## Survey of Current Business

The Survey of Current Business (ISSN 0039-6222) is published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, Survey of Current Business, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Subscriptions to the Survey of Current Business are maintained, and their prices set, by the Government Printing Office, an agency of the U.S. Congress.

Send address changes to

> Superintendent of Documents
U.S. Government Printing Office Washington, DC 20402

To subscribe, call 202-512-1800. To inquire about your subscription, call 202-512-1806.

Subscription and single-copy prices:
Periodicals: $\quad \$ 48.00$ domestic $\$ 60.00$ foreign
First-class mail: $\$ 120.00$
Single copy: $\quad \$ 17.25$ domestic $\$ 21.56$ foreign
Make checks payable to the Superintendent of Documents.

Periodicals postage paid at Washington, DC and at additional mailing offices (USPS 337-790).

The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department.

this issue of the Survey went to the printer on August 16, 2000.
It incorporates data from the following monthly BEA news releases:
U.S. International Trade in Goods and Services (July 19),

Gross Domestic Product (July 28), and
Personal Income and Outlays (August 1).

# TABLE OF CONTENTS 

$S_{\text {pecial in this issue }}$
6 Annual Revision of the National Income and Product Accounts: Annual Estimates, 1997-99, and Quarterly Estimates, 1997:I-2000:I

The revised NIPA estimates do not significantly alter the picture of the U.S. economy that was shown in the previously published estimates. Over the period covered by the revisions, the average annual growth rate of real GDP was revised up slightly, from 4.5 percent to 4.6 percent, and the average annual rate of increase in the price index for gross domestic purchases was unrevised at 1.5 percent. The revised estimates reflect the incorporation of regular source data and the introduction of changes in the methodology for preparing the estimates; for example, the estimates of employer contributions to group health insurance are now based on data collected in the new medical expenditure panel survey.

## Regular features

1 Business Situation
Real GDP continued to increase strongly in the second quarter of 2000, up 5.2 percent after a 4.8 -percent increase in the first quarter. In contrast, real final sales of domestic product slowed to a 4.2 -percent increase from a 6.7 -percent increase. The price index for gross domestic purchases slowed to a 2.2 -percent increase from a 3.8-percent increase.

141 U.S. Affiliates of Foreign Companies: Operations in 1998
The current-dollar gross product of U.S. affiliates of foreign companies increased 7 percent in 1998, primarily reflecting record levels of new foreign investment. The U.S.-affiliate share of gross product originating in U.S. private industries edged up from 6.2 percent in 1997 to 6.3 percent in 1998. By country of ownership, the United Kingdom remained the largest investing country in 1998, and Germany overtook Japan as the second largest as a result of new acquisitions of U.S. companies.

## 159 State Personal Income, First Quarter 2000

Personal income in the Nation slowed to a 1.6-percent increase in the first quarter of 2000 from a 1.9 -percent increase in the fourth quarter of 1999. In the first quarter, personal income grew the fastest in Vermont, North Carolina, Alaska, Georgia, and Florida. Personal income declined in North Dakota, Nebraska, Kansas, South Dakota, and Iowa.

## Looking Ahead

Gross State Product by Industry. On September 5, 2000, BEA will release new estimates of gross state product for 1998 and revised estimates for 1977-97. An article that presents these estimates, which incorporate the most recent revision of the national estimates of gross product by industry, will be published in a forthcoming issue of the Survey.

## B U S I N E S S S I T U A T I O N

This article was prepared by Daniel Larkins and Ralph W. Morris.

REAL gross domestic product (GDP) increased 5.2 percent in the second quarter of 2000 , according to the "advance" estimates of the national income and product accounts (NIPA's), after increasing 4.8 percent (revised down from 5.5 percent) in the first quarter (table 1 and chart 1). ${ }^{1}$ In contrast to the step-up in real GDP, growth of real final sales of domestic product slowed sharply, to 4.2 percent from 6.7 percent (revised down from 7.1 percent), largely reflecting a sharp slowdown in consumer spending.

The revision to the first-quarter estimates resulted from the annual revision of the NIPA's; in general, the effect of the annual revision was small,

> 1. Quarterly estimates in the NIPA's are expressed at seasonally adjusted annual rates. Quarter-to-quarter dollar changes are the differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data unless otherwise specified.
> Real estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters; real estimates are expressed both as index numbers $(1996=100)$ and as chained (1996) dollars. Price indexes $(1996=100)$ are also calculated using a chain-type Fisher formula.

NOTE.-Chained (1996) dollar series are calculated as the product of the chaintype quantity index and the 1996 current-dolar value of the corresponding series, divided by 100 . Because the formula for the chain-rype quantity incexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1996) dollar levels and residuals. which measure the extent of nonadditivity in each table, are shown in NIPA tables 1.2, 1.4, and 1.6. Percent changes are calculated which measure he extent of nonadditivity in each table, are shown in NIPA tables 1.2. 1.4. and 1.6 . Percent changes are calculated
and the overall picture of the economy in recent years was not much changed. ${ }^{2}$

Real GDP growth in the second quarter was substantially above its 3.7 -percent average rate for the current economic expansion (which began in the second quarter of 1991); growth had also been above average in the three preceding quarters. Nevertheless, GDP increased less than domestic demand (that is, gross domestic purchases) for the sixth consecutive quarter, as growth in imports (a component of domestic demand) continued to outpace growth in exports (a component of domestic output).

The price index for gross domestic purchases slowed to a 2.2 -percent increase in the second

[^0]
## CHART 1

Selected Measures: Change From Preceding Quarter Percent

quarter after increasing 3.8 percent. Real disposable personal income increased 3.4 percent after increasing 1.9 percent. The personal saving rate was unchanged at 0.2 percent.

The largest contributors to the second-quarter increase in real GDP were private nonresidential fixed investment and personal consumption expenditures (PCE) (table 2). Nonresidential fixed investment increased 19.1 percent-double its average growth rate of 9.5 percent over the expan-sion-and contributed 2.4 percentage points to GDP growth; as in the first quarter, most of the increase was accounted for by purchases of equipment and software. PCE increased 3.0 percent in the second quarter and contributed 2.1 percentage
points to the growth in GDP; expenditures for services accounted for most of the PCE growth. Government consumption expenditures and gross investment (government spending) and inventory investment both contributed about 1.0 percentage point to GDP growth. The increase in GDP was damped by an increase in imports that subtracted 2.3 percentage points from the GDP growth rate.

The small step-up in GDP growth from the first quarter to the second was more than accounted for by upturns in inventory investment and in government spending. The effect of these upturns was partly offset by a sharp slowdown in PCE growth from 7.6 percent to 3.0 percent. The average rate of growth of PCE over the current expansion is 3.8

## Second-Quarter 2000 Advance GDP Estimate: Source Data and Assumptions

The "advance" GDP estimate for the second quarter is based on preliminary and incomplete source data; as more and better data become available, the estimate will be revised. The advance estimate is based on the following major source data. (The number of months for which data were available is shown in parentheses.)
Personal consumption expenditures: Sales of retail stores (3) and unit auto and truck sales (3);

Nonresidential fixed investment: Unit auto and truck sales (3), construction put in place (2), manufacturers' shipments of machinery and equipment other than aircraft (3), shipments of civilian aircraft (2), and exports and imports of machinery and equipment (2);
Residential investment: Construction put in place (2) and single-family housing starts (3);
Change in private inventories: Manufacturing and trade
inventories (2) and unit auto and truck inventories (3); Net exports of goods and services: Exports and imports of goods and services (2);
Government consumption expenditures and gross investment: Federal outlays (3), State and local construction put in place (2), State and local employment (3), and the employment cost index for the quarter;
GDP prices: Consumer price index (3), producer price index (3), U.S. import and export price indexes (3), and values and quantities of petroleum imports (2).
BEA made assumptions for source data that were not available. Table A shows the assumptions for key series; a more comprehensive list is available from STAT-USA/ Internet, a service of the U.S. Department of Commerce, and from BEA's Web site at <www.bea,doc.gov>.

NOTE--More detailed contributions to percent change in real gross domestic product are shown in NIPA table 8.2. Contributions to percent change in major components of real gross
increasing 0.3 percent in the first (table 3 ). The small downturn was accounted for by auto output; truck output increased more than in the first quarter. Final sales of motor vehicles to domestic purchasers decreased 15.6 percent after increasing 20.1 percent.

Purchases of motor vehicles by consumers (PCE) and purchases by businesses (private fixed investment) decreased after increasing.

Consumer purchases of motor vehicles turned down but remained at a high level. Factors frequently considered in analyses of consumer spending were generally favorable in the second quarter. The growth in real disposable personal income picked up to 3.4 percent from 1.9 percent, and the unemployment rate decreased to 4.0 percent from 4.1 percent. The Index of Consumer Sentiment (a measure prepared by the University of Michigan's Survey Research Center) remained at a high level. Factors specific to motor vehicle purchases were less favorable; for example, interest rates on newcar loans at commercial banks and prices of new motor vehicles increased.

Both imports and exports of motor vehicles decreased in the second quarter after increasing in the first.

Motor vehicle inventory investment increased after decreasing; the increase mainly reflected a swing in truck inventories from liquidation to accumulation. The inventory-sales ratio for new do-

## Table 3.-Motor Vehicle Output, Sales, and Inventories

[Seasonally adiusted at annual rates]

mestic autos, which is calculated from units data, increased to 2.2 at the end of the second quarter from 2.1 at the end of the first; the traditional industry target is 2.4.

## Prices

The price index for gross domestic purchases, which measures the prices paid for goods and services purchased by U.S. residents, increased 2.2 percent in the second quarter after increasing 3.8 percent in the first (table 4). The first-quarter increase reflected an acceleration in energy prices and a pay raise for Federal civilian and military personnel. ${ }^{3}$ In the second quarter, energy prices decelerated. Prices of gross domestic purchases less food and energy increased 1.8 percent in the second quarter after increasing 2.8 percent in the first (chart 2).

PCE prices increased 2.3 percent after increasing 3.5 percent. Prices of PCE energy goods and services increased 13.4 percent, much less than in the first quarter. ${ }^{4}$ PCE food prices increased 2.3 percent, about the same as in the preceding three quarters. Prices of PCE less food and energy increased 1.7 percent after increasing 2.2 percent.

Prices of private nonresidential fixed investment increased 1.4 percent after increasing 1.8 percent.

| State and local .......................................... | 3.8 | 3.5 | 5.7 | 3.4 |
| Addendum: Gross domestic purchases less food and energy | 1.1 | 1.5 | 2.8 | 1.8 |

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas

These increases, which followed 18 consecutive quarterly decreases, largely reflected increases in the prices of software and of transportation equipment and smaller-than-usual decreases in computer prices.

Prices of government consumption expenditures and gross investment increased 2.4 percent after increasing 6.4 percent. Prices paid by the Federal Government increased 0.6 percent after increasing 7.7 percent; the first-quarter increase largely reflected the pay raise. Prices paid by State and local governments increased 3.4 percent after increasing 5.7 percent.

The GDP price index, which measures the prices paid for goods and services produced in the United States, increased 2.5 percent after increasing 3.3 percent. The GDP price index, unlike the price index for gross domestic purchases, includes the prices of exports and excludes the prices of imports. The larger increase in the GDP price index than in the price index for gross domestic purchases reflected import prices, which decreased slightly after increasing; the price of imported petroleum decelerated sharply.

## Personal income

Real disposable personal income (DPI) increased 3.4 percent in the second quarter after increasing 1.9 percent in the first (chart 3 ). Most of the stepup was due to the slowdown in PCE prices; cur-rent-dollar DPI increased 5.8 percent after increasing 5.5 percent. The personal saving rate (saving as a percentage of current-dollar DPI) remained unchanged at 0.2 percent.

Personal income increased $\$ 130.0$ billion, about the same as in the first quarter. A step-up in pro-

## CHART 2

Gross Domestic Purchases Prices: Change From Preceding Quarter Percent

prietors' income was offset by slowdowns in personal interest income and in wage and salary disbursements (table 5).

Proprietors' income increased $\$ 15.8$ billion after increasing $\$ 4.3$ billion. An upturn in farm proprietors' income more than accounted for the stepup. The upturn mainly reflected the pattern of subsidy payments, which increased $\$ 0.7$ billion after decreasing $\$ 13.0$ billion.

Wage and salary disbursements increased \$75.8 billion after increasing $\$ 82.1$ billion. The slowdown was accounted for by goods-producing industries other than manufacturing and by government.

Transfer payments to persons increased \$19.2 billion, about the same as in the first quarter. The second-quarter increase included benefit payments of $\$ 6.4$ billion (annual rate) that resulted from the new Senior Citizens' Freedom to Work Act of 2000 . This act, which was signed into law April 7, 2000 and was effective retroactive to Janu-

ary 1 , eliminated the "retirement earnings test" and allowed social security beneficiaries aged 65 and older to receive full benefits regardless of their earnings. Prior to enactment, benefits had been reduced $\$ 1$ for every $\$ 3$ earned over the annual earning limit, which was $\$ 17,000$ for calendar year 2000. The first-quarter increase in transfer payments had reflected a $\$ 10.4$ billion step-up in cost-of-living adjustments to benefits under social security and other Federal retirement and income support programs.

# Annual Revision of the National Income and Product Accounts 

Annual Estimates, 1997-99 Quarterly Estimates, 1997:I-2000:I

By Eugene P. Seskin and David F. Sullivan

$T$N THIS issue of the Survey of Current Business, the Bureau of Economic Analysis (BEA) presents revised estimates of the national income and product accounts (NIPA's) for 1997-99 and the first quarter of 2000. ${ }^{1}$ As is usual in annual NIPA revisions, these estimates incorporate source data that are more complete, more detailed, and otherwise more appropriate than those that were previously incorporated. In addition, several metho-

[^2]dological and presentational changes have been made.

The first section of this article discusses the impact of the revisions on key NIPA measures of economic activity, and the second section provides a summary of the revisions and the major source data underlying them. The third section describes the changes in the methodology used to prepare the estimates, and the fourth section discusses two changes in the presentation of the NIPA tables. Appendix A shows, in current dollars, the revised annual estimates and the revisions for the five summary accounts of the NIPA's. Tables presenting most of the revised monthly, quarterly, and annual NIPA estimates and the "advance" estimates for

the second quarter of 2000 follow this article (a list of these tables is shown beginning on page 34). In addition, historical estimates beginning with 1929 for gross domestic product (GDP) and other major NIPA series are presented beginning on page 120.

## Impact of the Revisions

Overall, the picture of the U.S. economy presented in the revised estimates does not differ significantly from that shown in the previously published estimates. According to the revised estimates, the economy grew at a slightly faster rate: From the fourth quarter of 1996 to the first quarter of 2000 , the growth rate (average annual rate of change) of real GDP was revised up 0.1 percentage point to 4.6 percent (chart 1 and table 1). The upward revision was more than accounted for by upward revisions to private investment in equipment and software, to nonresidential structures, to personal consumption expenditures (PCE) for goods, and to change in private inventories; these revisions were partly offset by down-
ward revisions to PCE for services, to exports of services, and to residential investment. In the revised estimates, the major components contributing to growth were the same as those in the previous estimates: Increases in PCE, in private fixed investment, in exports of goods and services, and in State and local government consumption expenditures and gross investment more than offset an increase in imports of goods and services (which is subtracted in the calculation of GDP). Federal Government consumption expenditures and gross investment and change in private inventories changed little over the period.

The percent change from the preceding year for real GDP was revised up from 4.2 percent to 4.4 percent for 1997, was revised up from 4.3 percent to 4.4 percent for 1998 , and was unrevised at 4.2 percent for 1999. On a fourth-quarter-to-fourthquarter basis, the increase during 1997 was revised up from 4.1 percent to 4.3 percent, the increase during 1998 was revised down from 4.7 percent to 4.6 percent, and the increase during 1999 was revised up from 4.6 percent to 5.0 percent.

Although there were some revisions to the annual growth rates of real GDP, the pace of the current economic expansion is the same as previously estimated. From the cyclical trough in the first quarter of 1991 to the first quarter of 2000 , the average annual rate of change for real GDP was unrevised at 3.7 percent.

The revised estimates show about the same rate of increase in prices as that shown by the previously published estimates (chart 2). From the fourth quarter of 1996 to the first quarter of 2000, the average annual rate of increase in the price index for gross domestic purchases was unrevised at 1.5 percent; the rate of increase for the price index for GDP was revised up 0.1 percentage point to 1.7 percent (table 2). The percent change from the preceding year for the price index for gross domestic purchases was unrevised at 1.6 percent for 1997, was revised up from 0.7 percent to 0.8 percent for 1998, and was revised up from 1.5 percent to 1.6 percent for 1999. The revisions to the price index for GDP were similar.

## Summary of the Revisions

The revisions reflect the incorporation of new and revised source data for the current-dollar estimates and for the prices and quantities used to prepare

Table 2.-Chain-Type Price Indexes: Change From 1996:IV to 2000:I

the real estimates; they also reflect the introduction of changes in methodology. This section describes the revisions to the annual current-dollar, price, and real estimates, and then it briefly describes the revisions to the quarterly estimates.

## Annual current-dollar estimates

Table 3 summarizes the current-dollar revisions to major NIPA components. It provides a guide to the major revisions by identifying the subcomponent series for which revisions were $\$ 2.0$ billion or more (absolute value) for any of the years covered by this annual revision and by listing the major source data that underlie the revised estimates. Note that the incorporation of new and revised source data usually results in a revision to the level of an estimate not only for the year into which they are directly incorporated but also for subsequent years.

This annual revision incorporated data from the following primary Federal statistical sources: Bureau of the Census 1997 Economic Census and 1997 Census of Governments, annual surveys of State and local governments (for fiscal years 1998 and 1999), of manufactures, of merchant wholesale trade, of retail trade (for 1998), and of services (for 1998 and 1999); Census Bureau surveys of the value of construction put in place (for 1997-99); Federal Government budget data (for fiscal years 1998-2000); Internal Revenue Service (IRS) tabulations of income tax returns for corporations (for 1997 and 1998) and for sole proprietorships and partnerships (for 1998); Bureau of Labor Statistics (BLS) tabulations of wages and salaries of employees covered by State unemployment insurance (for 1999); U.S. Department of Agriculture farm statistics (for 1997-99); and BEA international transactions accounts (for 1997-99).

Gross domestic product (GDP).-The level of cur-rent-dollar GDP was revised up for all 3 years: $\$ 17.6$ billion, or 0.2 percent, for 1997; $\$ 30.3$ billion, or 0.3 percent, for 1998; and $\$ 43.1$ billion, or 0.5 percent, for 1999. These revisions are about average in comparison with recent annual NIPA revisions.

By major component, for 1997, upward revisions to equipment and software, to State and local government consumption expenditures and gross investment, and to personal consumption expenditures (PCE) for services more than offset a downward revision to change in private inventories. For 1998, upward revisions to nonresidential structures, to State and local government con-
sumption expenditures and gross investment, to PCE for services, to equipment and software, and to change in private inventories more than offset downward revisions to PCE for goods and to residential investment. For 1999, upward revisions to equipment and software and to nonresidential structures, a downward revision to imports of goods and services, and upward revisions to State and local government consumption expenditures and gross investment, to PCE for services, and to PCE for goods more than offset downward revisions to exports of goods and services, to residential investment, and to Federal Government consumption expenditures and gross investment.

PCE for goods.-PCE for goods was revised down $\$ 0.5$ billion for 1997 , was revised down $\$ 5.6$ billion for 1998 , and was revised up $\$ 5.1$ billion for 1999. For 1997, a downward revision to "goods other than motor vehicles and parts" more than offset an upward revision to motor vehicles and parts. For

1998, the downward revision was primarily accounted for by "goods other than motor vehicles and parts." For 1999, the upward revision was primarily accounted for by motor vehicles and parts.
"Goods other than motor vehicles and parts" was revised down $\$ 1.6$ billion for 1997, was revised down $\$ 5.2$ billion for 1998, and was revised up $\$ 0.5$ billion for 1999. For 1997, a downward revision to food more than offset upward revisions to "other nondurable goods" and to gasoline and oil. For 1998, downward revisions to food and to furniture and household equipment more than offset upward revisions to "other nondurable goods" and to gasoline and oil. For 1999, upward revisions to gasoline and oil and to "other nondurable goods" more than offset downward revisions to food and to furniture and household equipment. Within "other nondurable goods," the revisions were more than accounted for by drug preparations and

## Acknowledgments

Brent R Moulton, Associate Director for National Income, Expenditures, and Wealth Accounts, supervised the preparation of this year's annual revision of the national income and product accounts. Karl D. Galbraith, Chief of the Government Division, and Carol E. Moylan, Chief of the National Income and Wealth Division, directed major parts of the revision. Robert P. Parker, former Chief Statistician, and Bruce T. Grimm provided technical guidance. Kali K. Kong-assisted by Peter G. Beall, Randall T. Matsunaga, Karin E. Moses, Toui C. Pomsouvan, Charles S. Robinson, David F. Sullivan, and Ernest D. Wilcox-coordinated and conducted the estimation and review process.
Eugene P. Seskin and David F. Sullivan wrote the article; John R. Kort wrote the box on implementation of NAICS. Duane G. Hackmann, Kali K. Kong, and Teresa L. Weadock prepared analyses and other review materials for both the article and the news release. Herb L. Coverassisted by Mary Carol Barron, Michael J. Boehm, John Sporing, Jr., and Mary D. Young-developed and operated the computer systems that were used to compile, check, analyze, and report the final estimates. David F. Sullivan coordinated the presentational improvements and table changes.
Other BEA staff who made significant contributions to the revision are listed below.
Personal consumption expenditures-Clinton P. McCully. Goods-M. Greg Key, Robert N. Ganz III, Everette P. Johnson, James J. Raley III. Services-Aaron C. Catlin, Myung G. Han.
Investment and Foreign transactions-Paul R. Lally, Leonard J. Loebach. Inventories-Debra M. Blagburn, Jennifer A. Ribarsky. Structures-Velma P. Henry. Foreign transactions, equipment, software, and prices-David B.

Wasshausen, Jeffrey W. Crawford, Randall T. Matsunaga, Nadia F.P. Sadée, Linden L. Webber.
Federal Government-Pamela A. Kelly, W. Robert Armstrong, Laura M. Beall, Peter G. Beall, Kurt S. Bersani, James E. Boucher, Ann M. Groszkiewicz, Doris N. Johnson, Sean P. Keehan, Raymen G. LaBella, Claire G. Pitzer, Michael D. Randall, Michelle D. Robinson, Mary L. Roy, Shelly Smith, Benyam Tsehaye, Andrew E. Vargo.
State and local government-Bruce E. Baker, Steven J. Andrews, Florence H. Campi, Benjamin D. Cowan, Eric C. Erickson, Janet H. Kmitch, Donald L. Peters.
Chain-type quantity and price measures-Christian Ehemann, Michael J. Boehm, Karl V. Rohrer.
Income-Carol E. Moylan.
Personal income-Kurt Kunze, Thae S. Park, Toui C. Pomsouvan.
Employee compensation-Kurt Kunze, Molly B. Knight, Brian V. Moran, Monisha Primlani, James. E. Rankin, Ernest D. Wilcox.
Business income-Kenneth A. Petrick, Willie J. Abney, Debora A. Fisher, Jerry L. Stone, Garth K. Trinkl.
Property income-George M. Smith. Farm output and income-Shaunda M. Villones. Interest income-Mary Kate Catlin. Rental income of persons and housing outputDenise A. McBride.
Consumption of fixed capital-Shelby W. Herman. Pri-vate-Phyllistine M. Barnes, Michael D. Glenn, Kurt Kunze, Dennis R. Weikel. Government-D. Timothy Dobbs, Charles S. Robinson.
NIPA information-Marilyn E. Baker, Phyllistine M. Barnes, Virginia H. Mannering, Teresa L. Weadock.
Secretarial-Esther M. Carter, Katherine Dent, Angela P. Pointer, Angela M. Tucker, Dorothy A. Wilson.

sundries. The revisions to "goods other than motor vehicles and parts" resulted from the incorporation of revised 1997 Economic Census data, revised annual retail sales data for 1998, and revised monthly sales data for 1999.

Motor vehicles and parts was revised up $\$ 1.1$ billion for 1997, was revised down $\$ 0.4$ billion for 1998, and was revised up $\$ 4.6$ billion for 1999. For 1998, a downward revision to new autos was mostly offset by an upward revision to "other motor vehicles." For 1999, an upward revision to "other motor vehicles" more than offset a downward revision to new autos. The revisions to new autos were primarily accounted for by improved estimates of average expenditure per unit that were based on more detailed price data by model. The revisions to "other motor vehicles" were primarily accounted for by purchases of new trucks; for 1998, the revision reflected the incorporation of product shipments data from the Census Bureau annual survey of manufactures, and for 1999, it reflected a revised estimate of sales of trucks to consumers.

PCE for services.-PCE for services was revised up for all 3 years: $\$ 5.4$ billion for $1997, \$ 7.8$ billion for 1998, and $\$ 6.3$ billion for 1999. For 1997, the revision was primarily accounted for by an upward revision to medical care services. For 1998, upward revisions to "other services," to medical care services, and to housing services more than offset a downward revision to recreation. For 1999, upward revisions to "other services," to housing, and to medical care services more than offset downward revisions to recreation and to household operation.

The upward revisions to medical care services for 1997 and 1998 reflected upward revisions to nursing homes, to physicians, and to health insurance that more than offset downward revisions to hospitals. For 1999, upward revisions to hospitals, to nursing homes, and to health insurance more than offset a downward revision to physicians. For 1997, the revisions to nursing homes and to physicians reflected Census Bureau Economic Census data; for 1998, the revisions reflected Census Bureau service annual survey (SAS) data that were benchmarked to the Economic Census data; and for 1999 , the revisions reflected preliminary tabulations from the SAS. For 1997, the revision to health insurance reflected the incorporation of a new data source--the medical expenditure panel survey (MEPS) from the Department of Health
and Human Services (see the section "Changes in Methodology")-for employer and household costs for private health insurance; for 1998 and 1999, the revisions reflected extrapolation from the 1997 estimate using BLS data on employer costs for health insurance and BLS tabulations of wages and salaries of employees covered by unemployment insurance. For 1997, the revision to hospitals was more than accounted for by government hospitals, reflecting new and revised data from Census Bureau surveys of State and local governments. For 1998, the revision to hospitals reflected a downward revision to government hospitals that more than offset an upward revision to nonprofit hospitals; the revision to government hospitals reflected new data from Census Bureau surveys of State and local governments, and the revision to nonprofit hospitals was based on newly incorporated expense data from trade sources. For 1999, the revision to hospitals reflected upward revisions to nonprofit and to proprietary hospitals that more than offset a downward revision to government hospitals; the revisions to nonprofit and to proprietary hospitals reflected trade source data on community hospital expenses, and the revision to government hospitals reflected extrapolation from the 1998 estimate.

The upward revision to "other services" for 1998 was primarily accounted for by personal business services; for 1999, the revision reflected an upward revision to personal business services that was partly offset by a downward revision to religious and welfare activities. For both years, the revisions to personal business services were primarily accounted for by "services furnished without payment by financial intermediaries except life insurance carriers." ${ }^{2}$ For 1999, "expense of handling life insurance and pension plans" also contributed to the upward revision. The revisions to "services furnished without payment by financial intermediaries except life insurance carriers" were primarily accounted for by commercial banks, based on revised data on assets by sector from the Federal Reserve Board flow-of-funds accounts. The revisions to "expense of handling life insurance and pension plans" and to religious and welfare activities for 1999 reflected the incorporation of BLS

[^4]tabulations of wages and salaries of employees covered by unemployment insurance.

The upward revisions to housing for 1998 and 1999 were primarily accounted for by "other" housing, particularly hotels and motels, and reflected SAS data for 1998 that were benchmarked to the 1997 Economic Census and preliminary tabulations from the SAS for 1999.

The downward revisions to recreation for 1998 and 1999 were primarily to subcategories of
"other" recreation, reflecting SAS data for 1998 that were benchmarked to the 1997 Economic Census and preliminary tabulations from the SAS for 1999.

The downward revision to household operation services for 1999 reflected small downward revisions to several subcomponents that were partly offset by an upward revision to telephone and telegraph that was primarily based on new trade source data on cellular telephone revenues.

## Incorporating Source Data on the Basis of "Best Change"

As is usual in annual NIPA revisions, this revision covered the most recent 3 calendar years-1997-99 (and the first quarter of 2000). The NIPA estimates before 1997 will not be revised until the next comprehensive revision, which is tentatively scheduled for 2003. The annual revisions are limited to the most recent 3 years in order to coincide with the availability of major source data, particularly the Internal Revenue Service tabulations of income tax returns for corporations, and to reduce the frequency of revisions to the historical estimates (for example, revisions to the pre-1996 chain-type price and quantity measures are avoided because the estimates for 1996, the reference year, are not revised).
In this year's annual revision, there were several instances in which source data were revised for years prior to 1997 or new source data became available that would have led to revisions for prior years. For example, on July 3, 2000, the Census Bureau released revised data on the value of construction put in place back to 1983. In addition, detailed data from the 1997 Economic Census have become available since last year's comprehensive NIPA revision; if these data had been available for the comprehensive revision, incorporating them would have resulted in revisions to the pre-1997 NIPA estimates.' If the levels of the data from the quinquennial economic censuses differ from those from the annual surveys, such as the service annual survey, the annual data are usually benchmarked to the census data, so the annual estimates for the intercensal years are revised.
The new and revised source data that would have affected the NIPA estimates before 1997 are incorporated into the estimates for 1997-99 on either a "best-level" basis or a "best-change" basis. Incorporating the source data on a best-level basis provides estimates that are more

[^5]consistent with the source data, but it results in a discontinuity between the estimates for 1996 and those for 1997; this discontinuity distorts the measure of the change in the estimates. Incorporating the source data on a best-change basis provides accurate measures of the change in the estimates for all periods, but it results in levels of the estimates that are not fully consistent with the source data.
In general, BEA incorporates the source data on a bestchange basis in order to preserve accurate estimates of growth and consistent time series. ${ }^{2}$ For example, the NIPA estimate of investment in single-family structures of $\$ 159.1$ billion for 1996 is based on the previously published Census Bureau data on the value of construction put in place. The revised Census Bureau data are $\$ 170.8$ billion for 1996 and $\$ 175.2$ billion for 1997 . On a bestchange basis, the revised NIPA estimate of $\$ 163.2$ billion for 1997 was calculated by applying the 2.6 -percent growth rate from 1996 to 1997 in the revised Census Bureau data to the NIPA estimate for 1996 (that is, $163.2=$ $1.026 \times 159.1)$. Thus, the correct period-to-period change for 1996 to 1997 is preserved, but the level of the NIPA estimate for 1997 is now $\$ 12$ billion lower than the level of the Census Bureau data.
In the next comprehensive NIPA revision, the estimates of all components will be based on the best levels of the benchmark source data series, such as the benchmark input-output accounts. For most components of GDP, rough calculations suggest that when the estimates for 1997 are computed on a best-level basis, rather than on a best-change basis, the resulting revisions will generally be small. These rough calculations suggest that the largest revisions for 1997 will be to the following components: Nonresidential fixed investment in prepackaged software, up about $\$ 13$ billion, based on differences between the levels of the 1997 Service Annual Survey and the 1997 Economic Census; residential fixed investment, up about $\$ 12$ billion, based on revisions to Census Bureau data on the value of construction put in place; and personal consumption expenditures for services, up about $\$ 7$ billion, based on differences between the levels of the 1997 Service Annual Survey and the 1997 Economic Census. More precise estimates of these revisions will be available after the 1997 benchmark input-output accounts are completed.
2. However, the NIPA estimates of foreign transactions incorporate the annual revision of the international transactions accounts on the best-level basis in order to maintain consistency in BEA's published estimates.

Nonresidential structures.-Nonresidential structures was revised up for all 3 years: $\$ 1.7$ billion for 1997, $\$ 10.4$ billion for 1998, and $\$ 12.2$ billion for 1999. For 1998, upward revisions to gas utilities and to industrial structures accounted for most of the revision. For 1999, upward revisions to industrial structures and to gas utilities more than offset a downward revision to petroleum and natural gas well drilling and exploration. The revisions to industrial structures and gas utilities reflected the incorporation of revised Census Bureau data on the value of construction put in place. ${ }^{3}$ The revision to petroleum and natural gas well drilling and exploration reflected newly incorporated trade source data on drilling footage and newly incorporated prices that are used to calculate the currentdollar estimates.

Equipment and software.-Equipment and software was revised up for all 3 years: $\$ 11.5$ billion for 1997, $\$ 5.8$ billion for 1998, and $\$ 24.0$ billion for 1999. For 1997, the revision was accounted for by upward revisions to information processing equipment and software and to "other" equipment. Within information processing equipment and software, upward revisions to software and to computers and peripheral equipment were partly offset by a downward revision to "other." For 1998, upward revisions to information processing equipment and software and to "other" equipment were partly offset by a downward revision to transportation equipment-specifically, aircraft. Within information processing equipment and software, a large upward revision to software was partly offset by downward revisions to "other," to computers and peripheral equipment, and to communication equipment. For 1999, a large upward revision to information processing equipment and software was partly offset by a downward revision to transportation equipment. Within information processing equipment and software, a large upward revision to software was partly offset by downward revisions to "other," to computers and peripheral equipment, and to communication equipment. Within transportation equipment, downward revisions to trucks, buses, and truck trailers and to aircraft were partly offset by an upward revision to autos.
Within information processing equipment and software, the revisions to computers and periph-

[^6]eral equipment, to communication equipment, and to "other" reflected newly available Census Bureau data from the 1997 Economic Census and the 1998 Annual Survey of Manufactures. The revisions to software reflected newly available Census Bureau data from the 1997 Economic Census, the 1998 Service Annual Survey, and the unpublished BLS National Industry-Occupation Employment Matrix.

Within transportation equipment, the revision to trucks, buses, and truck trailers reflected a revision to the business share of light truck purchases, which is calculated from trade source data. The revision to autos was primarily accounted for by improved estimates of average expenditure per unit that were based on more detailed price data by model. The revisions to aircraft reflected product shipments data from the Census Bureau 1998 Annual Survey of Manufactures and revised product shipments data from the Census Bureau current industrial reports.
The revisions to "other" equipment reflected newly available data from the 1997 Economic Census and the 1998 Annual Survey of Manufactures.

Residential fixed investment.-Residential fixed investment was revised down for all 3 years: $\$ 1.0$ billion for $1997, \$ 3.3$ billion for 1998 , and $\$ 7.5$ billion for 1999. For all 3 years, the revisions were primarily accounted for by single-family structures, reflecting revised Census Bureau data on the value of construction put in place. ${ }^{4}$

Change in private inventories.-Change in private inventories is calculated by adjusting inventories reported by businesses on a book-value basis to a current-period replacement-cost basis by removing inventory profits and losses. ${ }^{5}$ Change in private inventories was revised down $\$ 5.4$ billion for 1997, was revised up $\$ 5.8$ billion for 1998, and was revised down $\$ 1.3$ billion for 1999.

The revisions to change in farm inventories were negligible for 1997 and 1998; for 1999, the change was revised down $\$ 3.6$ billion, reflecting newly available U.S. Department of Agriculture data on the composition and timing of crop market sales. ${ }^{6}$

The change in private nonfarm inventories was revised down $\$ 5.7$ billion for 1997, was revised up

[^7]$\$ 5.5$ billion for 1998 , and was revised up $\$ 2.2$ billion for 1999. For 1997, the revision was more than accounted for by a downward revision to the change in book value for manufacturing, reflecting newly available data from the 1997 Economic Census.

For 1998, upward revisions to the change in book value for retail trade, for manufacturing, and for "other than manufacturing and trade" more than offset a downward revision to the inventory valuation adjustment (IVA), which was in manufacturing and in wholesale trade. The revisions to the change in book value reflected newly available data from the Census Bureau annual survey of manufactures and annual retail trade survey and newly available inventory data from IRS tabulations of corporate and of sole proprietorship and partnership tax returns for 1998. The revisions to the IVA's for manufacturing and for wholesale trade reflected revised acquisition costs.

For 1999, the upward revision was mostly accounted for by an upward revision to the change in book value for retail trade, reflecting revised monthly data from the Census Bureau monthly retail trade survey.

Net exports of goods and services.-Net exports of goods and services was revised down for all 3 years: $\$ 1.0$ billion for 1997, $\$ 1.9$ billion for 1998 , and $\$ 0.1$ billion for 1999. For 1997, the revision was more than accounted for by a downward revision to exports of services. For 1998, the revision was mostly accounted for by an upward revision to imports of services. For 1999, a downward revision to exports of services was mostly offset by a downward revision to imports of services. For all 3 years, the revisions primarily reflected incorporation of revised data from BEA's international transactions accounts (ITA's) (see the section "Changes in Methodology").

Government consumption expenditures and gross investment.-Government consumption expenditures and gross investment was revised up for all 3 years: $\$ 6.9$ billion for 1997, $\$ 11.2$ billion for 1998 , and $\$ 4.3$ billion for 1999.

Federal Government consumption expenditures and gross investment was revised up for 1997, was revised up for 1998, and was revised down for 1999. For 1998, the upward revision reflected small upward revisions to both nondefense and defense consumption expenditures and gross investment. For 1999, the downward revision was
more than accounted for by a downward revision to nondefense consumption expenditures and gross investment. Within nondefense consumption expenditures and gross investment, a downward revision to "other" services was partly offset by an upward revision to nondefense equipment and software investment; the revisions primarily reflected revised Federal budget data for fiscal year 1999 and preliminary budget data for fiscal year 2000.

State and local government consumption expenditures and gross investment was revised up for all 3 years. The upward revisions were primarily to investment, specifically to structures, reflecting the incorporation of revised Census Bureau data on the value of construction put in place. Consumption expenditures was revised up by small amounts for 1997 and for 1998 and was revised down $\$ 2.4$ billion for 1999. Within consumption expenditures, for 1997 and for 1998, upward revisions to compensation of employees were partly offset by downward revisions to nondurable goods and to "other" services. For 1999, downward revisions to nondurable goods and to "other" services more than offset an upward revision to compensation of employees. For all 3 years, the revisions to nondurable goods and to "other" services reflected the incorporation of new and revised data from Census Bureau surveys of State and local governments; the upward revisions to compensation of employees were primarily to employer contributions to group health insurance, resulting from incorporating new data from the medical expenditure panel survey (see the section "Changes in Methodology").

Net receipts of income.-Net receipts of income from the rest of the world, which is excluded from GDP but included in gross national product, was revised up for all 3 years: $\$ 2.9$ billion for 1997, $\$ 6.4$ billion for 1998 , and $\$ 9.0$ billion for 1999 . Income receipts from the rest of the world was revised down for 1997, was revised up for 1998, and was revised up for 1999; income payments was revised down for all 3 years. These revisions reflected the incorporation of the annual revision of the ITA's: For income receipts, primarily updated source data-including the final results from the U.S. Treasury Department's Benchmark Survey of U.S. Portfolio Investment Abroad as of December 31, 1997-and a newly developed adjustment to account for the undercoverage of securities transactions; for income payments, primarily updated
source data. (For more information about the revision of the ITA's, see the section "Changes in Methodology.")

Gross national product (GNP).-GNP was revised up for all 3 years: $\$ 20.4$ billion, or 0.2 percent, for 1997; $\$ 36.7$ billion, or 0.4 percent, for 1998; and $\$ 52.0$ billion, or 0.6 percent, for 1999. These revisions to GNP were larger than those to GDP, reflecting the upward revisions to net receipts of income.

Gross domestic income (GDI).-GDI, which measures the costs incurred and the incomes earned in the production of GDP, was revised down $\$ 15.3$ billion for 1997, was revised up $\$ 7.5$ billion for 1998, and was revised down $\$ 10.2$ billion for 1999 (see the addenda to table 3).

For 1997, the downward revision to GDI reflected downward revisions to supplements to wages and salaries and to domestic corporate profits with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj) that more than offset upward revisions to domestic net interest, to consumption of fixed capital (CFC), and to proprietors' income with IVA and CCAdj. For 1998, the upward revision to GDI reflected upward revisions to domestic net interest, to proprietors' income with IVA and CCAdj, to CFC, to wage and salary accruals, and to indirect business tax and nontax liability that more than offset downward revisions to domestic corporate profits with IVA and CCAdj, to supplements to wages and salaries, and to rental income of persons with CCAdj. For 1999, the downward revision to GDI reflected downward revisions to domestic corporate profits, to supplements to wages and salaries, and to rental income of persons that more than offset upward revisions to domestic net interest, to CFC, to proprietors' income, and to wage and salary accruals.

Statistical discrepancy.-Revisions to the statistical discrepancy reflect differences between the revisions to GDP and those to GDI. ${ }^{7}$ For all 3 years, the revisions to GDP were larger (in absolute value) than those to GDI. For 1997, the statistical discrepancy was revised from $-\$ 3.2$ billion to $\$ 29.7$ billion (from zero percent to 0.4 percent of GDP), reflecting an upward revision to GDP and a downward revision to GDI. For 1998, the statistical discrep-

[^8]ancy was revised from - $\$ 47.6$ billion to $-\$ 24.8$ billion (from -0.5 percent to -0.3 percent of GDP), primarily reflecting an upward revision to GDP. For 1999, the statistical discrepancy was revised from $-\$ 125.1$ billion to $-\$ 71.9$ billion (from -1.4 percent to -0.8 percent of GDP), primarily reflecting an upward revision to GDP.

Compensation of employees.-Compensation of employees was revised down for all 3 years: $\$ 24.4$ billion for 1997, $\$ 27.0$ billion for 1998, and $\$ 31.9$ billion for 1999.

For all 3 years, the downward revisions were more than accounted for by downward revisions to other labor income. For 1997 and 1998, the revisions to other labor income were to employer contributions to group health insurance, reflecting a new data source-the medical expenditure panel survey (see the section "Changes in Methodol-ogy")-and to employer contributions to pension and profit-sharing plans, reflecting newly available Department of Labor tabulations of IRS data on these contributions. ${ }^{8}$

For 1998, the downward revision to other labor income was partly offset by an upward revision to wage and salary accruals, reflecting newly available source data for industries not covered by State unemployment insurance.

For 1999, the downward revisions to other labor income and to government wage and salary accruals were partly offset by an upward revision to the adjustment "wage accruals less disbursements," which reflected newly available BLS tabulations of wages and salaries of employees covered by State unemployment insurance. ${ }^{9}$

Proprietors' income with IVA and CCAdj.-Proprietors' income with IVA and CCAdj was revised up for all 3 years: $\$ 2.6$ billion for 1997, $\$ 14.6$ billion for 1998 , and $\$ 5.0$ billion for 1999. For 1997 and 1998, the upward revisions were mostly accounted for by nonfarm proprietors' income. For 1999, an upward revision to nonfarm proprietors' income was partly offset by a downward revision to farm proprietors' income.

[^9]The revisions to nonfarm proprietors' income primarily reflected newly incorporated IRS tabulations of sole proprietorship and partnership tax return data for 1998. The CCAdj for nonfarm proprietors' income was revised down for 1997, was revised up for 1998, and was revised up for 1999. (The CCAdj converts depreciation as reported on income tax returns to depreciation based on the replacement cost of the fixed assets; see "Consumption of fixed capital.") The revision to farm proprietors' income primarily reflected newly incorporated information from the U.S. Department of Agriculture.

Rental income of persons with CCAdj.-Rental income of persons with CCAdj was revised down for all 3 years: $\$ 1.9$ billion for 1997, $\$ 2.0$ billion for 1998, and $\$ 2.5$ billion for 1999. For 1997 and for 1999, the revisions were primarily accounted for by rental income of persons (without CCAdj) and resulted from upward revisions to several categories of residential housing expenses-mainly property taxes, origination fees, and other closing costs-and from downward revisions to royalties, all reflecting the incorporation of data from regular sources. For 1998, about half of the revision was accounted for by a revision to the CCAdj that reflected revised prices for residential housing.

Corporate profits with IVA and CCAdj.-Corporate profits with IVA and CCAdj was revised down for all 3 years: $\$ 4.7$ billion for 1997, $\$ 33.4$ billion for 1998 , and $\$ 36.7$ billion for 1999. Most of the downward revisions were accounted for by profits before tax. For 1997, the CCAdj was also revised down. For 1998, the CCAdj and the IVA were both revised down. For 1999, a downward revision to the CCAdj accounted for about half of the revision; the IVA was revised up. (For more information on the CCAdj, see "Consumption of fixed capital.")

Corporate profits before tax was revised down for all 3 years, as downward revisions to domestic profits more than offset upward revisions to rest-of-the-world profits. The revisions to domestic profits primarily reflected revised IRS tabulations of corporate tax returns for 1997, newly available preliminary tabulations for 1998, and other data from regular sources. The revisions to the rest-of-the-world profits were primarily accounted for by downward revisions to payments on foreign investment in the United States; for 1999, an upward revision to receipts from U.S. investment abroad
also contributed. The revisions to the rest-of-theworld profits reflected the incorporation of the annual revision of the ITA's.

Net interest.-Net interest was revised up for all 3 years: $\$ 11.4$ billion for $1997, \$ 47.0$ billion for 1998 , and $\$ 39.6$ billion for $1999 .{ }^{10}$

For 1997, the upward revision was accounted for by a downward revision to monetary interest received by domestic business-primarily by financial corporations-and by an upward revision to imputed interest paid by domestic businessprimarily by life insurance carriers.

For 1998, the upward revision was accounted for by upward revisions to monetary interest paid by domestic business-primarily by financial cor-porations-and to imputed interest paid by domestic business-primarily by life insurance carriers-and by downward revisions to imputed interest received by domestic business and to monetary interest received by the rest of the world.

The revisions to monetary interest reflected revised and newly available IRS tabulations of corporate tax return data. The revisions to imputed interest reflected newly incorporated regular source data. The revision to rest-of-the-world interest reflected the annual revision of the ITA's.

For 1999, the upward revision was accounted for by the revised 1998 levels and by newly incorporated regular source data, mainly reports from financial regulatory agencies. ${ }^{11}$

Consumption of fixed capital (CFC).-CFC-that is, the charge for the using up of private and government fixed capital-was revised up for all 3 years: $\$ 4.2$ billion for 1997, $\$ 12.7$ billion for 1998, and $\$ 25.2$ billion for 1999 . The relatively large upward revisions to the private component of CFC and the smaller upward revisions to the government component reflected the incorporation of revised BEA estimates of fixed investment, primarily for software, and of prices. (The estimates of investment and prices are direct inputs into the calculation of both private and government net capital stocks, which are used to calculat the CFC.)

Private capital consumption allowances (CCA)-that is, tax-return-based depreciation for
10. Net interest is calculated as the sum of monetary interest paid by domestic business and by the rest of the world and imputed interest paid by domestic financial corporate business, less monetary interest received by domestic business and by the rest of the world and imputed interest received by domestic business and by the rest of the world.
11. For 1999, the revision cannot be attributed to the same level of component detail as for 1998, because for 1999, the previously published estimates were prepared at a less detailed level.
corporations and nonfarm proprietorships and historical-cost depreciation (using consistent service lives) for farm proprietorships, rental income of persons, and nonprofit institutions-was revised up for all 3 years: $\$ 0.5$ billion for 1997, $\$ 5.1$ billion for 1998, and $\$ 9.4$ billion for 1999. For all 3 years, the revisions primarily reflected revised BEA estimates of software investment, which is not included in IRS depreciation for corporations or for nonfarm proprietors and partnerships. For 1998, the revision also reflected newly available IRS tax return data for nonfarm proprietorships and partnerships. For 1999, the revision also reflected revised BEA projections of IRS depreciation and amortization using BEA estimates of investment flows and IRS service lives and depreciation conventions.

Private capital consumption adjustment (CCAdj), which is derived as the difference between private CCA and private CFC, was revised down for all 3 years: $\$ 3.3$ billion for 1997, $\$ 5.8$ billion for 1998 , and $\$ 12.3$ billion for 1999.

Nonfactor income.-Nonfactor income-which comprises indirect business tax and nontax liability, business transfer payments, and "subsidies less current surplus of government enterprises"-was revised up for all 3 years: $\$ 0.2$ billion for 1997, $\$ 1.8$ billion for 1998, and $\$ 0.2$ billion for 1999. For 1998, the revision primarily reflected an upward revision to indirect business taxes that was partly offset by an upward revision to "subsidies less current surplus of government enterprises," which is subtracted in aggregating nonfactor incomes. For 1999, an upward revision to indirect business taxes was offset by an upward revision to "subsidies less current surplus of government enterprises." For all 3 years, the revisions to business transfer payments were negligible.

For all 3 years, the revisions to indirect business taxes reflected upward revisions to State and local indirect business taxes that were partly offset by downward revisions to Federal indirect business taxes. The revisions to State and local indirect business taxes were mostly accounted for by property taxes and reflected newly available and revised data from Census Bureau surveys of State and local governments. The revisions to Federal indirect business taxes were mostly accounted for by excise taxes and reflected newly incorporated data from the Treasury Department.

For 1999, the revision to subsidies less current surplus of government enterprises reflected up-
ward revisions to both the Federal component, based on newly incorporated data on outlays from the Monthly Treasury Statement, and the State and local component, based on data from Census Bureau annual surveys of State and local governments.

National income.-National income-income that originates from production-was revised down for all 3 years: $\$ 17.1$ billion for 1997, $\$ 0.7$ billion for 1998 , and $\$ 26.6$ billion for 1999 . These revisions reflected the previously described revisions to compensation of employees, proprietors' income, rental income of persons, corporate profits, and net interest.

Personal income and its disposition.-Personal income-income received by persons from participation in production, from government and business transfer payments, and from government interest-was revised down $\$ 14.1$ billion for 1997, was revised up $\$ 32.1$ billion for 1998, and was revised down $\$ 2.2$ billion for 1999 . These revisions partly reflected the previously described revisions to the components of national income that are included in personal income-wage and salary disbursements, other labor income, proprietors' income, and rental income of persons-and to the components of personal income-personal dividend income and personal interest income-that are derived from related components of national income. The revisions also resulted from revisions to transfer payments to persons and to personal contributions for social insurance.

Personal dividend income-which consists of dividend income received by persons from all sources and which equals national income dividends less dividends received by government-was revised up for all 3 years: $\$ 1.5$ billion for 1997, $\$ 2.8$ billion for 1998, and $\$ 6.0$ billion for 1999. These revisions reflected newly incorporated IRS tabulations of corporate tax return data, the annual revision of the ITA's, and data from public financial statements.

Personal interest income-which consists of monetary and imputed interest received by persons from all sources and which equals net interest plus interest paid by persons and interest paid by government less interest received by govern-ment-was revised up for all 3 years: $\$ 9.1$ billion for $1997, \$ 43.0$ billion for 1998 , and $\$ 32.4$ billion for 1999. ${ }^{12}$ These revisions reflected the previously described upward revisions to net interest and also
upward revisions to interest paid by government that more than offset downward revisions to interest paid by persons and upward revisions to interest received by government. The revisions to interest paid by persons reflected revised data on consumer credit from the Federal Reserve Board. The upward revisions to interest paid by government and to interest received by government were more than accounted for by revisions to State and local government interest paid and received, reflecting new and revised data from Census Bureau surveys of State and local governments.

Transfer payments to persons was revised down for all 3 years: $\$ 0.2$ billion for 1997, $\$ 0.6$ billion for 1998, and $\$ 2.0$ billion for 1999. For 1999, the revision resulted from a downward revision to Federal benefits for hospital and supplementary medical insurance (medicare) that more than offset an upward revision to State and local government benefits for medical care. The revision to Federal medicare benefits reflected newly incorporated data from the Treasury Department. The revision to State and local government medical care transfer payments reflected newly incorporated data on payments for medicaid from the Health Care Financing Administration.

Personal contributions for social insurancewhich is subtracted in calculating personal in-come-was revised down $\$ 0.2$ billion for 1997, was revised up $\$ 0.3$ billion for 1998, and was revised up $\$ 3.9$ billion for 1999. For 1999, the revision was attributable to an upward revision to personal contributions for Federal old-age, survivors, disability, and health insurance trust funds (social security), reflecting new taxable wage data from the Social Security Administration.

Personal tax and nontax payments was revised up $\$ 0.5$ billion for 1997, was revised down $\$ 1.7$ billion for 1998, and was revised down $\$ 0.1$ billion for 1999. For 1997, an upward revision to Federal Government tax and nontax payments more than offset a downward revision to State and local government tax payments. For 1998 and 1999, downward revisions to State and local tax and nontax payments more than offset upward revisions to Federal Government tax payments. The revisions to State and local tax and nontax payments reflected new and revised data from Census Bureau surveys of State and local govern-

[^10]ments. The revisions to Federal Government tax payments reflected newly incorporated data from the Treasury Department.

Reflecting the revisions to personal income and to personal tax and nontax payments, disposable personal income (DPI) was revised down $\$ 14.6$ billion for 1997, was revised up $\$ 33.8$ billion for 1998, and was revised down $\$ 2.0$ billion for 1999.

Personal outlays-PCE, interest paid by persons, and "personal transfer payments to the rest of the world (net)"-was revised up $\$ 3.6$ billion for 1997, was revised down $\$ 1.9$ billion for 1998, and was revised up $\$ 6.8$ billion for 1999. For 1997 and for 1999, upward revisions to PCE and to "personal transfer payments to the rest of the world (net)" more than offset downward revisions to interest paid by persons. For 1998, a downward revision to interest paid by persons more than offset upward revisions to PCE and to "personal transfer payments to the rest of the world (net)."

Personal saving-the difference between DPI and personal outlays-was revised down $\$ 18.2$ billion for 1997, was revised up $\$ 35.7$ billion for 1998, and was revised down $\$ 8.7$ billion for 1999. For 1997, the downward revision to personal saving reflected the downward revision to DPI and the upward revision to personal outlays. For 1998, the upward revision reflected the upward revision to DPI and the downward revision to personal outlays. For 1999, the downward revision reflected the upward revision to personal outlays and the downward revision to DPI. The revisions to the personal saving rate-personal saving as a percentage of DPI-were similar to those for personal saving; the rate was revised down from 4.5 percent to 4.2 percent for 1997, was revised up from 3.7 percent to 4.2 percent for 1998, and was revised down from 2.4 percent to 2.2 percent for 1999.

Gross saving and investment.-Gross saving was revised down $\$ 19.0$ billion for 1997, was revised up $\$ 8.4$ billion for 1998 , and was revised down $\$ 9.5$ billion for 1999. Gross saving as a percentage of GNP was revised down 0.3 percentage point to 18.0 percent for 1997, was unrevised at 18.8 percent for 1998, and was revised down 0.2 percentage point to 18.5 percent for 1999.

For 1997, the revision to gross saving reflected downward revisions to gross private saving and to gross government saving. Within gross private saving, downward revisions to personal saving and to undistributed profits with IVA and CCAdj more than offset an upward revision to corporate con-
sumption of fixed capital (CFC). Within gross government saving, an upward revision to the Federal Government current deficit was largely offset by an upward revision to the State and local government current surplus.

For 1998, gross private saving and gross government saving were both revised up. Within gross private saving, upward revisions to personal saving, to corporate CFC, and to noncorporate CFC more than offset a large downward revision to undistributed profits with IVA and CCAdj. The upward revision to gross government saving was largely accounted for by an upward revision to the Federal Government current surplus.

For 1999, a downward revision to gross private saving more than offset an upward revision to gross government saving. Within gross private saving, downward revisions to undistributed profits with IVA and CCAdj and to personal saving more than offset upward revisions to corporate CFC, to noncorporate CFC, and to the adjustment "wage accruals less disbursements." The upward revision to gross government saving reflected upward revisions to the Federal Government current surplus, to the Federal Government CFC, and to the State and local government CFC.

Gross investment-the sum of gross private domestic investment, gross government investment, and net foreign investment-was revised up for all 3 years: $\$ 14.0$ billion for 1997, $\$ 31.2$ billion for 1998 , and $\$ 43.6$ billion for 1999. For all 3 years, all the components were revised up.

## Annual price estimates

Revisions to the chain-type price indexes result from the incorporation of newly available and revised source data, the introduction of methodological changes that affect the use of source data, and the regularly scheduled incorporation of annual weights for the most recent year (1999). In this annual revision, the source data for price indexes that were used for deflation and the source data that affected implicit prices were revised. ${ }^{13}$ Methodological changes included a change in the deflator for imports of computers, beginning with 1999, and a change in the deflator for petroleum and gas well drilling and exploration, beginning with 2000 (see the section "Changes in Methodology"). In addition, the prices used for deflation reflected updated seasonal adjustment factors.

[^11]Newly available source data resulted in revisions to the implicit prices for four types of PCE for ser-vices-automobile insurance, health insurance, brokerage and investment charges, and "services furnished without payment by financial intermediaries except life insurance carriers"-and for Federal Government and State and local government compensation of employees. The revisions to most of these prices reflected the previously discussed revisions to the corresponding current-dollar estimates.

The level of the chain-type price index for gross domestic purchases was revised up for all 3 years: 0.03 index point to 101.64 for 1997, 0.10 index point to 102.45 for 1998, and 0.22 index point to 104.08 for 1999. Reflecting these revisions in level, the annual percent increase in the index was unrevised at 1.6 percent for 1997, was revised up 0.1 percentage point to 0.8 percent for 1998 , and was revised up 0.1 percentage point to 1.6 percent for 1999 (see the addendum to table 4). For all 3 years, the revisions to the annual percent increase in the chain-price index for GDP were the same as those to the chain-price index for gross domestic purchases.

The largest contributor to the upward revisions to the percent change in gross domestic purchases prices was the upward revision to PCE for services. Within PCE for services, the largest contributor was "services furnished without payment by financial intermediaries except life insurance carriers."

By major component of GDP, the largest revisions were to the percent change in the price index for Federal nondefense consumption expenditures and gross investment, which was revised up 0.5 percentage point for 1997, was revised down 0.3 percentage point for 1998, and was revised down 0.8 percentage point for 1999; compensation of employees accounted for the revisions. The only other major GDP component that was revised by more than 0.3 percentage point was State and local government expenditures and gross investment, which was revised up 0.4 percentage point for 1997; compensation of employees also accounted for this revision.

## Annual real GDP estimates

In general, revisions to real GDP reflect four factors: (1) Revisions to the current-dollar components of GDP for which chained-dollar estimates are prepared by deflation, (2) revisions to the prices used in deflation, (3) revisions to the quantities used to estimate components of real GDP by

extrapolation or direct valuation, and (4) revisions resulting from the use of revised and updated weights in the calculation of real GDP.

For the GDP components for which chaineddollar estimates are prepared by extrapolation or direct valuation, the current-dollar and chaineddollar estimates are based on independent source data; consequently, the corresponding revisions are unrelated. ${ }^{14}$ Thus, differences between the cur-rent-dollar revisions and the chained-dollar revisions to these components are reflected as revisions to their implicit prices. In this annual revision, the revisions to the current-dollar GDP estimates are larger than those to the chained-dollar GDP estimates, resulting in upward revisions to the implicit prices.

The annual percent change in real GDP was revised up 0.2 percentage point to 4.4 percent for 1997, was revised up 0.1 percentage point to 4.4 percent for 1998, and was unrevised at 4.2 percent for 1999 (table 4).

For 1997, the largest contributors to the upward revision to real GDP growth were fixed investment in equipment and software, PCE for services, and State and local government consumption expenditures and gross investment; the contributions of these components were partly offset by a downward revision to change in private inventories. For 1998, the largest contributors to the upward revision to real GDP growth were change in private inventories, nonresidential structures, State and local government consumption expenditures and gross investment, and Federal consumption expenditures and gross investment; the contributions of these components were partly offset by downward revisions to PCE for services, to PCE for goods, to investment in equipment and software, and to residential investment and by an upward revision to imports of goods and services (which is subtracted in the calculation of GDP). For 1999, the contributions of an upward revision to investment in equipment and software, of a downward revision to imports of goods and services, and of upward revisions to PCE for goods and to nonresidential structures were offset by downward revisions to PCE for services, to exports of goods and services, to State and local government consumption expenditures and gross investment, to residential investment, and to change in private inventories.

[^12]Revisions to the components of real GDP.-The annual percent change in real PCE was revised up 0.2 percentage point to 3.6 percent for 1997, was revised down 0.2 percentage point to 4.7 percent for 1998, and was unrevised at 5.3 percent for 1999. For 1997, the upward revision was mostly accounted for by an upward revision to PCE for services (medical care services). For 1998, the downward revision was the result of widespread downward revisions to PCE for durable goods and to PCE for services. For 1999, upward revisions to PCE for durable goods (mainly motor vehicles and parts) and to PCE for nondurable goods (mainly gasoline and oil and food) were offset by a downward revision to PCE for services (mainly recreation).

The change in nonresidential fixed investment was revised up for all 3 years: 1.5 percentage points to 12.2 percent for 1997, 0.3 percentage point to 13.0 percent for 1998, and 1.8 percentage points to 10.1 percent for 1999. For 1997, equipment and software primarily accounted for the revision. Within equipment and software, the upward revision was mainly to information processing equipment and software, specifically software. For 1998, an upward revision to structures (mainly utilities) was partly offset by a downward revision to equipment and software. Within equipment and software, a downward revision to transportation equipment (mainly aircraft) more than offset an upward revision to information processing equipment and software; within information processing equipment and software, a large upward revision to software more than offset downward revisions to computers and peripheral equipment and to "other" information processing equipment. For 1999, an upward revision to equipment and software (mainly software) accounted for most of the revision.

The change in residential investment was revised down for all 3 years: 0.3 percentage point to 2.0 percent for 1997, 0.9 percentage point to 8.3 percent for 1998, and 1.0 percentage point to 6.4 percent for 1999. For all 3 years, single-family structures accounted for most of the revisions.

The change in inventory investment was revised down $\$ 5.3$ billion (chained dollars) for 1997, was revised up $\$ 5.9$ billion for 1998, and was revised up $\$ 3.1$ billion for 1999. For all 3 years, nonfarm inventory investment accounted for most of the revisions. Within nonfarm inventory investment, for 1997, a downward revision to manufacturing more than accounted for the revision; for 1998, upward
revisions to retail trade and to "other" nonfarm inventories more than accounted for the revision; and for 1999, an upward revision to wholesale trade accounted for most of the revision.

The change in exports of goods and services was revised down 0.2 percentage point to 12.3 percent for 1997 , was revised up 0.1 percentage point to 2.3 percent for 1998 , and was revised down 0.9 percentage point to 2.9 percent for 1999. For 1999, the revision was mainly accounted for by widespread downward revisions within exports of services.

The change in imports of goods and services was unrevised at 13.7 percent for 1997, was revised up 0.3 percentage point to 11.9 percent for 1998 , and was revised down 1.0 percentage point to 10.7 percent for 1999. The downward revision for 1999 was mostly accounted for by "other private services" and by travel.

The change in government consumption expenditures and gross investment was revised up 0.2 percentage point to 2.4 percent for 1997, was revised up 0.4 percentage point to 2.1 percent for 1998, and was revised down 0.4 percentage point to 3.3 percent for 1999. For 1997, an upward revision to State and local investment in structures more than offset a downward revision to State and local consumption expenditures for nondurable goods. For 1998, the revision was largely accounted for by upward revisions to State and local structures, to State and local compensation of employees, and to Federal nondefense consumption expenditures for nondurable goods. For 1999, the revision was more than accounted for by downward revisions to State and local consumption ex-
penditures (mainly compensation of employees) and to Federal nondefense consumption expenditures (mainly "other services").

## Quarterly estimates

Revisions to the quarterly (and monthly) NIPA estimates reflect the revisions to the annual estimates from the newly incorporated annual source data, the incorporation of new and revised monthly and quarterly source data (including the updating of seasonal factors that are used to indicate quarterly patterns), and the introduction of changes in methodology. In this annual revision, the changes in methodology primarily affected other labor income and price measures for the estimates of certain components of fixed investment and of foreign transactions.

In general, the quarter-to-quarter patterns of change in the principal measures of real output and prices on the revised basis are not markedly different from those on the previously published basis (table 5). For real GDP, the revisions to the 13 quarterly percent changes (at annual rates) averaged 0.5 percentage point (without regard to sign). The changes were revised up for five quarters, were revised down for seven quarters, and were unrevised for one quarter. The largest upward revisions to the percent changes in real GDP were 1.0 percentage point for the second quarter of 1997 and for the fourth quarter of 1999. For the second quarter of 1997, the growth rate of real GDP was revised to 5.9 percent; the upward revision was largely attributable to investment in equipment and software, to exports of goods, and to PCE for services. For the fourth quarter of 1999, the

growth rate of real GDP was revised to 8.3 percent; the upward revision was attributable to investment in equipment and software and to change in private inventories. The largest downward revision to the percent changes in real GDP was 0.7 percentage point, to 4.8 percent, for the first quarter of 2000; the downward revision was attributable to investment in equipment and software and to change in private inventories.

For gross domestic purchases prices, the revisions to the 13 quarterly percent changes (at annual rates) averaged 0.2 percentage point (without regard to sign). The changes were revised up for eight quarters, were revised down for two quarters, and were unrevised for three quarters. The largest revision was a downward revision of 0.4 percentage point for the fourth quarter of 1999; the principal source of the revision was prices of PCE for services.

## Changes in Methodology

This section describes the changes in methodol-ogy-either in the source data or in the methods
used to prepare the estimates-that were incorporated into this annual revision. ${ }^{15}$ Several of these changes were identified as high priority items in BEA's strategic plan for maintaining and improving the Nation's economic accounts. ${ }^{16}$

Classification by industry.-For this annual NIPA revision, the source data collected by other Federal agencies under the new North American Classification System (NAICS) were converted to the 1987 Standard Industrial Classification (SIC) in order to be consistent with the other BEA source data that remain on an SIC basis. Specifically, for BEA's industry-based estimates of change in private inventories, profits, nonfarm proprietors' income, and net interest for 1997 and 1998, industry concordances between NAICS and the SIC were developed to convert the NAICS-based source data to
15. These methodological changes update the information in two tables that list the principal source data and methods used to prepare the estimates of GDP. These tables were published in "Updated Summary NIPA Methodologies," 14-35; updated tables will be published in the October 2000 Surver.
16. See "BEA's Mid-Decade Strategic Plan: A Progress Report," Surver 76 (June 1996): 52-55.

## Implementation of the North American Industry Classification System

This annual revision of the NIPA's incorporates some source data from Federal agencies that were collected under the new North American Industry Classification System (NAICS). However, much of the source data remain on the Standard Industrial Classification (SIC) basis, and the NIPA estimates by industry are presented on that basis (see below for the tentative schedule for implementing NAICS).
NAICS is an economic classification system that groups establishments into industries and that provides the framework for collecting, analyzing, and disseminating economic data on an industry basis. NAICS is unique because it is constructed under a single conceptual framework in which economic units that use similar production processes are classified in the same industry. As a result, the data are more appropriately classified for measuring productivity, unit labor costs, and input-output relationships.
NAICS was adopted by the United States, Canada, and Mexico on April 9, 1997. NAICS replaces the SIC, which had been the U.S. standard since the 1930's and which was last updated in 1987. ${ }^{1}$
BEA's plan for implementing NAICS depends on the implementation schedules of its source data agencies. The

1. See Executive Office of the President, Office of Management and Budget, North American Industry Classification System, United States, 1997 (Washington DC: Bernan Press, 1998) and Executive Office of the President, Office of Management and Budget, Standard Industrial Classification Manual, 1987 (Washington DC: Government Printing Office, 1987).

Census Bureau released data for the 1997 Economic Census on a NAICS basis in 1999 and 2000, and BEA released data on foreign direct investment in the United States (FDIUS) on a NAICS basis in 1999. ${ }^{2}$ Full implementation of NAICS by BEA's three major source data providersthe Census Bureau, the Bureau of Labor Statistics (BLS), and the Internal Revenue Service (IRS)-will be completed in 2004.
BEA's tentative plans for NAICS implementation are as follows:
2000: BEA converted NAICS-based source data to an SIC basis; it did not publish NAICS-based estimates.
2001: BEA will convert its inventory estimates to a NAICS basis. Other NAICS-based source data will continue to be converted to an SIC basis.
2002: BEA will convert its estimates of State personal income (based on data from BLS) to a NAICS basis and will publish the benchmark 1997 input-output accounts on a NAICS basis (based on data from the 1997 Economic Census).
2003-2004: Based on its 1997 benchmark input-output accounts and the full implementation of NAICS by all of its source-data agencies, BEA will finish converting all of its industry-based estimates to a NAICS basis, including a new set of benchmark NIPA estimates.

[^13]an SIC basis using special tabulations of IRS and Census Bureau source data. For BEA's productbased estimates of personal consumption expenditures and private investment in equipment and software, product concordances between NAICS and the SIC were developed to convert the NAICSbased source data to an SIC basis using special tabulations of Census Bureau source data. ${ }^{17}$ These converted data were then incorporated into the NIPA estimates. (For more information, see the box "Implementation of the North American Industry Classification System.")

Medical expenditure panel survey (MEPS).-The revised estimates of employer contributions to group health insurance, which accounts for about half of other labor income, are now based on MEPS-a new Department of Health and Human Services survey that covers both health insurance purchased by employers for their employees and health insurance provided by employers on a selfinsured basis. ${ }^{18}$ The estimate is introduced on a "best-level" basis for 1997 because MEPS pro-vides-for the first time-a benchmark for the level of employer health insurance costs. Previously, the health insurance estimates were based on total contributions from the Health Care Financing Administration's national health accounts less employee contributions from the BLS consumer expenditure survey. Estimates for
17. The NAICS and the SIC are industry, not product, classification systems. However, product data from the 1997 Economic Census use a NAICS coding scheme, so a concordance between the 1997 scheme and the one used in the 1992 Economic Census (which was based on the SIC) had to be developed.
18. Self insurance by employers accounts for about half of all health insurance provided to employees.
later years continue to be extrapolated using BLS data on employer costs for employee compensation and BLS tabulations of wages and salaries of employees covered by unemployment insurance.

Net exports of goods and services and net receipts of income.-The major source of the NIPA estimates of foreign transactions is the U.S. international transactions accounts (ITA's), which are also prepared by BEA. In this year's annual ITA revision, newly available data from regular sources, including revised monthly data on foreign travelers in the United States, and from surveys conducted by BEA and by the Department of Treasury were incorporated. Several improvements in the estimating methodologies were also introduced; these include improved estimates of net U.S. purchases of foreign securities, newly developed estimates of expenditures of temporary nonagricultural workers in the United States, and improved estimation techniques for expenditures of international organizations and of foreign embassies in the United States. ${ }^{19}$ In addition to incorporating the ITA revisions, the NIPA's also incorporate revisions to the items that adjust for the differences between the two sets of accounts (these differences are identified in NIPA table 4.5B).

As usual, the ITA revisions were incorporated into the NIPA's at their "best level," beginning with estimates for 1997; the NIPA estimates of foreign transactions for earlier years were not revised. (The revisions of the ITA's for years before 1997 will be incorporated in the next comprehensive

[^14]Availability of Revised Estimates and Related Information
The estimates shown in the NIPA tables that follow this article and the estimates for earlier periods (for most tables, beginning with 1929 for annual estimates and with 1946 for quarterly estimates) are available on BEA's Web site at <www.bea.doc.gov>. Later this year, the NIPA estimates will be available on a CD-ROM.
Publication of the revised estimates and related estimates will continue in subsequent issues of the Survey of Current Business. The September Survey will present table 5.16, which shows changes in the net stock of produced assets; reconciliation table 8.28 , which shows the relationship between personal income in the NIPA's and adjusted gross income published by the Internal Revenue Service; and new estimates of fixed assets and consumer durable goods for 1999 and revised estimates for 1997-98.
The October Surver will present "Updated Summary NIPA Methodologies," which lists the principal source
data and estimating methods used in preparing the current-dollar and real estimates of GDP; tables 3.15-3.17 (government spending by function), tables $3.18-3.20$ (government sector reconciliation tables), and tables 9.19.6 (seasonally unadjusted estimates); revised real inventories, sales, and inventory-sales ratios for manufacturing and trade for 1997:I-2000:1; and revised estimates of State personal income that incorporate the results of this annual revision of the NIPA's.
The December Surver will present revised and updated estimates of gross product by industry.
In early 2001, BEA will publish National Income and Product Accounts of the United States, 1929-97, which will present the full set of NIPA tables and will describe definitions and statistical conventions.
The availability of the CD-ROM and the volume will be announced in the SURvEY and on BEA's Web site.

NIPA revision.) As a result, there are discontinuities between the NIPA estimates for 1996 and those for 1997 (table 6).

The change in current-dollar net exports of goods and services (and in current-dollar GDP) from 1996 to 1997 is overstated by $\$ 2.3$ billion. The discontinuity is primarily accounted for by exports of "other" private services, reflecting the incorporation of newly developed estimates of expenditures by temporary nonagricultural workers in the United States.

For net receipts of income, the change from 1996 to 1997 is overstated by $\$ 1.7$ billion. The discontinuity is more than accounted for by corporate profits paid to the rest of the world, reflecting improved estimates of the current-cost adjustment. ${ }^{20}$ For GNP, which includes both net exports of goods and services and net receipts of income, the change is overstated by $\$ 3.9$ billion.

New prices.-In this annual revision, price measures are modified for the estimates of some components of fixed investment and of foreign transactions to account for several price indexes that are no longer available from the Bureau of Labor Statistics (BLS).
20. See Bach, "U.S. International Transactions," 74.

The first modification is to a price index that is used in the deflation of computers and peripheral equipment, a component of equipment and software: The BLS international price index for imported computers replaces a weighted average of the producer price index (PPI) for large-scale computers, the PPI for mid-range computers, and an unpublished BLS price index for imported personal computers, beginning with January 1999. This BLS international price index for imported computers is also be used to deflate imports of mainframes and personal computers for the estimates of foreign transactions.

The second modification is to the price index that is used to deflate petroleum and gas well drilling and exploration, a component of nonresidential structures: The PPI for oil and gas field services replaces PPI's for onshore field services and for offshore field services, beginning with January 2000.

## Presentational Changes

Table 7.20.-In this annual revision, a new NIPA table, table 7.20, is introduced that shows annual chain-type quantity and price indexes for personal consumption expenditures (PCE) by type of expenditure. The items that are shown correspond to

1. Equals the revisions to the U.S. international transactions accounts that have not been car-
ried back in the NIPA's at this time.
those shown in table 2.5 for the chained-dollar estimates of PCE by type of expenditure. The new table provides estimates for the PCE aggregates by type of expenditure that were not previously available in the NIPA tables; most of the detailed items are already in table 7.5 , which shows the chaintype quantity and price indexes for PCE by type of product. The estimates in the new table begin with 1929 (see the box "Availability of Revised Estimates and Related Information").

Table 8.26. -Two lines have been deleted from table 8.26, which shows the relation between monetary interest paid and received in the NIPA's and in corresponding IRS measures. Line 26 showed

NIPA estimates of monetary interest received by sole proprietorships and partnerships, and line 25 showed the corresponding IRS estimates. The IRS no longer publishes estimates of total interest received by financial partnerships. The NIPA estimates of monetary interest received by financial sole proprietorships and partnerships are currently derived from IRS estimates of partnership receipts. These NIPA estimates will continue to be published in line 27 in table 8.20, which shows interest paid and received by sector and legal form of organization.

## National Income and Product Accounts Tables

This section presents revised annual estimates for 1997-99, revised quarterly estimates for 1997:I-2000:I, and the "advance" estimates for 2000:II for nearly all of the full set of tables of the national income and product accounts (NIPA's); these estimates were released on July 28, 2000. For information about the revision, see "Annual Revision of the National Income and Product Accounts" in this issue.

In this annual revision, a new table 7.20 has been added. It shows annual chain-type quantity and price indexes for personal consumption expenditures by type of expenditure, and it corresponds to the presentation of the chained-dollar estimates in table 2.5.

As indicated, the tables present annual [A], quarterly [Q], and monthly [ $M$ ] estimates.

## Summary Tables

A Summary National Income and Product Accounts, 1999................. 36
S. 1 Summary of Percent Change From Preceding Period in Real Gross
S. 2 Summary of Contributions to Percent Change in Real Gross Domestic Product [A, Q]

## 1. National Product and Income

1.1 Gross Domestic Product [A, Q]
1.2 Real Gross Domestic Product [A, Q].......................................................................... 39
1.3 Gross Domestic Product by Major Type of Product [A, Q]............. 40
1.4 Real Gross Domestic Product
by Major Type of Product [A, Q]................................................... 40
1.5 Relation of Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers [A, Q]............................... 41
1.6 Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers [ $\mathrm{A}, \mathrm{Q}$ ] ....... 41

1.8 Real Gross Domestic Product by Sector [A, Q].................................. 41
1.9 Relation of Gross Domestic Product, Gross National Product, Net National Product, National Income, and
Personal Income [A, Q].
.......... 42
Relation of Real Gross Domestic Product, Real Gross Nationa Product, and Real Net National Product [A, Q]
1.11 Command-Basis Real Gross National Product [A, Q ..... 42
1.12 Net Domestic Product by Sector [A] ..... 43
1.13 Real Net Domestic Product by Sector [A]. ..... 43
1.14 National Income by Type of Income [A, $Q$ ]. ..... 43
1.15 National Income by Sector, Legal Form of Organization, and Type of Income [A] ..... 44
1.16 Gross Product of Corporate Business in Current Dollars and GrossProduct of Nonfinancial Corporate Business in Current andChained Dollars [A, Q]45
2. Personal Income and Outlays
2.1 Personal Income and Its Disposition [A, Q]46
2.2 Personal Consumption Expenditures by Major Type of Product $[\mathrm{A}, \mathrm{Q}$ ] ..... 47
2.3 Real Personal Consumption Expenditures by Major Type of Product [A, Q] ..... 47
2.4 Personal Consumption Expenditures by Type of Expenditure [A] ..... 48
2.5 Real Personal Consumption Expenditures by Type of Expenditure [A] ..... 49
2.6 Personal Consumption Expenditures by Type of Product $[\mathrm{A}]$ ..... 50
2.7 Real Personal Consumption Expenditures by Type of Product [A] ..... 51
2.8 Personal Income by Type of Income [A, M] ..... 52
2.9 Personal Income and Its Disposition [A, M] .....  .53
2.10 Personal Consumption Expenditures by Major Type of Product $[\mathrm{A}, \mathrm{M}]$. ..... 54
2.11 Real Personal Consumption Expenditures by Major Type of Product $[\mathrm{A}, \mathrm{M}]$ ..... 54
3. Government Current Receipts and Expenditures
3.1 Government Current Receipts and Expenditures [A, Q] ..... 55
3.2 Federal Government Current Receipts andExpenditures [A, Q]56

Tables 3.15-3.20, 5.16, 8.28, 9.1-9.6 on the revised basis are not yet available. Tables 5.16 and 8.28 are scheduled to be published in the September 2000 Survey of Current Business. The other tables are scheduled to be published in the October 2000 Survey.

The annual and quarterly estimates for gross domestic product (GDP) are presented in "GDP and Other Major NIPA Series, 1929-2000:I." The estimates for most of the NIPA series, beginning with 1929, are available on BEA's Web site at <www.bea.doc.gov> and on STAT-USA's Web site at <www.stat-usa.gov>.

3.4 Personal Tax and Nontax Receipts [A]............................................. 58
3.5 Indirect Business Tax and Nontax Accruals [A]................................................ 58
3.6 Contributions for Social Insurance [A]...................................... 58
3.7 Government Consumption Expenditures and Gross Investment by Type [A, Q] $\qquad$
3.8 Real Government Consumption Expenditures and Gross Investment by Type $[\mathrm{A}, \mathrm{Q}]$. $\qquad$
3.9 Government Consumption Expenditures Gross and Net....................................... by Type [A]61
3.10 National Defense Consumption Expenditures and Gross Invest- 

$\qquad$
3.11 Real National Defense Consumption Expenditures and Gross

3.12 Government Transfer Payments to Persons [A] ............................ 64
3.13 Subsidies Less Current Surplus of Government Enterprises [A].. 64

6. Income and Employment by Industry
6.1C National Income Without Capital Consumption Adjustment byIndustry Group [A, Q] 76
6.2C Compensation of Employees by Industry [A] ..... 77
6.3C Wage and Salary Accruals by Industry [A] ..... 77
6.4C Full-Time and Part-Time Employees by Industry [A] .....  78
6.5C Full-Time Equivalent Employees by Industry [A]. .....  78
6.6C Wage and Salary Accruals Per Full-Time Equivalent Employee by Industry [A] .....  79
6.7C Self-Employed Persons by Industry Group [A] ..... 79
6.8C Persons Engaged in Production by Industry [ A ] ..... 80
6.9C Hours Worked by Full-Time and Part-Time Employees by Industry Group [A] .....  80
6.10C Employer Contributions for Social Insurance by Industry Group [A] .....  80
6.11C Other Labor Income by Industry Group and by Type [A] ..... 81
6.12C Nonfarm Proprietors' Income by Industry Group [A] ..... 81 ..... 81
6.13C Noncorporate Capital Consumption Allowance by Industry Group [A] ..... 81
6.14C Inventory Valuation Adjustment to Nonfarm Incomes by Legal Form of Organization and Industry Group [A] ..... 82
6.15C Net Interest by Industry Group [A]. ..... 82
6.16C Corporate Profits by Industry Group $[\mathrm{A}, \mathrm{Q}]$ ..... 82
6.17C Corporate Profits Before Tax by Industry [A] ..... 83
6.18C Federal, State, and Local Corporate Profits Tax Liability by Industry [A] ..... 83
6.19C Corporate Profits After Tax by Industry [A] ..... 84
6.20C Net Corporate Dividend Payments by Industry [A] ..... 84
6.21C Undistributed Corporate Profits by Industry [A] ..... 85
6.22C Corporate Capital Consumption Allowances by Industry $[\mathrm{A}]$ .....  85
7. Quantity and Price Indexes
7.1 Quantity and Price Indexes for Gross Domestic Product [A, Q] ..... 86
7.2 Quantity and Price Indexes for Gross Domestic Product, Final Sales, and Purchases [A, Q] ..... 87
7.3 Quantity and Price Indexes for Gross National Product and Com- mand-Basis Gross National Product [A, Q].88
7.4 Chain-Type Quantity and Price Indexes for Personal ConsumptionExpenditures by Major Type of Product [A, Q]. 88
7.5 Chain-Type Quantity and Price Indexes for Personal ConsumptionExpenditures by Type of Product [A]7.6 Chain-Type Quantity and Price Indexes for Private Fixed Invest- .89
ment by Type [A, Q]7 Chain-Type Quantity and Price Indexes for Private Fixed Invest-91
ment in Structures by Type [A] .....  927.8 Chain-Type Quantity and Price Indexes for Private Fixed Invest-
ment in Equipment and Software by Type [A]7.9 Chain-Type Quantity and Price Indexes for Exports and Importsof Goods and Services and for Receipts and Paymentsof Income [A, Q]
937.10 Chain-Type Quantity and Price Indexes for Exports and Imports of
Goods and Services by Type of Product [A, Q] 7.11 Chain-Type Quantity and Price Indexes for GovernmenConsumption Expenditures and Gross Investmentby Type [A, Q] 96
7.12 Chain-Type Quantity and Price Indexes for National Defense Consumption Expenditures and Gross Investment by Type [A] 98
7.13 Chain-Type Quantity and Price Indexes for Gross Government Fixed Investment by Type [A] .....  99
7.14 Chain-Type Quantity and Price Indexes for Gross Domestic Prod- uct by Sector [A, Q] ..... 100
7.15 Price, Costs, and Profit Per Unit of Real Gross Product of Nonfi- nancial Corporate Business [A, Q] ..... 100
7.16 Implicit Price Deflators for Private Inventories by Industry Group [Q] ..... 101
7.17 Chain-Type Quantity Indexes for Gross Domestic Product by Major Type of Product $[A, Q]$ ..... 101
7.18B Chain-Type Quantity Indexes for Motor Vehicle Output $[A, Q]$..102
7.19 Chain-Type Quantity Indexes for Gross and Net Investment by Major Type [A] ..... 103
7.20 Chain-Type Quantity and Price Indexes for Personal Consump- tion Expenditures by Type of Expenditure [A]. ..... 104
8. Supplemental Tables
8.1 Percent Change from Preceding Period in Selected Series [A, Q] .106
8.2 Contributions to Percent Change in Real Gross Domestic Product [A, Q]. ..... 108
8.3 Contributions to Percent Change in Real Personal ConsumptionExpenditures by Major Type of Product [A, Q]109
8.4 Contributions to Percent Change in Real Private Fixed Investment by Type [A, Q]109
8.5 Contributions to Percent Change in Real Exports and in Real Imports of Goods and Services by Type of Product [A, Q] ..... 110
8.6 Contributions to Percent Change in Real Government Consump-tion Expenditures and Gross Investment by Type [A, Q] ................. 1108.7 Selected Per Capita Product and Income Series in Current andChained Dollars [A, Q].111
8.8B Motor Vehicle Output [A, Q] ..... 111
8.9B Real Motor Vehicle Output [A, Q] ..... 112
8.10 Farm Sector Output, Gross Product, and National Income [A] ..... 113
8.11 Real Farm Sector Output, Real Gross Product, and Real Net Product [A] ..... 113
8.12 Housing Sector Output, Gross Product, and National Income [A] ..... 113
8.13 Real Housing Sector Output, Real Gross Product, and Real Net Product [A] ..... 113
8.14 Consumption of Fixed Capital by Legal Form of Organization [A] ..... 114
8.15 Capital Consumption Adjustment by Legal Form of Organizationand Type of Adjustment (A]114
8.16 Business Transfer Payments by Type [A] ..... 114
8.17 Supplements to Wages and Salaries by Type [A] ..... 114
8.18 Rental Income of Persons by Type [A] ..... 115
8.19 Dividends Paid and Received by Sector [A]. ..... 115
8.20 Interest Paid and Received by Sector and Legal Form of Organization [A] ..... 115
8.21 Imputations in the National Income and Product Accounts [A] ..... 116
8.22 Relation of Consumption of Fixed Capital in the National Incomeand Product Accounts to Depreciation and Amortization as Pub-lished by the Internal Revenue Service [A] .1188.23 Relation of Nonfarm Proprietors' Income in the National Incomeand Product Accounts to Corresponding Measures as Published bythe Internal Revenue Service [A]118
8.24 Relation of Net Farm Income in the National Income and ProductAccounts to Net Farm Income as Published by the U.S. Depart-ment of Agriculture [A]118
8.25 Relation of Corporate Profits, Taxes, and Dividends in the NationalIncome and Product Accounts to Corresponding Measures as Pub-as Pub-lished by the Internal Revenue Service $[\mathrm{A}]$.......................................Income and Product Accounts to Corresponding Measures as Published by the Internal Revenue Service $[A]$119
8.27 Relation of Wages and Salaries in the National Income and ProductAccounts to Wages and Salaries as Published by the Bureau ofLabor Statistics [A]119
8.28 Comparison of Personal Income in the National Income and Prod-uct Accounts with Adjusted Gross Income as Published by theInternal Revenue Service $[A]^{*}$8.29 Capital Transfers (Net) [A].119
9. Seasonally Unadjusted Estimates $[\mathrm{Q}]^{*}$
9.1 Gross Domestic Product, Not Seasonally Adjusted*9.2 Personal Consumption Expenditures by Major Type of Product,Not Seasonally Adjusted*
9.3 Federal Government Current Receipts and Expenditures, Not Sea-sonally Adjusted*
9.4 State and Local Government Current Receipts and Expenditures, Not Seasonally Adjusted*
9.5 Foreign Transactions in the National Income and Product Accounts, Not Seasonally Adjusted*

### 9.6 Corporate Profits with Inventory Valuation Adjustment, Not Sea-

 sonally Adjusted**These tables are not published in this issue. See the introductory text.

## S. Summary Tables

Table A.-Summary National Income and Product Accounts, 1999
[Billions of dollars]
Account 1.-National Income and Product Account

| Line |  |  | Line |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| NoTE--Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines. <br> Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the percent change in real gross domestic product are shown in table 8.2. <br> Chain-type quantity indexes for the series in this table are shown in table 7.1. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Table 1.3.-Gross Domestic Product by Major Type of Product
[Billions of dollars]

NOTE--Percent changes from preceding period for gross domestic product and for final sales of domestic product
are shown in table 8.1.

| NOTE.-Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of comestic product and of change in private inventories; the residual line following structures <br> is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures. <br> Percent changes from preceding period for gross domestic product and for final sales of domestic product are shown in table 8.1. Chain-type quanjty indexes for the series in this table are shown in table 7.17. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

| Residual ................................................................................. | 13 | . 1 | -1.3 | 0 | -1.8 |

t. Equals net domestic product less net product of households and institutions and of general government. 2. Equals net domestic business product less net tarm product
2. Equals compensation of general government employees as shown in table 3.8 .

NOTE.-Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the comesponding chained-dollar estimates are usually not additive.

Table 1.16.-Gross Product of Corporate Business in Current Dollars and Gross Product of Nonfinancial Corporate Business in Current and Chained Dollars

1. Eflective with the estimates scheduled for release on November 29,2000 , chained-doliar gross product of nonnancial corporate business for 1997 to 2000 will be revised to reflect revisions to the gross product price indexes or nonfinancial industries.
2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of
the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 .
3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital

## 2. Personal Income and Outlays

| 1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas. |  |  |  |  |  |  |  | The residual line is the difference between the first line and the sum of the most detailed lines. Chain-type quantity indexes for the series in this table are shown in table 7.4. |  |  |  |  |  |  |  |  |  |  |  |  |
| NOTE-Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity <br> Contributions to the percent change in real personal consumption expendiures are shown in table 8.3. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Note-Chained (1996) dollar series are calculated as the product of the chain-type quansity index and the 1996 current-doilar value of the corresponding series, divided by 100 . Because the formula tor the chain-type quantity
indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

NOTE--Chained ( 1996 ) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 900 . Because the formula tor the chain-type quantity indexes uses weights of more than one period, the corresponding chained-doilar estimates are usually not additive. in the addenda.

NOTE--Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive

$$
\text { Chain-lype indexes for the series in this table are shown in table } 7.12 .
$$

The residual line is the difference between the first line and the sum of the most detailed lines, excluding the line
in the addendum.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are inctuded in sevvices. Beginning with 1986, repairs and aiterations of equipment are reciassified from goods to services.

NOTE-_Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dolar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chain-type quantity indexes for the series in this table are shown in table 7.9 .

| 1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to sevices. <br> 2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

1. Exports and imports of gold in the NiPA's differ from those in the ITA's. ITA gold exports (line 2) and imports (line 19) are excluded from the NIPA's; imports of gold in the NIPA's (line 21) is the excess of the value of gold in gross domestic purchases excluded from the NIPA's; imports of gol
over the value of U.S. production of gold.
2. Consists of statistical revisions to the TTA's that have not yet been incorporated into the NIPA's and statistical revisions to the NIPA's that have not yet been incorporated into the ITA's.
3. Consists of transacions between the United States and its teritories, Puerto Rico, and the Northern Mariana Islands. The
treament of U.S. territories, Puerto Rico, and the Northern Mariana Islands in the NIPA's differs from that in the ITA's. In the NiPA's they are included in the rest of the world; in the ITA's, they are islands in the NIPA's difters from that in the ITA's. In the NiPAs, current transfers, net (line 43) consists only of transfer payments from persons, because transfer payments, subsidies, and grants-in-aid from the Federal Government to residents of U.S. territories, Puerto Rico, and the Northern Mariana Islands, are excluded from NIPA transfer payments to the rest of the world.
4. Transfers of goods and services under military grant programs, net, are classitied as exports and as unilateral current transiers in the ITA's. In the NIPA's, these transactions are excluded from exports and from transter payments and are induded in Federal Government consumption expenditures. Beginning with 1988, the ITA's classify certain items as military grants that the NIPA's do
not. Beginning with 1988, the ITA's classity certain items as military grants that the NIPA's do not. In the NIPA's these transactions are excluded from exports and included in transfer payments from government.
5. In the ITA's, income transactions between parents and affiliates are recorded on a net basis. In ITA exports, U.S. parents' receipts from foreign affiliates for interest are net of such payments by U.S. parents to foreign affiliates. In ITA imports, U.S. affiliates' payments to foreign parents for interest are net of such receipts by U.S. affiliates from foreign parents. In the NIPA's, these trans-
actions are recorded on a gross basis. The amount of the adjustment is identical in payments and in income receipts and, thus, does not affect NIPA net income receipts or net foreign investment.

[^23] assets; change in inventories is included in government consumption expenditures.
NoTE-Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chain-lype quantity indexes for the series in this table are shown in table 7.19.

1. Includes new computers and peripheral equipment only.
2. Excludes sotware "embedded," or bundied, in computers and other equipment

NOTE,-Chained (1996) dollar series are calculated as the product of the chain-lype quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity
indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.
The residual line is the difference between the first line and the sum of the most detailed lines
Contributions to the percent change in real private fixed investment are shown in table 8.4.

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for their own use.
2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes.
3. Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not ejsewthere classified, such as passenger terminals, greenhouses, and animal hospitals.
4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields
5. Consists primarily of dormitories and of fraternity and sorority houses.

| Residual ................................................................................ | 37 | 0 | 3 | -. 4 | -. 9 |

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for heir own use.
2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes.
3. Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not isewhere classified, such as passenger terminals, greenhouses, and animal hospitals
4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields.
5. Consists primarily of dormitories and of fraternity and sorority houses.

NOTE.-Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dolar value of the corresponding series, divided by 100. Because the formula for the chain-lype quantity ard chained-doliar estimates are usually not additive.
cesidual line is the difference between the first line and the sum of the most detailed lines.
Chain-lype quantity indexes for the series in this table are shown in table 7.7 .

1. Includes new computers and peripheral equipment only.
. Excludes soltware "embedced," or bundled, in computers and other equipment.
NOTE-Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table are shown in table 7.8.
n.e.c. Not elsewhere classified.

| t. Inventories are as of the end of the quarter. The quarter-to-quater changes calculated from this table are at quarterly rates, whereas, the change in private inventories component of GDP is stated at annual rates. <br> 2. Inventories of auto and home supply stores are included in "other durable goods." <br> 3. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of tinal sales by farm and by government enterprises. |  |  |  |  |  | Note-Chained (1996) dollar inventory series are calculated to ensure that the chained (1996) dollar change in inventories for 1996 equals the current-dollar change in inventories for 1996 and that the average of the 1995 and 1996 end-of-year chain-weighted and fixed-weighted inventories are equal. Chained (1996) dollar final sales are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories. |  |  |  |  |  |  |  |  |  |  |

. Consists of general government and government enterprise expenditures for fixed assets.
2. Structures and sottware include compensation of government employees engaged in new own-account investment and related expenditures for goods and services.
3. Consists of Department of Deiense new structures, except family housing.
4. Consists primarily of general office buivings, police and fire stations, courthouses, auditoriums, garages, and
passenger terminals.
5. Consists primarly of electric and gas facilities, transit systems, and airfieds.

NOTE--Chained (1996) doilar series are calculated as the product of the chain-lype quantity index and the 1996 indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference beween the first line and the sum of the most detailed lines, excluding the lines in the addenda.
Chain-type quantity indexes for the series in this table are shown in table 7.13 .
See footnotes to table 5.14 .

1. Reflects the reciassification of air couriers from trucking and warehousing to transportation by air.
2. Consists of museums, botanical and zoological gardens; engineering and management sevvices; and services, not elsewhere classified.
3. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.
NOTE.- Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weeky hours per employee on full-time schedules.
2. Reflects the reciassification of air couriers from trucking and warehousing to transportation by air.
3. Consists of museums, botanical and zoological gardens; engineering and management services; and services, not elsewhere classitied.
4. Includes Coast Guard. temporarily in the United States.
NOTE.- Estimates in this table are based on the 1987 Standard Industrial Classification (SIC)

| 1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures. <br> 2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government. <br> 3. Compensation of government employees engaged in new own-account investment and related expenditures |  |  |  |  |  |  |  | for goods and services are classified as investment in structures and in software. The compensation of all general government employees is shown in the addenda. |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  | 4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  | measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets. |  |  |  |  |  |  |  |  |  |  |  |  |

1. Gross government irvestment consists of general government and government enterprise expenditures for fixed assets, inventiory investment is included in government consumption expenditures.
2. Consumption expendititres for durable goods excludes expenditures classified as investment, except for goods ransserred to toreign countries.
3. Compensation of government employees engaged in new own-account investment and felated expenditures
for goods and senvices is classified as investment in structures and in software. The compensation of all general government employees is shown in the addendum.
4. Consumption of fixed capital or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

| 1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory inyestment is included in government consumption expenditures. <br> 2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government. <br> 3. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as investment in structures and in software. <br> 4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial <br> measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets. <br> Note.-The quantity indexes on which the estimates in this table are based are shown in table 7.11. The estimates in this table differ from those in table 8.2 because this table shows contributions to real government consumption expenditures and gross investment, whereas table 8.2 shows contributions to real gross domestic product. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

1. Except for exports and imports, consists of new trucks only.
. Consists of final sales and change in private inventories of new autos assembled in the United States.
2. Consists of personal consumption expenditures, private fixed investment, and gross government invesment.

NOTE.-Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996
current-dolar value of the corresponding series, civided by 100. Because the formula for the chain-lype quanity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.
Chain-type quantity indexes for the series in this table are shown in table 7.18B.

| Nonfarm nonresidential properties | 24 | $-2$ | -3 | -. 3 | $-3$ |
| Fixed assets owned and used by nonprofit institutions serving individuals. | 25 | -6.5 | -6.7 | -6.8 | -7.0 |
| Proprietors' income ................................................................ | 26 | -. 7 | -. 6 | -. 6 | -. 6 |
| Addendum: <br> Capital consumption adjustment for national income ( $4+13+19+26$ ) | 27 | 4.0 | 18.8 | 28.7 | 30.5 |

1. Except for farm proprietorships and partnerships (line 14) and other private business (line 18), the capital consumption adjustment is calculated in two parts. The adjustment for consistent accounting at historical cost converts depreciation, based on the service lives and depreciation schedules employed by firms when filing their income tax returns, o consistent service ives and empirically based depreciation schedules. The adjustment for current-
cost valuation converts the historical-cost series with consistent accounting to a series valued at current cost. For cos. valuation converts the historical-cost series with consistent accounting to a series valued at current cost. For
farm proprietorships and patterships and for other private business, the historical-cost series is based on consistent service lives and empirically based depreciation schedules, so the adjustment reflects only a conversion to currentcost valuation.

| Personal interest income ( $58+64+65$ ) or $(29+51)$................... | 66 | 810.6 | 864.0 | 940.8 | 963.7 |

1. Excludes interest paid or received by govemment enterorises, which is included in the government sector. 2. Consists of interest paid on the deposit liabilities of commercial and mutual savings banks, savings and loan 3ssociations, and credit unions.
2. Interest received by nonfinancial sole proprietorships and partnerships is considered interest received by per-
ans and is included in line 29 . sons and is included in line 29.
NoTE.- In this table, imputed interest paid (line 38) is the difference between the property income received by financial intermediaries from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, persons, governments, and the rest of the world. In table 8.21 , imputed interest (line 155 )-the interest component of imputations that affect gross national product-consists of the impute interest paid by financial pied housing and on buidings and equipment owned and used by nonprofit insitutions senving individuals.

1. Residential dwellings owned and used by nonprofit institutions serving individuals are included in owner-occupied housing categories.
2. Includes services furnished without payment by financial intermediaries except life insurance carriers to government employee retirement plans.
3. Classified as a service in exports of goods, services; and income receipts and as an income payment in imports of goods, services, and income payments.
4. For general government employees, recorded as compensation of employees (wages and salaries) and as a sale; government consumption expenditures is not affected. Similar payments for employees of government enterorises are not included in government consumption expenditures; they are deducted in the calculation of the surplus
of government enterprises.
5. Healit insurance premiums paid by employers are included in the calculation of the "health insurance" category of personal consumption expenditures (PCE); life insurance premiums paid by employers are included in the calcula6 the expenses of handing ifie insurance and pension plans category of PCE. equal to benefits paid. These payments are funded direclly out of the current budget. The specific programs consist of workers' compensation, unemployment insurance, and medical services for the dependents of active duty military personnel at nonmilitary facilities. Source data are not available for the corresponding treatment for similar State and local government programs. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the sumplus of government enterprises.
6. Consists of owner-occupant purchases of new single-family dwellings, including manulactured homes, expenditures on improvements, and payments of commissions on new and existing residential dwellings, less sales of dwellings to government. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.6 because the series shown in that table reflect total purchases by private business.
7. Exciudes investment by nonprofit institutions serving individuals in residential properties, which is included in owner-occupant investment (see footnote 1) and in sales of existing structures to governments. The series is caldata shown in table 5.6 because the series shown in that table reflect total purchases by private business.
9 . The consumption of fixed capital (CFC) of government enterprises is not included in government consumption expenditures; it is deducted in the calculation of the current surplus of government enterprises and is recorded as expenditures, it is deducted government CFC.
8. Includes gross investment of government enterprises.

NOTE.-"Imputations" are transactions recorded in the national income and product accounts that are not transacions of the market economy. In this table, the imputations shown in the "specific imputations" section are those consists of the property incomes eamed on life insurance and pension reserves. These incomes are considered to be incomes received by persons and not by the insurance carriers; this reciassification is not considered an imputation for purposes of table 8.21, because it does not affect GNP.

1. Consists of forgiveness of debts owed by foreign governments to the U.S. Government.
2. Consists of Federal Government investment grants for highways, transit, air transportation, and water treatment plants.
3. Consists of a marime construction subsidies paid by the Federal Government. (transfers of funds by individuals moving across borders).

## GDP and Other Major NIPA Series, 1929-2000:I

Tables 1-4 present the historical series from the national income and product accounts (NIPA's).
Specifically, table 1 presents current-dollar gross domestic product and its components. Table 2A presents real gross domestic product and its components in chained dollars, and table 2B presents real gross domestic product and its components in chain-type quantity indexes. Table 3 presents NIPA
price indexes. Table 4 presents national income and personal income.

The estimates are available on BEA's Web site at <www.bea.doc.gov>; for information, call 202-606-5304. These estimates are also available on STAT-USA's Web site at <www.stat-usa.gov>; for information, call 202-482-1986.

See footnotes and note at the end of the table.

Note.-Chained (1996) dollars (and chain-type quantity indexes) provide the best available measures of how a particular series changes over time. However, users of this table are cautioned that comparisons across chained (1996) dollar components of GDP may be misleading, particularly for periods before 1987, when the residual is sometimes quite large. For example, during the years of World War II, the residual column in this table, which is the difference between GDP and the sum of the most detailed component series in this table, is very large. During these years, because of spending associated with World War II, the share of GDP accounted for by government consumption expenditures and gross investment doubled before returning to a more normal share; in addition, the prices paid for goods and services throughout the economy were tightly controlled and very different from postwar levels. The large residuals illustrate the problems with calculating
contributions to GDP or other aggregates from the chained (1996) dollar values. Accurate estimates can be made of the contributions of components to the percent change in GDP; these estimates are provided in NIPA table 8.2. Contributions to percent change in major components of real GDP are shown in tables 8.3 through 8.6. Additional historical data may be found on BEA's Web site at <www.bea.doc.gov>.
For a more detailed discussion of the use of chained dollars, including a method for closely approximating contributions to changes in real GDP for longer periods, see "BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" in the May 1997 Survey of Current Business. Additional versions of NIPA table 1.2 that use alternative reference years are available on BEA's Web site. Tables 1.2A, 1.2B, 1.2 C , and 1.2D will be based on chained 1937, 1952, 1972, and 1982 dollars, respectively.

Table 2A.-Real Gross Domestic Product-Continued
[Billions of chained (1996) dollars; quarterly estimates are seasonally adjusted at annual rates]

| Year and quarter | GDP | Personal consumption expenditures | Gross private domestic investment | Exports and imports of goods and services |  | Government ${ }^{1}$ | Residual | Final sales of domestic product | Gross domestic purchases | Final sales to domestic purchasers | GNP | Percent change from preceding period |  |  |  |  |

## Errata

## U.S. Travel and Tourism Satellite Accounts for 1996 and 1997

Table 1 in "U.S. Travel and Tourism Satellite Accounts for 1996 and 1997" in the July 2000 issue of the Survey of Current Business contained errors in the estimates for tourism final demand and its share of GDP. This table, with the corrected estimates, is shown below.

In addition, two corrections are made to the text of the article. In the first bullet on page 8, the text should
read "...(GDP) increased from 3.3 percent to 3.5 percent." On page 9 (first paragraph under "Tourism demand"), the text should read "...Tourism final demand purchases in the United States increased from $\$ 208.9$ billion, or 3.3 percent of GDP, in 1992 to $\$ 291.5$ billion, or 3.5 percent of GDP, in 1997 (table 1)."

# U.S. Affiliates of Foreign Companies 

## Operations in 1998

By William J. Zeile

ACCORDING to preliminary results from BEA's 1998 annual survey of foreign direct investment in the United States (FDIUS), record levels of new foreign investment helped to boost the current-dollar gross product of U.S. affiliates of foreign companies 7 percent, from $\$ 389$ billion in 1997 to $\$ 418$ billion in 1998. ${ }^{1}$ Despite this increase, strong growth in the U.S. economy resulted in little change in the share of the private economy that is accounted for by U.S. affiliates: The affiliate share of gross product originating in private industries increased from 6.2 percent in 1997 to 6.3 percent in 1998 (table 1 and chart 1).

[^32]The record new foreign investments in 1998 included acquisitions of several very large U.S. companies. ${ }^{2}$ These investments, which coincided with a sharp increase in overall merger and acquisition activity in the United States, reflected both the continuing strength and stability of the U.S. economy and several industry-specific factors. ${ }^{3}$ By industry, the impact of acquisitions on affiliate gross

[^33]
## CHART 1

U.S.-Affiliate Share of Gross Product Originating in Private Industries, 1982-98

product was most pronounced in manufacturing, particularly in transportation equipment and in petroleum and coal products. ${ }^{4}$

The effect of the record new investments on affiliate gross product in 1998 was partly offset by foreign selloffs of affiliates, most notably large mi-nority-owned affiliates in the transportation and the broadcasting and telecommunications industries. In addition, the gross product of petroleum affiliates was reduced by unfavorable conditions in the world market for petroleum products. ${ }^{5}$

Other measures of affiliate operations were also boosted by the record new foreign investments in 1998. Employment by affiliates increased 8 percent to 5.6 million; the affiliate share of U.S. private nonbank employment increased to 5.2 percent, the highest share since 1991. Exports of goods by affiliates increased 7 percent in the face of a 1-percent decrease in total U.S. exports, and imports of goods by affiliates increased 9 percent, compared with a 5-percent increase in total U.S. imports. The affiliate share of U.S. exports of goods increased to 22.1 percent from 20.5 percent in 1997, and the af-
4. The data on affiliate operations are now classified by industry according to a new system that is based on the 1997 North American Industry Classification System; see the box "New Industry Classifications" in William J. Zeile, "Foreign Direct Investment in the United States: Preliminary Results from the 1997 Benchmark Survey," Surver 79 (August 1999): 24.
5. Crude oil prices fell 34 percent in 1998, according to 12 -month averages of the refiners' acquisition cost of domestic and imported crude oil from the Energy Information Administration (EIA) of the U.S. Department of Energy. The decrease in oil prices was not accompanied by a corresponding increase in demand and production: Worldwide production of crude oil increased only 2 percent.
filiate share of U.S. imports of goods increased to 31.8 percent from 30.4 percent in 1997. Intrafirm exports and imports by affiliates, however, were largely unaffected by new foreign investments, and the shares of these exports and imports in total U.S. exports and imports of goods decreased.

The following are additional highlights of the operations of U.S. affiliates in 1998:

- By country of ownership, the United Kingdom remained the largest investing country in terms of affiliate gross product. As a result of new acquisitions of U.S. companies, Germany overtook Japan as the second-largest investing country.
- By industry, manufacturing's share of the gross product of all affiliates increased to more than 50 percent. Affiliate gross product in professional, scientific, and technical services also increased substantially.
- The affiliate share of U.S. employment in manufacturing increased to more than 13 percent. Within manufacturing, the affiliate share of employment in motor vehicles, bodies and trailers, and parts increased substantially, from 18.5 percent to 28.2 percent.
- By State, the affiliate share of total business employment was highest in Hawaii, South Carolina, and North Carolina. The affiliate share increased substantially in several States in the Great Lakes region, particularly in Michigan.

## Key Terms

The following key terms are used to describe U.S. affiliates of foreign companies and their operations.
U.S. affiliate. A U.S. business enterprise in which there is foreign direct investment-that is, in which a single foreign person owns or controls, directly or indirectly, 10 percent or more of the voting securities of an incorporated U.S. business enterprise or an equivalent interest in an unincorporated U.S. business enterprise. "Person" is broadly defined to include any individual, corporation, branch, partnership, associated group, association, estate, trust, or other organization and any government (including any corporation, institution, or other entity or instrumentality of a government). A "foreign person" is any person resident outside the United States-that is, outside the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and all U.S. territories and possessions.
Majority-owned U.S. affiliate. A U.S. affiliate that is owned more than 50 percent by foreign direct investors.
Foreign parent. The first person outside the United States in a U.S. affiliate's ownership chain that has a direct investment interest in the affiliate.
Ultimate beneficial owner (UBO). That person, proceeding up a U.S. affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. Unlike the foreign par-
ent, the UBO of an affiliate may be located in the United States. The UBO of each U.S. affiliate is identified to ascertain the person that ultimately owns or controls the U.S. affiliate and that therefore ultimately derives the benefits from ownership or control.
Foreign parent group. Consists of (1) the foreign parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, up to and including the UBO, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.
Gross product. The contribution to U.S. gross domestic product, which is the goods and services produced by labor and property located in the United States. Gross product, often referred to as "value added," can be measured as gross output (sales or receipts and other operating income plus inventory change) minus intermediate inputs (purchased goods and services). Alternatively, it can be measured as the sum of the costs incurred (except for intermediate inputs) and the profits earned in production. The estimates of gross product that are presented in this article were prepared by summing cost and profit data collected in the annual and benchmark surveys of foreign direct investment in the United States.

- Exports and imports of goods by affiliates increased substantially as a result of new foreign acquisitions. For German-owned affiliates, exports more than doubled, and imports increased more than 70 percent.
- Intrafirm exports by affiliates (which were relatively unaffected by foreign acquisitions) decreased, reflecting troubled economic conditions in Asia. Intrafirm imports by affiliates increased only slightly, and the share of affiliate intrafirm imports in total U.S. imports decreased.
This article examines changes in the gross product, employment, and trade in goods of U.S. affiliates in 1998, particularly as they relate to the corresponding totals for the U.S. economy. For each of these measures, changes in affiliate operations are examined both at the aggregate level and by major investing country; changes in gross product are also examined by industry of affiliate. For
employment, affiliate shares of the economy are examined by industry and by State.

## Gross Product

Largely as a result of the surge in new foreign direct investment in 1998, the gross product (or value added) of nonbank U.S. affiliates in current dollars increased 7 percent, from $\$ 389$ billion to $\$ 418$ billion. In comparison, total U.S. gross product originating in private nonbank industries in current dollars increased 6 percent. ${ }^{6}$ The U.S.-affiliate share of total U.S. gross product edged up from 6.2 percent in 1997 to 6.3 percent in 1998, continuing an uptrend.
6. Although the rate of change in U.S.-private-industry gross product serves as a convenient benchmark against which the increase in U.S.-affiliate gross product can be evaluated, the two growth rates are not strictly comparable, because the latter partly reflects transfers in ownership that do not represent increased production for the whole economy. Similarly, changes in U.S.-affiliate employment, exports, and imports, which partly reflect changes in ownership, are not strictly comparable to the changes for the whole economy.

## Data on Foreign Direct Investment in the United States

BEA collects three broad sets of data on foreign direct investment in the United States (FDIUS): (1) Financial and operating data of U.S. affiliates, (2) data on U.S. businesses newly acquired or established by foreign direct investors (new investment data), and (3) international transactions (balance of payments) and direct investment position data. This article presents the financial and operating data; new investment data were published in "Foreign Direct Investment in the United States: New Investment in 1999" in the June 2000 issue of the Survey of Current Business; the international transactions and direct investment position data were published in the articles "The International Investment Position of the United States at Yearend 1999," "U.S. International Transactions, First Quarter 2000," and "Direct Investment Positions for 1999: Country and Industry Detail," in the July 2000 issue of the Surver.
Each of the three data sets focuses on a distinct aspect of FDIUS. The financial and operating data provide a picture of the overall activities of the U.S. affiliates; the new investment data provide information about U.S. businesses that are newly acquired or established by foreign direct investors, regardless of whether the invested funds were raised in the United States or abroad; and the international transactions and direct investment position data cover foreign investors' transactions with, and positions in, both new and existing U.S. affiliates. ${ }^{1}$
Financial and operating data of U.S. affiliates. The data on the overall operations of U.S. affiliates are collected in BEA's annual and benchmark surveys of FDIUS. (Bench-

1. For a more detailed discussion of the differences between these three sets of data, see Alicia M. Quijano, "A Guide to BEA Statistics on Foreign Direct Investment in the United States," Survey 70 (February 1990): 29-37. This guide is available on BEA's Web site at <www.bea.doc.gov/bea/ail.htm>.
For a comparison of the data on affiliate operations with the data on new investment, see the appendix "Sources of Data" in Mahnaz Fahim-Nader and William J. Zeile, "Foreign Direct Investment in the United States: New Investment in 1994 and Affiliate Operations in 1993," Survey 75 (May 1995): 68-70.
mark surveys, which are BEA's most comprehensive surveys of foreign direct investment in terms of both coverage of companies and subject matter, are taken in place of the annual survey once every 5 years.) The data cover U.S. affiliates' balance sheets and income statements, employment and compensation of employees, trade in goods, research and development expenditures, sources of finance, and selected data by State. In addition, the gross product of affiliates is estimated from data reported in these surveys.
Except in benchmark survey years, these data, unlike the new investment data, cover only nonbank affiliates. The financial and operating data for affiliates are on a fiscal year basis. The data cover the entire operations of the U.S. affiliate, irrespective of the percentage of foreign ownership.
New investment data. The data on outlays by foreign direct investors to acquire or establish affiliates in the United States are collected on a calendar year basis in BEA's survey of new FDIUS. In addition, the new investment survey collects selected data on the operations of the newly acquired or established affiliates. For newly acquired affiliates, these data are for (or as of the end of) the most recent fiscal year preceding the acquisition, and for newly established businesses, they are projected for (or as of the end of) the first year of operation. The data cover the entire operations of the business, irrespective of the percentage of foreign ownership.
International transactions and direct investment position data. These data are collected in the quarterly survey of FDIUS. The data cover the U.S. affiliate's transactions and positions with its foreign parent or other members of its foreign parent group, so these data focus on the foreign parent's share, or interest, in the affiliate rather than on the affiliate's overall size or level of operations. The major items included in the U.S. international transactions (balance of payments) accounts are direct investment financial flows, direct investment income, royalties and license fees, and other services transactions with the foreign parent group.

Despite record new investments, affiliate gross product increased at a slower pace than in the previous 2 years ( 9 percent in 1997 and 11 percent in 1996), partly because of the offsetting effect of foreign selloffs. In 1998, these selloffs mainly affected minority-owned affiliates. For majority-owned affiliates (which have consistently accounted for at least three-fourths of affiliate operations), the offsetting effect of foreign selloffs was relatively small. The gross product of majority-owned affiliates increased 12 percent, the fastest rate of increase since 1990. The share of these affiliates in U.S. gross product originating in private industries increased from 5.0 percent in 1997 to 5.3 percent in 1998.

## By country of ownership

Affiliates with ultimate beneficial owners (UBO's) in seven major investing countries-Canada, France, Germany, Japan, the Netherlands, Switzerland, and the United Kingdom-have accounted for more than 80 percent of the gross product of all
nonbank affiliates since at least 1977, the first year for which annual data on affiliate operations are available. In 1998, as in each of the years 1977-97, the largest investing country in terms of affiliate gross product was the United Kingdom: Britishowned affiliates accounted for 18.2 percent of the gross product of all nonbank affiliates and for 1.1 percent of total U.S. gross product originating in private industries (table 2). German-owned affiliates accounted for the second-largest share of affiliate gross product ( 15.9 percent), edging out Japanese-owned affiliates, which had accounted for the second-largest share in each of the years 1991-97. The share for German-owned affiliates was substantially higher in 1998 than in previous years: As recently as 1994, Germany had ranked as the fourth largest investing country, behind the United Kingdom, Japan, and Canada (chart 2).

The jump in share for German-owned affiliates reflected a 44 -percent increase in gross product that mainly resulted from German acquisitions of

* Less than 0.05 percent.
U.S. manufacturing companies, particularly in transportation equipment. In contrast, the gross product of Japanese-owned affiliates increased only 4 percent, reflecting little new direct investment from Japan. ${ }^{7}$

Although there was largescale new investment from the United Kingdom in 1998, the gross product of British-owned affiliates decreased as a result of selloffs (mainly of minority-owned affiliates) and of reductions in the value added of existing affiliates (which partly reflected unfavorable conditions in the world market for petroleum products). These factors were also primarily responsible for a large decrease in the gross product of Netherlandsowned affiliates.

## By industry of affiliate

In 1998, affiliates classified in manufacturing accounted for more than half of the gross product of all nonbank affiliates (table 3). Among other sectors, the gross product of affiliates was largest in wholesale trade, which includes a number of large affiliates with substantial secondary operations in manufacturing.

Manufacturing's share of total affiliate gross product increased from 49 percent in 1997 to 54 percent in 1998. Within manufacturing, the gross product of affiliates classified in transportation equipment more than doubled, mainly as a result of new foreign acquisitions and of changes in the industry classification of affiliates with operations in more than one industry. ${ }^{8}$ Affiliate gross product
7. In 1998, as in 1997, outlays by Japanese direct investors accounted for less than 5 percent of the total outlays by foreign direct investors to acquire or establish businesses in the United States. See table 4 in Howenstine and Troia, "New Investment in 1999," 58.

also increased substantially in plastics and rubber products, in primary metals, and in petroleum and coal products. In plastics and rubber products and in primary metals, the increases reflected both new acquisitions and expansions in the operations of existing affiliates. In petroleum and coal products, a large increase in gross product from new foreign acquisitions was partly offset by reductions in the value added of existing affiliates that reflected the unfavorable conditions in the world petroleum markets.

Outside of manufacturing, new acquisitions

| Other industries ............................................. | 36,307 | 38,663 | 11.6 | 11.0 | 6.5 |

boosted the gross product of affiliates in professional, scientific, and technical services. Decreases in affiliate gross product in finance (except depository institutions) and insurance and in information were mainly due to selloffs. In information, the decrease was more than accounted for by selloffs of minority-owned affiliates.

## Employment

In 1998, employment by affiliates increased 8 percent, the fastest rate of increase since 1989 (table 4). The increase, from 5.2 million to 5.6 million, was mainly due to foreign acquisitions of existing U.S. companies.

The affiliate share of U.S. private industry employment increased from 4.9 percent in 1997 to 5.2 percent in 1998 after remaining in the narrow range of 4.9-5.0 percent for several years. ${ }^{9}$ The

[^35]Table 4.-Employment of Nonbank U.S. Affiliates of Foreign Companies, 1977-98

share of employment for majority-owned affiliates also increased, from 4.0 percent to 4.3 percent.

## By industry

At the broad sectoral level, the affiliate share of U.S. employment in 1998 was highest in mining ( 15.5 percent), followed by manufacturing (13.4 percent), information ( 7.5 percent), and wholesale trade ( 6.6 percent) (table 5). ${ }^{10}$ For majority-owned affiliates, the shares in U.S. employment were also highest in mining ( 13.7 percent) and manufacturing ( 12.0 percent); however, the share in information ( 4.9 percent) was lower than that in wholesale trade ( 5.9 percent). Majority-owned affiliates accounted for about 90 percent of affiliate employment in the mining, manufacturing, and wholesale trade sectors, but they accounted for less than twothirds of affiliate employment in information. Within information, majority-owned affiliates accounted for less than one-fourth of affiliate employment in broadcasting and telecommunications, a subsector that includes industries that have been subject to restrictions on foreign ownership.

Among the subsectors in manufacturing, the affiliate share of all-U.S.-business employment in 1998 was highest in chemicals ( 35.4 percent). Within chemicals, affiliates accounted for nearly 50 percent of employment in pharmaceuticals and medicines, a research-intensive industry that is characterized by proprietary assets that favor the internalization of production activities within large multinational firms. In contrast, the affiliate share of employment was less than 3 percent in two low-technology manufacturing subsectorswood products and furniture and related products.

The affiliate share of employment in manufacturing increased from 12.4 percent in 1997 to 13.4 percent in 1998. Within manufacturing, the affiliate share increased the most in transportation equipment, in paper, and in beverages and tobacco. In transportation equipment, the affiliate share of employment in motor vehicles, bodies and trailers, and parts jumped from 18.5 percent to 28.2 percent, reflecting both foreign acquisitions of U.S. companies and expanded operations of existing affiliates. In paper and in beverages and tobacco, the increases in affiliate share largely reflected foreign acquisitions of minority ownership
10. Employment data by industry of sales are used to estimate shares; this basis approximates the establishment-based disaggregation of the corresponding data for all U.S. businesses. See the box "Using Employment Data to Estimate Affiliate Shares of the U.S. Economy by Industry" on page 148.

n.a. Data required to compute shares are not available.

1. The data on U.S. employment in private industries that were used in catculating these percentages are classilied by industry of estabistmment. For "all industries," they are from table 6.4C of the "National Income and Produc or below, the data for 1997 are from the Census Bureau's 1997 Economic Census, and the data for 1998 are from the Census Bureau's County Business Patterns.
For "all industries," the total for U.S. employment in nonbank private industries is equal to employment in private industries less the employment of depository institutions and private househotds. The U.S. private-industry employ ment totals used to calculate the aftliate shares in "all industries" in this table difier from the U.S. employmen totals used to calculate affiliate shares in table 6; the latter are from BEA's Regional Economic Information System me estimates in table 6, unike those used for this table, do not exclude employment in depository institutions. In addition, the estimates used for table 6, unlike those used for this table, exclude U.S. residents temporarily em ployed abroad by U.S. businesses. They may also differ from NIPA estimates used for "all industries" in this table because of different definitions and revision schedules.
2. For consistency with the coverage of the data on U.S. employment in private industries, U.S.alfiliate employment in Puerto Rico, in "other U.S. areas," and in "foreign" was excluded from the U.S.affiliate employment total when the percentage shares on this line were computed.
3. Total affiliate manufacturing employment and the shares of all-U.S.business manufacturing employment acby industry of sales, and the total for manufacturing includes some nonmanufacturing employees (see the box "Using Employment Data to Estimate Affiliate Shares of the Economy by Industry"), whereas in tabie 7, affiliate manufactur
ing employment consists only of employees on the payrolls of manufacturing plants. Data on the latter basis are
not available for the subindustries within manufacturing shown in this table. In addition, the total for manufacturing not available for the subindustries within manufacturing shown in this table. In addition, the total for manufacturing 4. For both US atfiliates and all US businesses includes oil and gas extaction
4. For both U.S. atfiliates and all U.S. businesses, includes oil and gas extraction. (See note below.)
5. The data on U.S. employment used to calculate the percentages shown on this line cover taxable establish cluded in data from the 1997 Economic Consus but not in the in taxable establishments in 1998 was estimated by applying the ratio of employment in taxable establishments to total employment in the industry from the 1997 Economic Census data to the employment data from County Bus ness Patterns.
6. This line includes all employment that U.S. affiliates did not specity in terms of industry of sales when they filled out their survey form. Affiliates that filed the long form (that is, affiliates with assets, sales, or net income or loss greater than $\$ 100$ milion) had to specity only their 10 largest sales categories, and affiliates that filed the short form had to specity only their 4 largest sales categories.

NOTE.-A significant portion of U.S.-affiliate employment in petroleum and coal products is accounted for by inte grated petroleum companies that have, in addition to their manufacturing employees, substantial numbers of employ ees in petroleum extraction; because these employees cannot be identified separately, they are included in petroleum and coal products manufacturing. For consistency, employees of affiliates classified in the "oil and gas extraction without refining" industry and employees of all U.S. businesses in oil and gas extraction are also incuded in petro leum and coal products manufacturing rather than in mining.
shares in U.S. companies. The shares of employment in these two subsectors that were accounted for by majority-owned affiliates increased only marginally.

Outside of manufacturing, the affiliate share of employment increased substantially in administration, support, waste management, and remediation services, largely as a result of foreign acquisitions of U.S. companies specializing in employment services.

The affiliate share of employment decreased substantially in transportation and warehousing and in information. In both sectors, the decreases were mainly due to selloffs of foreign minorityownership shares in large U.S. companies. Within information, the effect of these selloffs was most pronounced in broadcasting and telecommunications, where the affiliate share decreased from 9.0 percent to 6.4 percent. A decrease in the affiliate share of employment in the motion picture and sound recording industries subsector mainly reflected foreign selloffs of majority-owned affiliates.

## By State

In 1998, as in earlier years, the affiliate shares of private-industry employment were highest in Hawaii ( 10.4 percent), South Carolina ( 8.2 percent), and North Carolina ( 7.3 percent); these three States also had the highest shares for majorityowned affiliates (table 6). Employment in manufacturing accounted for more than one-half of af-
filiate employment in South Carolina and North Carolina but for only 3 percent of affiliate employment in Hawaii (table 7).

South Carolina ranked fourth among States in terms of the affiliate share of total employment in manufacturing ( 20.5 percent), behind the District of Columbia (23.4 percent), Kentucky (22.8 percent), and North Dakota ( 22.0 percent). The high affiliate shares in the District of Columbia and North Dakota partly reflect very small manufacturing employment totals relative to the totals in most other States. ${ }^{11}$

In 1998, employment by affiliates increased the most in Michigan and Illinois. In Michigan, employment by affiliates increased 64,000 , largely as a result of foreign acquisitions in the motor vehicles and motor vehicle parts industries. The affiliate share of private industry employment in Michigan increased from 4.4 percent to 6.0 percent, and the affiliate share of manufacturing employment increased from 10.1 percent to 15.2 percent. In Illinois, employment increased 38,000 , partly as a result of acquisitions in the food service and petroleum industries; the affiliate share of employment increased from 4.4 percent to 5.0 percent. Employment by affiliates also increased substantially in the other Great Lakes States.

[^36]
## Using Employment Data to Estimate Affiliate Shares of the U.S. Economy by Industry

In this article, data on employment are used to estimate affiliate shares of the U.S. economy by industry because these data can be disaggregated by industry of sales, a basis that approximates the disaggregation of the data for all U.S. businesses by industry of establishment. Thus, the data on affiliate employment can be used to calculate the affiliate shares of the U.S. economy at a greater level of industry detail than can be calculated using the gross product estimates or other data, which can only be disaggregated on the basis of industry of affiliate. ${ }^{1}$
In the classification by industry of sales, the data on affiliate employment (and sales) are distributed among all of the industries in which the affiliate reports sales. As a result,

[^37]employment classified by industry of sales should approximate that classified by industry of establishment (or plant), because an affiliate that has an establishment in an industry usually also has sales in that industry. ${ }^{2}$
In contrast, in the classification by industry of affiliate, all of the operations data (including the employment data) for an affiliate are assigned to that affiliate's "primary" indus-try-that is, the industry in which it has the most sales. ${ }^{3}$ As a result, any affiliate operations that take place in secondary industries will be classified as operations in the primary industry.

[^38]Employment by affiliates decreased substantially in Minnesota and in Hawaii. In Minnesota, where the affiliate share of employment decreased from 4.5 percent to 3.6 percent, selloffs of minor-ity-owned affiliates more than accounted for the
decrease; employment by majority-owned affiliates increased. In Hawaii, the decrease was also largely the result of selloffs; the affiliate share of employment decreased from 11.4 percent to 10.4 percent.

Table 6.-Employment by Nonbank U.S. Affiliates by State, 1997 and 1998

|  | Thousands of employees |  |  |  | Percentage of total private industry employment in the State ${ }^{1}$ |  |  |  |

- Less than 50 employees.

1. The data on employment in private industries used to calculate the shares shown in this table are from BEA's Regional Economic intormation System. The totals are equal to employment in private industries less employment
of private households. The U.S. employment totals used to calculate affiliate shares in this tabie differ from those of private households. The U.S. employment totals used to calculate attiliate shares in this tabie differ from those
used for table 4 and the all-industries line of table 5, which are from table 6.4C of the "National Income and Product Accounts (NIPA) Tables." They differ from the NIPA estimates of employment because they include depository institutions, and, by definition, they exclude U.S. residents temporarily employed abroad by U.S. businesses. They also
may differ from the NIPA estimates because of dififerent definitions and revision schedules. 2. For consistency with the coverage of the private-industry employment data, U.S. affiliate employment in Puerto Rico, in "other U.S. areas," and in "toreign" was excluded from the U.S.affiliate employment total when the percentage shares on this line were computed.

Consists of employees of U.S n.a. Not available.

## Trade in Goods

U.S. affiliates have a major presence in U.S. trade in goods: In most years since 1977, affiliates have accounted for $20-25$ percent of U.S. exports of goods and for $30-35$ percent of U.S. imports of goods; these shares are much higher than affiliates' shares of either gross product or employment (table 8). The relatively high shares in trade partly reflect the activity of wholesale trade affiliates, which have served as conduits for flows of goods between the United States and the foreign investing countries. ${ }^{12}$ Affiliate trade in goods has been dominated by majority-owned affiliates: In the past decade, these affiliates have consistently accounted for more than 80 percent of affiliate exports and more than 90 percent of affiliate imports.

Much of the trade in goods by affiliates-about 40 percent of exports and 70 percent of importsis intrafirm trade (that is, trade between the affili-

[^39] played an even larger role in U.S.-affiliate trade in earlier years.
ates and their foreign parents or other member companies of their foreign parent groups). In most years, U.S.-affiliate intrafirm trade has accounted for 8-12 percent of U.S. exports and for 20-28 percent of U.S. imports. Almost all of the intrafirm trade of affiliates has been trade by majorityowned affiliates.

## Exports

In 1998, exports of goods by U.S. affiliates increased 7 percent, to $\$ 150.8$ billion, as a result of new foreign investments. In contrast, total U.S. exports of goods decreased 1 percent, reflecting a reduction in foreign demand that was associated with troubled economic conditions overseas, particularly in Asia. Thus, the affiliate share of U.S. exports of goods increased from 20.5 percent in 1997 to 22.1 percent in 1998.

The increase in affiliate exports in 1998 was more than accounted for by foreign acquisitions of a few large U.S. manufacturing companies; exports by existing U.S. affiliates decreased, reflecting the

troubled conditions in Asia, which has been a major market for U.S.-affiliate exports. ${ }^{13}$ Because the acquired affiliates had little or no established trade with their new foreign parent companies, foreign acquisitions did not have a comparable impact on intrafirm exports by affiliates. In fact, intrafirm exports by affiliates decreased 9 percent in 1998, and the share of these exports in U.S. exports of goods decreased from 9.1 percent to 8.4 percent.

By country of UBO, exports by German-owned affiliates more than doubled, largely because of German acquisitions of U.S. companies (table 9). As a result, the share of exports by German-owned affiliates in affiliate exports of goods increased from 10.0 percent to 19.2 percent, and their share in total U.S. exports of goods increased from 2.0

[^40]percent to 4.2 percent. Intrafirm exports by Ger-man-owned affiliates, which were largely unaffected by the acquisitions, increased 13 percent, reflecting expanded activity by existing affiliates.

## Acknowledgments

The 1998 annual survey was conducted under the supervision of Joseph F. Cherry III, with contributions by Juris E. Abolins, Chester C. Braham, Emily D. Curry, Hien X. Dang, Constance T. Deve, Nicole Donnegan, Chris Goins, Charles R. Gravitz, David N. Hale, Earl F. Holmes, Lonnie Hunter, Carol L. Lefkowitz, Stephanie A. Lewis, Edna A. Ludden, Betty K. Maddy, Isabel L. McConnell, Demetria A. McCormick, Gregory L. McCormick, Sidney A. Moskowitz, Christine L. Perrone, Ronald L. Ross, William R. Shupe, Clarence D. Smith, Marie P. Smith, John R. Starnes, Diann L. Vann, Kimyetta Whitehead, and Dorrett E. Williams.
Computer programming for data estimation and the generation of data tables was provided by Diane Young, Neeta Kapoor, and Tara O'Brien.

[^41]Acquisitions of U.S. companies were also the major factor behind a 15 -percent increase in exports by British-owned affiliates. These acquisitions had virtually no impact on intrafirm exports by British-owned affiliates, which increased only 1 percent.

In contrast, exports by Japanese-owned affiliates decreased 12 percent, and exports by Koreanowned affiliates decreased 24 percent. These reductions, which mainly took the form of reduced intrafirm exports by wholesale trade affiliates, can be attributed to a falloff in Japanese and Korean demand for U.S. goods that resulted from the 1998 economic downturn in the two countries and the accompanying depreciation of their currencies against the U.S. dollar. ${ }^{14}$ The decrease in intrafirm

[^42]exports by Japanese-owned and Korean-owned affiliates more than accounted for the overall decrease in U.S.-affiliate intrafirm exports.

## Imports

In 1998, imports of goods by U.S. affiliates increased 9 percent, to $\$ 289.7$ billion, mainly as a result of foreign acquisitions of U.S. manufacturing companies. Total U.S. imports of goods increased 5 percent. Thus, the affiliate share of U.S. imports of goods increased from 30.4 percent in 1997 to 31.8 percent in 1998.

As with exports, the imports of companies acquired in 1998 boosted the imports of U.S. affiliates from unrelated parties but had little effect on intrafirm imports: Imports by affiliates from unrelated parties increased more than a third, while intrafirm imports by affiliates increased less than 1 percent. The share of intrafirm imports by affili-

ates in U.S. imports of goods decreased from 23.2 percent in 1997 to 22.3 percent in 1998.

By country of ownership, imports by Germanowned affiliates increased 72 percent; the increase mainly resulted from German acquisitions of U.S. companies, which expanded imports from unrelated parties. Intrafirm imports by German-owned affiliates increased 13 percent, mainly reflecting increased imports by existing affiliates in the motor vehicle manufacturing and motor vehicle wholesale trade industries.

Among the other investing countries, imports by Korean-owned affiliates (which have predominantly been by wholesale trade affiliates) increased 19 percent in 1998, reflecting increased imports by existing wholesale trade affiliates. Imports by Swedish-owned affiliates also increased 19 percent, reflecting expanded imports by existing affiliates. In contrast, imports by Netherlands-owned affiliates decreased, partly as a result of selloffs. For British-owned affiliates, a substantial increase in imports from unrelated parties that resulted from
new acquisitions was largely offset by reduced intrafirm imports by existing affiliates.

## Data Availability

This article presents a summary of the preliminary estimates from the 1998 annual survey of foreign direct investment in the United States. More detailed estimates will be published this fall; availability will be announced on the inside back cover of the Surver. Revised estimates will be published next year.

Estimates of U.S. affiliate operations in 1977-97 are available on diskettes and in compressed files that can be downloaded from BEA's Web site at <www.bea.doc.gov>.
The estimates for 1991-97 are also available in publications.
For more information on these products and how to get them, see the International Investment Division Product Guide on BEA's Web site at <www.bea.doc.gov/bea/dil.htm>, or write to the Research Branch (BE-50), International Investment Division, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Tables 10 and 11 follow.

# State Personal Income, First Quarter 2000 

By Duke Tran

The quarterly estimates of State personal income are prepared by the Regional Economic Measurement Division.

TN the first quarter of 2000, U.S. personal income increased $\$ 127.3$ billion, or 1.6 percent (table A).' First-quarter highlights include the following:

- The 1.6 -percent growth rate in personal income was a step-down from the 1.9 -percent growth rate in the fourth quarter of 1999.

1. In this article, dollar changes are expressed at seasonally adjusted annual rates, and percent changes are expressed at quarterly rates.

- Forty States and the District of Columbia had growth rates in personal income that exceeded the 0.9 -percent increase in prices paid by U.S. consumers.
- In Vermont, North Carolina, Alaska, Georgia, and Florida, personal income grew the fastest (chart 1).
- In North Dakota, Nebraska, Kansas, South Dakota, and Iowa, personal income declined.

1. Percent changes are expressed at quarterly rates.
income, and proprietors' income-less personal contributions for sociad insurance plus an adjustment to convert earn-
[^43]The step-down in U.S. personal income in the first quarter reflected a step-down in net earnings, which grew 1.5 percent after growing 1.9 percent. ${ }^{2}$ Dividends, interest, and rent grew 1.8 percent after growing 2.4 percent, and transfer payments grew 1.7 percent after growing 0.9 percent. ${ }^{3}$ The slowdown in dividends, interest, and rent was accounted for by a large decline in rent, mainly reflecting the pattern of Federal farm subsidy payments and the return to more normal levels after the fourth-quarter rebound from uninsured losses associated with Hurricane Floyd in the third quarter of 1999. ${ }^{4}$
U.S. earnings by place of work grew 1.6 percent in the first quarter after growing 1.9 percent in the fourth. The slowdown partly reflected the pattern of Federal farm subsidy payments; it also reflected downturns in bonuses and other payments in some industries from unusually high levels in the fourth quarter.

By industry, earnings in farms declined 24.7 percent after growing 69.9 percent. Earnings growth decelerated in transportation and public utilities, in wholesale trade, and in services. It accelerated in government, in construction, in retail trade, in finance, insurance, and real estate, and in manufacturing. In mining, it rebounded after a decline.

By region, personal income growth decelerated in the Plains, Rocky Mountain, Far West, Southwest, Great Lakes, and New England regions, mainly reflecting slower growth in net earnings. Personal income growth accelerated in the Mideast and Southeast regions, mainly reflecting stronger growth in net earnings and in transfer payments.

Table 1 at the end of this article presents the quarterly estimates of personal income for each State and region, beginning with the first quarter of 1997. Table 2 presents the quarterly estimates of personal income by major source and of earnings by industry, beginning with the third quarter of 1998.

[^44]
## Growth rates by State

In the first quarter, the growth rates in personal income in 40 States and the District of Columbia exceeded the 0.9 -percent increase in the prices paid by U.S. consumers (as measured by the price index for personal consumption expenditures).

States with the fastest growth.-The five States with the fastest growth in personal income were Vermont ( 2.9 percent), North Carolina ( 2.6 percent), Alaska ( 2.5 percent), Georgia ( 2.4 percent), and Florida ( 2.4 percent). The fast growth in these States mainly reflected strength in net earnings.

These five States accounted for 11.1 percent of U.S. personal income, but they accounted for 16.9 percent of the $\$ 127.3$ billion increase in U.S. personal income (see table B). In the fourth quarter, these States accounted for the same share of U.S. personal income, but they accounted for only 10.3 percent of the growth.

In North Carolina, Georgia, and Florida, the largest contributors to earnings growth were earnings in services, in government, and in finance, insurance, and real estate (tables C and D). The strong growth in earnings in government partly reflected the pay raise for Federal civilian and military personnel and the hiring of temporary workers for the Census 2000. In North Carolina, earnings in manufacturing, in farms, and in construction also contributed to the growth in earnings; the strong growth in farm earnings partly reflected a large payment made under the National Tobacco Grower Settlement Trust. In Georgia, earnings in transportation and public utilities and in retail trade also contributed substantially to earnings growth. In Florida, earnings in retail trade, in construction, and in manufacturing also contributed.

In Vermont, the main contributor to earnings growth was earnings in manufacturing, and in Alaska, the major contributors were earnings in mining and in government. In both States, earnings in services, in government, and in retail trade also contributed substantially. In Vermont, earnings contributions were also large in construction, and in Alaska, they were large in transportation and public utilities.

States with declines.-The five States with declines in personal income were in the Plains region: North Dakota ( -2.7 percent), Nebraska ( -2.1 percent), Kansas ( -1.6 percent), South Dakota ( -1.1 percent), and Iowa ( -0.5 percent). These five States accounted for 2.8 percent of U.S. personal income.

The declines reflected large declines in net earnings and weakness in dividends, interest, and rent. The weakness in dividends, interest, and rent was accounted for by step-downs in rent, partly reflecting the timing of Federal subsidy payments that were authorized by the 1999 Omnibus Spending Act.

In all five States, the major contributors to the declines in earnings were declines in farm earnings
that reflected decreases in farm subsidy payments from unusually high levels in the fourth quarter. These payments, which were also authorized by the 1999 Omnibus Spending Act, have fluctuated substantially from quarter to quarter.

Tables C, D, 1 and 2 follow.

## ${ }^{p}$ Preliminary

1. Percent changes are expressed at quarterly rates.

NOTE.-The personal income level shown for the United States is derived as the sum of the State estimates.
It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of

Table 2.-Personal Income by Major Source

[^47]4. Rental income of persons includes the capital consumption adjustment.
5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment. 6. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.
NoTE.-The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In patticular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S.

## BEA CURRENT AND HISTORICAL DATA

National, International, and Regional Estimates

This section presents an extensive selection of economic statistics prepared by the Bureau of Economic Analysis (BEA) and a brief selection of collateral statistics prepared by other Government agencies and private organizations. Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights.

BEA's economic statistics are available on three Web
sites. BEA's Web site at <www.bea.doc.gov> contains data, articles, and news releases from the national, international, and regional programs. The Federal Statistical Briefing Room (FSBR) on the White House Web site provides key economic statistics, including gross domestic product. The Commerce Department's STAT-USA Web site at <www.stat-usa.gov> provides detailed databases and news releases from BEA and from other Federal Government agencies by subscription.
The tables present annual [A], quarterly $[Q]$, and monthly $[M]$ estimates.

## National Data

Sections A, B, C, and part of E are not included in this issue because of the publication of the annual revision of the national income and product accounts.

In this issue, see "Annual Revision of the National Income and Product Accounts: Annual Estimates for 1997-99 and Quarterly Estimates for 1997:I-2000:I," "National Income and Product Accounts Tables" (an extensive set of NIPA tables for 1997-2000:II), and "GDP and Other Major NIPA Series, 1929-2000:I."

For additional information, go to our Web site at <www.bea.doc.gov/bea>.

## D. Domestic Perspectives

This table presents data collected from other government agencies and private organizations, as noted. Quarterly data are shown in the middle month of the quarter.

Table H.1.-International Perspectives-Continued

1. All exchange rates are from the Board of Governors of the Federal Reserve System.
2. As of January 1. 1999, the euro is reported in place of the individual euro-area currencies. These carrency rates can be derived trom the eurro rale by using
1.95583 German marks, and 1936.27 lialian life.
3. The rate shown tor the United States is an index of the weighted average of the foreign exchange value of ihe U.S. dollar against the currencies of a broad group ol major U.S. trading parmers, Januay $1997=100$ and
rellects revised trade weights. For more inlormation on the exchange rate indexes, see "New Surnmary Measures
of the Forecion
NoTE.-US. interest rates, unemployment rates, and GDP growth rates are from the Federal Reserve, the Bureau of Labor Slatistics, and BEA, respectrely. Al other data (induding U.S. consumes prices and U.S. share prices, both of which have been rebased 10 1 1995 to tacilitate comparison) are © OECD, July 2000 , OECD Main Economic indicators and are reproduced with permission of the OECD.

P Preliminary.
Revised.

1. Percent changes are expressed at quarterly rates

NOTE.-The personal income level shown for the United States is derived as the sum of the State estimates.
differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability
of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal
civilian and miltary personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S.
firms.

Source: Table 1 in "State Personal Income, First Quarter $2000^{n}$ in this issue of the SURVEY of CURRENT BUSF| firms. |

Nore. - The personal income level shown for the Unied Slates is derived as the sum of the State estimates. It differs from the national income and product accountis (MPAS) because of of the availablity of source data. in particular, it differs from the NPA estimate because, by defini-
dion, it omits the earnings of federal civilian and miliary personnel stationed abroad and of U.S. Source: Tables 1 and 3 in "Comprenensive Revision of State Personal Income" in the June 2000 issue of the SURVEY.

1. Per capita personal income and per capita disposable personal income were computed using
midyear population estimates from the Bureau of the Census. Note popuaion esinates rom he Bueau or me Census.
Note-The personal income level shown tor the United States is derived as the sum of the
State estimates. It differs from the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing
of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. Source: Tables 2 and 4 in "Comprehensive Revision of State Personal Income" in the June 2000 issue of the SURVEY.

Table J.4.-Gross State Product for States and Regions by Industry, 1997

1．Per capita personal income was computed using Census Bureau midyear population estimates．Estimates for 1996－98 reflect county population estimates available as of March 2000.
2．The personal income level shown for the United States is derived as the sum of the county estimates，It differs from the estimate of personal income in the national income and product accounts（NIPA＇s）because of dil－ source data．In particular，it ditiless from the NIPA estimate because，by definition，it omits the eamings of Federal divilion and military personnel stalioned abroad and of U．S．residents employed abroad temporarity by privale U．S． firms．

3．Indudes Metropolitan Statistical Areas，Primary Metropolian Statistical Areas（PMSA＇s designated by＂），and
New England Counly Metropolitan Areas（NECMA＇s）．The New Haven－Bridgeport－Siambord－Danbury－Waterbury，CT New England County Metropolitan Areas（NECMA＇s）．The New
NECMA is presented as a PMSA（pant of the New York CMSA）

## Additional Information About the NIPA Estimates

## Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP in 1997-98 uses prices for 1997 and 1998 as weights, and the 1997-98 annual percent change in the GDP price index uses quantities for 1997 and 1998 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. ${ }^{1}$ These annual changes are "chained" (multiplied) together to form time series of quantity and price; the percent changes that are calculated from these time series are not affected by the choice of reference period.

The quarterly changes in quantities and prices are calculated with weights from two adjacent quarters. As part of an annual or comprehensive revision, the quarterly indexes through the most recent complete year are adjusted to ensure that the average of the quarterly indexes conforms to the corresponding annual index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1996) dollar estimates." These estimates are computed by multiplying the 1996 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled $\$ 100$ in 1996 and if real output for this component

[^50]increased by 10 percent in 1997, then the "chained (1996) dollar" value of this component in 1997 would be $\$ 110(\$ 100 \times 1.10)$. Note that percentage changes in the chained (1996) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1996) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A "residual" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. Accurate measures of component contributions to the percentage changes in real GDP and its major components are shown in NIPA tables 8.2-8.6.

BEA also publishes the "implicit price deflator" (IPD), which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100 ; the values of the IPD and of the corresponding "chain-type" price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths-for example, quarters and years-may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these changes requires a variant of the compound interest formula:

$$
r=\left[\left(\frac{x_{t}}{x_{o}}\right)^{m / n}-1\right] \times 100
$$

where $r$ is the percent change at an annual rate; $x_{t}$ is the level of activity in the later period; $x_{0}$ is the level of activity in the earlier period; $m$ is the yearly periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and $n$ is the number of periods between the earlier and later periods (that is, $t-o$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year-for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

## Reconciliation Tables

ITA's International transactions accounts
NIPA's National income and product accounts

## Appendix B

## Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, regional, and international accounts.

## National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product), the estimates of wealth and related estimates, gross product by industry, the inputout accounts, and the satellite accounts.

National income and product accounts (NIPA's). This series of papers documents the conceptual framework of the NIPA's and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting (1985) [also in the March 1985 Survey]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (1985)
Foreign Transactions (1987) [A revised version is forthcoming.]
GNP: An Overview of Source Data and Estimating Methods (1987) [Most of the information in this paper has been superseded by "A Guide to the NIPA's" (March 1998 SURVEY).]
Government Transactions (1988)
Personal Consumption Expenditures (1990)
These methodologies have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPA's. The most recent revisions are described in the following Survey articles.
"A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts" Definitional and Classificational Changes (August 1999)
New and Redesigned Tables (September 1999)
Statistical Changes (October 1999)
"Improved Estimates of the National Income and Product Accounts: Results of the Comprehensive Revision"
For 1959-98 (December 1999)
For 1929-99 (April 2000)
"Annual Revision of the U.S. National Income and Product Accounts" (August 2000)
"A Guide to the NIPA's" (March 1998) provides the definitions of the major NIPA aggregates and components, discusses the measures of real output and prices, explains how production is classified and how the NIPA's are presented, describes the statistical conventions that are used, and lists the principal source data and methods that are used to prepare the estimates of gross domestic product (GDP).

Information about the sources and methods that are used to prepare the national estimates of personal income, which are the basis for the State estimates, is in State Personal Income, 1929-97 (1999).
"BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" (May 1997) is the most recent in a series of articles that describe the conceptual basis for the chain-type measures of real output and prices that are used in the NIPA's.
"Reliability of the Quarterly and Annual Estimates of GDP and Gross Domestic Income" (December 1998) evaluates these estimates by examining the record of revisions to them.

Wealth and related estimates. Fixed Reproducible Tangible Wealth in the United States, 1929-94 (1999) discusses the concepts and statistical considerations that underlie the estimates and their derivation.
"Fixed Assets and Consumer Durable Goods for 1925-98" (April 2000) describes the definitional and statistical improvements that were incorporated in the comprehensive revision of the estimates.

Gross product by industry. "Improved Estimates of

## Mission and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, regional, and international accounts are available on BEA's Web site at <www.bea.doc.gov>. For information about the development and the implementation of the plan, see these Survey articles.
"Mid-Decade Strategic Review of BEA's Economic Accounts: Maintaining and Improving Their Performance" (February 1995)
"Mid-Decade Strategic Review of BEA's Economic Accounts: An Update". (April 1995)
"BEA's Mid-Decade Strategic Plan: A Progress Report" (June 1996)

Gross Product by Industry for 1947-98" (June 2000) describes the most recent comprehensive revision of these estimates.

Input-output accounts. "Benchmark Input-Output Accounts for the U.S. Economy, 1992" (November 1997) describes the preparation of the 1992 accounts and the concepts and methods that underlie the accounts.
"Annual Input-Output Accounts of the U.S. Economy, 1996" (January 2000) presents annual tables for 1996 that update the 1992 benchmark accounts.

Satellite accounts. These accounts extend the analytical capacity of the national accounts by focusing on one aspect of economic activity.
"Integrated Economic and Environmental Satellite Accounts" and "Accounting for Mineral Resources: Issues and BEA's Initial Estimates" (April 1994)
"A Satellite Account for Research and Development" (November 1994)
"U.S. Transportation Satellite Accounts"
For 1992 (April 1998)
For 1996 (May 2000)
"U.S. Travel and Tourism Satellite Accounts" For 1992 (July 1998)
For 1996 and 1997 (July 2000)

## International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITA's). The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITA's and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITA's.
"U.S. International Transactions, Revised Estimates" is a series of articles about the annual ITA revisions and the improvements in methodology; the latest article is published in the July 2000 issue.

Direct investment. International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.
"Methodology for U.S. Direct Investment Abroad," which is also available in U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results (1998)
"A Guide to BEA Statistics on U.S. Multinational

Companies," which is also available in the March 1995 Survey
"Methodology for Foreign Direct Investment in the United States," which is also available in Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final Results (1995)
"A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 Survey
International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

## Regional accounts

The regional accounts include estimates of personal income and gross state product.

Personal income. Estimates of personal income are prepared for States and for local areas.
"Comprehensive Revision of State Personal Income for 1969-99" (June 2000) summarizes the changes in the methodology that is used to prepare the estimates. The detailed methodology is available on the CD-ROM State Personal Income, 1969-98.
"Comprehensive Revision of Local Area Personal Income for 1969-98" (July 2000) summarizes the changes in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD-ROM Regional Economic Information System, 1969-98.

Gross state product. "Comprehensive Revision of Gross State Product by Industry, 1977-94" (June 1997 Survey) summarizes the sources and the methods that are used to prepare the estimates.
"Gross State Product by Industry, 1977-96" (June 1998) and "Gross State Product by Industry, 1995-97" (June 1999) present the most recent revisions to the estimates and summarize the changes in methodology.

## Availability

Most of the items listed here are available on our Web site at <www.bea.doc.gov>; in particular, look under "Methodologies." Our online Catalog of Products provides descriptions of both our printed and electronic publications. The Catalog also includes links to compressed files of our diskette products that can be downloaded for free.
For specific information about the availability of our most recently released estimates and products, see "Getting BEA's Estimates" on the inside back cover.

Estimates and related information are available in news releases and publications and on diskettes, CD-ROM's, and the BEA Web site. The news releases are now posted on the Web site within minutes of the official time of release. Our online Catalog of Products provides product descriptions and includes links to compressed files of our diskette products that can be downloaded for free.

Our most recent Web site postings and statistical products are listed below.

## www.bea.doc.gov

August 2000 Survey of Current Business Click on "Survey of Current Business and other BEA Publications," and look under "Table of contents." Selected NIPA Tables, Second Quarter 2000 (Advance) Click on "GDP and related data," and look under "Current period estimates."

Gross Product by Industry, 1947-98
Under "National," click on "Industry and wealth data," and look under "Gross product by industry."
Local Area Personal Income for 1969-98

## Diskettes and CD-ROM's

## U.S. Direct Investment Abroad: Operations of U.S.

 Parent Companies and Their Foreign Affiliates Contains estimates that cover the financial structure and operations of U.S. multinational companies and their foreign affiliates.Revised 1997 Estimates. Diskette IDN-0254, \$20. Preliminary 1998 Estimates. Diskette IDN-0255, \$20. U.S. International Transactions, Historical Series Contains historical data of exports and imports of goods, travel, transportation, other services, foreign aid, and private and official capital flows.
Diskette IDN-0261, \$20.
U.S. International Transactions, First Quarter 2000 Contains annual estimates for 1999 and quarterly estimates for 1999:I-2000:I on a balance-of-payments basis. Diskette IDN-0260, \$20.

## Gross Product by Industry, 1947-98

Contains the components of gross domestic income that define current-dollar gross product originating for 1947-98 and current-dollar gross output and intermediate inputs for 1977-98.
Diskette NDN-0256, \$20.
Regional Economic Information System, 1969-98
Cotains estimates of personal income and its components, earnings, and employment for States, metropolitan areas, and counties.
CD-ROM RCN-0250, $\$ 35$.
State Personal Income, 1969-98
Contains total and per capita estimates and detailed estimates for the United States, regions, and States.
CD-ROM RCN-0249, \$35.

To order, call the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666).

## Publications

Foreign Direct Investment in the United States
Preliminary Results From the 1997 Benchmark Survey Presents data on the financial structure and operations of the U.S. affiliates of foreign investors, including data collected only in benchmark surveys. Stock no. 003-010-00284-1, \$13.

## International Direct Investment

Studies by the Bureau of Economic Analysis
Presents a collection of studies on multinational companies, the guides to BEA's statistics, and the methodologies used to prepare the estimates.
Stock no. 003-010-00278-6, \$24.

To order, visit the U.S. Government Printing Office's Web site at <www.gpo.gov> or call 202-512-1800.

| Personal Income and Outlays, October 2000 | Nov. 30 | 8:30 a.m. |

* Joint release by the Bureau of the Census and the Bureau of Economic Analysis (BEA)

For more information, call BEA at 202-606-9900, or go to our Web site at www.bea.doc.gov

[^0]:    2. See "Annual Revision of the National Income and Product Accounts: Annual Estimates, 1997-99, and Quarterly Estimates, 1997:I-2000:I" in this issue.
[^1]:    3. In the NIPA's, an increase in the rate of Federal employee compensation is treated as an increase in the price of employee services purchased by the Federal Government.
    4. "Energy goods and services" consists of gasoline, fuel oil, and other energy goods and of electricity and gas.
[^2]:    1. For information on the structure, definitions, presentation, and methodologies that underlie the NIPA's, see "A Guide to the NIPA's," Survey of Current Business 78 (March 1998): 26-68. For definitional changes that were made in the 1999 comprehensive revision of the NIPA's, see Brent R. Moulton, Robert P. Parker, and Eugene P. Seskin, "A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts: Definitional and Classificational Changes," Survey 79 (August 1999): 7-20.
[^3]:    See footnotes at the end of the table.

[^4]:    2. This PCE category consists of imputed payments made by persons to depository institutions-that is, commercial banks, mutual savings banks, savings and loan associations, credit unions, and regulated investment compa-nies-to purchase checking, bookkeeping, and investment services for which they do not pay an explicit service charge. For additional information, see U.S. Department of Commerce, Bureau of Economic Analysis, Personal Consumption Expenditures, Methodology Paper No. 6 (Washington, DC: U.S. Government Printing Office, 1990): 11-12.
[^5]:    1. The 1997 Economic Census data that were incorporated in the 1999 comprehensive NIPA revision were preliminary retail sales data, which were used in the estimation of personal consumption expenditures for goods, and preliminary data on shipments of computers, which were used in the estimation of nonresidential fixed investment. For more information, see Eugene P. Seskin, "Improved Estimates of the National Income and Product Accounts for 1959-98: Results of the Comprehensive Revision," Survey of Current Business 79 (December 1999): 15-43.

    Several years ago, BEA implemented a program, as described in its strategic plan, to speed up the compilation of its benchmark input-output accounts and the benchmarking of the NIPA's to those accounts. This goal was met with the release of the 1992 benchmark input-output accounts in late 1997 and the release of the comprehensive NIPA revision in October 1999. As a consequence, much of the data from the 1997 Economic Census were not available in time to be fully incorporated in the NIPA comprehensive revision.

[^6]:    3. The Census Bureau data on value of construction put in place are the major source data for the estimates of both nonresidential and residential structures. The revised structures estimates were based on the "best period-to-period change" rather than the "best level" of the appropriate Census series (see the box "Incorporating Source Data on the Basis of 'Best Change"").
[^7]:    4. See footnote 3.
    5. The inventory valuation adjustment, which is calculated as the change in private inventories less the change in book values, reflects inventory price changes for firms that value inventory withdrawals at acquisition (historical) cost.
    6. The inventory valuation adjustment is not needed for farm inventories, because they are measured on a current-market-price basis.
[^8]:    7. For a further discussion, see the box "The Statistical Discrepancy," Survey 77 (August 1997): 19.
[^9]:    8. For 1999, the revision cannot be attributed to the same level of component detail as those for 1997 and 1998, because for 1999, the previously published estimates were prepared at a less detailed level.
    9. Wage accruals less disbursements (WALD) is the difference between wages earned, or accrued, and wages paid, or disbursed. In the NIPA's, wages accrued is the appropriate measure for national income, and wages disbursed is the appropriate measure for personal income. To estimate WALD, BEA converts annual disbursements data based on BLS tabulations of wages and salaries to an accrual basis. WALD consists of BEA estimates of bonus payments that are declared at the end of a year but that are actually paid the next year.
[^10]:    12. Personal interest income includes income received by publicly administered government employee retirement plans. For a discussion of the treatment of these plans, see Moulton, Parker, Seskin, "Definitional and Classificational Changes," 11-12.
[^11]:    13. The implicit prices are computed by dividing the current-dollar estimates by the chained-dollar estimates that are derived from the quantity data used in quantity extrapolation and direct valuation.
[^12]:    14. For a list of these components, see table 2 in "Updated Summary NIPA Methodologies," Surver 78 (September 1998): 14-35. An updated version of this table will be published in the October 2000 Surver.
[^13]:    2. BEA's FDIUS program uses the enterprise-a multiestablishment company and its majority-owned domestic subsidiaries or divisions-and not the establishment, as its statistical unit.
[^14]:    19. See Christopher L. Bach, "U.S. International Transactions, Revised Estimates for 1982-99," Surver 80 (July 2000): 70-77.
[^15]:    *These tables are not published in this issue. See the introductory text.

[^16]:    NOTE.-Numbers in parentheses indicate accounts and items of counterentry in the accounts. For example, line 7 of account 1 is shown as "other labor income (2-8)"; the counterentry is shown in account 2 , line 8.

[^17]:    1. Equals gross domestic product less gross product of households and institutions and of general government. 2. Equals gross domestic business product less gross farm product.
    2. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.8.
    NOTE--Chained (1996) doliar series are calculated as the product of the chain-type quantity index and the 1996 current-doliar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity
[^18]:    1. Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and services and income payments.
    2. Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100 .
    NOTE--Chained (1996) dollar series are calculated as the product of the chain-lype quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity
[^19]:    The residual ine is the difference between the first line and the sum of the most detailed lines. See notes and footnotes to table 2.4 .

[^20]:    The residual line is the cifference between the first line and the sum of the most detailed lines
    Chain-type quantity indexes for the series in this table are shown in table 7.5
    The figures in parentheses are the line numbers of the corresponding items in table 2.4.

[^21]:    9.3, and 9.4, interest received is netted against current expenditures.

[^22]:    the detailed lines for imports of goods and imports of services.
    Chain-type quantity indexes for the series in this table are shown in table 7.10
    Contributions to the percent change in real exports and in real imports of goods and services are shown in

[^23]:    1. Gross government investment consists of general government and government enterprise expenditures for fixed
[^24]:    nual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the
    corresponding chained-dollar estimates are usually not additive. The residual line is the difterence between the first corresponding chained-doliar estimates are us
    line and the sum of the most detailed lines.

[^25]:    1. Consists of social services; membership organizations; engineering and management services, except for commercial research and resting services and for management and public relations; and services, not elsewhere classified.
    2. Consists of receipts by all U.S. residents, including both corporations and persons, of dividends from their incorporated foreign afifiliates, their share of reinvested earnings of their incorporated foreign affiliates, and earnings of unincorporated foreign affiliates (line 75), net of corresponding payments (line 76).
    NoTE.- Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).
[^26]:    1. Consists of social services; membership organizations; engineering and management services, except for commercia
    fied.
    fied. Consists of receipls by all U.S. residents, including both corporations and persons, of dividends from their incorporated foreign attiliates, their share of reinvested earnings of their incorporated foreign affiliates, and earnings of unincorporated foreign affiliates (line 75), net of corresponding payments (line 76).
    Note.- Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).
[^27]:    1. The implicit price defiator for gross product of nonfinancial corporate business divided by 100 .
[^28]:    1. Equals personal consumption expenditures for housing less expenditures for other housing as shown in table
[^29]:    1. Government consumption expenditures and gross investment.
[^30]:    GDP Gross domestic product
    GNP Gross national product.

[^31]:    1. Real DPI in chained (1996) dollars. Derived by deflation using the implicit price deflator for personal consump-
    tion expenditures.
    DPI Disposable personal income.
[^32]:    p Preliminary
    Revised.
    NO. Not available. gross product originating in depository institutions and private househoids, imputed rental income from owner occupied housing, and business transter payments
    The estimates of U.S. private-inoustry gross product were recently revised. See Sherlene K.S. Lum, Brian C. Moyer, and Robert
    F Vinctict

[^33]:    1. The estimates of gross product of U.S. affiliates are conceptually consistent with the U.S. estimates of gross domestic product, or gross domestic product originating, by industry. Both sets of estimates are income-based estimates; that is, they are measured as the sum of costs incurred (except for intermediate inputs) and the profits earned in production (see the box "Key Terms").
    The financial and operating data of nonbank U.S. affiliates presented in this article cover the entire operations of the U.S. affiliate, irrespective of the percentage of foreign ownership. All data are on a fiscal year basis. Thus, for 1998, an individual affiliate's fiscal year is its financial reporting year that ended in calender year 1998.
    The estimates of gross product and the other data items for affiliate operations for 1998 are preliminary. The estimates for 1997 are revised; for most of the key data items, the revisions to the totals ranged from -4 percent to 4 percent.
    2. According to data from BEA's annual survey of new foreign investments, outlays by foreign direct investors to acquire or establish businesses in the United States surged from $\$ 69.7$ billion in 1997 to $\$ 215.3$ billion in 1998 (the previous high was $\$ 72.7$ million in 1988). Investment outlays increased further in 1999 , to a record $\$ 282.9$ billion. See Ned G. Howenstine and Rosaria Troia, "Foreign Direct Investment in the United States: New Investment in 1999," Survey of Current Business 80 (June 2000): 55-63.
    3. For a discussion of some of the industry-specific factors behind the largest investment transactions in 1998, see Mahnaz Fahim-Nader, "Foreign Direct Investment in the United States: New Investment in 1998," Surver 79 (June 1999): 16-23.
[^34]:    8. Each U.S. affiliate is classified in the industry that accounts for the largest portion of its sales. Many U.S. affiliates are involved in a variety of business activities; changes in the mix of these activities can cause an affiliates's industry classification to change, but an affiliate is reclassified only if the change in the primary activity from the preceding year is significant or if the change has persisted for 2 years.
[^35]:    9. Because U.S. affiliates tend to be relatively concentrated in less labor-intensive sectors of the economy (such as manufacturing), the affiliate share of employment has consistently been lower than the affiliate share of gross product.
[^36]:    11. According to data from the Census Bureau's County Business Patterns, there were 3,000 manufacturing employees in the District of Columbia and 23,000 manufacturing employees in North Dakota in 1998. About two-thirds of the manufacturing employees in the District of Columbia were employed in printing and related support activities.
[^37]:    1. Establishment-level data from a joint project of BEA and the Bureau of the Census can be used to calculate affiliate shares at an even greater level of detail. These data show each four-digit manufacturing industry in the Standard Industrial Classification; they are currently available for 1987-92. The data for foreign-owned manufacturing establishments are analyzed in a number of Survey articles that can be accessed at BEA's Web site at <www.bea.doc.gov/bea/ail.htm>.
[^38]:    2. However, this is not the case if one establishment of an affiliate provides all of its output to another establishment of that affiliate. For example, if an affiliate operates both a metal mine and a metal-manufacturing plant and if the entire output of the mine is used by the manufacturing plant, all of the affiliate's sales will be in metal manufacturing, and none in metal mining. When the mining employees are distributed by industry of sales, they are classified in manufacturing even though the industry of that establishment is mining.
    3. An affiliate's primary industry is based on a breakdown of the affiliate's sales by BEA International Surveys Industry classification code.
[^39]:    12. In 1998, affiliates classified in wholesale trade accounted for 37 percent of affiliate exports and for 53 percent of affiliate imports. Wholesale trade affiliates
[^40]:    13. Data on the destination of U.S.-affiliate exports, which were most recently collected in the 1997 benchmark survey of foreign direct investment in the United States, indicate that exports to Asia and Pacific accounted for 41 percent of the total exports of U.S. affiliates in 1997.
[^41]:    See the footnote and note at the end of the table.

[^42]:    14. Data on the destination of U.S.-affiliate exports indicate that more than 70 percent of the intrafirm exports of Japanese-owned and Korean-owned affiliates were shipped to their respective home countries.
[^43]:    ings by place of work to a place-or-residence basis.
    3. Doliar changes are expressed at annual rates.
    NOTE: Estimates may not add to totals because of rounding.

[^44]:    2. Net earnings is calculated as earnings by place of work less personal contributions for social insurance plus an adjustment that converts these earnings to a place-of-residence basis. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.
    Net earnings is used to analyze changes in the composition of personal income; earnings by place of work is used to analyze changes in the industrial structure of earnings. Net earnings by industry is not available, because the source data used to adjust earnings to a place-of-residence basis are not available by industry and because personal contributions for social insurance are not estimated by industry. For the definitions of the components of earnings, see U.S. Department of Commerce, Bureau of Economic Analysis, State Personal Income, 1929-97 (Washington, DC: U.S. Government Printing Office, 1999), or go to BEA's Web site at <www.bea.doc.gov/bea/mp.htm>, and look under "Regional programs" for "State Personal Income, 1929-97."
    3. By type of income, net earnings accounted for about two-thirds of the personal income growth in the first quarter; dividends, interest, and rent accounted for about 20 percent, and transfer payments accounted for about 14 percent.
    4. The 1999 Omnibus Spending Act authorized subsidy payments that affect the pattern of both rental income of persons and farm proprietors' income.
[^45]:    1. Rankings are sorted based on percent change in 2000:1.
    2. Percent changes are expressed at quarterly rates.
[^46]:    See footnotes at end of table.

[^47]:    preliminary.
    D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.

    1. The estimates of earnings for 1998-2000 are based on the 1987 Standard Industrial Classification.
    2. Personal contributions for social insurance are included in earnings by type and by industry, but they are excluded from personal income.
    3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less wage and salary disbursements to Canadian and Mexican residents commuting into the United States.
[^48]:    5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U. parents payments or mports is revised to include U.S. parents' payments to foreign aftilates and to exclude U.S. aftilates' receipts 6. Beginning in
    governments and laxes pide "other transiers" component includes taxes paid by U.S. private residents to foreign
    6. At the present time, all U.S. Treasury-owned gold is held in the United Sta
    7. Includes sales of foreign obligations to foreigners.
    8. Consists of bills, centificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible 10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
    9. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other trans11. Includes, primarily, U.S. Government liabilites associated with military agency sales contracts and other trans-
    actions arranged with or through foreign official agencies; see table 4 in "U.S. Intenational Transactions, First Quarter 2000 " in the July 2000 issue of the SURVEY.
[^49]:    See tootnotes al the end of the table.

[^50]:    1. In addition, because the changes in quantities and prices calculated using these weights are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.
