net gain in stock prices for the year despite strong corporate earnings growth. Depreciation of the dollar in exchange markets also discouraged purchases. This environment was in marked contrast to that in 1993, when sharply lower interest rates, strong corporate earnings growth, and dollar apprecia-

tion led to steadily rising stock prices and rising net foreign purchases (chart 12).

Net foreign purchases of corporate and other bonds decreased to \$55.8 billion from \$61.5 billion. A record increase in new offshore issues limited the decline in purchases of outstanding bonds.

New bond issues sold abroad by U.S. corporations increased to a record \$40.9 billion from \$33.7 billion. Despite rising and sometimes volatile interest rates, issues were spurred by a large volume of maturing issues and by lower interest rates than were available in the United States. Most of these issues were of relatively short maturity. Straight fixed-rate bonds, Euro medium-term note programs, and floating-rate notes all increased even more strongly than last year. The U.S. dollar remained the most popular currency for new issues; however, issues denominated in Japanese yen were sharply higher. Issues placed by nonbank financial corporations and by banking corporations accounted for most of the increase in offshore issues (table R).

Direct investment.—Net capital inflows for foreign direct investment in the United States were \$60.1 billion in 1994, compared with inflows of \$21.4 billion in 1993 (table M).

Reinvested earnings shifted to inflows of \$7.3 billion from outflows of \$9.4 billion. Negative reinvested earnings, which had begun to diminish in 1992 and 1993 as a result of strong expansion in the U.S. economy, turned positive in 1994 as the expansion continued. Affiliates of Western European parents accounted for most of the higher positive reinvested earnings in 1994. Affiliates of Japanese parents still had negative reinvested earnings, but less so than last year, when Japanese affiliates accounted for over one-half of all negative reinvested earnings.

Net intercompany debt inflows were \$21.2 billion, compared with \$9.1 billion, as foreign parents repaid loans from their U.S. affiliates, particularly loans to finance affiliates.

Net equity capital inflows were \$31.6 billion, compared with \$21.7 billion. For the first three quarters of 1994, inflows were at the same pace as in 1993, but several large acquisitions and numerous mid-sized acquisitions in the fourth quarter pushed equity inflows to an exceptionally high quarterly level. For the year, the United Kingdom accounted for two-thirds (\$6.6 billion) of the step-up. Japan had the next largest step-up (\$2.2 billion), followed by Other Western Europe (\$1.5 billion).

Tables 1 through 10 follow.

See footnotes on page 98.

FOOTNOTES TO U.S. INTERNATIONAL TRANSACTIONS TABLES 1-10

General notes for all tables: P Preliminary. R Revised. *Less than \$500,000 (±) n.a. Not available.

D Suppressed to avoid disclosure of data of individual companies.

Table 1:

- Credits, +; Exports of goods, services, and income; unilateral transfers to United States; capital inflows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets; increase in foreign official assets in the United States.
Debits, -; Imports of goods, services, and income; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets; decrease in foreign official assets in the United States.
- Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2.
- Includes some goods: Mainly military equipment in line 4; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 18; and fuels purchased by airline and steamship operators in lines 7 and 21.
- Includes transfers of goods and services under U.S. military grant programs.
- Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.
- Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
- For all areas, amounts outstanding December 31, 1994, were as follows in millions of dollars: Line 34, 74,335; line 35, 11,051; line 36, 10,039; line 37, 12,030; line 38, 41, 215. Data are preliminary.
- Includes sales of foreign obligations to foreigners.
- Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
- Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
- Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 4.
- Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.
- Conceptually, the sum of lines 70 and 62 is equal to "net foreign investment" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in the "Reconciliation and Other Special Tables" section in this issue of the Survey of Current Business. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the July issue of the Survey).
- Additional footnotes for historical data in June issues of the Survey:
14. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 Survey, p. 27.
15. For 1978-83, includes foreign currency-denominated notes sold to private residents abroad.
16. Break in series. See Technical Notes in the June 1989, June 1990, June 1992, and June 1993 issues of the Survey.

Table 2:

- Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 Survey), except for 1974-81, when they represent transactions values, f.a.s. foreign port of exportation (see June issues of the Survey for historical data). From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" month data supplied by the Census Bureau (see Technical Notes in the December 1985 Survey). Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The seasonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see Technical Notes in the June 1980 Survey, in the June 1988 Survey, and in the June 1991 Survey). Prior to 1983, annual data are as published by the Census Bureau, except that for 1975-80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries.
- Beginning in 1990, the Census Bureau replaced its compiled export statistics with counterpart Canadian import statistics. Similarly, Statistics Canada replaced its compiled export statistics with counterpart U.S. import statistics. This exchange of data has eliminated the need for the inland freight adjustment on U.S. exports, but not on U.S. imports.
- Adjustments in lines A5 and A13, B12, B47, and B82 reflect the Census Bureau's reconciliation of discrepancies between the merchandise trade statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.
- Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 10, line 4 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 10, line 18 (direct defense expenditures).
- Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the Survey for historical data).
- Deduction of foreign charges for repair of U.S. vessels abroad, which are included in tables 1 and 10, line 21 (other transportation); coverage adjustments for special situations in which shipments were omitted from Census data; and the deduction of the value of repairs and alterations to U.S.-owned equipment shipped abroad for repair. Also includes addition of understatement of inland freight in f.a.s. values of U.S. merchandise imports from Canada in 1974-81; deduction of imports from the Panama Canal Zone before October 1, 1979; and for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the Survey for historical data).
- For 1988-89, correction for the understatement of crude petroleum imports from Canada.
- Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2 and 16. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: *Industrial countries*: Western Europe, Canada, Japan, Australia, New Zealand, and South Africa; *Members of OPEC*: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (beginning in January 1993, excludes Ecuador); *Other countries*: Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for some balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates. For all years, "Asia" and "Africa" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."
- Includes the former German Democratic Republic (East Germany) beginning in fourth quarter of 1990. In earlier periods, the German Democratic Republic was included in Eastern Europe.
- Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with New Zealand included as part of "Asia" and South Africa as part of "Africa."
- Includes nuclear fuel materials and fuels.

Table 3:

- Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.
- Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and international organizations in the United States. Payments (imports) include mainly wages of foreign residents temporarily employed in the United States and Canadian and Mexican commuters in U.S. border areas.

Table 4:

- Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93-199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A3 items, part of these military expenditures is applied in lines A40 and A43 to reduce short-term assets previously recorded in lines A38 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A3 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A39 and C9. A third part of line A3, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A34. A fourth part of line A3, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A45.
 - Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.
 - The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.
 - Line A35 includes foreign currency collected as interest and line A40 includes foreign currency collected as principal, as recorded in lines A13 and A14, respectively.
 - Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contrary for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.
 - Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.
 - Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.
- Table 5:**
- Petroleum includes, and manufacturing and "other" industries exclude, the exploration, development, and production of crude oil and gas, and the transportation, refining, and marketing of petroleum products, exclusive of petrochemicals. "Other" industries includes wholesale trade; banking; finance (except banking), insurance, and real estate; services; and other industries—agriculture, forestry, and fishing; mining; construction; transportation, communication, and public utilities; and retail trade.
 - Acquisition of equity holdings in existing and newly established companies, capital contributions, capitalization of intercompany debt, and other equity contributions.
 - Sales (total and partial), liquidations, returns of capital contributions, and other dispositions of equity holdings.
 - Beginning with the second quarter of 1994, payments and receipts of interest related to interest rate swaps between a U.S. affiliate and its foreign parent group are netted and are shown as either a net payment or net receipt. In prior quarters, they are shown on a gross basis. Estimates for prior quarters will be placed on a net basis in June 1995.

Table 6:

- Primarily provincial, regional, and municipal.
 - Largely transactions by International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (IDB).
 - Estimate for scheduled redemptions and identifiable early retirements. Includes estimates based on Canadian statistics for redemptions of Canadian issues held in the United States. Unidentified and nonscheduled retirements appear in line A30.
- Table 7:**
- Deposits (line A5) include other financial claims (line A6) for some countries due to the commingling of these categories in foreign source data.
 - Primarily mortgages, loans, and bills and notes drawn on foreigners.
 - Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
 - Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
 - Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.

Table 8:

- Includes central governments and their agencies and corporations; state, provincial, and local governments and their agencies and corporations; and international and regional organizations.
- U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' accounts may be commingled in some categories. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.
- Commercial paper issued in the U.S. market by foreign incorporated entities; excludes commercial paper issued through foreign direct investment affiliates in the United States.
- Negotiable and readily transferable instruments other than commercial paper, payable in dollars; consists largely of negotiable certificates of deposit.
- Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
- Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
- Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.
- Includes Eastern Europe and international and regional organizations.

Table 9:

- Negotiable certificates of deposit issued by banks in the United States are included in banks' custody liabilities and are separately identified in memorandum line 8. Nonnegotiable certificates of deposit are included in time deposits.
- Includes borrowing under Federal funds or repurchase arrangements, deferred credits, and liabilities other than deposits.
- Mainly negotiable and readily transferable instruments, excluding U.S. Treasury securities.
- Mainly International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB), and the Trust Fund of the International Monetary Fund.
- U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' liabilities may be commingled in some categories. Foreign-owned banks are U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.
- Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
- Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
- Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.
- Includes Eastern Europe and international and regional organizations.

Table 10:

- For footnotes 1-13, see table 1.
- The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal.
- The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.
- Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Also includes taxes withheld, current-cost adjustments associated with U.S. and foreign direct investment, and small transactions in business services that are not reported by country.
- Details not shown separately; see totals in lines 49 and 56.
- Details not shown separately are included in line 61.

FOOTNOTES FOR PAGES C-1 THROUGH C-5

a	Anticipated.	NSA	Not seasonally adjusted.
AR	Annual rate.	p	Preliminary.
c	Corrected.	r	Revised.
©	Copyrighted.	♦	Graph included for this series.
e	Estimated.	§	Major revision—see notes.
*	Later data listed in notes.	◇	End of period.

L,C,Lg,U Cyclical indicator series are classified as L (leading), C (coincident), Lg (lagging), or U (unclassified) at reference cycle peaks, troughs, and overall. Series classifications are shown in parentheses following the series titles.

‡ Cyclical indicator series denoted by ‡ are inverted (i.e., the sign is reversed) for cyclical analysis calculations, including classifications, contributions to composite indexes, and current high values.

† Cyclical indicator series denoted by † are smoothed by an autoregressive-moving-average filter developed by Statistics Canada.

For information on composite indexes and other concepts used in this section, see "Business Cycle Indicators: Upcoming Revision of the Composite Indexes" in the October 1993 SURVEY OF CURRENT BUSINESS and "The Composite Index of Coincident Indicators and Alternative Coincident Indexes" in the June 1992 SURVEY.

References to series in this section use the prefix "BCI-" followed by the series number. Unless otherwise noted, series are seasonally adjusted.

Percent change data are centered within the spans: 1-month changes are placed in the ending month, 3-month changes are placed in the 3d month, 6-month changes are placed in the 4th month, 1-quarter changes are placed in the ending quarter, and 4-quarter changes are placed in the 3d quarter.

Diffusion indexes are defined as the percent of components rising plus one-half of the percent of components unchanged. Diffusion index data are centered within the spans: 1-month indexes are placed in the ending month and 6-month indexes are placed in the 4th month.

High values reached by cyclical indicators in the expansion following the last reference cycle trough (March 1991) are shown in boldface type; high values reached prior to the period shown in the table are listed at the bottom of each page. For inverted series, low values are indicated as highs.

Sources for series in this section are shown on pages C-53 through C-55 in the October 1994 SURVEY.

Page C-1

NOTE.—Major data revisions:

Manufacturing and trade sales in 1987 dollars (BCI-57)—see note for page C-2.

Ratio of manufacturing and trade inventories to sales in 1987 dollars (BCI-77)—see note for page

C-2.

* Preliminary March 1995 values: BCI-32 = 56.7, BCI-19 = 493.15, and BCI-109 = 9.00.

1. Data exclude Puerto Rico, which is included in figures published by the source agency. From August 1992 through April 1994, data include initial claims made under the July 1992 Emergency Unemployment Compensation amendments.

2. Copyrighted. This series may not be reproduced without written permission from the University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248.

3. Excludes BCI-57, for which data are not available.

4. Excludes BCI-77 and BCI-95, for which data are not available.

5. Data beginning January 1994 are based on the revised Current Population Survey and are not directly comparable with data for earlier periods.

Page C-2

NOTE.—Major data revisions:

Average weekly insured unemployment rate (BCI-45) has been revised from 1989 forward to incorporate new source data and new seasonal adjustment factors. For further information, contact the U.S. Department of Labor, Employment and Training Administration, Unemployment Insurance Services, Division of Actuarial Services, Washington, DC 20210.

Sales of retail stores in 1987 dollars (BCI-59) has been revised from 1987 forward to incorporate revisions in current-dollar retail sales. The series on manufacturing and trade sales in 1987 dollars (BCI-57) and the ratio of manufacturing and trade inventories to sales in 1987 dollars (BCI-77) have been revised from 1987 forward to incorporate the revised retail sales data. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

* Preliminary March 1995 value: BCI-32 = 56.7.

1. Data beginning January 1994 are based on the revised Current Population Survey and are not directly comparable with data for earlier periods.

2. Data exclude Puerto Rico, which is included in figures published by the source agency. From August 1992 through April 1994, data include initial claims made under the July 1992 Emergency Unemployment Compensation amendments.

3. Data exclude Puerto Rico, which is included in figures published by the source agency.

4. Copyrighted. This series may not be reproduced without written permission from F.W. Dodge, McGraw-Hill, Inc., 24 Hartwell Avenue, Lexington, MA 02173.

Page C-3

NOTE.—Major data revision: Ratio of manufacturing and trade inventories to sales in 1987 dollars (BCI-77)—see note for page C-2.

* Preliminary March 1995 value: BCI-23 = 344.6.

1. Copyrighted. This series may not be reproduced without written permission from Knight-Ridder Financial Publishing, 30 South Wacker Drive, Suite 1810, Chicago, IL 60606.

Page C-4

* Preliminary March 1995 values: BCI-122 = 101.0, BCI-123 = 90.2, and BCI-85 = 0.08.

1. Copyrighted. This series may not be reproduced without written permission from the University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248.

2. Copyrighted. This series may not be reproduced without written permission from the American Bankers Association, 1120 Connecticut Avenue, NW, Washington, DC 20036.

Page C-5

* Preliminary March 1995 values: BCI-119 = 5.98, BCI-114 = 5.73, BCI-116 = 8.21, BCI-115 = 7.52, BCI-117 = 6.10, BCI-109 = 9.00, BCI-19 (1941-43=10) = 493.15, BCI-19 (1967=100) = 536.4, BCI-748 = 1,163.3, BCI-745 = 347.6, BCI-746 = 902.1, BCI-742 = 1,444.8, BCI-747 = 642.8, BCI-743 = 487.4, BCI-750 = 83.69, BCI-758 = 90.52, BCI-755 = 1.4061, BCI-756 = 4.9756, BCI-752 = 0.6249, BCI-757 = 1,688.99, and BCI-753 = 1.4077.

1. Balance of payments basis: Excludes transfers under military grants and Department of Defense sales contracts (exports) and Department of Defense purchases (imports).

2. Organisation for Economic Co-operation and Development.

3. This index is the weighted-average exchange value of the U.S. dollar against the currencies of the other G-10 countries plus Switzerland. Each country is weighted by its 1972-76 global trade. For a description of this index, see the August 1978 *Federal Reserve Bulletin* (p. 700).

4. This index is compiled by the Center for International Business Cycle Research (CIBCR), Graduate School of Business, Columbia University, New York, NY 10027.

Notes for Pages C-7 Through C-27

The following notes explain general features of the charts that appear in this section:

• Business cycle peaks (P) and troughs (T), as designated by the National Bureau of Economic Research, Inc., are indicated at the top of each chart. The shaded areas represent recessions.

• For each series classified as a cyclical indicator, the timing classifications at peaks, at troughs, and overall are shown in a box adjacent to the title. (L = leading, C = coincident, Lg = lagging, U = unclassified.) A complete list of series titles and sources is shown on pages C-53 through C-55 in the October 1994 SURVEY.

• Arithmetic scales are designated "Scale A." On the same arithmetic scale, equal vertical distances represent equal differences in data. (For example, the vertical distance from 10 to 15 is the same as the distance from 100 to 105.)

• Logarithmic (log) scales are designated L-1, L-2, or L-3 to indicate their relative size. On log scales of the same size, equal vertical distances represent equal percentage changes. (For

example, the vertical distance from 10 to 15 is the same as the distance from 100 to 150.) Compared with an L-1 scale, the same percentage change covers half the distance on an L-2 scale and one-third the distance on an L-3 scale.

• Data are monthly unless otherwise indicated. Quarterly data are indicated by a "Q" following the series title.

• Some series include a centered moving average, which is shown as a heavy line superimposed on the actual monthly data.

• Parallel lines across a plotted series indicate a missing data value, change in definition, or other significant break in continuity.

• The box near the end of each plotted series indicates the latest data month (Arabic numeral) or quarter (Roman numeral) shown or, for series computed over a span of time (diffusion indexes and rates of change), the latest data period used in computing the series.

Index to Historical Data for Selected Series

Some issues of the SURVEY provide historical data for selected Business Cycle Indicators series. The series for which historical data have been shown are listed below by subject, by series number, and by issue. Historical data for additional series will be shown, as space allows, in future issues.

Subject	Series number	Issue	Page	Subject	Series number	Issue	Page
Bank reserves:				Interest rates—Continued:			
Free reserves	93	1/95	C-34	Federal funds rate	119	11/94	C-42
Member bank borrowings from the Federal Reserve	94	1/95	C-34	Mortgage yield, secondary market	118	11/94	C-41
Business formation:				Municipal bond yield	117	11/94	C-41
Current liabilities of business failures	14	11/94	C-30	Treasury bill rate	114	11/94	C-39
Index of net business formation	12	11/94	C-29	Treasury bond yield	115	11/94	C-40
New business incorporations	13	11/94	C-29	International comparisons:			
Business loans:				Consumer price indexes:			
Commercial and industrial loans, current dollars	72	11/94	C-36	Canada (and changes)	733	1/95	C-39
Commercial and industrial loans, 1987 dollars	101	10/94	C-48	Federal Republic of Germany (and changes)	735	1/95	C-40
Net change in business loans	112	11/94	C-38	France (and changes)	736	1/95	C-41
Capacity utilization rates:				Italy (and changes)	737	1/95	C-42
Manufacturing	82	12/94	C-33	Japan (and changes)	738	1/95	C-43
Total industry	124	12/94	C-33	United Kingdom (and changes)	732	1/95	C-38
Capital investment:				Exchange rates:			
Contracts and orders for plant and equipment, 1987 dollars ...	20	10/94	C-38	Canada	753	12/94	C-42
Machinery and equipment sales and business construction expenditures	69	1/95	C-33	Federal Republic of Germany	755	12/94	C-43
Composite indexes:				France	756	12/94	C-43
Coincident indicators (and changes)	920	10/94	C-30-31	Italy	757	12/94	C-44
Lagging indicators (and changes)	930	10/94	C-33-34	Japan	758	12/94	C-44
Leading indicators (and changes)	910	10/94	C-28-29	United Kingdom	752	12/94	C-42
Ratio, coincident index to lagging index	940	10/94	C-35	Weighted-average exchange value of U.S. dollar	750	12/94	C-41
Consumer attitudes:				Industrial production indexes:			
Index of consumer confidence	122	11/94	C-42	Canada	723	12/94	C-35
Index of consumer expectations ¹	123	11/94	C-43	Federal Republic of Germany	725	12/94	C-36
Index of consumer expectations ²	83	10/94	C-43	France	726	12/94	C-36
Index of consumer sentiment	58	11/94	C-34	Italy	727	12/94	C-37
Consumer installment credit:				Japan	728	12/94	C-37
Delinquency rate	39	11/94	C-31	OECD, European countries	721	12/94	C-34
Net change	113	11/94	C-39	United Kingdom	722	12/94	C-35
Ratio, credit to personal income	95	10/94	C-46	Stock price indexes:			
Total outstanding	66	11/94	C-35	Canada	743	12/94	C-39
Diffusion indexes:				Federal Republic of Germany	745	12/94	C-39
Coincident indicator components	951	10/94	C-32	France	746	12/94	C-40
Lagging indicator components	952	10/94	C-34-35	Italy	747	12/94	C-40
Leading indicator components	950	10/94	C-29-30	Japan	748	12/94	C-41
Employment:				United Kingdom	742	12/94	C-38
Average weekly hours, manufacturing	1	10/94	C-36	United States (1967=100)	19	12/94	C-38
Average weekly overtime hours, manufacturing	21	1/95	C-29	Inventories:			
Civilian employment	442	1/95	C-36	Manufacturing and trade, change	31	1/95	C-29
Civilian labor force	441	1/95	C-35	Manufacturing and trade, 1987 dollars	70	11/94	C-35
Diffusion Index of employees on private nonagricultural payrolls	963	1/95	C-44	Ratio, manufacturing and trade inventories to sales, 1987 dollars	77	10/94	C-43
Employee hours in nonagricultural establishments	48	1/95	C-32	Labor cost per unit of output, manufacturing, index (and changes)	62	12/94	C-29-30
Employees in goods-producing industries	40	1/95	C-30	Money supply:			
Employees on nonagricultural payrolls	41	10/94	C-39	Change in money supply M1	85	11/94	C-36
Index of help-wanted advertising	46	11/94	C-32	Change in money supply M2	102	11/94	C-37
Participation rate, both sexes 16-19 years of age	453	1/95	C-37	Money supply M1, 1987 dollars	105	11/94	C-38
Participation rate, females 20 years and over	452	1/95	C-37	Money supply M2, 1987 dollars	106	10/94	C-48
Participation rate, males 20 years and over	451	1/95	C-36	New orders, consumer goods and materials, 1987 dollars	8	10/94	C-37
Persons engaged in nonagricultural activities	42	1/95	C-31	Prices:			
Ratio, civilian employment to population	90	1/95	C-33	Consumer Price Index, all items (and changes)	320	11/94	C-43-44
Housing:				Consumer Price Index for services (and changes)	120	10/94	C-49-50
Index of new private housing units authorized by local building permits	29	10/94	C-38	Index of producer prices for sensitive crude and intermediate materials	98	11/94	C-37
New private housing units started	28	11/94	C-31	Index of sensitive materials prices (and changes)	99	10/94	C-46-47
Income:				Index of spot market prices, raw industrial materials	23	11/94	C-30
Personal income less transfer payments, 1987 dollars	51	10/94	C-40	Sales:			
Personal income, 1987 dollars	52	11/94	C-33	Manufacturing and trade, 1987 dollars	57	10/94	C-41
Ratio, personal income to money supply	108	1/95	C-35	Retail stores, 1987 dollars	59	11/94	C-34
Wages and salaries in mining, manufacturing, and construction, 1987 dollars	53	11/94	C-33	Stock price index, 500 common stocks	19	10/94	C-37
Industrial production indexes:				Unemployment:			
Business equipment	76	12/94	C-32	Average duration in weeks	91	10/94	C-44
Consumer goods	75	12/94	C-32	Average weekly initial claims for unemployment insurance	5	10/94	C-36
Defense and space equipment	557	12/94	C-34	Civilian unemployment rate	43	11/94	C-32
Durable manufactures	73	12/94	C-31	Number of persons unemployed	37	1/95	C-30
Nondurable manufactures	74	12/94	C-31	Ratio, help-wanted advertising to number unemployed	60	1/95	C-32
Total	47	12/94	C-29	Unemployment rate, 15 weeks and over	44	1/95	C-31
Interest rates:				Unfilled orders, durable goods, 1987 dollars (and changes)	92	10/94	C-44-45
Average prime rate charged by banks	109	10/94	C-49	Vendor performance, slower deliveries diffusion index	32	10/94	C-39
Corporate bond yield	116	11/94	C-40				

BEA INFORMATION

BEA's economic information is available in publications, on computer tapes, on diskettes, and through a variety of other products and services. Most of these are described in *A User's Guide to BEA Information*. For a copy, write to the Public Information Office, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230, or call (202) 606-9900.

Recent Publications from GPO

ORDER FROM: Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954. Payment may be by check (made payable to Superintendent of Documents) or charged to a GPO deposit account number, VISA, or MasterCard. Phone (202) 512-1800 or fax (202) 512-2250.

National Income and Product Accounts of the United States. (1992-93) Two volumes. Presents the full set of national income and product accounts (NIPA) estimates for 1929-88 that resulted from the most recent comprehensive, or benchmark, revision. Text describes the statistical conventions used in the NIPAs and the definitions and classifications underlying the accounts.

Vol. 1: 1929-58. 264 pp. \$15.00 (GPO STOCK NO. 003-010-00236-1).

Vol. 2: 1959-88. 424 pp. \$25.00 (GPO STOCK NO. 003-010-00231-0).

Fixed Reproducible Tangible Wealth in the United States, 1925-89. (1993) Contains annual estimates of the stock of privately owned and government-owned durable equipment and structures and of durable goods owned by consumers in the United States for 1925-89. Estimates are for fixed nonresidential private capital by major industry group, for residential capital by tenure group, for government-owned fixed capital by type of government, and for 11 types of durable goods owned by consumers. 460 pp. \$25.00. (GPO STOCK NO. 003-010-00235-2).

Benchmark Input-Output Accounts of the United States, 1987. (1994) Presents summary and detailed make and use tables for industries and commodities; tables showing commodity and industry output requirements per dollar of commodity demanded; and tables showing the input-output (I-O) commodity composition of personal consumption expenditures and producers' durable equipment expenditures in the national income and product accounts. Presents concepts and methods used in the 1987 benchmark accounts; concordance between I-O and 1987 Standard Industrial Classification codes; description of the components of the measures of output, intermediate inputs, and value added; and mathematical derivation of total requirements tables. 468 pp. \$29.00 (GPO STOCK NO. 003-010-00251-4).

Local Area Personal Income, 1969-92. (1994) Presents the estimates of personal income and per capita personal income for 1969-92 for the United States, regions, States, counties, and metropolitan areas. Also presents the Census Bureau's estimates of population that were used in the derivation of per capita personal income. Provides information about the sources and methods used to prepare the estimates for 1987-92 and samples of all the detailed tables of personal income and employment that are available for regions, States, counties, and metropolitan areas. 784 pp. \$41.00. (GPO STOCK NO. 003-010-00249-2).

Foreign Direct Investment in the United States: 1992 Benchmark Survey, Preliminary Results. (1994) Presents preliminary results of BEA's 1992 benchmark survey of foreign direct investment in the United States. Benchmark surveys, which are conducted every 5 years, are BEA's most comprehensive surveys in terms of both coverage of companies and subject matter. The publication presents information on the financial struc-

ture and operations of U.S. affiliates of foreign direct investors, including data for items—such as employment covered by collective bargaining agreements and merchandise trade by product and country of destination or origin—that are collected only in benchmark survey years. Data are classified by industry of U.S. affiliate, by country of ultimate beneficial owner, and, for selected data, by State. 124 pp. \$7.50 (GPO STOCK NO. 003-010-00248-4).

Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies, Revised 1991 Estimates. (1994) Presents revised results for 1991 from BEA's annual survey covering the financial structure and operations of nonbank U.S. affiliates of foreign direct investors. Data are classified by industry of U.S. affiliate, by country and industry of ultimate beneficial owner, and, for selected data, by State. 92 pp. \$6.00 (GPO STOCK NO. 003-010-00246-8).

Foreign Direct Investment in the United States: Establishment Data for 1987. (1992) A joint effort by BEA and the Bureau of the Census, this publication provides new data on operations of U.S. affiliates of foreign direct investors in much greater industry detail than has been available in the past. Over 800 4-digit SIC industries are covered. Presents the number, employment, payroll, and shipments or sales of the establishments. Data are disaggregated by industry, by State, and by country of ultimate beneficial owner. 696 pp. \$36.00 (GPO STOCK NO. 003-010-00228-0).

Foreign Direct Investment in the United States: Establishment Data for Manufacturing, 1991. (1994) A joint effort by BEA and the Bureau of the Census, this is the latest in a series of publications that present new data for foreign-owned U.S. manufacturing establishments (plants), including data on their number, value added, shipments, employment, total employee compensation, employee benefits, hourly wage rates of production workers, cost of materials and energy used, inventories by stage of fabrication, and expenditures for new plant and equipment. The data are disaggregated by detailed industry (up to 459 industries), by State, and by country of investor. 220 pp. \$14.00 (GPO STOCK NO. 003-010-00250-6). *Also available in this series are publications presenting data for: 1990, 216 pp. \$14.00 (GPO STOCK NO. 003-010-00242-5); 1989, 204 pp. \$13.00 (GPO STOCK NO. 003-010-00243-3); and 1988, 204 pp. \$13.00 (GPO STOCK NO. 003-010-00244-1).*

U.S. Direct Investment Abroad: 1989 Benchmark Survey, Final Results. (1992) Presents final results of the latest benchmark survey of the worldwide operations of U.S. multinational companies. Contains detailed 1989 data on the financial structure and overall operations of U.S. parent companies and their foreign affiliates in 263 tables organized by industry of parent or by country and industry of affiliate. Also contains a complete methodology and copies of survey forms and instructions. 448 pp. \$25.00 (GPO STOCK NO. 003-010-00234-4).

U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates. (1994) Two publications containing results for 1991 and 1992 from BEA's annual survey of the worldwide operations of U.S. multinational companies. Contains information on the financial structure and operations of U.S. parent companies and their foreign affiliates. Data are classified by country and industry of affiliate and by industry of U.S. parent. 100 pp. \$6.50 each. *Preliminary 1992 Estimates: GPO STOCK NO. 003-010-00245-0; Revised 1991 Estimates: GPO STOCK NO. 003-010-00247-6.*
