## JUNE 1994 . $\wp$ VOLUME 74 NUMBER <br> 

## Survey of Currentr Business

U.S. DEPARTMENT OF COMMERCE. $\sim$ ECONOMICS AND STATISTICS ADMINISIRATION BUREAU OF ECONOMIC ANAIYSIS

# Survey of Current Business 

Survey of Current Business. Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, Survey of Current Business, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Subscriptions to the Survey of Current Business are maintained, and their prices set, by the Government Printing Office, an agency of the U.S. Congress. Send correspondence on circulation and subscription matters (including address changes) to:

Superintendent of Documents,
U.S. Government Printing Office,

Washington, DC 20402.
Make checks payable to the Superintendent of Documents.
Subscription and single-copy prices:
Second-class mail: $\$ 34.00$ domestic, $\$ 42.50$ foreign.
First-class mail: $\$ 71.00$.
Single copy: \$9.00 domestic, $\$ 11.25$ foreign.

Second-class postage paid at Washington, DC and at additional mailing offices. (UsPs 337-790).
The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department.

U.S. Department of Commerce<br>Ronald H. Brown, Secretary

## Economics and Statistics Administration

Bureau of Economic Analysis
Carol S. Carson, Director
I. Steven Landefeld, Deputy Director

## Editor-in-Chief: Douglas R. Fox Managing Editor Leland L. Scolt

Publication Staff: W. Ronnie Foster, M. Gretchen Gibson, Ernestine T. Gladden, Eric B. Manning, Donald I. Parschalk

THis issue of the Survey went to the printer on July in, 1994
It incorporates data from the following monthly Bea news releases:
Gross Domestic Product (June 29),
Personal Income and Outlays (June 30), and
Composite Indexes of Leading, Coincident, and Lagging Indicators (July i).

# TABLE OF CONTENTS 

## $S_{\text {pecial in this issue }}$

> 30 Residential Construction From a Long-Run Perspective
> Over long timespans, demographic factors play the dominant role in determining the number and types of new housing units constructed: Net household formation and the number of housing starts were both higher in the 197o's than in the 1960's and 1980's. Economic factors play a role in determining the size and quality of housing units: In the late 1970's, housing investment was heavily influenced by prospective capital gains, and in the 1980's, by affordability.

79 U.S. International Transactions, Revised Estimates for 1984-93
This annual revision of the balance of payments accounts extends BEA's efforts to address gaps in coverage that have arisen from dynamic changes in global financial markets. Large revisions in the capital account result from expanded use of foreign source data that capture U.S. residents' direct transactions with foreign banks, many of which bypass the existing U.S. data collection system.

## $R_{\text {egular features }}$

## 1 Business Situation

Real GDP increased 3.4 percent in the first quarter of 1994. Real GNP increased 3.5 percent, and real GNP on a command basis increased 4.0 percent. Corporate profits decreased $\$ 29.9$ billion; the decrease was attributable to the effects of the Northridge earthquake.

> 42 U.S. Multinational Companies: Operations in 1992
> Growth in the overall operations of U.S. multinational companies was generally stronger in 1992 than in 1991: Growth in both assets and sales picked up, but employment decreased slightly for the third consecutive year. The pickup in assets and sales was due to stronger U.S. parent operations; growth in foreign affiliate operations slowed.

63 The International Investment Position of the United States in 1993
The net international investment position of the United States at market value became less negative in 1993, totaling $-\$ 507.7$ billion, while the position at current cost became more negative, totaling $-\$ 555.7$ billion. Large net capital inflows continued. Positive valuation adjustments only partly offset these inflows on a current-cost basis; on a market-value basis, they more than offset these inflows because of substantial price gains in U.S. direct investment abroad, reflecting a sharp upswing in foreign stock prices.

- Continued on next page -

# 72 Direct Investment Positions on a Historical-Cost Basis, 1993: Country and Industry Detail <br> The U.S. direct investment position abroad valued at historical cost increased 10 percent in 1993, driven by record capital outflows. The increase was spread among all major geographic areas, with about half of it coming in Europe. The foreign direct investment position in the United States at historical cost increased 5 percent. The increase was fully accounted for by European investors, whose position rose 8 percent. 

## 86 U.S. International Transactions, First Quarter 1994 <br> The U.S. current-account deficit increased $\$ 1.3$ billion, to $\$ 31.9$ billion, in the first quarter of 1994. An increase in the deficit on goods and services was partly offset by lower net unilateral transfers and by a small decrease in the deficit on investment income.

## LOOKING AHEAD

- Annual Revision of the National Income and Product Accounts. An article presenting revised NIPA estimates and discussing major sources of the revisions will appear in the July Survey. The revisions will cover the 3 -year period beginning with the first quarter of 1991. Selected data will be available as of July 29 . For more information on the presentation of the nipa revisions, see the box on page 3 in this issue.
* U.S. Affiliates of Foreign Companies: Benchmark Survey Results. The preliminary results of bea's latest benchmark survey of foreign direct investment in the United States, covering 1992, will be presented in the July Survey. The benchmark survey is BEA's most comprehensive survey of the operations of foreign-owned U.S. companies in terms of both coverage and subject matter.

# THE BUSINESS SITUATION 

Larry R. Moran prepared the first section of this article, and Daniel Larkins prepared the section on corporate profits.

Tr HE "FINAL" estimate of growth in real gross domestic product (GDP) for the first quarter of 1994 is 3.4 percent, 0.4 percentage point higher than the "preliminary" estimate reported in the May Survey of Current Business (table 1). ${ }^{1}$ By

|  |  |  |  |  |

component, the largest revisions were in personal consumption expenditures ( PCE ) for services, up $\$ 5.2$ billion, and in exports of services, down $\$ 4.2$ billion. These revisions primarily reflected the incorporation of revised balance of payments estimates for expenditures in the United States by nonresidents. ${ }^{2}$ In exports, expenditures in the United States by nonresidents on hotels, meals, entertainment, transportation, and other services were revised down by $\$ 3.0$ billion; this revision was offset by a corresponding upward revision in PCE services. ${ }^{3}$ Among other components of GDP, fixed investment and change in business inventories were revised up. The upward revision in fixed investment was widely spread among major components, with the largest revision in nonresidential structures. The upward revision in the

[^1]change in business inventories was primarily in nonfarm inventories.
The final estimate of real gross domestic purchases shows a 4.9 -percent increase, 0.7 percentage point higher than the preliminary estimate.
The final estimates of the fixed-weighted price indexes for gross domestic purchases and for GDP show increases of 2.6 percent and 3.2 percent, respectively, little changed from the preliminary estimates.

Gross national product (GNP).-Real GNP increased 3.5 percent in the first quarter (chart 1 , table 2). GNP equals GDP plus receipts of factor income from the rest of the world less payments of factor income to the rest of the world. In the first quarter, receipts increased $\$ 2.4$ billion, and payments increased $\$ 1.5$ billion. Profits more than accounted for the increase in payments and accounted for two-thirds of the increase in receipts; interest income accounted for the rest of the increase in receipts.

Real GNP on a command basis increased more than real GNP- 4.0 percent, compared with 3.5 percent-reflecting an improvement in the terms

of trade. ${ }^{4}$ In the fourth quarter, command-basis GNP increased slightly less than real GNP-6.1 percent, compared with 6.2 percent-reflecting a slight deterioration in the terms of trade.

## Corporate Profits

Profits from current production-profits before tax plus inventory valuation adjustment and capital consumption adjustment-decreased $\$ 29.9$ billion in the first quarter after increasing $\$ 39.4$ billion in the fourth (table 3). The decrease can be traced to the Northridge earthquake, which struck southern California on January 17:

[^2]Table 3.-Corporate Profits

Levels of these and other profits series are found in tables $1.14,1.16,6.16 \mathrm{C}$, and 7.15 of the "Selected NIPA Tabies."

IVA Inventory valuation adjustment
CCAdI Capital consumption adjustment

Earthquake-related benefits paid by insurance companies reduced their profits about $\$ 22$ billion, and earthquake-related damage to corporate equipment and structures that was not offset by insurance benefits reduced profits of all industries about $\$ 8$ billion.

A large decrease in profits from the domestic operations of financial corporations mainly reflected benefits paid by insurance carriers as a result of the earthquake. A much smaller decrease in profits from the domestic operations of nonfinancial corporations reflected a decrease in unit profits; a rise in unit nonlabor cost largely reflected losses of fixed capital in the earthquake. Profits from the rest of the world decreased slightly.

Cash flow from current production, a profitsrelated measure of internally generated funds available to corporations for investment, decreased $\$ 6.0$ billion after increasing $\$ 15.7$ billion. As a result of the decrease in cash flow and an increase in nonresidential fixed investment, the ratio of cash flow to nonresidential investment was reduced to 82.7 percent from 85.2 percent. The ratio has been drifting down from its peak of 93.8 percent in the first quarter of 1992, but it is still higher than it was in the 1980's.

Related measures.-Industry profits are measured by profits before tax (pвt) with inventory valuation adjustment (iva) because estimates of the capital consumption adjustment by industry do not exist. Like profits from current production, this measure of profits dropped sharply in the first quarter after a sharp increase in the fourth. Virtually all of the drop in PBT
with iva was accounted for by financial corporations; property and casualty insurance carriers accounted for most of the drop, but commercial banks and savings and loan associations also contributed. Profits of nonfinancial corporations changed little, as decreases in trade and in the transportation and public utilities group were almost entirely offset by increases in manufacturing and in "other" nonfinancial industries. The decrease in trade profits was more than accounted for by nonfood retail stores; the decrease in profits of the transportation and public utility group was mitigated by increased profits of communications companies, which are included in this group. The increase in manufacturing profits reflected substantially higher profits in motor vehicles and in food; these higher profits were partly offset by substantially lower profits in petroleum.

In profits from the rest of the world, receipts of profits from foreign affiliates of U.S. corporations increased $\$ 2.8$ billion, and payments of profits by U.S. affiliates of foreign corporations increased $\$ 3.5$ billion. Manufacturing affiliates contributed to both increases. Petroleum affiliates contributed to the increase in payments but not to the increase in receipts. Receipts and payments from "other" affiliates decreased.

PBT decreased $\$ 14.2$ billion. The difference between this decrease and the $\$ 29.9$ billion decrease in profits from current production mainly reflected a decrease in the iva. The iva, an estimate of inventory profits with the sign reversed, decreased $\$ 11.9$ billion. The increase in inventory profits reflected an increase in prices of inventoried goods.

## Annual Revision of the NIPA's: Presentation of Revised Estimates and Related Information

#### Abstract

An article presenting the revised national income and product accounts (NIPA) estimates for the 3 -year period beginning with the first quarter of 2991 and discussing major sources of revisions will appear in the July Survey of Current Business. The July issue will contain the five summary accounts of the nIPA's; a complete list of NIPA tables; the full set of NIPA tables, except for the government expenditures by type and function tables and the government reconciliation tables (tables 3.15-3.20), the seasonally unadjusted tables (tables 9.1-9.6), and the alternative quantity and price measures that appear in tables 7.1-7.9, 7.11-12, and 8.1; and the NIPA index.

The August Survey will contain the alternative quantity and price measures for the first quarter of 1988 through the second quarter of 1994. It will also present revised estimates of fixed reproducible tangible wealth in the United States for 1991-93, as well as summary estimates for $1925-93$.

The September Survey will contain nipa tables 3.153.20 and $9.1-9.6$, as well as the summary NIPA tables for 1929-93. It will also present revised constant-dollar inventories, sales, and inventory-sales ratios for manufacturing and trade beginning with the first quarter of 1991.

The October Surver will contain estimates of gross product originating by industry for 1991-92.

In addition, the revised NIPA estimates will be made available on printouts, computer tape, and diskettes; for order information, write to the National Income and Wealth Division (be-54), Bureau of Economic Analysis, Washington, DC 20230 or call (202) 606-5304. The revised estimates will also be placed on the U.S. Department of Commerce's Economic Bulletin Board; for information, call the Office of Business Analysis at (202) 482-1986.

## NATIONAL INCOME AND PRODUCT ACCOUNTS

## Selected NIPA Tables

New estimates in this issue: "Final" estimates for the first quarter of 1994.
The selected set of national income and product accounts (NipA) tables shown in this section presents quarterly estimates, which are updated monthly. (In most tables, the annual estimates are also shown.) These tables are available on the day of the gross domestic product (GDP) news release on printouts and diskettes on a subscription basis or from the Commerce Department's Economic Bulletin Board. For order information, write to the National Income and Wealth Division (be-54), Bureau of Economic Analysis, Washington, dC 20230 or call (202) 606-5304.

Tables containing the estimates for 1929-87 are available in the two-volume set National Income and Product Accounts of the United States, see inside back cover for order information. For 1988-92, the complete official time series of NIPA estimates can be found as follows:

|  | 1988 | 1989 | 1990-92 |
| :---: | :---: | :---: | :---: |
| Most tables................... | NIPA'S, vol. 2 | July 1992 Survey | Aug. 1993 Surver |

| Tables 7.3-7.12............... . | Apr. 1993 Survey | Apr. 1993 Survey | " |

Summary nipa series back to 1929 are in the September 1993 Surver. Errata to published nipa tables appear in the September 1992, April 1993, October 1993, and March 1994 issues. nips tables are also available, most beginning with 1929, on diskettes or magnetic tape. For more information on the presentation of the estimates, see "A Look at How bea Presents the nipa's" in the February 1994 Survey.

Note.-This section of the Survey is prepared by the National Income and Wealth Division and the Government Division.

1. Exports of goods and services and receipts of factor income deflated by the implicit price deflator for imports of goods and services and payments of factor income.
2. Ratio of the implicit price deffator for exports of goods and services and receipts of factor income to the corresponding impicit price deflator for imports with the decimal point shitted two places to the right. NoTE.-Percent changes from preceding period for selected items in this table are shown in table 8.1.

NOTE.-The quantily and price indexes in this table are calculated from weighted averages of the detaled output and prices used to prepare each aggregate and component. The fixed-weighted measures use as weights the composition of output in 1987. For the altemative indexes, the chain-type indexes with annual weights use weights for the preceding and current years, and the indexes with benchmark-years weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, and 1987 and the most recent year. Percent changes from preceding period for selected items in this table are shown in table 8.1.

Table 7.2.-Fixed-Weighted and Alternative Quantity and Price Indexes for Gross Domestic Product, Final Sales, and Purchases
[Index numbers, 1987=100]

1. Equals GDP less change in business inventories.
2. Equals GDP less net exports of goods and services or equals the sum of personal consumption expenditures, gross private domestic investment, and government purchases.
3. Equals gross domestic purchases less change in business inventories or equals the sum of personal consumption expenditures, gross private domestic fixed investment, and government purchases. NOTE.-Percent changes from preceding period for selected items in this table are shown in table 8.1.

NOTE.-Except for disposable personal income, the quantity and price indexes in this table are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. The fixedweighted measures use as weights the composition of output in 1987. For the alternative indexes, the chain-type indexes with annual weights use weights ior the preceding and curient years, and the indexes with benchmarkyears weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, and 1987 and the most recent year.

Preliminary.
Revised.

1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and
definitions used to prepare BEA's international and national accounts.
2. Contains goods that cannot be separately identified.

## Constant-Dollar Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade

Tables 1, 2, and 3 present quarterly and monthly constant-dollar inventories, sales, and inventory-sales ratios, respectively. Table 4 presents quarterly fixed-weighted constant-dollar inventory-sales ratios-that is, ratios obtained by weighting detailed industry ratios by 1987 sales. Table 5 presents quarterly and monthly inventories for manufacturing by stage of fabrication.

## Data Availability

Quarterly constant-dollar estimates for manufacturing and trade inventories, sales, and inventory-sales ratios for 1977-89 were published in the January 1993 Survey of Current Business; estimates for 1990-92 were published in the September 1993 Survey. Quarterly and monthly constant-dollar estimates for 1967-93, as well as constant-dollar manufacturing inventories by stage of fabrication, are available on printouts, diskette, and computer tape. To order, write to the National Income and Wealth Division, be-54, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230. Specify Constant-Dollar Manufacturing and Trade Inventories, Sales, and Ratios (Accession No. BEA 54-90-21-205 for printouts, BEA 54-91-40-409 for diskette, or BEA 54-85-01-004 for computer tape), and include a check or money order for $\$ 55.00$ for printout, $\$ 20.00$ for diskette, or $\$ 100.00$ for computer tape, payable to the Bureau of Economic Analysis. To order by telephone, call (202) 606-5304; MasterCard and visa are accepted.

# Residential Construction From a Long-Run Perspective 

By Albert A. Hirsch

Frank de Leeuw, formerly bea's. Chief Statistician, provided helpful comments on an earlier draft of this article.

Mоst discussions about housing construcM tion focus on the short run. That is to be expected, as homebuilding is a cyclically sensitive component of economic activity. Primarily, fluctuations in housing construction have been linked with financial conditions that accompany booms and recessions; specifically, fluctuations in housing construction have been linked with fluctuations in mortgage interest rates and, up to 1979, credit availability. Secondarily, cyclical variations in real disposable personal income and consumer confidence have figured in the timing of the demand for new housing. These aspects, together with the effects of substantial changes in Federal housing subsidies and of pertinent new tax legislation, dominate the current analysis of housing markets and construction activity.

This article examines residential construction from a long-run perspective. From this perspective, demographic factors play a dominant role. Ultimately, the size of the housing stock excluding second homes, in numbers of units, is determined by the number of households. ${ }^{1}$ The number of households is, in turn, strongly linked to demographic factors, in particular, the size and age distribution of the adult population. Thus, the number of new units constructed is related to changes over time in these demographic factors-notably to the growth of the adult population. Both demographic and economic factors determine the exact relationship between the adult population and the number of households. Demographic factors-in particular, the age distribution of the adult population-also influence the mix of housing by type of structure.

The size and the quality of the housing units that are demanded are determined by economic factors-principally real disposable personal income and the cost of, and the expected investment return on, homeownership (or the expected net return on investment in rental housing) and by the sizes of households. Economic factors

1. A household is an individual, a family, or any other group who regularly occupies a housing unit.
are also important considerations in deciding whether to remodel a house or to sell it and buy another; hence, they affect the allocation of construction activity between new and existing units.
This article proceeds in stages as follows. The first section reviews demographic developments during the three decades from 1960 to 1990 by looking at both the changing growth rates of the total adult population and the contributions of age subgroups of this population to this pattern. The next section examines the relationship of population growth to net household formation and the changes in that relationship over time. The third section examines the relationship between net household formation and the number of new housing units constructed, as measured by housing starts, and the fourth, the relationship between the age composition of heads of households and the composition of housing starts by type of structure. The fifth section examines factors that determine the amount of real expenditures per new housing unit (with an emphasis on single-family structures). The next section briefly examines the allocation of purchases between new and existing structures. The article concludes by summing up the impact of the demographic and economic factors on total investment in residential structures in 1960-90 and by drawing some inferences about housing construction in the 1990's.

Because of the article's long-run focus, much of the analysis is in terms of 5 -year intervals. ${ }^{2}$ This approach smooths the impact of cyclical and other disturbances, thus facilitating the assessment of demographic influences on residential construction.

[^7]
## Demographic changes, 1960-90

The growth pattern of the U.S. adult populationpersons 18 years and over-during 1960-90 was dominated by the post-World War in "baby boom" of 1946 to 1964. This boom produced an average annual growth surge of 2 percent in adult population during the 1970's; it was preceded and followed by a decade of more moderate growthaveraging $1 / 2$ percent annually in the 1960's and $1^{1 / 4}$ percent in the 1980 's.

The dynamics of the baby boom and other demographic factors can be seen in chart 1 , which depicts half-decade changes in the adult population by age group. The earliest baby boomers reached adulthood in 1964, that is, just before the end of the first half-decade. During the next 5 years, many more crossed the threshold of young adulthood. (That increases in the 18 -to-24-year-old age group were about the same in both half decades reflects the relatively small number of persons who turned 25 during the first period because of low birth rates during the Great Depression.) From 1970 to 1985, the baby boomers produced bulges in the growth of the 25-to-34-year-old age group, while the growth in the number of 18 - to 24-year-olds decelerated sharply in the 1970's and then declined in 1980-85. In the 1980's, increases in adult population were centered in the 35-to-64-year-old age group, as many baby boomers turned 35. Aside from the dynamics of the baby boom, since the early 1970's, there
has been a strong upward trend in the number of persons aged 65 and older; this growth reflects increased longevity.

## Growth of adult population and net household formation

A priori, one might expect a reasonably stable relationship between the size of the adult population and the number of households. Indeed, the ratio of the number of households to adult population, often called the "headship rate," has historically remained within a fairly narrow range. From 1960 to 1990, this ratio gradually rose from 0.457 to 0.495 . This relative stability permits approximate predictions of the number of households from population projections. ${ }^{3}$ However, the change in the number of households-that is, net household formation or the number of newly formed households less the number of dissolutions of households-is the direct determinant of the demand for additional housing expressed in numbers of newly constructed housing units.

How reliably do changes in adult population predict net household formation? Chart 2 shows average annual changes in adult population and in households. Visually, the relationship between the two variables appears strong. Clearly, household formation in the 1960's and 1970's mirrors

[^8]

the steady acceleration of the adult population, and in the 1980's, net household formation recedes as does the population growth. However, a closer look at the data shows variability in the relationship, especially after 1975. In 1960-75, the overall incremental headship rate fluctuated (on the 5 -year-average basis) within a narrow range, between 55 and 57 percent. However, in 1975-80, when the rate of increase in population substantially diminished, net household formation continued to advance unabatedly, which resulted in a rise in the incremental headship rate from 55 percent to 63 percent. The relationship was sharply reversed in $1980-85$, when net household formation fell much more than the growth in population; as a result, the incremental headship rate dropped to 51 percent. The relationship again reversed in 1985-90, when net household formation increased while population growth continued to decrease-the only instance of an inverse pattern-which brought the incremental headship rate to an unprecedented 66 percent.

What accounts for this variability? To answer this question, it is useful to consider the age subgroups of the adult population (thus, stages of the life cycle) and the kinds of household configurations and choices that are peculiar to each subgroup. Young adults, aged 18 to 24 years, manifest a wide variety of living arrangements, only some of which result in increases in the number of households and then to a varying degree. They may continue to live with their parents; they may live in apartments, either alone or with other young adults; or they may live in rented rooms (usually in single-family structures) in already established households or in college dormitories. ${ }^{4}$

Adults aged 25 to 34 years generally live as single-person householders or as married couples, some with children. This is the age group that is most prominently faced with tenure choice, that is, the choice between (continued) rental and owner occupancy. The shift from rental to owner occupancy may or may not be accompanied by a change in the number of households: If two single-person householders marry and purchase a home, the number of households falls; if a couple moves from a rented unit to a purchased unit, the number of households does not change; and if a couple splits and the two individuals move into separate units, the number of households increases.

[^9]Persons aged 35 to 64 years generally live in single-family homes, with or without children. They may change tenure status or move to more expensive houses. The main factor tending to increase the number of households relative to population in this age group is the rising incidence of divorce, which usually results in the formation of another household.

Among persons aged 65 and older, a principal cause of a high and rising headship rate is increased longevity, which increases the proportion of single-spouse survivors. Furthermore, because the housing alternatives available to senior citizens have increased, living with middle-aged children-a factor tending to hold down the headship rate-occurs less frequently.

Table 1 shows, for the total adult population and for the four age groups, average annual changes (by half-decades) in population and in the number of households together with initiallevel and incremental headship rates. As seen in the table, the (average and marginal) propensity to head households tends to increase as age increases, a tendency that is most marked between the 18 -to- 24 -year-old and the 25 -to- 34 -year-old age groups. One possible cause of variation in the incremental headship rate for the overall adult

1. Ratio of households to population in initial year.
2. Ratio of change in households to change in population.

Source: U.S. Department of Commerce, Bureau of Economic Analysis
population is, therefore, the shifting age composition of the changes in adult population. During 1975-80, for instance, the combination of a relative increase in the population aged 35 to 64 years and a relative decrease in 18 - to 24 -year-olds largely accounts for the sharp rise in the overall incremental rate from the early $1970^{\prime}$ 's.
A similar shift from the early to the late 1980 's, due to a decrease in 18 - to 24 -year-olds was even more pronounced. Slower attrition of households headed by 18 - to 24 -year-olds relative to population in that age group and a recovery in the incremental headship rate in the 65 -andolder subgroup reinforced the surge in the overall incremental headship rate during 1985-90.
Shifting age composition, however, is not the only or even the main cause of variability in the overall incremental headship rate. Indeed, variability in the incremental rate within age subgroups generally dominates the age composition effects; the latter, in fact, partly offset the effects of within-age-group variability. ${ }^{5}$ Thus, during the early 1970's, a period marked by a major postwar recession, all age groups except the 18 to 24 -year-olds displayed substantial decreases in incremental headship rates; (in the cases of the two groups aged 35 years and older, these decreases were from relatively high rates in the late 1960's). These decreases, however, were largely offset by the effect on household formation of the surge in the 25 - to 34 -year-olds and the higher incremental headship rate shown for the 18 - to 24 -year-olds, which moderated the decline in the overall incremental rate from the late 1960's.
The causes of the within-group variability are not easy to sort out. To some degree, the variability and large deviations of incremental rates from level rates reflect simply the differences in level headship rates between those persons just entering the age subgroup and those exiting from it. Aside from this and the upward drift in the level headship rates in all age subgroupswhich, in part, reflects a rising proportion of single-person households resulting from increasing divorce rates-economic factors doubtless play a significant role. In particular, during recessions, younger persons, many of whom are on the margin of forming new households, may defer such decisions because of actual or threatened unemployment and continue to live with their parents or with unrelated persons longer than they might otherwise. In the $\mathbf{2 5}$-to- $\mathbf{3 4}$-year-

[^10]old age group, deferment of home purchases may postpone the dissolution of larger sized into smaller sized households.
Such behavior patterns are most clearly evident in the data in the early 1980's, a period marked by record-high mortgage rates as well as a major recession. The rise in the incremental rate for the 18 - to 24 -year-olds from 0.23 in the late 1960's to 0.39 in the early 1970's seems anomalous because the early 1970's also included a major recession. At any age, the affordability of housing in terms of the purchase or rental price and the cost and availability of mortgage credit can impinge upon household formation and dissolution decisions and, hence, upon headship rates.

## Household formation and housing starts

Because households are by definition identified with occupied housing units, the net change in available housing units equals the net change in the number of households plus the change in the number of vacant units. The change in the number of available units equals completions of newly constructed units (including mobile home placements) plus net conversions (subdivisions less consolidations of units in existing structures plus net conversions from nonresidential to residential use) less removals.
Two points must be considered before this framework can be made useful for analyzing the relationship between net household formation and the number of housing starts. First, completions-not starts-of new housing units appear in the relationship; but for the reasons given below, it is starts that are used for the focus and the measure of newly constructed units in this article. Second, account must be taken of (or simplifying assumptions made about) the nonconstruction components of the supply of available housing.
The principal reason for focusing on housing starts, rather than completions, as the measure of newly constructed housing units is that causality is seen as predominantly running from household formation to housing construction. Thus, the use of starts is appropriate simply because they precede completions and hence occur closer in time to the demographic stimulus. ${ }^{6}$ Furthermore, data on completions are available only

[^11]since 1968. Finally, national income and product account estimates of investment in new singlefamily residential structures (discussed later in the article) are based on starts.

With the above considerations in mind, the housing demand/supply relationship may be written as

$$
\begin{align*}
\Delta H H_{t}+\Delta V A C_{t}= & H S_{t-\theta}+M H P_{t}+  \tag{1}\\
& \operatorname{CONV}_{t}-R E M_{t}
\end{align*}
$$

where $\Delta H H$ is the net change in the number of households; $\triangle V A C$, the change in the number of vacancies; $H S$, housing starts (the average start-to-completion lag is $\theta$ ); MHP, mobile home placements; CONV, net conversions; and REM, removals (demolitions). Data on mobile home placements are available only since 1974, but data on shipments of mobile homes (units), which are available throughout, closely correspond with data on placements.
Annual data on mobile home shipments show considerable variability. Over the period 196190 , they ranged from 80,000 to 576,000 units annually, but were generally between 200,000 and 300,000 units. On average, they numbered about 18 percent of total private housing starts, but in the late 1960's and early 1970's, this proportion reached as high as 28 percent. However, because mobile homes have much shorter lifespans (on average about 10 years) than those of stationary structures, a substantial proportion of newly available units satisfies replacement demand. Moreover, some mobile homes are used as second (recreational) homes or as transitional housing. Finally, some mobile homes are used for nonresidential purposes. For these reasons, it seems appropriate to exclude mobile homes from the basic demographic demand/supply relationship.

Data on demolitions and conversions are limited and incomplete. Census Bureau data on housing units authorized for demolition for 1974 through 1979 show a steady decline from about 140,000 units to about 100,000 units per year; in general, demolitions were well below 10 percent of private housing starts. ${ }^{7}$ Unpublished Census Bureau data for 1980-92 show substantially lower levels of demolitions. Economic factors, as well as the degree of physical deterioration, may affect the rate of removals, but the available data

[^12]do not indicate that variations are clearly associated with aggregate economic activity. Finally, a supplement to the 1980 Census of Housing shows that conversions from nonresidential to residential use is quantitatively insignificant relative to new home construction: In 1980, the conversions added fewer than 8,000 housing units. Figures on subdivisions and consolidations are not available, but most likely, their net contribution is also small. Thus, the roles of demolitions and conversions can generally be ignored.

The analytically important part of equation (1), accordingly, devolves to the relationship among net household formation, housing starts, and the change in vacancies. Vacancies account for the difference between housing units demanded (based on the number of households) and housing supply (the stock of available housing units). Because of the mobility of households-in terms of location and among types and sizes of residential structures-and because second homes are counted as vacant units, some ratio of vacancies, quite possibly varying over time, represents a "normal," or equilibrium, level; variations in actual vacancies around this level are associated with cyclical and irregular variations in residential construction.

Chart 3 shows the net changes in households and housing starts by half-decades. The relationship between them is distinctly more variable than that between changes in adult population

and changes in the number of households. Net changes in households and housing starts move in opposite directions twice-from the first half to the second half of the 1960's and from the first half to the second half of the 1970's. However, an underlying relationship can be seen when full decades are examined: Both net household formation and levels of housing starts were relatively high in the 1970's, compared with those in the 1960's and 1980's.

For most of the three decades-the late 1970's are the exception-the number of housing starts exceeded the net increase in households. During four of the six half-decades-1965-70, 1970-75, 1980-85, and 1985-90-the excess was within a fairly narrow range, 14 percent to 22 percent, and averaged 17 percent. A moderate excess is to be expected because some new housing units represent replacements of removed units and because of purchases of second homes. Beyond the replacement level, the excess of new units constructed, including those intended for use as second homes, plus net conversions over the net increase in households adds vacancies.
During two of the half-decades, 1960-65 and 1975-80, the ratio of starts to net household formation departed substantially from its usual range. During 1960-65, starts exceeded net household formation by 59 percent. The cause (or source) of the (measured) excess is not readily apparent. Calculations made by Patrick H. Hendershott and Marc T. Smith indicate that a rise in vacancies contributed only modestly (about 12 percent of estimated completions) to this excess; accordingly, they infer, by computing residuals from an identity similar to equation (1), that there were exceptionally large negative "net other additions" (essentially the sum of the right-hand-side components in equation (1) excluding housing starts), which suggests an unusually large number of removals. ${ }^{8}$ Continued recovery from mortgage credit restraint in the late 1950's may also have contributed modestly, but analyses of residential construction and the mortgage market at the time do not emphasize this aspect.
In the late 1970's, in contrast, housing starts fell short of net household formation by 11 percent. This shortfall reflected a very rapid pace of net household formation-the most rapid during 1960-90-combined with the restraining effect of credit rationing on the financing of residen-

[^13]tial construction. ${ }^{9}$ Declines in both rental and homeowner vacancy rates during the late 1970's are consistent with the relative changes in the number of households and of newly constructed housing units.

## Composition of housing starts by type of structure

The type of housing that a household selects as its primary dwelling depends upon such factors as income, marital status, family size, and recency and permanence of establishment in the community. The basic choice in terms of types of structure is among a detached single-family home, a unit in a duplex or multiplex structure, an apartment, or a mobile home. Another choice involves tenure, that is, whether to rent or buy the property. These two choices are linked in two senses. First, certain factors, such as income and recency and permanence of establishment, underlie both decisions. Second, units in multifamily structures are typically rental units, while single-family homes are typically owner-occupied units.

It is certainly plausible that a household residing in a rental apartment will time its purchase of a single-family home on the basis of current and expected economic and financial circumstances. However, because both tenure choices are available for all types of structures, the assumption that underlies the following analysis is that these decisions are, at least in the long run, independent. ${ }^{10}$ Thus, the composition of the (occupied stationary) housing stock by type of structure-specifically, the relative numbers of units in single-family and multifamily structures-must reflect the mix of circumstances among households that determine the choice of housing. These circumstances (factors) are all more or less related to the age of the householder, that is, his or her stage in the life cycle. Accordingly, the single-family/multifamily composition should be strongly correlated with the age composition of heads of households.

[^14]The implication of this correlation for new residential construction is that insofar as the composition of the initial housing stock by type of structure is in equilibrium with respect to the demands of households, the composition of newly constructed units should be similarly related to the age distribution of (net) newly formed households. More specifically, allowing for initial departures from equilibrium vacancy levels, the proportions of housing units started in single-family and in multifamily structures should accord with the propensities of (net) new households to inhabit such structures.

Such (aggregate) propensities can be roughly quantified from data on the age composition of net changes in households and cross-tabulations of (levels of) households by age of householder and type of structure. The change-in-households data is shown in table 1 . The required crosstabulations were obtained from the 1980 Census of Housing. Unfortunately, this is the only such tabulation for the 30 -year period under review. ${ }^{11}$
It is reasonable to suppose that the relative propensities of householders within each age group to inhabit single-family or multifamily structures vary somewhat over time because of changes in underlying economic, demographic, and social conditions. However, if these withingroup variations are small relative to the variations across age subgroups over time, one may, for approximate analytical purposes, treat the age-group proportions as if they were stable. Estimates of aggregate proportions of (net) changes in households that are expected to occupy singlefamily structures can then be derived as weighted averages of the subgroup propensities.
The proportions of households occupying single-family structures (excluding mobile homes) by age subgroup derived from the 1980 housing census are shown in the following tabulation:

| Age subgroup | Percent of total households in single-family structures |
| :---: | :---: |
| 18 to 24 years. | 36.8 |
| 25 to 34 years. | 62.6 |
| 35 to 64 years | 78.5 |
| 65 years and older. | 69.5 |

11. U.S. Department of Commerce, Bureau of the Census, 1980 Census of Housing (Washington, DC: U.S. Government Printing Office, November 1983): Table A-8. The desired proportions are calculated by summing, by age group, over ownership status and household type (married couple families and unmarried householders). Earlier housing censuses do not provide complete age breakdowns, and the more frequent household surveys contain cross-tabulations of households by age group of householder and tenure status, but not by type of structure.

The variation across age groups is seen to be quite wide.

For each 5 -year period, the proportion of the (average annual) net change in all households that is estimated to reside (or be predisposed to reside) in single-family structures ("single-family households")-and hence the presumptive, or "predicted," proportion of single-family starts (disregarding differences in replacement rates for the two types of structures)-is then calculated by multiplying the average net change in households in each age group by the corresponding percentage from the above tabulation, summing these products over age subgroups, and dividing the sum by the aggregate net change. ${ }^{12}$ If initial vacancy rates for each type of structure are in equilibrium (or are not disproportionately in disequilibrium) and if the estimated proportions of single-family households in overall net household formation are reliable for the period in question, then the predicted proportions of total housing units started in single-family structures would be equal to the actual single-family household proportions.

How, in fact, do the predicted and actual proportions of single-family starts for the six 5 -year periods compare? Chart 4 reveals the degree of correspondence. The predicted percentages are

[^15]
## charit

Percent of Housing Starts
in Single-Family Structures:

US Departinento Corminerca Bureail ol Economic Andysia
measured on the X -axis, and the actual percentages, on the Y-axis; the points on the diagram represent pairings of the predicted and actual percentages for the six time periods. If the predicted proportions equalled the actual proportions, all the points would lie on the diagonal line.

Given the restrictive assumptions that underlie perfect predictions, four of the six points-for 1961-65, 1971-75, 1976-80, and 1986-90-are remarkably close to the diagonal line; for these periods, the differences between the predicted and actual proportions (distances from the diagonal line) are less than 5 percentage points. In 1966-70, the actual proportion of single-family starts was 7.5 percentage points below the predicted proportion. (There is no apparent reason, such as differences in initial vacancy rates, for this greater spread.) In 1981-85, however, the actual proportion of single-family starts was, at 62.6 percent, 17.6 percentage points below the predicted proportion of 80.2 percent. The predicted proportion is high for that period because of the decline in households headed by young (18-to-24-year-old) adults, who tend to inhabit multifamily structures.
The distortion in the composition of housing starts in 1981-85 is clearly beyond the bounds of probable estimation error and possible oversimplification of the assumptions and calls for an explanation. It appears, to begin with, to predominantly reflect an overbuilding of multifamily structures relative to demographic requirements. The overbuilding is evidenced by the fact that starts in multifamily structures averaged about 10 percent more in 1981-85 than in 1976-80 despite decreases in the numbers of young adults and by a rise in the rental vacancy rate from 5.1 percent in 1981 to 7.7 percent in 1987 . Singlefamily housing starts, in contrast, declined by about the estimated reduction in net formation of single-family households. The causes of the overbuilding of multifamily structures are well known. The combination of newly legislated accelerated tax depreciation and deregulation of banks and of savings and loan institutions, which increased their lending flexibility, encouraged multifamily-type construction on a large scale.

In 1986-90, the actual proportions of singlefamily and multifamily starts reverted nearly to their predicted levels as the former increased and the latter decreased sharply despite a slight net increase in multifamily households. However, against the background of excessive multifamily unit construction in the first half of the
decade and continued high vacancy rates, the change in composition of starts does not represent a full restoration of equilibrium: In light of demographic requirements, multifamily unit construction remained high until the end of the decade.

## Real investment per new housing unit

This section discusses long-run changes in real investment per new housing unit. For new single-family structures, the long-run trend in constant-dollar investment per unit (with units measured by housing starts) has been positive over the three decades despite a decrease in average household size; the average annual rate of increase for $1960-90$ was about 2 percent, with the largest increases in early 1960's and the late 1980's.

Most purchases of single-family residential structures are made for owner occupancy, and owner-occupants hold such property first and foremost for the housing services it provides. The "amount"-that is, the size, quality, and location-of house value purchased depends on economic factors as well as on size of the household. These economic factors-in particular, prices of available housing of given qualitative characteristics, household income, accumulated saving, and available mortgage borrowing terms-may be summarized by the term "affordability."

Residential real estate, whether purchased for owner occupancy or leasing, is also widely recognized and held as an investment vehicle. Accordingly, at least some buyers of homes for their own use will also consider expected resale value in relation to the cost of ownership.
To evaluate the relative roles of changes in affordability and in the expected investment return, two measures, each embodying one of these concepts, are used-an "affordability" index and a measure of the "user cost" of housing capital.

Affordability Index.-The National Association of Realtors (NAR) compiles a housing Affordability Index, which combines data on mortgage loan terms, household income, and house prices. Specifically, the Affordability Index expresses median household income as a percentage of the income level required to qualify for a mortgage loan to purchase the median-priced existing house. ${ }^{13}$ Thus, if median family income is just

[^16]enough to qualify for a mortgage loan, the Affordability Index is 100 percent; higher or lower levels of median income accordingly generate index levels above or below 100.

User cost of housing capital.-There are several shortcomings to the Nar Affordability Index as a behavioral indicator for home buying intentions, the most prominent being its exclusion of the return to housing as an investment. Thus, as an alternative measure, the user cost of housing capital is considered. User cost, a concept first introduced into the theory of nonresidential fixed investment, is "the implicit rental value of capital services supplied by a firm (in the present context, a home owner) to itself."14 The generic user cost expression is formulated as

$$
\begin{equation*}
c=p(r+\delta)-\dot{p}, \tag{2}
\end{equation*}
$$

where $c$ is user cost, $p$ is the capital goods price, $\dot{p}$ is its expected rate of change, $r$ is the (nominal) interest rate (adjusted for tax deductions), and $\delta$ is the depreciation rate. The selection of specific appropriate variables for constructing an empirical measure of user cost, especially the taxadjusted interest rate and the depreciation rate, is a difficult and often controversial matter. Indeed, with respect to housing, different measures may be appropriate to the issue of tenure choice and for analyzing real investment per new housing unit. ${ }^{15}$

For present purposes, a user cost measure developed by Laurence $H$. Meyer and Associates for the residential construction sector of its quarterly econometric model is used. The specific form of the user cost expression in that model is

$$
\begin{gather*}
\text { User cost }=(P R C / P C O N) *  \tag{3}\\
{[R M T G *(1-0.008 * U T W)+} \\
(1-0.01 * U T W) * U T S I B P- \\
W X P R C+2.982]
\end{gather*}
$$

where $P R C$ is the implicit price deflator for residential investment, $P C O N$ is the implicit price deflator for personal consumption expenditures, RMTG is the fixed commitment rate on 30 -year

[^17]conventional mortgages, $U T W$ is an economywide income-weighted average of marginal tax rates (Federal plus State and local) on wage income, UTSIBP is the (average) property tax rate (computed from property taxes in the national income and product accounts and from bea's estimate of the nominal residential housing stock), $W X P R C$ is the "expected" rate of change (measured as an annualized 20 -quarter moving average of actual change) in PRC, and the constant 2.982 is the average depreciation rate (estimated from bea's stocks and flows of residential investment). The critical difference between the affordability and user cost measures is the inclusion of the expected rate of change in new house prices in the user cost measure.

Real investment per housing start, the Affordability Index, and user cost are shown in chart 5 for $1971-90$, the period for which all three series are available. Here, centered 3 -year moving averages of the data are used instead of simple 5 -year averages. The inverse of the user cost (more precisely, $1000 /$ user cost) is used for easier comparison with the Affordability Index.

Several observations stand out. First, although the Affordability Index was at exceptionally high levels in the early 1970's (it averaged 146 in 1971-75), investment per new housing unit was

not exceptionally large during this period (it was generally below the levels of the late 1960's). At least a partial solution to this puzzle can be found in the fact that during this period, the earliest baby boomers were the principal source of demand for new single-family homes. Because the average income of this relatively young population subgroup was, in all likelihood, well below the median for the adult population, the use of median income in the Affordability Index substantially misrepresented affordability of homeownership for this part of the population.

Investment per unit increased moderately during the late 1970's, while both the Affordability Index and the user cost declined. The movement in investment per housing unit was thus consistent with that in user cost and inconsistent with that in "affordability." The divergent movements in affordability and user cost were largely accounted for by accelerating inflation in the overall price level and in new home prices in particular and, accordingly, in inflationary expectations; from 1971 to 1978, the mortgage rate rose 2.1 percentage points, while the expected inflation rate increased 4.8 percentage points. Apparently, during this period, the shift towards more expensive home purchases reflects dominance of the investment motive. This rising trend was sharply reversed during the early 1980 's.
After 1983, investment per unit again rose sharply, but this time, its rise paralleled rises in the Affordability Index. User cost, after rising sharply in 1984, remained fairly level thereafter. Certainly in part, the renewed surge to more expensive home purchases reflected the movement of the baby boom generation into higher income brackets as they matured into their middle years. However, this may have been mitigated by a weakening of the investment motive for home purchases as inflation decelerated in tandem with declining nominal mortgage rates.
Real investment per unit in multifamily structures has been considerably more erratic through time than that in single-family structures. There was only a slight positive trend over the three decades: The increase in real investment was about 0.6 percent annually or roughly one-third that in single-family structures. The year-toyear fluctuations doubtless reflected changes in the composition of particular types of structures built and interregional shifts in the concentration of such structures. For the three decades, the average real investment per unit in multifamily structures ( 1987 prices) was $\$ 50,700$, compared with $\$ 80,100$ for single-family structures.

## Improvements versus trading up

Over 1960-90, increasing amounts-and, indeed, a growing proportion of total investment in residential structures-were expended on existing, rather than on new, structures. Real expenditures for improvements-additions, alterations, and major replacements-increased at an average annual rate of 1.8 percent from 1960 to 1990; from the early 1960's to the late 1980's, they rose from an average share of 22.1 percent of total purchases of structures (in 1987 dollars) to 25.8 percent.

Major replacements are, of course, normally made in response to natural wear and tear or to physical damage. In contrast, additions and alterations, which account for the bulk of improvements, reflect voluntary decisions to upgrade houses or to restructure them for personal convenience and often represent alternatives to moving.

A household in a single-family home that has decided that it must have, or simply desires to have, larger or otherwise improved living quarters may fulfill this need or desire by moving-that is, "trading up"-to another house or by enlarging or otherwise structurally modifying its present home. Many factors, including such noneconomic issues as location and the degree of attachment to the present home or neighborhood, impinge upon this decision. A major consideration is, of course, the relative costsincluding borrowing, transactions, and moving costs.
It is difficult to assess the impact that changing relative costs of restructuring existing houses and of trading up has had on the aggregate level of improvements-in particular, additions and alterations-and its share of total investment in residential structures. Higher prices of existing and new homes do not furnish a meaningful indicator, because presumptions cannot be made about the relative movements of prices of houses being sold and purchased by moving households. However, real transactions costs have clearly risen, and their rise at least partly accounts for the relative increase in expenditures for additions and alterations.

Table 2 shows, by half-decades, the ratio of real expenditures for additions and alterations to purchases of new single-family structures and the ratio of the implicit price deflator for brokers' commissions to the implicit price deflator for personal consumption expenditures. The price ratio, which provides an indication of relative transactions costs, had already begun to rise

Table 2.-Proportion of Real Additions and Alterations to Purchases of Single Family and the Real Transaction Cost of Home Sales, 1961-90

|  | $\begin{gathered} 1961- \\ 65 \end{gathered}$ | $\begin{gathered} 1966- \\ 70 \end{gathered}$ | $\begin{gathered} 1971- \\ 75 \end{gathered}$ | $\begin{gathered} 1976- \\ 80 \end{gathered}$ | $\begin{gathered} 1981- \\ 85 \end{gathered}$ | $\begin{gathered} 1986- \\ 90 \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Ratio of implicit price deffiator for brokers' commissions to implicit price delator for personal consumption expenditure $\qquad$ | . 73 | . 73 | . 79 | . 89 | . 91 | . 99 |

sharply in the 1970's; however, a marked increase in the proportion of additions is only seen in the 1980's. The seemingly long lag in the response may simply reflect the fact that during the late 1970's, a large number of new housing units was required to accommodate the rapid increase in the number of households; additions and alterations do not serve this need. Note also that increasing expenditures for additions and alterations, like investment in new structures, can reflect increases in numbers of units or increases in expenditures per unit or both; data are not available to sort out the difference.

## Total investment in residential structures

From 1960 to 1988, real investment in residential structures increased at an average annual rate of 2.5 percent, somewhat slower than the 3.2-percent average rate of growth of real gross domestic product. ${ }^{16}$ Thus, the average share of such investment in real GDP fell from 5.5 percent to 4.5 percent.

The rate of change has varied substantially over time. On an annual basis, variations have been very sharp and declines have occurred in 14 of the 30 years from 1960 to 1990. These variations reflect the strong sensitivity of residential construction to economic and credit conditions. In terms of 5 -year averages, the variations are much smaller: The average deviation of the growth rate from its mean (without regard to sign) is 2.4 percentage points, compared with 11.5 percentage points on an annual basis.

Half-decade averages of total real purchases of residential structures and of its major components are shown in chart 6. Purchases increased sharply from the late 1960's to the early 1970's; a further (smaller) increase occurred in the late 1970's. The higher levels of purchases reflected primarily the larger numbers of new housing units constructed; the latter, in turn,

[^18]is associated with the bulge in net household formation triggered by the postwar baby boom. The lower levels of housing investment in the early 1980's reflect the decline in building of new single-family structures; these reductions stem from lower rates of increase in households headed by persons in the age groups inclined to inhabit such structures, as well as from the sharply reduced incremental headship rates that were associated with recession and tight credit conditions. Larger investments in both new multifamily structures and improvements partly offset the decline in investments in single-family structures.

Real investment in structures was again sharply higher in the late 1980's, compared with that in the first half of the decade. The number of new housing units built was only slightly larger; however, the real value per unit of new single-family structures was substantially greater. Further, there was proportionately more investment in improvements.

The generally expanding levels of the "other" component, which is dominated by brokers' commissions on sales of existing and new houses, reflects increased numbers of single-family units sold as well as higher average values of the existing properties that were sold.

## CHAPT 6

Real Purchases of Residential Structures, Major Components, 1961-90

[^19]
## Housing construction in the 1990's

Real investment in residential structures decreased steadily from 1987 to 1991 , when housing starts fell to a historic low of 1.01 million units. These declines resulted from the combined effects of decelerating household formation, a sharp slowdown in multifamily unit construction due to the continued overhang of vacancies from the early 1980's, and the recession of 1990-91. By mid-1991, the decline in housing starts began to be reversed. In the first 5 months of 1994, starts averaged 1.42 million units (annual rate).

On the basis of the Census Bureau's projections of adult population and bea's estimates of real investment in residential structures for 1991-93, some inferences can be drawn about the likely behavior of residential construction during the rest of the 1990's.

First, based on Census Bureau projections of population by age subgroups to 1995 and 2000 and on the application of incremental headship rates near the recent averages, overall projections of net household formation can be made. ${ }^{17}$ The projected net increases in households (at average annual rates) are 1.11 million for $1990-95$ and 1.04 million for 1995-2000. These rates represent a substantial deceleration from those in the late 1980's and, indeed, are the lowest rates since the early 1960's; however, the (implied) aggregate incremental headship rates are relatively high at 58 percent in 1990-95 and 54 percent in 1995-2000.

[^20]Declines in the number of young adults (18to 24 -year-olds) and of households headed by them continue through both halves of the 1990's; by the late 1990 's, declines spread to the $25-$ to 34-year-olds.

Applying the average ratio of housing starts to net household formation from the nonextreme half-decades from 1960 to 1990 (1.17) to the projected net increases in households yields an average annual rate of 1.37 million housing starts for 1991-95 and an average rate of 1.32 million units for 1996-2000. However, housing starts averaged only 1.17 million units during 1991-93; thus to reach the projected 1.37 million units, they would have to average 1.68 million units for 1994-95, a rate that is well beyond the range of those seen in current forecasts. Because of continued high initial vacancy rates, especially for rental units, such a high ("makeup") level should not be expected; thus, consensus forecasts of about 1.4 million starts in 1994 and in 1995 are quite plausible and imply an average level of about 1.26 million starts for 1991-95. The average number of starts projected-purely on demographic considerations-for 1996-2000 thus represents a slight increase from the projected 1991-95 level. Because of the projected declines in the number of households in the younger age groups, the proportions of starts of units in multifamily structures (using the methodology described earlier) can be expected to remain low-on the order of 20 percent of total starts.

# U.S. Multinational Companies: Operations in 1992 

By Raymond J. Mataloni, Jr.

GROWTH in the operations of nonbank U.S. multinational companies (MNC's) in 1992 was generally stronger than in 1991, but was constrained by the divestiture of a number of large foreign affiliates in which U.S. parents had minority interests and by weak economic conditions abroad. According to preliminary results of BEA's latest annual survey of U.S. direct investment abroad, worldwide sales by U.S. mnc's increased 3 percent after a 1 -percent increase in 1991, and assets increased 7 percent after a 5 -percent increase. In contrast, employment decreased 2 percent for the second consecutive year, mainly as a result of corporate downsizing in the United States related to long-term industry-specific factors (table 1 and chart 1).
As was the case for the worldwide operations of U.S. mNc's, changes in U.S. parent companies' operations were generally stronger than in 1991. Both assets and sales increased faster than in 1991, reflecting improved U.S. economic conditions: Assets increased 8 percent after a 5 -percent increase, and sales increased 3 percent after negligible growth. ${ }^{1}$ U.S. parent employment, however, decreased 2 percent after a 3 -percent decrease.
Measures of foreign affiliate operations were dampened in 1992 by the sale of some very large

[^21]
## Acknowledgments

The International Investment Division's Direct Investment Abroad Branch, under the direction of Patricia $C$. Walker, conducted the survey from which the estimates were derived. James Y. Shin and Margo R. Collier supervised the editing and processing of the reports. Marie Colosimo, with the assistance of Arnold Gilbert and Robert Price, designed the computer programs to derive estimates for unreported data, generate the tables, and prevent disclosure of company-specific data.
minority-owned affiliates and, to a lesser extent, by weak economic conditions in some major host countries. Growth in both assets and sales slowed: Assets increased 4 percent after an 8percent increase, and sales increased 2 percent after a 3 -percent increase. Affiliate employment decreased 2 percent after a 1-percent increase; the decrease, which was the first since 1986, mainly reflected divestitures.

The following are other highlights from the 1992 survey:

- Europe remained the most popular location for newly acquired or established affiliates, which indicates that access to well-established and increasingly integrated markets continues to outweigh access to low-wage labor in motivating U.S. direct investment abroad.
- Latin America and Other Western Hemisphere became the second most popular location for newly acquired or established affiliates, up from fourth in 1990 . The locations of the new affiliates were spread

## GHARTM

Employment of Nonbank U.S. MNC's, U.S. Parents, and Foreign Affilates, 1982-92 Mhillons of employees

across the region and reflected, in part, economic liberalizations instituted by host governments.

- Affiliate operations continued to grow rapidly in Eastern Europe, but remained quite small; affiliate employment increased to 33,000 in 1992 from 21,000 in 1991.
- The U.S. content of the output of majorityowned foreign affiliates (mofa's) was 9 percent in 1992. ${ }^{2}$ U.S. content was above average in areas that are close to the United

2. The U.S. content of mofa output is calculated as the share of mora output (sales plus inventory change) accounted for by U.S. merchandise exports shipped to mora's.

## Key Terms

The following key terms are used to describe the members of U.S. multinational companies.
U.S. multinational company (MNC): The U.S. parent and all of its foreign affiliates.
U.S. parent: A person, resident in the United States, who owns or controls 10 percent or more of the voting securities, or the equivalent, of a foreign business enterprise. "Person" is broadly defined to include any individual, branch, partnership, associated group, association, estate, trust, corporation or other organization (whether or not organized under the laws of any State), or any government entity. If incorporated, the U.S. parent is the fully consolidated U.S. enterprise consisting of ( 1 ) the U.S. corporation whose voting securities are not owned more than 50 percent by another U.S. corporation, and (2) proceeding down each ownership chain from that U.S. corporation, any U.S. corporation (including Foreign Sales Corporations located within the United States) whose voting securities are more than 50 percent owned by the U.S. corporation above it. A U.S. parent comprises the domestic (U.S.) operations of a mNC.
Foreign affiliate: A foreign business enterprise in which there is U.S. direct investment, that is, in which a U.S. person owns or controls 10 percent or more of the voting securities or the equivalent. Affiliates comprise the foreign operations of an MNC.
Majority-owned foreign affiliate (MOFA): A foreign affiliate in which the combined ownership of all U.S. parents exceeds 50 percent.
Nonbank: An entity (MNC, parent, or affiliate) whose primary activity is not banking. Only nonbanks are covered by this article.
uct (value added) by country cross-classified by major industry of affiliate. ${ }^{3}$

## U.S. Parents

This section and the following section on foreign affiliates use employment to measure changes in mNC operations in 1992. Because changes in employment are not directly affected by valuation changes (such as those caused by inflation or by exchange-rate fluctuations), they usually provide a more accurate indication of changes in the level of real economic activity than other available measures. However, in the early 1990's, changes in employment may be less indicative of changes in real economic activity because of heavy corporate restructuring.

## Employment changes by industry

Nonbank U.S. parents employed roughly 18 million workers in 1992, which represented 20 percent of the U.S. private nonbank work force. Parent employment fell 2 percent in 1992; the decrease was widespread among industries and contrasted with a slight increase in total private nonbank employment in the United States. Excluding changes resulting from industry reclassifications of U.S. parents, the largest decreases were in transportation equipment man-

[^22]ufacturing, services, chemical manufacturing, petroleum, and "other" industries. ${ }^{4}$

In transportation equipment manufacturing, parent employment decreased 5 percent; most of the decrease was accounted for by the aerospace industry (included in "other transportation equipment"), but the automotive industry (included in "motor vehicles and equipment") also contributed. In aerospace, the decrease reflected parents' efforts to bring employment in line with reduced orders by the U.S. Government for military equipment. In the automotive industry, the decrease mainly reflected restructuring programs, including the consolidation of overlapping product-design and manufacturing units. In services, employment decreased 3 percent, reflecting the departure of a health services company from the U.S.-parent universe. In chemical manufacturing, employment decreased 3 percent, largely as a result of parents' divestiture of non-core activities. In petroleum, employment decreased 6 percent, as U.S. parents undertook restructurings to reduce overhead and to remain profitable in the face of relatively low oil prices. In "other" industries, employment edged down 1 percent; most of the decrease was accounted for by the telecommu-

[^23]nications industry (included in "communication and public utilities"). Parents in that industry adopted labor-saving technologies and eliminated redundant jobs, following mergers and acquisitions.
In finance (except banking), insurance, and real estate (fire), parent employment edged up 1 percent; most of the increase was in insurance.

## Foreign Affiliates

## Employment changes

Year-to-year changes in affiliate employment are the net result of changes in existing operations, acquisitions and establishments of affiliates, sales of affiliates to foreigners, liquidations of affiliates, and improvements in survey coverage (table 2). ${ }^{5}$ In 1992, decreases in employment attributable to existing operations and to affiliates that were sold or liquidated were partly offset by increases attributable to affiliates that were identified through efforts to improve coverage and to affiliates that were newly acquired or established.

Acquisitions and establishments.-In 1992, 290 nonbank affiliates with combined employment of 101,000 were established or acquired by U.S. mNC's (table 3). As in the 2 preceding years, Europe was the primary location for new affiliates. New European affiliates accounted for 59 percent of the number of all new affiliates and for 41 percent of their employment. The fastest growth in acquisitions and establishments, however, was in Latin America and Other Western

1. Includes changes resulting from the addition to the survey univarse of affiliates that were required to report in earlier years but did not, and other unatlocated changes.

AOTE.-Line 5 includes (and lines 2 and 6 exclude) changes resulting from affilates acquiring, establishing, selling, or liquidating parts of their consolidated operations. BEA permits survey respondents to consofidate affiliate operations that are in the same country and Digitized ifdusty.forthat are integral parts of a single business operation.

Hemisphere; that area ranked second in terms of number of, and employment by, new affiliates in 1992, up from fourth in 1990. The locations of the new affiliates were spread across Latin America and Other Western Hemisphere and partly reflected economic liberalizations-such as the privatization of State-owned monopolies, reduced local-content requirements, and reduced tariffs-instituted by host governments.

As in the 2 preceding years, manufacturing was the primary industry for new investments in 1992, partly reflecting the relatively high concentration of U.S. MNC's in manufacturing. ${ }^{6}$ It accounted for 42 percent of the number of all new affiliates and for 70 percent of their employment.

Highlights by area and by industry.-Total nonbank affiliate employment decreased 2 percent to 6.7 million employees in 1992. By area, large decreases in Europe and Canada and a smaller

[^26]- Fewer than 50 employees.

1. "international" affiliates are those that have operations in more than one country and that are engaged in petroleum shipping, other water transportation, or operating movable oiland gas-drilling equipment.
2. European Communities (12) comprises Belgium, Denmark, France, Germany, Greece, Ireland, Haly, Luxembourg, Netherlands, Portugal, Spain, and the United Kingdom.

NOTE.-The data in this table cover only newly acquired or established foreign affillates. They exclude data for consolidated units of existing foreign affiliates that were acquired or established during the year.
decrease in Asia and Pacific were partly offset by a large increase in Latin America and Other Western Hemisphere. By industry, a large decrease in manufacturing was partly offset by large increases in "other" industries (primarily in telecommunications) and services.
In Europe, affiliate employment decreased 6 percent to 2.8 million, following a 2 -percent increase. Most of this decline was accounted for by one U.S. parent company's sale of its minority stake in a group of large European companies. Employment by mofa's decreased only 1 percent; employment by these affiliates either declined or remained flat in most major Western European countries, partly reflecting weak economic conditions. In Eastern Europe, in contrast, affiliate employment increased rapidly-to 33,000 -as new affiliates were established in Poland, Russia, Hungary, and the former Czechoslovakia. Except in Russia, where petroleum extraction was the main activity, most affiliates in these countries were engaged in manufacturing inexpensive nondurable goods (such as snack foods, soft drinks, tobacco products, and toiletries) for local consumption.
In Canada, affiliate employment decreased 5 percent, to 0.9 million, following a 2 -percent decrease. The decreases were widespread by industry and mainly reflected restructuring by affiliates seeking to increase their competitiveness and to remain profitable under weak economic conditions.
In Asia and Pacific, affiliate employment decreased 1 percent, to 1.5 million, following a 1-percent increase. The decline was accounted for by the sale of a few very large minority-owned affiliates in Japan, the Republic of Korea, and Australia. Employment by mofa's increased 3 percent; increases were largest in China, Malaysia, and Hong Kong.

In Latin America and Other Western Hemisphere, affiliate employment increased 6 percent,

## Data Availability

> Only summary data are published in this article. Estimates of MNC operations in greater detail are available for 1977 and for 1982 -92 in publications and for 198292 on computer-readable media (tape or diskette). For information, call (202) $606-9827$. Publications presenting the revised estimates for 191 and the preliminary estimates for 1992 will be available in July; their availability will be announced on the inside back cover of the SURVEY OF CURRENT Businss.
to 1.4 million, following a 1 -percent decrease. Nearly all of this increase was accounted for by the purchase of minority interests in a few very large foreign businesses; employment by mofi's, in contrast, increased only 1 percent. Mexican affiliate employment increased the most, largely reflecting the purchase of minority interests. These investments were probably made primarily in anticipation of growth in the local, rather than the U.S., market; none of the acquired companies shipped goods to the United States in 1992. Affiliate employment also increased in Costa Rica, Venezuela, and Argentina.

## Majority-owned foreign affiliates

For some analytical purposes, data for majorityowned foreign affiliates (mofa's)-rather than for all affiliates-should be used. For example, analysis of affiliate operations in which the U.S. parent has unambiguous control requires data for mofa's. Additionally, some aspects of affiliate operations can be analyzed only from the perspective of mofa operations, because the necessary data items are not collected for other affiliates.
mofa's make up the bulk of the nonbank affiliate universe; in 1992, they accounted for 88 percent of the number of, and 82 percent of the sales by, all nonbank foreign affiliates (table 4). mofa's accounted for a larger share of the number of affiliates than of sales by affiliates because, on average, mofa's are smaller than minority-owned foreign affiliates. The percentage of nonbank affiliates that were mofa's was above average in Canada ( 94 percent) and Europe ( 93 percent) and was below average in all other major areas. Of the countries shown in table 4 (that is, countries that had affiliate employment of at least 100,000 in 1992), Belgium had the highest mofa percentage ( 95 percent) and Japan had the lowest ( 61 percent).

Most affiliates are not only majority owned but wholly owned. Both globally and in each major area, well over one-half of all affiliates were wholly owned in 1992. In all the countries except Japan, more than three-fifths of affiliates were wholly owned. Although Japan now imposes few formal restrictions on 100 -percent ownership by foreign direct investors, such ownership may be inhibited by informal barriers, such as interlocking stock ownership among domestic corporations. ${ }^{7}$ Additionally, U.S. parents may
7. As of January 1, 1992, Japan placed no formal restrictions on 100percent foreign ownership of domestic business enterprises except those in which it had a national security interest or those in agriculture, forestry and
choose to acquire partial ownership of Japanese affiliates in order to share knowledge or facilitate trade rather than to gain full control over the affiliates' operations or management.
fishery, in mining and petroleum, or in leather and leather products. (See International Monetary Fund (imp), Exchange Arrangements and Exchange Restrictions, Annual Report 1993 (Washington, DC: IMF, 1993): 266-67.)

Share of worldwide MNC operations.-Data for mofa's and U.S. parents that are nonduplicative can be summed to obtain measures of the global operations of MNC's in which U.S. parents have a controlling interest. Such measures are useful for evaluating the allocation of U.S.-MNC resources here and abroad. For example, they can be used

- Suppressed to avoid disclosure of data of individual companies.

1. The data on capital expenditures by MOFA's are based on BEA's semiannual suvey of capital expenditures igitize 2 • fhe MOFA sharepof MNC net income must be interpreted with caution because parents' net income includes
the parents' shares of their afifilites' net income. Thus, this amount is double-counted in the denominator of the ratio. For this reason, the ratio, and any increase or decrease in it, will be somewhat understated (assuming that ratio. For this reason, the ratio, and any increase or
both the numerator and the denominator are positive).
MNC Multinational company
MNC Muta Majorition-owned foreaign atfliate
to evaluate whether or not the mofa share of U.S.-MNC worldwide employment has increased.

Table 5 presents four measures of worldwide MNC operations-net income, research and development expenditures, capital expenditures, and employment-for 1982, 1991, and 1992. The mOFA shares of most measures of U.S.-MNC operations changed little in 1992, but they have increased moderately over the last decade (chart 2). In 1992, MOFA's accounted for 23 percent of MNC employment, up from 21 percent in 1982; 24 percent of mNC capital expenditures, up from 18 percent; and 12 percent of MNC research and development expenditures, up from 9 percent.
Net income was the one measure that showed a pronounced increase in mofa share; mofa's accounted for 59 percent of mNC net income in 1992, up from 20 percent in $1982 .{ }^{8}$ The mOFA share increased throughout 1982-92, accelerating in 1989-92; during the latter period, however, it reflected falling net income for U.S. parents rather than rising net income for mora's (chart 3). Parent net income was depressed in 1990-91 by the economic recession in the United States. In 1992, it was depressed by a special charge taken against parent earnings
8. The ratio of mofa net income to total mNc net income must be interpreted cautiously because parents' net income includes the parents' share of their affiliates' net income; thus, this amount is double counted in the denominator of the ratio. For this reason, the ratio, and any increase or decrease in it, will be somewhat understated (assuming that both the numerator and the denominator are positive). In addition, it should be noted that net income can be influenced by factors other than current operating earnings, such as capital gains and losses and special accounting charges.

## CHART 2

## MOFA Share of U.S.-MNC Operations, 1982-92

Share (percent)

to conform to new accounting requirements for post-retirement benefits; excluding the effects of this special charge, the mOfa share of MNC net income probably would have been about 40 percent. ${ }^{9}$

Gross product.-mofa gross product (value added) increased 2 percent to $\$ 363.7$ billion in 1992 (table 6). ${ }^{10}$ By area, the largest increase was in Latin America and Other Western Hemisphere, and the largest decrease was in Canada. By industry, the largest increase was in petroleum; the only decrease was in wholesale trade.
In 1992, employee compensation accounted for 47 percent of MOFA gross product, profit-type return for 20 percent, indirect business taxes for 26 percent, capital consumption allowances for 10 percent, and net interest paid for a negative 2

[^27]
## Chart 3

Net Income of Nonbank U.S. Parents and MOFA's, 1982-92

percent. ${ }^{11}$ These shares were about the same as those in 1991.

In the context of total mofa output, gross product illustrates the extent to which mofa's produce their own output rather than relying on purchases from others. In 1992, MOFA gross product accounted for 28 percent of mofa output, purchases from U.S. persons for 9 percent, and purchases from foreign persons for 63 percent. Purchases from U.S. persons accounted for above-average shares of mOfa output in areas that are close to the United States, such as Canada (23 percent) and Latin America and Other Western Hemisphere ( 14 percent). Their shares were about average in Asia and Pacific (10 percent) and below average in Europe ( 5 percent).

Because mofa gross product is conceptually consistent with a country's GDP, it can be used to estimate the MOFA share of host-country GDP. In the G-7 countries (other than the United States), the mOfa share of host-country GDP in 1992 was 8 percent in Canada, 5 percent in the United Kingdom, 3 percent in Germany, 2 percent in France and in Italy, and less than 1 percent in Japan. ${ }^{12}$ By
11. Profit-type return is net income before deduction of income taxes and depletion expenses. It excludes capital gains and losses and income from equity investments.
12. Host-country gDP statistics are from the Organisation for Economic Co-operation and Development (OECD), Main Economic Indicators (Paris:
comparison, U.S. affiliates of foreign companies accounted for 6 percent of U.S. GDP in 1991, the latest year for which data on U.S.-affiliate gross product are now available; affiliates of no country accounted for more than 1 percent. ${ }^{13}$

## Merchandise Trade

The mNC share of total U.S. merchandise trade remained large in 1992, but declined from the prior year. U.S. merchandise exports associated with MNC's-the sum of goods shipped by all U.S. persons to foreign affiliates and of goods shipped by U.S. parents to unaffiliated foreigners-were \$261.1 billion; this amount represented 58 percent of total U.S. merchandise exports, down from 61 percent in 1991 (table 7). ${ }^{14}$ The MNC share of

1. Profit-type return is net income before deduction of income taxes and depletion expenses.

It excludes capital gains and losses and excludes income from equity investments.
U.S. exports decreased primarily because exports to "other" foreigners (foreigners other than foreign affiliates) by U.S. parents decreased while those by other U.S. persons increased. Most of the increase in total U.S. merchandise exports to "other" foreigners was in exports to Pacific Rim and Latin American countries.
U.S. merchandise imports associated with mnc's-the sum of goods shipped by foreign affiliates to all U.S. persons and of goods shipped by unaffiliated foreigners to U.S. parents-were $\$ 216.4$ billion; this amount represented 41 percent of total U.S. merchandise imports, down from 44 percent in 1991. As with exports, the MNC share of U.S. imports decreased primarily because imports from "other" foreigners by U.S. parents decreased while those by other U.S. persons increased. Most of the increase in total U.S. merchandise imports from "other" foreigners was in imports from Pacific Rim countries (particularly Japan and China).

# The International Investment Position of the United States in 1993 

By Russell B. Scholl

Harlan W. King directed the preparation of estimates other than those of direct investment, with major contributions from Christopher A. Gohrband, Dena A. Holland, Theresa M. Stoll, and Lori A. Trawinski.

The net international investment position of the United States at yearend 1993 was $-\$ 555.7$ billion when direct investment is valued at the current cost of replacing plant, equipment, and other tangible assets, and it was -\$507.7 billion when direct investment is valued at the current stock-market value of owners' equity (table A, chart 1). However, for direct investment, U.S. assets abroad exceeded foreign assets in the United States. For other assets, taken as a whole, foreign holdings in the United States exceeded U.S. holdings abroad, mostly reflecting large foreign portfolio holdings in the United States.
The position with direct investment at market value became less negative in 1993 because of exceptionally strong price increases in foreign stock markets, which substantially raised the market value of U.S. direct investment abroad relative to the market value of foreign direct investment in the United States. In contrast, the position with direct investment at current cost became more negative; the cost of capital equipment, structures, land, and inventories, upon which the

| Other valuation changes .......................... | -2.2 | -1.6 |

current-cost valuation is based, rose much less than foreign stock prices.

In 1993, large net capital inflows continued (table B). Price changes abroad exceeded those in the United States, because foreign stock price increases far exceeded those in the United States. Exchange-rate adjustments were most significant in U.S. direct investment abroad and U.S. portfolio investments in Canada and Europe, where foreign currencies depreciated against the dollar from yearend 1992 to yearend 1993.

U.S. assets abroad increased strongly, reflecting U.S. institutional investors' accelerated diversification into foreign securities and record U.S. direct investment outflows. Record capital outflows were encouraged by prospects for economic recovery in many industrial countries, by continuing growth in emerging-market countries, and by foreign bond interest rates that remained well above U.S. bond rates. The especially large increase in U.S. portfolio holdings of foreign stocks raised the foreign component of U.S. holdings of all stocks to 4.9 percent by yearend 1993, compared with 3.3 percent at yearend 1992. In contrast, U.S. bank claims on foreigners declined for the fourth consecutive year, mainly as Japanese banks continued to cut back their international operations through U.S. offices.

Foreign assets in the United States increased in all categories, but especially strongly in portfolio holdings of U.S. securities. Record foreign capital inflows were encouraged by the relative strength of the U.S. economy, low U.S. inflation, and the U.S. dollar's appreciation against most key foreign currencies in 1993. In contrast, economic
growth in most industrial countries was sluggish or negative. Strongly rising U.S. bond prices and, to a lesser degree, U.S. stock prices encouraged large inflows into U.S. securities and contributed to price appreciation in foreign holdings. Foreign direct investment growth increased, as capital inflows recovered from the depressed 1992 level and, on a market-value basis, as the rise in U.S. stock prices added further to owners' equity. In addition, foreign official assets increased a record amount on a widespread buildup of dollars held by foreign central banks.
This article presents the major changes in U.S. assets abroad and the major changes in foreign assets in the Unites States, including direct investment valued at current cost and at market value. Tables 1,2 , and 3 , at the end of the article, present detailed estimates of the position, showing a breakdown of changes by account from 1992 to 1993, aggregate estimates by area for 1992-93, and historical estimates for 1979-93.
This issue also contains a companion article, "Direct Investment Positions on a HistoricalCost Basis, 1993: Country and Industry Detail,"

## New Source Data and Methodological Improvements

As is customary each June, the international investment position estimates incorporate new source data and methodological improvements that typically relate to changes incorporated in the U.S. international transactions accounts. For example, position estimates, and transactions based on changes in those position estimates, of U.S. nonbanking concerns' claims on and liabilities to unaffiliated foreigners were both enhanced by incorporation of new foreign-source data. For the international investment position, there are several major changes:

1. Claims on and liabilities to foreigners reported by U.S. nonbanking concerns were revised by further substitution of foreign-source data for selected country data reported to the U.S. Treasury. Counterpart data reported by national authorities to the Bank of International Settlements (BIs) on their local banks' claims on and liabilities to U.S. nonbanking concerns were introduced into U.S. estimates back to yearend 1983. The counterpart data for U.S. nonbank claims-that is, foreign banks' liabilities reported to the BIs-were used for Caribbean and Asian finance centers and for several countries in Western Europe not covered in last year's improvements. The counterpart data on U.S. nonbank liabilities-that is, foreign banks' claims reported to the bis-were used for the first time for Caribbean and Asian finance centers only. The bis data were augmented with data from the Bank of England on British banks' claims on the United States. (For a further explanation of these changes, see "U.S. International Transactions, Revised Estimates for 1984-93" elsewhere in this issue.)
2. Holdings of foreign, U.S. corporate, and U.S. federally-sponsored agency bonds were revised as a result of a change in the calculation of price changes. Comprehensive price indexes (obtained from market sources) that cover hundreds of issues and all major types are now used in place of indexes that were based on a small sample within each major type of issue.
(a) Foreign bonds: Dollar bonds placed in the U.S. market are now priced using more comprehensive indexes, and price changes for outstanding foreign-currency-denominated bonds have been introduced.
(b) U.S. corporate bonds: New estimates of redemptions of U.S. corporate Eurobonds have resulted in revisions to outstanding Eurobond issues and to foreign holdings of domestic corporate bonds, and new, more comprehensive price indexes were applied to each component.
(c) U.S. agency bonds: A more comprehensive measure of price changes was introduced.
3. U.S. liabilities reported by U.S. banks were reduced to remove certain bank custody liabilities to the Caribbean banking centers from 1986 forward. The removal is to avoid double counting, because these liabilities are covered by the newly substituted bis data. (For a further explanation of this change, see "U.S. International Transactions, Revised Estimates for 1984-93," elsewhere in this issue.)
that presents detailed estimates of the U.S. direct investment abroad position and of the foreign direct investment in the United States position; these detailed estimates by country and by industry are available only on a historical-cost basis.

## Changes in U.S. Assets Abroad

## Bank claims

U.S. bank-reported claims on foreigners decreased $\$ 32.6$ billion, to $\$ 635.5$ billion, the fourth consecutive annual decline. U.S. interbank claims fell sharply, particularly claims on Japan, as Japanese banks continued to cut back their international operations through U.S. offices. Also contributing to the decrease in claims was weakness in international bank credit demand, which resulted from economic recession in several industrial countries and an increase in borrowers' reliance on international securities markets.

A decrease of $\$ 31.3$ billion, to $\$ 382.9$ billion, in U.S. dollar claims on foreign banks largely reflected the cutback in Japanese banks' international operations. More generally, claims on Japan fell because of weak loan demand due to the slowing Japanese economy and, in the second half of the year, falling prices of Japanese securities. U.S. claims on Western Europe, particularly the United Kingdom, also decreased substantially, as weak international demand for bank credit and below-average yearend credit needs depressed lending. Partly offsetting these decreases, claims on Canada were bolstered by economic recovery there.
U.S. banks' dollar claims on foreign public borrowers and other private foreigners increased $\$ 12.7$ billion, to $\$ 98.3$ billion; the increase was more than accounted for by U.S. security dealers' lending, through resale agreements, to international mutual funds in the Caribbean and the United Kingdom. Banks' claims declined, especially on Latin American borrowers.
Banks' domestic customers' claims decreased $\$ 13.4$ billion, to $\$ 92.0$ billion, as deposits abroad and foreign commercial paper became less attractive to U.S. institutional investors. In particular, U.S. money market mutual funds cut their offshore depositing in half during the year. Attractive conditions in longer term securities markets and the relative drop in short-term interest rates abroad curtailed foreign placements of commercial paper in the United States.

Banks' claims payable in foreign currencies fell $\$ 2.6$ billion, to $\$ 60.3$ billion; moderate lending

Table C.-Changes in U.S. Holdings of Foreign Securities, 1993
[Billions of dollars]

| Total change | 187.0 |
| :---: | :---: |
| Net U.S. purchases ................................................................ | 120.0 |
| Price changes ....................................................................... | 82.2 |
| Exchange rate changes ........................................................... | -15.2 |

during much of the year was more than offset by a large repayment in the second quarter.

## Foreign securities

U.S. portfolio holdings of foreign securities increased $\$ 187.0$ billion, to $\$ 518.5$ billion, bolstered by record net purchases and strong price appreciation, especially in foreign stocks (table C).
U.S. institutional investors accelerated diversification into foreign securities, doubling their net purchases of foreign stocks and more than tripling their net purchases of foreign bonds:

- In 1993, large U.S. pension funds invested approximately $\$ 54.0$ billion abroad, or 8 percent of their assets, up from $\$ 33.0$ billion, or 5 percent, in 1992. ${ }^{1}$
- Sales of shares by U.S. mutual funds investing abroad increased to $\$ 28.0$ billion in 1993, up from $\$ 9.0$ billion in $1992 .{ }^{2}$

Factors encouraging this movement were the exceptional price performance of many foreign stock markets relative to the U.S. market, the strong price performance of British gilt-edged bonds, and U.S. institutional demand for higher yielding foreign bonds as U.S. bond interest rates continued to fall. The steep drop in U.S. rates induced a record volume of newly issued bonds in the United States, bolstered by borrowers' refinancing of outstanding debt.
U.S. holdings of foreign stocks increased $\$ 119.6$ billion, to $\$ 297.7$ billion, mainly reflecting record net purchases and large price appreciation. Diversification by U.S. investors into foreign stocks accelerated, as many foreign stock markets substantially outperformed the U.S. market (table D).

- U.S. holdings of Western European stocks increased substantially. Net purchases were $\$ 25.3$ billion, and price appreciation was $\$ 25.8$ billion. Price advances ranged from 20 to 40 percent among most European markets,

[^32]Table D.-U.S. Holdings of Foreign Stocks by Major Areas
[Billions of dollars]

|  | 1992 | 1993 | Change |
| :---: | :---: | :---: | :---: |
| Total holdings ............................................ | 178.1 | 297.7 | 119.6 |
| Western Europe | 90.9 | 123.4 | 32.5 |
| Of which: United Kingdom .................. | 29.0 | 41.9 | 12.9 |
| Germany ............................. | 14.5 | 23.0 | 8.5 |
| Netherlands .......................... | 11.6 | 18.0 | 6.4 |
| France ................................. | 11.5 | 16.3 | 4.8 |
| Canada ................................................. | 14.8 | 23.1 | 8.3 |
| Japan .................................................... | 28.9 | 42.7 | 13.8 |
| Latin America .......................................... | 15.2 | 35.8 | 20.6 |
| Other countries .......................................... | 28.3 | 72.7 | 44.4 |

compared with only 7 percent in the U.S. market. Exchange rate losses, reflecting the dollar's strength against European currencies, reduced the gain by $\$ 17.1$ billion.

- U.S. holdings of Japanese stocks increased $\$ 13.8$ billion, as an 11-percent price advance early in the year and the strong yen attracted U.S. investors. The increase in holdings reflected net purchases of $\$ 5.5$ billion, price appreciation of $\$ 2.8$ billion, and exchange rate appreciation of $\$ 4.1$ billion.
- U.S. holdings of Canadian stocks increased $\$ 8.3$ billion, reflecting net purchases of $\$ 5.1$ billion, price appreciation of $\$ 3.4$ billion, attributable to a 20 -percent rise in prices, and only small exchange rate depreciation.
- Increases in other U.S. holdings principally reflected investor interest in the newly emerging economies, where market prices increased 30 to 100 percent. In Latin America, holdings rose $\$ 20.6$ billion on net purchases of $\$ 9.6$ billion and price appreciation of $\$ 10.2$ billion, reflecting strong price advances in Mexico, Argentina, and Brazil. Holdings of stock from other countries-particularly the emerging Asian markets of Hong Kong, Singapore, Malaysia, Korea, Taiwan, and Thailand-rose an unprecedented $\$ 44.5$ billion on net purchases of $\$ 12.4$ billion and price appreciation of $\$ 32.1$ billion.
U.S. holdings of foreign bonds increased $\$ 67.4$ billion, to $\$ 220.8$ billion, largely reflecting record net purchases. New foreign bond issues in the United States were a record $\$ 46.8$ billion. Sharply lower U.S. interest rates, which reached a $20-$ year low, prompted sizable refinancings by many international borrowers. Canadian, Netherlands, and British corporate borrowers accounted for half of the step-up in new issues. Issues from Australia, Korea, Hong Kong, and several countries in Latin America also increased. Redemptions of outstanding dollar bonds reduced

Table E.-Changes in U.S. Direct Investment Abroad, 1993
[Billions of dollars]

|  | At current cost | At market value |
| :---: | :---: | :---: |
| Total change ............................................ | 48.0 | 207.2 |
| Capital outflows ....................................... | 57.9 | 57.9 |
| Equity capital ..................................... | 17.4 | 17.4 |
| Intercompany dabt ............................... | 10.9 | 10.9 |
| Reinvested earnings ............................ | 29.6 | 29.6 |

| Exchange rate changes ............................ | -10.3 | -18.4 |
| Other valuation changes ........................... | -2.4 | . 8 |

holdings by $\$ 8.9$ billion. U.S. net purchases of outstanding foreign bonds surged to $\$ 21.5$ billion, nearly all from the British gilt-edged market.

## U.S. direct investment abroad and other private assets

U.S. direct investment abroad at current cost increased $\$ 48.0$ billion, to $\$ 716.2$ billion; at market value, it increased $\$ 207.2$ billion, to $\$ 993.2$ billion (table E). Capital outflows increased to a record $\$ 57.9$ billion as reinvested earnings nearly doubled, as equity outflows increased to a near-record, and as intercompany debt outflows declined slightly.
The increase in reinvested earnings reflected growth in affiliates' earnings in a few countries and a reduction in repatriated dividends to U.S. parents. By area, capital outflows strengthened to Europe, despite sluggish or negative economic growth there and declining costs for funding in several European countries. Outflows also strengthened to the Pacific Rim countries, where economic growth was buoyant, and to Latin America, where economic recovery was underway in several countries.

At current cost, capital outflows were partly offset by exchange rate losses, which reflected the translation of foreign affiliates' assets and liabilities from depreciating foreign currencies into U.S. dollars. At market value, the exchange rate losses were more than offset by substantial increases in U.S. owners' equity as a result of the sharp upswing in stock prices in most world markets.
U.S. claims on unaffiliated foreigners reported by U.S. nonbanking concerns increased $\$ 0.6$ billion, to $\$ 254.5$ billion. Financial claims, which accounted for four-fifths of total claims, decreased $\$ 0.5$ billion, but included sizable currency and geographic shifts. U.S. dollar claims on the United Kingdom and on the Caribbean banking centers were reduced, while foreign currency and, to a lesser extent, dollar claims on continental Europe and Asia increased. Commercial claims increased $\$ 1.1$ billion, primarily in the first quar-
ter, as weakness through the year reflected the slowdown in U.S. export growth.

## U.S. official reserve assets and other U.S. Government assets

U.S. official reserve assets increased $\$ 17.5$ billion, to $\$ 164.9$ billion, mainly reflecting price appreciation of U.S. gold-reserve assets. U.S. gold-reserve assets increased $\$ 15.4$ billion, to $\$ 102.6$ billion, as a result of an 18-percent increase in the price of gold. U.S. foreign-currency reserves increased $\$ 1.5$ billion, to $\$ 41.5$ billion; small capital outflows, representing the accumulation of holdings from interest earnings on those reserves, were partly offset by intervention sales of yen in the second and third quarters. Valuation changes mostly reflected appreciation in yen holdings.
U.S. Government assets other than official reserve assets increased $\$ 0.2$ billion, to $\$ 80.9$ billion; increases in U.S. Government credits and other assets slowed sharply, as fewer credits were rescheduled and new credit disbursements declined. Partly offsetting the overall decline in credit disbursements were large disbursements to the Government of the Russian Federation that represented the consolidation and rescheduling of certain claims against the former Soviet Union; the U.S. Government also acquired outstanding claims on the former Government that were held by U.S. banks.

## Changes in Foreign Assets in the United States

## Foreign official assets

Foreign official assets in the United States increased $\$ 73.9$ billion, to $\$ 516.9$ billion. Most of this growth was accounted for by record capital inflows, mostly in the acquisition of short-term U.S. Treasury obligations and U.S. bank deposits; price appreciation in U.S. stocks also contributed. Industrial countries added $\$ 38.9$ billion through purchases of U.S. assets, mostly by Western European countries late in the year and by Asian countries in the middle of the year. Non-opec developing countries, primarily in Latin America and the Pacific Rim, added $\$ 36.6$ billion to their U.S. assets. Some Latin American countries may have invested unused proceeds from international debt issues in the United States. opec members drew down their U.S. assets by $\$ 3.8$ billion.

## Bank liabilities

U.S. liabilities to private foreigners and to international financial institutions reported by U.S. banks increased $\$ 20.9$ billion, to $\$ 672.0$ billion.
U.S. banks' own liabilities payable in dollars increased $\$ 1.4$ billion, to $\$ 556.6$ billion; the small change reflected two nearly offsetting developments among foreign-owned banks in the United States. On the one hand, U.S. offices of European and Canadian banks financed a moderate expansion of their U.S. assets through borrowing from unaffiliated foreign banks, mostly in the second half of the year. On the other hand, nearly offsetting this increase was a further rundown in liabilities of U.S. offices of Japanese banks to own foreign offices in Japan, as Japanese banks' withdrawal from the international interbank market continued.
U.S. banks' own liabilities payable in foreign currencies increased $\$ 4.8$ billion, to $\$ 77.6$ billion; most borrowing was from Western Europe in the first and third quarters to fund surges in foreign currency lending abroad.

Banks' custody liabilities increased $\$ 12.3$ billion, to $\$ 37.8$ billion, as a result of inflows into negotiable certificates of deposit from the United Kingdom; these inflows were primarily in the second half of the year, when the foreign-owned banks in the United States drew funds from unaffiliated banks abroad.

## U.S. Treasury securities

U.S. Treasury securities held by private foreigners and international financial institutions increased $\$ 29.2$ billion, to $\$ 254.1$ billion (table F).
A strong rise in U.S. Treasury bond prices through August and the U.S. dollar's strength against the Canadian dollar and continental European currencies contributed to heavy purchases. However, net purchases slowed late in the year as bond prices weakened and as Canadian and continental European purchasers shifted to U.S. corporate bonds. International bond funds in the Caribbean continued to reduce their holdings in 1993, as they had in 1992.

[Billions of dollars]

| Total change .................................................................................. | 29.2 |
| :---: | :---: |
| Net foreign purchases ................................................................ | 24.8 |
| Price changes ........................................................................... | 4.4 |
| Exchange rate changes .............................................................. | 0 |

## Other U.S. securities

Foreign holdings of U.S. securities other than U.S. Treasury securities increased $\$ 112.2$ billion, to $\$ 733.2$ billion, as strong foreign demand more than doubled net purchases to a record (table G).

Demand accelerated throughout the year as a result of several factors: Buoyant prices in U.S. securities markets, steeply falling U.S. bond interest rates, low U.S. inflation, dollar appreciation against most major currencies, and strong economic growth in the final quarter, when foreign purchases of stocks rose sharply.

Foreign holdings of U.S. stocks increased $\$ 39.8$ billion- $\$ 18.6$ billion in strong net purchases and $\$ 21.2$ billion in price appreciation-to $\$ 340.0$ billion. Net foreign purchases resumed for the year, encouraged by a 7 -percent rise in U.S. stock prices, by dollar appreciation, and by strong economic growth in the fourth quarter, when two-thirds of net purchases occurred. However, considerably stronger price performance in many foreign stock markets was a limiting factor. Net purchases included a heavy volume of initial public offerings in the United States and an increase in U.S. Euro-equities issued abroad. Holdings of Western European and Japanese investors reflected their switch to net purchases in 1993 after net sales in 1992. Latin American investors, especially international funds in the Caribbean, significantly stepped up their purchases.

Foreign holdings of U.S. corporate and federally-sponsored agency bonds increased $\$ 72.4$ billion, to $\$ 393.2$ billion, as a result of record net purchases of $\$ 61.5$ billion and price appreciation of $\$ 12.2$ billion. Foreign demand was especially strong for U.S. fixed-rate securities. In a falling interest rate environment, U.S. borrowers were encouraged to refinance outstanding high-cost debt, and they stepped up new issues both domestically and abroad. U.S. offshore new issues increased $\$ 10.6$ billion, to $\$ 34.0$ billion; issues consisted mostly of straight fixed-rate bonds issued by nonbank financial corporations, which financed renewed growth in consumer credit demand. Later in the year, medium-term notes and floating-rate notes were also used to accommodate investor concern of a possible upturn in interest rates. Foreign-

| Price changes ............ | 33.4 |
| Exchange rate changes ......................................................... | -1.3 |

ers also added substantially to their holdings of mortgage-backed securities issued and guaranteed by U.S. federally-sponsored agencies; net purchases were a record $\$ 32.1$ billion, largely from the United Kingdom, Japan, other Asia, and investment funds in the Caribbean.

## Foreign direct investment in the United States and other liabilities

Foreign direct investment in the United States at current cost increased $\$ 19.7$ billion, to $\$ 516.7$ billion; at market value, it increased $\$ 48.8$ billion, to $\$ 745.8$ billion (table H). As a share of the U.S. private sector's net worth excluding households' net assets, these investments accounted for 9.1 percent on a current-cost basis and 13.1 percent on a market-value basis at yearend. ${ }^{3}$

Net capital inflows recovered: Equity inflows slowed slightly; intercompany debt shifted to inflows, and negative reinvested earnings slowed. Japanese parent firms, faced with depressed earnings in Japan, drew heavily from their U.S. affiliates, which paid dividends in excess of earnings. Capital inflows from Europe partly reflected stronger economic growth in the United States than in most European countries. Capital inflows also reflected a step-up in diversification into U.S. investments by foreign multinationals, as their U.S. acquisitions and establishments in 1993 accelerated sharply. ${ }^{4}$ On a market-value basis, the advance in U.S. stock prices resulted in a further substantial increase in owners' equity.

Liabilities to unaffiliated foreigners reported by U.S. nonbanking concerns increased $\$ 12.6$ billion, to $\$ 233.3$ billion. Financial liabilities increased $\$ 10.8$ billion, primarily in the second and fourth quarters, when U.S. short-term interest rates turned upward. U.S. nonbanks borrowed

from banks in the United Kingdom and from Asian banking centers while, to a much lesser extent, repaying loans from banks in the Caribbean; most new borrowing was through the issuance of Eurocommercial paper. Commercial liabil-
ities increased $\$ 3.5$ billion, including increased margins in the U.S. futures markets by Western Europeans that were partly offset by a small decline in U.S. trade payables.

Tables 1 through 3 follow.

r Revised.
P Preliminary.

1. Represents gains or losses on foreign-currency-denominated assets due to their revaluation at current exchange rates.
2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets.
of asseis. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.
3. Reflects changes in gold stock from U.S. Treasury sales of gold medaliions and commemorative and bullion coins; also reflects replenishment through open market purchases. These de-
monetizations/monetizations are not included in international transactions capital flows.
4. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscolianeous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes Wortd War I debts that are not being serviced.
5. Includes indebiedness that the borrower may contractualy, or at its option, repay with its currency, with a third country's currency, or by dellivery of materials or transter of services.
6. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

Table 2.-U.S. Assets Abroad and Foreign Assets in the United States by Area
[Millions of dollars]

## - Revised.

- Preliminary.
- Includes U.S. gold stock valued at market price
- Less than $\$ 500,000(+-)$.

1. Also includes paid-in capital subscription to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over
riods in excess of 1 year. Excludes
third country's currency, or by delivery of materials or transfer of services.
2. Positions at current costs or market value are not available by area; country detail are available only at histori cal costs in the article "Direct Investment Positions on a Historical Cost Basis, 1993; Country and Industry Detail" elsewhere in this issue of the SURVEY.
3. Details not shown separately.
4. Details not shown separately.
5. Details not shown separately are included in totals in line 20.
6. Primarily U.S. Govemment liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

${ }^{r}$ Revised.
$p$ Preliminary.

1. U.S. official pold stock valued at market price.
2. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been setied through intemational agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.
3. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transier of services.
4. Estimates for 1982 forward are finked to both the 1982 and 1989 benchmark surveys of U.S. direct investment abroad. Estimates for 1979-81 are linked to both the 1977 and 1982 benchmark surveys of U.S. direct investment abroad.
5. Estimates for 1979 forward reflect new 1987 base-year price indexes for tangible assets, which replace the 1982 base-year price indexes previously used in the national income and product accounts.
6. Estimates are linked to both the 1982 and 1989 benchmark surveys of U.S. direct investment abroad.
7. Breaks in series reflect the following: in 1982, an increase in reporters' exemption levels; in 1983, the introduction of data from the United Kingdom and from the Bank for International Settlements (BiS) for Austria, Belgium, Denmark, Finland, Germany, Ireland, Luxembourg. Nowway, Spain, Sweden, Switzerland, Caribbean banking centers

BIS coverage for Switzerland was also improved in 1989.
8. Breaks in series refled the following: in 1981, expanded coverage of brokers' and security dealers' reporting of claims; in 1982, an increase in reporters' exemption levels; in 1988, the introduction of data on holdings of loreign commercial paper.
9. Estimates include results of 1978, 1984, and 1989 portiolio benchmark surveys conducted by the U.S. Department of the Treasury.
10. Primarily U.S. Government liabilisies associated with military sales contracts and other transactions arranged with or through foreign official agencies.
11. Estimates for 1980 fonward are linked to both the 1980 and 1987 benchmark surveys of foreign direct invest ment in the United States. Estimates for 1979 are linked to both the 1974 and 1980 benchmark surveys of foreign direct Investment in the United States.
12. Estimates for 1982 forward are linked to both the 1980 and 1987 benchmark surveys of foreign direct invest ment in the United States.
13. Breaks in series reflect the following: in 1982, an increase in reporters' exemption levels; in 1983 , the introduc-
tion of data from the United Kingdom and Bis-source data for Caribbean and Asian banking centers.
14. A break in series in 1982 reflects an increase in reporters' exemption levels.

NoTE.--Revised area tables for 1979-93 are available upon request from the Balance of Payments Division (BE 58), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

# Direct Investment Positions on a Historical-Cost Basis, 1993: Country and Industry Detail 

By Sylvia E. Bargas and Jeffrey H. Lowe

This article presents the country and industry detail underlying the U.S. direct investment position abroad and the foreign direct investment position in the United States for 1993 on a historical-cost, or book value, basis. This basis is the only one on which detailed estimates of the position are available by country and industry. ${ }^{1}$ Aggregate estimates of the investment

1. Estimates on a historical-cost basis largely reflect prices at the time of investment rather than prices of the current or any other period. Historical cost is the basis used for valuation in company accounting records in the

positions on the current-cost and market-value bases are presented in the companion article "The International Investment Position of the United States in 1993," beginning on page 63 of this issue. Table 1 shows the aggregate direct investment positions on all three valuation bases.

In the analysis that follows, information from outside sources, mainly press reports, has been used to assist in the analysis and interpretation of the direct investment position data.

## U.S. Direct Investment Abroad

The U.S. direct investment position abroad valued at historical cost-the book value of U.S. direct investors' equity in, and net outstanding

United States and is the only basis on which companies can report data in the direct investment surveys conducted by the Bureau of Economic Analysis (ben). (For consistency, the estimates of earnings and reinvested earnings used in analyzing changes in the historical-cost positions are also on this basis and are not adjusted to current cost; detailed estimates of these items, like the positions, are not available with such an adjustment.)

## CHART 1

The Direct Investment Positions on a Historical-Cost Basis, 1982-93

## CHARTR

## U.S. Direct Investment Position Abroad,

 1993: Shares of Host Countries

US Depminent of Cormerice, Erisau of Economic Arayde
loans to, their foreign affiliates-was $\$ 548.6$ billion at yearend 1993 (tables 2 and 3, and chart 1). ${ }^{2}$ The positions in the United Kingdom- $\$ 96.4$ billion, or 18 percent of the total-and in Canada$\$ 70.4$ billion, or 13 percent of the total-remained by far the largest of any country (chart 2).
In 1993, the overall position increased $\$ 49.7$ billion, or 10 percent, compared with a 7 -percent increase in 1992. The following tabulation shows the change in position by type of capital flow and valuation adjustment: ${ }^{3}$

| Change in 1993 (Billions of dollars) |  |
| :---: | :---: |
| Total | 49.7 |
| Capital outflows | 58.1 |
| Equity capital | 17.4 |
| Intercompany debt | 10.9 |
| Reinvested earnings. | 29.8 |
| Valuation adjustments. | -8.4 |
| Currency translation. | -5.8 |
| Other ............... | -2.6 |

The increase in the 1993 position reflected several factors. First, the steadily growing
2. A foreign affliate is a foreign business enterprise in which a single U.S. investor owns at least 10 percent of the voting securities, or the equivalent.
3. Valuation adjustments to the historical-cost position are made to reflect differences between changes in the position, measured at book value, and capital flows, measured at transaction value. (For the position on a historical-cost basis, there are no valuation adjustments due to price changes, because prices are held at historical levels.)

Currency translation adjustments to the position are made to reflect changes in the exchange rates that are used to translate affiliates' foreign-currency-denominated assets and liabilities into U.S. dollars. The precise effects of currency fluctuations on translation adjustments depend on the value and currency composition of affiliates' assets and liabilities. Depreciation of foreign currencies in relation to the dollar usually results in negative translation adjustments, because it tends to lower the dollar value of net foreign-currency-denominated assets. Similarly, appreciation of foreign currencies in relation to the dollar usually results in positive adjustments, because it tends to raise the dollar value of net foreign-currency-denominated assets.

## Changes in the position by country

The $\$ 49.7$ billion increase in the U.S. direct investment position abroad was spread among all major geographic areas. The largest increases were in Europe, Asia and Pacific, and Latin America and Other Western Hemisphere.

Europe accounted for just under one-half of the increase. There, the position rose $\$ 22.9$ billion, or 9 percent. Capital outflows of $\$ 30.0$ billion were partly offset by a $-\$ 7.1$ billion valuation adjustment related to widespread foreign currency depreciation against the dollar. Within Europe, the increase (as well as the level of the position at yearend) was by far the largest in the United Kingdom; increases were also sizable in Germany and Switzerland.

In the United Kingdom, a $\$ 13.8$ billion increase was mainly in finance (except banking), insurance, and real estate (fire); it mostly reflected U.S. parents' advances to, and earnings reinvested in, investment-bank affiliates. The capital needs of these affiliates have expanded in accordance with the growing demand for global financial services, as evidenced by the record growth in cross-border sales and purchases of securities in 1993. These affiliates also have played a role in financing the continued heavy merger and acquisition activity in Europe. Equity capital outflows to the United Kingdom were particularly large in manufacturing, where they reflected several large acquisitions in "other" manufacturing and "other" transportation equipment.
In Germany, the position increased $\$ 3.9$ billion; the increase was widespread by industry and by account. In Switzerland, a $\$ 3.7$ billion increase consisted mainly of reinvested earnings of affiliates in FIRE and wholesale trade.

In Norway, the increase in position, though far smaller than that in Germany or Switzerland, was the net of large, nearly offsetting changes resulting from the same transaction: The largest single equity capital outflow in 1993, reflecting the acquisition of a food products manufacturer, was largely offset by an associated negative valuation adjustment.
In Asia and Pacific, the position increased $\$ 12.3$ billion, or 15 percent. Almost one-half of the increase resulted from reinvested earnings. Increases occurred in most countries and reflected continued robust economic growth in the area. Some of the largest increases-ranging from $\$ 1.6$ billion to $\$ 2.1$ billion-were in Australia, Hong Kong, and Singapore; they primarily resulted from reinyested earnings. However, the largest
increase in position within Asia and Pacific- $\$ 4.8$ billion-was in Japan; this increase mainly reflected positive valuation adjustments related to the appreciation of the Japanese yen against the U.S. dollar. Equity outflows also contributed to the increase in Japan; they were the largest to any Asian and Pacific country and were concentrated in manufacturing.
In Latin America and Other Western Hemisphere, the position increased $\$ 11.3$ billion, or 12 percent. The largest increases were in Bermuda, the Netherlands Antilles, and Mexico. In Bermuda, a $\$ 2.5$ billion increase mainly resulted from the reinvested earnings of finance affiliates of U.S. parents in manufacturing and petroleum. In the Netherlands Antilles, a $\$ 2.1$ billion increase mainly reflected repayments by U.S. parents of loans from their finance affiliates. In Mexico, a $\$ 1.7$ billion increase partly reflected the acquisition of minority interests in a beverage business and a telecommunications business. These acquisitions were part of a wider trend of acquisitions in those industries that reflected the industries' increasing globalization and the worldwide search by U.S. parents for growing markets. The acquisition of the telecommunications business, for example, was the largest of many new investments in that industry in 1993, including the purchase of minority interests in the newly privatized Hungarian telephone system and in a Hong Kong telecommunications company that will be used as a base to enter the burgeoning Chinese market.
The position in Canada increased $\$ 1.6$ billion, or 2 percent. The increase largely resulted from reinvested earnings, particularly in transportation equipment manufacturing, petroleum, and fire; also contributing was the acquisition of a minority interest in a beverage company. However, the increase was dampened by a negative valuation adjustment that resulted from the depreciation of the Canadian dollar against the U.S. dollar.

## Foreign Direct Investment in the United States

The foreign direct investment position in the United States valued at historical cost-the book value of foreign direct investors' equity in, and net outstanding loans to, their U.S. affiliateswas $\$ 445.3$ billion at the end of 1993 (tables 2 and 4 , and chart 1 ). ${ }^{5}$ For the second consecutive
5. A U.S. affiliate is a U.S. business enterprise in which a single foreign direct investor owns at least 10 percent of the voting securities, or the equivalent.
year, Japan's position- $\$ 96.2$ billion, or 22 percent of the total-was the largest. The United Kingdom had the second largest position-\$95.4 billion, or 21 percent of the total-and the Netherlands had the third largest- $\$ 68.5$ billion, or 15 percent of the total (chart 3 ).

In 1993, the overall position increased $\$ 19.6$ billion, or 5 percent, compared with a 2 -percent increase in 1992 and a 6-percent increase in 1991. The following tabulation shows the change in position by type of capital flow and valuation adjustment:

Change in 1993 (Billions of dollars)

| Total. | 19.6 |
| :---: | :---: |
| Capital inflows | 22.6 |
| Equity capital | 21.7 |
| Intercompany debt. | 9.1 |
| Reinvested earnings | -8.1 |
| Valuation adjustments | -3.0 |
| Currency translation | . 4 |
| Other . .............. | -2.6 |

The increase in the position resulted from improvements in foreigners' incentive and ability to invest in the United States. Foreigners' incentive to invest was enhanced by the continued growth of the U.S. economy. Their ability to invest was strengthened by improved business conditions in certain major investor countries, such as the United Kingdom, which raised the earnings of foreign parents in those countries. The impact of these factors can also be seen in the total outlays by foreign investors to acquire or establish U.S. businesses: In 1993, such outlays, including those financed by equity capital inflows, rose

## CHART 3

## Foreign Direct Investment Position in the United States, 1993: Shares of Investor Countries

US. Departineti dC Cornerce: Bureau of Economic Araypis

71 percent after having decreased 40 percent in 1992. ${ }^{6}$

The 5-percent increase in the position in 1993 is in line with the average rate of growth over the previous 2 years, but it remains well below the rates of growth during 1982-90, when annual increases averaged 16 percent. Among the factors limiting growth in the position in 1993 were continued economic weakness in Japan, the largest investor country, and competition for investable funds from a number of other areas, such as Europe, Latin America, and the Pacific Rim, that also offered attractive investment opportunities.

For the fifth consecutive year, growth in the position was reduced by negative reinvested earnings, which occur when affiliates incur losses or pay dividends to their foreign parents in excess
6. For a discussion of these and other factors affecting new foreign direct investment in the United States, see "U.S. Business Enterprises Acquired or Established by Foreign Direct Investors in 1993," Survey 74 (May 1994): 5061. Preliminary data from bea's survey of new foreign direct investments, summarized in that article, indicate that total outlays to establish or acquire U.S. businesses were $\$ 26.2$ billion in 1993, up from $\$ 15.3$ billion in 1992 . These figures differ from those on changes in the foreign direct investment position presented here largely because they cover only transactions involving the acquisition or establishment of new U.S. affiliates and because they include financing other than that from the foreign parent, such as local borrowing by existing U.S. affiliates. In contrast, changes in the position reflect transactions of existing, as well as new, U.S. affiliates (but only if the transactions are with the foreign parent or other members of the foreign parent group) and valuation adjustments.

Notwithstanding their differences, the two types of data are related. Any outlays to acquire or establish U.S. businesses that are funded by foreign parents (or other members of the foreign parent group) are part of capital inflows, a component of the change in the position. Data on the sources of funding of outlays to acquire or establish new U.S. affiliates indicate that foreign parent groups funded $\$ 11.8$ billion of such outlays in 1993, compared with $\$ 7.8$ billion in 1992.

## GHART 4

Earnings, Distributed Earnings, and Reinvested Earnings of U.S. Affiliates of Foreign Parents, 1982-93
Billion \$

of their current earnings. ${ }^{7}$ During the 5 -year period, U.S. affiliates maintained relatively stable earnings distributions despite sharp declines in earnings, which turned to losses in 1990 (chart 4). Earnings began to recover in 1992, and by 1993 they were once again positive, though barely. Reinvested earnings also increased, but were still negative in 1993. By country, Japan accounted for over one-half of total negative reinvested earnings in 1993, as Japanese parent companies, faced

[^35]with poor business conditions at home, turned to their U.S. affiliates for funds. By industry, affiliates' negative reinvested earnings were fairly widespread, but were highest in real estate and machinery manufacturing.

## Changes in the position by country

The $\$ 19.6$ billion increase in the 1993 position was fully accounted for by European investors, whose position rose 8 percent. Within Europe, parents in the United Kingdom had the largest increase, followed by parents in Germany, the Netherlands,

2. OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Gabon, Indonesia, Iran, liza, Kuwait, Libya, Nigeria, Catar, Saudil Arabia, the United Arab Emirates, and Venezuela. Prior to 1993, Ecuador was also a member of OPEC; data tor it are included in the 1992, but excluded from the 1993, data in this line.
and France. Outside Europe, the position of Canada increased, while the position of Japan decreased. In Other Western Hemisphere, a relatively small increase in the position was the net result of a number of considerably larger, offsetting changes among countries in the area; most of the largest changes were in finance (except banking) (hereinafter referred to as "finance").

The position of British parents increased $\$ 6.3$ billion, or 7 percent. The largest increases were in finance, chemicals, and "other" industries. In finance, the increase was in the form of debt, as affiliates borrowed funds from their British parents. In chemicals, nearly one-half of the increase was accounted for by (positive) reinvested earnings of companies engaged primarily in the manufacture of pharmaceuticals. In "other" industries, equity capital inflows accounted for most of the increase; included in equity capital inflows was a $\$ 0.4$ billion inflow resulting from a British company's acquisition of a minority interest in an air transportation company.
The position of German parents increased $\$ 5.1$ billion, or 17 percent. The largest increases were in finance and in chemicals. In finance, the increase resulted from debt repayments by foreign parents; in chemicals, it was due to affiliates' borrowing from foreign parents.

The position of Netherlands parents increased $\$ 3.2$ billion, or 5 percent. "Other" industries and banking had the largest increases. In "other" in-
dustries, the increase was due to borrowing from foreign parents. Nearly one-half of the increase in banking resulted from the elimination of negative positions in affiliates that were liquidated.
The position of French parents increased $\$ 3.0$ billion, or 12 percent. Three-fourths of the increase was in finance and resulted from repayments by French parents of funds borrowed from their affiliates.
The position of Canadian parents increased $\$ 1.6$ billion, or 4 percent. Increases in insurance and finance were partly offset by a decrease in "other" industries. In both insurance and finance, the increases were about evenly distributed between equity inflows, debt inflows, and (positive) reinvested earnings. The decrease in "other" industries was mostly attributable to the repayment of loans from foreign parents.
The position of Japanese parents declined $\$ 1.3$ billion, or 1 percent. The decline was spread among several industries; the largest declines were in finance, real estate, and "other" industries. In finance, the decrease was more than accounted for by debt outflows, as affiliates made loans to their parents. The declines in real estate and "other" industries were more than accounted for by negative reinvested earnings, as affliates paid dividends to their parents even though they had negative earnings. Only in wholesale trade and banking were there significant increases, which reflected sizable capital contributions by Japanese parents to their affiliates.

# U.S. International Transactions, Revised Estimates for 1984-93 

By Christopher L. Bach

As is customary each June, the estimates of U.S. international transactions have been revised to incorporate methodological and statistical changes. This year, like last year, a number of improvements have been implemented as part of a multiyear effort by the Bureau of Economic Analysis (bea) to address gaps in the coverage of transactions. Many of these gaps have arisen because of the dynamic nature of the international financial markets, and the extensive methodological changes made this year reflect bea's efforts to keep pace with the rapid growth, innovation, and change in the markets that have been so evident in recent years. The improvements to address these gaps in coverage respond to a number of suggestions by working groups at the International Monetary Fund (IMF) and the National Academy of Sciences.

The largest revisions this year are in the capital accounts, where greatly expanded use is made of counterpart data. The most important of the counterpart data used this year are those compiled by the Bank for International Settlements (BIS) on banks' claims and liabilities with nonbanks in other reporting countries. Because these counterpart data are much more comprehensive in coverage than the U.S. source data, they have been substituted into the U.S. accounts. The use of the sis data had been suggested earlier by statistical working groups at the imp as a potential means of correcting the underreporting, or
nonreporting, of direct transactions between domestic residents and foreign banks. However, it has not been until this year that U.S. compilers and bis statisticians have been fully successful in resolving the many issues of comparability between the bis data and data included elsewhere in the U.S. accounts.

As a result of the substitution of counterpart data, capital outflows and capital inflows have been raised by very substantial amounts for 198493. Cumulative capital outflows added to the accounts totaled $\$ 98.6$ billion for this period, and cumulative capital inflows totaled $\$ 115.9$ billion. The capital accounts now reflect economic developments during these years much better than before. The effect on outstanding positions is also substantial. For 1993, on both a current-cost basis and a market-value basis, U.S. assets abroad were revised up $\$ 137.6$ billion as a result of the substitution of counterpart data, and foreign assets in the United States were revised up $\$ 121.9$ billion.

Revisions to the current account for 1984-92 were relatively small (table 1). However, sizable revisions occurred to portfolio income as a result of the substitution of counterpart data in the capital accounts. For many years, the revisions to income receipts and payments were close to offsetting; in general, slightly more income payments were added to the accounts than income receipts. For 1993, revisions to the current

account were large; in addition to the revisions related to the substitution of counterpart data, sizable revisions were made to other private service receipts and payments and to direct investment income receipts and payments.

## Major sources of revisions

The major sources of revisions to the U.S. international transactions accounts are highlighted in the following paragraphs. The changes to the income and capital accounts are summarized in table 2.

- Merchandise trade.-Updated seasonal adjustment factors, developed jointly by bea and the Bureau of the Census and based on updated source data, are incorporated into the quarterly estimates of merchandise trade. In addition, changes in the harmonized classification system, upon which bea's end-use categories are based, have changed the commodity composition of merchandise exports and imports.
- Portfolio investment income receipts.-Banks' income receipts are reduced to reflect a movement away from interest charges on

certain interoffice account balances and to reflect the application of shorter term (and therefore lower) interest rates to certain other account balances. Nonbanks' income receipts are raised because larger outstanding claims on foreign banks are now used in the position estimates as a result of the substitution of counterpart data.

- Portfolio investment income payments.-Like banks' income receipts, banks' income payments are reduced to reflect the movement away from interest charges on certain interoffice account balances. Nonbanks' income payments are raised because larger outstanding liabilities to foreign banks are now used in the position estimates as a result of the substitution of counterpart data.
In addition, and also to reflect changed market conditions, dividend payments on foreign holdings of U.S. stocks are raised as a result of the application of a slightly higher average dividend rate; interest payments on U.S. Government securities are reduced as a result of the application of more representative and lower interest rates; and income payments on U.S. banks' custody holdings are reduced to parallel revisions made in the position estimates that eliminate duplication in the recording of transactions.
- U.S. nonbanks' claims and liabilities.-New estimates, based on counterpart data, are introduced to more completely record changes in U.S. nonbanking concerns' claims on and liabilities to foreign banks.

## Merchandise trade

Estimates of merchandise trade were revised for 1991-93. For both exports and imports, quarterly seasonally adjusted series were revised, based on updated seasonal and trading-day factors developed jointly by bea and the Census Bureau. The revised data for 1993 published by bea are identical with those published by the Census Bureau (on a balance of payments basis); small differences arise in earlier years because bea retabulates adjustments for timing over a longer time period than does the Census Bureau.

Estimates of merchandise trade by principal end-use category were also revised for 1991-93 to reflect the reclassification of harmonized system (Hs) commodity classification codes, from which beA's end-use data are developed. The Hs codes were reclassified as a result of research by the Bureau of Labor Statistics to rebase its
price statistics to the year 1990 and as a result of BEA's reclassification to provide symmetrical classification of commodities for both exports and imports. For exports, the results for 1993 were to lower by $\$ 1.2$ billion the value of commodities classified as capital goods, and to raise by $\$ 1.0$ billion the value of commodities classified as consumer goods. The effects on other export end-use categories were small. For imports, the value of industrial supplies and materials was raised $\$ 0.6$ billion, and the value of consumer goods was lowered $\$ 0.3$ billion. The effects on other import end-use categories were small. The revisions affect only the distribution of merchandise across end-use categories; total exports and imports are unaffected.

## Services

Other private service receipts.-For 1993, a new estimate was developed to measure more completely expenditures in the U.S. economy of foreign embassies and consular offices. For foreign embassies and consular offices in Washington, $D C$, source data were obtained for the number of diplomatic and nondiplomatic staff; for wages, salaries, and other benefits paid to employees; and for operating expenditures of embassies and consular offices. The empirical relationships, developed from both actual and estimated source data, were also used, after adjustment, to estimate local expenditures of embassies and offices outside the Washington,

## Acknowledgments

The revised estimates were prepared under the general direction of Anthony DiLullo, with the assistance of Cynthia McPherson. Christopher Gohrband and Harlan King prepared the new estimates of nonbanking concerns' transactions using the bis data; Christopher Gohrband and Steven Baldwin, the new estimates of U.S. Government income payments; Barbara Cohen, the new estimates of banks' income receipts and payments; Theresa Stoll, the new estimates of dividend payments on U.S. stocks; and Jane Newstedt, the consolidation of all revisions to portfolio income. Kwok Lee and Julie Bishop prepared the revised classification of merchandise trade. Ed Dozier and Mary Ellen Mikulec prepared the new estimates of expenditures by embassies and international organizations. The revised estimates of direct investment services, income, and capital flows were prepared under the general direction of Betty Barker, Chief of the International Investment Division; Jeffrey Lowe oversaw all aspects of the revisions, with the assistance of the staff of the International Investment Division.

DC area, including the United Nations. A similar approach, also based on actual and estimated source data, was used to estimate local expenditures of international organizations, such as the World Bank, the Inter-American Development Bank, and the International Monetary Fund. The new expenditure estimate was $\$ 0.6$ billion higher than the old one for 1993, the first year for which a new estimate was made.

## Portfolio investment income

Bank income receipts.-Bank income receipts were reduced for 1993 and revised back to 1988 to reflect the fact that in recent years, banks do not charge their own foreign offices interest on certain classes of interoffice account balances, whereas in earlier years, market practices were such that interest was charged. In response to this change in market conditions, bea no longer estimates interest receipts on these account balances. The change in treatment is made to both receipts and payments, but the impact is to lower receipts more than payments because of the larger outstanding asset positions to which interest rates were applied. For 1993, the result was to reduce bank income receipts $\$ 1.1$ billion.

In addition, on other classes of bank accounts, short-term Eurodollar rates more appropriately reflect recent banking practices than the prime rate used in previous calculations; consequently, Eurodollar rates are substituted into the calculation. The result was to reduce bank income receipts $\$ 1.6$ billion for 1993.

Nonbank income receipts.-As a result of the substitution of Bis counterpart data for U.S. nonbank financial claims on foreign banks, income receipts were raised for 1984-93. For 1984, the addition to receipts was $\$ 5.0$ billion; the additions increased to $\$ 10.8$ billion for 1990 before declining to $\$ 4.6$ billion for 1993. Additions were largest for 1989-91, when claims increased especially rapidly in response to strong expansion in both industrial and developing countries, and when interest rates rose rapidly in response to increases in the demand for funds and to rising inflation. For 1992-93, additions were smaller, as the growth in outstanding claims leveled and as interest rates fell sharply.

Additions to nonbank income receipts were generally smaller than additions to nonbank income payments because of the smaller outstanding asset positions to which interest rates were applied, and because the asset positions and related income receipts had already been partially
adjusted for lack of coverage by the revisions of the last 2 years.
Dividend payments.-Stock dividends paid to foreigners were raised for 1989-93 and revised back to 1985 as a result of the application of a higher average dividend rate to outstanding foreign holdings. The rate now applied is the dividend rate for the Standard and Poor's 500 stock index, which is believed to be reflective of the current composition of foreign holdings. Previously, a slightly lower rate, appropriate for a more restricted composition of holdings, was applied. Dividend payments were raised $\$ 1.1$ billion for 1993.

Bank income payments on own account.-Like bank income receipts, bank income payments were reduced for 1993 and revised back to 1988 to reflect the fact that in recent years, banks do not charge their own foreign offices interest on certain classes of interoffice account balances, whereas in earlier years, market practices were such that interest was charged. In response to this change in market conditions, bea no longer estimates interest payments on these account balances. The change in treatment is made to both payments and receipts, but the impact is to lower payments less than receipts because of the smaller outstanding liability positions to which interest rates were applied. For 1993, the result was to reduce bank income payments on own account $\$ 0.9$ billion.
Bank income payments on custody liabilities.Because the new estimates of nonbank liabilities and nonbank income payments include some transactions already in the banking accounts, the bank capital and related bank income transactions are removed from the accounts for 1986-93 to avoid double counting. The removal is necessary because a large portion of banks' custody transactions is for nonbanks. Reductions to income payments were largest in 1989-91, when liability positions were substantially reduced and when interest rates rose strongly; reductions to positions for 1992-93 were also large, but interest rates fell sharply. For 1993, bank income payments on custody liabilities were reduced $\$ 2.0$ billion.

Nonbank income payments.-As a result of the substitution of BIS counterpart data for U.S. nonbank financial liabilities to foreign banks, income payments were raised for 1984-93. For 1984, the addition to payments was $\$ 4.5$ billion; additions increased to $\$ 12.6$ billion for 1990 , before de-
clining to $\$ 6.3$ billion for 1993. Additions were largest for 1988-91, when liabilities increased especially rapidly in response to strong expansion in both industrial and developing countries, and when interest rates rose rapidly in response to increases in the demand for funds and to rising inflation. For 1992-93, additions were smaller, as the growth in outstanding liabilities slowed and as interest rates fell sharply.

Additions to nonbank income payments were generally larger than additions to nonbank income receipts because of the larger outstanding liability positions to which interest rates were applied, and because asset positions and related income receipts had already been partially adjusted for lack of coverage by the revisions of the last 2 years.

The bis data also suggest that short-term Eurodollar rates are more appropriate to apply to outstanding liability positions than the long-term rates used in the previous methodology; thus, a substitution has been made. The substitution, which also brings rates applied to liabilities in line with rates applied to claims, lowered nonbank income payments.
U.S. Government income payments.-Interest paid on foreign holdings of U.S. Government agency bonds was lowered for $1990-93$ for two reasons that reflect changed market conditions. First, the interest rate applied to outstanding positions was changed to a mortgage rate because in recent years, most agency bonds are collateralized mortgage obligations. Second, a large portion of these obligations is relatively short term, with rates that are tied to Eurodollar rates; therefore, short-term Eurodollar rates were introduced into the calculation. The result of both changes was to lower interest payments $\$ 0.6$ billion for 1993.

## U.S. nonbanking concerns' claims on and liabilities to unaffiliated foreigners

Background.-Over the past several years, compilers in leading countries, statistical working groups at the IMF, and statisticians at the Bank for International Settlements (BIs) have all noted deficiencies in the coverage of capital transactions. Current reporting systems incompletely record such transactions or fail to record them at all, leading to large distortions in individual country presentations and to significant difficulties in making country comparisons. The shortcomings are in large part due to the rapid integration of capital markets and the rise in direct transactions that bypass existing data collection systems. The
integration of capital markets has resulted in a sharp rise in the volume of direct financial transactions between U.S. nonbank companies (and individuals) and foreign banks. The U.S. system for tracking international nonbanking transactions was designed for a time when the bulk of such transactions flowed through U.S. banks and other large, established financial institutions and when only the very largest U.S. companies conducted direct transactions with foreign banks. The sharp rise in direct transactions by a wide range of nonbank companies has meant that a large volume of transactions are missed by the existing reporting system, though they are captured in foreign banks' data that are reported to central banks and to the bis.
Three years ago, bea began the process of substituting this foreign banking data for U.S. source data to address the gaps in coverage arising from these direct transactions between U.S. nonbank residents and foreign banks. This has proved to be a highly efficient use of resources, particularly when the data was, for the most part, already being collected by foreign central banks and statistical authorities. Initial efforts led to work with compilers under the auspices of the International Monetary Fund, who examined issues of measurement and international comparability. Later efforts focused on work with compilers in leading countries to conform their data to consistent concepts and definitions and to establish data comparability so as to permit expanded use of counterpart data by the United States and other countries. Over the last 2 years, bilateral data from Canada and the United Kingdom, as well as supplemental data from the U.S. Federal Reserve Board, were first substituted into the U.S. accounts; then, additional bilateral data from the Netherlands, Germany, Italy, and France were substituted. The third and final phase, which has been largely completed with this year's revisions, was to work with statisticians at the U.S. Federal Reserve Board and the bis to examine the comprehensive data they compile.

As a result of this research, BEA is substituting into the accounts a large part of the data compiled by the bis on foreign banks' transactions with U.S. nonbanks. The substitution removes significant gaps in coverage from the U.S. accounts and now presents a picture of nonbanking activity that broadly parallels the picture of banking activity over the past decade. Specific details for both U.S. nonbanking concerns' claims and liabilities are presented in the following paragraphs.

Claims on unaffiliated foreigners.-This year, BEA has been able to expand significantly its use of foreign source data by substituting counterpart data for an additional 10 European countries plus the Caribbean and Asian banking (financial) centers covered by the bis reporting system; these data provide a measure of foreign banks' liabilities to U.S. nonbanking concerns. The bis data have substantially more complete coverage than the bilateral substitutions made to date, and in addition, they incorporate recent improvements made by the U.S. Federal Reserve Board in the reporting of transactions of foreign-owned banks resident in the Caribbean Islands.
bea has made this substitution after extensive consultations with statisticians in foreign countries and at the bis, who confirmed that securities transactions and banking transactions could be separately identified in the bis data so as to avoid an overlap with transactions reported elsewhere in the U.S. accounts. Where these criteria could not be met, as was the case for Japan, the bis data were not used.

The impact of this substitution on the U.S. accounts is dramatic. Prior to making any substitutions into the accounts, U.S. source data recorded U.S. nonbank financial claims on foreigners at $\$ 35.1$ billion at yearend 1983, rising to $\$ 42.6$ billion at yearend 1993. As a result of the bilateral substitutions made over the last 2 years, nonbank claims were raised to $\$ 76.1$ billion at yearend 1983, then rose to $\$ 115.7$ billion at yearend 1993. With this year's substitution of the bis data, nonbank claims were raised to $\$ 131.3$ billion at yearend 1983 and now rise to $\$ 254.5$ billion at yearend 1993.
The growth indicated by the revised estimates more correctly reflects the rapid expansion of nonbank activity that has occurred over the past decade, particularly through Caribbean banking (financial) centers and, very recently, through the Asian banking (financial) centers. At the end of 1993, U.S. nonbank claims on Caribbean banks accounted for $\$ 124.2$ billion of the $\$ 254.5$ billion in total outstanding claims, and nonbank claims on Asian banks accounted for $\$ 10.0$ billion. Growth was most rapid in 1988-90, but has leveled off since then.

The new position data, when converted into flows, indicate that substantially more capital outflows occurred in 1986, and during the period of rapid expansion in economic activity in 1988-90, than was previously shown in the accounts. For 1988-90, this pattern is consistent with the economic expansion of the industrial
and developing countries and the accompanying rises in the demand for credit, in interest rates, in inflation, and in the financing of large acquisitions by multinational corporations. The strong expansion in the financial activity of nonbanks now broadly parallels the expansion of bank activity recorded in the accounts for the same period. The limited increase in capital outflows of nonbanks for 1991-93 is indicative of the major deceleration of economic activity worldwide and is now broadly consistent with the significant retrenchment of U.S. bank lending and the reduction in banking activity recorded in the accounts in this period.
Related revisions in interest receipts are discussed in the section on portfolio income. The largest additions to interest receipts occur in 1989-91, when both the outstanding positions and the short-term Eurodollar interest rates applied to them rose rapidly. In 1992-93, the outstanding positions changed little and interest rates dropped precipitously, resulting in smaller, but still substantial, additions to interest receipts; the additions were the result of the larger outstanding asset positions now used in the calculation.
Liabilities to unaffiliated foreigners.-Until now, bea has not been able to substitute bis data for claims reported by foreign banks, largely because the bis data did not successfully separate securities transactions from banking transactions. This difficulty remains with much of the claims data reported by foreign banks to the BIS, and bis statisticians are working with statistical officials in the reporting countries to separate the two types of transactions. However, for banks' claims reported in the Caribbean and Asian offshore banking (financial) centers, bea discussions with international banking experts at the Federal Reserve Board and the bis have confirmed that commingling of securities and banking transactions is insignificant. Furthermore, bilateral data obtained from the Bank of England also permits the separation of banking and securities transactions. Therefore, bIS data on bank claims for these offshore banking (financial) centers, as well as bilateral data from the Bank of England, have been substituted into the U.S. accounts.
The impact of this substitution on the U.S. accounts is dramatic. Prior to making any substitutions into the accounts, U.S. source data recorded U.S. nonbank financial liabilities to foreigners at $\$ 26.9$ billion at yearend 1983 , rising to $\$ 54.5$ billion at yearend 1993. With this year's substitution of the bIS data, nonbank liabilities
were raised to $\$ 61.7$ billion at yearend 1983 and now rise to $\$ 233.3$ billion at yearend 1993.
The growth indicated by the revised estimates more correctly reflects the rapid expansion of nonbank activity that has occurred over the past decade, particularly through Caribbean banking (financial) centers and, very recently, through the Asian banking (financial) centers. At the end of 1993, U.S. nonbank financial liabilities to Caribbean banks accounted for $\$ 136.2$ billion of the $\$ 233.3$ billion in total outstanding liabilities, and nonbank liabilities to Asian banks accounted for $\$ 15.5$ billion. Growth was most rapid in 1988-90, but was only moderate in 1991-93.
In a manner parallel to that for nonbank claims, the new position data for nonbank liabilities, when converted into flows, indicate that substantially more capital inflows occurred during the period of rapid expansion in economic activity in 1987-90, and in 1992-93, than was previously shown in the accounts. For 1987-90, this pattern is consistent with the expansion of the major industrial economies and the accompanying rises in the demand for credit, in interest rates, in inflation, and in the financing of large acquisitions by multinational corporations. The increase in the financial activity of nonbanks now broadly parallels the expansion of bank activity recorded in the accounts for the same period. The somewhat larger inflows now recorded in the accounts for

1992-93 are loosely related to the pickup in the U.S. economy and the accompanying increase in the demand for funds and are broadly consistent with the modest pickup in inflows through banks.
Related revisions in interest payments are discussed in the section on portfolio income. The largest additions to interest payments occur in 1989-91, when both the outstanding positions and the short-term Eurodollar interest rates applied to them rose rapidly. In 1992-93, the outstanding positions increased slowly and interest rates dropped precipitously, resulting in smaller, but still substantial, additions to interest payments; the additions were the result of the larger liability positions now used in the calculation.

## U.S. banks' custody liabilities

The substitution of Bis data and Bank of England data for U.S. nonbanking concerns' liabilities to foreign banks necessitates the removal of certain custody transactions conducted by U.S. banks for U.S. nonbanks in order to avoid double counting these transactions. Therefore, for 1986-93, banks' capital positions were lowered, and capital flows and related income estimates were adjusted. Revisions to capital flows were largest for $1988-90$, when net capital inflows were removed from the accounts, and for 1991 and 1993, when net capital inflows were added to the accounts.

# U.S. International Transactions, First Quarter 1994 

By Douglas B. Weinberg

The estimates in this article incorporate a number of major improvements, including changes in estimating methodologies and new source data. For a discussion of these changes, see "U.S. International Transactions, Revised Estimates for 1984-93" in this issue.

THE U.s. current-account deficit increased to $\$ 31.9$ billion in the first quarter of 1994 from $\$ 30.6$ billion (revised) in the fourth quarter of 1993 (table A). ${ }^{1} \quad$ An increase in the deficit on goods and services was partly offset by lower net unilateral transfers and by a small decrease in the deficit on investment income. Economic expansion in the United States combined with sluggish conditions abroad continued to encourage U.S. imports of goods and services and to restrain exports.

[^36]In the capital account, net recorded capital inflows were $\$ 27.2$ billion in the first quarter, compared with $\$ 26.5$ billion in the fourth. Acquisitions of foreign assets by U.S. residents and acquisitions of U.S. assets by foreign residents both slowed, resulting in little change in net inflows. Gross capital flows were affected by higher interest rates worldwide, particularly in the United States, where both short- and long-term rates increased sharply.

## U.S. dollar in exchange markets

From December 1993 to March 1994, the U.S. dollar depreciated 1 percent on a trade-weighted average basis both against the currencies of 10 industrial countries and against the currencies of 22 OECD countries plus 4 newly industrialized countries in Asia (table B, chart 1). The dollar was affected by sharply rising U.S. interest rates and

${ }^{p}$ Preliminary.
by renewed trade tensions between the United States and Japan (chart 2).

For the quarter as a whole, the U.S. dollar depreciated against most European currencies. It depreciated 2 percent against the Swiss franc, the Belgian franc, and the Italian lira and 1 percent against the French franc and the German mark. The dollar depreciated less than 1 percent against the Dutch guilder and was unchanged against the British pound.

In the first half of the quarter, the dollar appreciated by small amounts against most European currencies. Market participants continued to anticipate that stronger economic activity in the United States combined with sluggish conditions in continental Europe, particularly in Germany, would lead to a fairly rapid convergence of U.S. and European short-term interest rates. These expectations were partially fulfilled on February 4 , when U.S. monetary authorities increased short-term interest rates for the first time in 5

years. The dollar peaked against most European currencies near the middle of the quarter, when it was further strengthened by a reduction in the British base lending rate.

In the last half of the quarter, the dollar depreciated against European currencies, partly due to the slow pace of interest-rate reductions in Germany. German monetary authorities were cautious in lowering the securities repurchase rate, the most important short-term interest rate, in an environment of rapid growth in the money supply. There was also some concern that U.S. monetary authorities might delay future increases in short-term rates because of indications of continued low inflation. When U.S. authorities again tightened monetary conditions at the end of the quarter, the dollar's decline halted.

The dollar depreciated 4 percent against the Japanese yen. Early in the quarter, the dollar reached a high, capping a rise that began in

the third quarter of 1993. However, the dollar declined sharply in the middle of the quarter, as trade tensions escalated between the United States and Japan. Tensions climaxed when a summit meeting between the U.S. and Japanese heads of State, held to discuss progress on the U.S.-Japan trade "framework" talks, ended without key issues being resolved. Thus, the dollar fell as prospects for reducing Japan's currentaccount surplus dwindled. Contributing to the fall were sales of U.S. securities by Japanese investors and record purchases of Japanese equities by U.S. investors.

The U.S. dollar appreciated 3 percent against the Canadian dollar. For most of the quarter, short-term interest-rate differentials increasingly favored U.S.-dollar-denominated assets, contributing to the strength of the U.S. dollar. The U.S. dollar reached a 7 -year high despite the intervention purchases of Canadian dollars by Canadian monetary authorities.

Against the currencies of the newly industrialized countries in Asia, the U.S. dollar depreciated 1 percent against both the Singapore dollar and Taiwan dollar and was unchanged against the Hong Kong dollar and South Korean won.

## Current Account

The $\$ 1.3$ billion increase in the deficit on current account in the first quarter was accounted for by a $\$ 4.3$ billion increase in the deficit on goods and services, a $\$ 0.2$ billion decrease in the deficit on investment income, and a $\$ 2.8$ billion decrease in net unilateral transfers.

## Goods and services

The deficit on goods and services increased to $\$ 24.3$ billion in the first quarter from $\$ 20.0$ billion in the fourth. The deficit on merchandise trade increased $\$ 3.8$ billion, and the surplus on services decreased $\$ 0.5$ billion.

Merchandise trade.-The merchandise trade deficit increased to $\$ 37.0$ billion in the first quarter from $\$ 33.2$ billion in the fourth. Exports decreased, following a fourth-quarter surge, and imports increased.

Exports.-Exports decreased $\$ 1.7$ billion, or 1 percent, to $\$ 118.0$ billion in the first quarter. Volume, measured in constant (1987) dollars, decreased 2 percent (table C). Most of the decrease in value was accounted for by nonagricultural exports, but agricultural exports also fell.

Nonagricultural exports decreased $\$ 1.3$ billion, or 1 percent, to $\$ 107.1$ billion; volume also decreased 1 percent. Three-fourths of the decrease in value was accounted for by a drop in nonmonetary gold, but exports decreased in all major commodity categories except capital goods. The largest decrease was in industrial supplies and materials, which was more than accounted for by the drop in nonmonetary gold. Smaller decreases occurred in consumer goods (both durables and nondurables) and automotive products, in which a decline in parts more than offset an increase in passenger cars. In contrast, capital goods increased because of a surge in semiconductors; exports of most other capital goods increased by only small amounts or decreased.

Agricultural exports decreased $\$ 0.4$ billion, or 4 percent, to $\$ 10.9$ billion in the first quarter; volume decreased 6 percent. Most of the decrease in value was accounted for by a decline in corn exports; wheat and soybeans also decreased, but by smaller amounts. After surging in the fourth quarter, corn exports returned to the levels prevailing through most of 1993, as volume dropped sharply.

Imports.-Imports increased $\$ 2.1$ billion, or 1 percent, to $\$ 155.0$ billion in the first quarter. Volume, measured in constant (1987) dollars, increased 2 percent (table C). The increase in value was more than accounted for by continued growth in nonpetroleum imports.

Nonpetroleum imports increased $\$ 3.6$ billion, or 3 percent, to $\$ 144.6$ billion in the first quarter; volume also increased 3 percent. Half of the increase in value was accounted for by imports of capital goods, which continued to lead the growth in nonpetroleum imports. Capital goods were paced by a surge in telecommunications equipment and supported by increases in computers, peripherals, and parts and in semi-
conductors. In addition, a sizable portion of the increase was accounted for by nonpetroleum industrial supplies and materials (mostly chemicals and iron and steel products). Automotive products also increased; imports of parts continued to surge as a result of strong domestic auto production. Consumer goods were virtually unchanged.

Petroleum imports decreased $\$ 1.5$ billion, or 13 percent, to $\$ 10.4$ billion in the first quarter. Both prices and volume decreased: The average price per barrel dropped to $\$ 12.66$ from $\$ 14.09$, and the average number of barrels imported daily dropped to 8.99 million from 9.24 million. The fall in price reflected continued sluggish demand in most industrial countries other than the United States and abundant worldwide supplies. The decrease in import volume, which occurred despite rising domestic consumption and falling domestic production, reflected a significant draw-down in inventories.

Balances by area.-The deficit with industrial countries increased to $\$ 22.5$ billion in the first quarter from $\$ 21.8$ billion in the fourth. An increase in the deficit with Canada, reflecting a smaller increase in exports than in imports, was partly offset by a decline in the deficit with Japan, reflecting a larger increase in exports than in imports. The deficit with Western Europe decreased slightly.

The deficit with developing countries increased to $\$ 14.4$ billion from $\$ 11.6$ billion. The increase was mostly accounted for by an increase in the deficit with Asian countries other than China and Hong Kong.

Services.-The surplus on services decreased to $\$ 12.7$ billion in the first quarter from $\$ 13.2$ billion in the fourth. Service receipts decreased to $\$ 46.2$ billion from $\$ 46.6$ billion; service payments increased to $\$ 33.5$ billion from $\$ 33.4$ billion.

$p$ Preliminary.

Travel receipts decreased to $\$ 14.2$ billion from $\$ 14.7$ billion. The decline was mostly accounted for by reduced receipts from Canada and Mexico; receipts from overseas also decreased, but by a small amount. The decrease in receipts from Canada reflected a sharp drop in the number of Canadian travelers to the United States. The number of visitors from overseas was unusually weak in February, which held down the total number of visitors for the quarter. Travel payments decreased to $\$ 10.7$ billion from $\$ 10.8$ billion. The decrease was accounted for by a decline in payments to Mexico; payments to Canada and payments by U.S. travelers overseas changed little.
Passenger fare receipts decreased to $\$ 4.0$ billion from $\$ 4.1$ billion, and passenger fare payments increased to $\$ 3.0$ billion from $\$ 2.9$ billion.

Other transportation receipts were unchanged at $\$ 5.9$ billion. Port expenditure receipts were unchanged, as an increase in air port expenditures offset a decrease in ocean port expenditures. Freight receipts decreased, reflecting the decline in the volume of U.S. exports. Other transportation payments decreased to $\$ 6.1$ billion from $\$ 6.3$ billion. The decrease was accounted for by a decline in freight payments; port expenditure payments were unchanged.
Receipts for other private services increased to $\$ 14.3$ billion from $\$ 14.1$ billion; the increase was mostly accounted for by an increase in education receipts. Payments for other private services were unchanged at $\$ 8.6$ billion. An increase in financial services payments, resulting from sharply higher commission payments on securities transactions, was offset by declines in other categories.

Transfers under U.S. military agency sales contracts were unchanged at $\$ 2.4$ billion. U.S. direct defense expenditures abroad decreased to $\$ 2.8$ billion from $\$ 2.9$ billion.

## Investment income

The deficit on investment income decreased to $\$ 0.4$ billion in the first quarter from $\$ 0.6$ billion in the fourth. Receipts of income on U.S. assets abroad increased more than payments of income on foreign assets in the United States.

Direct investment income.-Receipts of income on U.S. direct investment abroad increased to $\$ 14.9$ billion in the first quarter from $\$ 14.4$ billion in the fourth. The increase was more than accounted for by an increase in earnings of manufacturing affiliates, mainly in Europe, which was partly off-
set by a decline in earnings of finance affiliates in the United Kingdom.

Payments of income on foreign direct investment in the United States increased to $\$ 3.0$ billion from $\$ 2.3$ billion. The increase was more than accounted for by an increase in earnings of manufacturing affiliates, reflecting the continued expansion of the U.S. economy. Earnings of petroleum affiliates also increased.
Portfolio investment income.-Receipts of income on other private investment increased to $\$ 13.9$ billion in the first quarter from $\$ 13.2$ billion in the fourth. Much of the increase was accounted for by higher receipts on U.S. holdings of foreign securities, particularly foreign stocks, due to substantial purchases in recent quarters. Income receipts on bank claims also increased, mostly because of higher yields. U.S. Government income receipts decreased to $\$ 1.0$ billion from $\$ 1.2$ billion.

Payments of income on other private investment in the United States decreased to $\$ 16.3$ billion from $\$ 16.5$ billion. The decrease was more than accounted for by lower payments on foreign holdings of U.S. securities; lower payments on bonds more than offset slightly higher payments on stocks. In contrast, income payments on bank liabilities increased, largely because of higher liabilities. U.S. Government income payments increased to $\$ 10.8$ billion from $\$ 10.6$ billion.

## Unilateral transfers

Net unilateral transfers were $\$ 7.3$ billion in the first quarter, compared with $\$ 10.0$ billion in the fourth. The decrease was more than accounted for by a dropoff in U.S. Government grants, following large fourth-quarter disbursements to Israel.

## Capital Account

Net recorded capital inflows were $\$ 27.2$ billion in the first quarter, compared with $\$ 26.5$ billion in the fourth. Acquisitions of foreign assets by U.S. residents and acquisitions of U.S. assets by foreign residents both slowed, resulting in little change in net inflows.

## U.S. assets abroad

U.S. assets abroad increased $\$ 55.9$ billion in the first quarter, compared with an increase of $\$ 63.6$ billion in the fourth. The slowdown was due to reduced outflows on several accounts; outflows slowed the most for net U.S. purchases of foreign securities.
U.S. official reserve assets.-U.S. official reserve assets increased $\$ 0.1$ billion in the first quarter, compared with a $\$ 0.7$ billion increase in the fourth. Transactions in foreign currencies included the liquidation of nearly all non-mark and non-yen balances.

Claims reported by banks.-U.S. claims on foreigners reported by U.S. banks increased $\$ 9.1$ billion in the first quarter, compared with an increase of $\$ 9.3$ billion in the fourth. The firstquarter increase was accounted for by a surge in claims payable in foreign currencies. Claims payable in dollars decreased by a small amount, as a decrease in foreign-owned banks' claims was nearly offset by an increase in U.S.-owned banks' claims.
Banks' own claims payable in dollars decreased $\$ 1.9$ billion in the first quarter, in contrast to an increase of $\$ 5.7$ billion in the fourth. The decrease was accounted for by a reduction in foreignowned banks' claims, mostly on own foreign offices in Japan; the reduction reflected reversals of 1993 yearend lending. In contrast, lending by U.S.-owned banks increased, particularly to own foreign offices in the United Kingdom, where modest economic growth led to strengthening credit demand. Claims on other private foreigners changed little; however, lending by securities brokers and dealers to international mutual funds continued. Claims on foreign public borrowers decreased, mostly on borrowers in Latin America and in Asia excluding Japan.
Banks' domestic customers' claims payable in dollars decreased $\$ 1.2$ billion in the first quarter, in contrast to an increase of $\$ 2.0$ billion in the fourth. A drop in foreign commercial paper outstanding in the United States and a decrease in negotiable and readily transferable instruments were partly offset by a sharp increase in dollar deposits abroad.
Banks' own claims payable in foreign currencies increased $\$ 11.9$ billion in the first quarter, compared with an increase of $\$ 1.1$ billion in the fourth. The first-quarter surge was accounted for by increased lending to Japan, which was partly matched by increased foreign currency borrowing from Japan.

Foreign securities.-Net U.S. purchases of foreign securities were $\$ 26.9$ billion in the first quarter, down from $\$ 30.3$ billion in the fourth (chart 3). Net purchases of foreign stocks were $\$ 16.6$ billion, down from $\$ 20.0$ billion, and net purchases of foreign bonds were unchanged at $\$ 10.3$ billion.

The decline in net U.S. purchases of foreign stocks was accounted for by reductions in net purchases from Western Europe and from Latin America and by a shift to net sales in Asian countries other than Japan. These changes were largely offset by a step-up in net purchases of Japanese stocks. The reduction in purchases from Western Europe was mainly accounted for by a drop in purchases from the United Kingdom, where stock prices fell sharply in the last half of the quarter. The reduction in purchases from Latin America was more than accounted for by a drop in purchases from Mexico, where U.S. investors had concerns over the assassination of the leading presidential candidate. In contrast, net purchases of Japanese stocks jumped to a record level. U.S. investment was encouraged by rising Japanese stock prices and the appreciation of the yen against the dollar, which led to exchange-rate gains on U.S. holdings.
New issues of foreign bonds placed in the United States increased to $\$ 10.7$ billion from $\$ 9.9$ billion. U.S. long-term interest rates increased

sharply during the quarter, but most foreign rates increased as much as U.S. rates. Foreign borrowers remained attracted to the still favorable U.S. rates, particularly on longer maturity, fixed-rate issues, which increased as a percentage of total funds borrowed. By area, new issues of Canadian bonds recovered from a low fourth quarter, and Latin American issues remained strong.
Net purchases of outstanding foreign bonds declined to $\$ 1.1$ billion from $\$ 2.7$ billion. The slowdown was more than accounted for by a shift to large net sales to the United Kingdom. Following strong net purchases in recent years, U.S. investors sold British gilt-edged bonds, as sharply declining British bond prices led to substantial losses on U.S. holdings. These sales were largely offset by increased net purchases from continental Europe and by a shift to net purchases from Japan.

Direct investment.-Net capital outflows for U.S. direct investment abroad were $\$ 20.4$ billion in the first quarter, compared with $\$ 22.7$ billion in the fourth. The decrease was accounted for by lower net equity capital outflows and reinvested earnings, which were partly offset by an increase in net intercompany debt outflows. The decrease in equity capital outflows was widespread by area, mostly reflecting reduced outflows for acquisitions. The increase in intercompany debt outflows was the result of transactions with finance affiliates in the United Kingdom.

## Foreign assets in the United States

Foreign assets in the United States increased $\$ 83.1$ billion in the first quarter, compared with an increase of $\$ 90.2$ billion in the fourth. A step-up in inflows on U.S. liabilities reported by U.S. banks,
excluding U.S. Treasury securities, was more than offset by reduced inflows on other accounts.

Foreign official assets.-Foreign official assets in the United States increased $\$ 11.4$ billion in the first quarter, following an increase of $\$ 24.0$ billion in the fourth (table D). Assets of industrial countries more than accounted for the first-quarter increase. Assets of non-opec developing countries increased by a small amount, following a sharp fourth-quarter increase. Assets of OPEC members decreased for the fourth consecutive quarter.

Liabilities reported by banks.-U.S. liabilities reported by U.S. banks, excluding U.S. Treasury securities, increased $\$ 34.1$ billion in the first quarter, compared with an increase of $\$ 7.4$ billion in the fourth. The first-quarter surge in borrowing primarily reflected strengthening demand for commercial and industrial credit in the United States. The supply of funds from abroad was encouraged by an increase in U.S. short-term interest rates relative to most foreign rates.

Banks' own liabilities payable in dollars increased $\$ 25.1$ billion in the first quarter, compared with an increase of $\$ 4.9$ billion in the fourth. U.S.-owned banks' liabilities surged, particularly to own foreign offices; foreign-owned banks' liabilities also increased, but by a much smaller amount. Increased borrowing from abroad, particularly from Western Europe and the Caribbean, was used to finance commercial and industrial lending in the United States, which was fueled by continuing U.S. economic growth. Funding from abroad may also have been used to finance continued U.S. bank purchases of U.S. Government securities, as well as increased lending to the United Kingdom. The supply of funds

1. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
2. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oilexporting countries. Begin-

[^37]from abroad was encouraged by the runup in U.S. short-term interest rates at a time when most foreign rates were stable or declining.

Banks' own liabilities payable in foreign currencies increased $\$ 7.8$ billion in the first quarter, in contrast to a decrease of $\$ 3.6$ billion in the fourth. The increase was mainly in liabilities to Japan and the United Kingdom. The increase in borrowing from Japan partly matched the step-up in foreign currency lending to Japan.
U.S. Treasury securities.-Net private foreign purchases of U.S. Treasury securities were $\$ 9.2$ billion in the first quarter, up from $\$ 8.0$ billion in the fourth. Foreign purchases from the Caribbean and Western Europe stepped up, but transactions by Japanese and other Asian investors shifted to net sales.

Other U.S. securities.-Net foreign purchases of U.S. securities other than U.S. Treasury securities fell to $\$ 20.3$ billion in the first quarter, but remained moderately strong after record net purchases of $\$ 38.0$ billion in the fourth (chart 3). Net foreign purchases of U.S. stocks were $\$ 6.6$ billion, down from $\$ 11.9$ billion, and net foreign purchases of U.S. bonds were $\$ 13.7$ billion, down from $\$ 26.1$ billion. Selling off both stocks and bonds, Japanese investors accounted for half of the decline in total net purchases.

Net foreign purchases of U.S. stocks were strong for most of the quarter, but they dropped off as U.S. stock prices fell sharply late in the quarter. Most of the decline in net purchases was accounted for by a shift to net sales by Japanese and other Asian investors. Net purchases from
the United Kingdom and the Caribbean also declined significantly. Exchange-rate losses resulting from depreciation of the dollar against the yen encouraged net sales of U.S. stocks by Japanese investors.

The slowdown in net foreign purchases of U.S. bonds partly reflected sharply falling U.S. bond prices. Net foreign purchases of U.S. federallysponsored agency bonds fell to $\$ 6.7$ billion from $\$ 14.7$ billion, and net foreign purchases of U.S. corporate bonds fell to $\$ 7.0$ billion from $\$ 11.4$ billion. New issues of bonds sold abroad by U.S. corporations decreased marginally, but remained strong, partly reflecting a smaller rise in Eurobond interest rates than in U.S. bond rates, as well as continued demand for funds by U.S. borrowers. Transactions in other outstanding corporate bonds shifted to net sales from net purchases. By area, the slowdown in total net purchases was largely accounted for by a shift to net sales by Japanese investors and by reduced net purchases from the Caribbean. As in the case of U.S. stocks, exchange-rate losses resulting from the dollar's depreciation motivated Japanese investors to reduce their dollar exposure.

Direct investment.-Net capital inflows for foreign direct investment in the United States were $\$ 8.1$ billion in the first quarter, unchanged from the fourth. A decrease in net equity capital inflows was offset by an increase in net intercompany debt inflows and by higher reinvested earnings, which were still negative. By industry, net capital inflows increased in manufacturing and petroleum, but decreased in "other" industries.

[^38]
## FOOTNOTES TO U.S. INTERNATIONAL TRANSACTIONS TABLES 1-10A

## General notes for all tables: ${ }^{p}$ Preliminary. "Less than $\$ 500,000$ ( $\pm$ ) n.a. Not available.

$D_{\text {Suppressed to avoid disclosure of data of individual companies. }}^{\text {a }}$
Table 1:

1. Credits, +: Exports of goods, services, and income; unilateral transfers to United States; capita inflows (increase in toreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets; increase in foreign official assets in the United States.

Debits, -: Imports of goods, services, and income; unilateral transfers to foreigners; capital outfiows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. officiat reserve assets; decrease in foreign ffical assets in the United States.
2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various er adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2.
3. Includes some goods: Mainly military equipment in line 4; maior equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 18; and fuels purchased by airline and steamship pperators in lines 7 and 21.
4. Includes transfers of goods and services under U.S. military grant programs.
5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from loreign parents.
6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
7. For all areas, amounts outstanding March 31, 1994, were as follows in milions of dollars: Line 34, 76,810; line 35, 11,052; line 36, 9,383 ; line 37, 12,135; line 38, 44,239. Data are preliminary.
8. Inciudes sales of foreign obligations to foreigners.
9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
11. Includes, primarily, U.S. Govemment liabilities associated with military agency sales coniracts and other transactions arranged with or through foreign official agencies; see table 4.
12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and ocal governments.
13. Conceptually, the sum of lines 70 and 62 is equal to "net foreign investment" in the national income and product accounts (NPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international fransactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of ransactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in the "Reconciliation and Other Special Tables" section in this issue of the Sumvey of Cuarent Business. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the July issue of the SURVEY).

Additional footnotes for historical data in June issues of the Sunver:
14. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 SuRver, p. 27.
15. For 1979-83, includes foreign currency-denominated notes sold to private residents abroad.
16. Break in series. See Technical Notes in the June 1989, June 1990, June 1992, and June 1993 issues of the Survey. Table 2:

Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 Surver), except for 1974-81, when they epresent transactions values, f.as. foreign port of exportation (see June issues of the Surver for historical data). From 1983 foward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" month data supplied by the Census Bureau (see Technical Notes in the December 1985 Survey). Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The seasonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see Technical Notes in the June 1980 SURVEY, in the June 1988 Surver, and in the June 1991 Survey). Prior to 1983, annual data are as published by the Census Bureau, except that for 1975-80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foresign countries.
2. Beginning in 1990, the Census Bureau replaced its compiled export statistics with counterpart Canadian import statistics. Similarly, Statistics Canada replaced its compiled export statistics with counterpart U.S. import statistics. This exchange of data has eliminated the need for the inland freight adjustment on U.S. exports, but not on U.S. imports.
3. Acjustments in lines A5 and A13, B12, B47, and B82 reflect the Census Bureau's reconciliation of discrepancies between the merchandise trade statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.
4. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 10 , line 4 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 10, line 18 (direct defense expenditures).
5. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were ofitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair, and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1,1979, and for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the Survey for historical in Cent.
6. Deduction of foreign charges for repair of U.S. vessels abroad, which are included in tables 1 and 10 , line 21 (other transportation); coverage adjustments for special situations in which shipments were omitted from Census data; and the deduction of the value of repairs and alterations to U.S.owned equipment shipped abroad for repair. Also includes addrion of understatement of inland freight in f.as values of U.S. merchandise imports from Canada in 1974-81; deduction of imports from the Panama Canal Zone before October 1, 1979; and for 1975-82, net timing adustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the Survey historical data)
7. For 1988-89, correction for the understatement of crude petroleum imports from Canada
8. Annual and unadjusted quarteriy data shown in this table correspond to country and area data in table 10, lines 2 and 16. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the international Tin Council (ITC), and sales of sateliftes to Intelsat. The memoranda are defined as follows: Industrial countries. Western Europe, Canada, Japan, Australia, New Zealand, and South Atrica; Members of OPEC. Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (beginning in Jennuary 1993, excludes Ecuador); Other countries. Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for some baiance of payments agjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates. For all years, "Asia" and "Arrica" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."
9.Includes the former German Democratic Republic (East Germany) beginning in fourth quarter of 1990. In earlier periods, the German Democratic Republic was incuuded in Eastem Europe.
10. Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with New Zealand included as part of "Asia" and South Africa as part of "Africa."
11. Includes nuclear fuel materials and fuels.

Table 3:

1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods roduction.
2. Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.
3. Oher unaffiliated services receipts (exports) include mainly expenditures of foreign governments and international Digitizedorganizations intreranited States. Peyments (imports) include mainly wages of foreign residents temporarity employed http://fras in the United States and Canadian and Mexican commuters in U.S. border areas.

# SUBJECT GUIDE <br> Volume 74 (1994), NUMBERS $1-6$ 

This guide lists articles and "Business Situation" sections by subject, giving the title, issue number, and beginning page number.

## General

User's Guide to bea Information. 2:66. 1994 Release Dates for bea Estimates. 1:62.

## National

## Corporate profits

Preliminary Estimates. Fourth Quarter 1993, 3:2; First Quarter 1994, 5:8.
And Property Income in 1993. 4:7.
Revised Estimates. First Quarter 1994, 6:2.

## Environmental accounting

Accounting for Mineral Resources: Issues and bea's Initial Estimates. 4:50.
Integrated Economic and Environmental Satellite Accounts. 4:33.

## Government transactions

Federal Budget Estimates, Fiscal Year 1995. 2:34.
Government Sector. Fourth Quarter 1993, 3:3; First Quarter 1994, 5:9.
State and Local Government Fiscal Position in 1993. 3:30.

## Gross domestic product

Business Situation: Advance Estimates. Fourth Quarter 1993, 1:1; First Quarter 1994, 4:1.
Business Situation: Final Estimates. Fourth Quarter 1993, 3:1; First Quarter 1994, 6:1.
Business Situation: Preliminary Estimates. Fourth Quarter 1993, 2:1; First Quarter 1994, 5:1.

## Input-output

Benchmark Input-Output Accounts for the U.S. Economy, 1987. 4:73; Requirements Tables, 5:62.

## Inventories and sales

Constant-Dollar Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade. 3:28; 6:28.

## National income and product accounts (NIPA's)

A Look at How bea Presents the Nipa's. 2:31.
National Income and Product Accounts Tables. Selected nipa Tables: 1:8; 2:9; 3:5; 4:10; 5:12; 6:4. Errata: 3:27.
Personal Income and the Disposition of Personal Income. Monthly Estimates: 4:31; 5:34; 6:26.

## Pollution abatement and control

Pollution Abatement and Control Expenditures, 1972-92: Estimates for 1992 and Revised Estimates for 1972-91. 5:36.

## Reconciliation and other special tables

Reconciliation of bea Compensation and bls Earnings. 2:30; 5:33.
Reconciliation of NIPA Net Exports of Goods and Services and Net Receipts of Factor Income with BPA Balance on Goods, Services, and Income. 3:26; 6:25.

## Residential construction

Residential Construction From a Long-Run Perspective. 6:30.

## International

## Balance of payments

New Estimates of Monthly U.S. International Services Transactions. 2:64.
U.S. International Transactions. Fourth Quarter and Year 1993, 3:44; First Quarter 1994, 6:86; Revised Estimates for 1984-93, 6:79.
U.S. International Transactions in Goods and Services, Monthly Estimates. 4:32; 5:35; 6:27.

## Foreign direct investment in the United States

Characteristics of Foreign-Owned U.S. Manufacturing Establishments. 1:34.
U.S. Business Enterprises Acquired or Established by Foreign Direct Investors in 1993. 5:50.

## Investment position

International Investment Position of the United States in 1993. 6:63.
Direct Investment Positions on a Historical-Cost Basis, 1993: Country and Industry Detail. 6:72.

## Reconciliation and other special tables

Reconciliation of NIPA Net Exports of Goods and Services and Net Receipts of Factor Income with bPA Balance on Goods, Services, and Income. 3:26; 6:25.

## U.S. direct investment abroad

Capital Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies, Plans for 1994. 3:36.

Gross Product of U.S. Multinational Companies, 1977-91. 2:42. U.S. Multinational Companies: Operations in 1992. 6:42.

## Regional

## Personal income

Local Area Personal Income: Estimates for 1990-92 and Revisions to the Estimates for 1981-91. 4:127.
Personal Income by State and Region. Third Quarter 1993, 1:29; Fourth Quarter 1993, 4:117; Per Capita Personal Income, 1988-93, 4:117.

# FOREIGN DIRECT INVESTMENT IN THE UNITED STATES: <br> Establishment Data for Manufacturing 

This series of publications, a joint effort by BEA and the Census Bureau, presents data covering foreign-owned manufacturing establishments (plants).

- The data cover the number of foreign-owned manufacturing plants and measures of their operations, including value added, shipments, employment, total employee compensation, employee benefits, hourly wage rates of production workers, cost of materials and energy used, inventories by stage of fabrication, and expenditures for new plant and equipment.
- The data are presented by highly detailed industry (up to 459 industries), by State, and by country of investor.

- Each volume includes a methodology.

The new data were obtained by linking BEA enterprise, or company, data on foreign direct investment with more detailed establishment, or plant, data for all U.S. companies from the Census Bureau's Annual Survey of Manufactures.

Volumes presenting data for 1988-90 are now available; a volume presenting data for 1991 will be published later this year. In 1992, a volume containing fewer data items, but covering both manufacturing and nonmanufacturing industries in 1987 was published, based on data from the Census Bureau's 1987 economic censuses.

The data are also available on computer diskette. Each diskette may be ordered by calling BEA at (202) 606-9893. The accession numbers are 50-94-40-788 for the 1988 data, 50-93-40-789 for 1989, and 50-93-40-790 for 1990; each diskette costs $\$ 20.00$.

FOREIGN DIRECT INVESTMENT IN THE UNITED STATES:
$\ldots \ldots \ldots$ copies of Establishment Data for Manufacturing, $1988 \mathrm{~S} / \mathrm{N} 003-010-00244-1$ at $\$ 13.00$ each.
copies of Establishment Data for Manufacturing, $1989 \mathrm{~S} / \mathrm{N}$ 003-010-00243-3 at \$13.00 each.
copies of Establishment Data for Manufacturing, $1990 \mathrm{~S} / \mathrm{N}$ 003-010-00242-5 at $\$ 14.00$ each.
The total cost of my order is $\$$ $\qquad$ Prices include regular domestic postage and handling and are subject to change.

L,C,Lg,U Cyclical indicator series are classified as L (leading), C (coincident), Lg (lagging), or U (unciassified) at reference cycie peaks, troughs, and overall. Series classifications are shown in parentheses following the series titles.
$\ddagger$ Cyclical indicator series denoted by $\ddagger$ are inverted (i.e., the sign is reversed) for cyclical analysis calculations, including classifications, contributions to composite indexes, and current high values.
$\dagger$ Cyclical indicator series denoted by $\dagger$ are smoothed by an autoregressive-moving-average filter developed by Statistics Canada.
For information on composite indexes and other concepts used in this section, see "Business Cycle Indicators: Upcoming Revision of the Composite Indexes" in the October 1993 Survey of Current Business and "The Composite Index of Coincident Indicators and Alternative Coincident Indexes" in the June 1992 Survey.

References to series in this section use the prefix "BCI-" foliowed by the series number. Unless otherwise noted, series are seasonally adjusted.
Percent change data are centered within the spans: 1-month changes are placed in the ending month, 3 -month changes are placed in the 3 d month, 6 -month changes are placed in the 4th month, 1-quarter changes are placed in the ending quarier, and 4-quarter changes are placed in the 3d quarter.

Diffusion indexes are defined as the percent of components rising plus one-half of the percent of components unchanged. Difflusion index data are centered within the spans: 1 -month indexes are placed in the ending month and 6 -month indexes are placed in the 4 th month.
High values reached by cyclical indicators in the expansion following the last reference cycle trough (March 1991) are shown in boldface type; high values reached prior to the period shown in the table are listed at the bottom of each page. For inverted series, low values are indicated as highs.
Sources for series in this section are shown on pages C-30 through C-32 in the April 1994 Survey.

## Page C-1

Note.-Major data revisions: Series based on establishment employment (BCl-1 and BCl-41)-see note for page C-2.

* Preliminary June 1994 values: $\mathrm{BCl}-19=455.71$, and $\mathrm{BCl}-109=7.25$.

1. Data exclude Puerto Rico, which is included in figures published by the source agency. From August 1992 through April 1994, data include initial claims made under the July 1992 Emergency Unemployment Compensation amendments.
2. Copyrighted. This series may not be reproduced without written permission from the University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248.
3. Excludes $\mathrm{BCl}-57$, for which data are not available.
4. Excludes $\mathrm{BCl}-77$ and $\mathrm{BCl}-95$, for which data are not available.
5. Data beginning January 1994 are based on the revised Current Population Survey and are not directly comparable with data for earlier periods.

## Page C-2

Note.-Major data revisions: Series on establishment employment (BC1-1, $-21,-40,-41,-48,-570$, and -963) have been revised to reflect the adoption of a new benchmark, updated bias and seasonal adjustment factors, and reaggregation of major divisions. Periods covered by these revisions are as follows: $\mathrm{BCl}-41$ from 1945 forward, $\mathrm{BCl}-40$ from 1947 forward, $\mathrm{BCl}-48$ from 1988 fonward, BCl 21 and BCl-963 from 1989 forward, $\mathrm{BCl}-1$ from 1990 forward, and $\mathrm{BCl}-570$ from 1992 forward. For further information, contact the U.S. Department of Labor, Bureau of Labor Statistics, Office of Employment and Unemployment Statistics, Division of Employment and Unemployment Analysis, Washington, DC 20210.
*Anticipated 3d quarter 1994 values: $\mathrm{BCl}-61=639.71$ and $\mathrm{BCl}-100=611.27$; anticipated 4th quarter 1994 values: $B C 1-61=640.12$ and $B C 1-100=612.68$.

1. Data beginning January 1994 are based on the revised Current Population Survey and are not directly comparable with data for earlier periods.
2. Data exclude Puerto Rico, which is included in figures published by the source agency. From August 1992 through April 1994, data include initial claims made under the July 1992 Emergency Unemployment Compensation amendments.
3. Data exclude Puerto Rico, which is included in figures published by the source agency.
4. Copyrighted. This series may not be reproduced without written permission from McGraw-Hill Information Systems Company, F.W. Dodge Division, Paramount Plaza, 13th Floor, 1633 Broadway, New York, NY 10019.

## Page C-3

* Preliminary June 1994 value: $\mathrm{BCl}-23=291.0$.

1. Copyrighted. This series may not be reproduced without written permission from Knight-Ridder Financial Publishing, 30 South Wacker Drive, Suite 1820, Chicago, IL 60606.

## Page C-4

Note.-Major data revisions: Series on productivity and costs (BCI-26, -63, -345, -346,-358, and -370) have been revised to refliect the adoption of a new benchmark, new seasonal adjustment factors, and historical corrections. Periods covered by these revisions are as follows: BCI-346 from 1947 forward, BCl-358 from 1953 forward, $\mathrm{BCl}-370$ from 1954 forward, $\mathrm{BCl}-345$ from 1958 forward, $\mathrm{BCl}-63$ from 1980 forward, and BCI-26 from 1992 forward. For further information, contact the U.S. Department of Labor, Bureau of Labor Statistics, Office of Productivity and Technology, Division of Productivity Research, Washington, DC 20210.
*Preliminary June 1994 values: $\mathrm{BCI}-122=92.0, \mathrm{BCl}-123=94.4$, and $\mathrm{BCI}-85=0.46$.

1. Copyrighted. This series may not be reproduced without written permission from the University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, Ml 48106-1248.
2. Copyrighted. This series may not be reproduced without written permission from the American Bankers Association, 1120 Connecticut Avenue, NW, Washington, DC 20036.

## Page C-5

Note.-Major data revisions:
Employment, delense products industries (BCl-570)-see note for page $\mathrm{C}-2$.
Series based on exports and imports of goods (BC1-602, -604, -606, 612, -614, and -616) have been revised to reflect the updating of basic statistics and (for series 602 and 612) computation of new seasonal adjustment factors. Periods covered by these revisions are as follows: $\mathrm{BCl}-602$ and $\mathrm{BCl}-612$ from 1992 forward; and BCI-604, -606, -614, and -616 from 1993 forward. For further information, contact the U.S. Department of Commerce, Bureau of the Census, Foreign Trade Division, Washington, DC 20233.
U.S. international transactions series on merchandise trade (BC1-618, -620 , and -622 ) have been revised from 1991 forward to incorporate new source data, improved methodologies, changes in definitions, and computation of new seasonal adjustment factors. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Balance of Payments Division, Washington, DC 20230.

Series on foreign stock prices (BC1-742, -745, -746, -747, and -748) have been revised historically to reflect the incorporation of more accurate rebasing information. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

* Preliminary June 1994 values: $\mathrm{BCl}-119=4.20, \mathrm{BCl}-114=4.18, \mathrm{BCl}-116=8.16, \mathrm{BCl}-115=7.41$, $\mathrm{BCl}-117=6.06, \mathrm{BCl}-109=7.25, \mathrm{BCl}-19(1941-43=10)=455.71, \mathrm{BCl}-19(1967=100)=495.7, \mathrm{BCl}-748$ $=1,545.0, \mathrm{BCl}-745=373.0, \mathrm{BCl}-746=989.6, \mathrm{BCl}-742=1,415.4, \mathrm{BCl}-747=748.9, \mathrm{BCl}-743=475.1$, $\mathrm{BCl}-750=92.05, \mathrm{BCl}-758=103.23, \mathrm{BCl}-755=1.6377, \mathrm{BCl}-756=5.5903, \mathrm{BCl}-752=0.6574, \mathrm{BCl}-757$ $=1,597.91$, and $\mathrm{BCl}-753=1.3833$.

1. Balance of payments basis: Excludes transfers under military grants and Department of Defense sales contracts (exports) and Department of Defense purchases (imports).
2. Organisation for Economic Co-operation and Development.
3. This index is the weighted-average exchange value of the U.S. dollar against the currencies of the other G-10 countries plus Switzerland. Each country is weighted by its 1972-76 global trade. For a description of this index, see the August 1978 Federal Reserve Bulletin (p. 700).
4. This index is compiled by the Center for International Business Cycle Research (CIBCR), Graduate School of Business, Columbia University, New York, NY 10027.

# Comprehensive Information on the U.S. Economy 

The Survey of Current Business provides the broad scope and the statistical detail to keep you informed, month by month, about U.S. economic conditions. It is the journal of record for many of the headline-making economic statistics that influence decisionmakers in business and government, including:

Gross domestic product (GDP),
Personal income (both national and regional),
Leading economic indicators, and
U.S. balance of payments.

The Surver's articles analyze these numbers and present the statistical detail and methodologies that underlie them.

The Survey also contains the "Business Cycle Indicators" section, which consists of tables for about 270 series and charts for about 130 series that are widely used in analyzing current cyclical developments.

To keep up with the rapidly changing U.S. economy, subscribe to the Survey of Current Business today.

Superintendent of Documents Subscriptions Order Form

$\qquad$ subscription(s) of Survey of Current Business, SCUB: second-class mail - $\$ 34.00$ domestic, $\$ 42.50$ foreign; first-class mail - $\$ 71.00$ domestic. For foreign air mail prices or to place an order by telephone, call (202) 783-3238.

## BEA INFORMATION

BEA's economic information is available in publications, on computer tapes, on diskettes, and through a variety of other prodicts and services. Most of these are described in A User's Guide to bea Information. For a copy, write to the Public Information Office, az-53, Bureau of Economic Analysis, U.S. Deparment of Commerce, Washington, de 20230, or call (202) 606-9900.

## Recent Publications from GPO

#### Abstract

ordir from: Superintendent of Documents, po. Box 371954, Pittsburgh, pa 15250-7954. Payment may be by check (made payable to Superintendent of Documents) or charged to a gro deposit account number, visa, or MasterCard. Phone (202) 783 3238 or fax (202) 512-2250.

National Income and Product Accounts of the United States. (199293) Two volumes. Presents the full set of national income and product accounts (NIPA) estimates for $1929-88$ that resulted from the most recent comprehensive, or benchmark, revision. Text describes the statistical conventions used in the NipA's and the definitions and classifications underlying the accounts.

Vol. 1: 1929-58. 264 pp, si5.00 (Gpo stock no. 003-010-00236-1).
Vol. 2: 1959-88. 424 pp. $\$ 25.00$ (Gpo stock no. o03-010-00231-0).
Fixed Reproducible Tangible Wealth in the United States, 1925-89. (1993) Contains annual estimates of the stock of privately owned and government-owned durable equipment and structures and of durable goods owned by consumers in the United States for 1925-89. Estimates are for fixed nonresidential private capital by major industry group, for residential capital by tenure group, for government-owned fixed capital by type of government, and for 1 types of durable goods owned by consumers. 460 pp. $\$ 25.00$. (GPo stock no. 003-010-00235-2).
The 1982 Benchmark Input-Output Accounts of the United States. (1991) Presents tables for 541 industries/commodities showing the production of commodities (goods and services) by each industry, the use of commodities by each industry, the commodity composition of GNP, and the industry distribution of value added. Prepared primarily on the basis of data collected in the 1982 Economic Censuses. 368 pp. $\$ 19.00$ ( Gpo stock no. 003-010-00226-3).
bea Regional Projections to 2040. (1990) Three volumes. Presents regional projections for selected economic and population variables for 1995, 2000, 2005, 2010, 2020, and 2040. Includes projections for employment and earnings by industry and for personal income, as well as a statement of methodology:
Vol. 1: States. Out of print at gro, Call ben at (202) 606-5341 for availability.
Vol. 2: Metropolitan Statistical Areas. 352 pp. $\$ 17.00$ (Gpo srock no. $003-010-00211-5$ ).
Vol. 3: bea Economic Areas: 200 pp. sio:00 (gro stock no. 003-dio-00212-3).
Regional Multipliers: A User Handbook for the Regional Input-Output Modeling System (ruMs in). (1992) Presents updated tables of regional input-output ( 1 -o) multipliers by industry, for output, earnings, and employment, for all States and the District of Columbia: Multipli-
ers are shown on a direct-effect and a final-demand basis. Explains how to obtain multipliers for over soo industries for any geographic area composed of one or more US, counties or county equivalents. Inclides case studies. 124 pp. \$13.00 (Gpo stock No. 003-010-00227-1).

Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies. (1993) Two publications containing results for 1990 and 1991 from BEA's annual survey covering the financial structure and operations of nonbank U.S. affiliates of foreign direct investors. Data are classified by industry of U.S. affiliate, by country and industry of ultimate beneficial owner, and, for selected data, by State. 92 pp, $\$ 6.00$ each. Preliminary 1991 Estimates: gpo stock No, o03-010-00238-7: Revised 1990 Estimates: Gpo stock no. 003-010-00239-5.
Foreign Direct Investment in the United States: Establishment Data for 1987. (1992) A joint effort by nEA and the Bureau of the Census, this publication provides new data on operations of U.S. affiliates of foreign direct investors in much greater industry detail than has been available in the past. Over 8004 -digit sic industries are covered. Presents the number, employment, payroll, and shipments or sales of the establishinents. Data are disaggregated by industry, by State, and by country of ultimate beneficial owner. 696 pp, $\$ 36.00$ (GPO stock no. $003-010-00228-0$ ).
Foreign Direct Investment in the United States: Establishment Data for Manufacturing. (1993) A joint effort by BEA and the Bureat of the Census, this series of publications presents new data for foreign-owned U.S. manufacturing establishments (plants), including data on their number, value added, shipments, employment, total employee compensation, employee benefits, hourly wage rates of production workers, cost of materials and energy used, inventories by stage of fabrication, and expendifures for new plant and equipment: The data are disaggregated by detailed industry (up to 459 industries), by State, and by country of investor, 1990: 216 pp . $\$ 14.00$ (gro stock no. 003-010-00242-5); 1989: 204 pp, 513.00 (Gpo stock no. 003-010-00243-3); 1988: 204 pp. \$13.00 (Gpo stock no, 003-010-00244-1).
U.S. Direct Investment Abroad: 1989 Benchmark Survey, Final Results. (1992) Presents final results of the latest benchmark survey of the worldwide operations of U.S. multinational companies. Contains detailed 1989 data on the financial structure and overall operations of U.S. parent companies and their foreign affliates in 263 tables organized by industry of parent or by country and industry of affiliate. Also contains a complete methodology and copies of survey forms and instructions. 448 pp .525 .00 (GPo stock no. 003-010-00234-4).
U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates. (1993) Two publications containing results for 1990 and 1991 from BEA's annual survey of the worldwide operations of U.S. multinational companies. Contains information on the financial structure and operations of U.S. parent companies and their foreign affiliates. Data are classified by country and industry of affiliate and by industry of U.S. parent. 100 pp. $\$ 6.50$ each. Preliminary 1991 Estimates: gro stock no. 003-010-00240-9; Revised 1990 Estimates: Gpo stock No. 003-010-00241-7.

| Gross Domestic Product, 3d quarter 1994 (advance) | Oct. 28 |
| Personal Income and Outlays, September 1994 | Oct. 31 |
| * Joint release by the Bureau of the Census and BEA. |  |

[^0]:    1. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes are differences between these rates. Quarter-to-quarter percent changes are annualized. Real, or constant-dollar, estimates are expressed in 1987 dollars and are based on 1987 weights.
[^1]:    2. For a discussion of this year's annual revision of the balance of payments estimates, see "U.S. International Transactions, Revised Estimates for 1984-93" in this issue.
    3. The source data used in estimating PCE do not distinguish between domestic and foreign purchasers. Thus, in deriving PCE-which measures purchases by U.S. residents-BEA adjusted the source data by subtracting balance of payments estimates of expenditures in the United States by nonresidents.
    
[^2]:    4. In estimating real GNP, the current-dollar value of exports of goods and services is deflated by export prices, the current-dollar value of imports of goods and services is deflated by import prices, and the current-dollar values of receipts and of most payments of factor income are deflated by the implicit price deflator for net domestic product. In estimating command-basis GNPa measure of U.S. production in terms of its purchasing power-the currentdollar values of exports of goods, services, and incomes are deflated by the implicit price deflator for imports of goods, services, and incomes. The terms of trade is measured by the ratio of the implicit price deflator for exports of goods, services, and incomes to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.
[^3]:    1. Inventories are as of the end of the quarter.
[^4]:    1. Percant change at annual ato from preceding quarter based on seasonally adjusted estinates
[^5]:    1. Consists of statistical revisions in the BPA's that have not yet been incorporated in the
[^6]:    See footnotes to table 5.

[^7]:    2. For population and households (which are stocks), the periods are from mid-1960 to mid-1965, mid-1965 to mid-1970, and so forth; for new housing units and expenditures, the corresponding periods are 1961-65, 196670 , and so forth. In analyzing investment expenditures per new housing unit, a shorter time unit is used because of the apparently greater sensitivity of behavior to the underlying factors.
[^8]:    3. See Leonard Mills, "Understanding National and Regional Housing Trends," Business Review (Philadelphia, pa: Federal Reserve Bank of Philadelphia, September-October 1991): 15-23.
[^9]:    4. Dormitory rooms are not counted as separate housing units; thus, dormitory tenants do not constitute households.
[^10]:    5. When the data are adjusted for shifts in the age composition, the ratio of the mean absolute deviation in the overall incremental headship rate to that of the level headship rate rises from 3:1 to over 5:1.
[^11]:    6. The average start-to-completion lag is about 6 months for single-family structures and just over 9 months for multifamily structures; as single-family starts account for roughly two-thirds of total starts, on average, the weighted average for all units is about 7 months. In addition, there is a lag between demand signals and the initiation of housing construction; as a result, it is appropriate, using 5 -year averages, to relate housing starts during 1961-65 to household formation from mid-1960 to mid-1965, and so forth.
[^12]:    7. U.S. Department of Commerce, Bureau of the Census Construction Reports C-45 (various issues). The figures given include publicly owned buildings.
[^13]:    8. "Housing Inventory Change and the Role of Existing Structures, 19611985," American Real Estate and Urban Economics Association Journal 16, no. 4 (1988): 364-78.
[^14]:    9. Credit rationing resulted from the imposition of interest rate ceilings under the Federal Reserve Board's Regulation Q. These ceilings, in the face of strong upward pressure on interest rates, severely restricted mortgage lending by banks and savings and loan associations. The ceilings were phased out during the early $1980^{\prime}$ 's under the Banking Act of 1980 .
    10. One analyst has developed a sequential model in which homeownership is made a function of the ratio of the real user cost of owner-occupied housing to the rental price index, credit variables, and real disposable personal income per capita, and then housing starts in 1-to-4-family-unit structures are depicted as depending largely on homeownership. See Patrick H. Hendershott, "Real User Costs and the Demand for Single-Family Housing," Brookings Papers on Economic Activity, no. 2 (Washington, Dc: Brookings Institution, 1980): 401-44. For the reason given, however, this is not viewed as appropriate for long-run analysis.
[^15]:    12. The overall proportions are relatively insensitive to moderate changes in the underiying proportions that are taken as unvarying parameters for purposes of this analysis.
[^16]:    13. The Affordability Index assumes that the required downpayment is 20 percent of the purchase price and that the mortgage is a fixed-rate mortgage with a $30-$-year term (the term most frequently encountered). For purposes
[^17]:    of analyzing new residential construction, use of the median price of new, rather than of existing, houses is preferable; however, the two time series (compiled by the Census Bureau) are quite strongly correlated.
    14. Dale W. Jorgenson, "The Theory of Investment Behavior," Determinants of Itvestment Behavior, ed. Robert Ferber (New York: National Bureau of Economic Research, 1967): 129-35.
    15. See Patrick H. Hendershott and Joel Slemrod, "Taxes and the User Cost of Capital for Owner-Occupied Housing," American Real Estate and Urban Economics Association Journal no. 10 (1983): 375-92.

[^18]:    16. The year 1988 is taken as the endpoint because the cyclical decline in residential investment to 1990 distorts the underlying growth trend.
[^19]:     or ued stwatise
    Dhat Burnu o Ecomanchingus
    

[^20]:    17. More specifically, the incremental headship rate used for each subgroup is either the level rate for 1990 or a rate between the level rate and the 1985-90 incremental rate.
[^21]:    1. All of the estimates presented in this article are in current dollars. Therefore, given the 4-percent rate of inflation in the United States in 1991 and the 3 -percent rate in 1992 (based on the fixed-weighted price index for U.S. gross domestic purchases), U.S. parent sales, in real terms, were probably about flat in 1992 and probably declined in 1991.
[^22]:    3. Tables 6 and 14 update the estimates presented in "Gross Product of U.S. Multinational Companies, $1977-91$," Survey of Current Business 74 (February 1994): 42-63.
[^23]:    4. Each U.S. parent is classified in the industry that accounts for the largest portion of its sales or, for holding companies, its total income. Many U.S. parents are involved in a variety of business activities, and changes in the mix of these activities can cause a parent's industry classification to change. In 1992, industry reclassifications reduced employment in electric and electronic equipment manufacturing and wholesale trade and raised it in nonelectrical machinery manufacturing and food manufacturing.
[^24]:    5. Through ben's efforts to improve survey coverage, some affiliates that existed in prior years were added to the survey universe in 1992. Some of these affiliates should have been reported in earlier years but were not. Data for these affiliates are included in line 7 of table 2.
[^25]:    6. In 1989 (the latest year for which data are available), manufacturing accounted for 56 percent of U.S.-parent gross product but for only 24 percent of all-U.S.-business GDP.
[^26]:    D Suppressed to avoid disclosure of data of individual companies.

[^27]:    9. The special charge was made in accordance with Financial Accounting Standards Board Statement Number 106 (FASB 106). FASB 106 was adopted in December 1990 but was not required to be implemented until fiscal years beginning after January 15, 1992; most companies began conforming with the ruling during their 1992 fiscal years.

    FASB 106 requires that companies--both publicly held and private-with more than 500 post-retirement-plan participants recognize the cost of retiree health and other post-retirement benefits during their employees' careers rather than when the benefits are paid. While the new rule generally raises companies' annual charges for post-retirement benefits, the bulk of its impact on U.S. parents' net income in 1992 came from a one-time catch-up charge to account for the accumulated post-retirement benefits of all current and retired employees.
    10. Gross product is an economic accounting measure of the production of goods and services. For a firm, gross product can be measured as its gross output (sales or receipts and other operating income plus inventory change) less its intermediate inputs (purchased goods and services). Alternatively, gross product can be measured as the sum of costs incurred (other than for intermediate inputs) and profits earned in production. The costs fall into four major categories: Employee compensation, net interest paid, indirect business taxes, and capital consumption allowances. Estimates of mOFA gross product are derived by summing costs and profits.

[^28]:    OECD, March 1994): 200. Although these statistics are conceptually consistent with MOFA gross product, the two series are not strictly comparable, because of differences in coverage. The host-country GDP statistics cover banking, government, and other segments of the economy in which nonbank mofa's do not (or cannot) have operations. The mofa shares of only those segments in which they do operate would generally be somewhat higher than the shares cited in the text.
    13. The share of U.S. GDP accounted for by U.S. affiliates of foreign companies is not strictly comparable with the share of host-country GDP accounted for by mopa's, because the former includes all affiliates, not just those that are majority owned, and its denominator is adjusted to exclude banking and other sectors in which nonbank U.S. affiliates cannot, or do not, invest.

    Data on gross product of U.S. affiliates of foreign companies for 1992 are scheduled for publication in the July 1994 SUrvey.
    14. The data on total U.S. merchandise exports and imports used for this comparison are on a Census basis; exports include reexports and mil-
