## Special in this issue

19 Benchmark Input-Output Accounts of the United States, 1997
The 1997 benchmark input-output (I-O) accounts present a detailed picture of the interactions among industries that combine to produce the Nation's GDP. A major change introduced in the 1997 I-O accounts is the incorporation of the North American Industry Classification System (NAICS), which provides a new treatment of the service activities of central administrative offices and other types of auxiliaries and a more detailed presentation of the increasingly important service industries. The 1997 accounts feature I-O tables that are more consistent with the GDP-by-industry accounts and the gross state product accounts and with other industry data that are based on NAICS.

## Regular features

1 Business Situation: Preliminary Estimates for the Third Quarter of 2002

Real GDP increased 4.0 percent in the third quarter, according to the "preliminary" estimate, a sizable upward revision from the 3.1-percent increase shown in the "advance" estimate issued last month. However, both estimates indicated that economic growth stepped up from the 1.3-percent increase in the second quarter. Corporate profits decreased 1.8 percent (quarterly rate), about the same decrease as in the two preceding quarters. The current deficit of the Federal Government was unchanged, at $\$ 190.3$ billion, and the current deficit of State and local governments grew to $\$ 51.8$ billion.

## 111 U.S. Multinational Companies: Operations in 2000

The worldwide gross product of U.S. multinational companies increased 8.7 percent in 2000 . The strong growth was evident in the operations of both U.S. parents and their majority-owned foreign affiliates. The growth in the operations of the affiliates was fueled both by expansions of existing affiliates and by acquisitions and establishments of new affiliates. By industry, the strongest growth was in petroleum-related activities. By area, the sharpest increases were in Africa and the Middle East.

## Looking Ahead

Preview of Revised NIPA Estimates. An article that previews the impact of incorporating the 1997 benchmark input-output accounts in the upcoming comprehensive revision of the NIPA's will be published in a forthcoming issue of the Survey. These "preliminary" revised NIPA estimates will not reflect the definitional changes and the other statistical changes that will also be incorporated in the comprehensive revision.

## Business Situation

## Preliminary Estimates for the Third Quarter of 2002

PRELIMINARY estimates of the national income and product accounts (NIPA's) show a bigger step-up in economic growth than was reported in last month's "advance" estimates.

- Real gross domestic product (GDP) increased 4.0 percent in the third quarter of 2002 after increasing 1.3 percent in the second quarter (table 1 and chart 1). ${ }^{1}$ Since the trough in real GDP in the third quarter of last year, growth has averaged 3.2 percent.

[^0]This article was prepared by Daniel Larkins and Raymen G. Labella.

- Gross domestic purchases increased 3.8 percent after increasing 2.6 percent.
Inflation slowed; the price index for gross domestic purchases increased 1.2 percent after increasing 2.3 percent. Real disposable personal income moderated, increasing 2.9 percent after increasing 3.6 percent.

The preliminary estimate of GDP growth is 0.9 percentage point higher than the advance estimate; for gross domestic purchases, the preliminary estimate is

## CHART 1

Real Gross Domestic Product

[^1]0.7 percentage point higher than the advance estimate. ${ }^{2}$

Despite the larger-than-usual revisions, the general picture presented in the preliminary estimates is similar to that in the advance estimates. In both, for example, consumer spending stepped up substantially, and imports (which are subtracted in the calculation of GDP) slowed sharply. ${ }^{3}$ According to the preliminary estimates,

- Consumer spending contributed 2.90 percentage points to third-quarter growth after contributing 1.22 percentage points to second-quarter growth (table 2). Auto and truck purchases surged, mainly in response to aggressive sales-incentive programs that included generous rebates and zero-rate financing.
-The slowdown in imports was sharp. Exports also slowed, but less than half as much as imports. ${ }^{4}$
- Spending by State and local governments turned up, adding 0.30 percentage point to third-quarter growth after subtracting 0.21 percentage point from second-quarter growth. Consumption expenditures increased about the same amount in each quarter, but gross investment increased after decreasing.

2. The source data underlying the revisions to GDP and its components are discussed in the section "Revisions."
3. In this article, "consumer spending" is shorthand for the NIPA series "personal consumption expenditures," "government spending" is shorthand for "government consumption expenditures and gross investment," and "inventory investment" is shorthand for "change in private inventories."
4. Imports of goods and services are included in gross domestic purchases but not in GDP. Exports of goods and services are included in GDP but not in gross domestic purchases.

Norr. More detailed contributions to perment change in real gross domestic product are shown in NIPA table 8.2 . Contributions to percent change in major components oi real gross domestic product
are shown in tables 8.3 through 8.6 .

- Nonresidential investment in equipment and software increased twice as much as in the second quarter. In contrast, nonresidential structures decreased for the fourth quarter in a row.
-The production of goods increased 8.4 percent after increasing 0.4 percent (table 3). The production of services slowed, and the construction of structures decreased, though not as much as in the second quarter.
- Real motor vehicle output increased 37.8 percent after increasing 8.1 percent. GDP less motor vehicle output increased 3.0 percent after increasing 1.0 percent.
- Inventory accumulation picked up, adding 0.45 percentage point to third-quarter GDP growth. In the second quarter, a swing from liquidation to accumulation had added 1.31 percentage points to growth.
- Final sales of domestic product-GDP less inventory investment-increased 3.5 percent after little change.
- Real final sales of computers increased 81.6 per-cent-the biggest increase since early 1995-after being stalled for five quarters. The price index for private fixed investment in computers and peripheral equipment decreased more than in the second quarter and more than it did, on average, over the past 4 years. (However, the recent price decreases were not as large as those registered in the mid-1990s.)
- Personal saving as a percentage of current-dollar disposable personal income decreased to 3.8 percent from 4.0 percent. Gross saving as a percentage of gross national product, which is not available when the advance estimate is prepared, dropped to 15.0 percent from 15.5 percent, continuing its downtrend from a peak of 19.1 percent in the first quarter of 1999.

Table 3. Real Gross Domestic Product by Type of Product
[Seasonally adjusted at annual rates]

or most items are shown in NIPA table 1.4. Detail on motor vehicle output is shown in NIPA table 8.98.

## Personal Consumption Expenditures

Real personal consumption expenditures (PCE) increased 4.1 percent in the third quarter, more than twice as much as in the second (table 4 and chart 2). Purchases of motor vehicles and parts, which surged in response to generous rebates and below-market interest rates for new vehicles, accounted for more than half of the third-quarter increase in PCE. Purchases of nondurable goods increased modestly after little change, and purchases of services slowed somewhat.

Among durable goods excluding motor vehicles, computer equipment (in "furniture and household equipment") increased more than in the second quarter but fell far short of the increases in 1987-2000, which averaged over 40 percent. The "other" category

of durable goods, which includes items as dissimilar as books and motorcycles, increased after little change.

In nondurable goods, purchases of clothing and of fuels and lubricants turned up. "Other" nondurable goods increased more than in the second quarter.

The mild slowdown in services partly reflected a deceleration in hospital services (in "medical care"), a downturn in telephone bills (in "other household operation"), and a downturn in movie admissions (in "recreation").

CHART 2
Real Personal Consumption Expenditures
Percent

U.S. Bureau of Economic Analysis

Factors frequently considered in the analysis of consumer spending were mixed in the third quarter (chart 3). The Index of Consumer Sentiment (prepared by the University of Michigan's Survey Research Center) dropped substantially, but the unemployment rate decreased somewhat, and real disposable personal in-
come (DPI) increased 2.9 percent (and was 3.0 percent
5. From the trough in real GDP in the first quarter of 1991 to the peak in real GDP in the fourth quarter of 2000 , real DPI increased at an average
higher than a year earlier). ${ }^{5}$ annual rate of 3.1 percent.

## Private Fixed Investment

Real private fixed investment changed little in the third quarter after declining for almost 2 years. Nonresidential structures continued to be the main source of weakness; investment in nonresidential equipment and software increased moderately, and residential investment posted another modest increase (table 5 and chart 4).

Nonresidential. Buildings, especially commercial buildings, accounted for most of the third-quarter drop in structures. After declining for seven quarters, investment in commercial buildings is about two-thirds of its level in the fourth quarter of 2000 and is lower than at any time since early 1996. Investment in industrial buildings, which is much smaller than investment in commercial buildings, has fallen even more precipitously: It is less than half of its level in the fourth quarter of 2000 and is lower than at any time since the beginning of the chained (1996) dollar series in 1987.

Information processing equipment increased 14.4 percent in the third quarter, a little more than in the second; computer equipment accounted for more than

[^2] importance of the components cannol be inferred on the
half of the third-quarter increase. Transportation equipment decreased despite a strong increase in mo-tor-vehicle purchases; as in the second quarter, the motor-vehicle increase was more than offset by a sharp drop in aircraft investment, which fell to its lowest level in almost 5 years. In industrial equipment, the up-and-down pattern of recent quarters continued, as a 5.5 -percent increase followed a 7.1 -percent decrease; "special industry machinery" (which includes equipment for manufacturing semiconductors) posted a strong gain in the third quarter.

In recent quarters, conditions that are frequently considered in the analysis of investment spending have been mixed (chart 5). The capacity utilization rate for manufacturing, mining, and utilities remains almost 10 percent below the level reached in the expansion of the 1990 s, but it has increased a little in each of the past three quarters. Domestic corporations' profits from current production are also well below the levels reached in the 1990s, but they are up more than 20 percent from the third quarter of last year. Growth of real final sales of domestic product averaged 2.5

percent over the past four quarters, compared with a 3.4 -percent average over the most recent expansion. Long-term interest rates have trended down, but not dramatically; the rate in the third quarter was 78 basis points lower than a year ago and 133 basis points lower than 2 years ago.

creased 2.1 percent, somewhat less than in the second quarter; it had surged in the first quarter (table 5 and chart 4). Single-family investment increased more than in the second quarter, while "other" structures increased less. The deceleration in "other" structures mainly reflected a downturn in brokers' commissions on home sales.

## Inventory Investment

Real inventories increased more in the third quarter than in the second (table 6 and chart 6 ). The step-up, which contributed 0.45 percentage point to GDP growth in the third quarter, reflected inventory changes in wholesale trade and in manufacturing. ${ }^{6}$

Liquidation of wholesale trade inventories in the second quarter gave way to accumulation in the third quarter. Upturns in the inventories of electrical goods wholesalers and apparel wholesalers were noteworthy, and inventories of machinery equipment wholesalers decreased less than in the second quarter. In contrast, inventories of farm products decreased more than in the second quarter, and inventories of professional and commercial equipment (including computers) wholesalers increased less than in the second quarter.

Inventory liquidation in manufacturing slowed to less than half of its second-quarter pace. Inventories of chemical manufacturers and of fabricated metal product manufacturers increased after decreasing, and inventories of computer manufacturers and of machinery manufacturers decreased less than in the second quarter. These increases in inventory investment were partly offset by inventories of "other" trans-

[^3]
## CHART 6

Real Private Inventory Investment: Change from Preceding Quarter

U.S. Bureau of Economic Analysis
portation equipment (including civilian aircraft) manufacturers, which decreased about twice as much as in the second quarter, and by inventories of food manufacturers, which were virtually unchanged after increasing.

Retail inventories increased less than in the second quarter. Accumulation by motor vehicle dealers slowed sharply; accumulation by clothing stores also slowed. In contrast, inventories of department stores increased in the third quarter after decreasing in the second.

Farm inventories were drawn down in the third quarter after a small increase in the second. Crop inventories more than accounted for the swing.

The ratio of real private nonfarm inventories to final sales of goods and structures decreased to 3.61 from 3.64 (see NIPA table 5.13B). A ratio that includes all final sales of domestic businesses slipped to 2.01 from 2.02. ${ }^{7}$ Both ratios have been trending down since the mid-1970s.
7. Using the ratio that includes all final sales of domestic businesses in the denominator implies that the production of services results in a demand for inventories that is similar to that generated in the production of goods and structures. In contrast, using the "goods and structures" ratio implies that the production of services does not generate demand for inventories. Both implications are extreme. Production of some services may require substantial inventories, while production of other services may not.

## Exports and Imports

Real exports and real imports both slowed substantially in the third quarter (table 7 and charts 7 and 8). The slowdown in imports was much sharper than the slowdown in exports.

Imports of goods increased 4.1 percent after jumping 27.9 percent. All major end-use categories contrib-

[^4]uted to the slowdown. Capital goods, consumer goods, and autos-the three largest categories of importsmade the biggest contributions. Petroleum imports turned down. Industrial supplies and materials weakened slightly. Imports of services decreased 6.1 percent after decreasing 2.1 percent; the larger decrease was

## CHART 7

Real Exports

## Percent

U.S. Bureau of Economic Analysis
mainly accounted for by a downturn in "other transportation."

Exports of goods increased 4.3 percent after increasing 15.9 percent. A downturn in exports of industrial supplies and materials and a slowdown in auto exports
accounted for much of the deceleration. Exports of services increased 1.1 percent after increasing 10.1 percent; "other private services" and royalties and license fees mainly accounted for the slowdown.

## CHART 8

## Real Imports

Percent

## U.S. Bureau of Economic Analysis

## Government Spending

Government spending increased 3.1 percent in the third quarter, about twice as much as in the second (table 8 and chart 9). An upturn in investment by State and local governments more than offset a slight downturn in nondefense spending by the Federal Government.

State and local government spending increased 2.4 percent after decreasing 1.7 percent. Gross investment increased 5.8 percent after decreasing more than twice that much; the upturn mainly reflected spending on road projects. Consumption expenditures increased modestly, as they had in the second quarter.

Spending by the Federal Government slowed. The downturn in nondefense spending mainly reflected a downturn in gross investment in equipment and software; it also reflected a downturn in purchases by the

Commodity Credit Corporation. Defense spending moderated slightly, reflecting a slowdown in expenditures on services.

## CHART 9

Real Government Consumption and Investment

CONTRIBUTIONS TO 3.1-PERCENT INCREASE IN REAL GOVERNMENT CONSUMPTION AND INVESTMENT IN 2002:III

U.S. Bureau of Economic Anatysis

## Prices

The price index for gross domestic purchases increased 1.2 percent in the third quarter, about half as much as in the second. The slowdown was largely accounted for by a moderation in the prices of energy goods and services. Prices of gross domestic purchases less food and energy increased 1.2 percent after increasing 1.5 percent (table 9 and chart 10 ).

Prices of goods and services purchased by consumers increased 1.7 percent after increasing 2.7 percent. Energy prices slowed sharply, mainly reflecting a much smaller increase in the price of gasoline and oil (the average retail price of regular gasoline changed little in the third quarter after increasing almost 25 cents per gallon in the second). Food prices increased less than 1 percent for the second quarter in a row. Prices of other consumer purchases increased 1.8 percent, about the same as in the second quarter.

Prices paid by government increased 1.4 percent, half as much as in the second quarter. Prices slowed

substantially at both the Federal and the State and local levels, partly in response to moderating energy costs.

Prices of residential investment decreased for the first time since early 1992. Prices had been flat in the first quarter of this year and up moderately in the second. In the first three quarters of 2002, prices of residential investment increased at an annual rate of only 0.6 percent.

Prices of private nonresidential fixed investment decreased for the fifth quarter in a row. Prices of equipment and software were mainly responsible for the most recent decrease. A decrease in prices of transportation equipment-the largest in 30 years-mainly reflected a decline in motor vehicle prices. Computer prices decreased more than in the second quarter.

The GDP price index (which, unlike the index for gross domestic purchases, includes the prices of exports and excludes the prices of imports) increased 1.0 percent in the third quarter. Import prices and export prices both increased, but the increase in import prices was somewhat larger than the increase in export prices. The price of imported petroleum increased, though much less than in the second quarter.

## Revisions

The preliminary estimate of a 4.0 -percent increase in real GDP in the third quarter is 0.9 percentage point higher than last month's advance estimate (table 10). In the past 20 years, the average revision, without regard to sign, from the advance estimate to the preliminary estimate was 0.5 percentage point.

An upward revision to inventory investment, which added 0.52 percentage point to real GDP growth, reflected the incorporation of revised Census Bureau data for August and newly available data for Septem-

Nore. The preliminary estimates for the third in-place for July and August (revised) and quarter of 2002 incorporate the following revised September.
or additional major source data that were not avail
able when the advance estimates were prepared. Change in private inventories: Manufacturing Personal consumption expenditures: Retail and trade
sales for August and September (revised), Exports and imports of goods and services: consumers' share of new-car purchases for Exports and imports of goods for August (revised) eptember, average unit value for domestic new and September
autos tor September (revised) local and long. Government
distance telephone revenue for the third quarter gross investment: Monthly Treasury Statement from company reports, and residential electricity detailed data for September, and State and local revenue tor July from the Energy Information government construction put-in-place for Juty and Administration.
Nonresidential fixed investment: Construction Wages and salaries: Employment, average put-in-place for Juky and August (revised) and hourly earnings, and average weekly hours for September, manufacturers' shipments of August and September (revised).
machinery and equipment for August and GDP prices: Detailed merchandise export and ments of complete clvilian aircraft for August import price indexes for July through September (revised) and September. for August (revised) and September and housing Residential fixed investment: Construction put- prices for the third quarter.
ber. Upward revisions were also made to State and local government spending (a 0.14-percentage-point contribution to GDP growth) and to residential investment ( 0.13 percentage point), mainly on the basis of revised data for July and August and newly available data for September from the Census Bureau on the value of construction put in place. Put-in-place data also accounted for a downward revision to nonresidential fixed investment.

## Corporate Profits

Profits from current production decreased $\$ 14.1$ billion ( 1.8 percent at a quarterly rate) in the third quarter after decreasing similar amounts in the first and second quarters (table 11). ${ }^{8}$

As in the previous two quarters, the third-quarter decrease in current-production profits contrasted with an increase in profits before tax (PBT). ${ }^{9}$ In the second and third quarters, the difference between changes in current-production profits and changes in PBT mainly reflected decreases in the capital consumption adjustment; in the first quarter, a decrease in the inventory valuation adjustment was almost as important.

Current-production profits consists of profits of domestic corporations and profits from the rest of the world. ${ }^{10}$ Profits of domestic financial corporations and nonfinancial corporations accounted about equally for the third-quarter decrease in current-production profits; profits from the rest of the world increased slightly.

[^5]The decrease in profits of domestic nonfinancial corporations reflected an increase in unit costs and a decline (the fourth in a row) in unit prices. The real gross product of these corporations increased in the third quarter. ${ }^{11}$

In the financial sector, weakness was widespread. Lower profits were posted by commercial banks, Federal Reserve banks, property and casualty insurance companies, and "other" financial corporations (such as real estate investment trusts and federally sponsored credit agencies).

The small increase in profits from the rest of the world reflected a bigger increase in receipts than in payments.

Cash flow from current production, a profits-related measure of internally generated funds available for investment, decreased $\$ 12.2$ billion, about the same as in the second quarter. ${ }^{12}$ The ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally generated funds, slipped to 86.0 percent from 86.6 percent. (During the expansion of the 1990 s, the ratio averaged 82.2 percent.)

## Government Sector

The combined current deficit of the Federal Government and of State and local governments increased $\$ 6.7$ billion, to $\$ 242.1$ billion, in the third quarter after increasing $\$ 33.8$ billion in the second (table 12). ${ }^{13}$ The third-quarter increase was accounted for by the State and local current deficit, which increased in the third quarter after decreasing in the second. The Federal current deficit was unchanged in the third quarter after increasing in the second.

## Federal

The Federal Government current deficit was unchanged, at $\$ 190.3$ billion, in the third quarter after increasing $\$ 44.5$ billion in the second. Current receipts and current expenditures both turned down.

Current receipts. Federal current receipts decreased $\$ 4.2$ billion in the third quarter after increasing $\$ 4.3$ billion in the second. The downturn was more than accounted for by a deceleration in corporate profits tax accruals and by a larger decrease in personal tax and nontax receipts in the third quarter than in the second. In contrast, indirect business tax and nontax accruals and contributions for social insurance accelerated slightly.

Corporate profits tax accruals increased $\$ 0.9$ billion after increasing $\$ 9.7$ billion. The deceleration reflected the smaller increase in domestic corporate profits before tax.

Personal tax and nontax receipts decreased $\$ 13.8$ billion after decreasing $\$ 12.9$ billion. The larger decrease was accounted for by personal income taxes. Within personal income taxes, nonwithheld income taxes decreased $\$ 12.1$ billion after decreasing $\$ 9.6$ billion. Withheld income taxes decreased $\$ 1.2$ billion after decreasing $\$ 2.8$ billion.

Indirect business tax and nontax accruals increased $\$ 2.5$ billion after increasing $\$ 1.8$ billion. The acceleration primarily reflected an acceleration in custom duties, which increased $\$ 3.0$ billion after increasing $\$ 0.6$ billion. In contrast, excise taxes decelerated, increasing $\$ 0.2$ billion after increasing $\$ 1.5$ billion. Within excise taxes, air transport excise taxes turned down after a second-quarter increase that reflected the Passenger Civil Aviation Security Service Fee, which became effective on February 18, 2002.

Contributions for social insurance increased $\$ 6.1$ billion after increasing $\$ 5.6$ billion. The acceleration was accounted for by contributions for social security (old-age, survivors, disability, and health insurance

[^7]trust funds), which increased $\$ 6.2$ billion after increasing $\$ 5.5$ billion, reflecting an acceleration in wage and salary disbursements.

Current expenditures. Current expenditures decreased $\$ 4.3$ billion in the third quarter after increasing $\$ 48.8$ billion in the second. The downturn was mostly accounted for by downturns in grants-in-aid to State and local governments and in net interest paid, but decelerations in consumption expenditures and in transfer payments and a larger decrease in "subsidies less

1. Net lending or borrowing is conceptually similar to net financial investment in the flow-of-funds accounts prepared by the Board of Governors of the Federal Reserve System. The two measures differ primarity because government net lending or borrowing is estimated from data for transactions, whereas net tinancial investment is estimated from data for financial assets. There are also smail conceptual difite
ment and veterans life insurance programs.
current surplus of government enterprises" also contributed.

Grants-in-aid to State and local governments decreased $\$ 4.6$ billion after increasing $\$ 17.3$ billion. Grants for State Medicaid programs, for education, for natural resources, for central executive, legislative, and judicial activities, and for housing and community services all turned down. Net interest paid decreased $\$ 9.2$ billion after an increase of $\$ 6.4$ billion. Gross interest paid decreased $\$ 7.8$ billion after increasing $\$ 6.3$ billion, primarily reflecting a downturn in interest paid to persons and business.

Consumption expenditures increased $\$ 8.6$ billion after a $\$ 14.7$ billion increase. The deceleration was mostly accounted for by defense consumption expenditures. Within defense consumption expenditures, services decelerated, increasing $\$ 4.5$ billion after a $\$ 9.4$ billion increase. Within services, "other services" (which includes expenditures for research and development, for transportation of materials, for travel of persons, and for other services) increased $\$ 3.2$ billion after a $\$ 7.0$ billion increase. Also within services, compensation of employees decelerated, increasing $\$ 1.1$ billion after a $\$ 2.3$ billion increase. In contrast, durable goods accelerated, increasing $\$ 1.6$ billion after a $\$ 0.2$ billion increase; spending on parts for aircraft, for ships, and for electronics accelerated, and spending on parts for missiles and for other durable goods turned up.

Nondefense consumption expenditures increased $\$ 2.1$ billion after an increase of $\$ 4.4$ billion. The deceleration was mostly accounted for by a downturn in nondurable goods. Within nondurable goods, strategic petroleum reserve purchases turned down, and Commodity Credit Corporation inventory change turned down, decreasing $\$ 0.4$ billion after increasing $\$ 0.5$ billion.
"Subsidies less current surplus of government enterprises" decreased $\$ 6.4$ billion after decreasing $\$ 0.3$ billion. The decrease was more than accounted for by an acceleration in "current surplus of government enterprises." Within "current surplus of government enterprises," the Postal Service current surplus increased $\$ 4.9$ billion after increasing $\$ 0.8$ billion. The acceleration reflected the postal rate increase for all classes of mail that went into effect on June 30, 2002.
"Transfer payments (net)" increased $\$ 7.2$ billion after increasing $\$ 10.7$ billion. Transfer payments to persons decelerated sharply, mostly because of a slowdown in unemployment benefits, which increased $\$ 0.2$ billion after increasing $\$ 15.0$ billion. Transfer payments to the rest of the world changed little after a substantial decrease. The second-quarter decrease followed a first-quarter increase that included a pay-
ment of $\$ 2.4$ billion ( $\$ 9.6$ billion at an annual rate) to Israel for economic support.

## State and local

The State and local government current deficit increased $\$ 6.7$ billion in the third quarter after decreasing $\$ 10.7$ billion in the second. Current receipts decelerated more than current expenditures.

Current receipts. State and local government current receipts increased $\$ 10.7$ billion after increasing $\$ 29.2$ billion. The deceleration was more than accounted for by the downturn in Federal grants-in-aid.

Corporate profits tax accruals decelerated, increasing $\$ 0.2$ billion after increasing $\$ 1.5$ billion.

Indirect business tax and nontax increased $\$ 10.3$ billion after increasing $\$ 7.1$ billion. The acceleration was more than accounted for by sales taxes, which increased $\$ 6.7$ billion after increasing $\$ 3.2$ billion. Law changes in twelve States boosted sales taxes on tobacco products by $\$ 2.3$ billion in the third quarter.

Personal tax and nontax receipts increased $\$ 4.7$ billion after increasing $\$ 3.2$ billion. The acceleration was mostly accounted for by personal income taxes, which increased $\$ 3.8$ billion after increasing $\$ 2.4$ billion, reflecting an acceleration in wages and salary disbursements.

Current expenditures. Current expenditures increased $\$ 17.5$ billion after increasing $\$ 18.5$ billion. The deceleration was more than accounted for by a deceleration in consumption expenditures. In contrast, "subsidies less current surplus of government enterprises" turned up, and transfer payments accelerated.

Consumption expenditures increased $\$ 9.0$ billion after increasing $\$ 12.9$ billion. The deceleration was accounted for by decelerations in nondurable goods, which increased $\$ 2.4$ billion after increasing $\$ 4.9$ billion, and in services, which increased $\$ 6.4$ billion after increasing $\$ 7.8$ billion. Within nondurable goods, petroleum products decelerated, and within services, "other services" turned down.
"Subsidies less current surplus of government enterprises" increased $\$ 0.3$ billion after decreasing $\$ 1.6$ billion. Subsidies increased $\$ 1.1$ billion after decreasing $\$ 0.9$ billion, reflecting an upturn in electricity subsidies by the State of California.

Transfer payments to persons increased $\$ 8.1$ billion after an increase of $\$ 7.3$ billion. The acceleration was mostly accounted for by Medicaid payments.

## Net lending or net borrowing

"Net lending or net borrowing(-)" is an alternative measure of the government fiscal position. Net lending is the financing requirement of the government sector and is derived as the current surplus plus the
consumption of fixed capital and "capital transfers received (net)" less gross investment and net purchases of nonproduced assets. ${ }^{14}$

The government financing requirement continued to deteriorate; net borrowing increased $\$ 4.0$ billion in the third quarter after increasing $\$ 30.4$ billion in the second. Federal net borrowing decreased $\$ 4.4$ billion
14. Net lending or net borrowing estimates are shown in NIPA tables 3.1-3.3.
as a result of an increase in capital transfers received, reflecting an upturn in estate and gift taxes. State and local net borrowing increased $\$ 8.4$ billion mainly as a result of the increase in the current deficit.

Government gross investment increased $\$ 4.3$ billion after decreasing $\$ 7.2$ billion. The upturn was more than accounted for by State and local government gross investment, mainly by investment in structures, which increased $\$ 3.8$ billion after decreasing $\$ 8.1$ billion.

## Updated NIPA Tables

Estimates in national income and product accounts (NIPA) tables 1.16 and 7.15 have been revised to incorporate newly available information.

For tables 1.16 and 7.15 , the annual estimates of real gross product of nonfinancial corporate business for 1999-2001 and the quarterly estimates for 1999:I-2002:II have been revised to reflect revised estimates of the industry-based price index used for deflation. The use of this index, which typically becomes available about 4
months after the annual revision of the NIPA's, was introduced in the 1999 comprehensive NIPA revision to better reflect the changing industrial composition of this sector and to provide better measures of productivity, costs, and profits per unit of gross product. In table 1.16, the estimates in lines 36 and 38 are revised, and in table 7.15, all estimates through 2002:II are revised.

Tables 1.16 and 7.15 follow.

Table 1.16. Gross Product of Corporate Business in Current Dollars and Gross Product of Nonfinancial Corporate Business in Current and Chained Dollars

Table 1.16. Gross Product of Corporate Business in Current Dollars and Gross Product of Nonfinancial Corporate Business in Current and Chained Dollars-Continued

1. Effective November 26,2002 , the estimates of chained-dollar gross product of nontinancial corporate business bepin-
ning with 1999 have been revised to reflect the 2002 annual revision to the gross product price index for nontinancial indus-
tries.
2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the
chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 .
3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

# Benchmark Input-Output Accounts of the United States, 1997 

By Ann M. Lawson, Kurt S. Bersani, Mahnaz Fahim-Nader, and Jiemin Guo

THIS article presents the 1997 benchmark inputoutput (I-O) accounts, the latest in a series of accounts that provide the most detailed, integrated information available on the structure of the U.S. economy. The I-O accounts-including the detailed once-every-5-year benchmark accounts and the less detailed annual updates-provide an extensive accounting of the production of goods and services by each industry and commodity, which includes the goods and services purchased by each industry, the incomes earned in each industry, and the distribution of sales for each good and service to industries and final users. ${ }^{1}$ They also detail each industry's contribution to gross domestic product (GDP) and to its counterpart gross domestic income (GDI).

These accounts are used by industry analysts to assess such issues as the potential size of direct and indirect sales and the potential sources of growth. Analysts and policymakers can also use the accounts to assess the impact across industries and on consumers of increases in petroleum prices, insurance costs, and taxes. State and local government analysts use them through regional extensions of the I-O framework to assess the impact of base-closings or of major development projects. BEA and other statistical agencies use them to benchmark GDP and other key statistics.

The 1997 benchmark I-O accounts show the flows of 483 commodities to 491 industries and to 13 final uses. Final uses represent expenditures by households, government, and business for consumption or investment. The categories of final uses are personal consumption expenditures (PCE), gross private domestic investment, exports, imports, and government consumption expenditures and gross investment. GDP, which excludes intermediate purchases in order to avoid double counting (for example, of the semiconductors that go into computers or the flour that goes into bread) is by definition equal to the sum of all final

[^8]uses. The I-O accounts show the contribution made by the primary inputs (mainly labor and capital) to the output of each industry.

Value added is the difference between a firm's sales and its intermediate purchases of materials and services from other firms. It is equal to the contributions of capital and labor to the firm's sales as measured by the incomes that they receive. Because value added includes only the firm's own contribution to output, the sum of value added, and of the sum of the incomes earned in production, equals GDI and also GDP.

In 1997, total sales, or the gross output, of U.S. business was $\$ 14.9$ trillion; deducting the $\$ 6.5$ trillion in intermediate purchases yields a GDP of $\$ 8.3$ trillion. On average, intermediate purchases of materials, energy, and all other commodities accounted for 44 cents of each dollar of sales, and value added accounted for the remaining 56 cents (with 31 cents for compensation, 4 cents for indirect business taxes and nontax liabilities, and 20 cents for other value added).

The I-O accounts are the building blocks for other economic accounts, including BEA's national income and product accounts (NIPA's). The impact of the 1997 I-O accounts on the NIPA estimates of GDP expenditure and income components will be presented in a forthcoming issue of the Survey of Current Business.

The major changes introduced in the 1997 benchmark I-O accounts include the following:

- Incorporated the North American Industry Classification System (NAICS), which provides the accounts with a more relevant system for classifying industries, especially for services, than its predecessor Standard Industrial Classification (SIC) system, which originated in the 1930s. As a result, the 1997 benchmark accounts provide greater detail on service industries-including those in the new sector "Information," which accounted for 4.4 percent of total value added.
- Pulled out certain service activities that had formerly been embedded in the statistical data and included them in industries that provide similar types of services. These activities consist of services provided by the central administrative offices and
other types of auxiliaries (such as trucking and legal services) of companies. This new treatment, which is part of the change to NAICS, ensures that the measure of services is independent of changes in company practices for outsourcing to other businesses. In the 1997 benchmark accounts, 3.1 percent of total value added is moved into these industries, mostly from manufacturing and from wholesale and retail trade.
- Presented the 1997 benchmark I-O accounts in a new featured set of "standard" tables that conform closely to the statistical data sources. These tables are more consistent with the GDP-by-industry accounts and the gross state product accounts and with other industry data that are based on information collected using NAICS.
- Adapted the software tool on BEA's Web site so users can interactively select and customize data from the benchmark I-O accounts. As a result, users can easily select, preview, and download data at different levels of aggregation and using different measures of value.
This article is presented in three parts. The first part summarizes the major changes to the 1997 benchmark accounts that result from the conversion from the SIC system to NAICS. The second part describes other major changes in classification, methodology, and presentation that have been introduced. The third part summarizes the methodology used to compile the accounts. A technical note describing the 1997 I-O tables is followed by several appendix tables that provide information on the classification of industries, value added, and final uses and bridge tables that link the 1997 benchmark I-O accounts to the NIPA's.

## NAICS and Its Effects on the 1997 Benchmark I-O Accounts

Unlike the SIC, NAICS classifies industries based on the economic concept of production: Establishments are grouped according to the similarities of their production processes rather than the similarities of their products. ${ }^{2}$ In using the concept of production, NAICSbased classifications are more in line with the principle underlying the I-O classifications: Industries are classified in the I-O accounts so that each industry has a unique production function.

One of the largest differences introduced by NAICS is that auxiliaries are now treated as establishments, classified by their production processes. ${ }^{3}$ In the SIC, the services provided by auxiliaries are measured as ex-

[^9]penses of the industry that uses the auxiliary service. In NAICS, the services that these auxiliaries provide are recognized as output, and the compensation paid to employees, indirect business tax and nontax liability, and depreciation make up the value added of auxiliaries. ${ }^{4}$ The incorporation of NAICS has enabled the 1997 benchmark I-O accounts to provide a better picture of the composition of the increasingly servicesoriented U.S. economy. With this treatment, GDP does not increase; instead, the intermediate purchases and the value added of the auxiliaries are moved from the establishments that use their services to an industry with similar production processes.

A second significant change in NAICS is the additional detail provided for the services sector. NAICS recognizes that the focus of U.S. economic activity has been shifting from goods to services, so that services have been accounting for a greater share of GDP over time. Whereas the 1992 benchmark I-O accounts showed an aggregate sector "Services," NAICS allows for a more detailed breakdown that includes

- Professional and business services,
- Education and health services, and
-Leisure and hospitality services.
A third important change in NAICS is the introduction of the sector "Information." This new sector reflects the new and advanced technologies that play increasingly important roles in the U.S. economy. Thus, the effects of these technologies on the economy are shown together rather than being scattered among manufacturing, services, and communications.

As a result of the NAICS changes, nearly $\$ 200$ billion of value added was shifted from the goods-producing sectors to the services-providing sectors. ${ }^{5}$ Total economic activity itself has not changed, but BEA's measure of services in the economy has improved.

## Treatment of auxiliaries

In the SIC, auxiliaries are classified as being part of the industry that uses their services. ${ }^{6}$ This treatment is best illustrated with an example. A plant that produces soft drinks uses the services of a central administrative office (CAO) that is located outside of the plant; this CAO handles activities such as paying invoices and providing payroll services for the soft drink plant. Under the SIC treatment, the intermediate purchases of

[^10]the CAO are included in the intermediate purchases of the soft drink plant, and the compensation, the indirect business tax and nontax liability, and the depreciation expenses of the auxiliary are reflected in the value added of the soft drink plant.

In NAICS, the services the CAO provides are measured as separate economic activities rather than grouped with the economic activities of the soft drink plant, and the services provided by auxiliaries are now explicitly measured and treated as output. Auxiliary value added, intermediate purchases, and output are grouped with similar industry activity, and the auxiliary services are shown as purchases by the industries served. The important change is that the activities of the auxiliaries are grouped in industries with similar production processes.?

NAICS recognizes a new industry, "Management of companies and enterprises" (NAICS 5511). Most of the establishments in this new industry are CAO's. In addition, the 1997 Economic Census collected data on

[^11]12 types of auxiliaries in services, in transportation and warehousing, and in information. ${ }^{8}$ Most of these other auxiliaries are in "Professional, scientific, and technical services" (NAICS 54) and in "Administrative and support and waste management and remediation services" (NAICS 56).

The Economic Census also provided data for auxiliaries on the SIC-industry-served basis, but these data were only partial. ${ }^{9}$ For comparison, BEA used these data to prepare rough approximations of output, intermediate purchases, and value added on an SIC basis. The approximations used an average of the split between the value added and the intermediate purchases of the three largest auxiliaries to remove the NAICS treatment of auxiliaries. Although rough, these approximations provide a means of gauging the effects of the new treatment at an aggregate level and give an indication of the major shifts that have resulted. The results are discussed below and shown in table A.

## The Input-Output Valuation of Transactions

Transactions in commodities are valued at producers' prices in the input-output (I-O) accounts. Producers' prices exclude wholesale and retail trade margins and transportation costs, but they include excise and sales taxes collected and remitted by producers. Transportation costs and trade margins are shown as separate purchases by the users of the commodities. The sum of the producers' value, transportation costs, and trade margins equals the purchasers' value.
In order to show the relationship between the production of commodities and their purchase by intermediate and final users, commodities are shown as if they move directly to users. The flows of commodities for resale to and from wholesale trade and retail trade are not shown. If trade were shown as buying and reselling commodities, industrial and final users would make most of their purchases from a single source-trade.

Wholesale and retail trade margins on commodities are shown as purchases by users and are included in the trade rows of use table 2 (rows 4200 and 4A00). Transportation costs are the freight charges paid to move the commodity from the producer to the intermediate user or the final user. All transportation costs are shown as a purchase by users and are included in the transportation rows of use table 2 (rows 4810 through 4840 and row 4860).

The wholesale trade sector comprises establishments engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. (Wholesalers sell merchandise to other businesses and normally operate from a warehouse or office.) The sector consists of two main types of wholesalers: Those that sell goods on their own account, and those that arrange sales and purchases for others for a commission or fee. Wholesale trade output consists of trade margin output and nonmargin output; both exclude the cost of goods purchased for resale. Both the margin and nonmargin outputs are included in the wholesale trade row of use table 2 (row 4200).
The trade margin output occurs when an establishment buys and resells the good. It is included in the purchasers' prices of the goods that are purchased but not in the producers' prices of those goods, and it is measured in two parts. For merchant wholesalers and for agents and brokers selling goods on their own account, the trade margin is calculated as wholesale sales less the cost of goods sold plus taxes collected by the distributor. For manufacturers' sales branches (wholesale trade establishments that primarily market goods manufactured by the same firm), it is calculated as expenses (excluding the cost of the goods) plus taxes collected by the sales branches.
Nonmargin output occurs when a wholesale trade service is purchased separately from the commodity, such as when a wholesaler acts as a broker between buyer and seller. Nonmargin output is assumed to be purchased by the producer of the goods being sold and is thus reflected in the producers' prices of the goods. It is measured as the sum of expenses (excluding the cost of the goods) on goods sold by manufacturers' sales offices, the commissions on goods sold by agents and brokers and by merchant wholesalers acting as commission merchants, the taxes
collected, and the customs duties, which are considered as taxes collected by wholesale trade establishments.
Retail trade has one primary product-distributive services for the sale of goods. Its output consists primarily of retail trade margins, which are measured as retail sales less the cost of goods sold plus the taxes collected by retail trade establishments. All retail trade margin and nonmargin output are included in the retail trade row of use table 2 (row 4A00).
Retail trade margins apply primarily to purchases by persons, but they are also applied to purchases by business and government, such as some purchases of personal computers by business. Retail trade margins are also applied to some intermediate purchases by business, such as office supplies, gasoline, and construction materials.
Imports of goods and services, a component of final uses, are measured by individual commodity at domestic port values. The domestic port value of an imported commodity, which includes customs duties, is considered equivalent to the producers' price of a domestically produced commodity. The imports of transportation and wholesale trade include adjustments to convert the sum of all commodity imports of goods to foreign port value.
Imports of services are valued at producers' prices. No margins or transportation costs are associated with services.
All imports except for "noncomparable imports" are assumed either to be consumed within the U.S. boundaries or to have domestic equivalents. Noncomparable imports consists of goods purchased by U.S. residents abroad and of services imports that have no domestic counterparts. ${ }^{1}$ These services include travel by U.S. residents abroad-both foreign travel by U. S. residents, which is included in final demand as a part of personal consumption expenditures, and foreign travel by U.S. business people, which is included as intermediate purchases. Noncomparable imports are distributed directly to industries and final users and are shown separately in use table 2 (row S003).
Exports of goods and services, a component of final uses, are measured by commodity at producers' prices-the same as other domestically produced commodities. Transportation costs and trade margins, which are required to move exports from the producer to the port of exit, are included in the transportation and trade rows of use table 2 (rows 4200,4810 through 4840, and 4860).

Change in private inventories, a component of final uses, is measured by commodity at the LIFO-reserve-adjusted book value that is reported by industries in the economic census. The inventory valuation adjustment, which removes inventory profits or losses from total gross domestic product in the 1-O accounts, is shown as a single entry in use table 2 (row S007, column F030).

[^13]Changes to intermediate purchases and to value added. The new treatment of auxiliaries raises total intermediate purchases and affects the industry distribution of value added. In the SIC-based classification, the services of auxiliaries are shown as intermediate purchases of goods and services, and the value added of the industries that used auxiliary services was higher than the NAICS treatment because it included compensation paid to the auxiliary's employees, indirect business tax and nontax liabilities paid by the auxiliary, and depreciation of the auxiliary's fixed capital. In the NAICS-based classification, the value-added components of an auxiliary are shown as the value added in the industries where they are classified.

As a result of the new classification, total intermediate purchases were $\$ 6,517$ billion, or about 5 percent higher than in the SIC. The $\$ 340$ billion increase represents the amount of industry purchases of the new auxiliary services (table A). Total value added in the economy remained the same, but value added across industries changed.

In the goods-producing sectors, value added decreased because the value-added components of auxiliary services were moved, and intermediate purchases increased (chart 1). The largest impact was on manufacturing compensation, which dropped more than $\$ 100$ billion. In the services-providing sectors, as a result of the new auxiliary treatment, especially the addition of the industry "management of companies and enterprises," both value added and intermediate purchases were raised. The higher value added in the ser-vices-providing sectors was equal to the amount of auxiliary compensation, indirect business tax and nontax liabilities, and depreciation that was moved from the goods-producing industries.

Changes to gross output. As a result of treating auxiliaries as output-producing establishments in the 1997 benchmark I-O accounts, total gross output was $\$ 14,863$ billion, or 2.3 percent higher than in the SIC (table A). ${ }^{10}$ The $\$ 340$ billion increase, the same as the increase in total intermediate purchases, was almost entirely accounted for by three auxiliaries:
-Corporate, subsidiary, and regional managing offices,

- Auxiliary scientific research and development, and
- Auxiliary warehousing and storage.

## Other NAICS changes

The 1997 benchmark I-O estimates include several additional classification changes as a result of incorporating NAICS. Establishments are now grouped according to the similarities of their production processes rather

[^14]than the similarities of their products. The largest of these additional changes were the following:
-The new "information" sector was created by combining industries from manufacturing, services, and transportation, communication, and utilities.

- Transportation, communication, and utilities was split into three sectors.
-The new "real estate and rental and leasing" sector was broken out of "finance, insurance, and real estate" and services.
- Services are shown with a breakdown according to their production processes, including "professional, scientific, and technical services," "administrative and waste management services," "educational services," "health care and social assistance," "arts, entertainment, and recreation," and "accommodation and food services."
For a description of these changes that resulted from NAICS and their effects, see table B.

Text continues on page 26.

## The Input-Output Classification Systems

The input-output ( $\mathrm{I}-\mathrm{O}$ ) accounts use two classification systems, both of which generally use the same 1-O codes and titles (see appendixes A and B). In the I-O industry classification system, output typically represents the total output of all establishments in each industry, regardless of whether the commodities produced are primary to the industry (that is, make up the largest proportion of the establishment's output) or are secondary (that is, primary to another industry). In the I-O commodity classification system, output represents the total output of the product or service, regardless of the classification of the establishments that produce it.
The I-O industry classification system. The I-O system is based on the official U.S. classification system, which for 1997 is the North American Industry Classification System (NAICS). NAICS classifies establishments into industries on the basis of the similarities of their production processes. In the previously used Standard Industrial Classification system, establishments are classified into industries on the basis of the similarities of their products.
The I-O industry classification system for 1997 generally applies to both the standard make and use tables and the supplementary make and use tables and requirements tables. For the supplementary make and use tables and requirements tables, industries are modified by redefining or moving some secondary products and their inputs from the industries in which they are produced to those in which they are primary (see the box "Treatment of Secondary Products" on page 27).
However, the I-O industry classification system includes "special industries" (industries or commodities) and "government industries" that are not considered industries in NAICS. Furthermore, because of data limitations, the I-O industry system includes three industries-agriculture, construction, and real estate-that are defined on an activity basis rather than on an establishment basis.
"Special industries" consists of noncomparable imports; scrap, used and secondhand goods; a rest-of-the-world adjustment to final uses; and an inventory valuation adjustment. I-O special industries are incorporated to maintain consistency with economic concepts underlying the national income and product accounts (NIPA's).
"Government industries" include government enterprises (Federal and State and local) and general government, which generally corresponds to the NAICS classification for Public Administration (NAICS Sector 92).
"Activity-based" industries are used for agriculture, construction, and real estate. Agriculture industries are classified by commodity, such as grain farming products, because the quality of the source data on the production of agriculture commodities is believed to be better than that of the data available by type of establishment or farm.
Construction is classified by type of activity, such as the construction of new highways and streets, rather than by the type of construction contractor, such as heavy construction
contractors who pave asphalt roads. Construction is classified by type of activity because the estimates rely heavily on the value-put-in-place statistics.
The real estate industry consists of all real estate rental receipts and all imputed rents for owner-occupied housing and for buildings and equipment owned and used by nonprofit institutions primarily serving households. Rental receipts are included in one industry because of the lack of data on rents received by individual industries. Imputed rents are included so the I-O accounts will be consistent with the NIPA's.
"Redefinitions" apply only to the industries in the supplementary make and use tables and requirements tables. As a result of these redefinitions, outputs and inputs related to the secondary activities of some industries are shifted to the industries in which they are primary activities. Only the secondary activities of industries for which the related inputs differ significantly from those required for the primary activities are redefined. For example, both the output and related inputs of fullservice restaurants in hotels and motels have been moved from the "hotels and motels" industry (in which "lodging services" is the primary activity) to the "food services and drinking places" industry (in which "eating and drinking" is the primary activity) because the input structure of "food and beverages" differs significantly from that of "lodging services." As a result of this shift, the total outputs for the "food services and drinking places" industry and the "hotels and motels" industry in the supplementary make and use tables differ from those in the standard tables (appendix F). (However, total outputs for the I-O commodities are the same in the two sets of tables.)
The I-O commodity classification system. In this system, each commodity is assigned the code of the industry in which the commodity is the primary product. This code is then used to group the production of the commodity in the industry in which it is the primary product with its production in other industries in which it is a secondary product. In a few cases, the I-O system reclassifies NAICS-defined commodity groups, and a secondary product is created from a NAICS-defined primary product. The output of the NAICS-defined product is moved (reclassified) to the I-O-defined primary product group; therefore, the output represents the total output of the product, regardless of the classification of the establishments that produce it.
In NAlCS, for example, the primary product of the newspaper publishers industry is defined as newspaper sales and newspaper advertising. In the I-O commodity system, the primary product of the newspaper publishers industry is newspaper sales. The advertising component is considered to be a secondary activity, so advertising receipts (output) are moved to the advertising commodity group. The total output for the I-O newspaper publishers industry remains unchanged, but the output of the newspaper commodity is reduced, and the output of the advertising commodity is increased.

Table B. NAICS and NAICS-Based I-O Classification System

| NAICS sector | NAICS-based 1-0 sector | Description of the industry | Major differences in classification or treatment between the HAICS-based $1-0$ sectors and the SIC-based 1-0 divisions | Output transier value [Billions of dollars] |
| :---: | :---: | :---: | :---: | :---: |
| Agriculture, forestry, fishing and hunting (NAICS 11) | Agriculture, forestry, fishing and hunting ' | Establishments engaged in growing crops, raising animals, and harvesting timber, fish and animals from farms, ranches, and natural habitats. | Logging moved from Manufacturing. | $\$ 20$ from Manufacturing |
| Mining <br> (NAICS 21) | Mining | Establishments that extract naturally occurring mineral solids, liquid minerals, and gases. | None. | None |
| Utilities (NAICS 22) | Utilities | Establishments engaged in the provision of electric power, natural gas, steam supply, water supply, and sewage removal. | Utilities moved from Transportation, communications, and utilities (TCU). | \$288 from TCU |
| Construction (NAICS 23) | Construction ${ }^{1}$ | Establishments engaged in the construction of buildings and other structures, heavy construction except buildings, additions, alterations, reconstruction, installation, and maintenance and repairs. | None. | None |
| Manufacturing (NAICS 31-33) | Manufacturing | Establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. | Parts of retail bakeries, custom drapery and tailors moved from Retail trade. Parts of broadwoven fabric finishing mills moved from Wholesale trade. Tire retreading and dental labs moved from Services. Logging moved to Agriculture, and Publishing moved to Information. | $\$ 3$ from Retail trade, $\$ 2$ from Wholesale trade, $\$ 4$ from Services, $\$ 20$ to Agriculture, $\$ 118$ to Information |
| Wholesale trade (NAICS 42) | Wholesale trade | Establishments engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. | Selected establishments with retail trade characteristics, such as auto parts, farm supplies, and lumber yards moved to Retail trade. Parts of broadwoven fabric finishing Mills moved to Manufacturing. | Approximately $\$ 70$ to Retail trade, $\$ 2$ to Manufacturing |
| Retail trade (NAICS 44-45) | Retail trade | Establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. | Selected establishments with retail trade characteristics moved from Wholesale trade. Parts of retail bakeries, custom drapery and tailors moved to Manufacturing. | Approximately $\$ 70$ from Wholesale trade, \$3 to Manufacturing |
| Transportation and warehousing (NAICS 48-49) | Transportation and warehousing, excluding postal service | Establishments providing transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to transportation. | New sector. Transportation and warehousing moved from Transportation, communications, and utilities (TCU). | \$520 from TCU |
| Information (NAICS 51) | Information | Establishments engaged in producing and distributing information and cultural products, providing the means to transmit or distribute these products and data, or communications services. | New sector. Includes publishing, communications, and various information-related industries (data processing, software publishing, and online information, etc.) moved from Manufacturing, TCU, and Services. | $\$ 118$ from Manufacturing, $\$ 377$ from TCU, $\$ 173$ from Services |
| Finance and insurance (NAICS 52) | Finance and insurance | Establishments engaged in financial transactions and in facilitating such transactions. | Holding companies moved to Management of companies and enterprises. | $\$ 1,306$ to Real Estate, $\$ 10$ to Management of companies and enterprises |
| Real estate and rental and leasing (NAICS 53) | Real estate and rental and leasing ${ }^{1}$ | Establishments engaged in renting, leasing, or allowing the use of tangible or intangible assets, and related services. | Real estate moved from Finance, insurance, and real estate; Rental of equipment moved from Services. | \$1,306 from Finance, $\$ 81$ from Services |
| ```Professional, scientific, and technical services (NAICS 54)``` | Professional and technical services | Establishments engaged in professional, scientific, and technical activities for others. | New sector, | \$743 |
| Management of companies and enterprises (NAICS 55) | Management of companies and enterprises | Auxiliaries that perform management services or act as holding companies for other establishments of the same company; other auxiliaries classified with industries performing similar activities rather than with industry served. | New sector. Holding companies and other management auxiliaries moved from the various industries they serve. | $\$ 320$ Total, $\$ 10$ from Finance |
| Administrative and support and waste management and remediation services (NAICS 56) | Administrative and waste services | Establishments engaged in support activities for daily operationis of other organizations. | New sector. Waste management moved from TCU. | \$348 Total, <br> $\$ 42$ from TCU |
| Educational services (NAICS 61) | Educational services | Establishments that provide instruction and training. | New sector. | \$112 |
| Health care and social assistance <br> (NAICS 62) | Health care and social assistance | Establishments that provide health care and social assistance for individuals. | New sector. | \$816 |
| Arts, entertainment, and recreation (NAICS 71) | Arts, entertainment, and recreation | Establishments that operate facilities or provide services to meet varied cultural, entertainment, and recreational interests. | New sector. | \$127 |
| Accommodation and food services (NAICS 72) | Accommodation and food services | Establishments that provide lodging and/or meals, snacks, and beverages for immediate consumption. | New sector. | \$413 |
| ```Other services (except public administration) (NAICS 81)``` | Other services, except public administration | Establishments that provide services not specifically provided for elsewhere in the classification system. | New sector. Household industry moved from Special industries. | \$348 Total, \$12 from Special industries |
| Public administration (NAICS 92) | $\begin{aligned} & \text { Government } \\ & \text { industries } \end{aligned}$ | Estabiishments of federal, state, and local government agencies that administer, oversee, and manage public programs. | None. | None |
| ........................... | Special industries ${ }^{3}$ | Special industries include noncomparable imports, scrap and used goods, rest of the world, and inventory valuation adjustment. | Household industry moved to Other services. | \$12 to Other services |

## Other Improvements to the 1997 Benchmark I-O Accounts

Additional changes in classification, methodology, and presentation were introduced in the 1997 benchmark I-O accounts. These changes, many of which are related to investment activities, include the following.
-Featured I-O tables now have industry definitions that are more consistent with the GDP-by-industry accounts. This change is part of BEA's effort to further integrate its economic accounts. In the GDP-by-industry accounts, new construction by industries of their own facilities is included in industry output but maintenance and repair construction by industries on their own facilities is not. In the featured I-O tables, these expenditures are treated the same way.

- Improved treatment of software. In the 1999 NIPA comprehensive revision, BEA introduced the treatment of software as investment; previously, expenditures on software were treated as intermediate purchases. In the 1997 benchmark I-O accounts, software is treated consistently as investment, and additional improvements are introduced, including the capitalization of software originals used for reproduction, the use of more detailed occupational data in estimating own-account software produced by industries, and a more direct calculation of the total costs of producing own-account software.
- Interactive software tool. A new tool is now available on BEA's Web site that enables users to interactively select and format data from the 1997 benchmark I-O accounts.
- Other major improvements. New definitions of output have been introduced for computer systems integrators as part of the industry "computer systems design services" and for the industry "natural gas distribution." The presentation of the requirements tables has been expanded to include an industry-by-industry total requirements table for estimating the linkages between industries from changes in final uses.

## Changes related to investment

Own-account new construction. Own-account new construction, or "force-account" construction, refers to construction activities performed by businesses, government, or persons for themselves rather than purchased from construction businesses. In the 1997 benchmark I-O accounts, it is treated as being produced by the industries in which the own-account new construction occurs and then "purchased" in final uses.

In the 1997 standard make and use tables, own-account new construction, including output and all in-
puts, is now shown as a secondary product of the industry in which the activity occurs. Previously, ownaccount construction was reassigned to the new-construction industry and included as part of its primary production. For home-owners, own-account new construction is now shown in the owner-occupied dwellings industry. For government, it is now shown in the general government industry.

The change in treatment does not affect total gross output and total final uses. It facilitates comparisons of the data in the standard make and use tables with other industry data, such as industry series from the GDP-by-industry accounts.

In the supplementary make and use tables, the activities of own-account new construction are still shown as part of the new-construction industry, as they were in the 1992 benchmark I-O accounts. See the box "Treatment of Secondary Products."

Own-account maintenance and repair construction. In the standard and the supplementary make and use tables, own-account maintenance and repair construction is no longer treated as output. This change reduces total gross output, but it does not affect total final uses and total value added, the alternative measures of total economic activity. This change is intended to facilitate comparisons of data from the I-O accounts with other statistical data on industries. Previously, own-account maintenance and repair activities were treated as secondary products of the originating industries and included in the maintenance and repair construction industry.

Software. The capitalization of software has been introduced into the 1997 benchmark I-O accounts. Three types of software-prepackaged software, custom software, and own-account software-are now treated as investment. For previous benchmark I-O accounts estimates, only software that was bundled with, or embedded in, equipment by the producer of that equipment was included in investment.

BEA introduced the capitalization of software into the national income and product accounts during the 1999 comprehensive revision of those accounts. ${ }^{11}$ In this benchmark, BEA has also made several measurement improvements discussed below.

Own-account software is now treated similarly to own-account new construction. It is shown as a secondary product of the originating industry in the standard make and use tables, and it is shown as part of the primary production of the software industry in the

[^15]
## Treatment of Secondary Products

For the purposes of data collection, an establishment or a business unit is assigned to an "industry" according to its output and production process. However, most establishments produce more than one product, so the establishment is categorized by its primary source of revenue or its primary product. The other products that the establishment produces are identified as secondary products. For example, a hotel may also provide restaurant services, but these services are not part of the hotel industry's primary product of lodging, so they are treated as a secondary product of the hotel industry.
In BEA's "standard" make and use tables, all of the products-primary and secondary-that are produced by an industry are assigned to that industry. As a result, the data in these tables are consistent with the industrybased data that are collected and reported by other statistical agencies.
In the "supplementary" make and use tables, some of the secondary products are reassigned to the industries in which these products are primary products. The data in these tables and in the total requirements tables that are derived from them are valuable for performing economic structural analysis, impact analysis, and other types of economic modeling.
In traditional I-O analysis, industries are required to have homogeneous production processes: Each industry produces only one commodity, and each commodity is produced by only one industry. Thus, secondary prod- ${ }^{\prime}$ ucts present a special problem because they represent heterogeneity in an industry's output. In order to transform the make and use tables into the required format, assumptions about the technology of producing secondary products are needed. The two most commonly used technology assumptions are the industry-technology assumption and the commodity-technology assumption.
BEA developed a two-step process to reassign the secondary products from the industry in which they were produced to the industries in which these products are primary products. ${ }^{1}$ The first step is referred to as the "redefinition process." In this step, it is assumed (1) that the input structure of a secondary product differs from the input structure of the primary product of the industry in which the secondary product was produced and (2)

[^16]that its input structure is similar to that of the primary product of the industry to which it is reassigned. ${ }^{2}$
As a result of the redefinition process, the total value of secondary products is decreased, and the total value of primary products is increased by the same amount. The following table summarizes the effects of this redefinition process on the detailed 1997 benchmark I-O make and use tables.

| [Billions of dollars] |  |  |  |  |
| :--- | ---: | ---: | ---: | :---: |
|  | Tota! <br> output | Primary <br> product <br> output | Secondary <br> product <br> output |  |
| Standard make and use table.................. | 14,863 | 13,718 | 1,145 |  |
| Supplementary make and use table.......... | 14,863 | 14,183 | 680 |  |
| Difference................................................. | 0 | 465 | -465 |  |

The amount of the redefined secondary output was $\$ 465$ billion, or 3.1 percent of total output and more than two-fifths of total secondary output. For most industries, the output shown in the standard make and use tables will differ from that shown in the supplementary make and use tables. The following industries were affected the most by these redefinitions: $\$ 62$ billion of auto repair was moved, mainly from retail trade, to "automotive repair and maintenance, except car washes"; $\$ 48$ billion of food services was moved, mainly from hotels, retail trade, and seivice industries, to "food services and drinking places"; $\$ 46$ billion of retail margin, primarily from service industries to "retail trade"; and $\$ 46$ billion of own account software, from most industries to "custom computer programming services."
In the second step, the remaining secondary products are reassigned so that each industry produces only its primary product. In this step, it is assumed that the input structure of each secondary product is similar to that of the primary product that the industry produces. ${ }^{3}$ This step is performed by the mathematical equations that are used to derive the three total requirements tables. ${ }^{4}$ This reassignment also affects a wide range of industries, including State and local government enterprises, manufacturing, "newspaper, book, and directory publishers," "radio and television broadcasting," and finance.
2. This step is based on the commodity-technology assumption, which assumes that each commodity has an input structure that is independent of the industry that produced it.
3. This step is based on the industry-technology assumption, which assumes that the input structure of all the commodities produced by an industry are the same.
4. For information about deriving the total requirements tables and traditional I-O tables, see Handbook of Input-Output Table, Compilation and Analysis (New York: United Nations, 1999).
supplementary make and use tables. The measurement of own-account software in the 1997 benchmark I-O accounts has been improved by (1) the capitalization of software originals used for reproduction; (2) the use of more detailed occupational data in estimating ownaccount software produced by industries; and (3) the introduction of a more direct calculation of the total costs of producing own-account software. ${ }^{12}$

Purchased software estimates have been changed to include improved estimates of intermediate consumption of software and an expanded definition of exports and imports of software. New sources, including information from annual reports filed by software producers with the Securities and Exchange Commission, and professional judgment were used to supplement economic census data on purchased software embedded in, or bundled with, other equipment.

The definition of exports and imports of software was expanded to more accurately reflect international trade in software. Estimates for exports and imports of royalties and license fees for the rights to distribute, use, and reproduce computer software and of "other" private services for computer and information processing services are now reflected in the capitalized software estimates.

Computer systems integrators. Computer systems integrators plan and design computer systems that integrate computer hardware, software, and communication technologies for their customers. In the 1997 benchmark I-O accounts, this industry is treated as providing design, installation, and other services, and the value of all computer hardware and purchased software is now excluded from the gross output of the industry. The hardware and software installed by the computer systems integrators are now shown as being sold directly by the "computer and peripheral equipment manufacturing" and the "software publishing" industries to business and government as investment. Most of the output of systems integrators is also capitalized for the first time, and the remainder goes to other businesses as intermediate purchases.

In the 1992 benchmark accounts, the values of computer hardware and software in integrated systems were recorded as intermediate purchases and included as part of the gross output of systems integrators. Only the portion of their sales representing computer hardware were capitalized as investment.

Private equipment and software categories. BEA has implemented three major changes to the categories

[^17]of private equipment and software. First, the category for instruments has been divided into a category "medical equipment and instruments" and a category "nonmedical instruments." Second, the category for trucks, buses, and truck trailers has been divided into "light trucks" and "other trucks, buses, and truck trailers." Third, the category for tractors has been dropped, and its components have been distributed to "agricultural machinery," "construction machinery," and "other nonresidential equipment."

## Change in definition for natural gas distribution

A new measure of gross output for natural gas distribution is introduced. In the 1992 benchmark accounts, output for natural gas distribution implicitly included resales in industry's sales. An analysis of the industry indicated that much of the growth in output for the industry that was reported in the 1997 Economic Census was due to resales of natural gas within the industry. In the 1997 benchmark accounts, the gross output measure of natural gas distribution is net of an estimated value for these resales.

## Changes in presentation

Three changes in presentation are introduced. First, the software tool available on BEA's Web site will allow users to interactively select and format data that they want to retrieve from the 1997 benchmark I-O accounts. Second, the standard make and use tables are now the featured I-O tables. Third, a new industry-byindustry total requirements table is added to the com-modity-by-commodity total requirements table and the industry-by-commodity total requirements table that have been provided in the past. (See also the box "Data Availability" on page 38.)

Web-based tool for customizing tables. In response to requests from users, BEA's Web site now features an interactive software tool that enables users to interactively select and customize data from the I-O accounts. Using this software, users can easily select, preview, and download subsets of data at the detailed, summary, or sector levels and valued in producers' prices or purchasers' prices. ${ }^{13}$ Additional features include a search engine for finding a specified industry or commodity and a tool that can be used to transpose columns and rows of data.

[^18]Presentation of standard make and use tables. The standard make and use tables conform closely to the official classification system used by the statistical agencies that collect and report data. For the 1997 benchmark accounts, these tables are on a NAICS basis; for the 1992 benchmark accounts, they were on a SIC basis. The availability of these tables on a NAICS basis makes it easier for users to compare data from the I-O accounts with other industry-based data series, and it is an important step in moving towards greater consistency between the I-O accounts and the GDP-by-industry and gross state product accounts.

Industry-by-industry total requirements table. For the 1997 benchmark, BEA has prepared an industry-by-industry total requirements table in addition to its other total requirements tables. The new table can be used to analyze the linkages between industries that result from changes in final demand.

## Compilation of the 1997 Benchmark I-O Accounts

An important feature of the accounting framework of the U.S. benchmark I-O tables, and of its underlying NAICS-based classification system, is its compatibility with basic accounting records. However, the source data reported by businesses and by other transactors in the economy must be transformed into a consistent, comprehensive set of I-O tables. In addition, because the available accounting records do not provide sufficient information for some parts of the accounts, BEA has to identify other data sources and estimating methods for the estimates.

BEA prepared the 1997 benchmark I-O accounts in seven steps:
(1) Developed a consistent classification framework that could be used for presenting the tables on a NAICS basis and for linking backwards with the aid of concordances to the source data that are still on an SIC basis or that use other classification systems,
(2) Estimated the output for each industry and commodity, which formed the basis for the I-O make table,
(3) Estimated the intermediate and value-added inputs required by each industry to produce its output,
(4) Estimated the domestic supply of each com-modity-that is, the total value of goods and services available for consumption as intermediate inputs by industries or as final uses,
(5) Estimated the components of final uses for which more direct information was unavailable, using the commodity-flow method,
(6) Estimated wholesale and retail trade margins, transportation costs, and excise and sales taxes in order to convert all transactions by final and intermediate
users from the prices received by producers to the prices paid by purchasers,
(7) Balanced the tables by resolving the larger discrepancies in the I-O use table with further analysis and judgmental changes and then allocating the smaller discrepancies; any final residual was allocated to the "other value added" component of value added.

Development of a classification framework. The 1997 benchmark I-O tables are based on NAICS, but some of the source data used in their preparation were not available on that basis. Because the statistical agencies and other providers of the source data are converting from the SIC system to NAICS over several years, data from several sources had to be mapped from an SIC basis to a NAICS basis. In addition, commodi-ties-whether produced by domestic industries or imported from other countries, whether transported by truck, rail, air, or water, and whether used as inputs by industries or as final uses-had to be classified consistently. Moreover, the classification system used for certain sets of data, such as the Harmonized System for foreign trade and the codes from the economic census for materials consumed by manufacturing and mining industries, typically reflect that system's history and original purpose. Because of the massive changes in classification that were made in this benchmark, considerable effort was required to prepare concordances or mappings for the conversion of all of the data to a common basis. In addition, whenever possible, concordances between the codes used for the 1992 benchmark accounts and the new codes used for the 1997 benchmark accounts were prepared. These concordances document the changes and provide a limited guide for comparing the 1997 benchmark tables with the tables of previous benchmarks.

Estimation of industry and commodity outputs. First, BEA estimated output and then prepared the I-O make table, which shows the commodities produced by each industry and all the industries producing each commodity. The outputs of most commodities and industries were based on receipts and shipments data collected in the 1997 Economic Census by the Census Bureau or in the case of agriculture, by the U.S. Department of Agriculture. Table C provides a list of the sectors covered by the economic census and the other principal data sources used by BEA to estimate the outputs for commodities and industries.

The economic census covers most establishments, but it does not directly cover businesses without employees, such as real estate agents and independent "mom and pop" operations that are generally small. BEA prepared the estimates for these businesses using nonemployer data from the Census Bureau; these data are based on administrative records of the Internal

Table D. Principal Data Sources and Methods for Estimating Intermediate Inputs and Value Added, 1997 Benchmark 1-0 Accounts

| Inpul component | Source data and methods used |
| :---: | :---: |
| Intermediate inputs....................... | Natural Resources <br> Inputs to the agriculture, forestry, fishing and hunting industries were estimated from U.S. Department of Agriculture data or 1997 Economic Census data or by extrapolating the 1992 benchmark I-O estimates by the change in industry output from 1992 to 1997. These estimates were then adjusted during the process of balancing commodities to equal commodity output totals. <br> Mining <br> Inputs to the mining industries were estimated primarily from 1997 Economic Census data on selected materials and supplies, fuels consumed, electricity usage, and communication services purchased. The remaining inputs were estimated by extrapolating the 1992 benchmark I-O estimates by the change in industry output from 1992 to 1997. These estimates were then adjusted during the process of balancing commodities to equal commodity output totals. <br> Construction <br> Inputs to the construction industries were estimated primarily from 1997 Economic Census data. These estimates were then adjusted during the process of balancing commodities to equal commodity output totals. <br> Manufacturing <br> Inputs to the manufacturing industries were estimated primarily from 1997 Economic Census data on materials and supplies, fuels consumed, electricity usage, and communication services purchased. In addition, some of the purchased services were estimated from the census surveys conducted in conjunction with the 1997 Economic Census for manufacturing. The remaining inputs were estimated by extrapolating the 1992 benchmark I-O estimates by the change in industry output from 1992 to 1997. These estimates were then adjusted during the process of balancing commodities to equal commodity output totals. <br> Sorvices, trade, transportation and warehousing, and utilities <br> For census-covered industries, information from the 1997 Business Expenditures Survey (BES) on operating expenses was used, including accounting services; advertising services; contract labor costs; data processing and other com-puter-related services; depreciation; lease and rental payments; legal services; office supplies; repair and maintenance expenses; tax and license fees; and cost of utilities. ${ }^{1}$ These estimates were then adjusted during the process of balancing commodities to equal commodity output totals. <br> For noncensus-covered industries, inputs were estimated either from trade associations data or by extrapolating the 1992 benchmark I-O estimates by the change in industry output from 1992 to 1997. These estimates were then adjusted during the process of balancing commodities to equal commodity output totals. |
| Value added: <br> Compensation of employees $\qquad$ | For census-covered industries, payroll data from the 1997 Economic Census were used; data were adjusted for misreporting and I-O industry definitions. Benefits data for manufacturing and mining were from the 1997 Economic Census. Benefits data for industries covered by the BES were based on the relationship between the BES benefits and payroll data applied to the 1997 Economic Census payroll data. For the remaining industries, benefits were estimated using indirect techniques. <br> For noncensus-covered industries, tabulations of wages and salaries covered by State unemployment insurance and estimates of benefits from the national income and product accounts were used; data were adjusted for misreporting and I-O industry definitions. <br> All estimates were adjusted to balance to total compensation in the national income and product accounts. |
| Indirect business tax and nontax liability. $\qquad$ | The estimates by industry were prepared in two parts: For excise and general sales taxes, the values were estimated as part of each industry's output; for other indirect business taxes, such as property taxes, and nontax liabilities, such as fees, estimates were distributed on the basis of a variety of source data, including State government tax collections statistics and the BES. For all other tax and nontax liability, estimates were distributed to industries using indirect techniques. <br> All estimates were adjusted to balance to total indirect business tax and nontax liability in the national income and product accounts. |
| Other value added....................... | For most industries, the residual method (total industry output less total intermediate inputs, compensation of employees, and indirect business tax and nontax liability) was used. |

1. These industries include information; professional, scientific and technical services; administrative and support services; vocational educational services; health care and social assistance; arts, entertainment, and recreation; accommodation and food services; other services; retail trade; and wholesale trade.
I-0 Input-output

Revenue Service (IRS), primarily from sole proprietorship businesses filing IRS Form 1040, Schedule C. BEA adjusted the IRS data to account for late filers and nonfilers and for filers who have misreported receipts.

The following industries are among those not covered by the economic census: Large certificated passenger air transportation and rail transportation in the sector "transportation and warehousing"; veterinary services in "professional and technical services"; landscaping services in "administrative and waste services"; private elementary and secondary schools and private colleges and universities in "educational services"; and religious organizations, labor unions, political organizations, and private households that employ workers for the operation of the household in "other services." For these industries, BEA used data from other sources-such as the U.S. Department of Agriculture, U.S. Department of Transportation, U.S. Department of Treasury, Office of Management and Budget, other Government agencies, and private organizationsmany of which are identified in table C .

The estimates of output for some industries and commodities are based on imputations. Examples include own-account software, the rental value of owneroccupied housing, and financial services provided without direct charges by financial institutions.

Estimation of industry intermediate and valueadded inputs. As shown in table $D$, most of the detailed data available to estimate commodity inputs were also from the 1997 Economic Census. When only aggregate data for expenses were available, BEA combined that information (for example, purchases of fuel by manufacturing industries) with information on purchases of individual commodities (for example, purchases of petroleum products, natural gas, and coal in purchased fuels) to estimate the purchases of specific commodities by an industry (for example, purchases of natural gas by a manufacturing industry).

BEA also estimated intermediate inputs for which no direct information was available. For example, detailed economic census data are available for the materials and supplies used by manufacturing industries, but the data only covered part of their purchased services. The estimates of the remaining inputs were extrapolated from the 1992 benchmark estimates by the change in industry output from 1992 to 1997.

In the I-O accounts, value added consists of three components-compensation of employees, indirect business tax and nontax liability, and "other value added." The first two components were estimated from a variety of data sources (the principal ones are shown in table D). Total compensation of employees from the NIPA's was allocated to industries on the basis of economic census data. Total indirect business tax and
nontax liability from the NIPA's was allocated to industries in two parts. For general sales and excise taxes, the values were incorporated as part of each industry's output on the basis of information from census annual surveys for sales taxes and from the GDP-by-industry accounts for excise taxes; for other indirect business taxes, such as property taxes, estimates were allocated on the basis of a variety of source data, including State government tax collections and highway statistics. Depreciation, a part of "other value added," was estimated for auxiliaries and government industries. ("Other value added" for other industries is derived as a residual by subtracting total intermediate inputs, compensation of employees, and indirect business tax and nontax liability from total industry output in the final step of balancing the table.)

Estimation of domestic supply. The domestic supply of each commodity is the total value of goods and services available for consumption as intermediate inputs by industries or as personal consumption expenditures (PCE), private fixed investment, and government consumption and gross investment expenditures. It was calculated as domestic commodity output plus government sales and imports less exports and change in private inventories. Government sales, such as sales of school lunches, were based on data from the NIPA's. Exports and imports were based on foreign trade statistics from the Census Bureau and on data from BEA's international transactions accounts. Because domestic supply is measured in producers' prices, transportation costs and wholesale trade margins were subtracted from exports before the final calculation. BEA estimated the 1997 change in private inventories by commodity on the basis of economic census data and of information on corporate inventories by industry from the IRS.

Estimation of other final uses. The estimates of final uses of the Federal Government and of State and local government were based on the estimates of total consumption and investment expenditures by type of purchase from the NIPA's. These estimates were then allocated to I-O commodities based on professional judgment and on information from the 1997 Census of Governments, Federal budget data, and government agency reports.

The estimates of many commodities in PCE and in private equipment and software were prepared using the commodity-flow method. In this method, government expenditures for, and intermediate purchases by businesses of, a commodity are subtracted from its domestic supply in order to obtain a residual that reflects purchases by persons for consumption or by businesses for investment. For example, using this method, purchases of cereal for PCE were estimated as a 100-

## Acknowledgments

This article and the completion of the 1997 benchmark inputoutput (I-O) accounts represent the contributions of many members of the Industry Accounts staff. Sumiye Okubo, Associate Director for Industry Accounts, and Ann M. Lawson, Chief of the Industry Economics Division, supervised the preparation of the 1997 benchmark I-O accounts. Edward T. Morgan, Chief of the Benchmark I-O Branch-assisted by Belinda L. Bonds and Stephanie L. McCulla--planned and coordinated division efforts to produce the estimates. Karen J. Horowitz provided invaluable technical support and assistance in the estimation and review process, and she contributed significantly to the review and reconciliation of the 1997 benchmark I-O accounts with the national income and product accounts. Mark A. Planting, Chief of the Industry Studies Branch, provided technical help for the review and publication process.
Ann M. Lawson, Kurt S. Bersani, Mahnaz Fahim-Nader, and Jiemin Guo coordinated and wrote sections of the article. Kathryn A. Kane and Michael J. Murphy assisted with preparing text materials. Lisa C. Phares and Stanislaw Rzeznik assisted in reviewing the tables and appendixes.
The following staff members of the Industry Economics Division contributed significantly to the 1997 benchmark I-O accounts.
Agriculture, forestry, fishing and hunting: Belinda L. Bonds, Lisa C. Phares.

Manufacturing: Belinda L. Bonds, Lisa C. Phares, Amanda C. Roberts, Stanislaw Rzeznik.
Mining: Belinda L. Bonds, Lisa C. Phares, Amanda C. Roberts, Stanislaw Rzeznik.
Construction: Belinda L. Bonds, Robert J. McCahill.
Management of companies and enterprises: Belinda L. Bonds.
Utilities: David W. McCarthy, Alvin D. Blake, Ricky L. Stewart.
Wholesale and retail trade: David W. McCarthy, Ricky L. Stewart.
Transportation: David W. McCarthy, Susan M. LaPorte.
Information: Kurt S. Bersani, Michael J. Murphy, Darlene C. Robinson-Smith.
Finance and insurance: Kurt S. Bersani, Karla L. Stanley-Allen, Sherlene K. S. Lum, Amanda C. Roberts.
Real estate and rental and leasing: Kurt S. Bersani, Michael J. Murphy.
Professional and technical services: Kurt S. Bersani, Kathryn A. Kane, Michael J. Murphy, Darlene C. Robinson-Smith.
Administrative and waste services: Mahnaz Fahim-Nader, Cora L. Klapper.

Educational services: Mahnaz Fahim-Nader, Abigail M. Kish.
Health care and social assistance: Mahnaz Fahim-Nader, Simon N . Randrianarivelo.
Arts, entertainment, and recreation: Mahnaz Fahim-Nader, Abigail M. Kish.
Accommodation and food services: Mahnaz Fahim-Nader,

Abigail M. Kish.
Other services, except public administration and private households: Mahnaz Fahim-Nader, Abigail Kish, Cora L. Klapper.
Federal Government: Mark A. Planting
State and local government: Mahnaz Fahim-Nader, Simon N. Randrianarivelo.

Foreign transactions. Robert S. Robinowitz.
Misreporting filer adjustment, nonemployer filer adjustment, and nonfiler adjustment: Felicia V. Candela, Belinda L. Bonds, Amanda C. Roberts.
Private equipment and software expenditures: Jeffrey W. Crawford, Matthew D. Atkinson, Belinda L. Bonds, Emily J. Dozier, David I. Kass, Peter D. Kuhbach, Gregory R. Linder.
Other staff members who contributed significantly to the completion of the accounts: Brian C. Moyer, Chief, Annual Industry Branch, Tameka R. Lee Harris, Diane E. Leason, William H. Nicolls IV, and Robert E. Yuskavage.
The following staff members of the National Income and Wealth Division, under the direction of Carol E. Moylan, Chief, contributed to the review and reconciliation of the 1997 benchmark I-O accounts with the national income and product accounts: M. Greg Key (personal consumption expenditures, goods); Clinton P. McCully, Michael Armah, Robert N. Ganz III, Kurt Kunze, Denise A. McBride, George M. Smith, Ernest D. Wilcox (personal consumption expenditures, services); Paul R. Lally, David B. Wasshausen (private equipment and software and structures).
The following staff members of the Government Division, under the direction of Brooks B. Robinson, Chief, were major contributors to the development of estimates: Bruce E. Baker, Pamela A. Kelly, Janet H. Kmitch, Donald L. Peters, and Claire G. Pitzer.
Staff members of the Office of the Chief Information Officer, particularly Brian D. Kajutti, Paul A. Kilday, Ross F. Metzger, and Janice E. Townsend, designed the data-processing system and coordinated the computer programing and processing system that was used to compile, check, analyze, and report the final estimates. From the Industry Economics Division, Karen J. Horowitz, assisted by Diane E. Leason, designed and tested the database used for the 1997 benchmark accounts.
A special acknowledgment is made to the staff of the Census Bureau, particularly to those in the Company Statistics Division under the direction of Ewen M. Wilson, Chief; in the Manufacturing and Construction Division under the direction of William G. Bostic Jr., Chief; and in the Services Sector Division under the direction of Mark E. Wallace, Chief. Without their cooperation and assistance, the timely publication of the 1997 benchmark I-O accounts would have been impossible.
percent residual.
The estimates of the other commodities used a variation of the commodity-flow method in which a percentage of domestic supply was allocated to PCE or to private equipment and software expenditures. Many of these percentages were based on class-of-customer data from the 1997 Economic Census or from information developed from alternative sources, such as trade associations, private businesses, and other government agencies. For example, using class-of-customer data from the economic census, purchases of tax return preparation services for PCE were estimated as 91 percent of domestic supply.

The estimates of residential and nonresidential structures in gross private fixed investment were generally based on information from the NIPA's and from the Census Bureau's data on value of construction put in place. Estimates of oil and gas well drilling and new access structures for solid mineral development and of manufactured mobile structures were based on 1997 Economic Census data. ${ }^{14}$

Estimation of trade margins, transportation costs, and excise and sales taxes. To estimate the cost of transporting commodities from producers to users, BEA first estimated all transportation services bought and sold in the economy by mode-that is, by rail, truck, water, air, and pipeline. Total transportation receipts for each mode were then separated into receipts from travel by persons, such as household consumers' purchases of airline services for vacation travel, and receipts from the transport of goods, such as mining operators' shipping coal by rail. The receipts for moving goods were allocated to commodities by mode: For rail, the allocation was based on information from the American Association of Railroads; for air, from the U.S. Department of Transportation; and for all other modes, from the Census Bureau's 1997 Commodity Flow Survey. For transportation margins on pipeline transmissions, BEA used data directly from the 1997 Economic Census.

The estimates of wholesale and retail trade margins were based on output data from the 1997 Economic Census, supplemented by information from the 1997 Annual Trade Survey and the 1997 Annual Retail Trade Survey. Margin output was then allocated to commodities, using information on sales for major commodity lines by type of business (for example, sales of kitchen appliances by household appliance stores) also from the economic census.

The estimates of sales and excise taxes were based on

[^19]information from the Census Bureau's annual trade surveys and from the NIPA's.

Final balancing of the tables. The final step was to resolve any discrepancies that caused inequalities between the domestic supply of a commodity and its disposition to intermediate and final users. These discrepancies occur for many reasons, including misreporting and misclassification of data from sources; improper valuation and timing of production, exports and imports, and other final uses; and inconsistences and gaps in the source data. In this step, BEA analyzed the sources of the larger discrepancies to determine possible solutions. The remaining smaller discrepancies were then allocated to likely users based on information from the 1992 benchmark I-O accounts. The remaining imbalances in the table were allocated to "other value added" of industries.

## Technical Note: The 1997 Benchmark Input-Output Accounts Tables

The 1997 benchmark input-output (I-O) accounts are presented in the standard make and use tables and several supplementary tables. ${ }^{15}$ The supplementary tables consist of make and use tables that are based on the standard tables, four requirements tables, and bridge tables. ${ }^{16}$

## Standard tables

The standard make and use tables are based on the North American Industry Classification System (NAICS). They are constructed before the redefinitions of selected secondary products (see the box "Treatment of Secondary Products" on page 27). These standard tables provide data in a way that is consistent with the GDP-by-industry accounts and the gross state product accounts and with other industry data that are based on information collected on the NAICS basis.

Table 1, the standard make table. The standard make table is a matrix that shows the value in producers' prices of each commodity produced by each industry (see the schematic in the upper panel of chart 2 and with estimates in table E). In the matrix, commodities are presented in the columns, and industries are presented in the rows. The entries in a row represent the dollar value of commodities produced by the industry at the beginning of the row. The entries in a column represent the value of the production by each industry

[^20]of the commodity at the top of the column.
The diagonal cell in each row (a shaded cell in chart 2) shows the value of production of the commodity for which the industry has been designated the "primary" producer. Any entries in the other cells in the row show the value of production of commodities for which other industries are the primary producers (and for which the given industry is a "secondary" producer).

The row total in the make table is total industry output, and the column total is total commodity output. As indicated by the shading in chart 2 , the row totals of the make table equal the column totals of the use table, and the column totals of the make table equal the row totals of the use table.

Table 2, the standard use table. The standard use table is a matrix that shows the commodities consumed, or used, by each industry and final consumer (see the schematic in the lower panel of chart 2 and with estimates in table F). The entries in a row represent the dollar value of the use by each industry of the commodity named at the beginning of the row and of the sales of the commodity to final uses. The industry uses add up to total intermediate use (the far right column of the industries' portion in chart 2). The final uses sum to GDP (the far right column of the finaluses' portion in chart 2). The entries in a column represent the value of the commodities-that is, of raw materials, semifinished products, and services-used and the value added that is generated in production by the industry at the top of the column. The row total (total commodity output) is the production of the commodity (no matter which industry contributed to that production), and the column total (total industry output) is the production of the industry (no matter what commodity was produced).

## Supplementary tables

The supplementary make and use tables are based on the standard make and use tables. The estimates in the supplementary make and use tables are used to calculate four requirements tables-commodity-by-industry direct requirements, commodity-by-commodity total requirements, industry-by-commodity total requirements, and industry-by-industry total require-ments-that quantify the direct and indirect effects of changes in final demand on the economy (see the box "Treatment of Secondary Products"). These requirements tables are an important analytical tool because they show the interdependence among the producers and consumers in the economy. Using these tables, analysts can estimate the direct and indirect effects of changes in final uses on industries and commodities. For example, these tables can be used to determine the economic impact of a disaster or to compute the effect on output of a shift in demand from domestic to imported goods.

Three additional supplementary tables serve as bridges between the I-O estimates and estimates in the national income and product accounts (NIPA's).

Tables 3 and 4, the supplementary make and use tables. Except for the treatment of redefinitions of selected secondary products produced by industries, these make and use tables are in the same format as the standard make and use tables.

Table 5, the commodity-by-industry direct requirements table. This table is derived from the use table by relating commodity input for an industry to the industry's output. The values in this table, referred to as the "direct requirements coefficients," show the amount of a commodity required by the industry to produce a dollar of the industry's output.

Table E. The Make of Commodities by Industries Before Redefinitions, 1997

USE TABLE COMMODTIES USED BY INDUSTRIES AND FINALUSES

Table 6, the commodity-by-commodity total requirements table. This table is derived from both the make and use tables. The values in this table, referred to as "commodity-by-commodity total requirements coefficients," show the production required both directly and indirectly of the commodity at the beginning of each row per dollar of delivery to final use of the commodity at the top of the column.

Table 7, the industry-by-commodity total requirements table. This table is derived from both the make and use tables. The values in this table, referred to as "industry-by-commodity total requirements coefficients," show the production required directly and in-
directly from the industry at the beginning of the row per dollar of delivery to final use of the commodity at the top of the column.

Table 8, the industry-by-industry total requirements table. This table is also derived from both the make and use tables. The values in this table, referred to as "industry-by-industry total requirements coefficients," show the production required directly and indirectly from the industry at the beginning of the row per dollar of delivery to final use by the industry at the top of the column.

Bridge tables. The first bridge table (appendix C) covers the I-O commodity composition of NIPA

[^22]personal consumption expenditures. The second table (appendix D) covers the I-O commodity composition of NIPA private equipment and software expenditures. The third table (appendix E) reconciles the I-O estimates of exports and imports with those in the NIPA's.

The commodity composition tables are necessary because the valuations and definitions used in the I-O accounts differ from those used in the NIPA's. In the IO accounts, the final use categories are expressed in producers' prices; in the NIPA's, final demand categories are expressed in purchasers' prices. In addition, the definitions of the export and import components of IO final use categories differ from those of the NIPA final demand categories. Before the I-O total requirements tables can be used to measure and analyze the changes in commodity or industry output require-
ments that result from changes in the level or composition of NIPA final demand, the NIPA final demand categories must be converted to the I-O final use categories; that is, the analysis should be consistent with I-O final use commodities that are valued at producers' prices for the I-O year and include separate entries for transportation costs and trade margins.

Some adjustments are necessary in order to reconcile the I-O estimates of exports and imports of goods and services with those in the NIPA's. In the NIPA'sunlike the I-O accounts-imports include the U.S. merchandise that is returned to the United States from other countries, and exports include the foreign merchandise that is reexported from the United States to other countries. The same adjustments are made for both exports and imports, so total GDP is not affected.

## Data Availability

The estimates from the 1997 benchmark input-output (I-O) accounts at the summary level ( 134 commodities and 131 industries) and at the detailed level ( 483 commodities and 491 industries), including a discussion of the matrix algebra underlying the derivation of the tables, are available on BEA's Web site. Go to <www.bea.gov>, click on "Industry: GDP by industry and input-output data," and look under "Input-Output data" to access the data interactively or in a published format.
The estimates are also available on the following diskettes:

- The summary estimates for the standard make and use tables and for the supplementary make, use, and requirements tables, product number NDN-0305, one diskette for $\$ 20$
- The estimates for the standard make and use tables at the detailed level, product number NDN-0306, two diskettes for $\$ 40$
- The estimates for the supplementary make, use, and
direct requirements tables at the detailed level, product number NDN-0307, three diskettes for $\$ 60$
- The estimates for the supplementary industry-by-commodity total requirements table at the detailed level, product number NDN-0308, one diskette for $\$ 20$
- The estimates for the supplementary commodity-bycommodity total requirements table at the detailed level, product number NDN-0309, one diskette for $\$ 20$
- The estimates for the supplementary industry-byindustry total requirements table at the detailed level, product number NDN - 0310, one diskette for $\$ 20$
- The estimates of the I-O commodity composition of national income and product account personal consumption expenditures and private equipment and software expenditures at the summary and detailed levels, product number NDN-0311, one diskette for $\$ 20$
To order, call the BEA Order Desk at 1-800-704-0415
(outside the United States, call 202-606-9666).

## Appendix A. Industries in the 1997 Benchmark Input-Output Accounts

The titles in boldface represent the industries used for the summary version of the 1997 tables. An asterisk following a North American Industry Classification System (NAICS) code indicates that the NAICS industry is included in more than one I-O industry.

# U.S. Multinational Companies: Operations in 2000 

By Raymond J. Mataloni, Jr.

THE combined domestic and foreign operations of nonbank U.S. multinational companies (MNC's) grew rapidly in 2000, according to preliminary estimates from the annual survey of U.S. direct investment abroad conducted by the Bureau of Economic Analysis (BEA). ${ }^{1}$ The worldwide gross product of U.S. MNC'sU.S. parents and their majority-owned foreign affiliates (MOFA's)-increased 8.7 percent in 2000 (table 1). ${ }^{2}$ About three-fourths of the growth was attributable to parents and affiliates that existed in both 1999 and 2000 , and about one-fourth was attributable to the entry of new parents and affiliates to the MNC universe in 2000. The gross product of U.S. parents increased 9.1 percent and that of MOFA's increased 7.0 percent. Growth in MNC operations generally exceeded that in the economies in which they are located, which led to a modest increase in the MNC share of the world economy.

Two other key measures of MNC operations also grew in 2000; MNC employment increased 1.5 percent, and capital expenditures increased 7.6 percent. Growth in employment was slower than that in the

[^35]other key measures, partly because growth in gross product and capital expenditures was concentrated in capital-intensive industries.

Growth in MNC operations in 2000 was strongest in oil and gas extraction and in petroleum and coal products manufacturing. In those two industries combined, MNC gross product increased 35.1 percent, as worldwide growth in petroleum consumption contributed to a sharp rise in prices for petroleum products.

MNC gross product in all other industries combined increased 6.4 percent in 2000, partly reflecting strong growth in the world economy. In addition, output expanded in a number of industries as a result of factors that increased the demand for particular products. For example, the continuing boom in merger and acquisition activity boosted the output of U.S. MNC's engaged in investment banking. The rising use of the Internet and cellular phones in the United States and abroad boosted the output of U.S. MNC's engaged in the manufacture of advanced consumer electronics, software design, and telecommunications services.

By area, the increase in MNC gross product was strongest in Africa and the Middle East (chart 1). Among African affiliates, growth was most rapid in pe-troleum-producing countries, particularly Nigeria and Angola, where the growth reflected the developments in world petroleum prices and consumption. Among

[^36]Middle Eastern affiliates, growth was most rapid in Israel and reflected the establishment of new affiliates and the expansion of existing affiliates engaged in the design and production of advanced consumer electronics. Elsewhere in the region, growth primarily reflected the developments in the petroleum industry. (Despite the strong growth in the gross product of affiliates in Africa and the Middle East, affiliates in these two regions accounted for less than 4 percent of total affiliate gross product in 2000.) Growth in the gross product of affiliates in Latin America and other Western Hemisphere was also strong, reflecting favorable local business conditions and rising demand in the United States for some goods produced by these affiliates. Growth in affiliate gross product was weakest in Europe, reflecting generally below-average economic growth in that area. Within Europe, affiliate gross product declined in several countries, most significantly in Germany, France, and Italy.

The increase in output by U.S. MNC's in 2000 reflected growth in the productive assets of foreign affiliates through the expansion of existing affiliates and through the acquisition and establishment of new affiliates. The total assets of affiliates increased 13.6 percent, and U.S. parents' claims on those assets, as measured by the U.S. direct investment position abroad at current cost, increased 10.0 percent in 2000. In 2001, growth in the direct investment position fell to 7.1 percent, reflecting a slowdown in the global economy and a sharp decrease in merger and acquisition activity worldwide. ${ }^{3}$

The following are additional highlights of the survey results for 2000:
-Worldwide production, capital expenditures, and employment of U.S. MNC's remained concentrated in the United States: U.S. parents accounted for about three-fourths, and MOFA's for about onefourth, of their combined gross product of $\$ 2,695.3$ billion, capital expenditures of $\$ 519.6$ billion, and employment of 31.2 million. These shares were essentially unchanged from 1989.

- Based on World Bank estimates of world GDP in current dollars, which are roughly comparable with the estimates of U.S.-MNC gross product, the U.S.-

[^37]MNC share of world GDP was 8.6 percent, up from 8.1 percent in 1999 and 6.8 percent in 1994. The

Percent Change in Nonbank U.S.-MNC Gross Product, by Country, 2000

MNC Multinational company
U.S. Bureau of Economic Anatysis
U.S.- parent share of U.S. GDP was 21.3 percent, up from 20.6 percent in 1999 and 18.6 percent in 1994. The MOFA share of foreign-country GDP was 2.8 percent, up from 2.6 percent in 1999 and 2.2 percent in 1994.
-The real gross product of both parents and MOFA's increased strongly. For MOFA's in manufacturing, real gross product increased 6.6 percent. For MOFA's in all other industries combined and for
U.S. parents, available data suggests that, after accounting for price changes and exchange-rate changes (in the case of MOFA's), real gross product also increased strongly.
-U.S. MNC's continued to account for a large share of U.S. trade in goods. U.S. exports of goods that involved U.S. parents or their foreign affiliates were $\$ 438.8$ billion, or 56 percent of total U.S. exports of goods. U.S. imports of goods that were associated

## Key Terms

The following key terms are used to describe U.S. multinational companies (MNC's) and their operations. For a comprehensive discussion of the terms and the concepts used, see Raymond J. Mataloni, Jr., "A Guide to BEA Statistics on U.S. Multinational Companies," Survey of Current Business 75 (March 1995): 38-55.

## U.S. MNC's

U.S. multinational company (MNC). The U.S. parent and its foreign affiliates. (In this article, a MNC is usually defined as the U.S. parent and its majority-owned foreign affiliates.)
U.S. parent. A person, resident in the United States, who owns or controls 10 percent or more of the voting securities, or the equivalent, of a foreign business enterprise. "Person" is broadly defined to include any individual, branch, partnership, associated group, association, estate, trust, corporation, or other organization (whether organized or not under the laws of any State), or any government entity. If incorporated, the U.S. parent is the fully consolidated U.S. enterprise consisting of (1) the U.S. corporation whose voting securities are not owned more than 50 percent by another U.S. corporation and (2) proceeding down each ownership chain from that U.S. corporation, any U.S. corporation whose voting securities are more than 50 percent owned by the U.S. corporation above it. A U.S. parent comprises the domestic operations of a U.S. MNC, covering operations in the 50 States, the District of Colombia, the Commonwealth of Puerto Rico, and all other U.S. areas.
U.S. direct investment abroad (USDIA). The ownership or control, directly or indirectly, by one U.S. person of 10 percent or more of the voting securities of an incorporated foreign business enterprise or the equivalent interest in an unincorporated business enterprise.
Foreign affiliate. A foreign business enterprise in which there is U.S. direct investment, that is, in which a U.S. person owns or controls (directly or indirectly) 10 percent or more of the voting securities or the equivalent. Foreign affiliates comprise the foreign operations of a U.S. MNC over which the parent is presumed to have a degree of managerial influence.

Majority-owned foreign affiliate (MOFA). A foreign affiliate in which the combined ownership of all U.S. parents exceeds 50 percent. In 1999, MOFA's accounted for 84 percent of the employment of all foreign affiliates of U.S. MNC's, up from 77 percent in 1989.

## Measures of operations

Gross product. The portion of the goods and services sold or added to inventory or fixed investment by a firm that reflects the production of the firm itself. Gross product, often referred to as "value added," can be measured as gross output (sales or receipts and other operating income plus inventory change and work in progress) minus intermediate inputs (purchased goods and services). Alternatively, it can be measured as the sum of the costs incurred (except for intermediate inputs) and the profits earned in production. The gross product estimates presented here were prepared by summing cost and profit data collected in the annual and benchmark surveys of USDIA. For the derivation of the current-dollar estimates of gross product, see Raymond J. Mataloni, Jr., and Lee Goldberg, "Gross Product of U.S. Multinational Companies, 1977-91," Survey 74 (February 1994): 57.

Capital expenditures. Expenditures made to acquire, add to, or improve property, plant, and equipment (PP\&E). PP\&E includes land, timber, mineral and likerights owned; structures, machinery, equipment, special tools, and other depreciable property; construction in progress; and tangible and intangible exploration and development costs. Changes in PP\&E due to changes in entity-such as mergers, acquisitions, and divestitures-or to changes in accounting methods are excluded. Capital expenditures are measured on a gross basis; sales and other dispositions of fixed assets are not netted against them.
Employment. The number of full-time and part-time employees on the payroll at yearend. If the employment of a parent or an affiliate was unusually high or low because of temporary factors (such as a strike) or large seasonal variations, the number that reflected normal operations or an average for the year was requested.
with U.S.-MNC's were $\$ 425.9$ billion, or 35 percent of total U.S. imports of goods.

- Newly acquired or established MOFA's continued to be concentrated in large and prosperous markets, such as the European Union, and the sales by these affiliates continued to be directed primarily toward the local market. This tendency suggests that access to markets in which to sell goods and services continues to be a more significant factor for most direct investors than access to low-cost labor and other productive resources.
The remainder of this article has three parts. The first part analyzes the worldwide operations of U.S. MNC's, the second part analyzes their U.S. operations, and the third part analyzes their foreign operations. A technical note describes improvements to the coverage of the U.S.-MNC universe and to the estimates of the real gross product of MOFA's in manufacturing.

## Worldwide Operations of U.S. MNC's

This section examines the changes in U.S.-MNC gross product and compares the changes in the gross product of U.S. parents and foreign affiliates. It also examines U.S. trade in goods associated with U.S. MNC's.

## Changes in gross product

Current-dollar gross product of U.S. MNC's grew 8.7 percent in 2000 , to $\$ 2,695$ billion. The U.S.-parent component of U.S.-MNC gross product increased 9.1 percent, and the MOFA component increased 7.0 percent. Available evidence suggests that, after accounting for price and exchange-rate changes, the real gross product of both parents and MOFA's increased significantly. For U.S. parents, the 9.1-percent increase in current-dollar gross product substantially exceeded the 2.4-percent rate of U.S. price inflation (as measured by the GDP implicit price deflator for all private U.S. businesses). For MOFA's, the 7.0 -percent increase in current-dollar gross product and a 2.7 -percent average inflation rate in host countries suggests an inflationadjusted increase of more than 4 percent. Moreover, because the exchange value of the U.S. dollar increased about 7 percent, it is likely that the real gross product of MOFA's increased substantially more than that amount. ${ }^{4}$ A more formal calculation of the changes in real gross product of MOFA's in manufacturing is con-

[^38]sistent with this assessment. (See the section "Real gross product of MOFA's in manufacturing.")

## U.S.-MNC-associated trade in goods

U.S. multinational companies account for a large share of U.S. international trade in goods. In 2000, U.S. trade in goods that involved U.S. parents or their foreign af-filiates-MNC-associated trade-accounted for 56 percent of U.S. exports of goods and for 35 percent of U.S. imports of goods (table 2).

Although the U.S.-MNC shares of U.S. exports and imports of goods remained large in 2000, they have fallen significantly in recent years. In 1994, the MNC share of U.S. exports of goods was 11 percentage points higher ( 67 percent) than in 2000, and the MNC share of U.S. imports of goods was 4 percentage points higher ( 39 percent). The fall in the MNC share of total U.S. trade in goods may be related to the rise in the share of trade accounted for by small and mediumsized U.S. companies, which are less likely to have mul-

| All U.S. exports of goods ................................................. | 512,626 | 695,797 | 781,918 |
| U.S.-MNC-associated U.S. exports as a percentage of total... | 67 | 63 | 56 |
| Intra-U.S.-MNC exports as a percentage of total.................. | 26 | 23 | 21 |
| All U.S. imports of goods .............................................. | 663,256 | 1,024,618 | 1,218,022 |
| U.S.-MNC-associated U.S. imports as a percentage of total .. | 39 | 38 | 35 |
| Intra-U.S.-MNC imports as a percentage of total .................. | 17 | 16 | 15 |

1. In nonbenchmark survey years (such as 2000), this number is calculated as total exports (imports) between U.S. parents and all of their foreign atfiliates (as reported by U.S. parents) less exports (imports) between U.S. parents and MOFA's (as reported by MOFA's).
2. For U.S. parents that are, in turn, owned 10 percent or more by a foreign person, the foreign parent
roup (FPG) consists of (1) the foreign parent of the U.S. parent, (2) any foreign person, proceeding up the group (FPG) consists of (1) the foreign, parent of the U.S. parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, and (3) any foreign
person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it. Trade between foreign-owned U.S. parents and their FPG's is not considered "intra-MNC" trade in this table because FPG's are excluded from BEAS definition of a U.S. MNC.
"other" (that is, minority-owned) foreign affiliates (as reported by aftiviates) less the estimate of exports (imports) between U.S. parents and "other" foreign aftiliates calculated as described in footnote 1. However, these estimates are subject to some imprecision because of differences in the coverage of the data reported by U.S. parents and foreign affiliates. No estimate of exports shipped to other foreign affiliates by U.S. parents is available for 2000 because fhe differences were especially large in that year.

MNC Multinational company.
MOFA Majority-owned foreign affiliate.
n.a. Not available.
tinational operations than are large U.S companies. ${ }^{5}$
U.S.-MNC-associated U.S. trade in goods may be disaggregated into two broad categories: (1) InterMNC trade (trade between U.S. parents and their foreign affiliates), and (2) MNC trade with others (trade between U.S. parents and foreigners other than their foreign affiliates and trade between foreign affiliates and U.S. persons other than their U.S. parents). ${ }^{6}$
U.S.-MNC-associated exports of goods increased 0.8 percent in 2000 , to $\$ 438.8$ billion. Intra-MNC U.S. exports increased 8.1 percent, and U.S. exports between U.S. MNC's and others decreased 3.2 percent. The increase in intra-MNC exports mainly reflected growing trade between U.S. parents and their East

[^39]Asian affiliates that are engaged in the manufacture of information technology products. Most of the exported goods were probably components for assembly because the increase was concentrated among affiliates in countries-such as Singapore, China, and the Phil-ippines-where intermediate inputs have dominated intra-MNC trade in goods with manufacturing affiliates. ${ }^{7}$ The decrease in U.S. exports between U.S. MNC's and others partly resulted from a pronounced decline in exports by U.S. parents in transportation equipment manufacturing (primarily in aircraft manufacturing).
U.S.-MNC-associated imports of goods increased 9.6 percent in 2000 , to $\$ 425.9$ billion. Intra-MNC U.S. imports increased 9.4 percent, and U.S. imports between U.S. MNC's and others increased 9.8 percent. The increase in intra-MNC imports was largest for U.S. MNC's in transportation equipment manufacturing and mainly reflected increased imports of cars and trucks from Mexican affiliates. The increase in U.S. imports between U.S. MNC's and others was largest for U.S. parents engaged in petroleum refining and mainly reflected the rise in the price and the volume of imported crude oil.
7. Based on data from the 1999 benchmark survey of U.S. direct investment abroad, virtually all ( 99.2 percent) of U.S. exports of goods shipped by U.S. parents to their manufacturing affiliates in China, Singapore, and the Philippines were intermediate for further manufacture.

## Data on U.S. Direct Investment Abroad

BEA collects two broad sets of data on U.S. direct investment abroad (USDIA): (1) Financial and operating data of U.S. multinational companies, and (2) international transactions and direct investment position data. This article presents the first set of data; the international transactions and direct investment position data are generally published in the July and September issues of the Survey of Curent Business.

Financial and operating data. The financial and operating data provide a picture of the overall activities of foreign affiliates and U.S. parent companies using a variety of indicators of their financial structure and operations. The data on foreign affiliates cover the entire operations of the affiliate, irrespective of the percentage of U.S. ownership. These data cover items that are needed in analyzing the characteristics, performance, and economic impact of multinational companies, such as sales, gross product (value added), employment and compensation of employees, capital expenditures, exports and imports, and research and development expenditures. Separate tabulations are available for all affiliates and for affiliates that are majority-owned by their U.S. parent(s).

International transactions and direct investment position data. The international transactions data cover a foreign affiliate's transactions with its U.S. parent(s), so these data focus on the U.S. parent's share, or interest, in its affiliate rather than on the affiliate's size or level of operations. These data are essential to the compilation of the U.S. international transactions accounts (ITA's), the international investment position, and the national income and product accounts. The major data items include capital flows (recorded in the ITA's financial account), which measure the funds that U.S. parents provide to their foreign affiliates, and income (recorded in the ITA's current account), which measures the return on those funds. The data also cover royalties and license fees and other service charges that parents receive from or pay to their affiliates. All of these items measure flows in a particular time period, such as a quarter or a year.
Direct investment position data are stock data and are cumulative; they measure the total outstanding level of U.S. direct investment abroad at yearend. Estimates are provided both at historical cost and in terms of currentperiod prices. The historical-cost estimates are published by country and by industry.

## U.S. Parents' Operations

This section examines the changes in U.S.-parent gross product by industry. ${ }^{8}$

## Changes in gross product

The gross product of U.S. parents increased 9.1 percent in 2000 , to $\$ 2,089.4$ billion (table 3). About threefourths of the growth reflected increased output by ongoing operations, and about one-fourth reflected U.S. companies becoming multinational by establishing or acquiring their first foreign affiliate.

By industry, the increases were most pronounced in mining ( 53.3 percent), finance (except depository institutions) and insurance ( 27.1 percent), information ( 22.0 percent), and manufacturing ( 8.1 percent). The increase in mining was concentrated in oil and gas extraction and reflected strong growth in petroleum consumption and a commensurate sharp rise in crude oil prices. The increase in finance and insurance was centered among parents with investment banking activities and partly reflected the record level of merger and acquisition activity. The increase in information partly reflected strong demand for products in the software publishing and telecommunications industries. The increase in manufacturing was most pronounced in petroleum and coal products and in computers and electronic products.
8. A U.S. parent may be under the control of a foreign parent company. In 2000, U.S. parents that were in turn controlled by foreign parents accounted for 9 percent of the gross product of all U.S. parents.

| Finance (except depository institutions) and insurance | 108,961 | 138,478 | 29,517 | 27.1 |
| Protessional, scientific, and technical services.. | 96,069 | 102,988 | 6,919 | 7.2 |
| Other industries ......................................... | 339,867 | 355,235 | 15,368 | 4.5 |

The gross product of U.S. parents decreased substantially in utilities and in transportation equipment manufacturing. The decrease in utilities partly reflected the fact that a few large parent companies sold or disposed of the few small foreign affiliates they held and, thus, these companies were no longer included in the parent-company universe. The decrease in transportation equipment partly reflected slow growth in revenues and an associated weakness in operating profits.

## Operations of Majority-Owned Foreign Affiliates

This section examines selected aspects of the operations of majority-owned foreign affiliates (MOFA's) of U.S. MNC's: The 1999-2000 changes in gross product, the country and industry distributions of newly acquired or established MOFA's, the MOFA shares of host country GDP, and the 1999-2000 changes in the real gross product of MOFA's in manufacturing.

## Changes in gross product

The gross product of MOFA's increased 7.0 percent to $\$ 605.9$ billion in 2000 (table 4). As was the case for U.S. parents, roughly three-fourths of the growth was attributable to affiliates that existed in both 1999 and 2000 , and about one-fourth was attributable to the entry of new affiliates to the MNC universe in 2000. Nearly half of the growth in MOFA gross product occurred in petroleum-related industries.

Increases were widespread by region but, in percentage terms, were most pronounced in Africa and the Middle East, mainly reflecting the rise in world petroleum prices and consumption. Increases in other regions generally reflected continued strong economic growth in host countries.

In Africa, MOFA gross product increased 55.6 percent, and, in the Middle East, it increased 29.2 percent. ${ }^{9}$ In Africa, the increase was highly concentrated among MOFA's in the petroleum extraction industry in a few countries, particularly Nigeria and Angola. In the Middle East, growth was most rapid in mining and manufacturing and was primarily accounted for by affiliates engaged in petroleum-related activities. It also reflected the expansion of the activity of Israeli affiliates engaged in the design and manufacture of advanced consumer electronics.

In Latin America and Other Western Hemisphere, MOFA gross product increased 16.1 percent. Although growth was widespread in the region, affiliates in Brazil and Mexico together accounted for more than half of the overall increase. The increases in both countries were widespread by industry and reflected strong growth in their economies. In Mexico, growth in MOFA gross product also reflected a 33 -percent increase in the volume of cars and trucks exported to the United States.

In Canada, MOFA gross product increased 10.1 percent, mainly reflecting increases in petroleum extraction and refining. In Asia and Pacific, it increased 7.8 percent, mainly reflecting accelerated growth in hostcountry economies, especially in China and Japan.

In Europe, MOFA gross product increased 2.7 percent. Changes by country were mixed: The fastest growth was in the United Kingdom, Norway, and the Netherlands, and the sharpest decreases were in Germany, Italy, and France. The increases in the United Kingdom and Norway mainly reflected rising oil prices and growth in petroleum extraction activities in the North Sea. The gross product of British affiliates in finance also increased rapidly, partly reflecting a rise in demand for investment banking services related to a rise in European merger and acquisition activity. The increase in the Netherlands partly reflected rising sales by affiliates in wholesale trade. The decreases in Germany, France, and Italy were centered in manufacturing. The decreases in Germany and France partly reflected declines ( 11 percent and 1 percent, respectively) in unit auto sales in the local markets. The decrease in Italy partly reflected plant closings in

[^40]machinery manufacturing.
By major industry, the increases in gross product were largest in mining, wholesale trade, and "other in-dustries"-mainly retail trade. The increases in mining and wholesale trade were centered in crude oil extraction and in petroleum marketing and reflected the rise in world petroleum prices and consumption. The increase in MOFA gross product in retail trade mainly reflected the growing popularity of American-style, large-scale discount retail stores.

Newly acquired or established MOFA's. In 2000, U.S. parent companies acquired or established 915 MOFA's with combined gross product of $\$ 11.1$ billion and combined employment of 340,000 (table 5). As in other years for which data are available (1990-99), Europe was the primary location for new affiliates. New European affiliates accounted for 56 percent of all new affiliates and for 61 percent of their gross product. Europe continued to be a favored location for new investments for many reasons, including the following: The large market size of the European Union tends to attract large investments that would be less efficient (or even uneconomic) on a smaller scale; the high per capita income of many European countries attracts investments to produce goods and services for which markets are as yet undeveloped in less affluent coun-

Table 5. Newly Acquired or Established Nonbank Majority-Owned Foreign Affiliates, by Major Area and Industry of Affiliate, 2000

O Suppressed to avoid disclosure of data of individual companies. Notes. The data in this table cover only newly acquired or established foreign affiliates. They exclude data for consolidated units of existing foreign atfiliates that were acquired or established during the year. The affiliates in the earlier annual surveys covering $1995-98$ because of difterences in the criteria for reporting. Completing the 2000 annual survey was required if the total assets, sales, or net income of the foreign afti iate exceeded $\$ 30$ million, while the threshold for filing on the $1995-98$ annual surveys was $\$ 20$ million.
tries; and the familiarity and level of development of the commercial and legal institutions in many European host countries makes feasible investments that would be considered too risky in less familiar or less developed environments.

In Asia and Pacific, nearly half of the new investments occurred in three relatively affluent countries with well developed commercial and legal institutionsAustralia, Japan, and Singapore. However, the number and size of new investments was also substantial in some less developed, but populous, countries in the region, such as China and India. In Latin America, nearly two-thirds of the new investments occurred in Mexico, Brazil, and Argentina.

In Canada, most of the largest new investments were in manufacturing and mining and appeared to have been attracted by Canada's abundant natural resources. Investments in energy-intensive manufacturing operations, such as aluminum smelting, have been attracted by Canada's ample supply of inexpensive hydroelectric power; investments in wood products and paper manufacturing, by its timber resources; and investments in petroleum extraction and refining, by its reserves of natural gas and crude oil.

Manufacturing continued to be the most popular industry for new investments in 2000. New manufacturing affiliates accounted for 34 percent of all new affiliates, for 41 percent of their gross product, and for 39 percent of their employment.

## MOFA share of host country GDP

Among the major host countries shown in table 6, the share of host-country gross domestic product (GDP) accounted for by MOFA's in 2000 ranged from 17.8 percent in Ireland to 0.1 percent in Russia. Despite the wide range, most of the shares were clustered around the average ( 3.7 percent). The MOFA share was within two standard deviations (plus or minus 6.8 percentage points) of the average in all but three countries where the MOFA share was exceptionally high: Ireland, Nigeria, and Singapore.

The high MOFA share in Ireland partly reflected the large scale of affiliate production that is primarily directed at serving export markets-mainly the European Union-that are much larger than the hostcountry market. In addition, Ireland's language and cultural similarities with the United States, educated workforce, and relatively low wages and corporate income taxes were factors that spurred production by MOFA's.

The high MOFA share in Nigeria also reflected the large scale of affiliate production aimed at export mar-kets-in this case, the production of crude oil for
world markets. Similarly, production by MOFA's in Singapore was directed at export markets, primarily markets for computer and electronic products. Some of the host-country features mentioned for Ireland were also factors that spurred production by MOFA's in Singapore.

## Real gross product of MOFA's in manufacturing

In addition to the current-dollar estimates of MOFA gross product, BEA prepares estimates of the real gross product of MOFA's in manufacturing (excluding petroleum). These estimates provide more meaningful comparisons of MOFA gross product across countries and over time than do the current-dollar estimates. Comparisons across countries are enhanced because

the estimates in real terms are based on purchasing-power-parity (PPP) exchange rates rather than on market exchange rates. ${ }^{10}$ Comparisons over time are enhanced because the estimates are in chained 1996 dollars, which are free from the biases associated with current-dollar measures and with traditional, fixedweighted measures. ${ }^{11}$ The estimates are restricted to manufacturing because the source data necessary for the adjustments are currently unavailable for other industries.

The real gross product of MOFA's in manufacturing grew 6.6 percent to $\$ 298.2$ billion in 2000 (table 7). Growth in the 24 member countries of the Organisation for Economic Co-operation and Development (OECD) shown in table 7 was 4.9 percent, compared with 13.2 percent in all other countries. The especially rapid growth in non-OECD countries was mainly accounted for by four countries-Brazil, China, Mexico, and Singapore-and partly reflected strong local eco-

[^41]

nomic growth. ${ }^{12}$
The 4.9-percent growth in MOFA gross product in the 24 selected OECD countries mirrored the growth in total host-country output; in 2000, industrial production in these countries grew 5.9 percent, compared with 3.4 percent in 1995-99 (chart 2). Within these countries, growth in MOFA gross product was most rapid in Poland, Switzerland, the Netherlands, Sweden, Ireland, and Australia. In Poland, the growth largely reflected the establishment of new affiliates and the rapid expansion of recently established affiliates. In Switzerland, the growth was mainly accounted for by expanded production of nondurable goods for sale to customers in other countries. In Ireland, the increase was centered in chemicals, primarily pharmaceuticals. In Australia, the increase was centered among affiliates engaged in the manufacture of metals.

## Technical Note

This note discusses the two principal data improvements introduced in this article: Improvements to the coverage of the U.S.-MNC universe, and improvements to the estimates of the real gross product of MOFA's in manufacturing.

Improvements to the coverage of the U.S.-MNC universe. Beginning with the revised 1999 benchmark estimates and the preliminary 2000 annual estimates presented in this article, BEA has expanded its estimates of the operations of U.S. MNC's in order to provide fuller coverage of the MNC universe. In the past, BEA excluded estimates for "very small" foreign affiliates and for parents that had only "very small" foreign affiliates. ${ }^{13}$ Estimates for very small foreign affiliates were excluded because only very limited information was reported for them, and their inclusion would not have had a material impact on the aggregate direct investment estimates, in terms of value. Estimates for parents of only very small affiliates were excluded to maintain consistency between the parent and affiliate estimates. Estimates for these formerly excluded parents and affiliates are now included in the MNC operations data in order to eliminate the small downward bias attributable to these exclusions.

For very small affiliates, a few data items were required to be reported on a supplement to the 1999 benchmark survey forms. In the revised benchmark es-

[^42]timates for 1999 presented here, these data items were included in the published totals and were also used as the basis to estimate other items covered by the survey. In the 2000 annual estimates, the 1999 data were extrapolated based on the movement in the data for somewhat larger affiliates.

The impact of the inclusion of the new estimates for very small affiliates on the published aggregate estimates is less significant for foreign affiliates than it is for U.S. parents. Overall, the values for very small affiliates are generally negligible, although they may be significant for a few data items or for a few individual host countries (particularly those that are less developed). For example, in 1999, very small MOFA's accounted for 0.5 percent of the assets, 1.0 percent of the gross product, 3.2 percent of the employment, and less than 0.1 percent of the capital expenditures of all MOFA's. In India, the employment of very small affiliates accounted for a substantially larger share- 9.8 percent-of the employment of all MOFA's in 1999.

The values for parents of only very small affiliates, however, are more significant. Parents of only very small affiliates accounted for 1.6 percent of the assets, 3.8 percent of the gross product, 6.1 percent of the employment, and 2.7 percent of the capital expenditures of all nonbank U.S. parent companies in 1999. Thus, the addition of data for parents of only very small affiliates does affect the comparability of the 1999 and 2000 data with data for earlier years for some data items for U.S. parents and for U.S. MNC's overall. ${ }^{14}$

Improvement of the real gross product estimates. This article introduces two improvements to the estimates of the real gross product of MOFA's in manufacturing: The number of countries for which separate estimates are available has been expanded from 19 to 24 , and the number of separate categories used in price deflation has been expanded from 6 to 21 . These improvements were made possible by an expansion in the coverage of data on purchasing-power-parity exchange rates and producer prices published by the Organisation for Economic Co-operation and Development (OECD). ${ }^{15}$ The expansion in the number of countries for which separate estimates are available provides additional cross-sectional detail, and it improves the ac-

[^43]curacy of the estimates for all countries combined because the methodology for these countries is conceptually superior. The expansion in the number of separate categories for which price data are used in de-
flation helps ensure that changes in the deflator used reflects changes in output prices in the primary industries of individual MOFA's.

## Data Availability

This article presents a summary of the preliminary estimates of the worldwide operations of U.S. multinational companies (MNC's) from the 2000 Annual Survey of U.S. Direct Investment Abroad and the final estimates from the 1999 Benchmark Survey of U.S. Direct Investment Abroad. More detailed estimates from the 2000 annual survey and the 1999 benchmark survey will be posted on the BEA Web site early next year.

Final estimates of U.S. MNC operations in 1977 and in 1982-98 and preliminary 1999 estimates are available in publications and in files that can be downloaded at no charge from BEA's Web site <www.bea.gov>.
For more information on these products and how to obtain them, see the International Investment Division Product Guide on BEA's Web site under "International."

## Subject Guide

## Volume 82 (2002)

This guide lists the major items that were published in the Survey of Current Business in the January-December 2002 issues. It gives the month of the issue and the beginning page number, and it includes selected boxes that are cited by title and page number.

## General

A Tribute to Robert Nathan \{February, 8\}
BEA's Strategic Plan for 2001-2005 \{May, 8\}
Customer Service Report for Fiscal Year 2002 \{October, 10\}
Fixed Assets and Consumer Durable Goods for 1925-2001 \{September, 23\}
Schedule of BEA News Releases in 2003 \{October, 148 and December, 134\}

## National

## Federal budget estimates

For Fiscal Year 2003 \{March, 14\}
Relation Between Budget and NIPA Estimates [box, 17]
Federal personal income tax liabilities and payments
Estimates for 1959-2000 \{November, 21\}
Inventories, sales, and inventory-sales ratios for
manufacturing and trade
Third Quarter 2001 \{January, 7\}
Fourth Quarter 2001 \{April, 11\}
First Quarter 2002 \{July, 8\}

# BEA Current and Historical Data 

## National, International, and Regional Data

#### Abstract

This section presents an extensive selection of economic statistics prepared by the Bureau of Economic Analysis (BEA) and a brief selection of collateral statistics prepared by other Government agencies and private organizations. Series that originate in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights.

BEA's economic statistics are available on BEA's Web site at <www.bea.gov>. The site contains data, articles, news releases, and other information from BEA's national, industry, international, and regional programs.

The tables present annual [A], quarterly [Q], and monthly [M] data

## National Data

A. Selected NIPA tables [A, Q]
S. Summary tables .......................................................D-2

1. National product and income ................................D-3
2. Personal income and outlays ..................................D-7
3. Government current receipts and expenditures ....D-8
4. Foreign transactions..............................................D-12
5. Saving and investment .........................................D-14
6. Income and employment by industry..................D-17
7. Quantity and price indexes..................................D-18
8. Supplemental tables ..............................................D-25
B. Other NIPA and NIPA-related tables
B. 1 Personal income [A, M] .....................................D-30
B. 2 Disposition of personal income [A, M].............D-30
B. 3 Gross domestic product by industry [A]...........D-31
B. 4 Personal consumption expenditures by
type [A].....................................................................
B. 5 Private fixed investment in structures by
type [A]...........................................................D-33
B. 6 Private fixed investment in equipment and software by type [A]

D-33
B. 7 Compensation and wage and salary accruals by
industry [A] ......................................................D-34
B. 8 Employment by industry [A] .............................D-35
B. 9 Wage and salary accruals by employee and by
industry [A]..................................................D-36
B. 10 Farm sector output, gross product, and
national income [A]....................................D-37
B. 11 Housing sector output, gross product, and
national income [A]......................................D-37
B. 12 Net stock of private fixed assets by
type [A]...........................................................D-38
C. Historical measures
C. 1 GDP and other major NIPA aggregates ............D-39
D. Domestic perspectives $[A, Q, M]$.............................. D-42
E. Charts

Selected NIPA series ...................................................D-44
Other indicators of the domestic economy ..............D-50

## International Data

F. Transactions tables
F. 1 U.S. international transactions in goods and services [A, M] ...........................................D-52
F. 2 U.S. international transactions [A, Q] ............... D-53
F. 3 U.S. international transactions by area [Q] ....... D-54
F. 4 Private services transactions [A].........................D-57
G. Investment tables [A]
G. 1 U.S. international investment position .............D-58
G. 2 USDIA: Selected items ......................................D-59
G. 3 Selected financial and operating data of foreign
affiliates of U.S. companies.............................D-60
G. 4 FDIUS: Selected items........................................D-61
G. 5 Selected financial and operating data of U.S.
affiliates of foreign companies......................D-62
H. International perspectives [A, Q, M] ..................... D-63
I. Charts

The United States in the international economy......D-64

## Regional Data

J. State and regional tables
J. 1 Personal income [Q]............................................. D-65
J. 2 Personal income and per capita personal income [A] .........................................D-66
J. 3 Disposable personal income and per capita disposable personal income [A] .......................D-67
J. 4 Gross state product [A] ....................................... D-68
K. Local area table
K. 1 Personal income and per capita personal income by metropolitan area [A]

D-69
L. Charts

Selected regional estimates
D-71

## Appendixes

A: Additional information about the NIPA estimates
Statistical conventions............................................D-73
Reconciliation tables [A, Q] ......................................D-74
B: Suggested reading...................................................... D-75

## National Data

## A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on November 26, 2002 and include the "preliminary" estimates for the third quarter of 2002.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most of these tables, annual estimates are also shown.

The news release on gross domestic product is available within minutes of the time of release, and the "Selected NIPA Tables" are available later that day, on BEA's Web site <www.bea.gov>.

The "Selected NIPA Tables" are also available on printouts or diskettes from BEA. To order NIPA subscription products, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666).

NOTE. Effective November 26, 2002, the chained-dollar estimates of nonfinancial corporate business beginning with 1999 have been revised to incorporate newly available price deflators. These revisions affected the estimates in NIPA tables 1.16 and 7.15. For more information, see "Updated NIPA Tables" in this issue.

## S. Summary Tables

Table S.1. Summary of Percent Change From Preceding Period in Real Gross Domestic Product and Related Measures
[Percent]

|  | 2000 | 2001 | Seasonally adjusted at annual rates |  |  |  |  |

| Residual. | 2.1 | 22.6 | 29.1 | 20.2 | 20.2 | 25.1 | 12.7 |

Nore. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the ormula for the chain-yype quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usualy
tive. The residual line is the difference between the first line and the sum of the most detailed lines.
Percent changes from preceding period for selected items in this table are shown in table 8.1 ; contributions to
the percent change in real gross domestic product are shown in table 8.2.
Chain-type quantity indexes for the series in this table are shown in table 7.1.

## Vintage Estimates of the National Income and Product Accounts, 1978-2000

BEA is pleased to announce the availability of a new CD-ROM that is designed to support studies of the impact of revisions to the annual and quarterly national income and product accounts estimates. The CD-ROM presents estimates of gross domestic product, gross domestic income, national income, and their major components for 1978-2000, organized by vintages of all of the successive estimates that have been published.

To order, please call the BEA Order Desk 1-800-704-0415 (outside the United States, call 202-606-9666); specify product number NCN-0298, price $\$ 35.00$. For more information, contact the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; telephone 202-606-9700; or e-mail NIPARelease@bea.gov.

1. Estimates for durable goods and nondurable goods for 1997 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
Note. Percent changes from preceding period for gross domestic product and for final sales of domestic
product are shown in table 8.1.

## Table 1.5. Relation of Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers

[Billions of dollars]

| Gross domestic product | 9,824.6 | 10,082.2 | 10,097.7 | 10,152.9 | 10,313.1 | 10,376.9 | 10,503.7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Less: Exports of goods and services | 1,101.1 | 1,034 | 005.8 | 971.1 | 977.5 | 18.1 | 035.4 |
| Plus: Imports of goods |  |  |  |  |  |  |  |
| and services ............ | 1,466.6 | 1,383.0 | 1,318.4 | 1,315.6 | 1.337.5 | 1.443.7 | 1,468.0 |
| Equals: Gross domestic purchases | 10,190.1 | 10,431.0 | 10,410.4 | 10,497.4 | 10,673.1 | 10,802.4 | 10,936.3 |
| Less: Change in private inventories. $\qquad$ | 63.6 | -60.3 | -60.6 | -96.5 | -29.9 | 3.4 | 14.0 |
| Equals: Final sales to domestic purchasers | 10,126.6 | 10,491.4 | 10,470.9 | 10,593.9 | 10,703.1 | 10,799.0 | 10,922.3 |

Note. Percent changes from preceding period for selected items in this table are shown in table 8.1.

Table 1.7. Gross Domestic Product by Sector [Billions of dollars]

| Gross domestic product $\qquad$ | 9,824.6 | 10,082.2 | 10,097.7 | 10,152.9 | 10,313.1 | 10,376.9 | 10,503.7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Business ' .................. | 8,311.4 | 8,482.7 | 8,484.6 | 8,525.2 | 8,656.2 | 8,700.1 | 8,806.0 |
| Nonfarm ${ }^{2}$.............. | 8,233.6 | 8,402.1 | 8,402.7 | 8,443.7 | 8,567.6 | 8,631.5 | 8,728.6 |
| Nonfarm less housing | 7,435.9 | 7,571.1 | 7,566.4 | 7,601.5 | 7,712.8 | 7,757.5 | 7,859.3 |
| Housing............... | 797.8 | 831.1 | 836.3 | 842.1 | 854.8 | 874.1 | 869.3 |
| Farm..................... | 77.8 | 80.6 | 81.9 | 81.6 | 88.6 | 68.6 | 77.4 |
| Households and |  |  |  |  |  |  |  |
| institutions............ | 431.1 | 459.6 | 465.1 | 466.6 |  | 481.4 | 490.8 |
| Private households... | 13.6 | 11.9 | 11.6 | 10.7 | 10.5 | 10.7 | 10.9 |
| Nonprofit institutions | 417.5 | 447.7 | 453.5 | 455.9 | 462.0 | 470.8 | 479.9 |
| General government ${ }^{3}$. | 1,082.1 | 1,139.8 | 1,148.0 | 1,161.1 | 1,184.4 | 1,195.3 | 1,207.0 |
| Federal.................. | 323.4 | 332.8 | 333.7 | 334.3 | 350.1 | 354.1 | 357.7 |
| State and local.......... | 758.7 | 807.0 | 814.3 | 826.8 | 834.3 | 841.3 | 849.3 |

1. Equals gross domestic product less gross product of households and institutions and of general govemment.
2. Equals gross domestic business product less gross farm product.
3. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.7.

Table 1.4. Real Gross Domestic Product by Major Type of Product [Billions of chained (1996) dollars]

|  | 2000 | 2001 | Seasonally adjusted at annual rates |  |  |  |  |

| Services .............................. | 4,728.9 | 4,826.4 | 4,830.9 | 4,869.1 | 4,903.2 | 4,945.5 | 4,977.2 |
| Structures............................ | 797.9 | 797.1 | 791.8 | 780.5 | 792.1 | 774.9 | 766.2 |
| Residual............................... | -13.2 | 4.6 | 9.3 | 6.4 | 4.7 | 5.3 | -7.8 |
| Addenda: |  |  |  |  |  |  |  |
| Motor vehicle output.......... | 336.5 | 315.9 | 320.2 | 332.6 | 340.5 | 347.2 | 376.1 |
| Gross domestic product less motor vehicle output ....... | 8,854.8 | 8,896.6 | 8,864.5 | 8,915.7 | 9,022.6 | 9,045.9 | 9,111.9 |

1. Estimates for durable goods and nondurable goods for 1997 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
NOTE. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 Current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of comestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.
Percent changes from preceding period for gross domestic product and for final sales of domestic product are
Chain-type quantity indexes for the series in this table are shown in table 7.17.
Table 1.6. Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers
[Billions of chained (1996) dollars]

| Gross domestic product. | 9,191.4 | 9,214.5 | 9,186.4 | 9,248.8 | 9,363.2 | 9,392.4 | 9,484.0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Less: Exports of goods and |  |  |  |  |  |  |  |
| services........................ | 1,137.2 | 1,076.1 | 1,048.0 | 1,021.8 | 1,030.6 | 1,065.5 | 1,074.3 |
| Plus: Imports of goods and services $\qquad$ | 1,536.0 | 1,492.0 | 1,467.0 | 1,447.2 | 1,477.1 | 1,552.9 | 1,561.8 |
| Equals: Gross domestic purchases | 9,561.2 | 9,600.7 | 9,575.8 | 9,645.3 | 9,778.2 | 9,840.8 | 9,932.7 |
| Less: Change in private inventories $\qquad$ | 9,561.2 65.0 | -61.4 | -61.8 | -98.4 | -28.9 | 4.9 | 15.5 |
| Equals: Final sales to domestic purchasers $\qquad$ | 9,490.7 | 9,644.9 | 9,620.3 | 9,722.3 | 9,794.4 | 9,826.0 | 9,907.3 |

Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Percent changes from preceding period for selected series in this table are shown in tabie 8.1
Chain-type quantity indexes for selented series in this table are shown in table 7.2.

| Federal | 289.4 | 291.3 | 291.6 | 292.0 | 294.3 | 296.0 | 298.6 |
| State and local................... | 669.0 | 687.0 | 691.0 | 696.5 | 699.7 | 701.7 | 704.3 |
| Residual. | -6.5 | -2.4 | . 8 | -5.6 | -5.4 | -. 6 | $-3.7$ |

1. Equals gross domestic product less gross product of households and institutions and of general government. Equals gross domestic business product less gross farm product.
2. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.8.
NOTE. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual ine is the difference between the first line and the sum of the most detailed lines.
Chain-type quantity indexes for the series in this table are shown in table 7.14.

## Table 1.9. Relation of Gross Domestic Product, Gross National Product, Net National Product, National Income, and Personal Income

[Billions of dollars]

Table 1.10. Relation of Real Gross Domestic Product, Real Gross National Product, and Real Net National Product
[Billions of chained (1996) dollars]

Table 1.11. Command-Basis Real Gross National Product
[Billions of chained (1996) dollars]

| Gross national product | 9,216.2 | 9,237.3 | 9,199.8 | 9,283.5 | 9,367.5 | 9,376.7 | 9,474.6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Less: Exports of goods and services and income receipts |  |  |  |  |  |  |  |
| from the rest of the world... | 1,498.9 | 1,366.5 | 1,324.1 | 1,264.7 | 1,268.0 | 1,311.9 | 1,327.0 |
| Plus: Command-basis exports of goods and services and income receipts from the rest of the world ' $\qquad$ | 1,516.6 | 1,410.0 | 1,400.2 | 1,314.9 | 1,321.2 | 1,345.6 | 1,358.2 |
| Equals: Command-basis gross national product $\qquad$ | 9,233.9 | 9,280.9 | 9,275.9 | 9,333.7 | 9,420.6 | 9,410.3 | 9,505.7 |
| Addendum: <br> Terms of trade ${ }^{2}$ $\qquad$ | 101.2 | 103.2 | 105.7 | 104.0 | 104.2 | 102.6 | 102.4 |

1. Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and services and income payments.
2. Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100 . current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not addiindex
tive.
Percent changes from preceding period for gross national product are shown in table 8.1. Chain-type quantity indexes for the series in this table are shown in table 7.3.

Table 1.16. Gross Product of Corporate Business in Current Dollars and Gross Product of Nonfinancial Corporate Business in Current and Chained Dollars
 with 1999 has been revised to reflect revisions to the gross product price indexes for nonfinancial industries.
2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . 3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product

## 2. Personal Income and Outlays

| expenditures less food and energy $\qquad$ | 5,057.5 | 5,204.5 | 5,202.4 | 5,293.6 | 5,322.1 | 5,353.5 | 5,419.8 |

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

Note. Chained ( 1996 ) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table are shown in table 7.4.
Contributions to the percent change in real personal consumption expenditures are shown in table 8.3.

Table 3.7. Government Consumption Expenditures and Gross Investment by Type
[Billions of dollars]

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures. 2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transterred to foreign countries by the Federal Government.
2. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as investment in structures and in sotware. The compensation of all general government employees is shown in the addenda.
3. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a
zero net return on these assets. tion of employees of Indian tribal governments reclassified from the private sector.

Table 3.8. Real Government Consumption Expenditures and Gross Investment by Type
[Billions of chained (1996) dollars]

NoTE. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.
Chain-type quantity 3.7.
Chain-type quantity indexes for the series in this table are shown in table 7.11.
contributions to percent change in real government consumption expenditures and gross investment are shown in table 8.6.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries.
3. Compensation of government employees engaged in new own-account investment and related expenditures for goods and servicess are classified as investment in structures and in software. The compensation of all general government employees is shown in the addendum.
 partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity tive. The residual line is the difference between, the first line and the sum of the most detailed lines, excluding the line in the addendum.
Chain-type indexes for the series in this table are shown in table 7.12.
See footnotes to table 3.10.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and atterations of equipment are reclassified lrom goods to services.
Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.
Chain-type quantity indexes for the series in this table are shown in table 7.9.

Table 4.3. Exports and Imports of Goods and Services by Type of Product [Billions of dollars]

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified
from goods to services. rom goods to services.
2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. This series is derived from the Census Bureau series "current cost inventories."
2. The inventory valuation adjustment (IVA) shown in this table differs from the NA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.
Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Note. Estimates in this table are based on the North American Industry Classitication System (NAICS). Chained (1996) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual
rates. Because the formula for the chain-lype quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line sponding chained-doliar estimaies are us the most detailed lines.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in the private inventories component of GDP. The former is the difterence between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.
2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of final sales by tarm and by government enterprises.
Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

| Nonfarm inventories to final sales of goods and structures $\qquad$ | 3.75 | 3.64 | 3.60 | 3.64 | 3.61 |

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates. 2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of inal sales by farm and by government enterprises.
NoTE. Estimates in this table are based on the North American Industry Classification System (NAICS). Chained 1996) dollar inventory series are calculated to ensure that the chained (1996) dollar change in inventories for 1996 equais the current-dollar change in inventories for 1996 and that the average of the 1995 and 1996 end-otyear chain-weighted and fixed-weighted inventories are equal. Chained (1996) dollar final sales are calculated as by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detaifed lines for inventories.

Note. Chain-type quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Implicit price deflitors are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current-
to chained-dollar output multiplied by 100 .
Percent changes from preceding period for items in this table are shown in table 8.1. Contributions to the percent change in real gross domestic product are shown in table 8.2.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.
3. Compensation of government employees engaged in new own-account investment and related expendi-
general government employees is shown in the addenda.
4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.
sation of employees of Indian tribal sation of employees of Indian tribal governments reclassified from the private sector.

1. Except tor exports and imports, consists of new trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States. 3. Consists of personal consumption expenditures, private fixed investment, and gross government invest-
ment.

## 8. Supplemental Tables

Table 8.1. Percent Change From Preceding Period in Selected Series
[Percent]

1. For some components of final sales of computers, includes computer parts.

Note. Contributions to the percent change in real gross domestic product are shown in table 8.2.

1. Includes new computers and peripheral equipment only.
2. Excludes software "embedded," or bundled, in computers and other equipment.

NOTE. The quantity indexes on which the estimates in this table are based are shown in table 7.6. The estimates in this table differ from those in table 8.2 because this table shows contributions to real private fixed investment, whereas table 8.2 shows contributions to real gross domestic product.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment were reclassified from goods to services.
NOTE. The quantity indexes on which the estimates in this table are based are shown in table 7.10. The estimates in this table differ from those in table 8.2 because this table shows contributions to real exports and to real imports, whereas table 8.2 shows contributions to real gross domestic product. Because imports are subtracted
in the calculation of gross domestic product, the contributions of components of real imports have opposite signs in the calculation of gross do

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
ixed assest, inventory investment is inctuded in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classitied as investment, except for goods transferred to foreign countries by the Federal Government.
3. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as investment in structures and in software.
4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.
Note. The quantity indexes on which the estimates in this trable are based are shown in table 7.11. The esti-
mates in this table differ from those in table 8.2 because this table shows contributions to reai government mates in this table differ from those in table 8.2 because this table shows contributions to real government consumption expenditures and gross investment, whereas table 8.2 shows contributions to real gross domestic product.

1. Except for exports and imports, consists of new trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.
Nore. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula tor the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not addr
tive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the ines in the addenda.
Chain-type quantity indexes for the series in this table are shown in table 7.18B.

Table B.2. The Disposition of Personal Income
[Monithy estimates seasonally adjusted at annual rates]

${ }^{\text {'Revised. }}$

1. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.
2. Population is the total population of the United States, including the Amed Forces overseas and the institutionalized
population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates. Source: U.S. Bureau of Economic Analysis.

## Annual Estimates

Except as noted for table B. 3 below, these tables are derived from the NIPA tables that were published in the August and September 2002 issues of the Survey of Current Business, and the estimates reflect the most recent comprehensive and annual NIPA revisions.

1. The current-dollar statistical discrepancy equals gross domestic product (GDP) measured as the sum of expenditures less gross domestic income-that is, GDP measured as the costs incurred and profits earned in domestic production. The chained (1996) dollar statistical discrepancy equals the current-dollar statistical
Equals GDP in ohained (1996) pres less the statistical discrepancy and the sum
detailed industries. The value of not allocated by industry reflects the nonadditivity of chained-dollar estimates and the differences in source data used to estimate real GDP by industry and the expenditures measure of real
Note. Estimates are based on the 1987 Standard Industrial Classification. The table is derived from tables 1 and 6 in "Gross Domestic Product by industry for 1999-2001" in the November 2002 SuRVEY.

* Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component.

1. Consists of purchases (including tips) of meals and beveraoes from retail, service, and amusement establishments, hotels, dining and buttet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed botit on- and ott-premise.
2. Includes lugoage.
3. Consists of watch, clock, and jewerly repairs, costume and dress suin rental, and miscellianeous personal services. 4. Consists of rent for space and for heating and plumbing faciitites, water heaters, lionting fixtures, kitchen cabinets,
linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of tuel and electricity.
4. Consists of space rent (see footnote 4) and rent for appliances, fumishings, and furniture.
5. Consists of transient hotets, motels, clubs, schools, and other oroup housing.
6. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air conditioners, sewing machines, vacuum cleaners, and other appliances.
7. Includes such house furnishings as floor coverings. comforters, quilts, blankets, pillows, picture frames, minors, art products, portable lamps, and clocks. Also incluves, wrining equipment and hand, power, and garden tools.
lamp shades brooms, and brushes lo. Consists of maintenance services for appliances and house fumishings, moving and warehouse expenses, postage and express charges, premiums tor fire and theft insurance on personal property less benefits and dividends, and miscellaneous household operation services.
8. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
9. Consists of osteopathic physicians, chiropractors, private duty nurses, chiropodists, podiatrists, and others providing heath and allied services, not elsewhere classifited
10. Consists of (1) current expendifitres (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.
11. Consists of (1) premmums, less benefits and dividends for health, hospoitilization and accide
berment insurance provided by commercial insurance carriers, and (2) admininistrative expenses (includuing consumption of fixed capital) of nonprofit and self-insured heath plans.
12. Consists of premiums, less benefitst and dividends, for income loss insurance.
13. Consists of premiums, , tess benefits and dividends, for privalety administered workers' compensation.
14. Consists of (1) operating expenses of commercial life insurance carriers. (2) administrative expenses of private noninsured pension plans and publicy administered government employee retirement plans, and (3) premiums, less bene-
fits and dividends, of fraternal benefth societies. For commercial lífe insurance carriers excludes expenses for accident and fits and dividends, of fraternal benefith societies. For commercial life insurance carriers, exccuduss expenses for accident and heaitt insurance and includess profits of stock companites and services turnished without payment by banks, credit agen-
cies, and investment companies. For pension and retirement plans, excludes services furnished without payment by banks, cies, and investment companies. For pension and reitrement plans, excludes services furnished without payment by banks,
credit agencies, and investment companies.
15. Consists of current expenditures (including consumptlon of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other personal business servicus.
16. Consists of premiums, less benefits and dividends, for motor veticle insurance.
17. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, and airport bus fares.
18. Consists of admissions to professional and amateur athletic events and to racetracks.
19. Consists of dues and fees excluding insurance premiums.
devices and parks; oolf courses; sightseeing buses and guides; priviting, skating, and swimming places; amusement commercial participant amusements.
20. Consists of net receipts of lotteries and expenditures for purchases of pets and pet care services, cable TV, film processing, photographic studios, sporting and recreation camps, video cassette rentals, and recreational services, not elsewhere classified.
21. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts-such as those from meals, rooms, and entertainments-accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For govemment institutions, equals student payments of 26.
22. For private institutions, equals current expenditures (including consumption of fixed capita) less receipts-such as tions, equals student payments of tuition. Excludes child day care services, which are included in religious and weltare activ27. Consists of (1) fees paid to commercial, business, trade, and correspondence schools and for educational services, not elsewhere classified, and (2) current expenditures (including consumption of fixed capital) by research organizations and foundations for education and research.
23. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious, social welfare, foreign relief, and political organizations, museums, libraries, and foundations. The expenditures are net of excludes relief payments within the United States and expenditures by foundations for education and research. For proprietary and government institutions, equals receipts from users.
24. Beginning with 1981, includes U.S. students' expenditures abroad; these expenditures were $\$ 0.3$ billion in 1981. 30. Beginning with 1981, includes nonresidents' sludent and medical care expenditures in the United States; student expenditures were $\$ 2.2$ billion and medical expenditures were $\$ 0.4$ billion in 1981.

Note. Consumer durable goods are designated (d.), nondurable goods (n.d.), and services (s.).
Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar more than one period, the corsesponding chained-doliar estimates are usually not additive. The residual tine is the weiterence between the first line and the sum of the most detailed lines.

| Equals: Private fixed investment in new equipment and software $\qquad$ | 932.6 | 992.7 | 912.4 |  |  |  |

1. Includes new computers and peripheral equipment only. Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component.
2. Excludes sofware "embedded," or bundled, in computers and other equipment.

Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity tive. The residual line is the difference between the first line and the sum of the most detailed lines.
n.e.c. Not elsewhere classified.

1. Equals the number of full-time equivalent employees plus the number of self-employed persons. Unpaid family workers are not included.
2 beginning with 2001, reflects the reclassification of employees of Indian tribal governments from the private sector in accordance with the Consolidated Appropriations Act of 2001.
2. Reflects the reclassification of air couriers from trucking and warehousing to transportation by air.
3. Consists of museums, botanical and zoological gardens; engineering and management services; and
services, not elsewhere classified.
4. Includes Coast Guard.
5. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.
Note. Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

Nore. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not addi-

1. Excludes software "embedded" or bundled in computers and other equipment.
2. Consists of otfice buildings except those occupied by electric and gas utility companies.
3. Consists primarily of stores, restaurants, garages, service stations, warehouses, and other build
ings used for commercial purposes.
4. Consists of buildings not elsewhere classified, such as passenger terminals, greenhouses, and
[^49]
## C. Historical Measures

This table is derived from the "GDP and Other Major NIPA Series" tables that were published in the August 2002 issue of the Survey of Current Business and from the "Selected NiPA Tables" that are published in this issue. (Changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1. GDP and Other Major NIPA Aggregates
[Quarterly estimates are seasonally adjusted at annual rates]

| Year and quarter | Billions of chained (1996) dollars |  |  | Percent change from preceding period |  | Chain-type price indexes |  | Implicit price deflators |  | Percent change from preceding period |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  | Chain-type price indexes |  | Implicit price deflators |  |
|  | domestic product | inal sales of domestic product | Gross national product | domestic product | inal sales of domestic product | domestic product | domestic purchases | domestic product | Gross national product | Gross domestic product | Gross domestic purchases | Gross domestic product | Gross national product |

## 1. All exchange rates are from the Board of Governors of the Federal Reserve System.

2. Rates for selected euro-area currencies can be derived by using the following conversion rates: 1 euro = 6.55957 French francs, 1.95583 German marks, and 1936.27 Italian lire.
3. The rate shown for the United States is an index of the weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of major U.S. trading partners, January $1997=100$. For more information on the exchange rate indexes, see "New Summary Measures of the Foreign Exchange Value of

## Regional Data

## J. State and Regional Tables

The tables in this section include the most recent estimates of State personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual estimates of State personal income and the estimates of gross state product are available on CD-ROM. For information on State personal income, e-mail reis.remd@bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross state product, e-mail gspread@bea.gov; write to the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

1. Percent change was calculated from unrounded data.

Nore. The personal income level shown for the United States is derived as the sum of the State estimates. It differs from
the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs
from the NIPA estimate because, by definition, it omits the eamings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.
suswess. Table 1 in "Personal Income by State, Second Quarter 2002" in the November 2002 issue of the Surver of Curnent

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census.
2. Percent change was calculated from unrounded data.

Note. The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the
estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. Source: Table 1 "State Personal Income, Revised Estimates for 1999-2001" in the October
2002 issue of the Surver of Current Business. 2002 issue of the Survey of Current Business.

| 1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census. <br> 2. Percent change was calculated from unrounded data. <br> Note. The personal income level shown for the United States is derived as the sum of the State estimates. It differs trom the estimate of personal income in the national income and product accounts (NIPA's) because of dilferences in coverage, in the methodologies used to prepare the <br> estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the eamings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. <br> Source: Table 1 "State Personal Income, Revised Estimates for 1999-2001" in the October 2002 issue of the Survey of Curreht Business. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## Additional Information About the NIPA Estimates

## Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP in 1997-98 uses prices for 1997 and 1998 as weights, and the 1997-98 annual percent change in the GDP price index uses quantities for 1997 and 1998 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. ${ }^{1}$ These annual changes are "chained" (multiplied) together to form time series of quantity and price; the percent changes that are calculated from these time series are not affected by the choice of reference period.

The quarterly changes in quantities and prices are calculated with weights from two adjacent quarters. As part of an annual or comprehensive revision, the quarterly indexes through the most recent complete year are adjusted to ensure that the average of the quarterly indexes conforms to the corresponding annual index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1996) dollar estimates." These estimates are computed by multiplying the 1996 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a cur-rent-dollar GDP component equaled $\$ 100$ in 1996 and if real output for this component increased by 10 percent in 1997, then the "chained (1996) dollar" value of this com-

[^54]ponent in 1997 would be $\$ 110(\$ 100 \times 1.10)$. Note that percentage changes in the chained (1996) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1996) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A "residual" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. Accurate measures of component contributions to the percentage changes in real GDP and its major components are shown in NIPA tables 8.2-8.6.

BEA also publishes the "implicit price deflator" (IPD), which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100 ; the values of the IPD and of the corresponding "chain-type" price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths-for example, quarters and years-may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these changes requires a variant of the compound interest formula:

$$
r=\left[\left(\frac{x_{t}}{x_{o}}\right)^{m / n}-1\right] \times 100
$$

where $r$ is the percent change at an annual rate; $x_{t}$ is the level of activity in the later period; $x_{0}$ is the level of activity in the earlier period; $m$ is the periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and $n$ is the number of periods between the earlier and later periods (that is, $t-0$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year-for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

## Reconciliation Tables

Table 1. Reconciliation of Changes in BEA-Derived Compensation Per Hour with BLS Average Hourly Earnings [Percent change trom preceding period]

|  | 2000 | 2001 | Seasonally adjusted at annual rates |  |  |  |  |  |

| Less. Other differences ${ }^{2}$....................... | 3.1 | -1.5 | -4.2 | -2.5 | -3.2 | -1.0 | 0.6 | 1.1 |
| Equals: BLS average hourly earnings of production or nonsupervisory workers on privale nontarm payrolls | 3.8 | 4.1 | 3.8 | 3.8 | 3.8 | 3.0 | 2.5 | 3.1 |
| Addendum: <br> BLS estimates of compensation per hour in the nonfarm business sector ${ }^{3}$ $\qquad$ | 7.0 | 2.7 | 0.1 | 1.0 | 1.5 | 2.9 | 3.9 | 4.8 |

- Preliminary

1. Includes BLS data on compensation and hours of nonfarm proprietors and hours worked of unpaid tamily workers.
2. Includes BEA use of non-BLS data and differences in detailed weighting. Annual estimates
also include differences in BEA and BLS benchmark procedures; quarterly estimates also include ditferences in seasonal adjustment procedures
3. These estimates differ from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing.

[^55] NIPA's (2002:1-2002:11).

TA's international transactions accounts

## Appendix B <br> Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. In addition, most of this information is available on BEA's Web site at <www.bea.gov>. Look under "Methodologies"; for articles from the Survey of Current Business, look under "Publications."

## National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of wealth and related estimates.

National income and product accounts (NIPA's). This series of papers documents the conceptual framework of the NIPA's and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting
(1985) [also in the March 1985 Surver]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (1985) [An updated version (March 2002) is available on BEA's Web site.]
Foreign Transactions (1987)
GNP: An Overview of Source Data and Estimating Methods (1987)
Government Transactions (1988)
Personal Consumption Expenditures (1990)
The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPA's. For more information, see the following.

National Income and Product Accounts of the United States, 1929-97 (2001) provides the definitions of the major NIPA aggregates and components, discusses the measures of real output and prices, explains how production is classified and how the NIPA's are presented, describes the statistical conventions that are used, and lists the principal source data and methods that are used to prepare the estimates of gross domestic product (GDP). [Go to <www.bea.gov/bea/an/nipaguid.htm>.]

Information about the sources and methods that are used to prepare the national estimates of personal income, which are the basis for the State estimates, is in State Personal Income, 1929-97 (1999).

In addition, see the following articles in the Surver.
"Updated Summary NIPA Methodologies" (October 2002) briefly describes the principal source data and methods used to prepare the currentdollar and real estimates of GDP.
"Annual Revision of the National Income and Product Accounts" (August 2002).
"BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" (May 1997) is the most recent in a series of articles that describe the conceptual basis for the chain-type measures of real output and prices that are used in the NIPA's.
"Reliability of GDP and Related NIPA Estimates" (January 2002) evaluates the principal NIPA estimates by examining the record of revisions to them.
Wealth and related estimates. Fixed Reproducible Tangible Wealth in the United States, 1925-94 (1999) discusses the concepts and statistical considerations that underlie the estimates and their derivation.
"Fixed Assets and Consumer Durable Goods for 1925-98" (April 2000) describes the definitional and statistical improvements that were incorporated in the comprehensive revision of the estimates.

## Industry accounts

The industry accounts consist of the estimates of gross domestic product by industry, the input-output accounts, and two satellite accounts.

Gross product by industry. "Improved Estimates of Gross Product by Industry for 1947-98" (June 2000) describes the most recent comprehensive revision of these estimates.

## Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov>. See also "BEA's Strategic Plan for 2001-2005" in the May 2002 issue of the Survey of Current Business.
"Gross Domestic Product by Industry for 1998-2000" (November 2001) describes the most recent annual revision of the these estimates.

Input-output accounts. "Benchmark Input-Output Accounts for the U.S. Economy, 1997" (December 2002) presents the 1997 accounts and describes the improvements that were incorporated.
"Annual Input-Output Accounts of the U.S. Economy" presents annual tables that update the 1992 benchmark accounts

For 1996 (January 2000)
For 1997 (January 2001)
For 1998 (December 2001)
Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.
"U.S. Transportation Satellite Accounts"
For 1992 (April 1998)
For 1996 (May 2000)
"U.S. Travel and Tourism Satellite Accounts"
For 1992 (July 1998)
For 1996 and 1997 (July 2000)

## International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITA's). The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITA's and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITA's.

The annual revisions of the ITA's are described in a series of articles, the latest of which is published in the July 2002 Surver.

Direct investment. International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

The "Methodology for U.S. Direct Investment
Abroad," which is also available in U.S. Direct
Investment Abroad: 1994 Benchmark Survey, Final

Results (1998)
"A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 Survey
"A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 Survey
In addition, the updated methodology for foreign direct investment in the United States is available in Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey (2001)

International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.
"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

## Regional accounts

The regional accounts include estimates of personal income and gross state product.

Personal income. Estimates of personal income are prepared for States and for local areas.
"Comprehensive Revision of State Personal Income for 1969-99" (June 2000) summarizes the changes in the methodology that is used to prepare the estimates. The detailed methodology is available on the CD-ROM State Personal Income, 1929-2000.
"Comprehensive Revision of Local Area Personal Income for 1969-98" (July 2000) summarizes the changes in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD-ROM Regional Economic Information System, 1969-2000.

Gross state product. "Comprehensive Revision of Gross State Product by Industry, 1977-94" (June 1997) summarizes the sources and the methods that are used to prepare the estimates. "Gross State Product by Industry, 1977-98" (October 2000) describes the most recent comprehensive revision of these estimates.

PERIODICALS

## Schedule of Upcoming BEA News Releases

U.S. International Transactions, 3rd quarter 2002
U.S. International Trade in Goods and Services, October 2002*

Gross Domestic Product, 3rd quarter 2002 (final) and
Corporate Profits, 3rd quarter 2002 (revised)
Personal Income and Outlays, November 2002
U.S. International Trade in Goods and Services, November 2002*

State Personal Income, 3rd quarter 2002
Gross Domestic Product, 4th quarter 2002 (advance)
Personal Income and Outlays, December 2002
U.S. International Trade in Goods and Services, December 2002*

Gross Domestic Product, 4th quarter 2002 (preliminary)
Personal Income and Outlays, January 2003
U.S. International Trade in Goods and Services, January 2003*
U.S. International Transactions, 4th quarter 2002

Gross Domestic Product, 4th quarter 2002 (final) and
Corporate Profits, 4th quarter 2002
Personal Income and Outlays, February 2003

* Joint release by the Bureau of the Census and the Bureau of Economic Analysis (BEA)

For more information, call BEA at 202-606-9900, or go to our Web site at www.bea.gov

[^0]:    1. Quarterly estimates in the NIPN's are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and annualized. "Real" estimates are in chained (1996) dollars, and price indexes are cham-type measures.
[^1]:    U.S. Bureau of Economic Analysis

[^2]:    1. The large decrease reflects a return to more normal basis of these estimates.

    Center in the third quarter of 2001 (described in the March and June "Business Situations"). At a quarterly rate (no annualized). the decrease is 65.2 percent.
    2. "Computers and peripheral equipment" include new items only: "Sottware" excludes software embedded, or bundled, in computers and other equipment. Because of the large price changes that characterize the components of chained-dollar estimates is substantial and the relative

[^3]:    6. In the NIPA's, the change in private inventories affects the level of GDP; the "change in the change" in private inventories affects the change (or growth) in GDP.
[^4]:    Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government
    are included in services.
    Note. See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are shown in NIPA table 4.4. Percent changes in major aggregates are shown in NIPA table S.1.

[^5]:    8. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown in NIPA tables 1.9, 1.14, 1.16, and 6.16C (see "Selected NIPA Tables," which begins on page D-2 of this issue) as corporate profits with inventory valuation and capital consumption adjustments.
    Percent changes in profits are shown at quarterly, not annual, rates.
    9. Profits before tax is based on inventory and depreciation practices used in tax accounting, whereas the current-production measure-which excludes nonoperating items, such as special charges and capital gains and losses-is based on depreciation of fixed assets and inventory withdrawals valued at current cost.
    10. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from BEA's international transactions accounts.
[^6]:    11. Gross product of nonfinancial corporations is a measure of the contribution, or value added, of these businesses to the Nation's output. On November 26, 2002, realestimates of the series were revised, beginning with 1999, to reflect new and revised estimates of the industry-based price index used for deflation that usually become available about 4 months after the annual revision of the NIPA's.
    12. Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.
[^7]:    13. The combined current surplus or deficit of the Federal Government and State and local governments is the NIPA measure of net saving by government. Net saving equals gross saving less consumption of fixed capital. These estimates are shown in NIPA table 5.1.
[^8]:    1. Benchmark I-O accounts are prepared at 5-year intervals and are based on detailed data from the economic census conducted by the Census Bureau. The eight previous benchmark 1-O accounts covered 1958, 1963, 1967, 1972, 1977, 1982, 1987, and 1992. The 1992 I-O accounts were presented in the November and December 1997 issues of the Survey of Current Business.
[^9]:    2. For details about the differences between the 1987 Standard Industrial Classification System and the 1997 NAICS, see the Census Bureau's Web site at <www.census.gov>.
    3. Auxiliaries are establishments that primarily provide support services, such as payroll services or data-processing services, to other establishments of the same enterprise.
[^10]:    4. For auxiliaries, output is the sum of intermediate purchases plus value added, which is measured as the sum of compensation, indirect business tax and nontax liability, and depreciation. Intermediate purchases are all the other operating expenses of an establishment.
    5. Goods-producing sectors include natural resources and mining, construction, and manufacturing. Services-providing sectors include utilities, trade, transportation and warehousing, information, and all other services.
    6. See Executive Office of the President, Office of Management and Budget, Standard Industrial Classification Manual 1987 (Springfield, VA: National Technical Information Service): 13-15.
[^11]:    7. See Karen J. Horowitz and Stephanie H. McCulla, "Upcoming Changes in the NAICS-Based 1997 Benchmark Input-Output Accounts," Surver 81 (December 2001): 71.
[^12]:    8. For details about auxiliary services in the 1997 NAICS, see the Census Bureau's Web site at <www.census.gov>.
    9. The 1997 Economic Census is the only one in which auxiliaries are presented on both a NAICS basis and an SIC basis.
[^13]:    1. Most imported goods now have domestic counterparts. Before the 1992 benchmark I-O accounts, noncomparable imports also included domestically consumed imported goods, such as bananas and coffee, that had no significant domestic counterparts.
[^14]:    10. In the 1992 benchmark I-O accounts, output of auxiliaries was included for export services and Federally funded research and devclop-
[^15]:    11. For more information, see Robert P. Parker and Bruce T. Grimm, "Recognition of Business and Government Expenditures for Software as Investment: Methodology and Quantitative Impacts, 1959-98" (paper presented to BEA's Advisory Committee, Washington DC, May 5, 2000) at <www.bea.gov/bea/papers/software.pdf>.
[^16]:    1. See Jiemin Guo, Ann M. Lawson, and Mark A. Planting, "From Make-Use to Symmetric I-O Tables; An Assessment of Alternative Tecnology Assumptions" (paper presented at the $14^{\text {th }}$ International Conference on Input-Output Techniques, Montreal, Canada, October 10-15, 2002, sponsored by the International Input-Output Association) for the detailed procedures and technology assumptions used for secondary products in the preparation of benchmark I-O tables.
[^17]:    12. See Bruce T. Grimm, Brent R. Moulton, and David B. Wasshausen, "Information Processing Equipment and Software in the National Accounts" (paper presented at the National Bureau of Economic Research, Conference on Research in Income and Wealth, Measuring Capital in the New Economy, Washington DC, April 26-27, 2002).
[^18]:    13. The producer's price is the amount receivable by the producer from the purchaser of a good or service produced as output. It includes sales and excise taxes collected and remitted by the producer, but it excludes wholesale and retail trade margins and transportation charges. The purchaser's price is the sum of the producer's price, transportation costs, and trade margins. The concepts of producer's price and purchaser's price used in the 1997 benchmark I-O accounts are similar to those used in the 1993 System of National Accounts.
[^19]:    14. Because of NAICS, estimates of oil and gas well drilling and new access structures for solid mineral development are now shown in mining (NAICS 213, Support activities for mining).
[^20]:    15. In the 1992 I-O accounts, these make and use tables were referred to as "alternative" tables.
    16. In the 1992 I-O accounts, these make and use tables and the requirements tables were referred to as "traditional" tables, and the bridge tables, were referred to as "supplementary" tables.
[^21]:    1. Financial activities include both finance and insurance (NAICS 52) and real estate and rental and reasing
    (NAICS 53). "Other" includes government industries and other 1-0 special industries; for more information see
    2. 

    "Appendix A. Industries in the 1997 Benchmark Input-Output Accounts."

[^22]:    1. Financial activities inctude both france and insurance (NAICS 52) and real estate and rental leasing (NAICS 53).
    2. "Other" includes qovemment industries and other 1-0 speclal industries; for more information ste
    "Appendix A. Industries in the 1997 Benchmark Input-Output Accounts."
    3. "Other value added" consisted of the following national income and product accounts components of
[^23]:    * Less than $\$ 500,000$

[^24]:    Less than $\$ 500,000$

[^25]:    Less than $\$ 500,000$

[^26]:    *Less than $\$ 500,000$.

[^27]:    * Less than $\$ 500,000$.

[^28]:    * Less than \$500,000

[^29]:    - Less than $\$ 500,000$.

[^30]:    - Less than $\$ 500,000$.

[^31]:    Less than $\$ 500,000$

[^32]:    * Less than $\$ 500,000$.

[^33]:    *Less than $\$ 500,000$.

[^34]:    - Less than $\$ 500,000$.

[^35]:    1. This article presents highlights from the 2000 annual survey and the 1999 benchmark survey. More detailed estimates will be available later this year (see the box "Data Availability" on page 122).

    The 1999 benchmark survey estimates presented here are the final revised estimates. Highlights of the preliminary 1999 estimates were presented in Raymond J. Mataloni, Jr., and Daniel R. Yorgason, "Operations of U.S. Multinational Companies: Preliminary Results from the 1999 Benchmark Survey," Survey of Current Business 82 (March 2002): 24-54. Highlights of the preliminary 1998 estimates were presented in Raymond J. Mataloni, Jr., "U.S. Multinational Companies: Operations in 1998," Survey 80 (July 2000): 26-45. Highlights of the preliminary 1997 estimates were presented in Raymond J. Mataloni, Jr., "U.S. Multinational Companies: Operations in 1997," Survey 79 (July 1999): 8-35. These articles focus on the preliminary estimates for the most recent year; they also present the final estimates for the preceding year, but these estimates are not analyzed in detail, because the revisions tend to be small. A complete list of the SurveY articles presenting highlights of the operations of U.S. multinational companies is available on BEA's Web site at <www.bea.gov/bea/ai/iidguide.htm>.
    2. A U.S. MNC comprises a U.S. parent company and its foreign affiliates. The examination of the foreign operations of U.S. MNC's in this article generally focuses on data for majority-owned foreign affiliates (MOFA's) rather than for all foreign affiliates because MOFA's are usually under U.S. managerial control and because some of the data necessary for this analysis are collected only for MOFA's. In addition, most foreign affiliates are majority-owned. For example, in 2000 , MOFA's accounted for 84 percent of the employment by all nonbank foreign affiliates.

[^36]:    Acknowledgments
    The 2000 annual survey was conducted under the direction of Patricia C. Walker. James Y. Shin supervised the editing and processing of the reports. The following staff contributed to the processing and editing of the survey or to related computer programming: Joan O. Adams, Christina D. Briseno, Beverly Brooks, Margo R. Collier, James J. Crim, David N. Hale, Jeni Halpern, Carole J. Henry, Jeanne Hicks, Barbara K. Hubbard, Neeta Kapoor, Christine J. Lee, Stephanie A. Lewis, Marcia S. Miller, Juanita L. Mortimer, Xia Ouyang, Monique M. Pickett, Nancy F. Steffen, and Felita A. Traynham.

[^37]:    3. The financial and operating data for MNC's and the data on the U.S. direct investment position abroad focus on different aspects of MNC operations. (See the box "Data on U.S. Direct Investment Abroad.") The most recent year covered by the financial and operating data (2000) differs from that for the direct investment position data (2001) because the data are collected on separate BEA surveys with different filing deadlines. The latest developments in the direct investment position abroad were discussed in Maria Borga and Daniel R. Yorgason, "Direct Investment Positions for 2001: Country and Industry Detail," Survey 82 (July 2002): 21-31.
[^38]:    4. In 2000, the weighted average (in terms of MOFA gross product) U.S.dollar price of the currencies of 7 major euro-area countries and 15 other major host countries fell 7.2 percent. (Collectively, these countries accounted for 83 percent of total MOFA gross product in 2000.)
    The average rate of price inflation in these host countries was derived as a weighted average (in terms of MOFA gross product) using data on GDP implicit price deflators from the World Bank Group Web site.
[^39]:    5. One study documenting the rising importance of small and mediumsized U.S. businesses in U.S. international trade is U.S. Department of Commerce, International Trade Administration, Office of Trade and Economic Analysis, "Small and Medium-Sized Enterprises Play an Important Role," Export America (Volume 2, Number 11: September 2001): 26-30.7
    6. BEA's data on intrafirm trade are distinct from a similar data series on related-party trade from the Census Bureau. Unlike BEA's data on intrafirm trade, which are from its surveys of multinational company operations, the Census Bureau data are based on a checkoff question in customs declarations of exports and imports. For exports, the definition of "related party" in the customs documents is based on an ownership share of at least 10 percent, which is consistent with the definition of direct investment used in BEA's surveys; however, for imports, the customs definition is based on a 6percent ownership share. In addition, the data on related-party trade, unlike BEA's data, do not distinguish the trade between U.S. and foreign units of U.S. multinational companies from the trade between U.S. and foreign units of foreign multinational companies.
[^40]:    9. In addition to the effects of rising petroleum prices and consumption, the rapid growth in these regions also reflected the relatively low level of MOFA gross product which, for a given dollar increase, leads to a relatively high percentage increase.
[^41]:    10. To translate gross product estimates denominated in foreign currencies into U.S. dollars for international comparisons, PPP exchange rates should be used. PPP exchange rates approximate the number of foreign currency units required in a foreign country to buy goods and services (whether or not they are traded internationally) that are equivalent to those that can be bought in the United States with 1 U.S. dollar. For details, see the appendix to Raymond J. Mataloni, Ir., "Real Gross Product of U.S. Companies' Majority-Owned Foreign Affiliates in Manufacturing," Surver 77 (April 1997): 16-17.
    11. For a summary of the methodology used to derive the real gross product estimates, see Mataloni, "Real Gross Product," 12-17. Footnote 14 to the article specifies the Fisher quantity index used in the methodology. (See the technical notes to this article for improvements to the methodology.)
[^42]:    12. In 2000, real GDP in Brazil increased 4.5 percent; in China, 6.6 percent; in Mexico, 7.9 percent; and in Singapore, 9.9 percent. (These data were obtained from the World Bank Web site at <www.worldbank.org>.) By comparison, the average growth in the OECD countries excluding the United States was 3.6 percent. (These data were obtained from the OECD Web site at <www.oecd.org>.)
    13. In the 1999 and 2000 estimates presented in this article, a "very small" affiliate is one whose assets, sales, and net income (positive or negative) were each not greater than $\$ 7$ million.
[^43]:    14. Two other changes that begin with the 1999 data and that affect the comparability of the 1999 and 2000 data with those for earlier years are the change to an industry classification system based on the North American Industry Classification System, and the improvements in coverage of the U.S.-MNC universe that resulted from the 1999 benchmark survey. For details, see the appendix to Raymond J. Mataloni, Jr., and Daniel R. Yorgason, "Operations of U.S. Multinational Companies: Preliminary Results from the 1999 Benchmark Survey," Surver 82 (March 2002): 24-54.
    15. The data on purchasing-power-parity exchange rates were published in OECD, Purchasing Power Parities and Real Expenditures, 1996 Results (Paris, OECD 1999). The data on producer price indexes appear on the OECD CD-ROM Indicators of Industry and Services, Volume 2001/4 (Paris, OECD 2002).
[^44]:    * Less than $\$ 500,000$ ( $+/-$ )

    Suppressed 10 avoid disclosure of data of individual companies.

[^45]:    1. Exports and imports of certain goods, primariy military equipment purchased and sold by the Federa Government, are included in services. Beginning with 1986 , repairs and alterations of equipment are reclassified from goods to services.
[^46]:    * Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component.
    NOTE. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not addiive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

    Chain-type quantity indexes for the series in this table are shown in table 7.10.
    Contributions to the percent change in real exports and in real imports of goods and services are shown in table 8.5

    See footnotes to table 4.3.

[^47]:    1. Includes new computers and peripheral equipment only. Because of rapid changes in relative prices, the chained-doltar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component; accurate estimates of these contributions are shown in table 8.4.
    2. Excludes sottware "embedded," or bundled, in computers and other equipment.

    Nore. Chained (1996) dollar series are caiculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-tyoe quantily indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual ine is the difterence between the first line and the sum of the most detailed lines.

    Chain-type quantity indexes for the series in this table are shown in table 7.6.
    Contributions to the percent change in real private fixed investment are shown in table 8.4.

[^48]:    1. Excludes software "embedded," or bundled, in computers and other equipment.
    2. For some components of final' sales of computers, includes computer parts.
[^49]:    animal hospitals.
    5. Consists primarily of streets, dams, reservoirs, sever and water facilities, parks, and airfields. 6. Consists primarily of dormitories and of fraternity and sorority houses.
    n.e.c. Not etsewhery
    n.e.c. Not elsewhere classified

[^50]:    3. Standard and Poor's, Inc.
    4. Bureau of the Census
[^51]:    PPreliminary.

    1. Represents gains or losses on toreign-currency-denominated assets due to their revaluation at current exchange rates.
    2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets.
    . Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.
    3. Reflects changes in gold stock from U.S. Treasury sales of gold medaliions and commemorative and bullion
    coins; also reftects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.
[^52]:    Note. in inis table, unike in the international transactions accounts, income and capital outlows are shown without a current-cost adjustment, and income is shown net ot whinholaing taxes. In addition, uniike in the international investment position, the direct investment position is valued at historical cost.

    The data in this table are from tables 16 and 17 in "U.S. Direct Investment Abroad: Detail for Historical-Cost
    Position and Related Capital and Income Flows, 2001 " in the September 2002 issue of the Surver of CunRent Position and Related Capital and Income Flows, 2001 " in the September 2002 issue of the Suaver of Current Busuluess.

[^53]:    the Dollar," Federal Reserve Bulletin, vol. 84 (October 1998), pp. 811-18.
    Nore. U.S. interest rates, unemployment rates, and GOP growth rates are from the Federal Reserve, the Bureau of Labor Statistics, and BEA, respectively. GDP growth rates for other countries are calculated from levels which have been rebased to 1995 to tacilitate comparison) are © $\odot E C D$ and are reproduced with permission.

[^54]:    1. In addition, because the changes in quantities and prices calculated using these weights are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.
[^55]:    1. Consists of statistical revisions in the NIPA's that have not yet been incorporated into the TA's (2002:II) and statistical revisions in the lifAs that have not yet been incorporated into the
