## Special in this issue

33 Annual Revision of the U.S. International Accounts, 1993-2001
Each year, the estimates in the U.S. international transactions accounts and the U.S. international investment position accounts are revised to incorporate statistical and methodological changes and regularly available source data. The year's annual revision featured the incorporation of results from the March 2000 U.S. Treasury Department's Benchmark Survey of Foreign Portfolio Investment in the United States. The incorporation of these results led to substantial downward revisions to the estimates of foreign holdings of U.S. securities for 1995-2000 in the U.S. international investment position accounts. It also led to substantial downward revisions to the related income payments and net financial inflows for foreign-owned assets in the United States for 1995-2001 in the U.S. international transactions accounts. In addition, receipts and payments for "other" private services are revised to incorporate results from BEA's Benchmark Survey of Selected Services for 2001.

## Regular features

1 Business Situation: Final Estimates for the First Quarter of 2002
Real GDP increased 6.1 percent in the first quarter of 2002, up from a 1.7 -percent increase in the fourth quarter of 2001. The "preliminary" estimate for the first quarter issued last month had shown a 5.6 -percent increase. A downward revision to imports (which are subtracted in the calculation of GDP) and an upward revision to nonresidential investment in equipment and software more than offset a downward revision to exports. Corporate profits increased $\$ 5.8$ billion ( 0.7 percent at a quarterly rate) in the first quarter after increasing $\$ 125.0$ billion ( 17.9 percent) in the fourth.

## 10 The International Investment Position of the United States at Yearend 2001

In 2001, the net international investment position of the United States became more negative, whether measured on a current-cost basis or on a market-value basis. The net position at current cost was $-\$ 1,948.1$ billion at yearend 2001, compared with $-\$ 1,350.8$ billion (revised) at yearend 2000. The net position for yearend 2000 was revised from the previously published estimate of $-\$ 1,842.7$ billion, primarily reflecting the incorporation of results from the March 2000 U.S. Treasury Department's Benchmark Survey of Foreign Portfolio Investment in the United States as part of the annual revision of the U.S. international accounts.

## 21 Direct Investment Positions for 2001: Country and Industry Detail

In 2001, growth slowed in the historical-cost positions of U.S. direct investment abroad (USDIA) and of foreign direct investment in the United States (FDIUS), reflecting slowdowns in both U.S. and foreign economic growth. The USDIA position grew 7 percent, down from 10 percent in 2000; the FDIUS position grew 9 percent, down sharply from 27 percent in 2000. The economic slowdowns contributed to a worldwide drop in merger and acquisition activity, which included a slowdown in crossborder activity, and to depressed earnings, which reduced reinvested earnings, of both U.S. and foreign affiliates.

41 U.S. International Transactions, First Quarter 2002
The U.S. current-account deficit increased $\$ 17.4$ billion, to $\$ 112.5$ billion, in the first quarter of 2002. The increase was primarily accounted for by an increase in the deficit on goods and by a shift in the balance on income from a surplus to a deficit. In the financial account, net recorded inflows decreased $\$ 51.3$ billion, to $\$ 99.4$ billion. Financial inflows for foreignowned assets in the United States and financial outflows for U.S.-owned assets abroad both decreased substantially, but the decrease in financial inflows was larger.

## D-1 BEA Current and Historical Data

Inside back cover: Getting BEA's Estimates
Back cover: Schedule of Upcoming News Releases

## Looking Ahead

Annual Revision of the NIPA's. The August Surver will present the annual revision of the national income and product accounts (NIPA's). The issue will include an article that describes the impact of the revision on GDP and other major NIPA estimates and that discusses the principal sources of the revisions. The issue will also include tables that show the revised NIPA estimates for the first quarter of 1999 through the first quarter of 2002. Selected revised estimates will be available on July $31^{\text {st }}$ as part of the release of the "advance" GDP estimates for the second quarter of 2002.

## Business Situation

## Final Estimates for the First Quarter of 2002

$\mathrm{A}^{\mathrm{c}}$CCORDING to the "final" estimates of the national income and product accounts (NIPA's), real GDP increased 6.1 percent in the first quarter of 2002, 0.5 percentage point more than in last month's "preliminary" estimates (table 1 and chart 1).' (Over the past 20 years, the average revision, without regard to the sign, from the preliminary estimate to the final estimate was 0.3 percentage point.) Real final sales of domestic product was also revised up, from 2.0 percent in the preliminary estimate to 2.6 percent in the final.

[^0]Daniel Larkins and Frederick von Batchelder prepared this article.

## CHART 1

Real Gross Domestic Product

Note.-Percent change at annual rate from preceding quarter;
based on seasonally adiusted estimates.
U.S. Bureau of Economic Analysis

The source data underlying these and other revisions to the NIPA's are discussed in the section "Revisions."

The picture of the economy shown in the final estimates for the first quarter is similar in most respects to that shown in the preliminary estimates. According to both estimates,

- Inventories were liquidated for the fifth consecutive quarter, but because the pace of liquidation slowed sharply, real inventory investment contributed more than 3 percentage points to the growth in real GDP (table 2).?

2. In the NIPA's, inventory investment is shown as "change in private inventories." According to the final estimates, the pace of inventory liquidation slowed from -5119.3 billion in the fourth quarter to -527.7 billion in the first.

Note. More detailed contributions to percent change in real gross domestic product are shown in NIPA table 8.2. Contributions to percent change in major components of real gross domestic product are shown in tables 8.3 through 8.6.
durable goods had increased sharply, mainly on the strength of an exceptional rise in motor vehicle purchases.)

- An increase in government spending contributed more than 1 percentage point to GDP growth. An increase in Federal Government spending was concentrated in national defense; an increase in State and local government spending was attributable both to gross investment and to consumption expenditures.
- Nonresidential fixed investment continued to decline, as structures decreased for the fourth quarter in a row. Equipment and software changed little, according to the final estimate; the preliminary estimate had shown a small decrease.
-Inflation remained calm. In the final estimates, the price index for gross domestic purchases increased 1.1 percent.
- Real disposable personal income increased at a dou-ble-digit rate after dropping sharply. Current-dollar personal income rose while personal tax payments fell. The drop in tax payments partly reflected the introduction of a new 10 -percent tax bracket (mandated by the Economic Growth and Tax Relief and Reconciliation Act of 2001) and the indexation provisions of current tax law.
-The personal saving rate, which is measured as personal saving as a percentage of current-dollar disposable personal income, rebounded to 2.9 percent after falling to 0.4 percent.
-Real final sales of computers decreased, the third decrease in the past four quarters; real motor vehicle output continued to increase moderately.

## Revisions

The largest contributors to the 0.5 -percentage-point upward revision to real G.P. were imports, which contributed 0.54 percentage point, and nonresidential investment in equipment and software, which contributed 0.21 percentage point (table 3 ). The effect of these revisions was partly offset by a downward revision to exports ( -0.23 percentage point).

The revisions to imports and exports reflected the incorporation of data on trade in goods and services from the annual revision of BEA's international transactions accounts (ITA's). The revision to equipment and software reflected the incorporation of revised Census Bureau data on shipments based on the 1999 and 2000 Annual Survey of Manufactures (ASM). The ITA- and ASM-related revisions were incorporated into the NIPA's on a "best-change" basis, which preserves accurate estimates of growth and consistent time series. ${ }^{4}$

The price index for gross domestic purchases increased 1.1 percent, 0.3 percentage point more than the preliminary estimate. The revision was largely accounted for by revisions to the implicit prices for imputed financial charges that resulted from the incorporation of newly available data from the Federal Deposit Insurance Corporation and to the implicit prices for brokerage and investment counseling based on newly available data from the Security and Exchange Commission.

Real disposable personal income (DPI) increased 13.9 percent in the first quarter, 0.1 percentage point more than the preliminary estimate. A larger upward revision to current-dollar DPI ( 0.5 percentage point) was mostly offset by an upward revision to the implicit price deflator for personal consumption expenditures, which is used to deflate DPI.

Nore. The final estimates for the first quarter of 2002 incorporate the following revised or additional major source data that were not available when the preliminary estumates were prepared.
Personal consumption expenditures: Revised setail sales for March, bank services data tor the first quarter, ano rokerage services data for the tirst quarter.
shipments (on a "best-change" basis) for October 2001 pur-in-place for February and March, and revised manutacturers of Manufactures.
Residential fixed investment; Revised construction put-in-place for February and March, revised sales of new houses for nuary through March, and revised sales of existing houses for March.
Change in private inventories: Revised manuuaciurers' inventories (on a "best-change" basis) for October 2001 through ries for March.
Exports and imporis of goods and services: Revised data on exports and imports of goods and services for October
001 tirough March 2002 that include the incorporation (on a "best-change" basis) of the results of the annual revision of A's intemational transactions accounts.
Government consumption expenditures and gross investment: Revised State and local construction put-in-place fo poration (on a "best-change" basis) of the results of the Bureau of Labor Statistics annual benchmark revisions to the establishment payroll survey.
Wages and salaries: Revised employment, average hourly eamings, and average weekly hours for October 2001 through March 2002 that reffect the incorporation (on a "best-change" basis) of the results of the Bureau of Labor Statistics annual GDP prices: Revised the establishment payroll survey mports for March, and revised prices of single-family houses under construction for the quarter.

## Gross National Product

Real gross national product (GNP) increased 4.8 percent in the first quarter, 1.3 percentage points less than real G.P. (table 4). ${ }^{5}$ The smaller increase in GNP than in G.P. reflected an increase in income payments to the rest of the world and a decrease in income receipts from the rest of the world. The increase in payments was more than accounted for by profits; the decrease in receipts was more than accounted for by interest.
"Command-basis" GNP—which measures the purchasing power of goods and services produced by the U.S. economy-increased 4.9 percent (chart 2). The similarity between the increase in this measure and the increase in GNP reflects the relative stability-a 0.8 percent increase--in the terms of trade. ${ }^{6}$
5. GNP is a measure of goods and services produced by labor and property supplied by U.S. residents. It is equal to GDP plus income receipts from the rest of the world less income payments to the rest of the world.

1. Exports of goods and services and income receipts deflated by the impticit price deflator for imports of goods and services and income payments
2. Ratıo of the implicit price deflator for exports of goods and services and income receipts to the corre soonding implicir price detlator for imports divided by 100
Note. See note to table 1 for an explanation of chained (1996) dollar series. Levels of these series are shown in NIPA tables 1.10 and 1.11

The national saving rate-gross saving as a percentage of GNP—decreased to 16.5 percent, its lowest level since the third quarter of 1994. The series had peaked at 19.1 percent in the third quarter of 1998.
6. In the estimates of command-basis GNP, the current-dollar value of the sum of exports of goods and services and income receipts is deflated by the implicit price deflator (IPD) for the sum of imports of goods and services and income payments.
The terms of trade is a measure of the relationship between the prices that are received by U.S. producers for exports of goods and services and the prices that are paid by U.S. purchasers for imports of goods and services. It is measured by the following ratio, with the decimal point shifted two places to the right: In the numerator, the IPD for the sum of exports of goods and services and of income receipts; in the denominator, the IPD) for the sum of imports of goods and services and of income payments.

Changes in the terms of trade reflect the interaction of several factors, including movements in exchange rates, changes in the composition of the traded goods and services, and changes in producers' profit margins. For example, if the U.S. dollar depreciates against a foreign currency, a foreign manufacturer may choose to absorb this cost by reducing the profit margin on the product it sells to the United States, or it may choose to raise the price of the product and risk a loss in market share.

## Corporate Profits

Profits from current production increased $\$ 5.8$ billion (or 0.7 percent at a quarterly rate) in the first quarter after increasing $\$ 125.0$ billion ( 17.9 percent) in the fourth (table 5). ${ }^{7}$

The revised first-quarter estimate is $\$ 1.7$ billion more than the preliminary estimate released last month. A $\$ 3.9$ billion upward revision to profits from the rest of the world was partly offset by a $\$ 2.4$ billion downward revision to profits of domestic financial corporations. Profits of domestic nonfinancial corporations were revised little

The 0.7 -percent increase in current-production profits is markedly smaller than the 3.9-percent increase in profits before tax (PBT). ${ }^{8}$ The difference between the two measures mainly reflects provisions of the Job Creation and Worker Assistance Act of 2002,
7. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown in NIPA tables 1.9, 1.14, 1.16, and 6.16C (see "Selected NIPA Tables," which begins on page D-2 of this issue) as corporate profits with inventory valuation and capital consumption adjustments. Percent changes in profits are shown at quarterly, not annual, rates.
8. PBT is based on inventory and depreciation practices used in tax accounting, whereas the current-production measure-which excludes nonoperating items, such as special charges and capital gains and losses-is based on depreciation of fixed assets and inventory withdrawals valued at current cost.
which allowed increased depreciation-and thus reduced profits-on a tax-accounting basis. ${ }^{9}$

In both the current-production measure and PBT, the first-quarter estimate reflected settlement payments of $\$ 9.8$ billion (annual rate) to the States by tobacco companies. Settlement payments had reduced the fourth-quarter estimates by $\$ 9.0$ billion.

Current-production profits consists of profits of domestic corporations and profits from the rest of the world. ${ }^{10}$ Profits of domestic corporations increased substantially in the first quarter, though not as much as in the fourth; profits from the rest of the world decreased after increasing. In the first quarter, the increase in domestic profits and the decrease in rest-ofworld profits reflected a surge in profits of domestic affiliates of foreign parents, mainly parents in Western Europe and Japan. (Because these affiliates are located in the United States, their profits are included in

Note. Levels of these and other profits series are shown in NiPA tables 1.14, 1.16, 6.16C, and 7.15. CCAdj Capital consumption adjustment IVA Inventory valuation adjustment
profits of domestic corporations; because they are owned by foreign parents, their profits are subtracted in the calculation of profits from the rest of the world.) By industry, about one-third of the surge in profits of domestic affiliates was accounted for by petroleum and manufacturing affiliates; the remaining two-thirds was accounted for by affiliates in "other" industries, including finance, insurance, and telecommunications.

For domestic nonfinancial corporations, the firstquarter increase in profits mainly reflected a rise in unit profits that resulted from a bigger decrease in unit labor costs than in unit prices. Profits were also boosted by an increase in the real output of these corporations. ${ }^{11}$

For domestic financial corporations, the increase largely reflected profits of "other" financial corporations (such as real estate investment trusts and federally sponsored credit agencies) and of property and casualty insurance companies.

Cash flow from current production, a profits-related measure of internally generated funds available for investment, decreased $\$ 8.3$ billion after increasing $\$ 78.5$ billion. ${ }^{12}$ The ratio of cash flow to nonresidential

[^3]fixed investment, an indicator of the share of the current level of investment that could be financed by internally generated funds, increased from 84.4 percent to 85.5 percent, its highest value since the second quarter of 1996.

Profits with inventory valuation adjustment (IVA). The current-production measure of profits is not available at the detailed industry level, because estimates of the capital consumption adjustment (CCAdj) do not exist at this level. (CCAdj is available only for total financial and total nonfinancial industries.) Consequently, industry profits are best measured by profits with IVA.

For all major categories of nonfinancial industries, profits with IVA increased, though the increases for wholesale and retail trade were very small (chart 3 ). Within manufacturing, increases were widespread; the largest increases were posted by "other durable goods" and "other nondurable goods." ${ }^{13}$ Only two manufacturing industries posted substantial decreases-chemicals and petroleum.
12. Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.
13. "Other" durable-goods manufacturing includes the lumber, furniture, stone, transportation equipment excluding motor vehicles, instruments, and miscellaneous manufacturing industries. "Other" nondurable-goods manufacturing includes the tobacco, textile, apparel, paper, printing, rubber, and leather industries.

## CHART 3

Corporate Profits with Inventory Valuation Adjustment: Change from 2001:IV to 2002:I
Billion \$

[^4]2. 'Other' nonfinancial corporations inclures the agriculture, mining, construction, and services industries
along with some activities included in the 'finance, insurance, and real estate' group.

# Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade, 2002:I 

Tables 1, 2, and 3 show quarterly and monthly estimates of real inventories, sales, and inventory-sales ratios, respectively. Table 4 shows real manufacturing inventories by stage of fabrication. Real estimates are in chained (1996) dollars.

## Data availability

Quarterly estimates for 2001:III of real manufacturing and trade inventories, sales, and inventory-sales ratios and of real manufacturing inventories by stage of fabrication were published in the April 2002 Survey of Current Business, and quarterly estimates for 1997:IV-2001:II were published in the October 2001

## ${ }^{p}$ Preliminary.

Nort. Estimates in this table are based on the North American industry Classification System (NAICS).
Chained (1996) doltar inventory series are calculated to ensure that the chained (1996) dollar change in inventories for 1996 equals the current-dollar change in inventories for 1996 and that the average of the 1995 and 1996 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes use

Survey.
These estimates are also available as downloadable files on BEA's Web site at <www.bea.gov>; click on "GDP and related data" and look under "Supplementary estimates, historical underlying detail", and click on "Change in private inventories."

The most recent estimates are also available by subscription from BEA: On diskette as part of the NIPA monthly update (product number NDS-0171, price $\$ 204.00$ ) and as separate monthly printouts (product number NLS-0166, price $\$ 108.00$ ). To order, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666).

## ${ }^{p}$ Preliminary.

Nore. Estimates in this table are based on the North American Industry Classification System (NAICS).
Chained (1996) dollar sates are calculated as the product of the chain-type quantity index and the 1996 current-dollar
value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

- Preliminary.
'Revised.
Note. Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (1996) doilar inventory series are calculated to ensure that the chained (1996) dollar change in inventories for chain-weighted and fixed-weighted inventovies are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

# The International Investment Position of the United States at Yearend 2001 

By Elena L. Nguyen

IN 2001, foreign-owned assets in the United States increased by a sizable amount while U.S.-owned assets abroad changed little, with direct investment valued at current cost (see the box "Current-Cost and Market-Value Methods of Valuing Direct Investment"). As a result, the net international investment position became more negative.

The net international investment position at current cost was $-\$ 1,948.1$ billion at yearend 2001, compared with - $\$ 1,350.8$ billion (revised) at yearend 2000 (table 1 , chart 1). The previously published net international investment position for yearend 2000 was $-\$ 1,842.7$ billion; the revision reflects the incorporation of the U.S. Treasury Department's once-every-5-year Bench-
mark Survey of Foreign Portfolio Investment in the United States (see the box "Improvements in the Estimates"). In 2001, financial inflows into U.S. assets exceeded financial outflows into foreign assets, declines in stock market prices had a greater impact on U.S. assets abroad than on foreign assets in the United States, and exchange-rate depreciation of foreign currencies lowered the value of U.S. assets abroad more than it lowered the value of foreign assets in the United States.

The net international investment position with direct investment valued on an alternative basis-at the current stock market value of owners' equity-also became more negative; it was $-\$ 2,309.1$ billion at yearend 2001, compared with $-\$ 1,583.2$ billion (revised) at

## Current-Cost and Market-Value Methods of Valuing Direct Investment

Since 1991, in the series of annual articles on the international investment position of the United States, two measures of valuing direct investment positions-the current-cost method and the market-value method-have been discussed and presented as two alternatives to the historical-cost valuation. The current-cost method values the U.S. and foreign parents' shares of their affiliates' investment in plant and equipment, using the current cost of capital equipment; in land, using general price indexes; and in inventories, using estimates of their replacement cost. The market-value method values the owners' equity share of direct investment using indexes of stock market prices. (For additional information, see J. Steven Landefeld and Ann M. Lawson, "Valuation of the U.S. Net International Investment Position," Survey of Current Business 71 (May 1991): 40-49.)
In this article, BEA emphasizes the current-cost method, because the estimates prepared using the cur-rent-cost method are comparable with BEA's current-cost estimates of total U.S. reproducible tangible wealth and with the Federal Reserve Board's estimates of domestic net worth (the sum of tangible assets located in the United States, including plant and equipment, inventories, and land). Furthermore, BEA's calculation of direct investment income includes a current-cost adjustment to depreciation; this adjustment converts depreciation as
reported on company financial statements to the preferred economic accounts measure, which is based on the current cost, rather than on the historical cost, of assets.
The estimates of direct investment in the international investment position continue to be presented on both current-cost and market-value bases in order to highlight that different methods of valuing direct investment may be appropriate for different circumstances and that depending on the valuation method used, the resulting estimates may differ substantially. All of the categories in the international investment position accounts except direct investment positions can be directly estimated with reference to readily observable market prices. For example, the value of positions in portfolio investment securities, gold, loans, currencies, and bank deposits can be directly estimated based on face values or market prices of recent transactions. In contrast, direct investment positions typically involve illiquid ownership interests in companies that may possess many unique attributes-such as customer base, management, and ownership of intangible assets--whose values in the current period are difficult to determine, because there is no widely accepted standard for revaluing company financial statements at historical cost into prices of the current period.
yearend 2000 . Foreign-owned assets increased, though not as much as on the current-cost basis, while U.S.owned assets decreased substantially, reflecting the greater impact of the declines in stock market prices on the market-value basis.

In the following discussion, the current-cost estimates of direct investment are featured, and the mar-ket-value estimates of direct investment are discussed only when there is a substantial difference between the two valuation measures. The differences between these
valuation measures are limited to differences in direct investment valuation adjustments, to differences in direct investment positions, and to differences in higher level aggregates that include these accounts. All financial flows and all asset and liability positions except direct investment are identical under both of these valuation measures.

With direct investment valued at current cost, U.S.owned assets abroad increased slightly to $\$ 6,196.1$ billion at yearend 2001 from $\$ 6,191.9$ billion at yearend

## Improvements in the Estimates

As is customary each July, the estimates of the U.S. international investment position incorporate newly available source data and methodological improvements that relate to the changes incorporated in the annual revision of the U.S. international transactions accounts.
This year, the estimates of foreign portfolio holdings of U.S. securities for 1995-2000 were revised to incorporate results from the U.S. Treasury Department's Benchmark Survey of Foreign Portfolio Investment in the United States, which covered foreign ownership of U.S. securities with an original maturity of more than 1 year as of March 2000. As a result, the net international investment positions are less negative than previously indicated. For yearend 2000, the net position was revised from $-\$ 1,842.7$ billion to $-\$ 1,350.8$ billion with direct investment at current cost and from $-\$ 2,187.4$ billion to
$-\$ 1,583.2$ billion with direct investment at market value.
The benchmark survey results were used by BEA to revise its estimates of the international investment position, as well as its estimates of financial inflows and associated flows of interest and dividend payments in BEA's international transactions accounts. In addition, BEA has used information from the benchmark survey and other sources to develop and implement new estimation methodologies that will improve future estimates of positions and of financial and income flows.
In addition, estimates of U.S. direct investment positions on a market-value basis for 1993-2000 were revised to incorporate improved source data. For additional information. See "Annual Revision of the U.S. International Accounts, 1993-2001" in this issue.

CHART 1
Net International Investment Position of the United States at Yearend, 1983-2001

Table D. U.S. Claims Reported by U.S. Banks and U.S. Nonbanks at Yearend
[Billions of dollars]

|  | 1999 | 2000 | 2001 |
| :---: | :---: | :---: | :---: |
| Total bank-reported claims | 1.100.3 | 1,252.1 | 1,416.8 |
| Banks' own claims, payable in doillars .......... | 793.1 | 892.2 | 1,053.6 |
| On own foreign offices | 529.7 | 623.1 | 747.8 |
| On unaffiliated foreign banks. | 97.2 | 91.1 | 100.6 |
| On other foreigners | 166.2 | 178.0 | 205.2 |
| Banks' customers' claims, payable in dollars .. | 219.0 | 278.9 | 271.7 |
| Banks' claims payable in foreign currencies ............ | 88.2 | 81.0 | 91.5 |
| Total nonbank-reported claims ............................ | 677.5 | 821.6 | 830.1 |

tion activity. U.S.-owned banks continued funding their offshore branches, primarily in Western Europe and the Caribbean. U.S. banks' claims on other foreigners increased, largely reflecting U.S. securities dealers' lending to international bond funds in the Caribbean and Western Europe, partly to finance increased foreign purchases of U.S. bonds.
U.S. banks' domestic customers' claims payable in dollars decreased $\$ 7.2$ billion, to $\$ 271.7$ billion, as U.S. investors reduced their holdings of foreign commercial paper as a result of falling short-term yields and heightened concerns about credit risk. U.S. banks' claims payable in foreign currencies increased $\$ 10.5$ billion, to $\$ 91.5$ billion, a significant rebound after 3 years of decline.
U.S. claims on foreigners reported by U.S. nonbanking concerns increased $\$ 8.5$ billion, to $\$ 830.1$ billion, largely reflecting a substantial slowdown in U.S. deposits in Western Europe and Caribbean banking centers (table D).

## Foreign securities

U.S. holdings of foreign securities decreased $\$ 278.9$ billion, to $\$ 2,110.5$ billion, in 2001. Net U.S. purchases of $\$ 94.7$ billion were more than offset by large negative valuation adjustments as a result of declines in foreign stock prices and of exchange-rate depreciation in most foreign currencies against the U.S. dollar.
U.S. holdings of foreign stocks decreased $\$ 267.7$ billion, to $\$ 1,564.7$ billion, in 2001 . Net U.S. purchases of $\$ 106.8$ billion were more than offset by negative valuation adjustments of $\$ 296.6$ billion in stock-price depreciation and $\$ 77.9$ billion in exchange-rate depreciation. Exchanges of stocks associated with foreign acquisitions of U.S. companies decreased sharply and accounted for a smaller portion of total net outflows. In nonmerger-related transactions, net U.S. purchases of foreign stocks increased, mostly in the first half of the year before concerns heightened over declining stock prices, the September 11th events, and limited economic recovery abroad.

- U.S. holdings of Western European stocks decreased $\$ 187.0$ billion, to $\$ 932.7$ billion. The decrease was attributable to 18 -percent price depreciation of

European stocks and to a 6-percent exchange-rate depreciation of the euro against the U.S. dollar and smaller depreciations of other Western European currencies against the dollar (table E). These negative valuation adjustments were partly offset by net U.S. purchases of $\$ 51.5$ billion. Exchanges of stock associated with Western European acquisitions of U.S. companies accounted for 52 percent of net U.S. purchases in 2001, down from 114 percent in 2000.
-U.S. holdings of Japanese stocks decreased $\$ 38.7$ billion, to $\$ 143.5$ billion, as Japanese stock prices declined 20 percent and the yen depreciated 15 percent against the U.S. dollar. These negative valuation adjustments were partly offset by net U.S. purchases of $\$ 19.9$ billion, mostly in the first half of the year.

- U.S. holdings of Canadian stocks decreased $\$ 23.7$ billion, to $\$ 99.6$ billion, reflecting 16 -percent depreciation of Canadian stock prices, 6-percent exchange-rate depreciation of the Canadian dollar against the U.S. dollar, and reduced net U.S. purchases of Canadian stocks.
- U.S. holdings of other foreign stocks, mostly emerging market stocks, decreased $\$ 18.3$ billion, to $\$ 388.9$ billion. Increases from price appreciation of most emerging market stocks and from net U.S. purchases were more than offset by losses from exchange-rate depreciation. In 2001, the Morgan Stanley Capital International Emerging Markets stock index rose 5.1 percent in local currency terms, but it fell 4.9 percent in U.S. dollar terms.
U.S. holdings of foreign bonds decreased $\$ 11.2$ billion, to $\$ 545.8$ billion, in 2001. A sharp swing to net sales of $\$ 12.1$ billion and exchange-rate depreciation of $\$ 17.3$ billion were partly offset by bond-price

| Singapore .................................... | 16.3 | 8.6 | 4.0 |

appreciation of $\$ 18.2$ billion (table F). High returns on U.S. bonds relative to most other industrial countries' bonds and heightened uncertainty about the prospects for economic growth abroad encouraged a shift to dol-lar-denominated bonds. The depreciation of most foreign currencies against the U.S. dollar prompted continued U.S. selling of foreign-currency-denominated bonds. Net U.S. sales of foreign bonds occurred mainly in the third quarter, when investors further reduced their exposure in foreign markets.

## U.S. direct investment abroad

U.S. direct investment abroad at current cost increased $\$ 107.8$ billion, to $\$ 1,623.1$ billion, in 2001; at market value, it decreased $\$ 384.3$ billion, to $\$ 2,289.9$ billion (table G). At current cost, net financial outflows were partly offset by negative valuation adjustments; at market value, net financial flows were more than offset by large negative valuation adjustments, mainly as a result of large price depreciation in most foreign stock markets (table H). Net outflows declined to $\$ 127.8$ billion, the lowest level since 1997, as U.S. acquisitions of foreign companies were reduced by the economic slowdowns in the United States and overseas. Net equity capital outflows decreased to $\$ 49.8$ billion; intercompany debt outflows shifted to inflows of $\$ 1.7$ billion; and reinvested earnings decreased to $\$ 79.7$ billion, reflecting a slowdown in overseas affiliates' earnings.

## U.S. official reserve assets and other U.S. Government assets

U.S. official reserve assets increased $\$ 1.6$ billion, to $\$ 130.0$ billion, in 2001. The increase was more than accounted for by a $\$ 3.0$ billion increase in the U.S. reserve position at the International Monetary Fund (IMF), as large net U.S. dollar lending from the IMF's General Resources Account to Turkey, Argentina, and

Brazil exceeded repayments from Russia and the Republic of Korea. Partly offsetting was a $\$ 2.3$ billion decrease in the value of foreign currency holdings that was more than accounted for by exchange-rate depreciation.
U.S. Government assets, other than official reserve assets, increased $\$ 0.5$ billion, to $\$ 85.7$ billion, as new U.S. Government credits to foreigners slightly exceeded repayments. Both new credits and repayments slowed in 2001

## Changes in Foreign-Owned Assets in the United States

## Bank and nonbank liabilities

U.S. liabilities to private foreigners and international financial institutions reported by U.S. banks increased $\$ 144.8$ billion, to $\$ 1,298.2$ billion, in 2001, largely as a result of U.S. banks' borrowing from their own foreign offices abroad to fund their liquidity needs and lending overseas (table I).
U.S. banks' own liabilities payable in dollars increased $\$ 118.4$ billion, to $\$ 1,090.8$ billion, as U.S. banks borrowed from their own foreign offices abroad, especially in the fourth quarter. Some of banks' borrowing in the fourth quarter was due to increased

demand for liquidity in both domestic and international markets after the events of September 11th. U.S. banks' liabilities to other foreigners increased $\$ 23.0$ billion, to $\$ 180.9$ billion, as U.S. securities dealers stepped up their borrowing from Western Europe and the Caribbean to fund their activities in the U.S. securities markets. U.S. banks' custody liabilities payable in dollars increased $\$ 14.1$ billion, to $\$ 118.9$ billion. U.S. banks' foreign currency liabilities increased $\$ 12.3$ billion, to $\$ 88.5$ billion, mainly in the first half of the year, to finance an expansion in U.S. banks' foreign currency lending.
U.S. liabilities to foreigners reported by U.S. nonbanking concerns increased $\$ 75.1$ billion, to $\$ 804.4$ billion, reflecting strong U.S. corporate borrowing from Western Europe and the Caribbean in the first quarter (table I).

## U.S. Treasury securities

Foreign holdings of U.S. Treasury securities decreased $\$ 12.2$ billion, to $\$ 388.8$ billion, in 2001 . Over the past 3 years, the relative attractiveness of higher yielding U.S. corporate and agency bonds and diminishing supplies of Treasury securities have led to sizable net foreign sales of Treasury bonds. However, net foreign sales slowed in 2001, partly because Treasury securities became more attractive after the disruptions in the world financial markets caused by the events of September 11 th. (In table J, foreign private holdings and foreign official holdings are combined in order to avoid the disclosure of sensitive data on individual country holdings by foreign official agencies. These estimates incorporate results from the March 2000 U.S. Treasury Department's Benchmark Survey of Foreign Portfolio Investment in the United States.)

## Other U.S. securities

Foreign holdings of U.S. securities other than U.S. Treasury securities increased $\$ 233.0$ billion, to $\$ 2,856.7$ billion, in 2001 . Net foreign purchases of $\$ 407.7$ billion were partly offset by negative valuation adjustments of $\$ 174.6$ billion. Net foreign purchases of U.S. bonds rose to a record, while net foreign purchases of U.S.
stocks slowed substantially as a result of heightened concerns about slowing U.S. economic growth and sharply declining corporate earnings. (Estimates were revised to incorporate results from the March 2000 U.S. Treasury Department's Benchmark Survey of Foreign Portfolio Investment in the United States.)

Foreign holdings of U.S. corporate and U.S. agency bonds increased $\$ 316.6$ billion, to $\$ 1,392.6$ billion. The increase primarily resulted from record net foreign purchases of $\$ 288.2$ billion; purchases were spurred by high yields on these issues relative to U.S. Treasury bonds and by a record amount of highly rated U.S. corporate and agency bonds issued overseas. As of December 2001, the United Kingdom remained the largest holder of U.S. corporate and U.S. agency bonds with $\$ 691.4$ billion, or 50 percent of foreign holdings; the next largest wère the Caribbean, with $\$ 256.2$ billion, and Japan, with $\$ 120.6$ billion (table K).

Foreign holdings of U.S. stocks decreased $\$ 83.6$ billion, to $\$ 1,464.0$ billion. Net foreign purchases of $\$ 119.5$ billion-down sharply from $\$ 192.4$ billion in 2000-were more than offset by stock-price depreciation of $\$ 203.1$ billion. Slowing U.S. economic growth and sharp declines in corporate earnings led to the first back-to-back annual losses in the U.S. stock market since 1974. The S\&P 500 stock index dropped 13 percent in 2001 after a 10 -percent drop in 2000 . As of December 2001, foreign holdings of U.S. stocks were largest in Western Europe, which held $\$ 969.5$ billion, or 66 percent of foreign holdings (table L). The United

Kingdom, Canada, and Japan remained the three largest foreign holders of U.S. stocks.

## U.S. currency

U.S. currency held by foreigners increased $\$ 23.8$ billion, to $\$ 275.6$ billion, in 2001. Currency shipments were mostly to Argentina in response to economic crisis and fears of devaluation

## Foreign direct investment in the United States

Foreign direct investment in the United States at current cost increased $\$ 124.2$ billion, to $\$ 1,498.9$ billion, in 2001; at market value, it decreased $\$ 239.3$ billion, to $\$ 2,526.7$ billion (table M). At current cost, net financial inflows more than accounted for the increase in the position. At market value, net financial inflows were more than offset by substantial price depreciation in owners' equity that resulted from the decline in U.S. stock market prices. Net financial inflows decreased sharply to $\$ 130.8$ billion, the lowest level since 1997 , as slow economic growth abroad and price depreciation in stock markets worldwide deterred investment and contributed to a substantial reduction in foreign acquisitions of U.S. companies. Net equity capital inflows slowed to $\$ 107.7$ billion; net intercompany debt inflows slowed to $\$ 42.8$ billion; and reinvested earnings shifted to a negative $\$ 19.7$ billion (table N ).

## Foreign official assets

Foreign official assets increased $\$ 12.8$ billion, to $\$ 1,021.7$ billion, in 2001. Net foreign purchases of U.S. securities were nearly offset by large net foreign withdrawals at U.S. banks. Price appreciation of bond holdings was nearly offset by price depreciation of stock holdings.

# Direct Investment Positions for 2001: Country and Industry Detail 

By Maria Borga and Daniel R. Yorgason

IN 2001, the historical-cost positions of U.S. direct investment abroad (USDIA) and of foreign direct investment in the United States (FDIUS) grew more slowly than in 2000. The USDIA position grew 7 percent in 2001, down from 10 percent in 2000. The FDIUS position grew 9 percent in 2001, down significantly from the exceptionally strong growth of 27 percent in 2000 and of 23 percent in 1999 (table 1 and chart 1). The slowdowns of the two positions in 2001 followed a period of more rapid growth in direct investment that began in the mid-1990s and extended through 2000.

The slower rates of growth in the direct investment positions in 2001 partly reflected slowdowns in economic growth in the United States and in a number of European and Asian countries that have historically been important destinations for U.S. direct investment abroad, or important sources for foreign direct investment in the United States, or both. The economic slowdowns affected growth in the positions in two ways. First, they contributed to a drop in merger and

## Key Terms

The key terms used in this article are described in this box. For a more detailed discussion of these terms and the methodologies used to prepare the estimates, see Foreign Direct Investment in the United States: Final Results from the 1997 Benchmark Survey (Washington, DC: U.S. Government Printing Office, June 2001) and U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results (Washington, DC: U.S. Government Printing Office, May 1998) (publication of the final results of the 1999 benchmark survey of U.S. direct investment abroad, including an updated methodology, is scheduled for next year). The methodologies are also available at BEA's Web site at <www.bea.gov>.
Direct investment. Investment in which a resident of one country obtains a lasting interest in, and a degree of influence over the management of, a business enterprise in another country. In the United States, the criterion used to distinguish direct investment from other types of investment is ownership of at least 10 percent of the voting securities of an incorporated business enterprise or the equivalent interest in an unincorporated business enterprise.
U.S. direct investment abroad (USDIA). The ownership or control, directly or indirectly, by one U.S. resident of 10 percent or more of the voting securities of an incorporated foreign business enterprise or the equivalent interest in an unincorporated foreign business enterprise.
Foreign direct investment in the United States (FDIUS). The ownership or control, directly or indirectly, by one foreign resident of 10 percent or more of the voting securities of an incorporated U.S. business enterprise or the equivalent interest in an unincorporated U.S. business enterprise.
Foreign affiliate. A foreign business enterprise in which a single U.S. investor (that is, a U.S. parent) owns at least 10 percent of the voting securities, or the equivalent.
U.S. affiliate. A U.S. business enterprise in which a single foreign investor (that is, a foreign parent) owns at least 10 percent of the voting securities, or the equivalent.

Ultimate beneficial owner (UBO). That person (in the broad legal sense, including a company), proceeding up the affiliate's ownership chain beginning with the foreign parent, that is not owned more than 50 percent by another person. The UBO ultimately owns or controls the affiliate and derives the benefits associated with ownership or control. Unlike the foreign parent, the UBO of a U.S. affiliate may be located in the United States.

Foreign parent group. Consists of (1) the foreign parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, up to and including the UBO, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.
Direct investment capital flows. Funds that parent companies provide to their affiliates net of funds that affiliates provide to their parents. For USDIA, capital flows also include the funds that U.S. direct investors pay to unaffiliated foreign parties when affiliates are acquired and the funds that U.S. investors receive from them when affiliates are sold. Similarly, FDIUS capital flows include the funds that foreign direct investors pay to unaffiliated U.S.residents when affiliates are acquired and the funds that foreign investors receive from them when affiliates are sold. FDIUS capital flows also include debt and equity transactions between U.S.affiliates and members of their foreign parent groups other than their foreign parents, described as follows.

Direct investment capital flows consist of equity capital, intercompany debt, and reinvested earnings. Equity capital flows are the net of equity capital increases and decreases. Equity capital increases consist of payments by parents to third parties for the purchase of capital stock when they acquire an existing business, payments made to acquire additional ownership interests in their affiliates, and capital contributions to their affiliates. Equity capital decreases are the funds parents receive when they reduce their equity interest in their affiliates. Intercompany debt flows result from changes in net outstanding loans and trade accounts between parents (and for FDIUS, other members of the foreign parent groups) and their affiliates, including loans by parents to affiliates and loans by affiliates to parents. Reinvested earnings are the parents' claim on the current-period undistributed aftertax earnings of the affiliates.
Direct investment position. The value of direct investors' equity in, and net outstanding loans to, their affiliates. The position may be viewed as the direct investors' contributions to the total assets of their affiliates or as the financing provided in the form of equity (including reinvested earnings) or debt. Financing obtained from other sources, such as local or third-party borrowing, is excluded.
BEA prepares estimates of the positions for USDIA and for FDIUS that are valued on three bases-historical cost, current cost, and market value. See the box "Alternative Measures of the Direct Investment Positions."
Valuation adjustments to the historical-cost position. Adjustments that are made to account for the differences between changes in the historical-cost position, which are measured at book value, and direct investment capital flows, which are measured at transaction value. (Unlike the positions on a currentcost and market-value basis, the historical-cost position is not adjusted to account for changes in the replacement cost of the tangible assets of affiliates or in the market value of parent companies' equity in affiliates.)
Valuation adjustments to the historical-cost position consist of currency translation and "other" adjustments. Currency-translation adjustments are made to account for changes in the exchange rates that are used to translate affiliates' foreign-cur-rency-denominated assets and liabilities into U.S. dollars. The precise effects of currency fluctuations on these adjustments depend on the value and currency composition of affiliates' assets and liabilities. Depreciation of foreign currencies against the dollar usually results in negative translation adjustments because it tends to lower the dollar value of foreign-cur-rency-denominated net assets. Similarly, appreciation of foreign currencies usually results in positive adjustments because it tends to raise the dollar value of foreign-currency-denominated net assets.
"Other" adjustments are made to account for differences between the proceeds from the sale or liquidation of affiliates and their book values, for differences between the purchase prices of affiliates and their book values, for writeoffs resulting from uncompensated expropriations of affiliates, for changes in industry of affiliate or country of foreign parent, and for capital gains and losses (other than currency-translation adjustments). These capital gains and losses represent the revaluation of the assets of ongoing affiliates for reasons other than exchange-rate changes, such as the sale of assets (other than inventory) for an amount different from their book value.
and sellers to project earnings and to agree on valuations for companies. Second, slower economic growth depressed the earnings, and thus the reinvested earnings, of both U.S. and foreign affiliates. For U.S. affiliates of foreign companies, reinvested earnings were negative in 2001 and partly offset the growth in the position that resulted from inflows of equity capital and intercompany loans from foreign parents.

## Alternative Measures of the Direct Investment Positions

This article presents country and industry detail on the positions of foreign direct investment in the United States and of U.S. direct investment abroad. These detailed estimates are prepared only on a his-torical-cost basis and, thus, largely reflect price levels of earlier periods. Current-cost and market-value estimates of the positions are also prepared, but only at an aggregate level. The current-cost estimates value the U.S. and foreign parents' shares of their affiliates' investment in plant and equipment, using the current cost of capital equipment; in land, using general price indexes; and in inventories, using estimates of their replacement cost. The market-value estimates value the equity portion of direct investment, using indexes of stock market prices. Because the historical-cost estimates are not ordinarily adjusted to reflect changes in the current costs of tangible assets or in the market values of the firms, the estimates on this valuation basis are less than BEA's current-cost and market-value estimates of the positions. The revised estimates of the position for 2000 and the preliminary estimates for 2001 are shown on all three valuation bases below. The cur-rent-cost and market-value estimates of the position are discussed in "The International Investment Position of the United States at Yearend 2001" in this issue.

| Valuation method | Position $\stackrel{\text { at }}{\text { yearend }}$ 2000 | Changes in 2001 (decrease (-)) |  |  | $\begin{aligned} & \text { Position } \\ & \text { at } \\ & \text { yearend } \\ & 2001 \text {. } \end{aligned}$ |

In 1998-2000, much of the merger and acquisition activity was concentrated in petroleum, in telecommunications and related industries, and in financial services (including asset management, insurance, and banking). In 2001, however, the merger and acquisition activity in these industries declined. In telecommunications, rapid technological change and deregulation had spurred both merger and acquisition activity and investment spending in 1998-2000. The increased investment spending on telecommunications infrastructure and networks led to growth and acquisition activity in related industries, such as the manufacturing of telecommunications equipment and the development of software to manage networks. In 2001, business conditions for telecommunications companies and manufacturers of telecommunications equipment deteriorated, as the previous spending on networks and other infrastructure resulted in excess capacity and large debt obligations, so acquisitions in these industries slowed substantially.

Reflecting the effect of the drop in merger and acquisition activity on the FDIUS position, equity capital inflows, which are mainly used to acquire U.S. firms, were substantially lower than in 2000, but they were still higher than in any year prior to $1998 .{ }^{2}$ Weak economic conditions in many of the countries that are historically major sources of FDIUS-including France, Germany, the Netherlands, Canada, and Japan-contributed to the slowdown in the expansion of foreign multinational companies (MNC's) into the United States. In addition, the weakness of the U.S. economy, which followed 10 years of economic expansion, reduced the attractiveness of U.S. firms as acquisition targets. The acquisitions that did occur in 2001 tended to be smaller than in the previous 3 years, when equity capital inflows were boosted by a few especially large acquisitions. In particular, the absence of these

[^7]large acquisitions resulted in a significant slowing in the growth of the position of parents in the United Kingdom.

Despite being substantially lower than in 2000, equity capital inflows still accounted for most of the growth in the FDIUS position in 2001. In contrast, reinvested earnings of foreign affiliates continued to account for most of the growth in the USDIA position. The greater importance of reinvested earnings in the growth of the USDIA position reflects the higher earnings of foreign affiliates of U.S. companies relative to those of U.S. affiliates of foreign companies; this difference may be partly due to the greater average maturity of foreign affiliates relative to that of U.S. affiliates. ${ }^{3}$

The remainder of this article is presented in two sections. The first section discusses changes in the USDIA position by type of capital flow and by host country. The second section discusses the changes in the FDIUS position by type of capital flow and by country of the foreign parent.

## U.S. Direct Investment Abroad

The USDIA position valued at historical cost-the book value of U.S. direct investors' equity in, and net outstanding loans to, their foreign affiliates-was $\$ 1,381.7$ billion at the end of 2001 (table 1 and chart 1). In 2001 , as in 2000 , the largest positions were those in the United Kingdom ( $\$ 249.2$ billion, or 18 percent of the total position), in Canada ( $\$ 139.0$ billion, or 10 percent), and in the Netherlands (\$131.9 billion, or 10 percent) (table 2.2 and chart 2).

The USDIA position increased $\$ 88.2$ billion in 2001, the smallest increase since 1997. The following table shows the changes in the position in 2000 and 2001 by the type of capital flow and by valuation adjustment.

| [Billions of dollars] |  |  |
| ---: | ---: | ---: |
|  | 2000 | 2001 |
| Total ..................................... | 120.3 | 88.2 |
| Capital outflows................... | 165.0 | 114.0 |
| Equity capital .................. | 66.1 | 49.8 |
| Increases ..................... | 91.0 | 70.8 |
| Decreases ............................. | 25.0 | 20.9 |
| Intercompany debt .......... | 11.0 | -1.7 |
| Reinvested earnings ........... | 87.9 | 65.8 |
| Valuation adjustments......... | -44.7 | -25.7 |
| Currency translation........ | -17.8 | -12.1 |
| Other ................................. | -26.9 | -13.7 |

[^8]Capital outflows were $\$ 114.0$ billion in 2001, 31 percent smaller than in 2000 and the smallest since 1997. Reinvested earnings accounted for the largest portion of capital outflows, 58 percent, and equity capital accounted for 44 percent. Flows of intercompany debt shifted from outflows to small inflows.

Reinvested earnings, at $\$ 65.8$ billion, were down 25 percent from 2000, reflecting both substantially lower earnings of affiliates and a decrease in the share of earnings that was reinvested. Earnings fell 18 percent to $\$ 107.4$ billion. The share of total earnings reinvested by foreign affiliates fell to 61 percent from 67 percent. The industries with the largest declines in shares-petroleum and manufacturing-were those with the largest proportional decreases in earnings. The decline in the reinvestment ratio in 2001 may be partly attributable to parents lowering the scale of funding for current and projected future operations of their affiliates as a result of sluggish economic growth in many host countries.

Equity capital outflows fell 25 percent in 2001, to $\$ 49.8$ billion. Equity capital increases were $\$ 70.8$ billion, and equity capital decreases were $\$ 20.9$ billion. About 60 percent of the increases were for the direct acquisition or establishment of new affiliates. The remaining 40 percent were capital contributions to existing affiliates. Equity capital increases were largest in Europe and in Latin America and Other Western Hemisphere. In Europe, the increases were highest in chemicals and allied products and in finance, insurance, and real estate (FIRE). In Latin America and

## CHART 2

U.S. Direct Investment Position Abroad, 2001: Host-Country Shares

[^9]Other Western Hemisphere, the increases were partly due to acquisitions of depository institutions. Equity capital decreases result from the liquidation or sale of affiliates or from the return of equity capital. In 2001, each of these accounted for roughly half of the total. Equity capital decreases from the United Kingdom were particularly large.

Intercompany debt shifted to small net inflows in 2001 after net outflows of $\$ 11.0$ billion in 2000 . This shift was largely accounted for by changes in the net lending of parents of European affiliates in chemicals. In addition, the net lending from affiliates in FIRE in several Caribbean countries to their U.S. parents increased.

The capital outflows were partly offset by $\$ 25.7$ billion in negative valuation adjustments to the position; the adjustments were split rather evenly between cur-rency-translation adjustments and other adjustments (see the box "Key Terms"). The negative currencytranslation adjustments reflect the appreciation of the U.S. dollar in 2001, particularly against the Canadian dollar, the Japanese yen, the British pound, and the Brazilian real.

## Changes by area and by country

In 2001, the USDIA position grew 8 percent in Canada, 7 percent each in Europe and in Latin America and Other Western Hemisphere, and 5 percent in Asia and Pacific. Growth in the USDIA positions in both Africa and the Middle East exceeded 10 percent, but

## Acknowledgments

The data for U.S. direct investment abroad were drawn from BEA's quarterly survey of transactions between U.S. parent companies and their foreign affiliates. The survey was conducted under the supervision of Mark W. New, assisted by Howard S. Chenkin, Jennifer C. Chilzer, Laura A. Downey, Javier J. Hodge, Marie K. Laddomada, Sherry Lee, Leila C. Morrison, and Dwayne Torney. Computer programming for data estimation and tabulation was provided by Marie Colosimo and Mark A. Ledbetter.
The data for foreign direct investment in the United States were drawn from BEA's quarterly survey of transactions between U.S. affiliates of foreign companies and their foreign parents. The survey was conducted under the supervision of Gregory G. Fouch, assisted by Peter J. Fox, Michelle L. Granson, Barbara C. Huang, Y. Louise Ku-Graf, Tracy K. Leigh, and Beverly E. Palmer. Computer programming for data estimation and tabulation was provided by Karen E. Poffel, assisted by Paula D. Brown and Tracy K. Leigh.
the levels of these positions remained very small. Position changes that exceeded $\$ 3$ billion in absolute value by area and by country are shown in the following table.
[Billions of dollars]

| All countries................................................. 88.2 |  |
| :---: | :---: |
| Canada. | 10.2 |
| Europe $\qquad$ 46.3 |  |
|  |  |
| Netherlands. | 14.3 |
| Germany .. | 10.5 |
| United Kingdom. | 7.5 |
| Switzerland | 7.0 |
| Luxembourg. | 4. |
| Sweden | -4.7 |
| Latin America and Other Western Hemisphere | 17.7 |
| Of which: |  |
| Mexico... | 14.8 |
| Bermuda. | 5.3 |
| Panama. | -4.0 |
| Asia and Pacific | 11. |
| Of which: |  |
| Japan. | 4.7 |

Within Europe, position increases were largest in the Netherlands and Germany. (In Germany, the position grew more than 20 percent.) The next largest increases were in the United Kingdom, Switzerland, and Luxembourg. In contrast, the position in Sweden dropped more than 20 percent.

In the Netherlands, the increase in the position was primarily accounted for by reinvested earnings of affiliates in FIRE, particularly affiliates that are holding companies, and of affiliates in chemicals. The holding companies derive virtually all of their earnings from operating affiliates, many of which are located in other foreign countries and many of which operate in multiple industries. ${ }^{4}$ The increase in Germany was partly due to equity capital increases resulting from acquisitions in chemicals and to intercompany debt outflows in industrial machinery and equipment manufacturing. In the United Kingdom, equity capital increases, increases in intercompany debt, and reinvested earnings were only partly offset by negative valuation adjustments of nearly $\$ 6$ billion. The increases in Switzerland and Luxembourg resulted mainly from the reinvested earnings of affiliates in FIRE (particularly holding companies). The decrease in Sweden was largely accounted for by intercompany debt inflows.

[^10]The increases in the position in Latin America and other Western Hemisphere were largest in Mexico and in Bermuda. The increase of $\$ 14.8$ billion, or 40 percent, in the position in Mexico was larger than that in any other country. Equity capital increases related to the acquisitions of depository institutions contributed to the increase. The increase in Bermuda was primarily associated with affiliates in FIRE and primarily reflected reinvested earnings and, to a lesser extent, increases in equity capital. In contrast, the position in Panama fell 14 percent, largely because of valuation adjustments in FIRE.

Within Asia and Pacific, Japan had the largest increase in position, mainly reflecting the reinvested earnings of affiliates in FIRE and in services.

In Canada, the increase in the position was largely due to affiliates' reinvested earnings in several industries; equity capital increases-primarily in petro-leum-also contributed to the increase.

## Foreign Direct Investment in the United States

The FDIUS position valued at historical cost-the book value of foreign direct investors' equity in, and net outstanding loans to, their U.S. affiliates-was $\$ 1,321.1$ billion at the end of 2001 (table 1 and chart 1). The largest positions remained those of the United Kingdom (\$217.7 billion, or 16 percent), Japan ( $\$ 159.0$ billion, or 12 percent), and the Netherlands ( $\$ 158.0$ billion, or 12 percent) (table 3.2 and chart 3 ).

In 2001, the FDIUS position increased $\$ 106.8$ billion, or 9 percent, following an increase of 27 percent in 2000. The following table shows the changes in the

## CHART 3

Foreign Direct Investment Position in the United States, 2001: Parent-Country Shares

U.S. Bureau of Economic Analysis
position in 2000 and 2001 by type of capital flow and by valuation adjustment.

| [Billions of dollars] |  |  |
| :---: | ---: | ---: |
|  | 2000 | 2001 |
| Total...................................... | 258.5 | 106.8 |
| Capital inflows ................. | 300.9 | 124.4 |
| Equity capital..................... | 245.9 | 107.7 |
| Increases..................... | 267.1 | 125.5 |
| Decreases........................ | 21.2 | 17.8 |
| Intercompany debt.......... | 55.3 | 42.8 |
| Reinvested earnings......... | -0.3 | -26.1 |
| Valuation adjustments ......... | -42.4 | -17.6 |
| Currency translation ........ | -2.1 | -3.0 |
| Other............................... | -40.3 | -14.6 |

Capital inflows were $\$ 124.4$ billion in 2001 , less than half the $\$ 300.9$ billion recorded in 2000 . The largest contributor to total capital inflows was equity capital inflows, followed by intercompany debt. Total capital inflows were reduced by negative reinvested earnings.

Equity capital inflows were $\$ 107.7$ billion, down sharply from $\$ 245.9$ billion in 2000 . Equity capital increases were $\$ 125.5$ billion, and equity capital decreases were $\$ 17.8$ billion. Equity capital increases reflected both acquisitions of U.S. businesses by foreigners and contributions of equity to existing U.S. affiliates. The firms acquired were mostly in finance, petroleum, depository institutions, publishing (classified in "other" manufacturing) and broadcasting and telecommunications (classified in "other industries"). ${ }^{5}$ Equity capital decreases reflected selloffs of affiliates by, and returns of capital to, foreign direct investors (transactions that are reported as U.S. capital outflows).

Intercompany debt inflows were $\$ 42.8$ billion, down from the $\$ 55.3$ billion in 2000 . A substantial portion of intercompany debt represents U.S. affiliates' borrowing from their foreign parents to finance acquisitions. As the pace of acquisitions slowed in 2001, borrowing by existing U.S. affiliates decreased.

Capital inflows were reduced by reinvested earnings of $-\$ 26.1$ billion in 2001, compared with $-\$ 0.3$ billion in 2000. (Reinvested earnings are negative when affiliates incur losses or when they distribute earnings to their foreign parents in excess of the parents' share in their current earnings.) In 2001, U.S. affiliates earnings

[^11]shifted from profits of $\$ 32.4$ billion to losses of $\$ 6.7$ billion, primarily reflecting the economic slowdown in the United States. In addition, U.S. affiliates distributed earnings of $\$ 19.3$ billion to their foreign parents. The industries with the largest negative reinvested earnings, machinery and finance, were also the industries with the largest losses. Negative valuation adjustments also reduced the size of the increase in the position (see the box "Key Terms").

## Changes by area and by country

In 2001, affiliates with parents in Europe more than accounted for the increase in the FDIUS position. Within Europe, the changes in the positions of some countries were related to debt restructuring within foreign MNC's. As part of the restructuring, intercompany debt obligations were shifted from foreign parents to their foreign affiliates in other countries. ${ }^{6}$ These shifts had no impact on the overall FDIUS position, but they resulted in offsetting changes in the positions of the countries involved. The increase in the position of Switzerland accounted for about half of the increase in the total position of Europe. The next largest dollar increases were for parents in Germany, France, and the Netherlands. The position of parents in the United Kingdom increased by a relatively small amount, and the position of parents in Luxembourg decreased. Outside Europe, the position of parents in Latin America and Other Western Hemisphere increased by a small amount. In contrast, the positions of parents in Canada and in Asia and Pacific decreased. The decrease in Asia and Pacific was more than accounted for by the decrease in the position of parents in Japan.

The following table presents major changes in position from 2000 to 2001 by area and by country.

| [Billions of dollars] |  |
| :---: | :---: |
| All countries | 106.8 |
| Canada | -6.0 |
| Europe | 111.6 |
| Of which: |  |
| Switzerland ................................................ | 56.3 |
| Germany ................................................... | 27.9 |
| France. | 15.7 |
| Netherlands. | 11.5 |
| United Kingdom........................................ | 3.9 |
| Luxembourg.............................................. | -13.6 |
| Latin America and Other Western Hemisphere | 4.4 |
| Asia and Pacific | -3.6 |
| Of which: |  |
| Japan...................................................... | -4.6 |

The position of Switzerland increased 81 percent in 2001. This increase was largely the result of MNC's

[^12]debt restructuring, which shifted loans from their foreign parents in other countries to the Swiss affiliates of the foreign parents.

The position of Germany increased 22 percent. The increase was more than accounted for by "other industries" and reflected acquisitions of telecommunications firms. The position of France increased 12 percent. Most of this increase was in services, finance, and insurance. The increase in services was accounted for by acquisitions; the increase in finance was mostly accounted for by equity capital contributions from French parents and a step-up in affiliates' borrowing from their parents; and the increase in insurance was largely due to French parents' increasing ownership shares in their insurance affiliates. The position of the Netherlands increased 8 percent; the increase was more than accounted for by affiliates in services, insurance, and retail trade. The increases in services and retail trade were the result of acquisitions, and the increase in insurance resulted from several large loans from parents to their affiliates. The position of the United Kingdom increased 2 percent after increasing 39 percent in 2000, when an especially large acquisition occurred. The position of Luxembourg decreased 25 percent as a result of a shift in debt: Direct debt obligations to Luxembourg parents were shifted to become obligations to the Swiss affiliates of the parents. The reduction in the position of Luxembourg parents as a result of this shift more than offset increases due to acquisitions of companies in commercial lending, communications, and electronic machinery manufacturing. These acquisitions were by firms ultimately owned by investors in other countries. ${ }^{7}$

The position of Canada decreased 5 percent. This decrease was more than accounted for by negative reinvested earnings in machinery that resulted from a shift to losses for affiliates in this industry. The position of Japan decreased 3 percent, largely because of selloffs of affiliates in machinery and finance. ${ }^{8}$

[^13]Tables 2.1, 2.2, 3.1, and 3.2 follow.

# Annual Revision of the U.S. International Accounts, 1993-2001 

By Christopher L. Bach

$\mathrm{A}^{\mathrm{s}}$$S$ is customary each June, the estimates of U.S. international transactions and of the U.S. international investment position have been revised to incorporate statistical and methodological revisions. This year, like last year, several improvements have been implemented as part of continuing efforts by the Bureau of Economic Analysis (BEA) to address gaps in coverage. In large part, the gaps have arisen because of the dynamic nature of international markets. Estimates of international transactions are revised for 1995-2001, and estimates of the international investment positions are revised for 1993-2000.

This year, the most notable revisions are the following:

- In the international transactions accounts, net private foreign purchases of U.S. Treasury and other U.S. securities are revised down for every year. For 2001, the revision to net financial inflows for net private foreign purchases of these securities totals $\$ 114.2$ billion (from $\$ 514.2$ billion to a revised $\$ 400.0$ billion).
- In the international transactions accounts, U.S. Government and "other" private income payments are revised down. As a result, the shift from a positive to a negative balance on income in 1998 is eliminated, and the annual negative balances on income in 1999-2001 are also eliminated. The revision to the balance on income for 2001 is $\$ 33.5$ billion.
- In the international investment position accounts, the net position is less negative in every year in 1995-2000. The revision for 2000 to the net position is $\$ 491.9$ billion with direct investment valued at current cost (from $-\$ 1,842.7$ billion to a revised $-\$ 1,350.8$ billion). Nonetheless, the trend in the position continues in a strongly negative direction. In the newly published estimates, the position at yearend 2001 is $-\$ 1,948.1$ billion.

Patricia Abaroa assisted in the preparation of this article.

The statistical and methodological improvements made to the accounts this year mainly result from incorporating data from BEA and U.S. Treasury Department benchmark surveys:

- "Other" private services receipts and "other" private services payments are revised to incorporate results from BEA's Benchmark Survey of Selected Services for 2001. The survey primarily covers business, professional, and technical services.
- "Other" private income payments, U.S. Government income payments, net foreign purchases of U.S. Treasury securities, and net foreign purchases of securities other than U.S. Treasury securities are revised for 1995-2001 to incorporate results from the U.S. Treasury's Benchmark Survey of Foreign Portfolio Investment in the United States for March 2000. In addition, results from that survey led to revisions in the estimates of foreign yearend holdings of U.S. Treasury securities and of U.S. securities other than U.S. Treasury securities for 1995-2000.
The Treasury Department's benchmark survey is a once-every-5-year security-by-security enumeration, provided by custodians and issuers of securities, of foreign holdings of U.S. portfolio securities with an original maturity of more than 1 year. The survey results indicated a substantial overstatement in the previously published estimates of foreign holdings of U.S. long-

## Acknowledgments

The revised estimates were prepared under the general direction of Paul Farello, with the assistance of other staff of the Balance of Payments Division. Patricia Abaroa prepared the new estimates of U.S. Treasury and agency securities. Elena Nguyen prepared the new estimates of U.S. corporate bonds and stocks. The benchmark revision of selected services was prepared under the supervision of Christopher Emond of the International Investment Division.
term debt instruments, largely because redemptions and selected other types of transactions were bypassing the monthly Treasury Department's transactions reporting system. Several steps have been taken to address these weaknesses. In particular, BEA has adjusted its estimates to account for transactions that bypass the transactions reporting system. In addition, the Treasury Department has announced plans to introduce new annual surveys of foreign portfolio investment holdings in the United States (beginning in 2002) and of U.S. portfolio investment holdings abroad (beginning in 2003), and it is working to improve the coverage of its monthly surveys.

The newly available benchmark survey data, improved methodologies, and improved coverage of the accounts are discussed in the remaining sections of this article. In addition to these major changes, revisions to the transactions accounts result from the incorporation of regularly available data from BEA's annual and quarterly surveys, from the U.S. Treasury Department's and Federal Reserve System's quarterly and monthly surveys, and from other U.S. Government
agencies and private sources. These revisions affect the estimates for 1998-2001.

For 2001, as a result of all these changes, the cur-rent-account deficit is reduced $\$ 24.1$ billion, to $\$ 393.4$ billion (table 1). By account, goods exports are reduced $\$ 2.1$ billion and goods imports are reduced $\$ 1.5$ billion, resulting in a deficit that is $\$ 0.6$ billion higher than previously estimated. For services, services exports are reduced $\$ 4.5$ billion and services imports are increased $\$ 5.4$ billion, resulting in a surplus that is $\$ 9.9$ billion lower than previously estimated. For income, income receipts are reduced $\$ 10.0$ billion and income payments are reduced $\$ 43.5$ billion, resulting in a $\$ 33.5$ billion shift from a previously published deficit to a surplus. For net current unilateral transfers, $\$ 1.0$ billion in inflows is added, resulting in a decrease to net outflows for transfers of the same amount. Net financial account inflows are revised down $\$ 74.1$ billion, to $\$ 381.8$ billion. Details on revisions to individual series are shown in table 2.

For 2000, as a result of all these changes, the net international investment position with direct investment

at current cost is revised from a negative $\$ 1,842.7$ billion to a negative $\$ 1,350.8$ billion: U.S. assets abroad are revised from $\$ 6,167.2$ billion to $\$ 6,191.9$ billion, and foreign assets in the United States are revised from $\$ 8,009.9$ billion to $\$ 7,542.7$ billion. On an alternative valuation basis, the position with direct investment at market value is revised from a negative $\$ 2,187.4$ billion to a negative $\$ 1,583.2$ billion: U.S. assets abroad are revised from $\$ 7,189.8$ billion to $\$ 7,350.9$ billion, and for-
eign assets in the United States are revised from $\$ 9,377.2$ billion to $\$ 8,934.0$ billion. Details on revisions to individual series are shown in table 3.

## Benchmark survey and annual surveys of selected services

Each year, BEA's estimates of international services transactions are revised to incorporate updated and more complete source data. Most of the data are from

BEA's own surveys, but data are also from other government agencies, other countries, international organizations, private industry, and other sources.

This year, estimates of cross-border services transactions are revised to incorporate the preliminary results of BEA's Benchmark Survey of Selected Services Transactions with Unaffiliated Foreign Persons for 2001. This once-every-5-year benchmark survey of selected business, professional, technical, and other services includes computer and data processing services; database and other information services; legal services; management, consulting, and public relations services; operational leasing services; telecommunications services; and various other services. The benchmark survey provides a more detailed breakdown of certain types of services than is available from BEA's annual surveys. For example, for telecommunications services, the benchmark survey collects additional detail on message telephone services, private leased channel services, value-added services, and support services. In addition, the benchmark survey covers several smaller ser-
vices not covered in the annual surveys in order to reduce respondent burden; these services include agricultural services; mailing, reproduction, and commercial art services; employment agency and temporary help services; and management of health care facilities. Finally, the benchmark survey was redesigned to clarify that transactions related to e-commerce and transactions conducted by the Internet were to be reported. The survey was also updated to cover services that have become increasingly important in today's global market, such as auction services.

In 2001, revisions from the benchmark survey account for $\$ 75$ million of the $\$ 4.8$ billion downward revision to "other" private services receipts and for $\$ 1.8$ billion of the $\$ 4.3$ billion upward revision to "other" private services payments. BEA will publish the detailed results of the benchmark survey, along with results from its annual and quarterly services surveys, in its annual article on international services in the fall. That article will provide a picture of U.S. trade in services by type of service and by country from 1986

Table 3. Major Sources of Revisions, International Investment Position at Yearend, 1993-2001
[Millions of dollars]

[^14]Note: Line numbers reter to table 1 of the article on the U.S. international investment position in this issue of the Subver.
through 2001, as well as details on both cross-border trade and sales through affiliates. An article on measurement issues in BEA's cross-border and affiliated services estimates was published in the June 2002 issue of the Survey of Current Business. The article discussed measurement issues in a number of cross-border ser-vices-including insurance services and construction services-as well as measurement issues involving sales by affiliates.

In addition to revisions to the selected business, professional, technical, and other services transactions resulting from the benchmark survey, BEA's annual survey of insurance transactions indicated that sizable revisions to payments and receipts for 2001 were necessary despite already sizable adjustments incorporated into these accounts immediately after the events of September $11^{\text {th }}$. Premiums paid and received are revised, as are losses recovered and losses paid. On balance, net insurance payments are raised $\$ 3.6$ billion, and net insurance receipts are lowered $\$ 3.2$ billion, for 2001. BEA measures net insurance payments as premiums paid less losses recovered and net insurance receipts as premiums received less losses paid.

Results from BEA's annual survey of construction and related services led to downward revisions to "other" private services receipts. Receipts for these services are revised down $\$ 2.9$ billion for 2001.

## Benchmark survey of foreign portfolio investment in U.S. securities

BEA bases its estimates of transactions and positions in U.S. securities for the international transactions accounts and the international investment position accounts on two sets of source data-monthly transactions data and data from once-every-5-year benchmark surveys. The monthly transactions data, collected by the Treasury International Capital Reporting System, provide aggregate (or summary) data on foreign gross purchases and gross sales of U.S. securities with an original maturity of more than 1 year by type of security (that is, U.S. Treasury securities, U.S. agency securities, corporate bonds, and stocks), that are reported by banks, brokers, dealers, and other financial intermediaries. The data provide timely information on financial flows that are published quarterly in the international transactions accounts. The once-every-5-year benchmark surveys of foreign portfolio investment in the United States, also conducted by the Department of the Treasury, provide a security-by-security enumeration of foreign holdings of U.S. securities that are reported by custodians, subcustodians,
and issuers of securities. For the benchmark survey year, benchmark results are adjusted to reflect the yearend position and serve as the basis for successive annual estimates of the position until the next benchmark survey results are available. Both sets of source data have their imperfections, but the benchmark surveys are considered more reliable than the transactions data.

In order to link the two sets of source data and prepare annual position estimates between benchmark years, BEA extrapolates the benchmark position estimate by adjusting it for net foreign purchases of U.S. securities, as reported in the transactions reporting system, and adding BEA's estimates of valuation adjustments to the position. The latter adjustments arise from price changes, exchange-rate changes, and other statistical changes (primarily changes in coverage of the surveys). The process is repeated for each year.

When a new benchmark survey is completed, BEA compares its investment position estimates based on financial flows and valuation adjustments to the new benchmark survey data. Differences are then attributed to the financial flow data from the transactions reporting system or to BEA's valuation adjustments. In past benchmark years, BEA has assigned nearly all of the differences between the two estimates of the position to either the price change or the "change in statistical coverage" components of the investment position accounts, leaving data on financial flows as reported by the transactions reporting system little changed in both the international transactions accounts and international investment position accounts. However, the size and nature of the differences this year suggest that adjustments to the financial flow data are warranted.

The differences between the results from the Treasury Department's Benchmark Survey of Foreign Portfolio Investment in the United States for March $2000^{1}$ and BEA's previously estimated investment position for the same date are much larger, both in absolute and percentage terms, than in previous benchmark years. Overall, as of the March 2000 measurement date, BEA's investment position overestimated foreign holdings of U.S. securities by 9 percent, or $\$ 306$ billion. ${ }^{2}$ Foreign holdings of long-term U.S. Treasury securities were overestimated by 19 percent, or $\$ 171$ billion. Foreign

[^15]holdings of U.S. agency bonds were overestimated by 59 percent, or $\$ 154$ billion. Foreign holdings of U.S. corporate bonds were overestimated by 10 percent, or $\$ 73$ billion. In contrast, foreign holdings of U.S. stocks were underestimated by 5 percent, or $\$ 91$ billion.
U.S. Treasury securities. The BEA estimate of Treasury debt held by foreigners ${ }^{3}$ of $\$ 1,055$ billion in March 2000 exceeded the benchmark result of $\$ 884$ billion by $\$ 171$ billion, an overestimate of 19 percent. BEA attributes the difference both to the financial flow component of the investment position accounts and transactions accounts and to the "change in statistical coverage" component of the investment position accounts. The difference cannot be reasonably attributed to the price adjustment component of the investment position, because the cumulative price change since the 1994 benchmark was only $\$ 7$ billion out of a total net change of $\$ 591$ billion from December 1994 to March 2000, and BEA is confident in its price adjustment.

Federal Reserve Board economists, along with BEA economists, have identified several sources of inconsistency between the transactions data and the benchmark survey data. ${ }^{4}$ These inconsistencies include, in the transactions data, understatement of Treasury bond sales and redemptions, misreporting of repurchase agreements, misreporting of securities lending transactions, misreporting of the use of Treasury securities as collateral in futures transactions, and misclassification of domestic transactions as cross-border transactions (or vice versa). However, BEA lacks sufficient information to attribute the difference to any single cause or to assess the relative importance of the different causes.

The percentage difference between the BEA estimate and the March 2000 benchmark survey result is more than triple the percentage difference between the BEA estimate and the December 1994 benchmark survey result. The expansion in the difference is likely related to the rapid changes that occurred in financial markets between the two benchmark surveys, to rapid changes in market practices, to the explosion in the volume of financial transactions (including redemptions), to improved communications, and to falling transactions costs. Because it is not clear whether these changes led the transactions reporting system to understate gross sales, to overstate gross purchases, or to contain some

[^16]combination of both, BEA made the determination that about half of the difference would be attributed to the "change in statistical coverage" component in the investment position accounts. The other half of the difference required changes to the financial flow component of the transactions accounts and the investment position accounts. (In previous benchmark years, all of the difference between the estimated and benchmark positions was allocated to the "change in statistical coverage" component of the investment position accounts.) Adjustments to financial flows are allocated over 5 years, with smaller adjustments in earlier years and larger adjustments in more recent years. Financial flows in Treasury securities are revised $-\$ 8.0$ billion for 1995 and 1996, $-\$ 16.0$ billion for 1997, $-\$ 20.0$ billion for 1998, and $-\$ 24.0$ billion for each year of 1999-2001. ${ }^{5}$ BEA will continue to adjust financial flows in Treasury securities until results of the next benchmark survey are available.
U.S. agency bonds. The BEA estimate of U.S. agency debt held by foreigners of $\$ 415$ billion in March 2000 exceeded the benchmark estimate of $\$ 261$ billion by $\$ 154$ billion, an overestimate of 59 percent. BEA attributes the difference to the financial flow component of the investment position and transactions accounts and to the "change in statistical coverage" component of the investment position accounts. The difference is not attributable to the price change component in the investment position accounts, because the cumulative price change from December 1994 to March 2000 was only $\$ 4$ billion out of a total net change of $\$ 308$ billion, and BEA is confident in its price adjustment.

Difficulties in reporting agency debt transactions in the transactions reporting system are likely due to special characteristics of agency securities, which come in the form of mortgage-backed debt and straight debt. Mortgage-backed agency securities include a paydown of principal each month, and the securities may be redeemed prior to original maturity if the underlying mortgages are liquidated. Generally, the paydowns of principal and early redemptions should be recorded as sales, but there is no effective mechanism in the existing transactions reporting system to capture these paydowns and early redemptions. Straight debt agency securities also create problems for the transactions reporting system because of the way in which agency
5. Adjustments to financial flows in U.S. Treasury securities are applied to line 65 of table 1 of the standard presentation of the transactions accounts and line 37 of table 1 of the standard presentation of the investment position accounts. Foreign official flows in U.S. Treasury securities in the transactions accounts are unrevised.
bond issuers manage interest-rate risk. During periods when interest rates are high, much of the agency debt issued is in the form of callable bonds. When interest rates fall, issuers call in the callable debt and reissue it as straight debt at lower interest rates. Calls of agency bonds should be recorded as sales, but the transactions reporting system probably misses many of these sales because securities brokers and dealers are often not involved in the transactions. These characteristics suggest that much of the difference between BEA's estimates of foreign holdings of agency bonds and the benchmark survey results occurs during periods in which interest rates declined significantly and debt was being redeemed.

Using market data, BEA has developed a statistical series to adjust financial flows over the 5 -year period between benchmarks. Agency issuers publish quarterly reports on the amount of outstanding mortgagebacked debt liquidated each quarter as well as the amount of straight debt that is called or redeemed before maturity. By assuming that the paydown and redemption patterns of foreign agency bond holdings are similar to those of total agency debt holdings and by knowing the share of total holdings held by foreigners from the benchmark survey, BEA can use the data provided by issuers to estimate the amount of foreign holdings that are liquidated, called, or redeemed in a given quarter. This adjustment is then added to quarterly gross sales. BEA will continue to use the series to adjust agency bond transactions for liquidations and calls until results of the next benchmark survey are available.

Revisions to financial flows for liquidations and calls total -\$11.1 billion for 1995, increase for 1996 and 1997, and reach $-\$ 45.7$ billion for 1998, a year of low interest rates. The revisions are somewhat smaller for 1999 and 2000, but they balloon to $-\$ 57.7$ billion for 2001 when interest rates reached their lowest levels in decades. ${ }^{6}$ The revisions to agency bonds eliminated about 80 percent of the $\$ 154$ billion difference between the BEA position estimate and the benchmark survey. The rest of the difference, which could be attributed to many causes, was classified as a "change in statistical coverage" in the investment position accounts; no adjustment for this difference was made to the transactions accounts.

[^17]U.S. corporate bonds. The BEA estimate of corporate debt held by foreigners of $\$ 776$ billion in March 2000 exceeded the benchmark estimate of $\$ 703$ billion by $\$ 73$ billion, an overestimate of 10 percent. BEA attributes the error to the financial flow component of the investment position accounts and transactions accounts. The difference is not attributed to price and ex-change-rate adjustments, because the cumulative adjustments from December 1994 to March 2000 are only - $\$ 45$ billion out of a total net change of $\$ 500$ billion, and BEA is confident in its price and exchangerate adjustments.

Possible explanations for the overestimation of corporate debt holdings include an understatement of early redemptions and redemptions at maturity, understatement of prepayments of asset-backed debt, and misclassification of domestic transactions as cross-border transactions (or vice versa). Most of these difficulties would likely result in underreporting of gross foreign sales relative to gross foreign purchases.

Adjustments similar to those used for agency bonds are not possible, because the corporate bond market does not have the same degree of homogeneity as the agency market. Further, key market indicators are lacking. Consequently, BEA allocated the difference between the transactions-based estimate and the benchmark estimate over the 5 -year period from the previous benchmark to the current benchmark. Smaller adjustments are made in earlier years and larger adjustments in later years. Financial flows for corporate debt are revised $-\$ 8.0$ billion for 1995, $-\$ 12.0$ billion for 1996, $-\$ 16.0$ billion for 1997, $-\$ 16.1$ billion for 1998, and $-\$ 16.4$ billion each for 1999 , 2000 , and $2001 .{ }^{7}$ BEA will continue to adjust corporate debt flows until results of the next benchmark survey are available.

Stocks. In contrast to the overestimate of U.S. debt holdings, the BEA estimate of foreign holdings of U.S. stocks of $\$ 1,618$ billion in March 2000 underestimated the benchmark survey results of $\$ 1,709$ billion by $\$ 91$ billion, or 5 percent. The investment position estimate of stocks differs from that of debt securities because the price change is a much more important factor, accounting for about 75 percent of the total change between December 1994 and March 2000. Because the price change accounts for such a large share of the total change, the possibility for error in the price estimate for stocks is much greater than the possibility for error in the price estimate for debt. Therefore, BEA

[^18]attributes the difference, which is small in percentage terms, to the price adjustment in the investment position accounts and leaves financial flows as reported in the transactions reporting system in both the transactions accounts and the investment position accounts.
U.S. Government income payments and "other" private income payments. Two of the income accounts, U.S. Government income payments and "other" private income payments, have also been revised, based on information from the benchmark survey.

When the significant overstatements in the previously published estimates of foreign holdings of longterm debt instruments are restated to new, lower amounts, associated estimates of interest payments are also reduced. The lower (revised) position estimates for debt are multiplied by representative market yields to estimate revised interest payments. The yield methodologies associated with the interest estimates are not changed as a result of the benchmark survey. BEA will continue to base its estimates of interest payments on the restated investment positions until results from the next benchmark survey are available.

Payments of dividends on stocks are revised to take account of the understatement in position indicated by the benchmark survey and to incorporate a change in BEA's methodology for calculating valuation adjustments to stocks. Incorporation of benchmark survey results leads to slightly higher positions for 1995-2000, but for 2000 , the increase is more than offset by the effects of the methodological change. In the previous methodology, a quarterly average of the S\&P 500 index was used to adjust the position for changes in price. The new methodology uses end-of-quarter S\&P 500 values to adjust the position. The new methodology has relatively little effect on the positions for 1995-99, but it results in a significant downward revision for 2000. Associated dividend payments change little for 1995-2000. BEA will continue to base its estimates of dividend payments on the new positions and new methodology until results from the next benchmark survey are available.

Revisions to U.S. Government income payments reflect the downward revisions to interest payments on
U.S. Treasury securities and U.S. agency bonds. U.S. Government income payments are revised down $\$ 3.6$ billion for 1995; the downward revisions grow to $\$ 24.8$ billion for 2000 and $\$ 23.5$ billion for 2001.

Revisions to "other" private income payments reflect small downward revisions to dividend payments for many years and more sizable downward revisions to interest payments on corporate bonds. In total, "other" private income payments are revised down $\$ 0.5$ billion for 1995 ; the downward revisions grow to $\$ 5.8$ billion for 2000 and $\$ 6.8$ billion for 2001.

## Other improvements

Annual liabilities survey. An annual liabilities survey of foreign residents' holdings of U.S. securities, including selected money market instruments, as of June 2002 is being conducted by the U.S. Treasury Department. ${ }^{8}$ Major custodians and issuers of securities are being asked to provide a security-by-security enumeration of foreign holdings of U.S. debt and equity instruments and of selected money market instruments. The sample survey results will be expanded to universe estimates based on results from the March 2000 benchmark survey. The liabilities surveys will be conducted annually except in every fifth year, when a full-scale benchmark survey will be conducted. More frequent information about foreign holdings of U.S. securities will enable BEA to avoid large differences that accumulate between infrequent benchmark surveys and to improve both the international transactions accounts and the international position accounts. The U.S. Treasury Department has also committed to conducting annual portfolio investment asset surveys that will be similar to the annual portfolio investment liabilities surveys.
U.S. direct investment abroad at market value. The estimates of U.S. direct investment abroad at market value for 1993-2000 have been revised to incorporate improved source data that more accurately revalue a portion of transactions to yearend amounts. The impact of this revision is smaller in earlier years and larger in later years.

[^19]
# U.S. International Transactions, First Quarter 2002 

By Douglas B. Weinberg

The estimates presented in this article reflect an annual revision of the international transactions accounts. For more information, see "Annual Revision of the U.S. International Accounts, 1993-2001" in this issue.

THE U.S. current-account deficit-the combined balances on trade in goods and services, income, and unilateral current transfers-increased to $\$ 112.5$ billion in the first quarter of 2002 from $\$ 95.1$ billion (revised) in the fourth quarter of 2001 (table A, chart 1). ${ }^{1}$ The deficit on goods increased, as imports increased and exports decreased, and the surplus on services decreased, as services payments increased more than services receipts. The balance on income shifted to a deficit from a surplus, and net outflows for unilateral current transfers increased.

In the financial account, net recorded financial in-flows-net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad-were $\$ 99.4$ billion in the first quarter, down from $\$ 150.7$ billion (revised) in the fourth. Financial inflows for foreign-owned assets in the

[^20]United States decreased more than financial outflows for U.S.-owned assets abroad.

The statistical discrepancy-errors and omissions in recorded transactions-was a positive $\$ 12.9$ billion in the first quarter, in contrast to a negative $\$ 55.8$ billion in the fourth.

The following are highlights for the first quarter of 2002:

- Goods imports increased after decreasing sharply in each of the previous four quarters; goods exports decreased for the sixth consecutive quarter.
- Services imports and exports were boosted by a rebound in international travel, but travel payments and receipts remained well below year-earlier levels.
- Net foreign purchases of U.S. securities slowed sharply from strong net foreign purchases in the fourth quarter.
- U.S. claims and liabilities reported by U.S. banks both decreased after increasing strongly in the fourth quarter.

Table A. Summary of U.S. International Transactions
[Millions of dollars, quarters seasonally adjusted]

## U.S. dollar in exchange markets

In the first quarter, the U.S. dollar appreciated 3 percent on a nominal, trade-weighted quarterly average basis against the group of seven major currencies that are widely traded in international markets (table B, chart 2). The U.S. dollar appreciated 2 percent against the euro and 7 percent against the Japanese yen.

The dollar appreciated amid indications that the U.S. economic downturn had ended. Economic reports released during the first quarter indicated that U.S. economic activity was recovering more quickly and more strongly than previously expected. As the quarter progressed, prices in U.S. financial markets began to reflect the improved economic prospects, including a rebound in U.S. stock market prices in March. U.S. monetary authorities left the target level for the Federal funds rate unchanged, but they did shift

## CHART 1

## U.S. Current-Account Balance and Its Components

U.S. Bureau of Economic Analysis
to an assessment that the risks to sustainable economic growth had fallen and were now equally balanced with the risks to price stability.

Economic reports suggested that the euro-area economy might also be improving. Mid-quarter releases of the German Business Climate Index and the euro-area Purchasing Manager's Index were stronger than expected, contributing to appreciation of the euro against the dollar in the second half of the quarter. The European Central Bank left its rate on refinancing operations unchanged.

After appreciating sharply against the Japanese yen at the end of 2001, the dollar appreciated further against the yen through most of the first quarter. (The dollar fluctuated widely against the yen in March but was little changed by the end of the month.) In the first quarter, Japanese economic conditions changed little, and concerns mounted about the health of the Japanese financial sector as the end of Japan's fiscal year on March 31 approached. Japanese financial asset prices fell sharply in the first half of the quarter, but they rebounded in the second half when the Japanese Government announced several measures that were supportive of the financial sector.

## CHART 2

Nominal Indexes of Foreign Currency Price of the U.S. Dollar

Note.-See table B for definitions of the indexes. Monthly average rates.
Data: Federal Reseve Board. Indexes rebased by BEA.
U.S. Bureau of Economic Analysis

The U.S. dollar appreciated 1 percent against both the Canadian dollar and the British pound, and it depreciated 1 percent against the Mexican peso and 7 percent against the Brazilian real. The dollar appreciated sharply against the Argentine peso after the Argentine Government adopted a floating exchange-rate policy in early January, following several months of economic and financial crisis.

## Current Account

## Goods and services

The deficit on goods and services increased to $\$ 94.9$ billion in the first quarter from $\$ 88.0$ billion in the fourth. The deficit on goods increased, and the surplus on services decreased.

## Goods

The deficit on goods increased $\$ 5.8$ billion, to $\$ 106.4$ billion, in the first quarter after decreasing in the previous four quarters. Imports increased after falling sharply in recent quarters, and exports continued to decline.

Exports. Exports decreased $\$ 2.7$ billion, or 2 percent, to $\$ 164.6$ billion in the first quarter. Real exports decreased 1 percent, and export prices decreased less than 1 percent (table C). ${ }^{2}$ The decrease in value was the sixth consecutive quarterly decrease, but it was substantially smaller than the decreases in the previous
2. Quantity (real) estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters. Real estimates are expressed as chained (1996) dollars. Price indexes ( $1996=100$ ) are also calculated using a chain-type Fisher formula.
three quarters.
In the first quarter, exports of most major end-use commodities decreased in value. A $\$ 1.1$ billion decrease in capital goods was largely attributable to a continued decline in computers, peripherals, and parts; the first-quarter decrease mostly reflected a drop in shipments to Western Europe, where spending for information technology had weakened. Most other types of machinery also declined, though generally by smaller amounts than in the fourth quarter. In con-

## Revisions to the Estimates

Estimates presented in this article reflect an annual revision of the international transactions accounts, which incorporates methodological and statistical improvements and newly available source data. The estimates for goods have been revised for 1999-2001, the estimates for services have been revised for 19982001, and the estimates for income and financial flows have been revised for 1995-2001. For more information, see "Annual Revision of the U.S. International Accounts, 1993-2001" in this issue.
For the fourth quarter of 2001, the current-account deficit was revised to $\$ 95.1$ billion from $\$ 98.8$ billion. The goods deficit was virtually unrevised at $\$ 100.7$ billion, the services surplus was revised to $\$ 12.6$ billion from $\$ 17.5$ billion, the balance on income was revised to a surplus of $\$ 6.5$ billion from a deficit of $\$ 1.7$ billion, and unilateral current transfers were revised to net outflows of $\$ 13.6$ billion from net outflows of $\$ 13.9$ billion. Net recorded financial inflows were revised to $\$ 150.7$ billion from $\$ 157.3$ billion.

trast, semiconductors increased, following substantial declines in the previous five quarters; the first-quarter increase reflected a rise in worldwide sales of semiconductors and an apparent end to inventory liquidation. Civilian aircraft, engines, and parts increased for the first time in four quarters.

Consumer goods decreased $\$ 0.6$ billion, reflecting declines in durable and nondurable goods; the largest decrease was in medical, dental, and pharmaceutical preparations. Nonagricultural industrial supplies and materials decreased $\$ 0.5$ billion, mostly as a result of declines in petroleum and products and in paper and related products; chemicals increased after dropping for five consecutive quarters. Agricultural products decreased $\$ 0.2$ billion, as both meat products and soybeans fell. Automotive products edged lower; a rebound in exports to Canada was more than offset by a drop in exports to other areas to the lowest level since the fourth quarter of 1999.

Imports. Imports increased $\$ 3.1$ billion, or 1 percent, to $\$ 271.1$ billion in the first quarter, following sizable declines in the previous four quarters. Real imports increased 2 percent, and import prices decreased 1 percent (table C). In value, an increase in nonpetroleum products more than offset a decrease in petroleum products.

Nonpetroleum products increased $\$ 4.1$ billion, or 2 percent, reflecting increases in all major end-use commodities. Consumer goods increased $\$ 1.7$ billion, largely as a result of a rise in durable goods, such as televisions and video receivers, household and kitchen appliances, and toys and sporting goods. Capital goods increased $\$ 1.3$ billion after falling for five consecutive quarters. The first-quarter increase was more than ac-
counted for by a step-up in high-tech equipment, particularly computers, peripherals, and parts, largely reflecting strengthened U.S. business investment in these products. Civilian aircraft fell sharply from a high level, and several other major capital goods commodities also decreased. Automotive products increased $\$ 0.7$ billion; the increase was mostly accounted for by passenger cars and parts from Canada. Nonpetroleum industrial supplies and materials changed little as a result of large offsetting changes in a few major commodities.

Petroleum and products decreased \$1.1 billion, or 5 percent, the sixth consecutive quarterly decline. The first-quarter decrease was more than accounted for by a drop in the average number of barrels imported daily, to 11.44 million from 12.07 million in the fourth quarter. The average price per barrel increased slightly to $\$ 18.40$ from $\$ 18.32$.

Balances by area. The goods deficit with Latin American countries increased $\$ 4.2$ billion- $\$ 2.7$ billion with Mexico-mostly resulting from a decline in exports. ${ }^{3}$ The deficit with Canada increased $\$ 3.1$ billion as a result of an increase in imports, and the deficit with Germany increased $\$ 0.6$ billion. In contrast, the deficit with China, the largest deficit with any country, decreased $\$ 1.2$ billion because of a decline in imports.

[^22]
## Services

The surplus on services decreased $\$ 1.1$ billion, to $\$ 11.6$ billion, in the first quarter. Receipts increased to $\$ 69.0$ billion from $\$ 65.6$ billion, and payments increased to $\$ 57.4$ billion from $\$ 52.9$ billion.

Travel receipts increased to $\$ 17.2$ billion from $\$ 14.7$ billion, and travel payments increased to $\$ 14.7$ billion from $\$ 12.9$ billion. The sharp increases were largely attributable to a rise in overseas travel by U.S. and foreign residents, which had fallen sharply after the September $11^{\text {th }}$ terrorist attacks. However, overseas travel, as well as travel between the United States and both Canada and Mexico, remained well below yearearlier levels.

Passenger fare receipts increased to $\$ 4.2$ billion from $\$ 3.6$ billion, and passenger fare payments increased to $\$ 5.1$ billion from $\$ 4.5$ billion. The increases were mostly attributable to an increase in the number of international travelers.
"Other" transportation receipts and payments were virtually unchanged and remained substantially below their peak levels of a year and a half ago. Receipts were virtually unchanged at $\$ 6.7$ billion. Port services edged slightly higher, as an increase in air port services, reflecting a rebound in the number of foreign visitors to the United States, was largely offset by a decrease in ocean port services, resulting mostly from a decline in the volume of U.S. exports transported by foreign-operated vessels. "Other" transportation payments were virtually unchanged at $\$ 9.0$ billion. Increases in air freight and in air port services were offset by decreases in ocean freight and ocean port services.

Receipts for "other" private services were virtually unchanged at $\$ 27.6$ billion. An increase in unaffiliated services, resulting from increases in all major services categories, was offset by a decrease in affiliated services. Payments for "other" private services increased to a record $\$ 18.7$ billion from $\$ 17.4$ billion. Net insurance payments increased strongly as a result of a sizable increase in premiums paid to reinsurance companies abroad. Most other unaffiliated services increased by small amounts, and affiliated services decreased.

## Income

The balance on income shifted to a deficit of $\$ 1.8$ billion in the first quarter from a surplus of $\$ 6.5$ billion in the fourth. Income receipts decreased to $\$ 57.7$ billion from $\$ 58.7$ billion, and income payments increased to $\$ 59.5$ billion from $\$ 52.2$ billion.

Receipts of income on U.S. direct investment abroad increased to $\$ 28.1$ billion from $\$ 27.4$ billion (chart 3). Earnings increased modestly after decreasing for four consecutive quarters. (The recent weakness in earnings
was attributable to weak economic conditions abroad and to the appreciation of the U.S. dollar, which reduced the value of foreign currency earnings when translated into U.S. dollars.) The first-quarter increase in earnings was largely attributable to financial affiliates (investment banks, brokers and dealers, and insurance affiliates), though their earnings remained substantially below year-earlier levels. Earnings of manufacturing affiliates and of petroleum affiliates continued to decrease.

Income on foreign direct investment in the United States shifted to profits of $\$ 7.2$ billion from losses of $\$ 1.2$ billion. The shift was attributable to a rebound in earnings to small profits from record losses. Earnings of financial affiliates improved the most. Losses by manufacturing affiliates decreased, largely reflecting

smaller losses by "other" manufacturing affiliates and stronger profits by chemical affiliates. Earnings of petroleum affiliates shifted to small profits from small losses.
"Other" private income receipts decreased to $\$ 28.2$ billion from $\$ 29.7$ billion (chart 3 ). Since the fourth quarter of 2000 , income receipts have fallen 45 percent as a result of declines in average yields, reflecting the weakening of foreign demand for short-term credit and the easing of monetary policies in major foreign countries (however, monetary policies in most foreign countries were unchanged in the first quarter of 2002). In the first quarter of 2002, decreases in receipts on bank and nonbank claims, mostly reflecting lower average yields, more than offset an increase in receipts on U.S. holdings of foreign securities.
"Other" private income payments decreased to $\$ 31.5$ billion from $\$ 32.2$ billion. ${ }^{4}$ Since the fourth quarter of 2000 , income payments have fallen 34 percent as a result of declines in average yields, reflecting the weakening of U.S. demand for short-term credit and the easing of monetary policy in the United States (however, monetary policy in the United States was unchanged in the first quarter of 2002). In the first quarter of 2002, decreases in payments on bank and nonbank liabilities, reflecting lower average yields, more than offset an increase in payments on foreign holdings of U.S. securities.
U.S. Government income receipts decreased to $\$ 0.8$ billion from $\$ 1.0$ billion, and U.S. Government income payments decreased to $\$ 18.5$ billion from $\$ 19.0$ billion.

## Unilateral current transfers

Unilateral current transfers were net outflows of \$15.9 billion in the first quarter, up from net outflows of $\$ 13.6$ billion in the fourth. The increase was largely accounted for by an increase in U.S. Government grants that resulted from the annual disbursement of funds to Israel and Egypt under the credit waiver program to finance military purchases and for general economic support.

## Capital Account

Capital account transactions were virtually unchanged at net inflows of $\$ 0.2$ billion in the first quarter.

## Financial Account

Net recorded financial inflows-net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad-were

[^23]$\$ 99.4$ billion in the first quarter, down from $\$ 150.7$ billion (revised) in the fourth. Financial inflows for for-eign-owned assets in the United States decreased more than financial outflows for U.S.-owned assets abroad.

## U.S.-owned assets abroad

Net U.S.-owned assets abroad increased $\$ 13.9$ billion in the first quarter, following an increase of $\$ 100.1$ billion in the fourth. The slowdown was more than accounted for by a shift in U.S. claims on foreigners reported by banks to a decrease in the first quarter from a large increase in the fourth, a shift to net U.S. sales of foreign securities from net U.S. purchases, and a decrease in net outflows for U.S. direct investment abroad. In contrast, U.S. claims on foreigners reported by nonbanks increased in the first quarter after decreasing in the fourth.
U.S. official reserve assets. U.S. official reserve assets decreased $\$ 0.4$ billion in the first quarter, in contrast to an increase of $\$ 0.2$ billion in the fourth (table D). The first-quarter decrease was more than accounted for by a decrease in the U.S. reserve position in the International Monetary Fund (IMF), reflecting net payments of U.S. dollars to the IMF by foreign countries.

Claims reported by banks and by nonbanks. U.S. claims on foreigners reported by U.S. banks decreased $\$ 10.0$ billion in the first quarter, in contrast to a large increase of $\$ 83.7$ billion in the fourth (chart 4). Banks' own claims increased much less in the first quarter than in the fourth, and banks' domestic customers' claims decreased after an increase.

Banks' own claims payable in dollars decreased \$1.2 billion, in contrast to an increase of $\$ 48.0$ billion. The first-quarter decrease, the second in three quarters, reflected unsteady foreign demand for U.S. bank credit, resulting from continued weakness abroad in overall economic activity, in merger and acquisition activity, and in syndicated lending. In addition, a rise in loan defaults, as well as presumed losses by a few banks on transactions with a large U.S. energy trading company, may have contributed to banks' greater risk aversion in lending. In the first quarter, claims of U.S.-owned banks decreased, largely reflecting the repayment of funds by branches in the Caribbean, and claims of for-eign-owned banks in the United States increased moderately.

Banks' domestic customers' claims payable in dollars decreased $\$ 12.3$ billion, in contrast to an increase of $\$ 30.5$ billion. The first-quarter decrease was attributable to decreases in all types of customers' claims. The largest decrease was in dollar deposits abroad, which had increased strongly in the fourth quarter.

Claims reported by U.S. nonbanking concerns in-
creased 54.0 billion, in contrast to a decrease of $\$ 37.2$ billion. The first-quarter increase was more than ac counted for by an increase in nonbank financial intermediaries' claims.

Foreign securities. Transactions in foreign securities shifted to net U.S. sales of $\$ 2.0$ billion in the first quarter from net U.S. purchases of $\$ 26.1$ billion in the fourth. Transactions in foreign stocks shifted to net U.S. sales of $\$ 1.5$ billion from net U.S. purchases of $\$ 18.7$ billion, and transactions in foreign bonds shifted to net U.S. sales of $\$ 0.6$ billion from net U.S. purchases of $\$ 7.4$ billion.

The shift to net U.S. sales of foreign stocks was largely accounted for by transactions unrelated to mergers and acquisitions; exchanges of stock resulting from foreign acquisitions of U.S. companies decreased modestly to a small amount. After rising strongly in the fourth quarter, stock prices in most European countries and in Canada rose moderately or declined in the first quarter. Nonmerger-related transactions with most European countries shifted to net U.S. sales, including transactions with the United Kingdom, where stocks of many foreign countries are traded. Net U.S. sales to Canada increased. Transactions with Japan shifted to net U.S. sales, as Japanese stock prices were volatile. In contrast, transactions with Latin America shifted to net U.S. purchases, partly in response to strong stock price increases in a few Latin American countries.

In bond transactions, new foreign issues in the United States decreased, and transactions in outstanding foreign bonds shifted to net U.S. sales from net U.S. purchases. New issues in the United States by foreign private corporations fell sharply, partly reflecting U.S. investors' increased cautiousness in the wake of several high-profile U.S. corporate bankruptcies. The shift to net U.S. sales of outstanding foreign bonds was accounted for by a shift to net U.S. sales to Western Europe that partly resulted from a decline in Western European corporate bond prices.

Direct investment. Net financial outflows for U.S. direct investment abroad were $\$ 22.5$ billion in the first
quarter, down from $\$ 27.5$ billion in the fourth. The decrease was attributable to a decrease in net equity capital outflows and an increase in net intercompany debt inflows. Reinvested earnings changed little. The drop in net equity capital outflows partly reflected a few large U.S. sales of existing foreign affiliates. U.S. acquisitions of foreign companies increased slightly.

## CHART 4

Financial Flows

Table D. Selected Transactions with Official Agencies
[Millions of dollars]

## Foreign-owned assets in the United States

Net foreign-owned assets in the United States increased $\$ 113.3$ billion in the first quarter, following an increase of $\$ 250.8$ billion in the fourth. The slowdown was more than accounted for by the following: U.S. liabilities to foreigners reported by banks shifted to a decrease from a large increase, transactions in U.S. Treasury securities shifted to net foreign sales from net foreign purchases, and net foreign purchases of U.S. securities other than U.S. Treasury securities slowed. In contrast, U.S. liabilities to foreigners reported by nonbanks increased more in the first quarter than in the fourth, and net inflows for foreign direct investment in the United States increased.

Foreign official assets. Foreign official assets in the United States increased $\$ 9.0$ billion in the first quarter, following an increase of $\$ 5.1$ billion in the fourth (table D). The first-quarter increase was more than accounted for by increases in assets of non-OPEC developing countries and of industrial countries. Assets of OPEC members decreased.

Liabilities reported by banks and by nonbanks. U.S. liabilities to foreigners reported by U.S. banks, excluding U.S. Treasury securities, decreased $\$ 25.3$ billion in the first quarter, in contrast to an increase of $\$ 85.6$ billion in the fourth (chart 4). Banks' own liabilities decreased in the first quarter after increasing strongly in the fourth quarter, and banks' custody liabilities also decreased after an increase.

Banks' own liabilities payable in dollars decreased $\$ 21.2$ billion in the first quarter, in contrast to an increase of $\$ 78.9$ billion in the fourth. The first-quarter decrease, the second in three quarters, reflected unsteady U.S. bank demand for foreign funds, partly resulting from continued weakness in U.S. fixed investment. The decrease was also partly attributable to a cutback in international lending by U.S. banks and to the availability of adequate liquidity from U.S. sources. U.S.-owned banks' liabilities decreased sharply after increasing sharply, as U.S.-parent offices repaid previously borrowed funds to offices in Caribbean financial centers and in Western Europe. In contrast, foreign-owned banks' liabilities increased, largely as a result of borrowing by Japanese-owned branches in the United States.

Banks' custody liabilities payable in dollars decreased $\$ 5.5$ billion, in contrast to an increase of $\$ 6.4$ billion. Liabilities reported by U.S. nonbanking concerns increased $\$ 34.7$ billion, following an increase of $\$ 1.2$ billion. The first-quarter increase partly reflected an increase in nonbank financial intermediaries' liabilities.
U.S. Treasury securities. Transactions in U.S. Treasury securities shifted to net foreign sales of $\$ 5.7$ bil-
lion in the first quarter from net foreign purchases of $\$ 27.2$ billion in the fourth. U.S. Treasury security prices were higher through late February; thereafter, indications that U.S. economic activity was recovering more quickly and more robustly than previously expected caused U.S. bond prices to decline. Net foreign sales of U.S. Treasury securities were concentrated in January, when some foreign investors may have sold securities that were acquired in the fourth quarter.

Other U.S. securities. Net foreign purchases of U.S. securities other than U.S. Treasury securities were $\$ 70.3$ billion in the first quarter, down from $\$ 99.3$ billion in the fourth. Net foreign purchases of U.S. corporate and other bonds were $\$ 45.4$ billion, down from $\$ 66.3$ billion, and net foreign purchases of U.S. stocks were $\$ 25.0$ billion, down from $\$ 33.0$ billion.

The decrease in net foreign purchases of U.S. bonds was attributable to a decline in net foreign purchases of U.S. agency bonds. Net foreign purchases of agency bonds were especially weak in January but picked up considerably by March. In contrast, new issues sold abroad by U.S. corporations were the strongest in more than a year. Highly rated U.S. borrowers sought to lock in low interest rates as the apparent strengthening of U.S. economic activity portended a possible increase in future borrowing costs. Net foreign purchases of other outstanding bonds decreased, as U.S. corporate bond prices were affected by several high-profile bankruptcies and ratings downgrades.

The slowdown in net foreign purchases of U.S. stocks partly reflected the much weaker performance of U.S. stock prices in the first quarter than in the

## Data Availability

Interactive access to the estimates that are presented in tables 1-10a of the U.S. international transactions accounts is available on BEA's Web site at <www.bea.gov>. You may view the most recent quarterly estimates (annual estimates for table 10a) for an entire table with a single mouse click, or you may select the period, frequency, and line items that you wish to view. The estimates are available as an HTML table or as comma-separated values that can be downloaded and imported into a spreadsheet or database.
The current and historical estimates in tables 1-10a are also available as compressed files on BEA's Web site; click on "Catalog of Products," and look under "International Accounts Products," "Balance of Payments."

The estimates are also available on diskettes. For more information, call BEA's Order Desk at 1-800-704-0415 (outside the United States, call 202-6069666).
fourth. Early in the first quarter, concerns about corporate accounting practices contributed to declines in U.S. stock prices. However as the quarter progressed, increasing indications that U.S. economic activity was improving boosted stock prices. By quarter's end, the S\&P 500 stock price index was unchanged from the start of the quarter, the Dow Jones Industrial Average Index was 4 percent higher, and the NASDAQ Composite Index was 5 percent lower.
U.S. currency flows. Net U.S. currency shipments to foreigners were $\$ 4.5$ billion in the first quarter, down from $\$ 10.5$ billion in the fourth. Shipments to Argentina fell sharply as the Argentine Government adopted a floating exchange rate policy and instituted other measures in an attempt to stabilize the country's financial and economic situation.

Direct investment. Net financial inflows for foreign direct investment in the United States were $\$ 25.7$ billion in the first quarter, up from $\$ 21.9$ billion in the fourth. A decrease in net equity capital inflows was more than offset by an increase in net intercompany debt inflows and by less negative reinvested earnings. After slowing sharply in 2001, net equity capital inflows remained sluggish in the first quarter of 2002, reflecting the downturn in foreign acquisitions of U.S. companies. Net intercompany debt inflows were boosted by a rise in debt inflows to manufacturing affiliates. A shift in earnings to small profits from substantial losses caused reinvested earnings to become less negative.

Tables 1 through 10a follow.

## Footnotes to U.S. International Transactions Tables 1-10A

General notes for all tables: $P$ Preliminary. 'Revised. 'Less than $\$ 500,000(+/-)^{1 /}$ Suppressed to avoid disclosure of data of individual companies.
Table 1:

1. Credits + : Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows-increase in foreign-owned assets (U.S. liabilities) or crease in U.S. -owned assets (U.S. claims)
Debits,-: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital accounts transactions payments; financial outflows-decrease in foreign-owned assets (U.S. hiabilities) or increas
2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, ex cludes imports of goods under direct defense expenditures identified in Census import documents, and reflects var ious other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2.
3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and pe troleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steam ship operators in lines 8 and 25
4. Includes transfers of goods and services under U.S. military grant programs.
5. Beginning in 1982, these lines are presented on a gross basis. The definition on
6. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of foreign parents.
f. Beginning in 1982 , the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government
7. At the present time, all U.S. Treasury-owned gold is held in the United States.
8. Includes sales of foreign obligations to foreigners.
9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 4 .
12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments. Conceptually, line 76 is equal to "net foreign investment" in the national income and product account (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the internation transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financia pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table $2 i$ appendix A in this issue of the SURVEY OF CURRENT Business. A reconciliation of the other foreign transactions in th two sets of accounts appears in table 4.5 of the fall set of NIPA tables
Addjitional footnotes for historical data in July issues of the Surver:
13. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 SURVEY, p. 27.
14. For 1978-83, includes foreign currency-denominated notes sold to private residents abroad. 16. Break in series. See Technical Notes in the June 1989-90, 1992-95, and July 1996-2001 issues of the Survey. Table 2:
15. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 Surver), except for 1974-81, when they represent transactions values, f.a.s. foreign port of exportation (see July issues of the Survey for historical data).
From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" monthly data supplied by the Census Bureau (see Technical Notes in the December 1985 SurVEY).
Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The sea1980 Survey in the June 1988 Surver and in the June five-digit end-use categories (see technical Notes in the June 1980 SURVEY, in the June 1988 Surver, and in the June 1991 Surver). Prior to 1983 , annual data are as published by Virgin Islands and foreign countries.
16. Adjustments in lines A5 and A13, B12, B48, and B84 reflect the Census Bureau's reconciliation of discrepancie between the goods statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates fo sis data shown in line A1.
sis data shown in line A1.
17. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6) and direct imports by he Department of Defense and the Coast Guard (ine A1 4), to the extert such agency sales contracts); the imports are included in tables 1 and 10 , line 22 (direct defense expenditures)
18. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale $n$ stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipment were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipmen shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also in cludes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975-82, net timing adjust ments for goods recorded in
the Surver for historical data)
19. Coverage adjustments for special situations in which shipments were omitted from Census data; the deduction of the value of repairs and alterations to U.S.-owned equipment shipped abroad for repair: and the adjustment of software imports to market value. Also includes addition of understatement of inland freight in f.a.s. values of U.S imports of goods from Canada in 1974-81; deduction of imports from the Panama Canal Zone before October 1979; and for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the Suvver for historical data)
20. For 1988-89, correction for the understatement of crude petroleum imports from Canada.
21. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10 , lines 3 and 20. Trade with international organizations includes purchases of nonmonetary gold from the Internationa oranda are defined as follows. Industrial countries Western Europe Canada, Japan Australia, New Zealand and South Africa; Members of OPEC: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emir ates, Indonesia, Algeria, Libya, Nigeria, and Gabon (Excludes Ecuador beginning in January 1993 and Gabon begin ning in lanuary 1995.); Other countries. Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for som balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates. For all years, "Asia" and "Africa" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."
22. Includes the former German Democratic Republic (East Germany) beginning in fourth quarter of 1990. In earlier periods, the German Democratic Republic was included in Eastern Europe.
23. Beginning in 1986, New Zealand and South Africa are included in "Othe
24. Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with 10. The "Euro area" which formed in lanuary 1999, includes Austria.
25. The "Euro area," which formed in January 1999, includes Austria, Belgium, Finland, France, Germany, Ire Table 3:
26. Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.
27. Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises rights to broadcast live events, software licensing fees, and other intangible property rights.
28. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and international organizations in the United States and film and television tape rentals. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.
Table 4:
29. Expenditures to release foreign governments from their contractual liabilities to pay for militaryl goods and services purchased through military sales contracts-first authorized (for israel) under Public Law 93-199, section 4 angainst these military sales contracts are included in line C10; see footnote 2 . Of the line A4 items, part of these mil itary expenditures is applied in lines A43 and A46 to reduce short-term assets previously recorded in lines A41 and C ; this application of funds is excluded from lines C 3 and C 4 . A second part of line A 4 expenditures finances fu-
ture deliveries under military sales contracts for the recipient countries and is applied directly to lines A42 and C9. A third part of line A4, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A37. A fourth part of hine A4, representing dollars paid to the recipient countries to inance purchases from countries other than the United States, is included in line A48.
30. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial supphiers are not included as transactions under military saies conracs. The enties for the several categories of t
31. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency
32. Line A38 includes foreign currency collected as interest and line A43 includes foreign currency collected as principal, as recorded in lines A16 and A17, respectively.
33. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contraentry for the part of line C 10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.
34. Includes purchases of loans from U.S. banks an
35. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs

## oluded in line C 2.

Table 5:

1. Beginning with 1991, payments and receipts of interest related to interest rate and foreign currency swaps between affiliates and parents are netted and are shown as either net payments or net receipts. Receipts and payments of other types of interest are shown on a gross basis.
2. Petroleum includes, and manufacturing and "other" industries exclude, the exploration, development, and production of crude oil and gas, and the transportation, refining, and marketing of petroleum products, exclusive of petrochemicals. "Other" industries includes wholesale trade; banking; finance (except banking), insurance, and real state; services; and other industries-agriculture, forestry, and fishing; mining construction; transportation, communication, and public utilities; and retail trade.
3. Acquisition of equity holdings in existing and newly established companies, capital contributions, capitalization 4. Sales (total and partial), liquidations, returns of capital contributions, and other dispositions of equity holdings. Table 6:
4. Primarily provincial, regional, and municipal.
5. Largely transactions by International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and InterAmerican Development Bank (IDB).
6. Estimate for scheduled redemptions and identifiable early retirements. Includes estimates based on Canadian statistics for redemptions of Canadian issues held in the United States. Unidentified and nonscheduled retirements appear in 1
Table 7 :
7. Estimates of transactions other than those with U.S. banks' Caribbean branches and with financial intermediaries (FI.s) are not available. Preliminary estimates of transactions with E.l.s, by area, are commingled in "other" to avoid disclosure of individual companies' area data. (line A7) for some countries due to the commingling of these
8. Deposits (line A5) include other financial claims (line ategories in foreign source data.
9. Primarily mortgages, loans, and bills and notes drawn on foreigners,
10. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
11. Bahamas, British West Indies (Cayman Islands), Netherlands Antilies, and Panama
12. Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Excludes Ecuador beginning in Jan
Table 8:
13. Includes central governments and their agencies and corporations; state, provincial, and local governments and heir agencies and corporations; and international and regional organizations.
14. U.S.-owned banks are mainly U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers are identified separately beginning with the first quarter of 1997; prior to 1997, they are commingled with U.S.-owned banks' accounts.
15. Commercial paper issued in the U.S. market by foreign incorporated entities; excludes commercial paper issued hrough forcign direct investment affiliates in the United States.
16. Negotiable and readily transferable instruments other than commercial paper, payable in dollars; consists largely 5. Western Europe Canad deposit.
17. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
18. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
19. Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Excludes Ecuador beginning in January 1993.
20. Includes Eastern Europe and international and regional organizations.
21. Estimates first available for the second quarter of 2001.
Table 9:

Table 9:

1. Negotiable certificates of deposit issued by banks in the United States are included in banks' custody liabilities and are separately identified in memorandum line 8. Nonnegotiable certificates of deposit are included in time de-
posits.
2. Includes borrowing under Federal funds or repurchase arrangements, deferred credits, and liabilities other than deposits.
3. Mainly negotiable and readily transferable instruments, excluding U.S. Treasury securities.
4. Mainly International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB), and the Trust Fund of the International Monetary Fund.
5. U.S.-owned banks are mainly U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers are identified separately beginning with the first quarter of 1997; prior to 1997, they are commingled with U.S.-owned banks' accounts.
6. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
7. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
8. Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Excludes Ecuador beginning in January 1993.
9. Includes Eastern Europe and international and regional organizations.
10. Estimates first available for the second quarter of 2001.

Table 10: For footnotes 1-13, see table 1
14. The "European Union" includes the "European Union (6)", United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finland, nd Sweden.
15, The "European Union (6)" includes Belgium, France, Germany (indudes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.
16. ncludes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. 1996, small transactions in business services that are not reported by country; and net US currency flows for which geographic source data are not available.
17. Details are not shown separately; see totals in lines 56 and 63 .
18. Details not shown separately are included in line 69.

Table 10a: For footnotes 1-13, see table 1 .
14. Details not shown separately are included in line 69.

Nore, Country data are based on information available from U.S. reporting sources. In some instances the statistics may not necessarily reflect the ultimate foreign transactor. For instance: U.S. export statistics reflect country of
reported destination; in many cases the exports may be transshipped to third countries (especially true for the Nethreported destination; in many cases the exports may be transshipped to third countries (especially true for the Netherlands and Germany). The geographic breakdown of security transactions reflects country with which transaction occurred but may not necessarily reflect the ultimate sources of foreign funds or ultimate destination of U.S. funds. Jnion (6), because in several instances estimates for the group are not available for each country. In addition, country data may not add to the European Union (6) totals because of rounding.

Table 4. Selected U.S. Government Transactions

# BEA Current and Historical Data 

National, International, and Regional Data

This section presents an extensive selection of economic statistics prepared by the Bureau of Economic Analysis (BEA) and a brief selection of collateral statistics prepared by other Government agencies and private organizations. Series that originate in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are pro-
vided through the courtesy of the compilers and are subject to their copyrights.

BEA's economic statistics are available on BEA's Web site at <www.bea.gov>. The site contains data, articles, news releases, and other information from BEA's national, industry, international, and regional programs.

The tables present annual [A], quarterly [Q], and monthly [M] data

## National Data

## A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on June 27, 2002, and include the "final" estimates for the first quarter of 2002.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most of these tables, annual estimates are also shown.

The news release on gross domestic product is available within minutes of the time of release, and the "Selected NIPA Tables" are available later that day, on BEA's Web site <www.bea.gov>.

The "Selected NIPA Tables" are also available on printouts or diskettes from BEA. To order NIPA subscription products, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666).

NOTE. Percent changes from preceding period for selected items in this tabie are shown in table 8.1.

Table 1.2. Real Gross Domestic Product
[Billions of chained (1996) dollars]

Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996
current-dolar value of the corresponding series divided by 100 . Because the formula for the chain-tye quantity current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity
indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not addiindexes uses weights of mord than one period, the corresponding chained-dolar estimates are usua
tive. The residual line is the difference between the first ine and the sum of the most detailited lines.
Percent changes from preceding period for selected items in this table are shown in table 8.1 ; contributions to the percent change in rea gross domestic product are shown in table 8.2.
Chain-type quantity indexes for the series in this table are shown in table 7.1.

Note. Except as noted in footnotes 1 and 2, chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because he formula tor the chain-type quanitity indexes uses weights of more than one period, the corresponding chained
doliar estimates are usually not additive.
The chain-type quantity index for gross national product is shown in table 7.3 .
Table 1.11. Command-Basis Real Gross National Product
[Billions of chained (1996) dollars]

| Gross national product | 9,216.4 | 9,333.6 | 9,329.1 | 9,335.5 | 9,304.9 | 9,364.7 | 9,475.3 |

| Energy goods and services ' Personal consumption | 286.4 | 286.0 | 292.2 | 284.7 | 286.3 | 280.7 | 291.1 |
| expenditures less food and energy $\qquad$ | 5,089.0 | 5,278.7 | 5,208.4 | 5,258.5 | 5,274.6 | 5,373.3 | 5,401.3 |

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

NOTE. Chained (1996) doliar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not addiive. The residual line is the difference between the first line and the sum of the most detailed lines.
ham-gpe quanily
Contributions to the percent change in real personal consumption expenditures are shown in table 8.3

* Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component.
Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar vatue of the corresponding series, divided by 100 . Because the formula for the chain-type quantity dexes user ive. For exports and or imports, the residual line is the difference between the aggregate line and the sum of the
Chain-type quantity indexes for the series in this table are shown in table 710
Contributions to the percent change in real exports and in real imports of goods and services are shown in table
See footnotes to table 4.3

1. Includes new computers and peripheral equipment only. Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative mportance of this component; accurate estimates of these contributions are shown in
2. Excludes software "embedded," or bundled, in computers and other equipment.
NoTE. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.
Chain-type quantity indexes for the series in this table are shown in table 7.6.
Contributions to the percent change in real private fixed investment are shown in table 8.4.

1. This series is derived from the Census Bureau series "current cost inventories."
2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table refliects the mix of methods (such as first-in, first-out and last-in, first-out) underying inventories derived primarily from census Bureau statistics (see footnote 1).
underying business income derived primarily from Internal Revenue Service statistics.
Note. Estimates in this table are based on the North American Industry Classification System (NAICS),

Note. Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (1996) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one peried, the corre-
sponding chained-dollar estimates are usually not additive. The residual line is the oifference between the first line sponding chained-dollar estimates are
and the sum of the most detailed lines.

| Nonfarm inventories to final sales of goods and structures | 3.53 | 3.47 | 3.42 | 3.29 | 3.28 |

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in the private inventories component of
GDP. The former is the difference between two inventory stocks each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.
2. Quarterly totals at monthly rates. Final sales of domestic business equals finai sales of domestic produc less gross product of households and institutions and of general government, and it includes a small amount or inal sales by farm and by government enterprises.
NoTE. Estimates in this table are based on the North American Industry Classitication System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.
2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product 2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product
less gross product of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.
NoTE. Estimates in this table are based on the North American Industry Classification System (NAiCS). Chained (1996) doilar inventory series are calculated to ensure that the chained (1996) dollar change in inventories for 1996 equals the current-dollar change in inventories for 1996 and that the average of the 1995 and 1996 end-ofyear chain-weighted and fixed-weighted inventories are equal. Chained (1996) dollar final sales are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the correline and the sum of the most detailed tines for inventories.

Note. Chain-type quantity and price indexes are calculated from weighted averages of the detailed output and
prices used to prepare each aggregate and component. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current-
to chained-dollar output multiplied by 100 .
Percent changes from preceding period for items in this table are shown in table 8.1. Contributions to the percent change in real gross domestic product are shown in table 8.2.

1. Exports and imports of certain goods, primarily miitiary equipment purchased and sold by the Federal fied from goods to services.
2. Includes parts of foods, feeds, and beverages, of nondurabie industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Table 7.11. Chain-Type Quantity and Price Indexes for Government Consumption Expenditures and Gross Investment by Type
[index numbers, 1996=100]

1. Gross government investment consists of general government and government enterprise expenditures for xed assets; inventory investment is included in government consumption expenditures
c transterred to foreign countries by the federal Government
2. Compensation of government employees engaged in new
tures for goods and services are classified as investment in structures and in sottware. The compensation of all eneral government employees is shown in the addenda.
3. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partal measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

Table 7.14. Chain-Type Quantity and Price Indexes for Gross Domestic Product by Sector
[Index numbers, 1996=100]

. Equals gross domestic product less gross product of households and institutions and of general govern2. Equals gross domestic business product less gross farm product.
. Equals compensation of general government employees plus general government consumption of fixed capital.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transterred to toreign countries by the rederal Government.
for goods and services are classified as investment in structures and in semt investment and related expenditures 4 Consumption of fixed capital or depreciation is included in oovernment partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.
NoTE. The quantity indexes on which the estimates in this table are based are shown in table 7.11. The estimates in this table differ from those in table 8.2 because this table shows contributions to real government consumption expenditures and gross investment, whereas table 8.2 shows contributions to real gross domestic product.

1. Except tor exports and imports, consists of new trucks only.

Consists of final sales and change in private inventories of new autos assembled in the United States
3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.
Nore. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 urrent-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity ndexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the
Chain-type quantity indexes for the series in this table are shown in table 7.18B.

and the differences in source data used to estimate real GDP by industry and the expenditures measure of real
GDP. Estimates are based on the 1987 Standard Industrial Classification. The table is derived from tables 1 and
Nore. Estind 6 in "Gross Domestic Product by Industry for 1998-2000" in the November 2001 Survey. This table corrects errors in the current-dollar estimates for total "Services" for 1998-2000 that were in table 1.

1. The current-dollar statistical discrepancy equals gross domestic product (GDP) measured as the sum of
expenditures less gross domestic income-that is, GDP measured as the costs incurred and profits earned in expencitures less gross domestic income-that is, GDP measured as the costs incurred and protits earned in discrepancy deflated by the implicit price deflator for gross domestic business product.
2. Equals GDP in chained (1996) dollars less the statistical discrepancy and the sum of GDP by industry of the detailed industries. The value of not allocated by industry reflects the nonadditivity of chained-dollar estimates

Table B.4. Personal Consumption Expenditures by Type of Expenditure

1. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, and beverages consumed both on-and off-premise.
2. Includes luggage.
3. Consists of watch, clock, and jewelry repairs, costume and dress suit rental, and miscellaneous personal services.
4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
5. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
6. Consists of transient hotels, motels, clubs, schools, and other group housing.
7. Consists of refrigerators and freezers, cooking ranges, dishwashers, laund
8. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air condi-

8 . Includes such house furnishings as floor coverings. comfort
products, portable lamps, and clocks. Also includes writing equipment and hand, power and gicder tools, mes, mirrors, art
9. Consists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes
lamp shades, brooms, and brushes
10. Consists of maintenance services for appliances and house furnishings, moving and warehouse expenses, postage and express charges, premiums household operation services.
11. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
12. Consists of osteopathic physicians, chiropractors, private duty nurses, chiropodists, podiatrists, and others
providing health and allied services, not elsewhere classified.
13. Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.
berment insurance provided by commercial insurance carriers, and (2) administrative expenses (including consumption of
fixed capital) of nonprofit and self-insured health plans.
15. Consists of premiums, less benefits and dividends, for income loss insurance.
16. Consists of premiums, less benefits and dividends. for privately administered workers' compensation.
17. Consists of (1) operating expenses of commercial life insurance carriers, (2) administrative expenses of private fits and dividends, of fraternat benefit societies. For commercial jife insurance carriers, excludes expenses for accident and heath insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies. For pension and retirement plans, excludes services furnished without payment by banks. credit agencies, and investment companies.
ions. employment agency fees, money (including consumption of fixed capital) of trade unions and professional associaand other personal business services.
19. Consists of premiums, less benefits and dividends, for motor vehicle insurance.
20. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, and airport bus fares.
20. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, and
21. Consists of admissions to protessional and amateur athletic events and to racetracks.
22. Consists of dues and fees excluding insurance premiums.
23. Consists of billiard parlors: bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement
24. Consists of net receipts of lotteries and expenditures for purchases of pets and pet care services, cable TV, fitm processing, pholographic studios, sporting and recreation camps, video cassette rentals, and recreational services, not 25 For privitite inst
25. For private institutions, equals current expenditures (inciuding consumption of fixed capital) tess receipts-such as tor research and development tinanced under contracts or grants.

For government institutions, equals student payments of tuition.
26. For private institutions, equais current expenditures (including consumption of fixed capital) less receipts-such as those from meals, rooms, and entertainments-accounted for separately in consumer expenditures. For government institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare
27. Consists of (1) fees paid to commercial, business, trade, and correspondence schools and for educational services, not elsewhere classified, and (2) current expenditures (including consumption of fixed capital) by research organizations and foundations for education and research.
28. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious, social welfare, foreign reliet, and political organizations, museums, libraries, and foundations. The expenditures are net of
receipts-such as those from meals, rooms and entertainments-accounted for separately in consumer expenditures, and excludes relief payments within the United States and expenditures by foundations for education and research. For propri-

## etary and government institutions, equals receipts from users.

3. Beginning with 1981, includes U.S. students' expenditures abroad; these expenditures were $\$ 0.3$ billion in 1981. expenditures were $\$ 2.2$ billion and medical expenditures were $\$ 0.4$ milicion care expenditures in the United States; student

* Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a easure of the contribution or relative importance of this component.

Note. Consumer durable goods are designated (d.), nondurable goods (n.d.), and services (s.)
Chained (1996) dollar series are caiculated as value of the corresponding series, divided by ro. Because the formula tor the chain-type quantity indexes uses weights of ence between the first line and the sum of the most detailed lines.

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for their own use.
2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes. 3. Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings
not elsewhere classified, such as passenger terminals, greenhouses, and animal hositals. not eisewhere classitied, such as passenger terminals, greenhouses, and animal hospitals. 5. Consists primarily of dormitories and of fraternity and sorority houses.

Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

| 1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules <br> 2. Reflects the reclassification of air couriers from trucking and warehousing to transportation by air. <br> 3. Consists of museums, botanical and zoological gardens; engineering and management services; and <br> services, not elsewhere classified. <br> 4. Includes Coast Guard. <br> 5. Includes estimates of foreign prolessional workers and undocumented Mexican migratory workers employed temporarily in the United States. <br> Nore. Estimates in this table are based on the 1987 Standard Industrial Classification (SIC). |  |  |  |  |  |  |  |  |  |  |  |  |  |

Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

## 1. Excludes software "embedded" or bundled in compulers and other equipment.

2. Consists of office buildings, except those occupied by electric and gas utility companies.
3. Consists primarily of stores, restaurants, garages, service stations, warehouses, and other buildings used for commercial puposes.
4. Consists of buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.
5. Consists primarily of streets, dams, reservoirs, sewer and water facilities, parks, and airfields.

## C. Historical Measures

This table is derived from the "GDP and Other Major NIPA Series" tables that were published in the August 2001 issue of the Survey of Current Business and from the "Selected NIPA Tables" that are published in this issue. (Changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1. GDP and Other Major NIPA Aggregates
[Quarterly estimates are seasonally adjusted at annual rates]

| Year and quarter | Billions of chained (1996) dollars |  |  | Percent change from preceding period |  | Chain-type price indexes |  | Implicit price deflators |  | Percent change from preceding period |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Gross domestic product | Final saies of domestic product | Gross national product | Gross domestic product | Final sales of domestic product | Gross domestic product | Gross domestic purchases | Gross domestic product | Gross national product | Chain-type price indexes |  | Implicit price deflators |  |

## D. Domestic Perspectives

This table presents data collected from other government agencies and private organizations, as noted. Quarterly data are shown in the middle month of the quarter.

Table D.1. Domestic Perspectives

See footnotes at the end of the table.

1. All exchange rates are from the Board of Governors of the Federal Reserve System.
2. Rates for sefected euro-area currencies can be derived by using the following conversion rates: 1 euro $=$
3. The rate shown for the United States is an index of the weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of major U.S. trading partners, January $1997=100$. For more information on the exchange rate indexes, see "New Summary Measures of the Foreign Exchange Value of
[^34]
## Regional Data

## J. State and Regional Tables

The tables in this section include the most recent estimates of State personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual estimates of State personal income and the estimates of gross state product are available on CD-ROM. For information on State personal income, e-mail reis.remd@bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross state product, e-mail gspread@bea.gov; write to the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

| 1. Percent change was calculated from unrounded data. <br> Note. The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it <br> differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporatily by private U.S. firms. <br> Source: Table 3 in "State Per Capita Personal Income and State Personal Income, 2001" in the May 2002 issue of the Sunver of Cureert Business. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

| 1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census. Estimates reflect population estimates available as of April 2002. <br> 2. Percent change was calculated from unrounded data. <br> Note. The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the <br> estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. <br> Source: Table 1 in "State Per Capita Personal Income and State Personal Income, 2001" in the May 2002 issue of the Suivey of Curfent Business. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

| 1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census. Estimates reflect population estimates available as of April 2002. <br> 2. Percent change was calculated from unrounded data. <br> Note. The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the <br> estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. <br> Source: Table 2 in "State Per Capita Personal Income and State Personal Income, 2001" in the May 2002 issue of the Survey of Current Busmess. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

| 1. Per capita personal income was computed using Census Bureau midyear population estimates. Estimates for 1998-2000 reflect county population estimates available as of April 2002. <br> 2. Percent change calculated from unrounded data. <br> 3. The personal income level shown for the United States is derived as the sum of the county estimates. It difters from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of <br> Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. <br> 4. Includes Metropolitan Statistical Areas, Primary Metropolitan Statistical Areas (PMSA's designated by *), and New England County Metropolitan Areas (NECMA's). The New Haven-Bridgeport-Stamford-Danbury-Waterbury, CT NECMA is presented as a PMSA (part of the New York CMSA). <br> Source: Table 1 in "Local Area Personal Income, 1998-2000" in the May 2002 issue of the Survey of Current Business. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## Additional Information About the NIPA Estimates

## Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP in 1997-98 uses prices for 1997 and 1998 as weights, and the 1997-98 annual percent change in the GDP price index uses quantities for 1997 and 1998 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. ${ }^{1}$ These annual changes are "chained" (multiplied) together to form time series of quantity and price; the percent changes that are calculated from these time series are not affected by the choice of reference period.

The quarterly changes in quantities and prices are calculated with weights from two adjacent quarters. As part of an annual or comprehensive revision, the quarterly indexes through the most recent complete year are adjusted to ensure that the average of the quarterly indexes conforms to the corresponding annual index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1996) dollar estimates." These estimates are computed by multiplying the 1996 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a cur-rent-dollar GDP component equaled $\$ 100$ in 1996 and if real output for this component increased by 10 percent in 1997, then the "chained (1996) dollar" value of this com-

[^35]ponent in 1997 would be $\$ 110(\$ 100 \times 1.10)$. Note that percentage changes in the chained (1996) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1996) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A "residual" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. Accurate measures of component contributions to the percentage changes in real GDP and its major components are shown in NIPA tables 8.2-8.6.

BEA also publishes the "implicit price deflator" (IPD), which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100 ; the values of the IPD and of the corresponding "chain-type" price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths-for example, quarters and years-may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these changes requires a variant of the compound interest formula:

$$
r=\left[\left(\frac{x_{t}}{x_{o}}\right)^{m / n}-1\right] \times 100
$$

where $r$ is the percent change at an annual rate; $x_{t}$ is the level of activity in the later period; $x_{o}$ is the level of activity in the earlier period; $m$ is the periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and $n$ is the number of periods between the earlier and later periods (that is, $t-o$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year-for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

## Reconciliation Tables

| Equals. BLS average hourly earnings of production or nonsupervisory workers on private nonfarm payrolls | 3.8 | 4.1 | 4.9 | 4.0 | 3.8 | 3.8 | 3.8 | 3.0 |
| Addendum: <br> BLS estimates of compensation per hour in the nonfarm business sector ${ }^{3}$ | 6.5 | 5.8 | 8.9 | 4.9 | 4.7 | 3.7 | 2.3 | 2.8 |
| 1. Includes BLS data on compensation and hours of nonfarm proprietors and hours worked of unpaid tamily workers <br> 2. Includes BEA use of non-BLS data and differences in detailed weighting. Annual estimates also include differences in BEA and BLS benchmark procedures; quarterly estimates also include differences in | seasonal adjustment procedures. <br> 3. These estimates differ from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing. <br> BLS Bureau of Labor Statistics. |  |  |  |  |  |  |  |

Table 2. Relation of Net Exports of Goods and Services and Net Receipts of Income in the NIPA's to Balance on Geods and Services and Income in the ITA's [Billions of dollars]

## Appendix B

## Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. In addition, most of this information is available on BEA's Web site at <www.bea.gov>. Look under "Methodologies"; for articles from the Survey of Current Business, look under "Publications."

## National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of wealth and related estimates.

National income and product accounts (NIPA's). This series of papers documents the conceptual framework of the NIPA's and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting (1985) [also in the March 1985 Survey]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (1985) [An updated version (March 2002) is available on BEA's Web site.]
Foreign Transactions (1987)
GNP: An Overview of Source Data and Estimating Methods (1987)
Government Transactions (1988)
Personal Consumption Expenditures (1990)
The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPA's. For more information, see the following.

National Income and Product Accounts of the United States, 1929-97 (2001) provides the definitions of the major NIPA aggregates and components, discusses the measures of real output and prices, explains how production is classified and how the NIPA's are presented, describes the statistical conventions that are used, and lists the principal source data and methods that are used to prepare the estimates of gross domestic product (GDP). [Go to <www.bea.gov/bea/an/nipaguid.htm>.]

Information about the sources and methods that are used to prepare the national estimates of personal income, which are the basis for the State estimates, is in State Personal Income, 1929-97 (1999).

In addition, see the following articles in the Surver.
"Updated Summary NIPA Methodologies" (October 2001) briefly describes the principal source data and methods used to prepare the currentdollar and real estimates of GDP.
"Annual Revision of the National Income and Product Accounts" (August 2001).
"BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" (May 1997) is the most recent in a series of articles that describe the conceptual basis for the chain-type measures of real output and prices that are used in the NIPA's.
"Reliability of GDP and Related NIPA Estimates" (January 2002) evaluates the principal NIPA estimates by examining the record of revisions to them.
Wealth and related estimates. Fixed Reproducible Tangible Wealth in the United States, 1925-94 (1999) discusses the concepts and statistical considerations that underlie the estimates and their derivation.
"Fixed Assets and Consumer Durable Goods for 1925-98" (April 2000) describes the definitional and statistical improvements that were incorporated in the comprehensive revision of the estimates.

## Industry accounts

The industry accounts consist of the estimates of gross domestic product by industry, the input-output accounts, and two satellite accounts.

Gross product by industry. "Improved Estimates of Gross Product by Industry for 1947-98" (June 2000) describes the most recent comprehensive revision of these estimates.

## Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov>. See also "BEA's Strategic Plan for 2001-2005" in the May 2002 issue of the Survey of Current Business.
"Gross Domestic Product by Industry for 1998-2000" (November 2001) describes the most recent annual revision of the these estimates.

Input-output accounts. "Benchmark Input-Output Accounts for the U.S. Economy, 1992" (November 1997) describes the preparation of the 1992 accounts and the concepts and methods that underlie the accounts.
"Annual Input-Output Accounts of the U.S. Economy" presents annual tables that update the 1992 benchmark accounts

For 1996 (January 2000)
For 1997 (January 2001)
For 1998 (December 2001)
Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.
"U.S. Transportation Satellite Accounts"
For 1992 (April 1998)
For 1996 (May 2000)
"U.S. Travel and Tourism Satellite Accounts"
For 1992 (July 1998)
For 1996 and 1997 (July 2000)

## International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITA's). The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITA's and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITA's.

The annual revisions of the ITA's are described in a series of articles, the latest of which is published in the July 2002 SURVEY.

Direct investment. International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

The "Methodology for U.S. Direct Investment
Abroad," which is also available in U.S. Direct
Investment Abroad: 1994 Benchmark Survey, Final

Results (1998)
"A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 Survey
"A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 Survey
In addition, the updated methodology for foreign direct investment in the United States is available in Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey (2001)

International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.
"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

## Regional accounts

The regional accounts include estimates of personal income and gross state product.

Personal income. Estimates of personal income are prepared for States and for local areas.
"Comprehensive Revision of State Personal Income for 1969-99" (June 2000) summarizes the changes in the methodology that is used to prepare the estimates. The detailed methodology is available on the CD-ROM State Personal Income, 1929-2000.
"Comprehensive Revision of Local Area Personal Income for 1969-98" (July 2000) summarizes the changes in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD-ROM Regional Economic Information System, 1969-2000.

Gross state product. "Comprehensive Revision of Gross State Product by Industry, 1977-94" (June 1997) summarizes the sources and the methods that are used to prepare the estimates. "Gross State Product by Industry, 1977-98" (October 2000) describes the most recent comprehensive revision of these estimates.

## Schedule of Upcoming BEA News Releases

U.S. International Trade in Goods and Services, May 2002*

State Personal Income, 1st quarter 2002.
Gross Domestic Product, 2nd quarter 2002 (advance)
Personal Income and Outlays, June 2002
U.S. International Trade in Goods and Services, June 2002*

Gross Domestic Product, 2nd quarter 2002 (preliminary) and
Corporate Profits, 2nd quarter 2002 (preliminary)
Personal Income and Outlays, July 2002
U.S. International Transactions, 2nd quarter 2002
U.S. International Trade in Goods and Services, July 2002*

State Per Capita Personal Income, 2001 (revised)
Gross Domestic Product, 2nd quarter 2002 (final) and
Corporate Profits, 2nd quarter 2002 (revised)
Personal Income and Outlays, August 2002
U.S. International Trade in Goods and Services, August 2002*

State Personal Income, 2nd quarter 2002 $\qquad$
Gross Domestic Product, 3rd quarter 2002 (advance)

[^36].... July $19 \quad$ 8:30 a.m.
.. July 24 9:00 a.m.
July $31 \quad$ 8:30 a.m.

Aug. 2 8:30 a.m.
Aug. 20 8:30 a.m.
Aug. 29 8:30 a.m.
Aug. $30 \quad$ 8:30 a.m.
Sept. 12 8:30 a.m.
Sept. 18 8:30 a.m.
Sept. 23 9:00 a.m.
Sept. 27 8:30 a.m.
Sept. 30 8:30 a.m.
Oct. 18 8:30 a.m.
Oct. 24 9:00 a.m.
Oct. 31 8:30 a.m.

[^0]:    1. Quarterly estimates in the NIPA's are expressed at seasonally adjusted annual rates. Quarter-to-quarter dollar changes are the differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data unless otherwise specified.
    Real estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters; real estimates are expressed both as index numbers $(1996=100)$ and as chained (1996) dollars. Price indexes ( $1996=100$ ) are also calculated using a chaintype Fisher formula.
[^1]:    4. However, the best-change procedure can result in levels of the estimates that are not fully consistent with the levels of the source data. The quarterly levels of the revised ITA estimates will be incorporated into the annual revision of the NIPA's that is scheduled for release at the end of July. For further information, see "Annual Revision of the U.S. International Accounts, 1993-2001" in this issue.
[^2]:    9. For details, see the box "Effects of the Job Creation and Worker Assistance Act of 2002," Survey of Current Business 82 (June 2002): 14.
    10. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from BEA's international transactions accounts.
[^3]:    11. "Output" here is nonfinancial corporate gross product. It is a measure of the contribution, or value added, of nonfinancial corporations to the Nation's output, and it is measured as the sum of incomes generated by these businesses.
[^4]:    1. Also includes communications and public ubilities.
[^5]:    6. A break in series in 1983 reflects the introduction of data from the United Kingdom and from the Bank for International
    Settlements (BIS) for several European couritries, Caribbean banking centers, and Asian banking centers. Additional coverage from BIS data was introduced in 1986, 1989, 1993, and 1994. In 1994, intercompany debt positions between parent companies and affiliates that are not depository institutions and that are primarily engaged in tinancial intermediation are reclassitied from the direct investment accounts to the monbank investment accounts.

    10 Estimates for 1976 forward are linked to the 1980, 1987, 1992, and 1997 benchmark surveys of foreign direct invest ment in the United States.
    11. A break in series in 1983 reflects the introduction of data from the United Kingdom. A break in series in 1994 reflects the reclassification of intercompany debt positions between parent companies and affiliates that are not depository institutions and that are primarily engaged in financial intermediation from the direct investment accounts to the nonbank invest for several European countries.

[^6]:    1. According to information from Thomson Financial Securities Data, the worldwide dollar volume of announced merger and acquisition activity decreased nearly 50 percent in 2001.
[^7]:    2. According to preliminary data from BEA's survey of new foreign direct investment, total outlays to acquire or establish U.S. businesses, including those financed by capital inflows from foreign parents, decreased 60 percent to $\$ 132.9$ billion in 2001 from $\$ 335.6$ billion in 2000 . See Thomas $W$. Anderson, "Foreign Direct Investment in the United States: New Investment in 2001," Survey of Current Business 82 (June 2002): 28-35. These data cover only transactions involving U.S. businesses newly acquired or established by foreign direct investors, and they include financing other than that from the foreign parent, such as local borrowing by existing U.S. affiliates. In contrast, the changes in the FDIUS position reflect transactions of both new and existing U.S. affiliates with their foreign parents or other members of their foreign parent groups and valuation adjustments, and they exclude financing not provided by the foreign parent group.
    Notwithstanding these differences, the two types of data are related. Any outlays to acquire or establish U.S. businesses that are funded by foreign parent groups are part of capital inflows for FDIUS, a component of the change in the position. Data from the new investments survey indicate that foreign parent groups funded $\$ 70.7$ billion, or 53 percent, of outlays to acquire or establish new U.S. affiliates in 2001, compared with $\$ 214.3$ billion, or 64 percent, in 2000.
[^8]:    3. For a discussion of the profitability of U.S. affiliates, see Raymond J. Mataloni, Jr., "An Examination of the Low Rates of Return of ForeignOwned U.S. Companies," Surver 80 (March 2000): 55-73.
[^9]:    U.S. Bureau of Econoric Analysis

[^10]:    4. For the past two decades, U.S. parent companies have been funneling an increasing share of their direct investments abroad through holding companies. For more information, see the "Technical Note" in Maria Borga and Raymond J. Mataloni, Jr., "Direct Investment Positions for 2000: Country and Industry Detail," Survey 81 (July 2001): 23-25.
[^11]:    5. A few of the larger acquisitions were accomplished by U.S. shareholders exchanging their stock in the acquired firms for shares in the foreign firms. These self-financing transactions resulted in large, but offsetting, financial flows in the U.S. international transactions accounts: The large inflows on direct investment that resulted from the foreign investors' acquisitions of U.S. companies were offset by the outflows on foreign securities that resulted from the U.S. shareholders receiving the stock of the foreign firms. The outflows were recorded as foreign securities transactions rather than as U.S. direct investment abroad because the exchanges of stock did not result in any single U.S. investor owning as much as 10 percent of the shares of a foreign firm.
[^12]:    6. Intercompany debt transactions include affiliates' payables to, and receivables from, their foreign parents and other members of their foreign parent groups (see the box "Key Terms").
[^13]:    7. BEA also prepares data on the FDIUS position by country of ultimate beneficial owner; the data are included in the detailed tables on FDIUS that are usually published in the September Surver.
    8. The year-to-year changes in machinery and finance reflected in tables 3.1 and 3.2 were dampened or partly offset by reclassifications of existing affiliates into these industries from "other industries."
[^14]:    1. Estimates were not previously published.
[^15]:    1. Office of the Assistant Secretary, International Affairs, Department of the Treasury; Securities Report Division, Federal Reserve Bank of New York; Division of International Finance, Board of Governors of the Federal Reserve System, Report on Foreign Holdings of U.S. Long-term Securities as of March 31, 2000 (see <www.treas.gov>).
    2. The estimate includes both private and foreign official holdings.
[^16]:    3. The estimate excludes short-term U.S. Treasury obligations.
    4. William Griever, Gary Lee, and Francis Warnock, "The U.S. System for Measuring Cross-Border Investment in Securities: A Primer with a Discussion of Recent Developments," Federal Reserve Bulletin (October 2001): 633-650.
[^17]:    6. Adjustments to financial flows in agency and corporate bonds are applied to line 66 in table 1 of the standard presentation of the transactions accounts and line 39 of table 1 of the standard presentation of the investment position accounts. Foreign official flows in agency and corporate bonds in the transactions accounts are unrevised.
[^18]:    7. See footnote 6.
[^19]:    8. Department of the Treasury, Federal Reserve Bank of New York, Board of Governors of the Federal Reserve System, Foreign Residents' Holdings of U.S. Securities, Including Selected Money Market Instruments.
[^20]:    1. Quarterly estimates of U.S. current-and financial-account components are seasonally adjusted when series demonstrate statistically significant patterns. The accompanying tables present both adjusted and unadjusted estimates.
[^21]:    3. Seasonally adjusted estimates for exports for areas and countries are derived by applying seasonal factors for total U.S. agricultural and nonagricultural exports to the unadjusted agricultural and nonagricultural exports for areas and countries and then summing the seasonally adjusted estimates. Seasonally adjusted estimates for imports for areas and countries are derived by applying seasonal factors for total U.S. petroleum and nonpetroleum imports to the unadjusted petroleum and nonpetroleum imports for areas and countries and then summing the seasonally adjusted estimates. (The seasonal factors are derived from the seasonal adjustment of U.S. exports and U.S. imports by five-digit end-use commodity category.)
[^22]:    1. Because chain indexes use weights of more than one period, the corresponding chained dollar estimates are usually not additive.
[^23]:    4. Estimates for "other" private income payments and for U.S. Government income payments have been revised downward for 1995-2001. For more information, see "Annual Revision of the U.S. International Accounts, 1993-2001" in this issue.
