## Survey of Current Business

SURVEY of CURRENT business (ISSN o039-6222). Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, Survey of Current Business, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Subscriptions to the Survey of Current Business are maintained, and their prices set, by the Government Printing Office, an agency of the U.S. Congress.

Postmaster: Send address changes to: Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The gPo order desk number is 202-5121800. The subscription complaint desk number is 202-512-1806.

Subscription and single-copy prices:
Periodicals: $\quad \$ 42.00$ domestic, $\$ 52.50$ foreign.
First-class mail: $\$ 104.00$.
Single copy: $\quad \$ 15.00$ domestic, $\$ 18.75$ foreign.

Make checks payable to the Superintendent of Documents.

Periodicals postage paid at Washington, DC and at additional mailing offices (USPS 337-790).

The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department.

13 Note on Rates of Return for Domestic Nonfinancial Corporations, 1960-98

## Regular features

## 1 Business Situation

Real GDP increased 4.1 percent in the first quarter of 1999 after increasing 6.0 percent in the fourth quarter of 1998; the price index for gross domestic purchases increased 1.1 percent after increasing 0.9 percent. Corporate profits increased $\$ 31.8$ billion in the first quarter. The Federal Government current surplus increased $\$ 45.6$ billion, to $\$ 111.4$ billion, in the first quarter, and the State and local government current surplus decreased $\$ 2.4$ billion, to $\$ 168.1$ billion.

16 Foreign Direct Investment in the United States: New Investment in 1998

Outlays by foreign investors to acquire or establish businesses in the United States jumped to a record $\$ 201.0$ billion in 1998 from $\$ 69.7$ billion in 1997. The 1998 total was boosted by two exceptionally large acquisitions, but even excluding them, outlays were still considerably higher than the previous record.

## 24 Gross State Product by Industry, 1995-97

In 1997, the States with the fastest growth in real gross state product (Gsp) were Oregon, New Hampshire, Texas, Arizona, and Colorado; Hawaii was the only State in which real GSP declined. The new and revised GSP estimates are consistent with the most recent estimates of gross product by industry for the Nation, and they incorporate the most recent annual revisions of State personal income and of the national income and product accounts.

## LOOKING AHEAD

- Annual Revision of the U.S. International Transactions Accounts. An article summarizing the revisions to the estimates of U.S. international transactions and discussing the major sources of the revisions will be published in the July Survey. The revisions will extend back to the first quarter of 1982 . Selected estimates will be made available on June 17 as part of the release of the estimates of U.S. international transactions for the first quarter of 1999.

## B U S I N E S S

This article was prepared by Larry R. Moran, Daniel Larkins, Ralph W. Morris, and Florence H. Campi.

$R$eal gross domestic product (GDP) increased 4.1 percent in the first quarter of 1999, according to the "preliminary" estimates of the national income and product accounts (NIPA's), after increasing 6.0 percent in the fourth quarter of 1998 (table 1 and chart 1 ); the "advance" first-quarter estimate of real GDP, reported in the May "Business Situation," had shown a 4.5 -percent increase. ${ }^{1}$ The downward revision to real GDP reflected an upward revision to

1. Quarterly estimates in the sipa's are expressed at seasonally adjusted annual rates. Quarter-to-quarter dollar changes are the differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data unless otherwise specified.

Real estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarters except those for the most recent year, which are calculated using quarterly weights; real estimates are expressed both as index numbers (1992=100) and as chained (1992) dollars. Price indexes $(1992=100$ ) are also calculated using a chain-type Fisher formula.

NOTE-Chained (1992) dollar series are calculated as the product of the chan-type quantity index and the 1992 current-doilar value of the corresponding series, divided by 100 . Because the cormula tor the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1992) dollar levels and residuals, which measure the extent of nonadditvity in each table, are in NIPA tables 1.2. 1.4. and 1.6. Percent changes are calculated from unrounded data. Percent changes in major aggregates are in NIPA table 8.1.

imports, which are subtracted in the calculation of GDP, and a downward revision to inventory investment; these revisions were partly offset by upward revisions to exports and to consumer spending. (The sources of the revisions are discussed in the section "Revisions.")
The 4.1-percent increase in the first quarter was above the 3.2 -percent average annual growth rate for real GDP over the current expansion, which began in the second quarter of 1991.
The picture of the economy in the first quarter presented by the preliminary estimates is little changed from that presented by the advance estimates. Like the advance estimates, the preliminary estimates showed the following:

- Real gdp growth decelerated in the first quarter. The deceleration was more than accounted for by a downturn in exports.
- Motor vehicle output decreased in the first quarter, following a fourth-quarter increase that largely reflected a rebound from a midsummer strike at a major manufacturer.
- Real final sales of domestic product decelerated slightly more than GDP, as inventory investment decreased less in the first quarter than in the fourth. ${ }^{2}$
- Real gross domestic purchases accelerated; consumer spending accounted for most

Note--NIPA table 8.2 also shows contributions for 1997:IV and 1998:I.
of the acceleration, but imports, private residential investment, and government spending and investment also contributed. ${ }^{3}$

- The largest contributors to the first-quarter increase in real GDP were consumer spending and private fixed investment (table 2). The increase in GDP was moderated by an increase in imports and by a decrease in exports.
The price index for gross domestic purchases increased 1.1 percent in the first quarter after increasing 0.9 percent in the fourth (table 3). This index had decreased slightly in the first quarter of 1998 and then increased at modestly accelerating rates in each quarter thereafter; however, the increase in the first quarter was considerably below the quarterly increases in the first 6 years of the current expansion. The step-up in the first quarter of 1999 was more than accounted for by a Federal pay increase for civilian and military personnel.
GDP prices increased 1.5 percent in the first quarter after increasing 0.8 percent in the fourth. The step-up in GDP prices was larger than that in gross domestic purchases prices primarily because import prices-which are subtracted in the calculation of GDP prices-decreased more in the

first quarter than in the fourth, largely reflecting petroleum prices.
Real disposable personal income (DPI) increased 4.3 percent in the first quarter, the same rate of increase as in the fourth quarter; these increases were the largest in more than 2 years. The personal saving rate-personal savings as a percentage of current-dollar DPI-decreased to negative 0.6 percent, the first negative rate since the quarterly series began in 1946; in the fourth quarter, the rate was o.o percent. (For additional information, see "Note on the Personal Saving Rate" on page 8 of the February 1999 Survey of Current Business.)

## Personal consumption expenditures

Real personal consumption expenditures (PCE) increased 6.8 percent in the first quarter after increasing 5.0 percent in the fourth (table 4). Expenditures for nondurable goods and for services increased more than twice as much as in the fourth quarter; expenditures for durable goods increased strongly but only about half as much as in the fourth quarter.

Many of the factors usually considered in analyses of PCE remained strong in the first quarter (chart 2). As mentioned earlier, real DPI increased at the same high rate as in the fourth quarter. The unemployment rate edged down to 4.3 percent from 4.4 percent. The Index of

[^2]Consumer Sentiment (prepared by the University of Michigan's Survey Research Center as a measure of consumer attitudes and expectations) increased to 105.9 from 100.2; the increase followed three consecutive decreases from the record of 107.8 in the first quarter of 1998.
Expenditures for nondurable goods increased 9.4 percent after increasing 4.2 percent. The acceleration reflected sharp step-ups in clothing and shoes and in "other" nondurable goods. ${ }^{4}$ In contrast, food increased substantially less than in the fourth quarter.
Expenditures for services increased 4.3 percent after increasing 1.7 percent. The step-up mainly reflected an upturn in electricity and gas. "Other" services increased somewhat more than in the fourth quarter; the step-up was more than accounted for by net foreign travel-as expenditures by U.S. residents traveling abroad turned up and as expenditures by foreigners traveling in the United States slowed-and by brokerage commissions and investment counseling. ${ }^{5}$

Expenditures for durable goods increased 12.9 percent after jumping 24.5 percent. The deceleration was more than accounted for by motor vehicles and parts, which slipped slightly after a sharp increase. In contrast, furniture and

[^3]household equipment increased more than in the fourth quarter; most of the acceleration was accounted for by a step-up in consumer electronics. ${ }^{6}$ "Other" durable goods also stepped up. ${ }^{7}$

## Nonresidential fixed investment

Real private nonresidential fixed investment increased 7.9 percent in the first quarter after jumping 14.6 percent in the fourth (table 5). Spending on both equipment and structures slowed.

Over the past four quarters, nonresidential fixed investment has increased at an average annual rate of 8.5 percent. The strength in recent quarters partly reflected strength in some of the factors that affect investment spending (chart 3). Over the past four quarters, real final sales of domestic product increased 4.6 percent, and long-term interest rates decreased; for example, the yield on high-grade corporate bonds decreased to 6.33 percent from 6.64 percent. In contrast, the capacity utilization rate declined to 80.3 percent from 82.7 percent, and domestic corporate profits increased at a modest annual rate of 3.2 percent.

1. "Other" residential investment includes home improvements, new mobile home sales, brokers commissions on home sales, residential equipment, and otner residental structures (which consists primarily of dormitories and fraternity and sorority houses).

NoTE- - See note to table 1 for an explanation of chained (1992) dollar series. Chained (1992) dollar levels and residuals are in NIPA tables 5.5, 8.5 (autos), and 8.7 (trucks). Percent changes in major aggregates are in NIPA table 8.1.

Producers' durable equipment (PDE) increased 9.7 percent after jumping 17.8 percent. The slowdown was mostly accounted for by a downturn in transportation and related equipment, but industrial equipment also turned down; within transportation and related equipment, autos and aircraft each turned down, and trucks, buses, and trailers slowed. "Other" pde turned up. ${ }^{8}$ Information processing and related equipment increased a little more than in the fourth quarter; a step-up in communications equipment more than offset a slowdown in computers and peripheral equipment.

[^5]
## CHART 3

## Selected Factors Affecting Nonresidential Investment

Billion chained (1992) \$

Percent

Percent

Structures increased 2.9 percent after increasing 6.0 percent; in the preceding four quarters, structures had either increased less than 1.0 percent or decreased. In the first quarter, "other" structures turned down; mining exploration, shafts, and wells decreased more than in the fourth quarter. ${ }^{9}$ Utilities edged up.

## Residential investment

Real private residential investment jumped 15.4 percent in the first quarter after increasing 10.0 percent in the fourth (table 5). The acceleration was mostly accounted for by a step-up in single-family structures, but multifamily structures and "other" residential investment also increased more than in the fourth quarter. ${ }^{10}$
Investment in single-family structures jumped 20.4 percent after increasing 10.9 percent. Over the past four quarters, single-family structures have increased at an annual rate of 15.2 percent. This increase partly reflected the strength in some of the factors usually considered in analyses of consumer spending. These factors include strong increases in real disposable personal income, low unemployment rates, and substantial increases in consumer wealth that were bolstered by large

[^6]
## CHART 4

Selected Interest Rates

Data: Federal Reserve Board, Federal Home Loan Morigage Corporation
U.S. Department of Conmerce, Bureaul of Economic Analysis
increases in stock market prices. In addition, the commitment rate on 30 -year, fixed-rate mortgages has declined over the past four quarters, though it edged up in the first quarter to 6.9 percent from 6.8 percent (chart 4).

Investment in multifamily structures jumped 25.2 percent after jumping 19.6 percent. "Other" residential investment increased 8.2 percent after increasing 7.4 percent; the acceleration was accounted for by a step-up in home improvements.

## Inventory investment

Real inventory investment-that is, the change in business inventories-decreased $\$ 5.2$ billion in the first quarter, as inventory accumulation slowed to $\$ 39.0$ billion from $\$ 44.2$ billion; inventory investment had decreased $\$ 11.5$ billion in the fourth quarter (table 6). The small first-quarter slowdown in inventory accumulation mainly reflected a swing from accumulation to liquidation in manufacturing inventories, but a slowdown in wholesale trade inventories also contributed.
Manufacturing inventories decreased $\$ 4.9$ billion after increasing $\$ 6.2$ billion. Inventories of both durable goods and nondurable goods industries turned down. The downturn in the durable goods industries was accounted for by transportation equipment and by primary metals; in contrast, inventories in the industrial machinery and electronic machinery industries increased more than in the fourth quarter. In the non-
durable goods industries, the downturn mainly reflected inventories of apparel and tobacco industries; food industries inventories increased more than in the fourth quarter.

Wholesale trade inventories increased $\$ 10.4$ billion after increasing $\$ 13.7$ billion. The slowdown was more than accounted for by durable goods industries; a downturn in the metals and minerals industry and a slowdown in the motor vehicles industry more than offset an upturn in the professional and commercial equipment industry (which includes computers). ${ }^{11}$

Retail trade inventories increased $\$ 18.8$ billion after increasing $\$ 10.9$ billion. Inventories of nondurable goods industries increased after a slight decrease; department stores accounted for about half of the upturn. Inventories of durable goods industries increased less than in the fourth quarter.
"Other" nonfarm inventories increased more than in the fourth quarter. ${ }^{12}$

Farm inventories increased $\$ 4.4$ billion after increasing $\$ 7.2$ billion. Crop and livestock inventories both contributed to the slowdown.

The ratio of real nonfarm inventories to real final sales of domestic businesses decreased to 2.24
11. In contrast to the preliminary estimate of a slowdown in wholesale inventories, the advance estimate showed a slight step-up; according to the preliminary estimates, the downturn in the metals and minerals industry is more pronounced, and the upturn in the professional and commercial equipment industry is less pronounced.
12. "Other" nonfarm inventories includes inventories held by the following industries: Mining; construction; public utilities; transportation; communication; finance, insurance, and real estate; and services.

Table 6.-Real Change in Business Inventories

in the first quarter from 2.25 in the fourth; the first-quarter level was close to the average level of the ratio in the past few years. The inventorysales ratio that includes only final sales of goods and structures decreased to 3.94 -the lowest in more than 25 years-from 3.97. ${ }^{13}$

## Exports and imports

Real exports of goods and services decreased 6.8 percent in the first quarter after jumping 19.7 percent in the fourth (table 7). Real imports of goods and services increased 14.2 percent after increasing 12.0 percent.

[^7]Real exports of goods fell 11.5 percent after jumping 24.6 percent. Most major categories of exports contributed to the downturn; the largest contributor was capital goods, primarily civilian aircraft, engines, and parts.
Real exports of services increased 5.5 percent after increasing 8.3 percent. A slowdown in travel accounted for most of the slowdown, but other transportation and royalties and license fees also contributed, changing little after increasing.
Real imports of goods increased 15.2 percent after increasing 14.1 percent. Imports of consumer goods except automobiles, of "other" capital goods, of computers, peripherals, and parts, and of foods, feeds, and beverages increased more in the first quarter than in the fourth; in addition, imports of industrial supplies and materials and of petroleum and products decreased less than in the fourth quarter. In contrast, automotive vehicles, engines, and parts increased less than in the

1. Based on chained-type annual (1992) weights.

NOTE.-The preliminary estimates for the first quarter of 1999 incorporate the following revised or additional major source data that were not avaiable when the advance estimates were prepared.
Personal consumption expenditures: Retail sales for February and March (revised), consumers' share of new-car purchases for March, average unit value for domestic new autos for March (revised), and consumers' share of new-truck purchases tor March. Nonresidential fixed investment: Construction put in place for January and February (revised) and March, manufacturers' shipments of machinery and equipment for February and March (revised), and exports and imports of machinery and equipment for February (revised) and March.

Residential fixed investment: Construction put in place tor January and February (revised) and March.
Change in business inventories: Manufacturing, retail trade, and wholesale trade inventories for February (revised) and March Exports and imports of goods and services: Exports and imports of goods for February (revised) and March
Government consumption expenditures and gross investment: State and local government construction put in place for January and February (revised) and March.

Wages and salaries: Employment, average hourly earnings, and average weekly hours for February and March (revised)
leum imports for February (revised) and March and housing prices for the first Quary through March (revised), unit-value index for petro-正 imports for February (revised) and March, and housing prices for the first quarter.
ernment spending more then offset a downturn in Federal Government spending.
State and local government spending and investment increased 7.7 percent after increasing 1.3 percent. Investment turned up, reflecting an upturn in investment in structures. Consumption expenditures increased more than in the fourth quarter, largely reflecting an acceleration in compensation of employees.
Federal defense spending decreased 6.6 percent after increasing 1.3 percent. Consumption expenditures turned down, largely reflecting a downturn in spending for research and development and for personnel support. Investment spending increased after decreasing; equipment accounted for most of the upturn, but structures also contributed.
Federal nondefense spending increased 8.1 percent after jumping 19.8 percent. The slowdown was more than accounted for by consumption expenditures. Investment increased more than in the fourth quarter; the acceleration was primarily accounted for by equipment.

## Revisions

As noted earlier, the preliminary estimate of a 4.1percent increase in real GDP in the first quarter is 0.4 percentage point lower than the advance estimate (table 9); for 1978-98, the average revision, without regard to sign, from the advance estimate to the preliminary estimate was 0.5 percentage point.

The downward revision to real GDP reflected an upward revision to imports, which are subtracted in the calculation of GDP, and a downward revision to inventory investment; these revisions were partly offset by upward revisions to exports and to consumer spending.

The revisions to imports and to exports were mostly in goods and reflected the incorporation of newly available Census Bureau data on international trade in goods for March.
The revision to inventory investment reflected the incorporation of revised February and newly available March data on change in inventories for manufacturing and trade from the Census Bureau.

The revision to PCE was mostly in durable goods and mainly reflected the incorporation of revised Census Bureau data on retail sales for March.

The preliminary estimates of the increases in the price indexes for gross domestic purchases (1.1 percent) and for GDP ( 1.5 percent) were
0.1 percentage point higher than the advance estimates.
The preliminary estimate of the increase in real DPI was 4.3 percent, 0.3 percentage point lower than the advance estimate. Current-dollar DPI increased 5.4 percent, 0.2 percentage point lower than the advance estimate. The downward revision to DPI was more than accounted for by a downward revision to current-dollar personal income, which, in turn, was accounted for by downward revisions to farm proprietors' income and to wages and salaries; about half of the downward revision to farm proprietors' income was accounted for by a downward revision to livestock output. The downward revision to personal income was partly offset by a downward revision to personal tax and nontax payments, which are subtracted in the calculation of DPI. The preliminary estimate of the personal saving rate was -0.6 percent, o.1 percentage point lower than the advance estimate.

## Corporate Profits

In the first quarter of 1999, profits from current production increased $\$ 31.8$ billion (or 3.9 percent at a quarterly rate) after decreasing $\$ 5.3$ billion
( 0.6 percent) in the fourth quarter (table 10). ${ }^{14}$ Profits of domestic nonfinancial corporations increased $\$ 19.7$ billion ( 3.3 percent) after decreasing $\$ 12.7$ billion ( 2.1 percent); in the first quarter, unit profits increased, reflecting an increase in unit prices and a decrease in unit costs. (Related information on nonfinancial corporations is discussed in "Note on Rates of Return for Domestic Nonfinancial Corporations, 1960-98," beginning on page 13.) Profits of domestic financial corporations increased $\$ 9.1$ billion ( 6.9 percent) after increasing $\$ 0.6$ billion ( 0.5 percent). Profits from the rest of the world increased $\$ 3.0$ billion (3.1 percent) after increasing $\$ 6.9$ billion ( 7.6 percent); the first-quarter increase was more than accounted for by receipts of earnings from foreign affiliates. ${ }^{15}$
14. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown in NIPA tables 1.9, 1.14, 1.16, and 6.16 C (see "Selected nIPA Tables," which begins on page D-2 of this issue) as corporate profits with inventory valuation and capital consumption adjustments.

Percent changes in profits are shown at quarterly, not annual, rates.
15. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from bea's international transactions accounts.

NOTE.-Levels of these and other profits series are in NIPA tables 1.14, 1.16, 6.16C, and 7.15
IVA inventory valuation adjustment
CCAdj Capital consumption adjustmen

Cash flow from current production, a profitsrelated measure of internally generated funds available for investment, increased $\$ 24.2$ billion after increasing $\$ 4.9$ billion. ${ }^{16}$ The ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally generated funds, increased to 86.2 percent from 84.9 percent but remains below its average level of 91.9 percent for 1991-97.

Domestic industry profits and related measures.Domestic industry profits increased $\$ 24.3$ billion after decreasing $\$ 17.5$ billion. ${ }^{17}$ Profits of domestic nonfinancial corporations increased $\$ 15.5$ billion after decreasing $\$ 17.3$ billion. The upturn in domestic nonfinancial profits reflected the pattern of payments by tobacco companies to States under the terms of various settlement agreements. To reflect these payments, a downward adjustment of $\$ 13.5$ billion (annual rate) was made to profits in the fourth quarter; in the first quarter, the adjustment was much smaller- $\$ 0.9$ billion. (For more information, see the box "State Tobacco Settlements" on page 12 of the April 1999 Survey.) Profits of domestic financial corporations increased $\$ 8.8$ billion after decreasing $\$ 0.2$ billion.

Profits before tax (PBT) increased $\$ 30.3$ billion after decreasing $\$ 12.4$ billion. The small difference between the $\$ 30.3$ billion increase in Pbt and the $\$ 31.8$ billion increase in profits from current production reflected nearly offsetting changes in the inventory valuation adjustment and the capital consumption adjustment. ${ }^{18}$ In the first quarter, inventory losses decreased $\$ 3.0$ billion, and

[^8]the capital consumption adjustment increased $\$ 4.5$ billion.

## Government Sector

The combined current surplus of the Federal Government and of State and local governments-the NIPA measure of net saving by government-increased $\$ 43.2$ billion, to $\$ 279.5$ billion, in the first quarter after decreasing $\$ 4.4$ billion in the fourth (table 11). ${ }^{19}$ The upturn was attributable to an upturn in the Federal Government current surplus. The State and local government current surplus turned down. ${ }^{20}$

## Federal

The Federal Government current surplus increased $\$ 45.6$ billion, to $\$ 111.4$ billion, in the first quarter after decreasing $\$ 26.2$ billion in the fourth. The upturn resulted from a sharp acceleration in receipts and a downturn in current expenditures.
Receipts.-Federal receipts increased $\$ 31.8$ billion in the first quarter after increasing $\$ 11.6$ billion in the fourth. The acceleration was more than accounted for by an upturn in corporate profits tax accruals and by an acceleration in contributions for social insurance.

Corporate profits tax accruals increased $\$ 8.6$ billion after decreasing $\$ 6.5$ billion, reflecting an upturn in domestic corporate profits before tax. The settlement payments to the States by tobacco companies had dampened corporate profits and thus corporate profits tax accruals in the fourth quarter.

Contributions for social insurance increased $\$ 16.2$ billion after increasing $\$ 8.3$ billion. The acceleration primarily reflected an increase in the social security taxable wage base that boosted contributions by employers, employees, and the self-employed to the old-age, survivors, and disability insurance trust funds.

Indirect business tax and nontax accruals decreased $\$ 0.3$ billion after decreasing $\$ 2.3$ billion. The smaller decrease was partly accounted for by customs duties, which decreased $\$ 0.1$ billion after decreasing $\$ 1.5$ billion, and by nontaxes, which decreased $\$ 0.2$ billion after decreasing $\$ 0.9$ billion.

[^9]Personal tax and nontax receipts increased $\$ 7.3$ billion after increasing $\$ 12.1$ billion. The deceleration was accounted for by estate and gift taxes, which increased $\$ 0.3$ billion after increasing $\$ 3.0$ billion, and by income taxes, which increased $\$ 7.0$ billion after increasing $\$ 9.2$ billion, reflecting a deceleration in withheld income taxes.

Current expenditures.-Current expenditures decreased $\$ 13.8$ billion in the first quarter after increasing $\$ 37.9$ billion in the fourth. ${ }^{21}$ The downturn reflected downturns in subsidies less the current surplus of government enterprises and in transfer payments (net) and a deceleration in consumption expenditures.
Subsidies less current surplus of government enterprises decreased $\$ 11.0$ billion after increasing $\$ 11.4$ billion. The downturn was mainly accounted for by subsidies, which decreased $\$ 8.0$ billion after increasing $\$ 11.8$ billion. Within subsidies, agricultural subsidies decreased $\$ 8.0$ billion after increasing $\$ 11.8$ billion; subsidies were boosted in the fourth quarter by special payments to farmers after the enactment of the 1999 Omnibus Consolidated and Emergency Supplemental Appropriations Act that provided two forms of relief to the farmers who were already enrolled in the Federal farm program.
Transfer payments (net) decreased $\$ 0.3$ billion after increasing $\$ 12.8$ billion. A sharp downturn in transfer payments to the rest of the world more than offset an acceleration in transfer payments to persons. Transfer payments to the rest of the world fell $\$ 13.6$ billion after increasing $\$ 11.4$ billion; the fourth-quarter increase was attributable to the yearly payment to Israel of $\$ 3.0$ billion$\$ 12.0$ billion at an annual rate-for economic support and other payments. Transfer payments to persons increased $\$ 13.3$ billion after increasing $\$ 1.4$ billion. The step-up mainly reflected a $1.3-$ percent cost-of-living adjustment in January that boosted social security (old-age, survivors, and disability insurance), Federal employee pension benefits, veterans pension benefits, and supplemental security income benefits by $\$ 6.3$ billion. In addition, payments for the Earned Income Tax Credit and the Child Tax Credit boosted transfer payments $\$ 3.4$ billion.

Consumption expenditures increased $\$ 1.4$ billion after increasing $\$ 11.9$ billion. ${ }^{22}$ The deceleration was partly accounted for by national defense

[^10]consumption expenditures, which decreased $\$ 3.0$ billion after increasing $\$ 3.8$ billion. The downturn in defense spending was primarily accounted for by services, which decreased $\$ 1.9$ billion after increasing $\$ 4.6$ billion. Within services, "other services" decreased $\$ 4.3$ billion after increasing $\$ 5.8$ billion, primarily reflecting downturns in expenditures for research and development and for personnel support. The downturn in "other services" was partly offset by an upturn in compensation of employees, which increased $\$ 3.0$ billion after decreasing $\$ 1.4$ billion; compensation

NOTE.-Levels of these series are in NIPA tables 3.1-3.3.
was boosted $\$ 3.3$ billion by the January 1999 pay raise. Durable goods decreased $\$ 0.6$ billion after decreasing $\$ 0.2$ billion; a downturn in aircraft was mostly offset by upturns in missiles, other durable goods, and electronics. Nondurable goods decreased $\$ 0.4$ billion after decreasing $\$ 0.7$ billion.

Nondefense consumption expenditures increased $\$ 4.2$ billion after increasing $\$ 8.2$ billion. The deceleration was more than accounted for by durable goods, which remained unchanged after increasing $\$ 5.9$ billion; the fourth-quarter increase followed the sale of the United States Enrichment Corporation in the third quarter. ${ }^{23}$ The deceleration in durable goods was partly offset by an acceleration in services, which increased $\$ 4.0$ billion after increasing $\$ 2.0$ billion. The acceleration was primarily attributable to compensation of employees, which increased $\$ 3.7$ billion after increasing $\$ 1.7$ billion; compensation was boosted $\$ 2.4$ billion by the January 1999 pay raise.

Net interest paid decreased $\$ 7.5$ billion after decreasing $\$ 4.3$ billion. Gross interest paid decreased $\$ 7.8$ billion after decreasing $\$ 3.8$ billion.

Grants-in-aid to State and local governments increased $\$ 3.7$ billion after increasing $\$ 6.0$ billion. The deceleration was more than accounted for by a deceleration in grants for medicaid and by a downturn in grants for highways and for other programs. In contrast, grants for cash assistance and for education turned up.

## State and local

The State and local government current surplus decreased $\$ 2.4$ billion, to $\$ 168.1$ billion, in the first quarter after increasing $\$ 21.8$ billion in the fourth. The downturn was accounted for by a deceleration in receipts.

[^11]Receipts.-State and local government receipts increased $\$ 9.2$ billion after increasing $\$ 30.8$ billion. The deceleration was accounted for by a downturn in indirect business tax and nontax accruals.

Indirect business tax and nontax accruals decreased $\$ 1.0$ billion after increasing $\$ 20.9$ billion. The downturn was more than accounted for by State nontax accruals, which decreased $\$ 12.5$ billion after increasing $\$ 12.0$ billion. In the fourth quarter, nontaxes were boosted by the settlement payments to the States by tobacco companies: These payments amounted to $\$ 3.4$ billion ( $\$ 13.5$ billion at an annual rate), including up-front payments to 46 States of $\$ 2.4$ billion ( $\$ 9.6$ billion at an annual rate). ${ }^{24}$ Sales taxes increased $\$ 7.4$ billion after increasing $\$ 5.5$ billion; the acceleration was mostly attributable to general retail sales taxes.

Personal tax and nontax receipts increased $\$ 3.8$ billion after increasing $\$ 4.3$ billion. The deceleration was accounted for by personal income taxes, which increased $\$ 2.7$ billion after increasing $\$ 3.2$ billion.

Corporate profits tax accruals increased $\$ 1.7$ billion after decreasing $\$ 1.2$ billion.
Current expenditures.-Current expenditures increased $\$ 11.6$ billion after increasing $\$ 9.0$ billion, primarily reflecting an acceleration in consumption expenditures.

Consumption expenditures increased $\$ 9.4$ billion after increasing $\$ 7.3$ billion. The acceleration was mainly attributable to an acceleration in services and to an upturn in nondurable goods. Within services, compensation of employees increased $\$ 7.5$ billion after increasing $\$ 6.1$ billion, reflecting an acceleration in compensation for education workers as a result of a step-up in education employment.

[^12]
# Note on Rates of Return for Domestic Nonfinancial Corporations, 1960-98 

FOR DOMESTIC NONFINANCIAL corporations, property income's rate of return decreased to 9.6 percent in 1998 from 9.9 percent in 1997 (chart 1 and table 1). Though lower than in 1997 and in 1996, the rate of return was higher than in any other year since 1969. Property income's share of domestic income dropped to 18.5 percent from 19.4 percent; nevertheless, the share was well above its average level for the past quarter century.
The rate of return is defined here as the ratio of profits and interest payments to the value of structures, equipment, and inventories. For pur-

Note.-This note was prepared by Daniel Larkins.

poses of this note, the numerator-corporate profits with inventory valuation and capital consumption adjustments plus net interest-is termed "property income" (table 2). ${ }^{1}$ In addition, the denominator-the

1. Structures, equipment, and inventories, valued at current cost at end of year. Structures and equipment are irom U.S. Department of Commerce, Bureau of Economic Analysis, Fixed Reproducible Tangible Wealth of the United States, 1925-96, CD-ROM (Washington, $\mathrm{DC}: \mathrm{Bu}$ reau of Economic Analysis, 1998) and from unpublished BEA data. Inventories are from legaltorm and industry detail underlying NIPA table 5.13 .
NOTE--Property income is profits from current production plus net interest. Profits from cur rent production is corporate profits with inventory valuation adjustrment and capital consumption adjustment. Profits ater tax is also shown with inventory valuation adjustment and capital con
sumption adiusment. sumption adjustment.

The measure of rate of return used here has several useful features. First, it captures the return to investment, regardless of the mix of equity and debt used to finance the investment. Second, the numerator is not affected by inventory profits or by depreciation schedules used in preparing the underlying tax returns. Third, because the components of the denominator are measured at current cost, the ratio is an estimate of the current average profitability of investment. (See the box "Alternative Measures of Rates of Return" on page 10 of the June 1997 Survey.)

The ratio of property income to domestic income is property income's "share" of domestic income-that is, the portion of domestic income that is not labor income.

## Q-type ratios

Another ratio of analytical interest is "Tobin's-Q," or simply " Q ," which compares the valuation of assets in financial markets with the current replacement cost of assets. ${ }^{2}$ A value of Q above 1 indicates that newly produced physical assets may be purchased more cheaply than (the ownership claims to) existing assets. Such a situation may induce businesses to purchase newly produced physical assets instead of acquiring existing assets; alternatively, it may induce financial investors to reduce the prices they will offer for financial assets. A value of Q below 1 indicates that existing physical assets may be acquired more cheaply than newly produced assets. Such a situation may induce businesses to purchase existing assets instead of newly produced physical assets; alternatively, it may induce financial investors to raise the prices they will offer for financial assets.

Q may be calculated in a variety of ways, but the general pattern of the ratio over time is relatively insensitive to the precise formula used to calculate it. In the numerator, all analysts would include the market value of equities outstanding. Many analysts would also include the value of corporate bond obligations, thereby making the ratio invariant to shifts in the mix of equity and debt used to finance investment. Further, the numerator could include all corporate debt, not just bonds. ${ }^{3}$

The denominator of Q should certainly include the net stock of reproducible tangible wealth valued at current cost; estimates for this series were used in calculating the rate of return. The denominator might also include other assets, such as land and financial assets; it might also include intellectual property (including software) that may not be capitalized. (All of these items are reflected in the market value of equities outstanding.)

[^14]It should be noted that the market value of equities outstanding reflects domestic and foreign assets owned by domestic nonfinancial corporations, while the net stock of reproducible tangible wealth includes the domestic wealth of domestic and foreign corporations.

Moreover, the other series that have been suggested for inclusion in the numerator and denominator (such

## CHART 2

## Q-type Ratios, Domestic Nonfinancial Corporations, 1960-98

U.S. Department of Commerce, Bursau of Economic Analysis
as corporate bonds and land) generally are either not available or are available on a historical-cost basis. The use of historical-cost estimates is inconsistent with the underlying rationale for Q -a comparison of market valuation and replacement costs. ${ }^{4}$ Analysts may differ on whether it is preferable to use some historical-cost components or to omit them and to thereby exclude some potentially important variables.

Fortunately, ratios constructed from various definitions all display quite similar patterns over time, and in light of the difficulties involved in measuring both the numerators and the denominators, the patterns of movement may be more important than the levels of the ratios. Three variants of the measure for domestic nonfinancial corporations are shown in chart 2; other variants would show much the same overall picture. ${ }^{5}$ All the ratios drop sharply in the early 1970's, stay relatively low until the early 1980's, and then increase more or less rapidly through 1998. In recent years, the increases have been particularly dramatic. Two of the ratios reached record highs in 1998. The narrowest measure-the market value of equities outstanding divided by the replacement cost of reproducible tangible wealth-increased to 1.36 from 1.09 . A broader measure that includes corporate bonds in the numerator increased to 1.58 from 1.30. The broadest measure, which includes corporate debt in the numerator and financial assets in the denominator, increased to 0.99 from 0.85.

[^15]
# Foreign Direct Investment in the United States 

 New Investment in 1998By Mahnaz Fahim-Nader

The survey, from which the data presented in this article were drawn, was conducted under the supervision of Joseph F. Cherry III and Dorrett E . Williams, with contributions by Nicole L. Donegan, Erik A. Kasari, Edward J. Kozerka, and Ronald McNeil. Karen Poffel programmed the tables.

Last year, outlays by foreign direct investors to acquire or establish businesses in the United States surged to $\$ 201.0$ billion, $2^{1 / 2}$ times the previous record of $\$ 79.9$ billion set in 1996 and almost triple the 1997 level of $\$ 69.7$ billion (table 1 and chart 1). ${ }^{1} \quad$ The 1998 outlays were boosted by two exceptionally large acquisitions, each of which significantly exceeded the size of any previous single investment. However, even without these two investments, outlays were still about 40 percent higher than those in 1996.

The surge in outlays by foreign direct investors coincides with a sharp increase in overall merger and acquisition activity in the United States to a level that substantially exceeds the 1997 record. ${ }^{2}$ Both these increases are a part of a global increase in mergers and acquisitions. The record outlays reflected the continuing strength and stability of the U.S. economy that provided foreign investors with strong incentives to invest in the United

[^16]Table 1.-Outlays and Employment of Newly Acquired or Established U.S. Businesses, 1980-98

[^17]States. In addition, a desire to gain access to the advanced and growing technological capability and large markets in the United States may have led a number of foreign companies to acquire information-related businesses in manufacturing and services.

The two large investments were acquisitions of a petroleum company and a motor vehicle

CHART 1
Outlays for New Investment in the United States by Foreign Direct Investors, 1980-98 Billions $\$$
U.S. Deparment of Conmerce, Bureau of Economic Analysis

NOTE.-In recent years, the annual article on foreign direct investment in the United States (folius) has covered both new investment and the operations of nonbank U.S. affliates of foreign companies. The data on new investment are collected in bea's survey of new fdius, and the data on the overall operations of U.S. affliliates are collected in bea's annual and benchmark surveys of fdius. This year, the data on the operations of nonbank U.S. affiliates in 1997 will be published in an article in a later issue, so that the results of the most recent benchmark survey of fdius can be incorporated.
manufacturing company. ${ }^{3}$ They were accomplished by exchanging stock; the shareholders in the acquired U.S. companies received stock in the new foreign firms that were created when the U.S. companies were combined with the foreign companies that made the acquisitions. Some of the other large investments were also structured as exchanges of stock, a technique that is increasingly used for financing mergers and acquisitions both in the United States and abroad. Taken together, these exchanges resulted in large, but almost entirely offsetting, capital flows in the U.S. balance of payments: The large inflows that resulted from the foreign direct investors' acquisitions of stock in the acquired U.S. companies were offset by the outflows that resulted from the distributions to U.S. stockholders of the stock in the newly established foreign parent companies.
The large investment in the petroleum industry illustrates a trend toward greater consolidation within the industry that was also reflected by
3. The International Investment and Trade in Services Survey Act prohibits bea from disclosing information from its direct investment surveys in a manner that allows the data supplied by an individual respondent to be identified. The act also provides that with the prior written consent of the respondent, information supplied by the respondent may be disclosed. For these two large investments, BEA obtained consent for limited disclosure in order to present useful results from the survey.
a number of other substantial petroleum-related investments, particularly in oil refining, distribution, oilfield machinery manufacturing, and oil and gas field services. In response to weak growth in the demand for fuels, excess capacity, and low oil prices, companies have been more aggressive in seeking out opportunities to reduce per unit costs in areas such as administration, refining, and marketing. A longer term factor behind the consolidations is the intensification of the worldwide competition to secure large, new oil reserves. In the United States, oil production, though declining since 1970, continues to exceed new discoveries. Generally, excluding production in the OPEC countries, production is leveling off, if not already declining. Large, new oilfields are becoming increasingly hard to find, and oil companies must explore more remote regions, often under inhospitable conditions, and deal with political, as well as geological, uncertainties. Given these circumstances, only companies with the size and financial strength to assume high costs and risks will remain profitable.

Although cost cutting and overcapacity have spurred consolidations in the motor vehicle industry worldwide, the main impetus for the

## bea Data on New Foreign Direct Investments

The estimates of new foreign direct investments cover U.S. business enterprises that were acquired or established by foreign direct investors during the year and that had total assets of more than $\$ 1$ million or that owned at least 200 acres of U.S. land in the year they were acquired or established. For 1997, U.S. enterprises that met these criteria were required to file full reports on the survey that the Bureau of Economic Analysis used to collect the data.
U.S. enterprises that were acquired or established by foreign direct investors and that had total assets of $\$ 1$ million or less were required to file partial reports, mainly for identification purposes; the data from the partial reports for 1997 are not included in the estimates. The total assets of the U.S. enterprises that filed partial reports for 1997 were $\$ 166.0$ million, only about 0.1 percent of the total assets of $\$ 170.6$ billion of the U.S. enterprises that filed complete reports.

For 1998, the criterion for filing full reports was raised to total assets of more than $\$ 3$ million, in order to reduce the reporting burden on small enterprises. To maintain comparability between the estimates for 1997 and 1998, the 1998 estimates incorporate the data from the partial reports filed by enterprises with assets between $\$ 1$ million and $\$ 3$ million. In 1998, the total assets of U.S. enterprises with assets of $\$ 1$ million or less that filed partial reports
were $\$ 257.4$ million, only about 0.1 percent of the total assets of $\$ 249.4$ billion of the U.S. enterprises with assets of more than $\$ 1$ million.
A U.S. business enterprise is categorized as "established" if the foreign parent or its existing U.S. affiliate (a) creates a new legal entity that is organized and begins operating as a new U.S. business enterprise or (b) directly purchases U.S. real estate. A U.S. business enterprise is categorized as "acquired" if the foreign parent or its existing U.S. affiliate (a) obtains a voting equity interest in an existing U.S. business enterprise and continues to operate it as a separate legal entity, (b) purchases a business segment or an operating unit of an existing U.S. business enterprise that it organizes as a new separate legal entity, or (c) purchases through the existing U.S. affiliate a U.S. business enterprise or a business segment or an operating unit of a U.S. business enterprise and merges it into the affiliate's operations.
The data on new investments do not cover a foreign parent's acquisition of additional equity in its U.S. affiliate or its acquisition of an existing U.S. affliate from another foreign investor. They also do not cover expansions in the operations of existing U.S. affiliates, and selloffs or other disinvestment are not netted against the new investments.
large foreign investment in the United States in this industry was the complementary strengthsmainly in terms of product lines-of the two manufacturers of motor vehicles. The merger also presented opportunities to take advantage of economies of scale in engineering, purchasing, manufacturing, and distribution.
Factors that are specific to particular industries also motivated a number of other large new investments. In manufacturing (particularly machinery) and in services (particularly computer and data processing services), a desire to gain access to the advanced and growing technological capability in the United States, to integrate operations vertically, and to enter new markets led a number of foreign companies to acquire telecommunication- and informationrelated businesses. In "other industries" (particularly communication and electric, gas, and sanitary services), investments were spurred by global deregulation and by a need to seek strength through size.
As in the past, outlays to acquire existing U.S. companies rather than to establish new U.S. companies accounted for most of total outlays. In 1998, they accounted for 90 percent of total outlays (table 2).

Outlays in 1998 were dominated by large investments. There were 12 investments of $\$ 2$ billion or more, and these investments accounted for almost two-thirds of total outlays (table 3). The
number of such investments was up from three in 1997 and eight in 1996. To some extent, the increase in the number of large investments in 1998 reflects the sharp increases in U.S. stock prices in recent years; these increases have raised the size of the outlays needed to acquire individual U.S. companies. The size of an investment can also be measured by the number of employees in the acquired company: In 1998, there were seven

## Data Availability

This article presents summary estimates of outlays by foreign direct investors to acquire or establish businesses in the United States.
A set of supplementary tables that present detail on the number of investments and investors for 1992-97 and on investment outlays and selected operating data for the newly acquired or established businesses for 1992-98 is available in compressed text files on BEA's Web site at <www.bea.doc.gov>. To access the files, click on the Catalog of Products, look under "International Accounts Products," " Foreign Direct Investment in the United States," and scroll down the page to "U.S. Business Enterprises Acquired or Established by Foreign Direct Investors." A set of tables for 1980-91 is also available.
The supplementary tables are also available on diskettes. To order, call the bea Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666), and specify product number IDN-0235 for the 1992-98 estimates and product number IDN-0078 for the 1980-91 estimates.

acquisitions of U.S. companies with more than 10,000 employees, the same as in 1996.
By industry, outlays increased sharply in the manufacturing and petroleum industries (table 4). Within manufacturing, the largest increases were in "other manufacturing" (particularly in motor vehicles and in printing and publishing) and in machinery (particularly industrial machinery and equipment). Outlays also increased in retail trade and in real estate. Outlays decreased in all other industries; the decreases were largest in the insurance industry.

By country of ultimate beneficial owner (UBO), the United Kingdom and Germany had the largest increase in outlays in 1998 (table 4). ${ }^{4}$ Investments from France, Canada, and the Netherlands also increased substantially. Outlays by Japanese investors, at $\$ 2.9$ billion, remained flat and were only a fraction of the peak- $\$ 19.9$ billion-in 1990 (chart 2).

[^18]The portion of outlays financed by foreign parents (including those by exchanging stock), rather than by existing U.S. affiliates, increased from 54 percent to a record 77 percent. The unusually high share mainly resulted from the two exceptionally large investments. Excluding

these investments, the share would have been 59 percent.
In dollars, outlays financed by the foreign parents increased to $\$ 155.3$ billion in 1998 from $\$ 37.4$ billion in 1997. The increase contributed to the sharp overall increase in net capital inflows for foreign direct investment in the United States (fdius) that are recorded in the U.S. balance of payments accounts for $1998 .^{5}$ Outlays financed by

[^20]existing U.S. affiliates with funds from other foreign sources or from U.S. sources increased $\$ 13.4$ billion, to $\$ 45.7$ billion.

The total assets of newly acquired or established affiliates were $\$ 249.4$ billion in 1998, up from $\$ 170.6$ billion in 1997 (table 5). The assets of the businesses that were acquired were $\$ 212.3$ billion.
U.S. businesses that were newly acquired or established employed 597,000 persons in 1998, up from 289,000 in 1997. The largest shares of employment were accounted for by manufacturing (44 percent) and services ( 23 percent).

Tables 5-7 follow.
published in Christopher L. Bach, "U.S. International Transactions, Fourth Quarter and Year 1998," Survey 79 (April 1999): 47 and 54. Revised estimates will be published in the July issue of the Surver.

Suporessed to avoid disclosure of data of individual companies.

1. See footrote 4 in text for explanation.
2. The European Union (15) comprises Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom. Prior to 1995 , Austria, Fin-
land, and Sweden were not members of the Eluropean Union.
3. OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.
NOTE--Data for 1998 are preliminary. For investments in which more than one investor participated, each investor and each investor's outlays are classified by the country of each individual utimate beneficial owner.

# Gross State Product by Industry, 1995-97 

By Richard M. Beemiller and Michael T. Wells

$T$n this article, the Bureau of Economic Analysis (bea) presents new estimates of gross state product (GSP) for 1997 and revised estimates for 1995-96. ${ }^{1}$ The new and revised GSP estimates are consistent with the estimates of gross product by industry for the Nation that were published in the November 1998 Survey of Current Business. ${ }^{2}$ The gsp estimates presented here incorporate the results of the most recent annual revisions of State personal income and of the national income and product accounts. ${ }^{3}$ The

[^21]next update of GSP will take place in mid- to late-2000.

The first part of this article discusses the relative performance of various States in terms of growth rates, industry shares of State totals, and State shares of total gsp for the Nation. The second part discusses the revisions to the GSP estimates and the major sources of the revisions.

## Growth Rates and Shares

Comparisons of GSP growth rates and shares of GSP across industries or States provide indications of the relative performance of industries or States. For example, comparing real gross state product

[^22]
## Gross State Product Estimates

Gsp for each State is derived as the sum of the gross state product originating in all industries in the State. In concept, an industry's gSp, or its value added, is equivalent to its gross output (sales or receipts and other operating income, commodity taxes, and inventory change) minus its intermediate inputs (consumption of goods and services purchased from other U.S. industries or imported). Thus, GSP is often considered the State counterpart of the Nation's gross domestic product (GDP). In practice, GSP and the national estimates of gross product originating (GPO) by industry are measured as the sum of the distributions by industry of the components of gross domestic income-that is, the sum of the costs incurred and incomes earned in the production of GDP. ${ }^{1}$

The GSP estimates are prepared for 63 industries (see appendix A). For each industry, gSP is presented in three components: Compensation of employees, indirect business tax and nontax liability, and "property-type income." ${ }^{2}$ The relation between these components and the components of GPO is shown in appendix B.

[^23]The estimates of GSP are prepared in current dollars (see table 6, which follows the text) and in chained (1992) dollars (see table 7). State estimates of GSP and its components for all industries are "controlled" to national totals of GPO and its components for all industries. ${ }^{3}$ The estimates of real GSP are derived by applying national implicit price deflators to the current-dollar GSP estimates for the 63 detailed industries. Then, the same chain-type index formula used in the national accounts is used to calculate the estimates of total real GSP and real GSP at a more aggregate industry level. ${ }^{4}$
Real GSP is an inflation-adjusted measure of each State's gross product that is based on national prices for the goods and services produced within that State. Real gsp may reflect a substantial volume of output that is sold to other States and countries. To the extent that a State's output is produced and sold in national markets at relatively uniform prices (or sold locally at national prices), GSP does a reasonable job of capturing the differences across States that reflect the relative differences in the mix of goods and services that the States produce. However, real GSP does not capture geographic differences in the prices of goods and services that are produced and sold locally.

[^24]growth rates shows the relative performance of particular industries or States. Comparisons can be made of the relative growth rates of real gross state product of a State's various industries or the industries' contributions to the growth rate of that State's economy as a whole. Likewise, comparing the share of total GSP in current dollars that is accounted for by the GSP of an industry over time indicates whether that industry's relative claim on the State's resources is increasing or decreasing.

## Real growth rates

The rate of growth in real GSP for the Nation in 1996-97 was 4.3 percent (table 1). ${ }^{4}$

Real GSP increased in all States except Hawaii.

By State, the growth rates ranged from an increase of 7.6 percent in Oregon to a decline of 0.2 percent in Hawaii. The five States with the fastest rates of growth in real GSP were Oregon ( 7.6 percent), New Hampshire ( 7.5 percent), Texas ( 6.8
dollars) in 1997 between gsp for the Nation and gpo, see appendix B. For a discussion of the relationship between GPO and GDP, see Lum and Moyer, "Gross Product by Industry," 20.

## Acknowledgments

The estimates of gross state product (GSP) were prepared by staff in the Regional Economic Analysis Division under the direction of John R. Kort, Chief, and George K. Downey, Chief of the Gross State Product by Industry Branch. Hugh W. Knox, Associate Director for Regional Economics, provided general guidance.

Contributing staff members were Richard M. Beemiller, Gerard P. Aman, Michael T. Wells, Clifford H. Woodruff int, John S. Barrett, Gloria I. Paniagua, and Melissa J. Pechan.
percent), Arizona (6.7 percent), and Colorado (6.5 percent) (chart 1 ).

In Oregon, the major contributor to the growth in real GSP was durable goods manufacturing, mainly electronic and other electric equipment (table 2). ${ }^{5}$ In New Hampshire, the major contributors were durable goods manufacturing, mainly electronic and other electric equipment; and finance, insurance, and real estate. In Texas, the major contributors were durable goods manufacturing and services. In Arizona, the major contributors were durable goods manufacturing, mainly electronic and other electric equipment; and services, mainly business services. In Colorado, the major contributor was services, mainly business services.

The five States with the slowest rates of growth in real Gsp were Hawaii ( -0.2 percent), Alaska (0.4 percent), North Dakota ( 0.6 percent), West Virginia ( 0.9 percent), and South Dakota (1.7 per-

[^26]
## CHART 1

Real Gross State Product: Percent Change, 1996-97

U.S. Department of Cormmerce, Bureau of Economic Analysis
cent). In Hawaii, the decline reflected declines in finance, insurance, and real estate, mainly real estate, and in construction. In Alaska, the slow growth reflected declines in government, mainly State and local government; and in mining, mainly oil and gas extraction. In North Dakota, the slow growth reflected a decline in agriculture, forestry, and fishing, mainly farms. In West Virginia, the slow growth reflected a de-
cline in nondurable goods manufacturing, mainly chemicals and allied products. In South Dakota, the slow growth reflected a decline in finance, insurance, and real estate.

## Shares of current-dollar GSP

Industry shares.-In 1996-97, the share of U.S. current-dollar GSP accounted for by private services-producing industries increased 0.5 per-

Table 2.-Contributions to Percent Change in Real Gross State Product, 1996-97

centage point, from 63.4 percent to 63.9 percent (table 3). ${ }^{6}$ The share accounted for by private goods-producing industries declined 0.2 percentage point, from 24.4 percent to 24.2 percent. ${ }^{7}$ The share accounted for by government declined 0.3 percentage point, from 12.2 percent to 11.9 percent. ${ }^{8}$

For individual States, the changes in industry shares show more variation. By State, the change in the share of the private services-producing in-
6. Private services-producing industries are defined to consist of transportation and public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and "services."
7. Private goods-producing industries are defined to consist of agriculture, forestry, and fishing; mining; construction; and manufacturing.
8. A decline in share does not necessarily indicate a decline in the level of GSP. For example, the share of government declined, but Gsp for government increased $\$ 34.8$ billion (see table 3 ).
dustries ranged from increases of more than 2.0 percentage points in Delaware, North Dakota, and Nebraska to declines of 0.7 percentage point in New Mexico and o. 6 percentage point in Oregon. In Delaware, the largest increase in share was in finance, insurance, and real estate, mainly depository institutions and holding and other investment offices; in North Dakota, the largest increase was in services, mainly business services; and in Nebraska, the largest increase was in transportation and public utilities, mainly communications. In New Mexico, the largest decline was in services, mainly "other" services. In Oregon, the largest declines were in transportation and public utilities, mainly communications; and in finance, insurance, and real estate, mainly depository institutions.

## Calculation of Industry Contributions to Changes in Real gsp

For current-dollar GSP, the sum of the component industries is equal to total GSP, so the changes in total GSP can be expressed as the sum of the changes in the component industries. This relationship can also be expressed in terms of percent changes by dividing by total GSP for year $t-1$ :

$$
100 \times \frac{G S P_{\text {Total }, t}-G S P_{\text {Total }, t-1}}{G S P_{\text {Total }, t-1}}=100 \times \sum_{i} \frac{C_{i, t}-C_{i, t-1}}{G S P_{\text {Total }, t-1}},
$$

where $G S P_{\text {Total, } t}$ is the value for total GSP in year $t$, and $C_{i, t}$ is the value of GSP for component industry $i$ in year $t$.
However, for real gSp, a modified formula is used because chained-dollar measures of gsp by industry are not necessarily additive to total GSP. Specifically, an industry's contribution to the total percent change in real GSP for years following the base year is calculated as

$$
C \% \Delta_{i, t}=100 \times \frac{\left(P_{t}^{P} p_{i, t-1}+p_{i, t}\right) \times\left(q_{i, t}-q_{i, t-1}\right)}{\left(2 \times I P D_{t}^{F} \times C D_{t-1}^{F}\right)}
$$

where $I P D_{t}^{F}$ is the implicit price deflator for total GSP in year $t$,
$C D_{t-1}^{F}$ is the chained-dollar value for total GSP in year $t-1$,
$P_{t}^{P}$ is the Paasche price index for total GSP in year $t$,
$p_{i, t}$ is the price index for industry $i$ in year $t$, and
$q_{i, t}$ is the quantity produced by industry $i$ in year $t$.
This formula can be expanded to yield

$$
C \% \Delta_{i, t}=100 \times \frac{P_{t}^{P} p_{i, t-1} q_{i, t}-P_{t}^{P} p_{i, t-1} q_{i, t-1}+p_{i, t} q_{i, t}-p_{i, t} q_{i, t-1}}{\left(2 \times I P D_{t}^{F} \times C D_{t-1}^{F}\right)} .
$$

Because the State variables that represent the composites of prices in one year and quantities in another (such as $p_{i, t-1} q_{i, t}$ ) are not directly observable, the contributions to growth are actually calculated using the following algebraically equivalent formula, which consists of combinations of prices and quantities for the same year and indexes of relative prices for years $t$ and $t-1$ :

$$
C \% \Delta_{i, t}=100 \times \frac{P_{t}^{P}\left(\frac{p_{i, t-1}}{p_{i, t}}\right) p_{i, t} q_{i, t}-P_{t}^{P} p_{i, t-1} q_{i, t-1}+p_{i, t} q_{i, t}-\left(\frac{p_{i, t}}{p_{i, t-1}}\right) p_{i, t-1} q_{i, t-1}}{\left(2 \times I P D_{t}^{F} \times C D_{t-1}^{F}\right)} .
$$

This formula changes somewhat when the contributions to growth for years preceding the base year are calculated.
For more information, see Eugene P. Seskin and Robert P. Parker, "A Guide to the nipa's," Survey 78 (March 1998): 38-39.

The changes in the share of the private goodsproducing industries ranged from an increase of 1.2 percentage points in New Mexico to declines of more than 2.0 percentage points in North Dakota, Nebraska, and Delaware. In New Mexico, the largest increase was in durable goods manufacturing, mainly electronic and other electric equipment. In North Dakota and Nebraska, the largest declines were in agriculture, forestry, and fishing, mainly farms. In Delaware, the largest decline was in nondurable goods manufacturing, mainly chemicals and allied products.

The changes in the share for government ranged from an increase of 0.4 percentage point in Hawaii to a decline of 0.7 percentage point in Virginia. In Hawaii, the increase in share was in Federal civilian and State and local government. In Virginia, the decline was in Federal civilian and Federal military government.

State shares.-Chart 2 shows the relative size of the State economies in terms of each State's share of current-dollar gsp for the Nation. The

14 States having the largest gsp accounted for nearly two-thirds of the U.S. total; the five largest States are California ( 12.7 percent), New York (8.0 percent), Texas ( 7.4 percent), Illinois (4.9 percent), and Florida ( 4.7 percent). The 21 States having the smallest GSP-mostly States in the western and in the northeastern parts of the Nation-accounted for slightly more than 10 percent of the U.S. total.

## Revisions to the Estimates

In general, the revisions to GSP as a percentage of the previously published estimates for 1995-96 are small. However, the revisions for 1996 are larger than those for 1995, mainly reflecting the incorporation of newly available source data from the Census Bureau's 1996 Annual Survey of Manufactures.

## Impact of the revisions

Current-dollar estimates.-For 1996, the five States with the largest upward percentage revisions were Oregon, Delaware, New Hampshire,

## CHART 2

Gross State Product in Current Dollars: Percentage of U.S. Total, 1997

U.S. Department of Commerce, Bureau of Economic Analysis

Hawaii, and Utah (table 4). The five States with the largest downward percentage revisions were South Dakota, Louisiana, Pennsylvania, Michigan, and Tennessee. The revisions for all these States mainly reflect the statistical changes incorporated into the current-dollar estimates of gsp for these industries: Manufacturing in all of these States except Hawaii and South Dakota; finance, insurance, and real estate in Delaware, Hawaii, South Dakota, Pennsylvania, and Michi-
gan; transportation and public utilities in Hawaii and South Dakota; retail trade in Hawaii and Utah; and services in Hawaii.

Real growth rates.-For 1995-96, the five States with the largest upward revisions to the growth rates of real gsp were Oregon, Alaska, Wyoming, North Dakota, and New Hampshire (table 5). The States with the largest downward revisions were South Dakota, Delaware, Louisiana, and

Hawaii. The revisions for all these States mainly reflect the incorporation of statistical changes into the current- dollar estimates.

## Major sources of the revisions

For the industries that had a major impact on the States with large revisions to current-dollar GSP, the sources of the revisions were either revisions to the national estimates of gro by industry or revisions to the State source data.

For manufacturing, the revisions reflect the incorporation of newly available data on value-added-in-production by State from the Census Bureau.

For the finance portion of finance, insurance, and real estate, the revisions mainly reflect the incorporation of the revised estimates of national GPO for holding and other investment offices and the incorporation of Federal Deposit Insurance Corporation data on deposits by State for depos-

itory institutions. For the real estate portion, the revisions mainly reflect the incorporation of new source data for property taxes iby Census Bureau.

For the transportation portion of transportation and public utilities, the revisions mainly reflect the incorporation of income and expense data by company for air carriers; for the public utilities portion, the revisions mainly reflect the incorporation of re-
vised State personal income estimates of proprietors' income by State for electric, gas, and sanitary services.
For retail trade, the revisions mainly reflect the incorporation of new source data for sales taxes by State. For services, the revisions mainly reflect the incorporation of the revised estimates of national gro.

Appendixes $A$ and $B$ and tables 6 and 7 follow.

## Data Availability

This article presents summary estimates of gross state product (GSP) by major industry group. The following GSP estimates for 63 industries for States, bea regions, and the United States are available from bea on the cd-rom Gross Product by Industry for the United States and States: Current-dollar estimates of gsp and its three components-compensation of employees, indirect business tax and nontax liability, and property-type income-and real GSP estimates in chain-type quantity indexes for 1977-97 and in chained (1992) dollars for 1982-97. ${ }^{1}$ The CD-ROM includes a data-retrieval program

[^27]that allows users to view or print selected records from the database and selected analytical tables and charts. Users may also export selected data to a file for importation into computer spreadsheets. To order, call the bea Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666) and specify product number MCN-0231, price $\$ 35.00$.
The gSp estimates and other regional economic information are available on BEA's Web site at <www.bea.doc.gov>. They are also available by subscription from the Commerce Department's stat-usa on the Economic Bulletin Board and the Internet; to subscribe, call 202-482-1986, or go to <www.stat-usa.gov>.
For further information, E-mail <gspread@ bea.doc.gov> or call 202-606-5340.

Appendix A.-Industries for Which Gross State Product Estimates Are Available

Nore.-The tables of gross product originating (GPO) by industry for the Nation that were published in the November 1998 SUAVEY OF CURRENT BUSINESS present estimates for all of the industries shown in this tabie except Federal civilian and Federal military. In addition, the GPO tables present estimates tor the following industries: Teiephone and telegraph; radio and television; non-

# BEA CURRENT AND HISTORICAL DATA 

## National, International, and Regional Estimates

#### Abstract

This section presents an extensive selection of economic statistics prepared by the Bureau of Economic Analysis and a much briefer selection of coilateral statistics prepared by other Government agencies and private organizations. Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights. bea makes its economic information available on three World Wide Web sites. The bea Web site <www.bea.doc.gov> contains data, articles, and news releases from BEA's national, international, and regional programs. The Federal Statistical Briefing Room (fsbr) on the White House Web site <www.whitehouse.gov/fsbr> provides summary statistics for gdp and a handful of other nipa aggregates. The Commerce Department's stat-usa Web site <www.stat-usa.gov> provides detailed databases and news releases from bea and from other Federal Government agencies by subscription; information about stat-usa's Economic Bulletin Board (ebb) and Internet services may be obtained at the Web site or by calling (202) 482-1986. The tables listed below present annual, quarterly, and monthly estimates, indicated as follows: [A] Annual estimates only; [Q] quarterly estimates only; [QA] quarterly and annual estimates; [MA] monthly and annual estimates.

## National Data

A. Selected nipa Tables: [QA]

1. National product and income D-2
2. Personal income and outlays........................D-6
3. Government receipts, current expenditures, and gross investment...............................D-7
4. Foreign transactions ..................................D-11
5. Saving and investment............................D-13
6. Income and employment by industry ........... D-16
7. Quantity and price indexes......................D-17
8. Supplemental tables..................................D-24
B. Other nipa and nipa-related tables:

Monthly estimates: [MA]
B.1. Personal income...................................D-27
B.2. Disposition of personal income .................D-27

Annual estimates: [A]
B.3. GDP by industry..................................D-28
B.4. Personal consumption expenditures by type of expenditure.........................................D-29
B.5. Private purchases of structures by type ....... D-30
B.6. Private purchases of producers' durable equipment by type ................................ D-30
B.7. Compensation and wage and salary accruals by industry...........................................D-31
B.8. Employment by industry.........................D-32
B.9. Wage and salary accruals and employment by industry per full-time equivalent..............D-33
B.10. Farm sector output, gross product, and national income ..............................D-34
B.in. Housing sector output, gross product, and national income .............................D-34
B.12. Net stock of fixed private capital, by type ... D-35
C. Historical tables: [A]
C.1. Historical estimates for major nIPA aggregates.

D-36
C.2.-C.7. Growth rates of selected components of real GDP..........................................D-39
D. Domestic perspectives [MA, QA] ...............D-41
E. Charts:

Selected nipa series....................................D-43

## International Data

F. Transactions tables:F.1. U.S. international transactions in goodsand services [MA] ................................ D-51
F.2. U.S. international transactions [QA] ..... D-52
F.3. Selected U.S. international transactions, by area [Q] ..... D-53
F.4. Private service transactions [A] ..... D-56
G. Investment tables:
G.1. International investment position of the UnitedStates [A] ........................................... D-57
G.2. usdia: Selected items [A]. ..... D-58
G.3. Selected financial and operating data for nonbankforeign affiliates of U.S. companies [A].........D-59
G.4. FDIUs: Selected items [A] ..... D-60
G.5. Selected financial and operating data of nonbankU.S. affliates of foreign companies [A].........D-61
H. International perspectives [MA, QA] ..... D-62
I. Charts D-64
Regional Data
J. State and regional tables:
J.1. Total and nonfarm personal income [QA] ....D-65
J.2. Percent of personal income for selected components [A] ..... D-66
J.3. Per capita personal income and disposable personal income [A] ..... D-67
J.4. Gross state product [A] ..... D-68
K. Local area table ..... D-69
L. Charts ..... D-71
Appendixes
Appendix A: Additional information about bea's nipa estimates:
Statistical conventions. ..... D-73
Reconciliation tables [QA] ..... D-74
Appendix B: Suggested reading ..... D-75

## National Data

## A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on May 27, 1999 and include the "preliminary" estimates for the first quarter of 1999.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most tables, the annual estimates are also shown. Most of the "annual only" NIPA tables were presented in the August 1998 Survey of Current Business; table 8.26 was presented in the September 1998 Survey; and the remaining "annual only" tables-tables 3.15-3.20 and 9.1-9.6-were presented in the October 1998 Survey.

The news release on gross domestic product (GDP) is available at the time of release, and the "Selected nIPA Tables" are available later that day, on stat-usa's Economic Bulletin Board and Internet services; for information, call stat-USA on 202-482-1986. In addition, the GDP news release is available the afternoon of the day of the release, and the "Selected nipa Tables" a day or two later, on bea's Web site <www.bea.doc.gov>.

The "Selected nipa Tables" are also available on printouts or diskettes from bea. To order nipa subscription products using Visa or MasterCard, call the bea Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666).

| Residual ................................... | -7.3 | -11:1 | -8.9 | -14.2 | -8.4 | -6.1 | -16.3 | -7. |

NOTE.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.
Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to
he percent change in real gross domestic product are shown in table 8.2 .
Chain-type quantity indexes for the series in this table appear in table 7.1

NOTE.-Chained (1992) dollar series are calculated as the product of the chain-lype quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one peniod, the corresponcing chained-dollar estimates are usually not additive. the sum of final sales of domestic product and of change in business inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of sevices,
and of structures.
Percent changes from preceding period for selected items in this table are shown in table 8.1
Chain-type quantity indexes for the series in this table appear in table 7.17.
Table 1.6.-Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers
[Billions of chained (1992) dollars]

| Gross domestic product | 7,269.8 | 7,551.9 | 7,364.6 | 7,464.7 | 7,498.6 | 7,566.5 | 7,677.7 | 7,754.7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Less: Exports of goods and services $\qquad$ | 970.0 | 984.7 | 998.8 | 991.9 | 972.1 | 965.3 | 1,009.6 | 992.0 |
| Plus: Imports of goods and services $\qquad$ | 1,106.1 | 1,222.9 | 1,147.8 | 1,190.4 | 1,217.3 | 1,224.3 | 1,259.6 | 1,302.1 |
| Equals: Gross domestic purchases | 7,396.5 | 7,765.9 | 7,502.1 | 7,644,9 | 7,718.6 | 7,798.8 | 7,901.3 | 8,028.3 |
| Less: Change in business inventories $\qquad$ | 63.2 | 57.4 | 66.5 | 91.4 | 38.2 | 55.7 | 44.2 | 39.0 |
| Equals: Final sales to domestic purchasers | 7,330.2 | 7,705.2 | 7,432.1 | 7,552.2 | 7,676.4 | 7,739.8 | 7,852.5 | 7,983.8 |

Note-Chained (1992) doilar series are calculated as the product of the chain-type quantity index and the 1992 current-dolar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one peniod, the corresponding chained-dollar estimates are usually not additive. Percent changes from preceding period for selected items in this table are shown in table 8.1.
Chain-type quantity indexes for the series in this table appear in table 7.2.
Table 1.8.-Real Gross Domestic Product by Sector [Bililions of chained (1992) dollars]

| Residual |  | -6.0 | -4. | -5.5 | -5. |  |  |  |

1. Gross domestic business product equals gross domestic product less gross product of households and institutions and of general government. Gross noniarm product equals gross domestic business product less gross farm product.
2. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.8 .
NOTE.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.
Chain-type quantity indexes for the series in this table appear in table 7.14.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

Nore. Except as noted in footnotes 1 and 2 chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chaineddollar estimates are usually not additive.
Chain-type quantity indexes tor the series in this table appear in table 7.3

Table 1.14.-National Income by Type of Income [Billions of dollars]

Table 1.16.-Gross Domestic Product of Corporate Business in Current Dollars and Gross Domestic Product of Nonfinancial Corporate Business in Current and Chained Dollars

1. Chained-dollar gross domestic product of nonfinancial corporate business equals the current-dollar product delated by the implicit price deflator for goods and structures in gross domestic product
2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chaintype quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . 3. Chained-dollar net domestic product of nonfinancial corporate business is the difference between the gross
product and the consumption of fixed capital.

NOTE--Chained (1992) dollar series are calculated as the product of the chain-type quantily index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chain-type quantity indexes for the series in this table appear in table 7.4.

Table 3.7.-Government Consumption Expenditures and Gross Investment by Type
[Billions, pf:dghlarsi]

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transierred to foreign countries by the Federal Government.
for coods and services are classified as investment in structures. The compensation of all and related expenditures for goods and services are classiif
ployees is shown in the addenda.
phoyees is shown in the addenda.
3. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general govermment fixed assets; use of depreciation assumes a zero net return on these assets.

Table 3.8.-Real Government Consumption Expenditures and Real Gross Investment by Type
[Billions of chained (1992) dollars]

Note--Chained (1992) dollar series are calculated as the product of the chain-type quantily index and the 1992 Current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-doilar estimates are usually not additive.
The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.
Chain-type quanlity indexes for the series in this table appear in table 7.11.
See footnotes to table 3.7.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods
anserred to toreign countries.
3. Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of ail general govemment employees is shown in the addendum.
4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the sevices of general government fixed assets; use of depreciation assumes a zero
net return on these assets.

NOTE.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity idexes uses weights of more than one period, the corresponoing chained-doliar estimates are usualy not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the ine in the addendum.
Chain-type indexes for the series in the table appear in table 7.12
See footnotes to table 3.10.

NOTE.-Chained (1992) dollar series are calculated as the product of the chain-lype quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity The residual line following the detail for exports is the difference between the agoregate "exports of goods and services", and the sum of the detailed lines for exports of goods and export of services. The residual line following he detail for imports is the difference between the aggregate "imports of goods and services" and the detailed nes for imports of goods and imports of services.
Chain-lype quantity indexes for the series in this table appear in table 7.10.
See footnotes to table 4.3 .

## 5. Saving and Investment

f. Includes new computers and peripheral equipment only

Note:-Chained (1992) doliar series are calcuated as the product of the chain-type quantity index and the 1992 current-dolar value of the corresponding series, divided by 700 . Because the formula tor the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.
The residual line is the difterence between the first line and the sum of the most detailed lines.
Chain-type quantity indexes for the series in this table appear in table 7.6 .

1. Beginning with 1982, this series is derived from the Census Bureau series "current cost inventories." For earlier periods, it is derived from the Census Bureau "book value inventories" series. The series difter in the treat-
ment of iiventories reported on a lastin, first-out (LLFO) basis: The series prior to 1982 is a mix of Lifo and ment of inventaries reportod on a last-in, first-out (LIFO) basis: The series prior to
non-LIFO inventories; the series beginning with 1982 is entirely on a non-LIFO basis.
non-LIFO irventiories; the series beginning with 1982 is entirely on a non-LIFO basis.
2. Beginning with 9973 , the inventory valuation adjustment (IVA) shown in this table dilfers from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (first-in, first-out; last-In, first-out; ete.) underlying inventories derived primarily from Census Bureau statistics (see foomotete 1). This mix difiers from that underlying business income derived primarily from internal Revenue Service statistics. Prior to 1973, the two IVA's 3. Pior 10 . 981 , inventories of auto and home supply stores are included in
with 1981 , these inventories are included in "other durable goods."

Note--Chained (1992) dollar series for real change in business inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at ancoresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most cetailed lines.

Table 5.12.-Inventories and Domestic Final Sales of Business by Industry Group
[Bililions of:dolatars-

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from cur-rent-dollar inventories in this table is not the curtent-dollar change in business inventories (CBI) component of GDP
The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The former is the difference between wo inventory stocks, each valued at their respective end-or-quarter prices changes calculated from this table are at quarterly rates; whereas, CBI is stated at annual rates.
2. Quarterty totals at monthty rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government and includes a small amount of final sales by farm.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods
to services.

NOTE.-See footnotes to table 4.3.

Table 7.11.-Chain-Type Quantity and Price Indexes for Government Consumption Expenditures and Gross Investment by Type
[index numbers, 1992=100]

1. Gross government investment consists of general government and government enterprise expenditures for fixed assels; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods
3. Compensation of government employees engaged in new force-account construction and related expenditures
for goods and services are classified as investment in structures. The compensation of all general government empioyees is shown in the addenda.
4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a patial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net
return on these assets.

| Residual | -. 2 | -. 4 | 0 | -. 1 | -. 7 | -. 5 | . 1 | 0 |

1. Includes new trucks only.

Nore--Chained (1992) doilar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-doliar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.
Chain-type quantity indexes for the series in this table appear in table 7.19.

## B. Other nipa and nipa-Related Tables

## Monthly Estimates:

Tables B. 1 and B. 2 include the most recent estimates of personal income and its components; these estimates were released on May 28, 1999 and include "preliminary" estimates for April 1999 and "revised" estimates for January-March 1999.

$P$ Preliminary
Revised.

1. Disposable personal income in chained (1992) dollars equals the current-dollar figure divided by the implicit
price deflator for personal consumption expenditures.

## Annual Estimates:

Except as noted, these tables are derived from the nipa tables published in the August 1998 Survey of Current Business; they are consistent with the most recent comprehensive and annual revisions.

Table B.3.-Gross Domestic Product by Industry, Current-Dollar and Real Estimates for 1995-97

| 1. The current-dollar statistical discrepancy equals gross domestic product (GDP) measured as the sum of expenditures less gross domestic income-that is, GDP measured as the costs incurred and profits earned in domestic production. The chained (1992) dollar statistical discrepancy equals the current-dollar discrepancy deflated by the implicit price deflator for gross domestic business produch. |  |  |  |  |  |  | 2. Equals GDP in chained (1992) dollars less the statistical discrepancy and the sum of GPO of the detailed industries. <br> NoTE.-Estimates are based on the 1987 Standard Industrial Classification. The table is derived from tables 10 and 13 in "Gross Product by Industry, 1995-97" in the November 1998 Surver. |  |  |  |  |  |  |

1. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and butfet cars, schools, school fratemites, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premise.
2. Includes luggage. clock, and jeweiry repairs, costume and dress suit rental, and miscellaneous personal services. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and coors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
3. Consisis of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
4. Consists of transient hotels, motels, clubs, schools, and other group housing.
5. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air conditioners, sewing machines, vacuum cleaners, and other appliances.
6. Includes such house furnishings as floor coverings, comforters, quilts, biankets, pillows, picture frames, mirrors, art products, portable lamps, and clocks. Also indudes writing equipment and hand, power, and garden tools.
includensists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes lamp shades, brooms, and brushes.
postage and express charges, premiums for appliances and house furnishings, moving and warehouse expenses, dends, and miscellaneous household operation services.
7. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
viding hensists of osteopathic physicians, chiropractors, private duly nurses, chiropodists, podiatrists, and others pro13. Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitais and nursing homes.
8. Consists of (1) premiums, less benefits and dividends, for health, hospitalization, and aocidental death and dismemberment insurance provided by commercial insurance cariers, and (2) administrative expenses (including consumption of fixed capital) of nonprofit and self-insured health plans.
9. Consists of premiums, less benefits and dividends, for income loss insurance.
10. Consists of premiums, less benefits and dividends, for privately administered workers' compensation.
premiums, tess benerits and dividends, of fraternal benefit socrieties. Excludes expenses allocated by commercial carriers to accident and health insurance.
11. Consists of current expenditures (including consumption of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation
services, and other personal business services.
12. Consists of premiums, less benefits and dividends, for motor vehicle insurance.
13. Consists of baggage charges, coastal and inland watenway fares, travel agents' fees, and aipport bus fares. athletic events and to racetracks.
14. Consists of dues and fees excluding insurance premiums.
15. Consists of billiard pariors; bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; sightseeing buses and guides; private flying operations; casino gambling; and other
16. Consists of net receipts of lotteries and expenditures for purchases of pets and pet care services, cable TV, film processing, photographic studios, sporting and recreation camps, video cassette rentals, and recreational services, not elsewhere classified.
17. For private institutions, equals current expenditures (including consumption of fixed capital) less receiptssuch as those from meals, rooms, and entertainments-accounted for separately in consumer expenditures, and less expendiures for research and development financed under contracts or grants. For govemment institutions, equals student payments of tution.
18. For private institutions, equals current expenditures (including consumption of fixed capital) less receiptssuch as those from meals, rooms, and entertainments-accounted for separately in consumer expenditures. For government institutions, equals student payments of tuition. Exciudes child day care services, which are inciuded in
religious and welare activities. services, not elsewhere classified, and (2) current expenditures (Including consumption of fixed capital) by research organizations and foundations for education and research.
19. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious, social weilare, loreign reief, and polical organizations, museums, libraries, and toundaiions. The expenditures are penditures, and excludes relief payments within the United States and expenditures by foundations for education and research. For proprietary and govemment institutions, equals receipts from users.
20. Beginning with 1981, includes U.S. students' expenditures abroad; these expenditures were $\$ 0.3$ billion in
21. Beginning with 1981, includes nonresidents' student and medical care expenditures in the United States; student expenditures were $\$ 2.2$ billion and medical expenditures were $\$ 0.4$ bilion in 1981.
Note.-Consumer durable goods are designated (d.), nondurable goods (n.d.), and services (s.)
Chained (1992) dollar series are calculated as the product of the chain-type quantiby index and the 1992 currentdoilar value of the corresponding series, divided by 100. Because the iormula tor the chain-type quantity indexes
uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

| Equals: Private purchases of new equipment | 569.8 | 615.2 | 666.0 |  |  |  |

1. Includes new computers and peripheral equipment only.

NOTE.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-doilar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.
n.e.c. Not elsewhere classified.

Table B.7.-Compensation and Wage and Salary Accruals by Industry
[Millions of dollars]

1. Consists of museums, botanical and 200logical gardens; engineering and management services; and services, not elsewhere classified.
2. Beginning with 1993, includes estimates of foreign professional workers and undocumented Mexican migratory
workers employed temporarily in the United States.
NOTE-Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).
Compensation equals wage and salary accruals plus supplements to wages and salaries. "Supplements" are listed

Nore--Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula tor the chain-type quantity indexes uses weights of more than one period, the corresponding chained-doliar estimates are usually not addiive. CCACj Capial consumpion adjusimen

1. Equals personal consumption expenditures for housing less expenditures for other housing as shown in table

NOTE--Chained (1992) dollar series are calculated as the product of the chain-ype quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. IVA Captar consumpion adjustment

Table B.12.-Net Stock of Fixed Private Capital, by Type
[Yearend estimates]

## C. Historical Tables

The tables in this section are derived from the "Summary National Income and Product Series" tables that were published in the August 1998 issue of the Survey of Current Business and from the "Selected nipa Tables" that are published in this issue. (Changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1.-Historical Measures of Real Gross Domestic Product, Real Gross National Product, and Real Gross Domestic Purchases
[Quartery estimates are seasonally adjusted at annual rates]

| Year and quarter | Billions of chained (1992) dollars |  |  | Percent change from precedingperiod |  | Chain-lype price indexes |  | Implicit price deflators |  | Percent change from preceding period |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  | Chain-ype | price index | Implicit price | deflators |
|  | Gross domestic prociuct | $\begin{gathered} \text { Final sales of } \\ \text { domestic } \\ \text { product } \end{gathered}$ | Gross national product product | Gross domestic product | Final sales of domestic product | Gross domestic product | Gross domestic purchases | Gross domestic product | Gross national product product | Gross domestic product | Gross domestic purchases purchases | Gross domestic product product | Gross national product product |

## F. Transactions Tables

Table F. 1 includes the most recent estimates of U.S. international trade in goods and services; the estimates were released on May 20, 1999 and include "preliminary" estimates for March 1999 and "revised" estimates for February 1999. The sources for the other tables in this section are as noted.

$p$ Preliminary.

1. Credits, + : Exports of goods, services, and income; unilateral transfers to United States; capital infiows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets; increase in toreign official assets in the United States.
Debits, -: Imports of goods, services, and income; unilateral transfers to foreigners; capital outilows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets; decrease in toreign offical assets in the United States.
2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2 in "U.S. International Transactions, Fourth Quarter and Year 1998" in the April 1999 SURVE
3. Includes some goods: Mainly military equipment in line 4; major equipment, other materials, supplies, and petroleum products purchased abroad
4. Includes transiers of goods and sevvices under U.S. military grant programs.
5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts
6. Beginning in 1982 , the "other transfers" component includes taxes paid by U.S. private residents to foreign
ion governments and taxes paid by private nonresidents to the U.S. Government.
7. For all areas, amounts outstanding December 31, 1998 , were as follows in millions of dollars: Line 34, 81,761; line $35,11,046$; line $36,10,603$; line $37,24,111$; line $38,36,001$. Data are preliminary.

Table F.3.-U.S. International Transactions, by Area
[Millions of dollars]

## 8. Incuudes sales of foreign obigations to foreigners.

9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible

10 . Consists of U.S. Treasury and Export-import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
11. Includes, primarily, U.S. Government: liabilities associated with military agency sales contracts and other transactions arranged with or through torieign official agencies; see table 4 in "U.S. Intemational Transactions, Fourth Quarter and Year $1998{ }^{\prime \prime}$ in the April 1999 issue of the SUPVEY.
12 . Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State
and local governments.

[^35]5. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.
6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of sevices. 7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.
NoTE.-The data in this table are from table 1 in "International Investment Position of the United States in 1997" in the July 1998 issue of the Surver.

1. Percent changes are expressed al quarterly rates.
NOTE.-The personal income level shown for the
differs from the estimate of personal income in the national income and product accounts (NPA's) because of
differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal
civilian and military personnel stationed abroad and of U.S. residents employed abroad temporatily by private U.S.
Source: Table 3 in "Personal Income and Per Capita Personal Income by State and Region, 1998" in the May igg9 issue of the Survey of Current business.

| Note.-The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by defini- <br> tion, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. <br> Source: Tables 1 and 2 in "Personal Income and Per Capita Personal Income by State and Region, 1998" in the May 1999 issue of the Surver. |  |  |  |  |  |  |  |  |  |  |

1. Per capita personal income and per capita disposable personal income were computed using midyear population estimates from the Bureau of the Census.
NOTE.-The personal income level shown tor the United States is derived as the sum of the
State estimates. It differs from the national income and product accounts (NIPA's) because of state estimates. It ciifers from the national income and product accounts (NiPA's) because of
differences in coverage, in the methodologies used to prepare the estimates, and in the timing
of the availability of source data. In particular, it differs from the NIPA estimate because, by detinicion, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents empioyed abroad temporarily by private U.S. firms.
Source: Tables 1 and 2 in "Personal Income and Per Capita Personal Income by State and
Region, 1998 " in the May 1999 issue of the SuRVEY. Region, 1998 " in the May 1999 issue of the SURVEY.

Table J.4.-Gross State Product for States and Regions by Industry, 1997

| State and region | Rank of total gross state product | Total gross state product | Agricuture, forestry, and fishing | Mining | Construction | Manufacturing | Transportation and public utilities | Wholesale trade | Retail trade | Finance, insurance, and real estate | Services | Government |

1. Per capita personal income was computed using Census Bureau midyear population estimates. Estimates for
1995-97 reflect county population estimates available as of March 1999 . 1995-97 reflect county population estimates available as of March 1999.
2. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the national income and product accounts (NiPA's) because of difierences in coverage, in the methodolo-
gies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from
the NIPA estimate because, by definition, it omits the earnings of Federal civilan and miliary personnel stationed
abroad and of U.S. residents employed abroad temporarily by private U.S. firms.
3. Includes Metropolitan Statistical Areas, Primary Metropolitan Statistical Areas (PMSA's designated by *), and New England County Metropoitan Areas (NECMA's). The New Haven-Bridgeport-Stamford-Danbury-Waterbury, CT Source: Table 1 in "local Ara Peral Income 1982-97" BUSINESS.

## Appendix A

## Additional Information About bea's nipa Estimates

## Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. (Similar formulas are used to calculate the quarterly indexes for the most recent quarters, called the "tail" period, and for the indexes for the other quarters, called the "historical period.") For example, the 1996-97 annual percent change in real GDP uses prices for 1996 and 1997 as weights, and the 1996-97 annual percent change in price uses quantities for 1996 and 1997 as weights. These annual changes are "chained" (multiplied) together to form time series of quantity and price. Because the Fisher formula allows for the effects of changes in relative prices and in the compostion of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. The Fisher formula also produces changes in quantites and prices that are not affected by the choice of base periods. In addition, because the changes in quantities and prices calculated in this way are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.
In addition, bea prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1992) dollar estimates." These estimates are computed by multiplying the 1992 currentdollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled $\$ 100$ in 1992 and if real output for this component increased by 10 percent in 1993, then the "chained (1992) dollar" value of this component in 1993 would be $\$ 110$ ( $\$ 100$ $\times 1.10$ ). Note that percentage changes in the chained
(1992) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1992) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A "residual" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. NIPA table 8.2 provides accurate measures of the contributions of the major components to the percentage change in real GDP for all periods.
bea also publishes the "implicit price deflator" (IPD), which is calculated as the ratio of currentdollar value to the corresponding chained-dollar value, multiplied by 100; the values of the IPD and of the corresponding "chain-type" price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths-for example, quarters and years-may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these changes requires a variant of the compound interest formula:

$$
r=\left[\left(\frac{X_{t}}{X_{o}}\right)^{m / n}-1\right] \times 100
$$

where $r$ is the percent change at an annual rate; $X_{t}$ is the level of activity in the later period; $X_{o}$ is the level of activity in the earlier period; $m$ is the yearly periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and
$n$ is the number of periods between the earlier and later periods (that is, $t-o$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year-for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

## Reconciliation Tables

Table 1.-Reconciliation of Changes in BEA-Derived Compensation Per Hour with BLS Average Hourly Earnings [Percent change from preceding period]

|  | 1997 | 1998 | Seasonally adjusted at annual rates |  |  |  |  |  |

| Equals: BLS average hourly earnings of production or nonsupervisory workers on private nonfarm payrolls | 3.9 | 4.1 | 4.6 | 3.9 | 4.6 | 3.4 | 3.3 | 3.5 |
| Addendum: <br> BLS estimates of compensation per hour in the nonfarm business sector ${ }^{3}$ $\qquad$ | 3.5 | 4.2 | 4.9 | 4.7 | 4.1 | 3.9 | 4.0 | 4.3 |

$p$ Preliminary

1. Includes BLS data on compensation and hours of nonfarm proprietors and hours worked of unpaid family workers.
2. Includes BEA use of non-BLS data and differences in detaited weighting. Annual estimates also include differences in BEA and BLS benchmark procedures; quarterly estimates also include
difterences in seasonal adjustment procedures.
3. These estimates difter from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing.

BLS Bureau of Labor Statistics

# Appendix B <br> Suggested Reading 

## Mid-Decade Strategic Plan

bea has published the following articles in the Survey of Current Business on the development and implementation of its strategic plan for improving the accuracy, reliability, and relevance of the national, regional, and international accounts.
"Mid-Decade Strategic Review of bea's Economic
Accounts: Maintaining and Improving Their
Performance" (February 1995)
"Mid-Decade Strategic Review of bea's Economic Accounts: An Update" (April 1995)
"bea's Mid-Decade Strategic Plan: A Progress Report" (June 1996)
Mid-Decade Strategic Review of bea's Economic Accounts: Background Papers (1995) presents seven background papers that evaluate the state of the U.S. economic accounts and that identify the problems and the prospects for improving the accounts.

## Methodology

bea has published a wealth of information about the methodology used to prepare its national, regional, and international estimates.

## National

National income and product accounts (NIPA's)
nIPA Methodology Papers: This series documents the conceptual framework of the NIPA's and the methodology used to prepare the estimates.

An Introduction to National Economic Accounting (nipa Methodology Paper No. 1, 1985) [Also appeared in the March 1985 issue of the Surver] Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (nipa Methodology Paper No. 2, 1985)
Foreign Transactions (nipa Methodology Paper No. 3, 1987) [Revised version forthcoming]
gnp: An Overview of Source Data and Estimating Methods (nipa Methodology Paper No. 4, 1987)
[Largely superseded by "A Guide to the nipa's" (March 1998 Survey)]
Government Transactions (nIPA Methodology Paper No. 5, 1988)
Personal Consumption Expenditures (nipa Methodology Paper No. 6, 1990)
The methodologies described in these papers are subject to periodic improvements that are typically introduced as part of the annual and comprehensive revisions of the nIPA's; these improvements are
described in the Survey articles that cover these revisions.
"Annual Revision of the U.S. National Income and Product Accounts": This series of Survey articles, the latest of which was published in the August 1998 issue, describes the annual NIPA revisions and the improvements in methodology.
"Completion of the Comprehensive Revision of the National Income and Product Accounts, 1929-96" (May 1997) is the last in a series of Surver articles that describe the most recent comprehensive revision of the nipa's.
"A Guide to the Nipa's" (March 1998 Survey) provides the definitions of the major nIPA aggregates and components; discusses the measures of real output and prices; explains how production is classified and how the NIPA's are presented; describes the statistical conventions that are used; and lists the principal source data and methods used to prepare the estimates of gross domestic product (GDP).
Information on the sources and methods used to prepare the national estimates of personal income, which provide the basis for the State estimates of personal income, can be found in State Personal Income, 1929-93 (1995).
"Gross Domestic Product as a Measure of U.S. Production" (August 1991 Survey) briefly explains the difference between GDP and gross national product.
"bea's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" (May 1997) is the most recent in a series of Surver articles that describe the conceptual basis for the chain-type measures of real output and prices used in the NIPA's.
"Reliability of the Quarterly and Annual Estimates of GDP and Gross Domestic Income" (December 1998 Surver) evaluates the reliability of these estimates by examining the record of revisions to them.

## Availability

Most of the items listed here are available on bea's Web site at <www.bea.doc.gov>. In addition, see the bea Catalog of Products for the availability of printed publications. The Catalog is available on bea's Web site; a printed copy can be obtained by writing to the Public Information Office, be-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230, or by calling 202-606-9900.

## Wealth and related estimates

"Improved Estimates of Fixed Reproducible Tangible Wealth, 1929-95" (May 1997 SURVEY) describes the most recent comprehensive revision of the estimates of fixed reproducible tangible wealth.

## Gross product by industry

"Improved Estimates of Gross Product by Industry, 1959-94" (August 1996 Survey) describes the most recent comprehensive revision of the estimates of gross product by industry.
"Gross Product by Industry, 1947-96" (November 1997 Survey) and "Gross Product by Industry, 1995-97" (November 1998 Survey) present the most recent revisions to the estimates of gross product by industry and briefly describe changes in methodology.

## Input-output accounts

"Benchmark Input-Output Accounts for the U.S. Economy, 1992" (November 1997 SURVey) describes the preparation of the 1992 input-output accounts and the concepts and methods underlying the U.S. input-output accounts.

## Satellite accounts

Satellite accounts that extend the analytical capacity of the national accounts by focusing on a particular aspect of activity are presented in the following Survey articles.
"Integrated Economic and Environmental Satellite Accounts" and "Accounting for Mineral Resources: Issues and bea's Initial Estimates" (April 1994)
"A Satellite Account for Research and Development" (November 1994)
"U.S. Transportation Satellite Accounts for 1992" (April 1998)
"U.S. Travel and Tourism Satellite Accounts for 1992" (July 1998)

## International

## Balance of payments accounts (bPA's)

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used in preparing the estimates in the bpa's and of the international investment position of the United States. These methodologies are subject to periodic improvements that are typically introduced as part of the annual revisions of the bPA's.
"U.S. International Transactions, Revised Estimates": This series of Survey articles, the latest of which was published in the July 1998 issue, describes the annual bPA revisions and the improvements in methodology.

## Direct investment

International Direct Investment: Studies by the Bureau of Economic Analysis (1999) presents a collection of previously published studies on U.S. direct investment abroad and foreign direct investment in the United States. In addition, it includes the following guides to bea's statistics and methodologies used to prepare the estimates.
"Methodology for U.S. Direct Investment Abroad"
(U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results (1998))
"A Guide to bea Statistics on U.S. Multinational Companies" (March 1995 Survey)
"Methodology for Foreign Direct Investment in the United States" (Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final Results (1995))
"A Guide to bea Statistics on Foreign Direct Investment in the United States" (February 1990 Survey)

## Surveys of international services

U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) provides information on the 11 surveys that bea conducts on these transactionsincluding classifications, definitions, release schedules, and methods used to prepare the estimates-and samples of the survey forms.

## Regional

## Personal income

State Personal Income, 1929-93 (1995) includes a description of the methodology used to prepare the estimates of State personal income. [Also available on the CD-ROM State Personal Income, 1929-97]

Local Area Personal Income, 1969-92 (1994) includes a description of the methodology used to prepare the estimates of local area personal income. [Also available on the CD-ROM Regional Economic Information System, 1969-97]

## Gross state product

"Comprehensive Revision of Gross State Product by Industry, 1977-94" (June 1997 Survey) summarizes the sources and methods for bea's estimates of gross state product.
"Gross State Product by Industry, 1977-96" (June 1998 Survey) and "Gross State Product by Industry, 1995-97" (June 1999 Survey) present the most recent revisions to the estimates of gross state product by industry and briefly describe changes in methodology.

Estimates and related information are available in news releases and publications and on diskettes, CD-ROM's, and the BEA. Web site. Our online Catalog of Products provides product descriptions and includes links to compressed files of our diskette products that can be downloaded for free.

Our most recent Web site postings and statistical products are listed below.

#### Abstract

U.S. Business Enterprises Acquired or Established by Foreign Direct Investors, 1992-98 (Diskette, IDN-0235, \$20.00) Presents the results of BEA's annual survey of new foreign direct investment in the United States. Gross Product by Industry for the United States and States (CD-ROM, MCN-0231, \$35.00) Contains nominal and real estimates of gross product originating for 1947-97 for the United States and of gross state product for each State for 1977-97. Regional Economic Information System (REIS) 1969-97 (CD-ROM, RCN-0230, \$35.00) Contains annual estimates of personal income and employment for all counties, metropolitan areas, States, and regions.

Fixed Reproducible Tangible Wealth of the United States, 1925-97 (CD-ROM, NCN-0229, \$35.00) Contains summary estimates of net stocks, depreciation, investment, and average age and detailed estimates by industry and type of equipment or structure in spreadsheet format.
National Income and Product Accounts, 1929-97 (CD-ROM, NCN -0198, \$35.00)
Contains the complete set of NIPA tables and the four summary tables of the most frequently used series in spreadsheet format.
U.S. International Transactions, Fourth Quarter and Year 1998 (Diskette, IDN-0228, \$20.00) Contains the latest annual and quarterly estimates of U.S. international transactions on a balance of payments basis.

To order, call the BEA Order Desk at 1-800-704-0415 (outside of the United States, 202-606-9666).

## Publications

## International Direct Investment: Studies by the Bureau of Economic Analysis

Presents a collection of studies on multinational companies, the guides to BEA's statistics, and the methodologies used to prepare the estimates. Stock no. 003-010-00278-6, \$24.00.
U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates Two publications: Revised 1995 Estimates, stock no. 003-010-00276-0, \$11.00; Preliminary 1996 Estimates, stock no. 003-010-00277-8, \$11.00.

## Benchmark Input-Output Accounts of the United States, 1992

Presents the summary and detailed make and use tables for industries and commodities and the total output multipliers for 1992 for the U.S. economy. Stock no. 003-010-00275-1, \$28.00.
Foreign Direct Investment in the United States: Operations of U:S. Affiliates of Foreign Companies Two publications: Revised 1995 Estimates, stock no. 003-010-00274-3, \$9.50; Revised 1996 Estimates, stock no. 003-010-00279-4 (call for the price).

To order, call the U.S. Government Printing Office (GPO) at 202-512-1800, or visit GPO's Web site at www.gpo.gov.

|  |  |

[^0]:    2. Final sales of domestic product is calculated as GDP less change in business inventories.
[^1]:    3. Gross domestic purchases-a measure of purchases by U.S. residents regardless of where the purchased goods and services were produced-is calculated as GDP less exports of goods and services plus imports of goods and services.
[^2]:    dollar levels and residuals are in NIPA tables 2.3, 8.5 (autos), and 8.7 (trucks). Percent change
    in major aggregates are in NIPA table 8.1.

[^3]:    4. "Other" nondurable goods includes tobacco, toilet articles, stationery and writing supplies, toys, film, flowers, cleaning preparations and paper products, and magazines and newspapers.
    5. "Other" services includes personal care, personal business, recreational, education and research, religious and welfare activities, and net foreign travel.
[^4]:    6. Consumer electronics includes goods such as computers; televisions; video and audio equipment; records, tapes, and disks; and musical instruments.
    7. "Other" durable goods includes jewelry and watches, ophthalmic products and orthopedic equipment, books and maps, bicycles and motorcycles, guns and sporting equipment, photographic equipment, boats, and pleasure aircraft.
[^5]:    8. "Other" pDe includes construction and agricultural equipment, mining and oilfield equipment, electrical equipment not included in other categories, furniture and fixtures, and service industry machinery.
[^6]:    9. "Other" structures includes streets, dams and reservoirs, sewer and water facilities, parks, airfields, brokerage commissions on the sale of structures, and net purchases of used structures.
    10. "Other" residential investment includes investment such as home improvements, new mobile home sales, brokers' commissions on home sales, residential equipment, net purchases of used structures, and other residential structures (which consists primarily of dormitories and fraternity and sorority houses).
[^7]:    13. The use of the ratio that includes all final sales of domestic businesses in the denominator implies that the production of services results in a demand for inventories that is similar to that generated in the production of goods and structures. In contrast, the use of the "goods and structures" ratio implies that the production of services does not generate demand for inventories. Both implications are extreme. The production of some services (for example, utilities and transportation) may require substantial inventories, while the production of others (such as legal and counseling services) may not.
[^8]:    16. Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.
    17. Domestic industry profits are estimated as the sum of corporate profits before tax and the inventory valuation adjustment; they are shown in NIPA table 6.16 C (on page D-16 of this issue). Estimates of the capital consumption adjustment do not exist at a detailed industry level; they are available only for total financial and total nonfinancial industries.
    18. The inventory valuation adjustment removes inventory profits and losses from business income; as prices change, companies that value inventory withdrawals at original acquisition (historical) costs may realize inventory profits or losses. Inventory profits-a capital-gains-like element in profitsresult from an increase in inventory prices, and inventory losses-a capital-loss-like element in profits-result from a decrease in inventory prices. In the nIPA's, inventory profits or losses are removed from business incomes by the inventory valuation adjustment (iva); a negative iva removes inventory profits, and a positive iva removes inventory losses.

    The capital consumption adjustment converts depreciation that is valued at historical cost and that is based on service lives and on the depreciation patterns specified in the tax code to depreciation that is valued at replacement cost and that is based on empirical evidence on the prices of used equipment and structures in resale markets. For information on depreciation in the nipa's, see Arnold J. Katz and Shelby W. Herman, "Improved Estimates of Fixed Reproducible Tangible Wealth, 1929-95," Survey 77 (May 1997): 69-92 and Barbara M. Fraumeni, "The Measurement of Depreciation in the U.S. National Income and Product Accounts," Survey 77 (July 1997): 7-23.

[^9]:    19. Net saving equals gross saving less consumption of fixed capital (crc); the estimates of government gross saving, CFC, and net saving are shown in NIPA table 5.1.
    20. The nipa estimates for the government sector are based on financial statements for the Federal Government and for State and local governments, but they differ from them in several respects. For the major differences, see NIPA tables 3.18 B on page 10 and 3.19 on page 11 of the October 1998 SUrvey.
[^10]:    21. For information on the definition of current expenditures and other major nIPA components, see Eugene P. Seskin and Robert P. Parker, "A Guide to the nipa's," SURVEY 78 (March 1998): 26-36.
    22. This discussion of consumption expenditures covers the current-dollar estimates; the earlier discussion of consumption expenditures and gross investment covered the chained (1992) dollar estimates.
[^11]:    23. Sales except those by government enterprises for goods and services that are similar to those provided by the private sector are subtracted in the calculation of government consumption expenditures.
[^12]:    24. For more information, see the box "State Tobacco Settlements" on page 12 in the April 1999 Survey.
[^13]:    1. Corporate profits and net interest are based on tabulations of "company" data rather than "establishment" data. As a result, property income for domestic nonfinancial corporations may include income earned by financial
[^14]:    2. See William C. Brainard and James Tobin, "Pitfalls in Financial Model Building," American Economic Review 58 (May 1968): 99-122. For additional references, see footnote 13 on page 10 of the June 1998 Survey.
    3. Financial assets and liabilities mentioned in this paragraph are available from the Federal Reserve Board, Flow of Funds Accounts of the United States, Federal Reserve Statistical Release z.l (Washington, Dc: Board of Governors of the Federal Reserve System).
[^15]:    4. Some data are available to shed light on the difference between historic values and market values of corporate bonds. According to the Merril Lynch Bond Indices: December 1998 Results 20 (January 19, 1999), the market value of investment grade domestic corporate bonds at the end of 1998 was approximately 8 percent higher than par value.
    5. For example, a variant incorporating a rough adjustment to convert corporate bonds to market valuation has very little effect on either the shape or the level of the ratios.
[^16]:    1. The estimates of outlays for 1998 are preliminary. The 1997 estimate of total outlays has been revised down 2 percent from the preliminary estimate published last year. For the preliminary 1997 estimates, see Mahnaz Fahim-Nader and William J. Zeile, "Foreign Direct Investment in the United States: New Investment in 1997 and Affiliate Operations in 1996," Survey of Current business 78 (June 1998): $39-67$
    2. The data on overall merger and acquisition activity in the United States in 1998 were reported by the Securities Data Company in a news release on January 6, 1999.
[^17]:    Preliminary
    $r$ Revised.

[^18]:    4. The ubo is that person, proceeding up a U.S. affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. The foreign parent is the first foreign person in the affiliate's ownership chain. Unlike the foreign parent, the ubo of an affiliate may be located in the United States. The ubo of each U.S. affiliate is identified to ascertain the person that ultimately owns or controls the U.S. affliate and that therefore ultimately derives the benefits from ownership or control.
[^19]:    D Suppressed to avoid disclosure of data of individual companies
    p Preliminary
    r Revised.

[^20]:    5. In addition to outlays from foreign parents to acquire or establish U.S affiliates, net capital inflows for forus include foreign parents' financing of their existing U.S. affiliates. In 1998, net inflows increased $\$ 102.8$ billion, to $\$ 196.2$ billion. Of the components of total capital inflows-equity capital, reinvested earnings, and intercompany debt-changes in equity capital inflows tend to most closely reflect the changes in new foreign investment, and in 1998, these inflows, net, increased $\$ 110.3$ billion, to $\$ 156.8$ billion. Because some of the largest investments in 1998 were structured as exchanges of stock, the net inflows for fdius were-as discussed earlier-largely offset in the U.S. balance of payments by capital outflows that reflected the increase in U.S. ownership of foreign securities. These preliminary estimates of inflows were
[^21]:    1. For the previously published estimates of GSP, see Richard M. Beemiller and George K. Downey, "Gross State Product by Industry, 1977-96," Survey of Current Business 78 (June 1998): 15-37.
    2. See Sherlene K.S. Lum and Brian C. Moyer, "Gross Product by Industry, 1995-97," Survey 78 (November 1998): 20-40.
    3. See Wallace K. Bailey, "State Personal Income, Revised Estimates for 1982-97" Survey 78 (October 1998): 20-41; and Eugene P. Seskin, "Annual
[^22]:    Revision of the National Income and Product Accounts," Survey 78 (August 1998): 7-35.

[^23]:    1. The difference between GDP and gross domestic income is the statistical discrepancy. In the national estimates of gro by industry, the statistical discrepancy is not allocated by industry. In the GSP estimates, insufficient information is available for allocating the statistical discrepancy to States. For more information on the statistical discrepancy, see Robert P. Parker and Eugene P. Seskin, "Annual Revision of the National Income and Product Accounts," Survey 77 (August 1997): 19.
    2. Property-type income is the sum of corporate profits, proprietors' income, rental income of persons, net interest, capital consumption allowances, business transfer payments, and the current surplus of government enterprises less subsidies. Property-type income at both the national and State levels includes proprietors' income as a capital share of production; however, some portion of proprietors' income represents the labor share of production.
[^24]:    3. If the initial sum of the State estimates differs from the national total for an industry, the difference between the national total and the sum-of-State total is allocated to the States according to the State distribution of the initial estimates.
    4. For additional information, see J. Steven Landefeld and Robert P. Parker, "bea's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth," Survey 77 (May 1997): 58-68; and Howard L. Friedenberg and Richard M. Beemiller, "Comprehensive Revision of Gross State Product by Industry, 1977-94", Survey 77 (June 1997): 28-29.
[^25]:    4. The rate of growth in real GDP-BEA's featured measure of the Nation's output-was 3.9 percent in 1996-97. GSP for the Nation differs from GDP for three reasons. First, gsp, like GPO, is derived from gross domestic income (GDI), which differs from GDP by the statistical discrepancy. Second, GSP excludes, and GDP and GPO include, the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equipment, except domestically located office equipment. Third, GSP and GDP often have different revision schedules. For an accounting of the differences (in current
[^26]:    5. In table 2, an exact formula for attributing GSP growth to the industries is used, so these estimates provide accurate measures of the contributions of the industries to the percentage change in real Gsp for 1996-97. See the box "Calculation of Industry Contributions to Changes in Real GSP," and Lum and Moyer, "Gross Product by Industry," 24-25.
[^27]:    1. The following measures for the United States are also available on the CD-ROM: Gross product by industry for 1947-97, detailed gross output for 1977-97, value of manufacturing product shipments for 1977-96, value of manufacturing industry shipments for 1977-97, and detailed indirect business taxes for 1978-97.
[^28]:    prises; State and local general government; and State and local government enterprises. SIC Standard Industrial Classification. See Executive Office of the President, Office of Management and Budget, Standard Indusirial Classification Manual 1987 (Washington, DC: U.S. Gov-
    ernment Printing Office, 1987).

[^29]:    1. Exports and imports of certain goods, primarily military equipment purchased and soid by the Federal Government, are included in sevices. Beginning with 1986, repairs and atterations of equipment are reclassified from goods
    to services.
[^30]:    CCAdj Capital consumption adjustment
    IVA Inventory valuation adjustment

[^31]:    1. Equals the number of ful-time equivalent employees plus the number of sefl-employed persons. Unpaid family workers are not included.
    not elsewhere classified.
    2. Indudes Coast Guard.
    3. Beginning with 1993, includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

    NOTE.-Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

[^32]:    1. Fult-ime equivaient employees equals the number of employees on fulli-time schedules plus the number of employees on part-lime schedules converted to a for all employees to average weekly hours per employee on fulltime schedules.
    2. Consists of museums, botanical and zoological gardens; engineering and management services; and services,
    not elsewhere classified.
    3. Includes Coast Guard
    4. Includes Coast Guard, includes estimates of foreign protessional workers and undocumented Mexican migratory workers employed temporarily in the United States.
    NOTE.-Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).
[^33]:    1. Consists of office buibings, except those occupied by eleetric and gas utility companies.
    2. Consists primarily of stores, restaurants, garages, service stations, warehouses, and other buildings used for
    3. Consists of buildin
    4. Consists of buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.
    5. Consists primarily of streets, dams, reservoirs, sewer and water facilities, parks, and airfields.
    . Consists primarily of dormitories and fraternity and sorority houses.
[^34]:    U.S. Department of Commerce, Bureau of Economic Analysis

[^35]:    ${ }^{p}$ Preliminary.

    1. Represents gains or losses on foreign-eurrency-denominated assets due to their revaluation at current exchange rates.
    2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets.
    3. Reflects changes in the value of the official gold stock due to fiuctuations in the market price of gold.
    4. Rellects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reffects replenishment through open market purchases. These domonetizations/monetizations are not included in international transactions capital flows.
[^36]:    18. 

    NoTE.-U.S. interest rates, unemployment rates, and GDP growth rates are from the Federal Reserve, the Bureau of Labor Statistics, and BEA, respectively. All other data (inciuding U.S. consumer prices and U.S. share prices,

[^37]:    See lootnotes at the end of the table.
