## BEA Advisory Committee

The BEA Advisory Committee advises the Director of BEA on matters related to the development and improvement of BEA's national, regional, industry, and international economic accounts, especially in areas of new and rapidly growing economic activities arising from innovative and advancing technologies, and provides recommendations from the perspective of businessmen, academicians, researchers, and experts in government and international affairs.

23 BEA's Preliminary Strategic Plan for 2001-2005
BEA has developed a preliminary strategic plan that outlines the major focus of the Bureau's work in the next several years. The principal goals consist of making BEA's economic accounts and services more responsive to customers; improving the methodologies, source data, and technologies used to prepare the national, industry, international, and regional accounts; attracting, developing, and retaining a top-notch workforce; and upgrading resource management to support these initiatives. The preliminary plan is presented here as part of BEA's effort to solicit public review and comment.
71 Upcoming Changes in the NAICS-Based 1997 Benchmark Input-Output Accounts
This note describes the effects of presenting the 1997 benchmark input-output accounts, which are scheduled to be released at the end of 2002, on a NAICS basis.

## - Business Situation

Real GDP declined 1.1 percent in the third quarter of 2001, according to the "preliminary" estimate, after four quarters of anemic growth. The "advance" estimate issued a month earlier had shown a 0.4 -percent decline. The downward revision was primarily accounted for by a downward revision to the change in private nonfarm inventories and an upward revision to imports of goods. Corporate profits decreased $\$ 63.1$ billion ( 8.3 percent at a quarterly rate); about $\$ 40$ billion of the decrease reflected a reduction in the profits of insurance carriers as a result of the payment of insurance benefits associated with the terrorist attacks of September 11th. The fiscal position of the Federal Government swung sharply from a current surplus of $\$ 186.7$ billion in the second quarter to a current deficit of $\$ 10.2$ billion in the third; the downswing reflected the effects of advance refund checks sent to taxpayers in the third quarter. The State and local government current surplus decreased from $\$ 21.3$ billion to $\$ 2.2$ billion.

41 Annual Input-Output Accounts of the U.S. Economy, 1998
The 1998 input-output (I-O) accounts, the third annual update of the 1992 benchmark I-O accounts, present a detailed picture of how industries interact to provide input to, and take output from, each other. The 1998 estimates show the continued long-term structural shift in the economy toward the use of services and the rapid growth in the demand for fixed investment commodities, at more than twice the growth rate in the demand for all commodities. In addition, intermediate consumption of business services grew more than 12 percent in 1998, almost five times faster than the growth of intermediate consumption of all other commodities.

## Looking Ahead

Evaluation of the GDP Estimates. An article presenting the results of a periodic evaluation of BEA's estimates of GDP, gross domestic income, and their components will be published in a forthcoming issue of the Survey. In this article, the reliability of the estimates will be assessed by examining the record of revisions to the annual and quarterly estimates.

This article was prepared by Daniel Larkins and Shelly Smith, assisted by Frederick von Batchelder.

## B U S I N E S S S I T U A T I O N

$R$EAL gross domestic product (GDP) decreased 1.1 percent (revised) in the third quarter, the weakest showing since a 2.0 -percent decrease in the first quarter of 1991 (table 1 and chart 1). ${ }^{1}$

The third-quarter decline followed four quarters of anemic growth that averaged 1.2 percent, far below the 3.6 -percent average growth rate over the earlier part of the just-ended expansion.

The "preliminary" estimate of a 1.1-percent decline is steeper than the 0.4 -percent decline shown in last month's "advance" estimate of the national income and product accounts (NIPA's). ${ }^{2}$ Despite

Nore.-Chained (1996) doliar series are calculated as the product of the chain-type quantity index and the 1996 current-dolla value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more which measure the extent of nonadditivity in each table are shown in NIPA tables 1214 and 16 Percent changes are calculated from unrounded data Percent changes in major agoregates are shown in NIPA table S. (See "Selected NIPA Tables." which es in major aggregates are shown in NIPA table S.I. (See Selected NIPA Tables. which begins on page $\mathrm{D}-2$ in this issue.)
this larger-than-usual revision, the preliminary and advance estimates paint pictures of the economy that are similar in broad outline and in many important details. In both estimates,

- Real GDP-a measure of domestic production of goods and services-turned down from the second to the third quarter, and the third-quarter decrease was the largest in 10 years.
- The largest contributors to the drop in GDP were exports, nonresidential fixed investment, and

## CHART 1

## Real Gross Domestic Product

## Percent

[^1]inventory investment. The main offset to these decreases was an increase in consumer spending (table 2). ${ }^{3}$ Imports, which are subtracted in the calculation of GDP, decreased.

[^2]
## Adjustments for the Terrorist Attacks of September $11^{\text {th }}$

The economic effects of the September 11th attacks are captured in the national income and product account estimates for the third quarter.' Most of these effects are reflected in the regularly incorporated source data; for certain components of GDP and gross domestic income, BEA prepared adjustments for the effects that were not captured in the source data. These adjustments were revised slightly for the preliminary estimate (see the accompanying table).

1. See the box "The Terrorist Attacks of September 11th as Reflected in the National Income and Product Accounts," Survey or Current Business 81 (November 2001): 2-3.

| cCAdj Capital consumption adjustment |  |

- The swing from positive to negative growth in GDP reflected weakening consumer spending, State and local government spending, and exports. The developments in these components were partly offset by nonresidential fixed investment, which decreased less than in the second quarter. Imports decreased much more than in the second quarter.
- By type of product, decreases in the production of goods and structures were only partly offset by an increase in the production of services (table 3).
- Private inventories were liquidated for the third consecutive quarter.
- Real final sales of computers decreased less than in the second quarter, and real motor vehicle output slowed.
- Real gross domestic purchases-a measure of domestic demand for goods and services regardless of where they are produced-decreased for the first time since 1991. ${ }^{4}$
 Nore-More detailed contributions to percent change in real gross domestic product are domestic product are shown in tables 8.3 through 8.6.
- The price index for gross domestic purchases decreased slightly after increasing. The downturn partly reflected the NIPA treatment of insurance benefits related to the terrorist attacks.
- The personal saving rate and the rate of growth of real disposable personal income jumped sharply. Both movements reflected taxpayer
refunds under the Economic Growth and Tax Relief Reconciliation Act of 2001. ${ }^{5}$

5. The personal saving rate is measured as personal saving as a percentage of current-dollar disposable personal income. The national saving rate is measured as gross saving as a percentage of gross national product; it is not available at the time of the advance estimate. In the third quarter, this rate decreased to 17.1 percent from 17.2 percent.

## Personal Consumption Expenditures

Real personal consumption expenditures (PCE) increased 1.1 percent, less than half as much as in the second quarter and its smallest increase since the first quarter of 1993 and (table 4 and chart 2). Durable goods and services accounted for the deceleration; nondurable goods, in contrast, increased a little more than in the second quarter.

Expenditures for durable goods increased 0.7 percent after increasing 7.0 percent. Motor vehicles and parts turned down, primarily reflecting a downturn in net purchases of used autos. Furniture and household equipment increased only a
third as much as in the second quarter, and "other" durable goods decreased after increasing.

Expenditures for services increased 1.5 percent after increasing 2.8 percent. A sharp deceleration in "other" services was more than accounted for by downturns in foreign travel by U.S. residents and in brokerage and investment counseling. Transportation, medical care, and recreation also contributed to the slowdown in services.

Expenditures for nondurable goods increased 0.5 percent after increasing 0.3 percent. The small step-up was more than accounted for by an upturn

in energy products. Food decreased more than in the second quarter, while clothing and shoes and "other" nondurable goods slowed.

Several factors frequently considered in the analysis of consumer spending became less favorable in the third quarter (chart 3). The unemployment rate increased for the third consecutive
quarter, reaching 4.8 percent, the highest rate since 1997. The Index of Consumer Sentiment (prepared by the University of Michigan's Survey Center) decreased for the sixth consecutive quarter. In contrast, real disposable personal income jumped, reflecting tax refunds under the Economic Growth and Tax Relief Reconciliation Act of 2001.

Private Fixed Investment, next page

## Private Fixed Investment

Real private fixed investment decreased in the third quarter, but not as much as in the second quarter; the back-to-back decreases were the first since 1991 (table 5 and chart 4). Nonresidential investment decreased less than in the second quarter. Residential investment slowed.

Nonresidential fixed investment.-Real private nonresidential fixed investment decreased 9.3 percent after decreasing 14.6 percent. Spending on equipment and software and spending on structures both decreased less than in the second quarter.

Computers and "other" information processing equipment fell less than in the second quarter, and software increased slightly after a decline. Transportation equipment also decreased less than in the second quarter, reflecting an upturn in aircraft.

Nonresidential buildings and public utilities both decreased more than in the second quarter,
and mining exploration, shafts and wells turned down. In contrast, "other" structures turned up sharply. The upturn reflected the lease of properties by the Port Authority of New York to private corporations. ${ }^{6}$

The investment climate has generally been unfavorable in recent quarters. Profits of domestic corporations and the capacity utilization rate in manufacturing, mining, and utilities have decreased for five consecutive quarters, and real final sales of domestic product has faltered. ${ }^{7}$ Long-term interest rates have trended down, but only modestly; for example, the yield on high-grade corpo-
6. In July 2001, the Port Authority leased properties at the World Trade Center to two private corporations. In the NIPA's, this lease was treated as the sale of an asset. As a result, net purchases of used structures increased $\$ 12.8$ billion (in current dollars at an annual rate). (The structures component of State and local government gross investment decreased by the same amount; thus, the lease transaction did not affect the level of GDP.)
7. The growth of real final sales has averaged 1.8 percent over the last five quarters; it averaged 3.5 percent over the first 37 quarters of the most recent expansion.

1. The percent change is not calculated for the third quarter of 2001; as a result of the little value.
2. Includes new computers and peripheral equipment only.
3. Excludes software "embedded," or bundled, in computers and other equipment.
4. Includes home improvements, new manufactured home sales, brokers' commissions on home sales, net purchases of used structures, and other residential structures (which consists primarily of dormitories and of fraternity, and sorority houses)
consists primarily of dormitories and or fraternity and sorority houses).
Nore.-See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are shown in NIPA tables 5.5 and 8.98 (motor vehicles).
Percent changes in major aggregates are shown in NIPA table S.1.
rate bonds decreased from 7.75 percent in June 2000 to 6.83 percent in September 2001 (chart 5 ).

Residential investment.-Real private residential investment increased 2.5 percent-less than half its increase in the second quarter (table 5 and chart 4). Single-family structures, multifamily structures, and "other" structures all slowed. The slowdown in "other" structures reflected a downturn in brokers' commissions on home sales and a slow-

## CHART 4

Real Private Fixed Investment Percent

U.S. Bureau of Economic Analysis
down in improvements; in contrast, sales of manufactured homes turned up.

## CHART 5

## Selected Factors Affecting Nonresidential Investment

Inventory Investment, next page

## Inventory Investment

Real inventory stocks decreased $\$ 60.1$ billion in the third quarter after decreasing $\$ 38.3$ billion in the second (table 6 and chart 6). The larger decrease in the third quarter than in the second subtracted 0.75 percentage point from third-quarter GDP growth; in the second quarter, inventory investment had subtracted 0.42 percentage point.

The third-quarter decrease in inventory investment was dominated by wholesale trade inventories, which decreased $\$ 17.4$ billion after increasing $\$ 2.6$ billion, and by manufacturing inventories, which decreased $\$ 47.2$ billion after decreasing $\$ 35.6$ billion.

In wholesale trade, durable-goods inventories decreased twice as much as in the second quarter, partly reflecting a swing from accumulation to liquidation in inventories of computer equipment and software. Accumulation of nondurable-goods inventories slowed, partly reflecting swings to liquidation in apparel and in grocery inventories.

Inventories of durable-goods manufacturers decreased considerably more than in the second quarter, mainly reflecting a stepped-up pace of liquidation of computer inventories. Inventories of nondurable-goods manufacturers decreased a little less than in the second quarter despite a swing from accumulation to liquidation in food inventories.

Retail trade inventories increased a little after decreasing. Inventories of motor vehicle dealers were the most important contributor to the upswing.

Farm inventories decreased a little more than in the second quarter, reflecting a steeper decline in crop inventories. Livestock inventories turned up.

The ratio of real private nonfarm inventories to final sales of goods and structures decreased to 3.66 from 3.67 (see NIPA table 5.13). A ratio that includes all final sales of domestic businesses decreased to 2.06 from $2.08 .{ }^{8}$ Both ratios are at their lowest levels in 35 years.
8. Using the ratio that includes all final sales of domestic businesses in the denominator implies that the production of services results in a demand for inventories that is similar to that generated in the production of goods and structures. In contrast, using the "goods and structures" ratio implies that the production of services does not generate demand for inventories. Both implications are extreme. Production of some services may require substantial inventories, while production of other services may not.

1. Includes inventories held by establishments in the following industries: Transportation; Nork. -See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) communication: finance. insurance. and real estate: and services.

## Exports and Imports

Real exports and real imports declined sharply; for each, it was the fourth consecutive quarterly decline.

Exports and imports of goods both decreased about as much as they had in the second quarter (table 7 and charts 7 and 8). In exports, smaller decreases in nonautomotive capital goods and in industrial supplies and materials were largely offset by a slowdown in autos and by bigger decreases in
nonautomotive consumer goods and in "other" exports. In imports, nonautomotive capital goods decreased much less than in the second quarter, but most other major categories were weaker than in the second quarter; for example, petroleum imports decreased after increasing slightly.

Exports of services turned down sharply, and imports of services dropped much more than in the second quarter. In both exports and imports,

1. Exports and imports of certain goods, primarily military equipment purchased and sold by Nore.-See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) the Federal Government, are included in services. shown in NIPA table S.1.

## Government Spending

Government spending increased 0.8 percent in the third quarter after increasing 5.0 percent in the second. Federal Government spending increased more than in the second quarter, but State and local government spending changed little after increasing (table 8 and chart 9).

Federal defense spending increased about as much as in the second quarter. Consumption expenditures accelerated, mainly reflecting an upturn in research and development and step-ups in employee compensation and in expenditures for aircraft; these developments were partly offset by a downturn in purchases of nondurable goods. Gross investment changed little after increasing; the deceleration mainly reflected a slowdown in equipment and software.

Federal nondefense spending accelerated; an upturn in gross investment more than offset a downturn in consumption expenditures. In investment, equipment and software stepped up, and structures increased slightly after decreasing. In consumption, services other than compensation of Government employees turned down.

State and local government spending dipped slightly after increasing. An increase in consumption expenditures was more than offset by a drop in gross investment that reflected the sale of the World Trade Center (see footnote 6).

1. Gross government investment consists of general government and government enterprise Nore. - See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) expenditures for fixed assets; inventory investment is included in government consumption dollar levels and residuals are shown in NIPA table 3.8. Percent changes in major aggregates are
expenditures.
shown in NIPA tabie S.1.

## Prices

The price index for gross domestic purchases, which measures the prices of goods and services purchased by U.S. residents, decreased 0.2 percent in the third quarter after increasing 1.3 percent in the second (table 9 chart 10 ). Two factors were mainly responsible for the downturn.

- Consumer prices declined, reflecting the NIPA treatment of insurance benefit payments associated with the September 11th terrorist attacks. ${ }^{9}$ Excluding the effect of these payments, the price index for gross domestic purchases increased 0.6 percent.
- Energy prices dropped after increasing. Excluding food prices (which stepped up) and energy prices, the price index increased 0.5 percent after increasing 0.9 percent.

Prices of personal consumption expenditures (PCE) decreased 0.3 percent after increasing 1.3

[^4]percent. PCE energy prices decreased sharply after increasing. Food prices increased more than in the second quarter.

The GDP price index, which measures the prices paid for goods and services produced in the United States, increased 2.2 percent, about the same as in the second quarter. (Excluding the in-surance-related price effects, the index increased 1.2 percent.) This index, unlike the price index for gross domestic purchases, excludes the prices of imports and includes the prices of exports. Import prices decreased much more than in the second quarter, mainly because of the insurance-related price effects; prices of imported goods decreased about as much as in the second quarter.

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

Note--Percent changes in major aggregates are shown in NIPA table 8.1. Index numbers are shown in tables 7.1, 7.2, and 7.4.

## Revisions

The preliminary estimate of a 1.1-percent decrease in real GDP in the third quarter is 0.7 percentage point larger than the 0.4 -percent decrease in the advance estimate (table 10). In the past 20 years, the average revision, without regard to sign, from the advance estimate to the preliminary estimate has been 0.5 percentage point.

A downward revision to the change in private nonfarm inventories contributed -0.40 percentage point to the revision to GDP, and an upward revision to imports of goods contributed -0.36 percentage point. Revisions to government spending, exports, and consumer spending also reduced GDP. The main offset to these negative contributions was an upward revision to private fixed investment, which contributed 0.37 percentage point.

The downward revision to private inventory investment reflected the incorporation of newly available Census Bureau data on inventories for September and revised data for August; the largest downward revision was to retail trade inventories.

The upward revision to imports of goods mainly affected nonautomotive consumer goods and nonautomotive capital goods; it primarily reflected the incorporation of newly available Census Bureau data on trade in goods for September.

The upward revision to private fixed investment was concentrated in nonresidential equipment and software, primarily reflecting newly available data on software companies' revenue for the third quarter, revised retail sales data on business software from a trade source, and newly available Census Bureau data on aircraft shipments, exports, and imports for September.

Table 10.-Revisions to Change in Real Gross Domestic Product and Prices, Third Quarter 2001
[Seasonally adjusted at annual rates]

Note.-The preliminary estimates for the third quarter of 2001 incorporate the following revised or additional major source data hat were not available when the advance estimates were prepared
Personal consumption expenditures: Retail sales for August and September (revised), consumers' share of new-car purchases for September, average unit value for domestic new autos for September (revised), and consumers' share of new-truck purchases for September.
Nonresidential fixed investment: Construction put-in-place for July and August (revised) and September, manufacturers' shipments of machinery and equipment for August and September (revised, manutacturers shipments of complete civilian aircraft for August (revised) and September, sottware company revenue data for the third quarter, and revised retail sales data on busines software from a trade source for the third quarter.
Residential fixed investment: Construction put-in-place for July and August (revised) and September.
Change in private inventories: Manufacturing and trade inventories for August (revised) and September.
Exports and imports of goods and services: Exports and imports of goods for August (revised) and Septembe
Government consumption expenditures and gross investment: Monthly Treasury Statement detailed data for September Department of Defense detailed financiai reports for the Army for the third quarter, and State and local government construction put-in-place for July and August (revised) and September.
Wages and salaries: Employment, average hourly earnings, and average weekly hours for August and September (revised). petroleum imports for August (revised) and September, and housing prices for the third quarter

## Corporate Profits

Corporate profits decreased again in the third quarter. The current production measure decreased $\$ 63.1$ billion (or 8.3 percent at a quarterly rate)-about twice as much as in the second quarter (table 11). After four consecutive quarterly decreases, profits were 22.2 percent below the level of a year earlier. ${ }^{10}$

Profits of domestic financial corporations decreased $\$ 28.4$ billion ( 17.2 percent). Profits of insurance carriers were reduced by the payment of insurance benefits associated with the terrorist attacks; current information suggests that these payments, net of foreign reinsurance, amounted to about $\$ 40$ billion (annual rate). (In the NIPA's, benefit payments are recorded in the period in which the event occurs to reflect the full expected loss, regardless of when the payments are actually made.) In the second quarter, profits had been reduced about $\$ 19$ billion by damage caused by Tropical Storm Allison and other severe storms.

Profits of domestic nonfinancial corporations decreased $\$ 33.6$ billion ( 7.5 percent). The decrease

[^5]was moderated by $\$ 20$ billion of subsidies received by airlines as part of a bill passed by Congress after the September 11th attacks.

Rest-of-the-world profits registered a small drop, as receipts from foreign affiliates of U.S. corporations decreased more than payments by U.S. affiliates of foreign corporations. ${ }^{11}$

Cash flow from current production, a prof-its-related measure of internally generated funds available for investment, increased $\$ 12.3$ billion after decreasing $\$ 6.5$ billion. ${ }^{12}$ The ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally generated funds, increased from 71.8 percent to 74.7 percent. During 1991-99, the ratio fluctuated between 72 percent and 94 percent, and it averaged 84 percent.
11. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from BEA's international transactions accounts.
12. Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.

## Government Sector

The fiscal position of the government sector, as measured by the combined current surplus of the Federal Government and of State and local governments, shifted from a current surplus of $\$ 208.0$ billion in the second quarter to a current deficit of $\$ 8.0$ billion in the third-the first current deficit since the fourth quarter of 1997 (table 12). ${ }^{13}$ The third-quarter shift was mostly attributable to the Federal sector. A larger decrease in the State and local current surplus in the third quarter also contributed to the shift.

The third-quarter shift in the combined position reflected the effects of advance refund checks sent to taxpayers in the third quarter as part of the Economic Growth and Tax Relief Reconciliation Act of 2001, which lowered net personal tax receipts by $\$ 140.7$ billion. Excluding this special factor, the combined current surplus declined $\$ 75.2$ billion in the third quarter.

## Federal

Fueled by a sharp downturn in current receipts, the fiscal position of the Federal Government shifted from a current surplus of $\$ 186.7$ billion to a current deficit of $\$ 10.2$ billion-the first current deficit since the fourth quarter of 1997. In the second quarter, the Federal current surplus had decreased $\$ 18.6$ billion.

Current receipts.-Federal current receipts decreased $\$ 182.8$ billion in the third quarter after increasing $\$ 4.1$ billion in the second. The downturn was mostly accounted for by a downturn in personal tax and nontax receipts. Corporate profits tax accruals decreased more in the third quarter than in the second. Contributions for social insurance decelerated in the third quarter, and indirect business tax and nontax accruals decreased more in the third quarter than in the second.

Personal tax and nontax receipts decreased $\$ 162.8$ billion after increasing $\$ 8.6$ billion. The sharp downturn was accounted for by income taxes, which decreased $\$ 162.6$ billion after increasing $\$ 8.7$ billion, as a result of provisions of the Economic Growth and Tax Relief Reconciliation Act of 2001. Beginning in mid-July, advance refund checks of up to $\$ 300$ for single taxpayers and up to $\$ 600$ for families were sent to taxpayers; refunds,

[^6]which are an offset to income tax receipts, were boosted $\$ 140.7$ billion as a result of this provision. Additionally, the Act lowered income tax rates.

Corporate profits tax accruals decreased $\$ 19.0$ billion after decreasing $\$ 7.7$ billion, reflecting a larger decline in domestic corporate profits before tax in the third quarter than in the second.

Contributions for social insurance increased $\$ 0.3$ billion after increasing $\$ 3.4$ billion. The decel-

| Federal Government........................................................................ | -29.7 |  |  |  |  |
| State and local government.......................................................................... | -62.2 |  |  |  |  | 1. "Net lending or borrowing" is conceptually similar to "net financial investment" in the flow-of-funds accounts prepared by the

Board of Governors of the Federal Reserve System. The two measures differ primarily because government net lending or
borrowing is estimated from data for transactions, whereas net financial investment is estimated from data for financial assets. borrowing is estimated from data for transactions, whereas net financial investment is estimated from data for financial assets.
There are also small conceptual differences, such as the classification of the Federal Government's railroad retirement and veterans life insurance programs.
eration primarily reflected a deceleration in contributions for social security (old-age, survivors, disability, and health insurance), which increased $\$ 0.2$ billion after increasing $\$ 3.6$ billion.

Indirect business tax and nontax accruals decreased $\$ 1.4$ billion after decreasing $\$ 0.2$ billion. The larger decline was more than accounted for by a downturn in excise taxes, which decreased $\$ 1.6$ billion after increasing $\$ 0.7$ billion. Within excise taxes, air transport turned down, as a result of airport closures caused by the terrorist attacks on the World Trade Center and the Pentagon on September 11, 2001, and of fewer passengers after airports reopened. Gasoline excise taxes also turned down, decreasing $\$ 0.3$ billion after a $\$ 1.0$ billion increase. In contrast, customs duties were unchanged after decreasing $\$ 1.3$ billion.

Current expenditures.-Current expenditures increased $\$ 14.1$ billion in the third quarter after increasing $\$ 22.6$ billion in the second. The deceleration was more than accounted for by a sharp downturn in grants-in-aid to State and local governments. In contrast, "subsidies less current surplus of government enterprises" accelerated in the third quarter.

Grants-in-aid to State and local governments turned down in the third quarter, decreasing $\$ 14.8$ billion after increasing $\$ 17.2$ billion. Grants for health and hospitals (including payments to States for children's health insurance programs), for State Medicaid programs, for education, and for welfare and social services turned down in the third quarter.
"Subsidies less current surplus of government enterprises" increased $\$ 22.2$ billion after increasing $\$ 2.2$ billion. The sharp acceleration was more than accounted for by subsidies, which increased $\$ 20.7$ billion after increasing $\$ 0.1$ billion. In the third quarter, airlines received $\$ 5.0$ billion ( $\$ 20.0$ billion at an annual rate) in direct aid from the Federal Government as part of the Air Transportation Safety and System Stabilization Act. ${ }^{14}$ The current surplus of government enterprises, which is an offset to subsidies, decreased $\$ 1.4$ billion after a $\$ 2.1$ billion decrease. Within enterprises, the U.S. Postal Service current surplus decreased $\$ 1.2$ billion after a $\$ 2.0$ billion decrease. A rate increase on some classes of mail effective in July, 2001, boosted the

[^7]U.S. Postal Service current surplus by $\$ 1.0$ billion in the third quarter.
"Transfer payments (net)" increased $\$ 14.1$ billion after increasing $\$ 11.6$ billion. Transfer payments to persons increased $\$ 14.5$ billion after increasing $\$ 10.5$ billion. The acceleration was accounted for by an acceleration in benefit payments for social security (old-age, survivors and disability insurance), which increased $\$ 4.4$ billion after increasing $\$ 2.0$ billion; one-time retroactive payments were made in July to correct for the underpayment of benefits associated with an error in the indexing of these benefits.

Net interest paid decreased $\$ 10.0$ billion in the third quarter, following an $\$ 11.0$ billion decrease. Gross interest paid decreased $\$ 9.3$ billion after decreasing $\$ 10.9$ billion, reflecting smaller decreases in interest paid to persons and business.

## State and local

The State and local government current surplus decreased $\$ 19.1$ billion, to $\$ 2.2$ billion, in the third quarter after decreasing $\$ 1.0$ billion in the second. Current receipts turned down, and current expenditures decelerated.

Current receipts.-State and local government current receipts decreased $\$ 7.1$ billion after increasing $\$ 20.9$ billion. The deceleration was more than accounted for by a downturn in Federal grants-inaid. Indirect business tax and nontax accruals decelerated, and corporate profits tax accruals declined more in the third quarter than in the second. In contrast, personal tax and nontax receipts turned up.

Indirect business tax and nontax accruals increased $\$ 3.7$ billion after increasing $\$ 6.9$ billion. The deceleration was accounted for by sales taxes, which increased $\$ 0.2$ billion after increasing $\$ 3.0$ billion. Within sales taxes, general sales taxes turned down, reflecting a downturn in general retail sales in the third quarter.

Corporate profits tax accruals decreased $\$ 3.0$ billion after a $\$ 1.1$ billion decrease in the second quarter, as domestic corporate profits before tax declined more in the third quarter than in the second.

Personal tax and nontax receipts increased $\$ 6.9$ billion after decreasing $\$ 2.4$ billion. The upturn was accounted for by personal income taxes, which increased $\$ 6.1$ billion after decreasing $\$ 3.2$ billion. The second-quarter decrease included the return
by some States of excess revenues in the form of one-time refund payments.

Current expenditures.-Current expenditures increased $\$ 12.0$ billion after increasing $\$ 21.9$ billion. The deceleration was accounted for by a downturn in "subsidies less current surplus of government enterprises" and a deceleration in consumption expenditures.
"Subsidies less current surplus of government enterprises" decreased $\$ 2.6$ billion after increasing $\$ 2.2$ billion. The downturn was more than accounted for by subsidies, which decreased $\$ 3.2$ billion after increasing $\$ 2.5$ billion; electricity purchases by the State of California turned down in the third quarter. The current surplus of government enterprises, which is offset against subsidies, turned down, decreasing $\$ 0.6$ billion after increasing $\$ 0.3$ billion; enterprise revenues fell $\$ 0.8$ billion, as the result of reduced airport and tunnel revenues stemming from the events of September 11, 2001, and the subsequent reduction in air traffic.

Consumption expenditures increased $\$ 10.2$ billion after increasing $\$ 14.6$ billion. The deceleration was largely accounted for by nondurable goods, which decreased $\$ 1.8$ billion after increasing $\$ 2.4$ billion. Within nondurable goods, petroleum products turned down.

Transfer payments to persons decelerated in the third quarter, increasing $\$ 4.5$ billion after a $\$ 5.4$ billion increase. The deceleration was attributable to a deceleration in disaster assistance payments.

The events of September 11th had little impact on these payments in the third quarter.

## Net lending or net borrowing

"Net lending or net borrowing(-)" is an alternative measure of the Government fiscal position. Net lending is the financing requirement of the government sector and is derived as the current surplus plus the consumption of fixed capital and "capital transfers received (net)" less gross investment and net purchases of nonproduced assets.

The Government fiscal position shifted from net lending of $\$ 113.4$ billion to net borrowing of $\$ 91.9$ billion, fueled by a sharp shift in the Federal Government fiscal position. State and local government net lending continued to decrease in the third quarter.

Government gross investment decreased $\$ 8.6$ billion after increasing $\$ 13.2$ billion. ${ }^{15}$ The downturn was mostly attributable to State and local government gross investment, which decreased $\$ 10.5$ billion after increasing $\$ 11.1$ billion. The downturn was accounted for by investment in structures and reflected the lease of the World Trade Center by the Port Authority of New York to two private corporations in July; in the NIPA's, the lease was treated as a sale of an existing asset, and State and local gross investment in structures was reduced by $\$ 12.8$ billion at an annual rate.

[^8]
## Updated NIPA Tables

The estimates in the following national income and product accounts (NIPA) tables have been revised to incorporate newly available information: Tables 1.16 and 7.15, and tables 2.1, 2.9, and 8.7.

For tables 1.16 and 7.15 , the annual estimates of real gross product of nonfinancial corporate business for 1998-2000 and the quarterly estimates for 1998:I2001:II have been revised to reflect new and revised estimates of the industry-based price index used for deflation. The use of this index, which typically becomes available about 4 months after the annual revision of the NIPA's, was introduced in the 1999 comprehensive NIPA revision to better reflect the changing industrial composition of this sector and to provide
better measures of productivity, costs, and profits per unit of gross product. In table 1.16, the estimates in lines 36 and 38 are revised, and in table 7.15, all the estimates are revised.

For tables 2.1, 2.9, and 8.7, the per capita and population estimates beginning with 1991 are revised to incorporate the results of the 2000 Census of Population. Table 2.9 R , an abbreviated version of NIPA table 2.9, provides the revised annual and monthly estimates of current-dollar and real per capita personal income and of population. In table 8.7, all the estimates are revised; the estimates in table 2.1 that are revised (lines 32-34) are shown in lines 4, 11, and 16 in this table.

Tables 1.16, 7.15, 2.9, and 8.7 follow.

Table 1.16.-Gross Product of Corporate Business in Current Dollars and Gross Product of Nonfinancial Corporate Business in Current and Chained Dollars

Table 7.15.-Price, Costs, and Profit Per Unit of Real Gross Product of Nonfinancial Corporate Business

Table 8.7.-Selected Per Capita Product and Income Series in Current and Chained Dollars
[Dollars; quarters seasonally adjusted at annual rates]

## Federal Personal Income Tax Liabilities and Payments, 1959-99

The table below presents the estimates of Federal personal income tax liabilities and of Federal personal income tax payments for 1959-99. ${ }^{1}$ The estimates for 1998 are revised, and the estimates for 1999 are new; these estimates reflect the incorporation of the results of this year's annual revision of the national income and product accounts and newly available tax return data from the Internal Revenue Service (IRS).

1. For a discussion of the payments series, the derivation and the use of the estimates of tax liabilities, and the sources of the differences between liabilities and payments, see Thae S. Park, "Federal Personal Income Tax Liabilities and Payments, 1959-97," Survey of Current Business 80 (March 2000): 11-14.

Note.-Thae S. Park prepared this report.

For 1998, tax payments exceeded tax liabilities by $\$ 25.9$ billion. The excess payments primarily resulted from the implementation of substantial tax cuts under the Taxpayer Relief Act of 1997. The most important provisions that reduced liabilities were the child tax credit and the credits for higher education tuition, both of which became effective beginning with January 1 , 1998. The withholding tables for tax year 1998 that were issued by the IRS for use by employers to calculate the amounts to be withheld from wages and salaries did not fully reflect the reduction in liabilities, so tax refunds were substantial.

For 1999, tax payments exceeded tax liabilities by only $\$ 1.8$ billion. There were no major tax law changes for 1999 that affected tax payments and tax liabilities differently.

1. This series is derived by the Bureau of Economic Analysis and is based on data from Statistics of income, Individual Income Tax Returns.
2. This series is presented in NiPA table 3.2 in the section "BEA Current and Historical Data of the Surver of Current Business. All the estimates are available on BEA's Web site at 3. This series is presented in the NIPA table 2.1 in "BEA Current and Historical Data." See also BEA's Web site.

# BEA's Preliminary Strategic Plan for 2001-2005 

As part of a year-long internal review of its mission and its goals, the Bureau of Economic Analysis (BEA) has developed a preliminary Strategic Plan that outlines the major elements of BEA's plan of work through the year 2005. The Strategic Plan, which has a broader focus than the Mid-Decade Strategic Review of $61 / 2$ years ago, will guide BEA's ongoing efforts to improve the quality, reliability, and dissemination of its economic accounts. The plan will be a flexible, "living" document that will be reviewed and updated annually.

This Strategic Plan has been presented to BEA employees and to the BEA Advisory Committee, and many of their suggestions have been incorporated. The plan is pre-

## Mission

THE Bureau of Economic Analysis (BEA) produces economic accounts statistics that enable government and business decision-makers, researchers, and the American public to follow and understand the performance of the Nation's economy. To do this, BEA collects source data, conducts research and analysis, develops and implements estimation methodologies, and disseminates statistics to the public.

## Vision

To be the world's most respected producer of economic accounts statistics.

## Values

- Integrity: Maintaining the sterling reputation of BEA and its statistics.
- Quality: Producing accurate, relevant, and timely statistics.
- Staff excellence: Fostering, recognizing, and rewarding contributions of employees.
- Responsiveness to customers: Providing what they want, when and how they want it.
- Innovation: Meeting the challenges of new technology and the changing economy.

## Goals

## Goal 1. Make BEA's economic accounts and services more responsive to the needs of its customers and partners

BEA is concentrating on improving its relationships with its customers and partners. The Strategic Plan identifies specific actions that address such objectives as establishing and improving two-way communication with customers through regular customer surveys and other sources of feedback; expanding outreach efforts to data users, the Congress, trade associations, the business community, and the news media through the more effective use of technology, partnerships, and informa-
sented here to reach others who have an interest in BEA's data. After a period of public review and comment, BEA will publish the final version of the plan in the spring of 2002.

You are encouraged to submit your comments. Does the plan address the most important issues? Do you agree with the actions and priorities proposed in the plan? Please send your comments by January 31, 2002: By mail to Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; by fax to 202-6065311; or by e-mail to comments@bea.doc.gov.
J. Steven Landefeld

Director, Bureau of Economic Analysis
tional materials; upgrading the technology used to collect and disseminate information; and redesigning BEA's Web site to provide more explanations, background information, searchable links to metadata, and other interactive features.

Performance: Performance under goal 1 will be monitored by measures such as the following:

- Customer satisfaction with BEA's products and services, as determined by regular customer surveys;
- Number of outreach activities and events;
- Number of Web site users.

## Goal 2. Attract, develop, and retain a highly qualified, diverse workforce prepared to innovate and improve BEA's statistics

BEA faces a variety of workplace challenges. The Strategic Plan identifies specific actions that address such workplace objectives as improving employee retention and recruitment by more effectively using the flexibility of the Personnel Management Demonstration Project, by supporting continuous career development for all employees, by aiming employee training plans toward future workforce needs, and by improving the system for recognizing and rewarding employees for their work.

Performance: Performance under goal 2 will be monitored by measures such as the following:

- Employee satisfaction, as determined by regular employee surveys;
- Employee retention rate;
- Speed of recruitment actions;
- Training program milestones met.

## Goal 3. Upgrade resource management to support BEA's strategic goals

Support for the initiatives outlined in the Strategic Plan will come from the more effective use of existing
resources (through productivity-enhancing technology investments and changes in work processes and products) and from incremental resources. To manage its resources effectively, BEA will have to better account for the costs and benefits of existing and proposed work. By using new financial accounting support and by stepping up its interaction with customers, the Department, and statistical agency partners, BEA will more effectively conduct its programs, allocate resources, and plan for the provision of resources to achieve the Bureau's goals.

Upgrading BEA's financial management.-BEA is developing a cost-based budget for existing and proposed work that is directly linked to the Bureau's activities. As a result, BEA will be better able to identify the costs and benefits of its programs for its customers, the Administration, and the Congress as a part of the budget formulation process. Moreover, BEA will be better able to track and manage its existing resources. This objective will be accomplished by obtaining the resources for an internal budget staff, by implementing an activitybased cost system, and by completing a smooth transition of our core financial system to the Commerce Department's new Commerce Administrative Management System.

Investing in information technology (IT).—BEA's economic programs require the IT support provided by the Office of the Chief Information Officer. Much has been accomplished to enhance BEA's IT infrastructure, especially the establishment of a stable local area network with strong backup capabilities for BEA systems, but significant work remains in the redesign of critical estimation systems. The Strategic Plan emphasizes four areas in which further IT investment is needed: (1) Continuing support of BEA program staff with more efficient IT tools (software) to enhance their performance, (2) ongoing upgrades of the IT infrastructure (servers, workstations, telephones) to ensure reliability and security, (3) redesigning of core estimation systems to maximize the use of database technologies, and (4) harnessing of rapidly developing Web-based technologies to improve data dissemination.

Updating and better focusing existing programs.-Meeting customer needs and working to better focus BEA's resources require a continuing reevaluation and improvement of products and work processes. This effort includes examining internal work processes and determining whether resources are devoted to the highest priorities. This evaluation will be accomplished by annual bottom-up reviews of work processes, with changes incorporated in annual updates of the Strategic Plan and of unit and individual work plans.

Focusing BEA's products and services to meet the needs of businesses, policymakers, and households.-To make sure that its existing statistical products are used effectively, BEA must provide expanded and more accessible infor-
mation on its Web site and improve the dissemination of information directly to the news media and to potential users of BEA's statistics in the business community, State and local governments, academia, think tanks, the Administration, and the Congress. Then, armed with cost and benefit information for existing and proposed products, BEA must work with these constituencies to develop products and services that meet their needs. This objective will be accomplished by upgrading BEA's public affairs function, by establishing a Congressional liaison function, by interacting regularly with BEA's customers on their needs, and by updating and refocusing the Strategic Plan and individual unit plans.

Performance: Performance under goal 3 will be monitored by measures such as the following:

- Upgrading financial management-project milestones met;
- Investing in IT--project milestones met for IT upgrades;
- Updating existing programs--number of products and processes reevaluated;
- Focusing on users' needs-number of outreach activities and events.

## Goal 4. Upgrade BEA's economic statistics by improving statistical methodologies and source data and by using new technologies

This first version of the Strategic Plan identifies statistical program priorities for FY 2001 through FY 2005. These priorities are summarized below by economic account, followed by an across-the-board review of source data improvements.

National accounts.-BEA produces the national income and product accounts (NIPA's), including the estimates of gross domestic product (GDP), monthly personal income and outlays, and stocks of fixed assets and consumer durable goods. The Strategic Plan identifies the following areas for improvement.

Improving processing systems.-The estimation of GDP can be made more reliable, efficient, and flexible through a comprehensive effort to improve the underlying processing systems. The Strategic Plan identifies actions such as the creation of a new central system to replace the two outdated and overburdened systems now in use, the replacement of the time-series database software used by analysts to prepare the estimates, and the overhaul of estimation subsystems. Special attention will be paid to good programming practices, including documentation of requirements and programs, thorough testing prior to implementation, and use of modern standards and best practices.

Addressing data gaps and other shortcomings.-The overall quality of the NIPA estimates is very high, but the quality is jeopardized by several gaps resulting from inadequate source data or from recent changes in the
economic environment. In addition, there are longstanding measurement problems, such as quality adjustments of prices and the measurement of services. A systematic plan to minimize these problems will improve the quality and usefulness of the national accounts. The Strategic Plan identifies specific actions that address such needs as implementing the North American Industry Classification System, developing new quality-adjusted prices, developing improved measures of services, developing improved estimates of software investment, and conducting research on and developing better estimates of employee stock options and other components of income.

Improving consistency and integration with other accounts.-In order to assemble an overall picture of the economy, many users want to move seamlessly not only among BEA's accounts but also between them and the Federal Reserve's flow-of-funds accounts and the Bureau of Labor Statistics' productivity accounts. Such comparisons are now impeded by inconsistencies in definitions and presentation. Several elements of the Strategic Plan are designed to facilitate those comparisons and provide more useful information by improving the consistency, coherence, and presentation of the accounts.

Improving consistency with international standards.International guidelines for national economic accounts generally reflect best practices, and BEA's estimates of major aggregates, such as GDP, are largely consistent with international guidelines and are an example of best practices. However, the Strategic Plan identifies several areas where BEA could improve the estimation, presentation, and usefulness of its national accounts by more fully adopting the recommendations contained in the international guidelines.

International accounts.-BEA produces the balance of payments and international investment accounts, as well as financial and operating data on multinational companies. The Strategic Plan addresses efforts to improve productivity or outputs in the existing areas of work and to improve coverage in areas where major gaps have recently appeared.

Improving productivity or outputs in existing areas of work.-Several initiatives are designed to enable BEA to do more with less. For example, increased investment in IT infrastructure will enable BEA to expand electronic data collection and dissemination and to improve the usefulness of the international accounts section of its Web site. BEA will conduct research on implementing new sampling and imputation techniques that would reduce the resources required to estimate data for relatively small companies that now must report in BEA surveys. In addition, BEA must improve the usefulness of its estimates of international trade in goods and services by accelerating their release.

Closing data gaps in the accounts.-A number of the initiatives pertain to closing data gaps that have recently developed. One initiative addresses the potential underreporting of U.S. goods trade, while others would alleviate the data gaps in international services by developing more frequent (quarterly instead of annual) surveys of unaffiliated services and by broadening the coverage of existing surveys. Additional initiatives focus on closing gaps in the measurement of financial flows, such as those stemming from transactions involving derivatives and other types of short-term financial instruments, reverse or short transactions, and transactions in traditional instruments that now bypass the international capital reporting system.

Improving consistency with international standards.--In general, BEA's international accounts are highly consistent with international standards; in fact, BEA has played a lead role in carrying out the conceptual work necessary to establish many of the standards. However, international standards are continually evolving and expanding, and in some areas-such as insurance ser-vices-BEA's methodologies probably could be improved. Proposed initiatives would enable BEA to keep abreast of the changing standards and to comply more fully with existing standards.

Industry accounts.-BEA produces economic statistics on industries, including the input-output (I-O) accounts, the GDP-by-industry accounts, and occasional satellite accounts. The I-O account benchmarks underpin the NIPA and other account benchmarks. The Strategic Plan focuses on completing the 1997 benchmark I-O accounts by late 2002, thereby meeting a commitment to produce the benchmark accounts within 5 years of the reference year. The plan also includes the following new elements that will provide customers with more useful industry statistics.

Accelerating annual industry data.-Research will be directed toward reducing the time lag for the release of the annual I-O accounts (from 3 years down to 1 year after the reference year) and the annual GDP-by-industry estimates (from 11 months down to 4 months after the reference year).

Reconciling and improving the consistency of industry estimates.-This element will be directed toward reviewing and partially reconciling the value-added estimates from the 1997 benchmark I-O accounts and GDP-by-industry accounts to bring those estimates into closer alignment and developing approaches to improve the consistency of the I-O, GDP-by-industry, and gross state product (GSP) estimates.

Improving estimating methods and processing systems and interfaces.-This element will focus on improving estimating methodologies, designing and developing interactive software tools for accessing data, expanding
integrated software applications to produce industry estimates, and developing processing systems to improve efficiency.

Regional accounts.-BEA produces estimates of quarterly and annual State personal income, annual county and metropolitan area personal income, annual GSP, wages and employment in varying degrees of detail by industry for each area, and regional input-output multipliers. The Strategic Plan identifies the following areas for improvement.

Accelerating the release of regional estimates.-This project would provide the users of regional data with dramatically earlier access to these estimates. For example, the time lag for the release of GSP estimates would be reduced from 18 months down to 5 months after the reference year. Similar accelerations would be achieved for metropolitan and local area personal income.

Continually improving methodologies.-The methodologies used to produce the regional estimates must be updated and improved to keep pace with changes in the national and regional economies. Topics that need to be addressed are the estimation of stock options on a regional basis and the redefinition of the BEA Economic Areas to reflect new metropolitan area definitions.

Improving source data.-In order to improve the quality of the regional estimates, it is necessary to identify, develop, and implement new and more appropriate source data. For example, new source data would be needed to develop estimates of capital stocks by State.

Source data improvement.-BEA obtains most of its source data from other Federal Government agenciesprimarily the Bureau of the Census, the Bureau of Labor Statistics (BLS), and the Department of the Treasury, especially the Internal Revenue Service (IRS). Therefore, it is imperative that BEA staff at all levels work with their colleagues in those agencies to upgrade the economic accounts by improving the relevance, quality, and timeliness of existing source data, by identifying untapped but potentially useful existing data, and by developing new data.

The following key data sources are the focal points of BEA's efforts to work with its partner agencies to improve source data for the economic accounts. (Many of these improvements are also mentioned in the listings of the various BEA program areas.)

Bureau of Labor Statistics data.--BLS employment and price data are essential ingredients of BEA's economic accounts. To improve its national, industry, and regional accounts, BEA will work with BLS to expand their Current Employment Statistics (790 program) to cover earnings of all employees. BEA will also work with BLS to explore expanding the coverage of the earnings
concept to cover all types of earnings, including employee stock options, and benchmarking the earnings data to the BLS Covered Employment and Wages (ES-202) program. For its national accounts, BEA will work with BLS to improve the Producer Price Index program to provide quality-adjusted price indexes for high-tech goods and to continue expanding the coverage of financial and nonfinancial services and of nonresidential construction.

Bureau of the Census data.-For its industry and national accounts, BEA needs better and more timely data on the intermediate outputs of industries. The international accounts need improved data on exports and imports of goods. The regional accounts stand to benefit greatly from the new American Community Survey, which (if funded) would provide more frequent data on variables now collected only in the Decennial Census.

Department of the Treasury data.-BEA's international accounts need expanded coverage of the Treasury International Capital reporting system to include derivatives and improved coverage of short positions and crossborder holdings of securities. In the national accounts, the measurement of business income could be improved by working with the IRS to update measures of voluntary taxpayer compliance. The regional accounts could investigate IRS data to develop éstimates of State capital stocks for nonmanufacturing firms.

BEA international transactions data.-For the international services data collected in BEA's surveys, the biggest improvement would come from instituting quarterly surveys of international transactions in the most important services. Currently, only annual surveys are conducted for most types of unaffiliated services transactions.

Performance: Performance under goal 4 will be monitored by measures such as the following:

- Number of statistical improvement milestones met;
- Cycle time for production of major estimates and other statistical outputs;
- Resource requirements for production of major estimates and other statistical outputs;
- Number of meetings with key source data providers.

## Additional Detail

The following table, organized by program area, summarizes the elements of the plan and provides milestones through FY 2005. The plan will be updated in FY 2002 to add milestones for FY 2006. The activities listed in the table and the timing of the milestones are based on the assumption that BEA will receive adequate budget funding for each of those years.

|  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| National Income and Product Accounts (NIPA) Estimates | Prepared quarterly and annual estimates of GDP and NIPA tables; published NIPA volumes. | Prepare quarterly and annual estimates of GDP and NIPA tables. | Prepare quarterly estimates of GDP tables; begin 2003 comprehensive revision estimates. | Prepare quarterly and 2003 comprehensive revision estimates of GDP and NIPA tables. | Prepare quarterly and annual estimates of GDP and NIPA tables; publish NIPA volumes. |
| Monthly Personal Income and Outlays | Prepared monthly estimates of personal income and outlays. | Prepare monthly estimates of personal income and outlays. | Prepare monthly estimates of personal income and outlays; begin 2003 comprehensive revision estimates. | Prepare monthly and 2003 comprehensive revision estimates of personal income and outlays. | Prepare monthly estimates of personal income and outlays. |
| Fixed Assets and Consumer Durable Goods | Prepared annual estimates of fixed assets and consumer durable goods; released 1999 comprehensive revision estimates. | Prepare annual estimates of fixed assets and consumer durable goods; publish Fixed Assets volume. | Prepare annual estimates of fixed assets and consumer durable goods; begin 2003 comprehensive revision estimates. | Prepare annual and 2003 comprehensive revision estimates of fixed assets and consumer durable goods. | Prepare annual estimates of fixed assets and consumer durable goods; publish Fixed Assets volume. |
| International Submissions | Prepared NIPA estimates based on 1999 comprehensive revision consistent with new 1993 System of National Accounts (SNA) for OECD. Prepared Government Finance Statistics (GFS) for Treasury to submit to IMF. | Update NIPA estimates consistent with 1993 SNA for OECD. Prepare GFS for Treasury to submit to IMF. | Update NIPA estimates consistent with 1993 SNA for OECD. Prepare GFS for Treasury to submit to IMF. | Prepare NIPA estimates based on 2003 comprehensive revision consistent with 1993 SNA for OECD. Prepare GFS for Treasury to submit to IMF. | Update NIPA estimates consistent with 1993 SNA for OECD. Prepare GFS for Treasury to submit to IMF. |
| NIH Research \& Development (R\&D) Biomedical Price Index | Prepared estimates of R\&D biomedical price index for NIH under reimbursable contract. | Prepare estimates and update weights of R\&D biomedical price index for NIH under reimbursable contract. | Prepare estimates of R\&D biomedical price index for NIH under reimbursable contract. | Prepare estimates of R\&D biomedical price index for NIH under reimbursable contract. | Prepare estimates and introduce chain weighting of R\&D biomedical price index for NIH under reimbursable contract. |
| Economic Accounts Training Program | Prepared and conducted training in economic accounts. | Prepare and conduct training in economic accounts. | Prepare and conduct training in economic accounts. | Prepare and conduct training in economic accounts. | Prepare and conduct training in economic accounts. |
|  |  |  | kisk |  |  |
| Implement North American Industry Classification System (NAICS) | Converted inventory estimates to NAICS basis; estimated personal consumption expenditures (PCE) and investment in equipment with NAICS source data. | Prepare wage and salary estimates with NAICS source data, which will be converted to a Standard Industrial Classification (SIC) basis. | Prepare for conversion of all income-side estimates to NAICS basis in comprehensive revision. | Publish comprehensive revision estimates on a NAICS basis; convert PPI source data from SIC to NAICS basis. | Prepare for conversions associated with NAICS 2002, NAICS 2007, and North American Product Classification System, |
| NIPA Central System Modernization | Prepared functional requirements for new central system (joint with CSSD, contractor). | Develop and program first phase of new central system (joint with CSSD, contractor). | Test and implement the first phase of the new central system (joint with CSSD, contractor). | Begin second phase, developing enhancements for new central system (joint with CSSD, contractor). | Test and implement the second phase (joint with CSSD, contractor). |
| Alternative Measures of Saving | Completed joint paper with Federal Reserve Board staff on alternative measures of saving. | Publish paper and present it at conferences; prepare regular updates of measures. | Update the measures. | Update the measures. | Update the measures. |
| Interactive Web Data Access | Developed tool to provide selected, annual, and 3-digit NIPA tables interactively on Web (joint with CSSD, contractor). | Extend tool to provide tables for fixed assets and consumer durable goods and for underlying detail (joint with CSSD, contractor). | Complete Web data access project. |  |  |
| Convert Table Generation | Began work to automate the generation of tables for news release and Survey (joint with CSSD and CBAD). | Complete work to automate the generation of tables for news release and Survey (joint with CSSD and CBAD). | Complete automation of remaining tables. |  |  |
| New Quality-Adjusted Prices | Introduced improved prices for local area network equipment. | Conduct research and develop new quality-adjusted prices. | Conduct research and develop new quality-adjusted prices. Submit proposals for prices of nonresidential structures, photocopy equipment, and other selected prices. | Conduct research and develop new quality-adjusted prices. If proposals are accepted, publish revised estimates. | Conduct research and develop new quality-adjusted prices. |
| Improved Services Measures | Conducted research and developed new measures of services. | Conduct research and develop new measures of services. Submit proposals for new measures of insurance and other selected services. | Conduct research and develop new measures of services. If proposals are accepted, prepare estimates. | Conduct research and develop new measures of services. Publish revised estimates. | Conduct research and develop new measures of services. |
| Improved Estimates of Software Investment | Developed and introduced improved quarterly software estimation method. | Review and improve benchmark estimation of software. | Conduct research and develop improved software prices. | Conduct research and develop improved software prices. | Conduct research and develop improved measures of foreign transactions in software. |
| Employee Stock Options | Conduct research on employee stock options. | Conduct research and develop conceptual framework for measuring employee stock options. | Conduct research and develop estimating methodology for employee stock options. | Conduct research and develop source data for employee stock options. | Conduct research and develop estimates for employee stock options. |
| Federal Investment and Consumption System | Began re-engineering of system for Federal Government investment and consumption estimates. | Complete database design and user interface. Begin testing. | Complete, test, and implement system before the end of December 2002. |  |  |

|  |  |  | theor FY 2001 -2005 $2003$ | S. Fortinues 2ro4 |  |

| Research Statistical Discrepancy | Researched possible sources of statistical discrepancy; improved estimate of GDP and gross domestic income (GDI). | Research on possible sources of statistical discrepancy; improve estimates of GDP and GDI. | Research on possible sources of statistical discrepancy; improve estimates of GDP and GDI. | Research on possible sources of statistical disrepancy; improve estimates of GDP and GDI. | Research on possible sources of statistical discrepancy; improve estimates of GDP and GDI. |
| Convert Time Series Package to "Fame" |  | Prepare requirement to convert analysts' "satellite" systems to Fame. Begin conversion. | Complete pre-revision conversions, testing, and implementation. | Prepare post-revision conversions. | Complete all revision conversions, testing, and implementation. |
| Misreporting Adjustments |  | Contract with Census Bureau to conduct Current Population Survey (CPS) exact match study of taxpayer misreporting and work with IRS to update measures of voluntary taxpayer compliance. | Work with IRS to update measures of voluntary taxpayer compliance. | Work with IRS to update measures of voluntary taxpayer compliance. | Contract with Census Bureau to conduct CPS exact match study of taxpayer misreporting and work with IRS to update measures of voluntary taxpayer compliance. |
| Methodology Papers | Completed updated methodology paper for corporate profits. | Complete updated methodology papers for government, foreign transactions, and new paper for fixed investment. | Update methodology papers. | Update methodology paper for PCE. New methodology papers for other components. | Annual updates of all methodology papers. |
| Reengineer Private Capital Stock Estimates |  | Develop requirements and rewrite programs. | Test and implement programs. |  |  |
| Reengineer Government Capital Stock Estimates |  | Develop requirements and rewrite programs. | Test and implement programs. |  |  |
| Revise Tables to Deemphasize Chained Dollars |  | Begin table redesign. | Implement table redesign. | Publish redesigned tables as part of 2003 comprehensive revision. |  |
| Recognize Government and Nonprofit Output |  | Prepare proposal to recognize output. | Implement proposal to recognize output. | Publish revised estimates of GDP by type of product. |  |
| Real Government and Nonprofit-by-Function Estimates |  | Develop simplified annual real government-by-function estimates. | Implement simplified real government- by-function estimates. | Work on development of refinements and quarterly real government-by-function estimates. | Work on development of nonprofit-by-function estimates. |
| Research to Revise Summary Accounts |  | Conduct research and prepare proposal to revise summary accounts. | If accepted, implement proposal to revise summary accounts. | Publish revised summary accounts. |  |
| Research Sector Definitions | Conducted research on government enterprises and other sector issues. | Conduct research on government enterprises and other sector issues. |  | Conduct research on government enterprises and other sector issues. | Prepare proposals to modernize sector definitions of government enterprises and noncorporate business. |
| Research Flow-of-Funds Integration | Conducted research on integrating NIPA's with flow-offunds accounts. | Conduct research on integrating NIPA's with flow-offunds accounts. | Publish preliminary attempt to consolidate NIPA's with flow-of-funds accounts. | Continue research on integrating NIPA's with flow-offunds accounts. | Publish improved integrated accounts. |
| Research on Compensation in Kind |  | Work with BLS to research new forms of fringe benefits, such as cafeteria plans. | Consider proposals based on research. If accepted, implement proposals. |  |  |
| Research on Nonprofit Sector |  | Conduct research on status of separate nonprofit accounts. | Develop new tables to show nonprofit expenditures and economic activity. | Conduct additional research to fill gaps in nonprofit accounts. | Publish prototype nonprofit accounts. |
| Research on Chain Inventories Method | Wrote and presented research paper on chain inventories method. | Refine paper, prepare proposal. | If proposal is accepted, implement proposal for chain inventories method. | Publish revised estimates of inventories. |  |
| Improve Capital Stock Estimates | Worked with Chief Economist to investigate service lives and other capital stock issues. | Prepare proposals for comprehensive revision. | If proposals are accepted, implement proposals. | Publish revised estimates of capital stock. Develop new research projects. | Conduct research on capital stock issues. |
| Interactive User-Defined Chain Aggregates |  |  |  | Prepare requirements and write programs for user-defined chain aggregates. | Test and implement programs. |
| Research Sector Gross Output |  | Work with IED to investigate feasibility of timely estimates of gross output by sector. | If feasible, submit proposal to prepare estimates of sector gross output. | If accepted, implement proposal and publish estimates of sector gross output. |  |
| Research NIPA/International Transactions Accounts (ITA's) Differences |  | Conduct study of differences; prepare proposals as appropriate. | If accepted, implement proposals to resolve differences between NIPA's and ITA's. | Publish revised estimates. |  |
| Research Pension Benefits | Worked with Regional Directorate to research accounting for pension benefits. | Work with Regional Directorate to research accounting for pension benefits. | If research is accepted, prepare and submit proposal for changes in comprehensive revision. | Research estimates of employers' contributions to deferred compensation plans. | Develop improved estimates of employers' contributions to deferred compensation plans. |
| Research Accrual Accounting |  | Conduct research on feasibility of moving some estimates (for example wages, personal taxes) to accrual basis. Coordinate with regional programs. | If research is accepted, prepare and submit proposal for changes in comprehensive revision. | Publish revised estimates. |  |

|  |  |  |  | If the decision is to implement a bias adjustment to the goods and services release, implement it this year. |  |
| Research Understatement of Goods Trade Estimates and Develop Bias Adjustments | Conducted research into existence of undercounts in reported imports or exports. | Conduct additional research and determine feasibility of developing an adjustment for NIPA (but not for BOP) purposes. | Collaborate with Census Bureau on whether to extend the NIPA bias adjustment (if made) to the goods and services release. |  | Continue to make bias adjustments, if appropriate. |
| Accelerate Monthly Estimates of U.S. Trade in Goods and Services | With Census cooperation, developed an implementation plan and schedule. | Perform research into developing accelerated estimation methods for direct investment and unaffiliated services. | Work with Census to develop methods of filling any "holes" in the goods estimates (possibly including goods exports to Canada) that may hinder acceleration. | Begin issuing the joint monthly press release on an accelerated basis. Monitor revisions in the services estimates, and, where the estimates are weakest, perform research into improving them. | Continue issuing the monthly release on an accelerated basis, and continue performing any needed research into improving the accelerated estimates. |
| Derivatives | Worked with members of the Treasury international capital (TIC) user group to design a quarterly survey. | Clear the survey through OMB. | Conduct the quarterly survey. | Continue to conduct the quarterly survey, and include the data in the BOP accounts. | Continue to conduct the quarterly survey, and include the data in the BOP accounts. |
| NAICS |  | Publish NAICS-based estimates for position and flows for Foreign direct investment in the United States (FDIUS); and for operations data from 1999 benchmark survey of U.S. direct investment abroad (USDIA). | Publish NAICS-based estimates from annual survey of USDIA; incorporate NAICS 2002 revisions in FDIUS operations data. | Publish NAICS-based estimates for position and flows for USDIA. | Incorporate NAICS 2002 revisions in USDIA operations data. |
| Improve Web Site | For BPD, began development of Web sites for all BOP data series. | For BPD, complete development of Web site. For direct investment data, redesign user interface of Web page; begin re-engineering of table production system and reformatting of historical data. | For direct investment, complete development of Web site; continue re-engineering of table production system and reformatting of historical data. | For direct investment data, complete re-engineering of table production system and reformatting of historical data. | Review and re-evaluate Web site, to ensure it effectively meets users' needs. |
| Utilize Stratified Sampling |  | Investigate feasibility of using stratified sampling in annual survey of FDIUS. | If feasibie, incorporate stratified sampling in design of annual survey of FDIUS. | If feasible, use stratificd sampling to conduct annual survey of FDIUS covering 2003. | Investigate feasibility of using stratified sampling in annual survey of USDIA. |

|  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Thoprath | divod |  |  |  |  |
| Quarterly Services Surveys |  | Design quarterly services survey and redesign annual services surveys to be integrated with quarterly survey, | Clear new and redesigned surveys; develop estimation routines and processing systems for quarterly surveys. | Implement quarterly services survey in the first quarter of 2004. | Continue to conduct quarterly services survey; consider expanding quarterly coverage to additional categories of services. |
| Improve Estimates of Short-Term Financial Instruments | Performed research into feasibility of adding short-term instruments to TIC surveys. | Add short-term financial instruments to TIC survey of securities claims. | Incorporate into accounts estimates of short-term financial claims from TIC survey. | Add short-term financial instruments to TIC survey of securities liabilities and incorporate estimates into the accounts. | Continue incorporating the estimates of inbound and outbound short-term instruments in the accounts. |
| Institute More Frequent Surveys of Portfolio Investment Assets and Liabilities | Worked with Treasury to develop annual surveys of securities liabilities. | Develop estimation routines and procedures to incorporate the results of the annual liability surveys in the accounts. Continue conducting the annual liability survey. Work with Treasury to design the annual asset survey that would cover 2003 and later years. | Continue conducting and incorporating into the accounts the results of the annual liability surveys. Continue working with Treasury to design the annual asset survey, covering 2003 and later years. | Conduct annual portfolio investment surveys of both assets and liabilities and incorporate their results into the accounts. | Conduct annual portfolio investment surveys of both assets and liabilities and incorporate their results into the accounts. |
| Update Estimation Methods | Reviewed and updated estimation of quarterly direct investment earnings, with particular attention to treatment of negative earnings. | Review and update quarterly direct investment distributed earnings. | Review and update estimation methods for other BOP flow accounts. |  |  |
| Expand Services Data Collection (Excluding Quarterly Surveys) | Redesigned benchmark survey of selected services to improve coverage of the following categories: Trade-related, auxiliary insurance, waste treatment, e-commerce-related, and other. | Conduct redesigned benchmark survey; use preliminary results to update annual survey to cover important new services, including e-commerce-related. | Conduct updated annual survey; publish final benchmark survey results; continue research on e-commerce transactions. | Redesign benchmark survey of financial services as needed to close any gaps and ensure coverage of new services; continue research on e-commerce transactions. | Conduct redesigned benchmark survey of financial services; continue research on e-commerce transactions. |
| Prepare Additional Special Studies | Worked with outside researchers to analyze global expansion strategies of U.S. firms; undertook analysis of propensity of foreign manufacturing affiliates to source inputs from their U.S. parents. | Prepare an article on U.S. intrafirm trade in goods; extend analysis of propensity of foreign manufacturing affiliates to source inputs from their U.S. parents. | Prepare and publish special studies to broaden understanding and extend analysis of data of the International Economics Directorate. | Prepare and publish special studies to broaden understanding and extend analysis of data of the International Economics Directorate. | Prepare and publish special studies to broaden understanding and extend analysis of data of the International Economics Directorate. |
| Update Statistical Methods in Light of Changing International Statistical Standards | Performed research into areas of deviation from international standards; identified all major existing differences. | Develop revised estimates of insurance services based on average claims; perform research into estimating implicit financial services and, as appropriate, other implicit services. | Incorporate revised estimates of insurance services into international transactions accounts; make progress to resolve other major differences. | Perform additional research into areas of deviation from international standards (focusing on new standards that may be emanating from the Special Data Dissemination Standards (SDDS) and international services areas). Also, identify areas where new guidance may be forthcoming in a new Balance of Payments Manual (BPM6) and consider the feasibility and advisability of adopting the new standards for the U.S. international accounts. | Make progress in resolving all significant differences. |
| Electronic Data Collection | Implemented Automated Survey Transmittal and Retrieval (ASTAR) system on quarterly survey of FDIUS. | Implement ASTAR on annual surveys of transportation, remittances, and financial services. | Implement ASTAR on benchmark and new investment surveys of FDIUS and on annual surveys of construction, insurance, royalties and license fees, and selected services. | Implement ASTAR on annual survey of FDIUS. | Implement ASTAR on benchmark survey of USDIA and benchmark survey of financial services. |

# Annual Input-Output Accounts of the U.S. Economy, 1998 

By Mark A. Planting and Peter D. Kuhbach

$\tau$HIS month, the Bureau of Economic Analysis released the 1998 annual input-output (I-O) accounts for the U.S. economy. These accounts are the third in a series of annual I-O accounts that have been prepared to improve the timeliness of the accounts: The lag between the year of measurement and the year of release has been reduced from 5 years to 3 years.

The annual I-O accounts show the flow of 97 commodities-goods and services-among 94 industries and to final uses. Final uses consist of personal consumption expenditures (PCE), gross private domestic investment, change in private inventories, exports, imports, and government consumption expenditures and gross investment. The sum of all final uses is, by definition, equal to gross domestic product (GDP). In addition, the accounts show, by industry, the contributions made by primary inputs (mainly labor and capital) to total output. By definition, these contributions, called "value-added," also sum to GDP.

The annual I-O accounts extend and supplement the quinquennial benchmark I-O accounts, the annual GDP-by-industry accounts, and the GDP estimates. Using various indicators to extrapolate both commodity output and industry output, the accounts provide a more up-to-date picture of interindustry interactions than the benchmark I-O tables. The accounts supplement the annual GDP-by-industry estimates by providing information on industry purchases and sales that are not found in the GDP-by-industry estimates of gross output, intermediate inputs, and value added. The annual I-O accounts also provide industry information that supplements the product information contained in the GDP estimates.

The I-O accounts map the structure of production and distribution economy wide. These accounts can be used to analyze changes in the composition of GDP and the effects of these changes on different parts of the economy. For example, the industry relationships from the 1998
accounts could be used to estimate the effects of the attacks of September 11th on tourism (including hotels and air transportation) and its supplying industries or the effects of the recent increases in defense spending on a broad range of industries.

The year 1998 was the seventh year of the 9year economic expansion of the 1990s. While consumer spending was important in sustaining the long expansion, high levels of investment, especially investment in high-tech equipment and ser-vices-computers, communication equipment, and software-played a central role. The longterm shift in the composition of U.S. output from traditional goods to services continued in the 1990s.

For assessing structural changes in the economy, the I-O estimates provide industry and product information, such as purchases of intermediate goods and services, that are not available in the final demand estimates included in GDP. Structural changes highlighted by the 1998 annual I-O accounts include the following:

- Intermediate consumption of business ser-vices-which are frequently associated with out-sourcing-grew more than 12 percent in 1998, almost five times faster than intermediate consumption of all other commodities.
- Consumer spending on services grew more rapidly than consumer spending on goods in 1992-98, but the spending on goods has larger backward linkages to the rest of the economy.
- Most goods have backward linkages that exceed 2.0 , indicating that a $\$ 1$ increase in final demand for goods results in at least another $\$ 1$ of demand for goods and services from the supplying industries. For example, passenger cars and trucks have a backward linkage of 2.82 , indicating that a $\$ 1$ increase in final demand will result in a $\$ 1.82$ increase in the demand for goods and services from all the other industries.
- Most services have linkages that are less than
2.0. For example, finance has a linkage of 1.72, indicating that a $\$ 1$ increase in final demand results in only a $\$ 0.72$ increase in the demand for goods and services from all the other industries.
- The demand for investment commodities grew faster than overall consumer spending (either for goods or services) in 1992-98. Moreover, the backward linkages on investment commodities tend to be larger than those for consumer spending.

The 1998 I-O accounts are based on the 1992 benchmark I-O accounts and are prepared using 1998 estimates of industry and commodity output and the 1998 estimates of GDP from last summer's annual revision of the national income and product accounts (NIPA's). ${ }^{1}$ The estimates of industry and commodity output are based on Census Bureau annual survey data and other annual sources.

1. For an overview of the I-O accounts, see Ann M. Lawson, "Benchmark Input-Output Accounts for the U.S. Economy, 1992: Make, Use, and Supplementary Tables," Survey of Current Business 77 (November 1997): 36-82; and "Benchmark Input-Output Accounts for the U.S. Economy, 1992: Requirements Tables," Survey 77 (December 1997): 22-47. For a description of the methodology for the annual I-O accounts, see Sumiye Okubo, Ann M. Lawson, and Mark A. Planting, "Annual Input-Output Accounts of the U.S. Economy, 1996," Surver 80 (January 2000): 37-86. For information on the NIPA revision, see Brent R. Moulton, Eugene P. Seskin, and David F. Sullivan, "Annual Revision of the National Income and Product Accounts," Survey 80 (August 2001): 7-120.

Estimates of the intermediate and final consumption of commodities are based on relationships from the 1992 benchmark I-O accounts. These relationships are allowed to adjust to maintain consistency with the 1998 data.

## The 1998 annual I-O tables

The 1998 annual I-O accounts consist of 94 industries, 97 commodities, and 11 categories of final demand. ${ }^{2}$ Two make tables, one that is based on I$O$ industry classifications (table 1) and an alternative that is based on the Standard Industrial Classification (SIC), show the commodities produced by each industry. Two use tables, one on the I-O basis (table 2) and one on the SIC basis, show the commodities that are consumed by each industry and final demand (table A is an aggregated version of the use table). ${ }^{3}$
2. The 1992 benchmark I-O accounts consist of 494 industries, 484 commodities, and 40 categories of final demand. The 1997 benchmark accounts are scheduled to be released at the end of 2002. For more information, see the note "Upcoming Changes in the NAICS-Based 1997 Benchmark Input-Output Accounts" in this issue.
3. The make table (table 1), the use table (table 2), and the industry-by-commodity total requirements table (table 5a) in summary format are presented at the end of this article. More detailed versions of all eight tables are available electronically; see the box "Data Availability" on page 50 .

1. The input-output ( $1-0$ ) accounts use two classification systems, one for industries and another for ommodities, but both systems generally use the same $1-0$ numbers and titles.
2. "Other" consists of government enterprises, general government industry, household industry, and the
iventory valuation adjustment.
3. Detail may not sum to totals due to rounding.
4. "Value added" consists of compensation of employees, indirect business tax and nontax liability, and ther value added. "Other value added" consists of the following components of gross domestic income Consumption of fixed capital, net interest, proprietors' income, corporate profits, rental income of persons, business transfer payments, and subsidies less current surplus of government enterprises.

Four requirements tables are derived from the make and use tables: One direct requirements table and three total requirements tables. The total requirements tables show the production that is required, directly and indirectly, to meet purchases from final demand. The industry-by-commodity total requirements table details all the linkages between commodity consumption and industry production. The aggregate effect of these linkages is captured in the column sums of this table and is referred to as "the backward linkage" (table 5a). The backward linkage for a commodity represents the total output required from all industries to supply $\$ 1$ of final demand for that commodity.

## Changes in the composition of total consumption in 1992-98

The series of I-O accounts can be used to compare the structure of the U.S. economy over time. Changes in the use of commodities by the economy, both for domestic use and for export, are measured by changes in the composition of total consumption (table B). Total consumption is defined as total domestic commodity output plus imports less change in private inventories, and it is equal to the sum of total intermediate use and the four final use sectors (personal consumption expenditures, gross private fixed investment, exports, and government purchases). Total consumption shows the total flow of commodities from domestic and foreign sources through the economy. The consumption of commodities by sector provides indications of where structural changes are occurring (table C).

Total commodity consumption grew 5.0 percent in 1998, somewhat slower than the average annual rate of growth of 6.1 percent over the period 1992-98 (table D). This slower rate of growth reflects a slowdown in the consumption of goods commodities, which grew 2.1 percent in 1998, less than half the average rate of 5.4 percent in 1992-98. ${ }^{4}$ In contrast, services commodities grew 6.7 percent in 1998, about the same as the average

[^9]rate of 6.6 percent in 1992-98. The faster growth in the consumption of services commodities further shifted total consumption from goods to services; the services' share of total consumption rose from 60.9 percent in 1992 to 62.5 percent in 1998. Among the services commodities, the fastest growth in 1998 was in finance, insurance, and real estate ( 8.7 percent) and services ( 8.4 percent), both of which grew faster than in 1992-98.

Among the goods commodities, all the major commodity groups grew more slowly in 1998 than in 1992-98. Mining declined much more substantially ( -19.2 percent, compared with -0.6 percent), primarily reflecting a decline in crude petroleum and natural gas prices in 1998. Growth in manufacturing commodities slowed substantially ( 2.7 percent, compared with 5.5 percent).

Table E shows the fastest growing commodities among those that accounted for at least 1 percent of total consumption in 1998. These commodities, which together accounted for 43.5 percent of total consumption, are predominantly services (commodity numbers 65 A and above). Among the fastest growing commodities were finance ( 14.0 percent), computer and data processing services ( 18.8 percent), and "other business and professional services" ( 12.9 percent), each of which grew at more than twice the rate of all commodities. Many of these commodities continued to grow in 1998 at about the same rates as in 1992-98. However, the growth rates of several commodities slowed dramatically: Computers and office equipment grew 5.0 percent in 1998, compared with 11.3 percent in 1992-97, and electronic components and accessories grew - 3.4 percent, compared with 14.6 percent.

[^10]Consumption of investment commodities, a component of final demand, increased at an average annual growth rate of 9.5 percent in 1992-98, and it grew 10.4 percent in 1998 (table F). Aircraft grew much faster in 1998, at 44.8 percent, than its average annual growth rate of 6.6 percent in 199298 and its 1992-97 rate of 0.2 percent. Real estate and royalties grew 17.4 percent in 1998, compared with 10.3 percent in 1992-98; computer and data processing grew 20.8 percent, compared with 14.6 percent; and new construction grew 11.0 percent, compared with 8.1 percent. In contrast, general industrial machinery declined 0.5 percent in 1998, compared with an average annual growth rate of 7.0 percent in 1992-98; computer and office equipment grew 4.6 percent, compared with 10.9 percent; and motor vehicles (passenger cars and trucks) grew 5.7 percent, compared with 11.6 percent.

Changes in investment demand have a substantial impact on the output of many industries because of the large backward linkages that are typical of capital goods production. Many of the investment commodities have backward linkages that exceed 2.0, indicating that an increase in the demand for these commodities will result in a doubling of production across all industries. For example, in 1998, a $\$ 4.6$ billion increase in the demand for audio, video, and communication equipment resulted in a $\$ 10.5$ billion increase in production across all industries.

Changes in the intermediate consumption of
commodities-commodities consumed by businesses in order to produce their output-were dominated by continued strong growth in the demand for business services. In 1998, intermediate consumption of these services-which are frequently associated with outsourcing-grew 12.4 percent, almost five times faster than intermediate consumption of all other commodities. Within business services, intermediate consumption of "computer and data processing services, including own-account software" grew 18.4 percent, "other business and professional services, except medical" grew 14.4 percent, and "legal, engineering, accounting, and related services" grew 10.1 percent (table G).

Table G.-Growth Rates for Business Services, 1992-98

| Commodity | Description | $\begin{gathered} 1998 \\ \text { Intermediate } \\ \text { consumption } \\ \text { (millions of } \\ \text { dollars) } \end{gathered}$ | Average annual rate of growth of consumption (percent) |  |

|  |  |  | 1992-98 | 1997-98 |
| 73A | Computer and data processing services, including own-account sottware | 142,963 | 19.0 | 18.4 |
| 738 | Legal, engineering, accounting, and related senices | 269,804 | 7.1 | 10.1 |
| $73 C$ | Other business and professional services, except medical | 518,753 | 11.4 | 14.4 |

Growth in the demand for PCE commodities, a component of final demand, continued at about the same rate in 1998 as in 1992-98. The growth was primarily in services commodities, which account for most of PCE and which generally grow faster than the average for all commodities in PCE (table H). Most commodities grew at approxi-

| 71 B | Real estate and royalties................................................... | 204.249 | 3.5 | 3.4 | 4.8 | 1.430 |
| 72 B 73 B | Personal and repair services (except auto) .................................- | 91.759 <br> 60.186 | 1.6 | 5.8 | 7.2 | 1.685 <br> 1.574 <br> 1 |
| $\begin{array}{r}738 \\ 74 \\ \hline\end{array}$ | Legal, engineering, accounting, and related services ........................ | $\begin{array}{r}60,186 \\ 329,080 \\ \hline\end{array}$ | 1.0 5.6 | 4.7 5.2 | 6.8 5.8 | 1.574 2.046 |
| 75 |  | 153,378 | 2.6 | ${ }_{9} 9$ | 5.0 | 1.895 |
| 76 |  | 127,297 | 2.2 | 8.4 | 8.5 | 1.724 |
| 77 A | Health services. | 838,616 | 14.3 | 5.4 | 5.1 | 1.695 |
| 77 B | Educational and social services, and membership organizations ........... | 325,789 | 5.6 | 6.3 | 8.3 | 1.812 |
|  | All other commodities ................................................................ | 784,907 | 13.4 | 5.3 | 4.1 | 1.881 |

[^11]mately the same rates in 1998 as in 1992-98, but several did not. The growth rate of drugs in 1998, at 15.8 percent, was almost twice the 8.9 -percent growth rate in 1992-98, and the growth rate of motor vehicles (passenger cars and trucks) was 6.8 percent, compared with 4.9 percent. In contrast, the growth rate of automotive repair services in 1998, at 5.0 percent, was about half the 9.3-percent growth rate in 1992-98, and the growth rate of insurance was 3.7 percent, compared with 6.1 percent.

The backward linkages for PCE commodities vary; the demand for goods generally has larger linkages, usually greater than 2.0 , and the demand for services generally has smaller linkages, usually less than 2.0. In 1992-98, the commodities that grew the fastest-mainly services-tended to have lower backward linkages, so the impact on the other industries of the growth in demand for consumer spending on these commodities was not as
great as the impact of the growth in demand for investment commodities.

## Data Availability

The estimates for 94 industries, 97 commodities and 11 categories of final demand at the input-output (I-O) two-digit level-including alternative estimates of the make and use tables on an approximate 1987 Standard Industrial Classification (SIC) basis-and a discussion of the matrix algebra underlying the derivation of the tables are available on BEA's Web site. Go to <www.bea.doc.gov>, click on "Gross product and input-output data," and look under "Input-Output data."
In early 2002, the data from the 1992 benchmark I-O accounts and the 1996, 1997, and 1998 annual I-O accounts will be available interactively on BEA's Web site. Users will be able to select data from any of the published tables.
The I-O two-digit estimates are also available on diskette for $\$ 20$-product number NDN-0291. To order, call the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666).

An appendix and tables 1, 2, and 5a follow.

## Appendix.-Classification of Industries in the Annual Input-Output Accounts

1. The SIC assigns codes to activities regardess of whether the establishment is owned by private firms or govermment agency. In the 1.0 accounts, SIC codes are used only to classity private activities.
2. Noncomparable imports include imported services that are not commercially produced in the United States, and goods and senvices that are produced abroad and used abroad by U.S. residents for example, U.S. Federal Government defense spending abroad.
Government defense spending abroad. many industries, and used goods are sales and purchases typically between
3. Scrap is a secondary product of mater final uses. Industry output is zero because there is no primany producing industry. The sales are shown as negative values in the use table.
4. Industry output is defined as the compensation of employees and consumption of fixed capital of general govenmment agencies. The compensation of employees engaged in construction work is included in construction. The compensation of employees engaged in the production of own-account sotware is included in computer and data processing services.
5. The commodity entries include adiustments among PCE and government expenditures to eliminate counting the expenditures by foreign residents in both exports and PCE or government expenditures.
6. Industry output is defined as the compensation of domestic household workers.
7. The inventory valuation adjustment removes inventory profits and losses from business income.

Note--The backward linkage for a commodity represents the total output required from all indus-
tries to supply $\$ 1$ of final demand tor that con tries to supply $\$ 1$ of final demand for that commodity.

# Upcoming Changes in the NAICS-Based 1997 Benchmark Input-Output Accounts 

In late 2002, the Bureau of Economic Analysis (BEA) will release the 1997 benchmark input-output (I-O) accounts of the United States. These accounts will be based on the North American Industry Classification System (NAICS), which reflects a complete reevaluation of the requirements and purposes, as well as the underlying principles, of an industry classification scheme. ${ }^{1}$ This note previews the changes to the I-O industry classification system that result from the conversion to NAICS (see table 1). ${ }^{2}$

Increased detail on services industries.-The U.S. economy has changed dramatically since the release in 1939 of the first Standard Industrial Classification (SIC) sys-tem-the predecessor to NAICS and the basis for the classification system underlying the 1992 and previous I-O accounts. Much of that change has been driven by the explosion in the number of services-producing industries. The detail that will be available in the 1997 and future I-O accounts on services industries will increase because of the increased number of services industries included in NAICS and in the NAICS-based I-O classification system. Specifically, about 250 of the 358 new industries in NAICS represent new classifications for services-producing industries; additionally, many service industries recognized by the SIC are reorganized or combined in NAICS. As a result, NAICS includes 575 services-producing industries (compared with 430 in the SIC). The new framework for the I-O accounts will reflect the increased detail available on these industries. The 1992 benchmark accounts presented information for 407 goods-producing industries and 84 services-producing industries. With the change from SIC to NAICS, the 1997 accounts will include more detail on services-producers while maintaining the total number of industries at about 500 .

[^12]Changed treatment of auxiliaries and creation of new sector.-In the new NAICS-based I-O classification system, auxiliaries that manage companies and enter-prises-commonly referred to as "headquarters of-fices"-or that act as holding companies will be grouped in the new sector "Management of Companies and Enterprises," and all nonmanagement, servicesproducing auxiliaries will be grouped with the industries that have similar production processes. ${ }^{3}$ Additionally, the output of these auxiliaries will be explicitly measured and will be treated as output; in the previous I-O accounts, the expenses of auxiliaries were included in the intermediate purchases and the value added of the industries they served, but auxiliary output was assumed to be zero.

As a result of these changes, the level of total gross output of the economy will be raised in the 1997 benchmark I-O accounts by the estimate of the output of ser-vices-providing auxiliaries, and the distribution of the value added across industries will be changed as the industry classification of these value-added expenses is changed. For example, compensation of employees, a component of value added, will decrease in the industries that previously included auxiliaries, especially those in manufacturing, and it will increase in services industries because the employees of these auxiliaries will be counted in those industries; total value added for all industries, however, will not change.

Greater relevancy due to the principles underlying NAICS.-One of the principles underlying NAICS is that a classification system should be as dynamic as the economy itself. As a result, NAICS will be reviewed and revised by the sponsoring countries (United States, Canada, and Mexico) every 5 years. BEA has revised the I-O classification scheme underlying each new set of benchmark accounts to reflect the changing economy, but these efforts have been limited by the relatively static SIC system underlying the tabulation of the required data. In the future, the I-O classification system can be guided and facilitated by the more regular revisions to NAICS.

[^13]Another principle underlying NAICS is the economic concept of production: Establishments are grouped according to the similarities of their production processes rather than the similarities of their products. This principle brings NAICS and the NAICSbased data closer to a similar principle underlying the I-O classification: Industries are classified in the I-O accounts so that each industry has a unique production function and output.

Other changes in the accounts.-The conversion to NAICS also provides BEA with the opportunity to make other improvements to its industry statistics. First, BEA is developing a uniform classification system for its industry statistics. At the NAICS two-digit sector level, most of BEA's industry groupings will be comparable, but differences may continue at more detailed levels. ${ }^{4}$ Second, BEA is reconciling the treatment in the "alternative" 1997 I-O accounts of "own-account" activi-ties-that is, activities produced by an establishment or by an industry using its own labor (such as new construction, maintenance and repair construction, and software)-with the treatment in the GDP-by-industry series. ${ }^{5}$

Issues raised by NAICS.-As a result of the change from an SIC-based classification system to a NAICS-based system, most industries in the 1997 benchmark I-O accounts will not be comparable with those in previous benchmark and annual I-O accounts. Any possibility for BEA to independently construct both SIC-based and NAICS-based accounts is precluded for several reasons. Although the Census Bureau tabulated data for shipments and receipts on both an SIC basis and a NAICS basis for 1997, the I-O accounts require addi-

[^14]tional data that were tabulated by the Census Bureau only on a NAICS basis, and the empirical relationships between NAICS-defined industries and SIC-defined industries provided by those shipments and receipts data generally cannot be used for other data, such as expenses. ${ }^{6}$ Moreover, given the rapid pace of change of product mixes and technology in many industries, these relationships will not be applicable for use in constructing the I-O tables for other years, and the Census Bureau will tabulate data only on a NAICS basis in the future.

Reconstructing the existing I-O accounts on a NAICS basis is not feasible for similar reasons. First, as noted above, the empirical relationships available for 1997 are not applicable to the accounts for previous years. Second, although the Census Bureau assigned NAICS codes to some of the most detailed data for 1992 on manufacturing and wholesale and retail trade, it did not assign NAICS codes to the 1992 data on the services sector-a large and rapidly changing sector of the economy. Thus, the available data would provide only a partial foundation for 1992 I-O accounts on a NAICS basis, and retabulating the remaining data to a NAICS basis would be complicated by changing product mixes, new technologies, and the entrance and exit of establishments from the market. ${ }^{\text {? }}$

At the level of detail required for compiling I-O accounts, therefore, comparable data are not available for producing a consistent time series. However, in response to the need of users, BEA is exploring methods of reconciling the GDP-by-industry data to provide users with aggregate series that are comparable over time.

[^15]Table 1.-NAICS and the NAICS-Based I-O Classification System

| NAICS sector | NAICS-based I-O sector | Description of the industry | Major differences in classification or treatment between the NAICS-based I-O sectors and the SIC-based I-O divisions |
| :---: | :---: | :---: | :---: |
| Agriculture, forestry, fishing, and hunting (NAICS 11) | Agriculture, forestry, fishing, and hunting ${ }^{1}$ | Establishments engaged in growing crops, raising animals, and harvesting timber, fish and animals from farms, ranches, and natural habitats. | Logging moved from Manufacturing. |
| Mining (NAICS 21) | Mining | Establishments that extract naturally occurring mineral solids, liquid minerals, and gases. | None. |
| Utilities (NAICS 22) | Utilities | Establishments engaged in the provision of electric power, natural gas, steam supply, water supply, and sewage removal. | Utilities moved from Transportation, communications, and utilities. |
| Construction (NAICS 23) | Construction ${ }^{1}$ | Establishments engaged in the construction of buildings and other structures, heavy construction except buildings, additions, alterations, reconstruction, installation, and maintenance and repairs. | I-O treatment of own-account new and maintenance and repair construction activities will be made consistent with GDP-by-industry series. |
| Manufacturing <br> (NAICS 31-33) | Manufacturing | Establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. | Custom drapery and tailors moved from Retail trade and tire retreading moved from Services. Logging moved to Agriculture, and Publishing moved to Information. |
| Wholesale trade (NAICS 42) | Wholesale trade | Establishments engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. | Selected establishments with retail trade characteristics, such as auto parts, farm supplies, and lumber yards, moved to Retail trade. |
| Retail trade (NAICS 44-45) | Retail trade | Establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. | Selected establishments with retail trade characteristics moved from Wholesale trade. Custom drapery and tailors moved to Manufacturing. |
| Transportation and warehousing (NAICS 48-49) | Transportation and warehousing | Establishments providing transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to transportation. | Transportation and warehousing moved from Transportation, communications, and utilities (TCU). |
| Information (NAICS 51) | Information | Establishments engaged in producing and distributing information and cultural products, providing the means to transmit or distribute these products and data, or communications services. | New sector. Includes publishing, communications, and various information-related industries (data processing, software publishing, and online information, etc.) moved from Manufacturing, TCU, and Services. |
| Finance and insurance (NAICS 52) | Finance and insurance | Establishments engaged in financial transactions and in facilitating such transactions. | Holding companies moved to Management of companies and enterprises. |
| Real estate and rental and leasing (NAICS53) | Real estate and rental and leasing ${ }^{1}$ | Establishments engaged in renting, leasing, or allowing the use of tangible or intangible assets, and related services. | Real estate moved from Finance, insurance, and real estate; Rental of equipment moved from Services. |
| Professional, scientific, and technical services (NAICS 54) | Professional, scientific, and technical services | Establishments engaged in professional, scientific, and technical activities for others. | New sector. |
| Management of companies and enterprises (NAICS 55) | Management of companies and enterprises | Auxiliaries that perform management services or act as holding companies for other establishments of the same company; other auxiliaries classified with industries performing similar activities rather than with industry served. | New sector. Holding companies and other management auxiliaries moved from the various industries they serve. |
| Administrative and support and waste management and remediation services (NAICS 56) | Administrative and support and waste management and remediation services | Establishments engaged in support activities for daily operations of other organizations. | New sector. Waste management moved from TCU. |
| Educational services (NAICS 61) | Educational services | Establishments that provide instruction and training. | New sector. |
| Health care and social assistance (NAICS 62) | Health care and social assistance | Establishments that provide health care and social assistance for individuals. | New sector. |
| Arts, entertainment, and recreation (NAICS 71) | Arts, entertainment, and recreation | Establishments that operate facilities or provide services to meet varied cultural, entertainment, and recreational interests. | New sector. |
| Accommodation and food services <br> (NAICS 72) | Accommodation and food services | Establishments that provide lodging and/or meals, snacks, and beverages for immediate consumption. | New sector. |
| Other services (except public administration) (NAICS 81) | Other services | Establishments that provide services not specifically provided for elsewhere in the classification system. | New sector. Household industry moved from Special industries. |
| Public administration (NAICS 92) | Final uses (part) | Establishments of federal, state, and local government agencies that administer, oversee, and manage public programs. | None. |
| $\ldots . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . ~$ | Special industries ${ }^{2}$ | Special industries include industries for government enterprises, general government, noncomparable imports, scrap and used goods, rest of the world, and inventory valuation adjustment. | Household industry moved to Other services. |

1. The use of data that are classified by activity rather than by industry to derive estimates for the agriculture and construction industries, and the inclusion of all real estate rental receipts in the real estate industry regardless of the industry that receives them, reflect inconsistencies with the production-based orientation of NAICS
2. I-O special industries are incorporated to maintain consistency with economic concepts underlying the national income and product accounts. The general government industry is defined by BEA as consisting solely of compensation and consumption of fixed capital.

## Errata: U.S. International Services

Tables 4.1, 4.2, 4.3, and 4.4. in the article "U.S. International Services: Cross-Border Trade in 2000 and Sales Through Affiliates in 1999" in the November 2001 Survey of Current Business contained errors. In each of these tables, the column headings "Books, records, and tapes" and "Broadcasting and recording of live events" were switched. The tables with the corrected column headings follow.

# Subject Guide 

Volume 81 (2001)

#### Abstract

This guide lists the major items that were published in the Surver of Current Business in the January-December 2001 issues. It gives the month of the issue and the beginning page number, and it includes selected boxes that are cited by title and page number.

## General

BEA's Preliminary Strategic Plan for 2001-2005
\{December, 23\}
Customer Service Report for Fiscal Year 2001 \{September, 22$\}$
Measuring the New Economy \{March, 23\}
The North American Industry Classification System in BEA's Economic Accounts \{May, 7\}
The North American Product Classification System [box, 7]
NAICS Implementation in BEA's Estimates of International Investment [box, 13]
Ruggles and Ruggles-A National Income Accounting Partnership \{April, 14\}
Schedule of BEA News Releases in 2002 \{October, 116 and December, 80\}

## National

## Federal budget estimates

For Fiscal Year 2002 \{May, 14\}
Relation Between Budget and NIPA Estimates [box, 17]
Federal personal income tax liabilities and payments Estimates for 1959-99 \{December, 22\}
Fixed assets and consumer durable goods 1925-2000 \{September, 27\}
Gross domestic product by industry 1998-2000 \{November, 17\} Using the GDP-by-Industry Accounts Estimates [box, 22]

## Input-output accounts

Annual Accounts for 1997 \{January, 9\}
Annual Accounts for 1998 \{December, 41\}
Upcoming Changes in the NAICS-Based 1997 Benchmark Input-Output Accounts \{December, 71\}
Inventories, sales, and inventory-sales ratios for man-
ufacturing and trade
Third Quarter 2000 \{January, 6\}
Fourth Quarter 2000 \{April, 12\} Implementing the North American Industry Classification System [box, 12]
First Quarter 2001 \{June, 20\}

Fourth Quarter 1997 to Second Quarter 2001 \{October, 7\}

## Motor vehicles

In 2000 \{February, 7\}
National income and product accounts (NIPA's)
Annual Revision
Annual Estimates, 1998-2000, and Quarterly Estimates, 1998:I-2001:I \{August, 7\}
Tables \{August, 34\}
Gross Domestic Product and Other Major NIPA Series, 1929-2001:I \{August, 121\}
Newly Available Tables \{September, 24 and October, 10\}
Business Situation
Advance Estimates
Fourth Quarter 2000 \{February, 1\}
First Quarter 2001 \{May, l\}
Second Quarter 2001 \{August, 1\}
Third Quarter 2001 \{November, 1\}
The Terrorist Attacks of September 11th as Reflected in the NIPA's [box, 2]
Preliminary Estimates Fourth Quarter 2000 \{March, 1\}
First Quarter 2001 \{June, 1\}
Second Quarter 2001 \{September, 1\}
Third Quarter 2001 \{December, 1\}
Final Estimates
Third Quarter 2000 \{January, 1\}
Fourth Quarter 2000 \{April, 1\}
First Quarter 2001 \{July, 1\}
Second Quarter 2001 \{October, 1\}
Comparing NIPA Profits with S\&P 500 Profits \{April, $16\}$
Comparison of BEA Estimates of Personal Income and IRS Estimates of Adjusted Gross Income, 1998-99 \{November, 9 \}
Gross Domestic Product and Other Major NIPA Series, 1929-2001:1 \{August, 34\}
Index to the NIPA Tables \{October, 42\}
Note on Profitability of Domestic Nonfinancial Corporations, 1960-2000 \{September, 19\}
Alternative Measures of Rates of Return [box, 20]

Trends in Consumer Spending, 1959-2000 \{March, 15\}
Personal Consumption Expenditures: Definition and Coverage [box, 16]
An Upcoming Change in the NIPA Presentation of Private Inventories by Industry \{June, 22\}
Updated NIPA Tables \{December, 18\}
Updated Summary NIPA Methodologies \{October, 18)

## International

Direct investment positions: Country and industry detail
For 2000 \{July, 16\}
Foreign direct investment in the United States
Detail for Historical-Cost Position and Related Capital and Income Flows, 2000 \{September, 40\}
Errata \{October, 98$\}$
New Investment in 2000 \{June, 27\}
Operations in 1999 \{August, 141\}
International investment position of the United States
Yearend 2000 \{July, 7\}
U.S. direct investment abroad

Detail for Historical-Cost Position and Related Capital and Income Flows, 2000 \{September, 80\}

## U.S. international services

Cross-Border Trade
In Services, 1986-2000 \{October, 94\}
In 2000 and Sales Through Affiliates in 1999
\{November, 49\}
Delivery of Computer Services to Foreign Markets [box, 57]
Changes in the Definition and Classification by Industry of Sales of Services by Foreign Affiliates [box, 58]
Errata \{December, 74\}

## U.S. international transactions

An Ownership-Based Framework of the U.S. Current Account, 1982-98 \{January, 44\}
Quarterly Estimates Third Quarter 2000 \{January, 47\}
Fourth Quarter and Year 2000 \{April, 21\}
First Quarter 2001 \{July, 37\}
Second Quarter 2001 \{October, 65\}
Reconciliation of the U.S.-Canadian Current Account, 1999 and 2000 \{November, 34\}
Revised Estimates for 1989-2000 \{July, 30\}

## Regional

## Gross state product by industry

Estimates for 1992-99 \{August, 159\}

## Local area personal income

Estimates for 1997-99 \{May, 50\}
Alternative Measures of County Employment and Wages [box, 54]

## State personal income

Annual Revision
Estimates for 1998-2000 \{October, 99\}
Availability of State Per Capita Personal Income Estimates [box, 79]
Revised Per Capita Estimates for 1991-2000
\{November, 116\}
Convergence in State Per Capita Personal Income, 1950-99 \{June, 36\}
Personal Income and Per Capita Income by State, 2000 \{May, 24\}
Quarterly Estimates
Third Quarter 2000 \{February, 14\}
First Quarter 2001 \{August, 173\}
Second Quarter 2001 \{November, 97\}

## Schedule of BEA News Releases in 2002

# BEA CURRENT AND HISTORICAL DATA 

## National, International, and Regional Data

This section presents an extensive selection of economic statistics prepared by the Bureau of Economic Analysis (BEA) and a brief selection of collateral statistics prepared by other Government agencies and private organizations. Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights.

BEA's economic statistics are available on three Web sites. BEA's Web site at <www.bea.doc.gov> contains
data, articles, and news releases from the national, industry, international, and regional programs. The Federal Statistical Briefing Room (FSBR) on the White House Web site at <www.whitehouse.gov/fsbr/ esbr.html> provides key economic statistics, including gross domestic product. The Commerce Department's STAT-USA Web site at <www.stat-usa.gov> provides detailed databases and news releases from BEA and from other Federal Government agencies by subscription.

## National Data

## A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on November 30, 2001, and include the "preliminary" estimates for the third quarter of 2001.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly; in most of these tables, annual estimates are also shown.

The news release on gross domestic product is available within minutes of the time of release, and the "Selected NIPA Tables" are available later that day, on BEA's Web site <www.bea.doc.gov> and on STAT-USA's Web site <www.stat-usa.gov>.

The "Selected NIPA Tables" are also available on printouts or diskettes from BEA. To order NIPA subscription products, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666).

NOTE.-Effective with the November 30th release, the estimates of real gross product of nonfinancial corporate business and its components beginning with 1998 were revised to incorporate newly available price deflators; these revisions affected the estimates in NIPA tables 1.16 and 7.15. In addition, the per capita estimates beginning with 1991 were revised to reflect the results of the 2000 Census of Population; these revisions affected the estimates in NIPA tables 2.1, 2.9, and 8.7. For more information, see "Updated NIPA Tables" in this issue.

## S. Summary Tables

Table S.1.-Summary of Percent Change From Preceding Period in Real Gross Domestic Product and Related Measures
[Percent]

|  | 1999 | 2000 | Seasonally adjusted at annual rates |  |  |  |  |

| Structures. | 774.3 | 792.2 | 789.9 | 794.3 | 817.6 | 821.8 | 808.5 |
| Residual ............................... | -10.1 | -17.9 | -19.8 | -18.3 | -8.7 | -2.8 | 7.2 |
| Addenda: |  |  |  |  |  |  |  |
| Motor vehicle output.. | 356.2 | 353.8 | 352.2 | 333.1 | 318.1 | 336.1 | 340.8 |
| Gross domestic product less motor vehicle output........ | 8,502.0 | 8,870.8 | 8,908.5 | 8,969.8 | 9,014.0 | 9,004.9 | 8,975.8 |

1. Estimates for durable goods and nondurable goods for 1997 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS)
NOTE.- Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.
Percent changes from preceding period for gross domestic product and for final sales of domestic product are hown in table 8.1
Chain-type quantity indexes for the series in this table are shown in table 7.17.

## Table 1.6.-Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers <br> [Billions of chained (1996) dollars]

| Gross domestic product. | 8,856.5 | 9,224.0 | 9,260.1 | 9,303.9 | 9,334.5 | 9,341.7 | 9,316.8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Less: Exports of goods and services | 1,034.9 | 1,133.2 | 1.159.3 | 1,147.5 | 1,144.1 | 1,108.3 | 1,055.5 |
| Plus: Imports of goods and | 1,034 | 1,133.2 |  | 1,147.5 | 1,144.1 | 1,108.3 | 1,055.5 |
| services........................... | 1,351.7 | 1,532.3 | 1,570.6 | 1,568.5 | 1,548.6 | 1,515.0 | 1,463.7 |
| Equals: Gross domestic purchases $\qquad$ | 9,154.9 | 9,594.7 | 9,641.5 | 9,694.4 | 9,710.4 | 9,720.4 | 9,699.1 |
| Less: Change in private inventories. | 62.1 | 50.6 | 51.7 | 42.8 | -27.1 | -38.3 | -60.1 |
| Equals: Final sates to domestic purchasers | 9,090.3 | 9,537.7 | 9,582.5 | 9,647.1 | 9,723.8 | 9,743.7 | 9,739.9 |

Note. - Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-doilar estimates are usually not additive.
Percent changes from preceding period for selected series in this table are shown in table 8.1.
Chain-type quantity indexes for selected series in this table are shown in table 7.2.

1. Effective with this release, the estimates of chained-dollar gross product of nonfinancial corporate business beginning with 1998 are revised to reflect revisions to the gross product price indexes for nonfinancial industries. 2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product 3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital

## 2. Personal Income and Outlays

Table 2.1.-Personal Income and Its Disposition
[Billions of dollars]

1. Consists of aid to families with dependent children and, beginning with 1996, assistance programs operating
2. Equals disposable personal income deflated by the implicit price deflator for personal consumption expendi-
tures.
NOTE. - Percent changes from preceding period for disposable personal income are shown in table 8.1. Note. Effective with this release, the estimates of population beginning with 1991 are revised to reflect the 2000 population count that was released in March 2001 by the Bureau of the Census.

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

NOTE.- Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usual not adoitive. The residual ine is the difference between the first line and the sum
Chain-type quantity indexes for the series in this table are shown in table 7.4 .
Contributions to the percent change in real personal consumption expenditures are shown in table 83

Table 3.7.-Government Consumption Expenditures and Gross Investment by Type
[Billions of dollars]

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.
3. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as invesiment in structures and in software. The compensation of all general government employees is shown in the addenda.
4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets

NOTE. - Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula tor the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines excluding the lines in the addenda.
Chain-type quantity indexes for the series in this table are shown in table 7.11
Contributions to percent change in real government consumption expenditures and gross investment are shown in table 8.6.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transterred to foreign countries.
3. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as investment in structures and in software. The compensation of all general government employees is shown in the addendam.
4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

NoTE-- Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, Chain-tyoe indexes for the series

| 1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services. <br> 2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods. |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

Table 4.4.-Real Exports and Imports of Goods and Services by Type of Product

Because of rapid changes in rejative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component.
Note.- Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula tor the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usualiy not additive. For exports and for imports, the residual line is the difference between the aggregate line and the um of the most detalled lines
equantity indexes for the series in this table are shown in table 7.10
Contributions to the percent change in real exports and in real imports of goods and services are shown in table
See footnotes to table 4.3

1. Includes new computers and peripheral equipment only. Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative mportance of this component; accurate estimates of these contributions are shown in table 8.4.
2. Excludes software "embedded," or bundled, in computers and other equipment.

NOTE. - Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines
Chain-type quantity indexes for the series in this table are shown in table 7.6.
Contributions to the percent change in real private fixed investment are shown in table 8.4.

1. This series is derived from the Census Bureau series "current cost inventories."
2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business ncomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that
deriying busimess income derived primarily from niternal Revenue Service statistics.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in the private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. in sated at annual rates.
2. Quarterly totals at monthly rates. Finat sales of domestic business equals final sales of domestic product final sales by farm and by government enterprises
Note.- Estimates in this table are based on the North American Industry Classification System (NAICS).

| Ratios of private inventories to final sales of domestic business: |  |  |  |  |  |
| Private inventories to final sales. | 2.28 | 2.29 | 2.25 | 2.24 | 2.22 |
| Nonfarm inventories to final sales ......... | 2.12 | 2.13 | 2.09 | 2.08 | 2.06 |
| Nonfarm inventories to tinal sales of goods and structures. | 3.72 | 3.75 | 3.68 | 3.67 | 3.66 |

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.
2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.
NoTE- E Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (1996) dollar inventory series are calculated to ensure that the chained (1996) dollar change in inventories for -yag equals the curren--dollar change e in inventories tor ig96 and that the average of the 1995 and 9960 lated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories.
3. Income and Employment by Industry

Table 6.1C.-National Income Without Capital Consumption Adjustment by Industry Group

NoTE.-Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal fied from goods to services.

Table 7.11.-Chain-Type Quantity and Price Indexes for Government Consumption Expenditures and Gross Investment by Type
[Index numbers, 1996=100]

1. Gross government investment consists of general government and government enterprise expenditures for
ixed assets; inventory investment is included in government consumption expenditures
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for
3. 
4. Compensation of government employees engaged in new own-account investment and related expendi-
tures for goods and services are classified as investment in structures and in software. The compensation of all general government employees is shown in the addenda.
5. Corlal measure of the value of the services of general iovern in government consumption expenditures as a e services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

| Imports of services ' .................... | . 18 | 1.94 | 2.53 | . 01 | . 74 | -. 28 | -4.90 |

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federai Government, are included in services. Beginning with 1986, repairs and alterations of equipment were reclassified from goods to services.
NOTE. - The quantity indexes on which the estimates in this table are based are shown in table 7.10. The estimates in this table differ from those in table 8.2 because this table shows contributions to real exports and to real inports, whereas table 8.2 shows contrburins to real gross domestic product. Because imports are subtracted in the caiculation of gross domestic product, the contributions of components of real imports have opposite signs

Table 8.6.-Contributions to Percent Change in Real Government Consumption Expenditures and Gross Investment by Type

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures. goods transferred to foreign countries by the Federal Government.
2. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as investment in structures and in software.
3. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a dero net return on these assets.
mates in this table differ from those in table 8.2 because this table shows contributions to real government consumption expenditures and gross investment, whereas table 8.2 shows contributions to real gross domestic product.

1. Except for exports and imports, consists of new trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States. 3. Consists of personal consumption expenditures, private fixed investment, and gross government invest ment.
NOTE.- Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.
Chain-type quantity indexes for the series in this table are shown in table 7.18B.

## Annual Estimates

Except as noted for table B. 3 below, these tables are derived from the NIPA tables that were published in the August and September 2001 issues of the Survey of Current Business, and the estimates reflect the most recent comprehensive and annual NIPA revisions.

Table B.3.-Gross Domestic Product by Industry, Current-Dollar and Real Estimates for 1998-2000

1. The current-dollar statistical discrepancy equals gross domestic product (GDP) measured as the sum of expenditures less gross domestic income-hat is, GDP measured as the costs incurred and profits earned in domestic production. The chained (1996) dollar statistical oiscrepancy equals the current-doliar statistical discrepancy deflated by the impricit price deflator for gross domestic business product.
detailed industries. The value of not allocated by industry reflects the nonadditivity of chaine
and the differences in source data used to estimate real GDP by industry and the expenditures measure of real and the
GDP.
Note
Note.-Estimates are based on the 1987 Standard Industrial Classification. The table is derived from tables 1 and 6 in "Gross Domestic Product by Industry for 1998-2000" in the November 2001 SuRVEY.
This table corrects errors in the current-dollar estimates for total "Services" for 1998-2000 that were in table 1.

Table B.4.-Personal Consumption Expenditures by Type of Expenditure

\end{tabular}

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for their own use.
2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes.
3. Consists of hotels and motetis, buildings used primarily for social and recreational activities, and buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.
4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields. 5. Consists primarily of dormitories and of fraternity and sorority houses.

Note--Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Equals personal consumption expenditures for housing less expenditures for other housing as shown in
table B.4. table B. 4 .

Note.-Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-doliar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

## Table B.12.-Net Stock of Private Fixed Assets; Equipment, Software, and Structures; by Type

## 1. Excludes software "embedded" or bundied in computers and other equipment.

2. Consists of office buildings, except those occupied by electric and gas utility companies,
3. Consists primarily of stores, restaurants, garages, service stations, warehouses, and other buildings used for commercial purposes.
4. Consists of buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals. 5. Consists primarily of streets, dams, reservoirs, sewer and water tacilities, parks, and airfields.

## C. Historical Measures

This table is derived from the "GDP and Other Major NIPA Series" tables that were published in the August 2001 issue of the Survey of Current Business and from the "Selected NIPA Tables" that are published in this issue. (Changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1.-GDP and Other Major NIPA Aggregates
[Quarterly estimates are seasonally adjusted at annual rates]

| Year and quarter | Billions of chained (1996) dollars |  |  | Percent change from preceding period |  | Chain-type price indexes |  | Implicit price deflators |  | Percent change from preceding period |  |  |  |

## F. Transactions Tables

Table F. 1 includes the most recent estimates of U.S. international trade in goods and services; the estimates were released on November 20, 2001, and include "preliminary" estimates for September 2001 and "revised" estimates for August 2001. The sources for the other tables in this section are as noted.

## ${ }^{p}$ Preliminary

Revised
Stes: cansit+ Exports of goods and services and income receipts; unilateral current transfers to the United ties) or decrease in U.S. owned assets (U.S. claims)
Debits, --: Imports of goods and services and income payments; unilateral current transters to foreigners; capital accounts transactions payments; financial outflows-decrease in foreign-owned assets (U.S. liabiitites) or increase in U.S.-owned assets (U.S. claims.)
2. Excludes exports of goods under U.S. military agency sales contracts identitied in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of
payments basis; see table 2 in "U.S. International Transactions, Second Quarter 2001" in the October 2001 sSue of the SURVEY OF CURRENT BUSINESS.
3. Includes some goods: Mainly military equipment in line 4; major equipment, other materials, supplies, and steamship operators in lines 8 and 25
4. Includes transfers of goods and services under U.S. military grant programs.
5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign aftimates and to molude U.S. aftiliates' receipts from toreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

Table F.3.-U.S. International Transactions, by Area
[Millions of dollars]

6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to 7 At the present time all U.S. Treasury-owned gold is held in the United States.
7. At the present time, all U.S. Treasury-owned gold is held in the United States.
8. Includes sales of foreign obligations to foreigners.
. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and noncon-
10. Consists of U.S. Treasury and Export-import Bank obligations, not included elsewhere, and of debt secu-
rities of U.S. Government corporations and agencies.
in. Includes, primarily, U.S. Government iiabilifies associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 4 in "U.S. International Transactions, 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.

Table F.3.-U.S. International Transactions, by Area-Continued
[Millions of dollars]

13. Conceptually, line 76 is equal to "net foreign investment" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in
reconciliation table 2 in appendix $A$ in this issue. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5B of the full set of NIPA tables published annually in the August issue of the SuRvEY.
14. The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finiand, and Sweden

Table F.3-U.S. International Transactions, by Area-Continued
[Millions of dollars]

15. The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank
10. The in international shipping in operating oil and as drilling equipment internationally and in petroliates trading. Also includes taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; small transactions in business services that are not reported by country; and net U.S. currency flows, for

Suppressed to avoid disclosure of data of individual companies. an Industry Classification System Prior to 1997 , the affiliate data were classified using an industry classitic tion system based on the Standard Industrial Classification system.
NoTes.-The data in this table are trom BEA's annual survey of the operations of U.S. affiliates of foreign
companies: see "U.S. Affiliates of Foreign Companies: Operations in 1999" in the August 2001 issue of the URyEy of Current Business.
Size ranges are given in employment cells that are suppressed. The size ranges are: A-t to 499; F-500 to 99; G-1,000 to 2,499; H-2,500 to 4,999; $-5,000$ to 9,999 ; J $-10,000$ to 24,999; K-25,000 to 49,999 L-50,000 to 99,999; $\mathbf{M}-100,000$ or more.

## H. International Perspectives

Quarterly data in this table are shown in the middle month of the quarter.

Table H.1.-International Perspectives

1. All exchange rates are from the Board of Governors of the Federal Reserve System.
2. Rates for selected euro-area currencies can be derived by using the following conversion rates: 1 euro $=$ 3 The rate shown for the United States is an index of the weighted ave
the U.S. dollar against the currencies of a broad aroup of maior US average of the foreign exchange value of more information on the exchange rate indexes. see "New Summary Measures of the Foreign Exchange Value of the Dollar." Federal Reserve Bulletin, vol. 84 (October 1998), pp. 811-18.

NoTE.-U.S. interest rates, unemployment rates, and GDP growth rates are from the Federal Reserve, the
 both of which have been rebased to 1995 to facilitate comparison) are © OECD and are reproduced with permission.

## J. State and Regional Tables

The tables in this section include the most recent estimates of State personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual State personal income estimates and the gross state product estimates are available on CD-ROM. For information on State personal income, e-mail reis.remd@bea.doc.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross state product, e-mail gspread@bea.doc.gov; write to the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

Table J.1.-Personal Income by State and Region
[Millions of dollars, seasonally adjusted at annual rates]

| 1. Per capita personal income was computed using midyear population estimates. The Census Bureau has not yet released intercensal population estimates that incorporate the results of the 2000 Decennial Census. BEA converted the April 1, 2000, Census Bureau population counts to a midyear 2000 basis and derived an interim set of population estimates for 1991-99 that are consistent with 1990 and 2000 population data. <br> 2. Percent change was catculated from unrounded data. |  |  |  |  |  | Note.--The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the of the availability of |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  | source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. |  |  |  |  |  |  |  |  |

| 1. Per capita disposable personal income was computed using midyear population estimates. The Census Bureau has not yet released intercensal population estimates that incorporate the results of the 2000 Decennial Census. BEA converted the April 1, 2000, Census Bureau population counts to a midyear 2000 basis and derived an interim set of population estimates for 1991-99 that are consistent with 1990 and 2000 population data. |  |  |  |  |  | Note.--The personal income level shown for the United States is derived as the sum of the State estimates It differs from the estimate of personal income in the national income and product accounts (NIPA's) becauseof differences in coverage in the methodologies used to prepare the estimates, and in the timing of the availof differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the avail-ability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earningsof Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily |  |  |  |  |  |  |  |  |

NOTE--Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP is derived from gross domesic income, which difiers from GDP by the statispersonnel stationed abroad and government consumption of fixed capital for military structures located abroad and
for military equipment, except office equipment. Also, GSP and GDP have different revision schedules.
Source: This table has been updated to reflect the GSP estimates for 1999, which were released on June 4, 2001. Detailed estimates are available on BEA's Web site at <www.bea.doc.gov> under "State and local area data."

1. Per capita personal income was computed using Census Bureau midyear population estimates. Estimates for 1997-99 reflect county population estimates available as of March 2000
Ififers from the estimate of personal income in the national income and product sum of the county estimates. It ferences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the eamings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S.
firms.
2. Includes Metropolitan Statistical Areas, Primary Metropolitan Statistical Areas (PMSA's designated by ${ }^{\text {* }}$ ), anc New England County Metropolitan Areas (NECMA's). The New Haven-Bridgeport-Stamford-Danbury-Waterbury, CT Source Table 1 in "Local Area Personal Income 1997-99"

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP in 1997-98 uses prices for 1997 and 1998 as weights, and the 1997-98 annual percent change in the GDP price index uses quantities for 1997 and 1998 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. ${ }^{1}$ These annual changes are "chained" (multiplied) together to form time series of quantity and price; the percent changes that are calculated from these time series are not affected by the choice of reference period.

The quarterly changes in quantities and prices are calculated with weights from two adjacent quarters. As part of an annual or comprehensive revision, the quarterly indexes through the most recent complete year are adjusted to ensure that the average of the quarterly indexes conforms to the corresponding annual index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1996) dollar estimates." These estimates are computed by multiplying the 1996 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled $\$ 100$ in 1996 and if real output for this component

[^23]increased by 10 percent in 1997, then the "chained (1996) dollar" value of this component in 1997 would be $\$ 110(\$ 100 \times 1.10)$. Note that percentage changes in the chained (1996) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1996) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A "residual" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. Accurate measures of component contributions to the percentage changes in real GDP and its major components are shown in NIPA tables 8.2-8.6.

BEA also publishes the "implicit price deflator" (IPD), which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100 ; the values of the IPD and of the corresponding "chain-type" price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths-for example, quarters and years-may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these changes requires a variant of the compound interest formula:

$$
r=\left[\left(\frac{x_{t}}{x_{o}}\right)^{m / n}-1\right] \times 100
$$

where $r$ is the percent change at an annual rate; $x_{t}$ is the level of activity in the later period; $x_{0}$ is the level of activity in the earlier period; $m$ is the periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and $n$ is the number of periods between the earlier and later periods (that is, $t-o$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year-for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

## Reconciliation Tables

Table 1.-Reconciliation of Changes in BEA-Derived Compensation Per Hour with BLS Average Hourly Earnings
[Percent change from preceding period]

|  | 1999 | 2000 | Seasonally adjusted at annual rates |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 2000 |  |  | 2001 |  |  |
|  |  |  | 11 | III | IV | 1 | 11 | 1319 |
| BEA-derived compensation per hour of all persons in the nonfarm business sector (less housing) $\qquad$ | 4.4 | 6.1 | 7.6 | 7.1 | 8.9 | 5.1 | 4.8 | 4.1 |
| Less: Contribution of supplements to wages and salaries per hour ............................................. | -0.3 | -0.3 | -0.3 | -0.2 | -0.4 | -0.3 | -0.1 | 0.0 |
| Plus: Contribution of wages and salaries per hour of persons in housing and in nonprofit institutions $\qquad$ | 0.0 | -0.1 | $-0.3$ | -0.3 | -0.6 | -0.1 | -0.1 | 0.1 |
| Less: Contribution of wages and salaries per hour of persons in government enterprises, unpaid family workers, and self-employed | -0. 4 | -0.1 | -0.1 | -0.1 | -0.3 | 0.1 | -0.1 | $-0.1$ |
| Equals: BEA-derived wages and salaries per hour of all employees in the private nonfarm sector | 4.7 | 6.4 | 7.7 | 7.2 | 9.0 | 5.2 | 4.9 | 4.3 |
| Less: Contribution of wages and salaries per hour of nonproduction workers in manufacturing $\qquad$ | 0.2 | 0.0 | 0.6 | 0.8 | 1.0 | 0.2 | 0.6 | 0.4 |
| Less: Other differences ${ }^{2}$.................................................................................................. | 0.9 | 2.5 | 3.3 | 2.7 | 3.0 | 1.0 | 0.0 | -0.1 |
| Equals: BLS average hourly earnings of production or nonsupervisory workers on privale nonfarm payrolls | 3.6 | 3.8 | 3.8 | 3.7 | 5.0 | 4.0 | 4.3 | 4.1 |
| Addendum: <br> BLS estimates of compensation per hour in the nonfarm business sector ${ }^{3}$ $\qquad$ | 4.4 | 6.1 | 7.6 | 7.1 | 8.9 | 5.1 | 4.8 | 4.5 |

${ }^{\rho}$ Preliminary.

1. Includes BLS data on compensation and hours of nonfarm proprietors and hours worked of
unpaid family workers.
2. Includes BEA use of non-BLS data and differences in detailed weighting. Annuai estimates also include differences in BEA and BLS benchmark procedures; quarterly estimates aiso include
diferences in seasonal adjustment procedures. 3. These estimates differ from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing.
BLS Bureau of Labor Statistics.

[^24]
## Appendix B

## Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, regional, and international accounts.

## National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product), the estimates of wealth and related estimates, gross product by industry, the inputoutput accounts, and the satellite accounts.

National income and product accounts (NIPA's). This series of papers documents the conceptual framework of the NIPA's and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting
(1985) [also in the March 1985 Survey]

Corporate Profits: Profits Before Tax, Profits Tax
Liability, and Dividends (1985)
Foreign Transactions (1987)
GNP: An Overview of Source Data and Estimating Methods (1987)
Government Transactions (1988)
Personal Consumption Expenditures (1990)
The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPA's. For more information, see the following.

National Income and Product Accounts of the United States, 1929-97 (2001) provides the definitions of the major NIPA aggregates and components, discusses the measures of real output and prices, explains how production is classified and how the NIPA's are presented, describes the statistical conventions that are used, and
lists the principal source data and methods that are used to prepare the estimates of gross domestic product (GDP).

Information about the sources and methods that are used to prepare the national estimates of personal income, which are the basis for the State estimates, is in State Personal Income, 1929-97 (1999).

In addition, see the following articles in the Survey.
"Updated Summary NIPA Methodologies" (October 2001) briefly describes the principal source data and methods used to prepare the current-dollar and real estimates of GDP.
"Annual Revision of the National Income and Product Accounts" (August 2001).
"BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" (May 1997) is the most recent in a series of articles that describe the conceptual basis for the chain-type measures of real output and prices that are used in the NIPA's.
"Reliability of the Quarterly and Annual Estimates of GDP and Gross Domestic Income" (December 1998) evaluates these estimates by examining the record of revisions to them.
Wealth and related estimates. Fixed Reproducible Tangible Wealth in the United States, 1925-94 (1999) discusses the concepts and statistical considerations that underlie the estimates and their derivation.
"Fixed Assets and Consumer Durable Goods for 1925-98" (April 2000) describes the definitional and statistical improvements that were incorporated in the comprehensive revision of the estimates.

Gross product by industry. "Improved Estimates of Gross Product by Industry for 1947-98" (June 2000)

## Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.doc.gov>. See also "BEA's Preliminary Strategic Plan for 2001-2005" in the December 2001 issue of the Survey of Current Business.
describes the most recent comprehensive revision of these estimates.
"Gross Domestic Product by Industry for 19982000 " (November 2001) describes the most recent annual revision of the these estimates.

Input-output accounts. "Benchmark Input-Output Accounts for the U.S. Economy, 1992" (November 1997) describes the preparation of the 1992 accounts and the concepts and methods that underlie the accounts.
"Annual Input-Output Accounts of the U.S. Economy" presents annual tables that update the 1992 benchmark accounts

For 1996 (January 2000)
For 1997 (January 2001)
For 1998 (December 2001)
Satellite accounts. These accounts extend the analytical capacity of the national accounts by focusing on one aspect of economic activity.
"Integrated Economic and Environmental Satellite Accounts" and "Accounting for Mineral Resources: Issues and BEA's Initial Estimates" (April 1994)
"A Satellite Account for Research and Development" (November 1994)
"U.S. Transportation Satellite Accounts"
For 1992 (April 1998)
For 1996 (May 2000)
"U.S. Travel and Tourism Satellite Accounts" For 1992 (July 1998)
For 1996 and 1997 (July 2000)

## International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITA's). The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITA's and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITA's.
"U.S. International Transactions, Revised Estimates" is a series of articles about the annual ITA revisions and the improvements in methodology; the latest article is published in the July 2001 Survey.

Direct investment. International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

The "Methodology for U.S. Direct Investment
Abroad," which is also available in U.S. Direct

Investment Abroad: 1994 Benchmark Survey, Final Results (1998)
"A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 Survey
"A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 Survey
In addition, the updated methodology for foreign direct investment in the United States is available in Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey (2001)

International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

## Regional accounts

The regional accounts include estimates of personal income and gross state product.

Personal income. Estimates of personal income are prepared for States and for local areas.
"Comprehensive Revision of State Personal Income for 1969-99" (June 2000) summarizes the changes in the methodology that is used to prepare the estimates. The detailed methodology is available on the CD-ROM State Personal Income, 1929-99.
"Comprehensive Revision of Local Area Personal Income for 1969-98" (July 2000) summarizes the changes in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD-ROM Regional Economic Information System, 1969-99.

Gross state product. "Comprehensive Revision of Gross State Product by Industry, 1977-94" (June 1997 Survey) summarizes the sources and the methods that are used to prepare the estimates. "Gross State Product by Industry, 1977-98" (October 2000) describes the most recent comprehensive revision of these estimates.

## Availability

Most of the items listed here are available on our Web site at <www.bea.doc.gov>; in particular, look under Methodologies. Our online Catalog of Products provides descriptions of both our printed and electronic publications. The Catalog also includes links to compressed files of our diskette products that can be downloaded for free.

For specific information about the availability of our most recently released estimates and products, see "Getting BEA's Estimates" on the inside back cover. U.S. GOVERNMENT PRINTING OFFICE

## Schedule of Upcoming BEA News Releases

| U.S. International Transactions, 3rd quarter 2001 | Dec. 12 | 8:30 a.m. |
| :---: | :---: | :---: |
| Annual Input-Output Accounts, 1998 | Dec. 13 | 10:00 a.m. |
| U.S. International Trade in Goods and Services, October 2001* | Dec. 19 | 8:30 a.m. |
| Gross Domestic Product, 3rd quarter 2001 (final) and |  |  |
| Corporate Profits, 3rd quarter 2001 (revised) | Dec. 21 | 8:30 a.m. |
| Personal Income and Outlays, November 2001 | Dec. 21 | 10:00 a.m. |
| U.S. International Trade in Goods and Services, November 2001* | Jan. 18 | 8:30 a.m. |
| State Personal Income, 3rd quarter 2001. | Jan. 24 | 9:00 a.m. |
| Gross Domestic Product, 4th quarter 2001 (advance) | Jan. 30 | 8:30 a.m. |
| Personal Income and Outlays, December 2001 | Jan. 31 | 8:30 a.m. |
| U.S. International Trade in Goods and Services, December 2001* | Feb. 21 | 8:30 a.m. |
| Gross Domestic Product, 4th quarter 2001 (preliminary) | Feb. 28 | 8:30 a.m. |
| Personal Income and Outlays, January 2002 | Mar. 1 | 8:30 a.m. |
| U.S. International Transactions, 4th quarter 2001. | Mar. 14 | 8:30 a.m. |
| U.S. International Trade in Goods and Services, January 2002*. | Mar. 19 | 8:30 a.m. |
| Gross Domestic Product, 4th quarter 2001 (final) and |  |  |
| Corporate Profits, 4th quarter 2001 (revised) ............. | Mar. 28 | 8:30 a.m. |
| Personal Income and Outlays, February 2002 | Mar. 29 | 8:30 a.m. |

* Joint release by the Bureau of the Census and the Bureau of Economic Analysis (BEA)

For more information, call BEA at 202-606-9900, or go to our Web site at www.bea.doc.gov

[^0]:    1. Quarterly estimates in the NIPA's are expressed at seasonally adjusted annual rates. Quarter-to-quarter dollar changes are the differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data unless otherwise specified.
    Real estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters; real estimates are expressed both as index numbers ( $1996=100$ ) and as chained (1996) dollars. Price indexes ( $1996=100$ ) are also calculated using a chain-type Fisher formula.
    2. The source data underlying the revision to GDP and its components are discussed in the section "Revisions."
[^1]:    U.S. Bureau of Economic Analysis

[^2]:    3. In the NIPA's, consumer spending is shown as personal consumption expenditures, government spending is shown as government consumption expenditures and gross investment, and inventory investment is shown as change in private inventories.
[^3]:    US. Bureau of Economic Analysis

[^4]:    9. See the box "The Terrorist Attacks of September 11th as Reflected in the National Income and Product Accounts," Survey Of Clrrent Besiness 81 (November 2001): 2-3.
    
[^5]:    10. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown in NIPA tables 1.9, 1.14, 1.16, and 6.16C (see "Selected NIPA Tables," which begins on page $\mathrm{D}-2$ ) as corporate profits with inventory valuation and capital consumption adjustments.

    Percent changes in profits are shown at quarterly, not annual, rates.

[^6]:    13. Net saving equals gross saving less consumption of fixed capital (CFC). The estimates of gross saving, CFC, and net saving are shown in NIPA table 5.1. For NIPA estimates of government current receipts, current expenditures, and the current surplus or deficit for 1999 and 2000, see NIPA tables 3.1, 3.2, and 3.3 in this issue.
[^7]:    14. In the NIPA's, subsidies other than agricultural subsidies are recorded on an accrual basis.
[^8]:    15. For NIPA estimates of government gross investment, see NIPA table 3.7 in this issue.
[^9]:    4. Services' share of economic activity varies depending on the definitions used. For example, I-O services commodities as a percentage of final uses rose from 72 percent in 1992 to 73 percent in 1998; in contrast, services as a share of GDP declined from 54 percent to 53 percent. The differences in the level are largely attributable to wholesale and retail trade; in the supply-oriented I-O commodity classification system, wholesale-retail trade is considered a service, but from the perspective of final users, these services are included in the value of goods purchased. The difference in the direction of movement was due not only to wholesale-retail trade but also to eating and drinking places and to computer and data processing services, including own-account sofiware, which is treated as services in the I-O commodity classification system but as consumer and investment goods in final demand.
[^10]:    Note. - The backward linkage for a commodity represents the total output required from all industries to supply $\$ 1$ of final demand for that commodity

[^11]:    Note. -The backward linkage for a commodity represents the total output required from all industries to supply $\$ 1$ of final demand for that commodity.

[^12]:    1. For BEA's schedule, see John R. Kort, "The North American Industry Classification System in BEA's Economic Accounts," Survey of Current Business 81 (May 2001): 7. For details about the differences between the 1987 Standard Industrial Classification system and the 1997 NAICS, see the Census Bureau's Web site at <www.census.gov>.
    2. For the current I-O classification of industries, see the appendix table in the article "Annual Input-Output Accounts of the U.S. Economy, 1998" in this issue.

    Note.-This note was written by Karen J. Horowitz and Stephanie H. McCulla.

[^13]:    3. Goods-producing auxiliaries have always been classified with similar industries.
[^14]:    4. BEA's industry statistics generally use data that are collected on an establishment basis and tabulated according to NAICS. BEA's international accounts use data collected on an enterprise, or company, basis and therefore use an industry classification scheme that is based on, but is less detailed than, NAICS. 5. See the box "Alternative I-O Tables" in Benchmark Input-Output Accounts of the United States, 1992 (Washington, DC: U.S. Government Printing Office, September 1998): M-6.
[^15]:    6. Additionally, the relationships are not released when proprietary information about the industry would be revealed.
    7. Most establishments produce more than one product, and the establishment is classified on the basis of its primary product at a given point in time. Thus, the data provide a snapshot of the establishment in 1997, but they do not provide information about any changes in its product mix and its technology or about the introduction of new products (or new establishments) in the years before (or after) the census. If an establishment produced only one product, a consistent time series might be constructed by simply reclassifying the establish ment's product and industry to the corresponding NAICS basis.
[^16]:    1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.
[^17]:    1. Except for exports and imports, consists of new trucks only.
[^18]:    1. Equals the number of full-time equivalent employees plus the number of self-employed persons. Unpaid tamily workers are not included.
    2. Reflects the reclassification of air couriers from trucking and warehousing to transportation by air. 3. Consists of museums, botanical and zoological gardens; engineering and management services; and services, not elsewhere classified.
[^19]:    See footnotes at the end of the table

[^20]:    Sources:

    1. Bureau of Labor Statistics
    2. Federal Reserve Board
[^21]:    which geographic source data are not available.
    7. Details not shown separately; see totals in lines 56 and 63 .

    NoTe - The data
    Note.- The data in tables F. 2 and F. 3 are from tables 1 and 10 in "U.S. International Transactions, Second Quatreation in the October 2001 issue of the SURVEV, which presents the most recent estimates from the U.S international transactions accounts.

[^22]:    ability of source data in particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

    Income by State, Second Quarter 2001" in the November 2001 issue of the Survey of Current Business.

[^23]:    1. In addition, because the changes in quantities and prices calculated using these weights are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.
[^24]:    1. Consists of statistical revisions in the NIPAs that have not yet been incorporated into the NIPA's (2001:1-2001:1)
