BEA Advisory Committee

The BEA Advisory Committee advises the Director of BEA on matters related to the development and improvement of BEA's national, regional, industry, and international economic accounts, especially in areas of new and rapidly growing economic activities arising from innovative and advancing technologies, and it provides recommendations from the perspective of business economists, academicians, researchers, and experts in government and international affairs.

This issue went to the printer on August 17, 2005. It incorporates data from the following monthly BEA news releases:

U.S. International Trade in Goods and Services (Aug. 12), Personal Income and Outlays (Aug. 2), and Gross Domestic Product (July 29).

SURVEY OF CURRENT BUSINESS

August 2005

Volume 85 • Number 8

1 Business Situation: Advance Estimates for the Second Quarter of 2005

Real GDP increased 3.4 percent after increasing 3.8 percent in the first quarter. The slowdown primarily reflected a downturn in private inventory investment. Real disposable personal income increased 1.4 percent after decreasing 2.9 percent.

8 Strengthening America's Economic Infrastructure: A Report on the Conference of the U.S. Chamber of Commerce and the Bureau of Economic Analysis

As part of its ongoing outreach to its data users, BEA cohosted a conference with the U.S. Chamber of Commerce's National Chamber Foundation to gain a deeper understanding of how it can continue to improve its U.S. economic accounts.

Annual Revision of the National Income and Product Accounts: Annual Estimates for 2002–2004 and Quarterly Estimates for 2002:I–2005:I

Real GDP for 2001–2004 grew at an average annual rate of 2.8 percent, 0.3 percentage point less than in the previously published estimates. For 2002:I–2005:I, real GDP grew at an average annual rate of 3.3 percent, 0.2 percentage point less than in the previously published estimates.

36 National Income and Product Accounts Tables

Revised annual, quarterly, and monthly estimates from the annual NIPA revision and advance estimates for the second quarter of 2005 and June 2005.

173 GDP and Other Major NIPA Series, 1929–2005:II

Historical estimates of GDP and its components in current dollars, in chained dollars, and in chain-type quantity and price indexes, national income, and personal income from the annual NIPA revision.

ii August 2005

198 U.S. Affiliates of Foreign Companies: Operations in 2003

Growth in the current-dollar value added of majority-owned nonbank U.S. affiliates slowed, increasing 6 percent after increasing 10 percent in 2002. Employment of these affiliates continued to decline, decreasing 3 percent after decreasing 3 percent in 2002.

Director's Message

One highlight of this month's SURVEY OF CURRENT BUSINESS is an article, accompanied by numerous tables, that details BEA's 2005 annual revision of the national income and product accounts (NIPAs), which covers 2002–2004.

As many of you know, BEA's annual revision of the NIPAs aim to incorporate more up-to-date source data and to make methodological enhancements. The article presenting this year's revision, which begins on page 13, marks the culmination of a lengthy process of dedicated work by BEA economists toward our goal of presenting a more detailed and complete picture of the U.S. economy.

The Survey this month also includes a summary of the recommendations made at the July conference "Strengthening America's Economic Infrastructure," cohosted by BEA and the U.S. Chamber of Commerce's National Chamber Foundation. The event proved very successful, with over 150 people in attendance.

Our objective was to seek recommendations from both private and public sector data users on ways that we might better meet their informational needs. We received many useful recommendations on a variety of topics, and their publication in this issue is the first step toward implementing them over the next few years.

Other articles in this issue discuss the "advance" estimates of gross domestic product for the second quarter of 2005, and operations of U.S. affiliates of foreign companies in 2003.

J. Steven Landefeld

O Steven Landfell

Director, Bureau of Economic Analysis

Taking Account

Fixler, Nalewaik Discuss GDP, GDI, and "True" State

Which is a better indicator of the "true" state of the economy: Gross domestic product (GDP) or gross domestic income (GDI)? The best estimate is perhaps a weighted average of the two, but that raises the issue of how to weight each measure.

Dennis Fixler, Chief Statistician at the Bureau of Economic Analysis (BEA), and Jeremy Nalewaik, a BEA economist, discussed their recent study of this topic last month at the National Bureau of Economic Research's Summer Institute 2005 in a workshop on productivity and macroeconomics.

In their study, the authors relaxed the assumption that the difference between the true state of the economy and both GDP and GDI is pure "noise," meaning that the two measures are not correlated with information about the economy's true state. Under this assumption, the measure with the smallest variance is given greater weight when calculating an average.

The authors explored the possibility that the difference could instead be "news," meaning pure information about the true state of the economy. The study suggests that under the news assumption, the measure with the

greatest variance should be given additional weight because it is assumed to contain more information about the true state of the economy.

The authors concluded that the news assumption is closer to reality. Therefore, GDP (which has greater variance than GDI) should be accorded greater weight.

The study's working paper is available on BEA's Web site at <www.bea.gov>, by clicking on "Papers and Working Papers."

BEA Unveils New Emblem as Part of Branding Effort

BEA adopted a new emblem in July as part of its long-term communications plan.

The new emblem, shown on the front of this issue of the Survey of Current Business and on BEA's Web site, <www.bea. gov>, was selected based on employee input and designs supplied by a third-party communications firm. BEA's other communication materials now carry the new emblem as well.

With a dark blue and gold color scheme, the emblem includes traditional lettering and a stylized line graph to evoke the trustworthiness and reliability central to BEA's goal of providing timely, accurate, and non-partisan economic accounts.

The rollout of the emblem is part of a comprehensive communications strategy to increase awareness and appreciation of BEA. More information about BEA's communications efforts will be available in the Strategic Plan to be released in late fall.

Reinsdorf Discusses Productivity and Trade

Since 1995, productivity growth in the United States appears to have accelerated. Many researchers have concluded that the primary cause has been accelerated productivity growth in the information technology (IT) sector, as evidenced by significant declines in the prices of IT goods.

In a recent study, BEA economist Marshall B. Reinsdorf and three coauthors investigated a new explanation for these IT price changes and, by implication, for the apparent acceleration in productivity: Gains in terms of trade, especially for IT products. Reinsdorf discussed this topic last month at the National Bureau of Economic Research's Conference on Income and Wealth.

The study suggests that while gains in terms of trade explain only a small portion of the productivity speedup, they are important to consider in the measurement of productivity.

August 2005 1

Business Situation

Advance Estimates for the Second Quarter of 2005

THE U.S. economy slowed somewhat in the second quarter of 2005, according to the "advance" estimates of the national income and product accounts (NIPAs) (chart 1). Prices accelerated somewhat.

The advance estimates for the second quarter of 2005 show the following:

- Real gross domestic product (GDP) increased 3.4 percent after increasing 3.8 percent in the first quarter (table 1). During the current expansion period, GDP growth has averaged 3.2 percent.²
- Prices of goods and services purchased by U.S. residents increased 3.2 percent in the second quarter after increasing 2.9 percent. The acceleration mainly reflected accelerations in food and energy prices.

The NIPA estimates for the first quarter of 2005, along with the estimates for 2002–2004, have been revised as part of the regular annual revision of the ac-

This article was prepared by David F. Sullivan.

counts.3

The deceleration in real GDP growth in the second quarter primarily reflected a downturn in inventory investment that was partly offset by a downturn in imports (which are subtracted in the calculation of GDP) and by accelerations in exports and in private investment in equipment and software.⁴

Inventory investment subtracted 2.32 percentage points from GDP growth in the second quarter after contributing 0.29 percentage point to growth in the first quarter. Businesses reduced inventories \$6.4 billion in the second quarter after adding \$58.2 billion in the first quarter; the reduction reflected inventory liquidations by retail motor vehicle and parts dealers and by manufacturers that were partly offset by inventory accumulations by wholesalers.

Imports decreased 2.0 percent and contributed 0.33 percentage point to real GDP growth after increasing 7.4 percent and subtracting 1.14 percentage points from GDP growth in the first quarter. Goods imports turned down; the largest contributors to the downturn

Note. Percent changes are from NIPA table 1.1.1, and contributions to percent change are from NIPA table 1.1.2. Shares are from NIPA table 1.1.10

^{1.} Quarterly estimates in the NIPAs are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and annualized.

^{2.} The current expansion period is measured from the cyclical trough in the third quarter of 2001 through the second quarter of 2005.

^{3.} See Eugene P. Seskin, Shelly Smith, and Teresa L.Weadock, "Annual Revision of the National Income and Product Accounts: Annual Estimates for 2002–2004 and Quarterly Estimates for 2002:I–2005:I" in this issue.

^{4.} In this article, "inventory investment" is shorthand for the NIPA series "change in private inventories," "consumer spending" is shorthand for "personal consumption expenditures," and "government spending" is shorthand for "government consumption expenditures and gross investment."

were nonautomotive consumer goods, petroleum and products, "other" goods, and industrial supplies. In contrast, services imports accelerated.

Exports increased 12.6 percent and contributed 1.25 percentage points to GDP growth after increasing 7.5 percent and contributing 0.74 percentage point. Goods exports accelerated; the largest contributors to the acceleration were accelerations in nonautomotive capital goods and in industrial supplies and an upturn in foods, feeds, and beverages. In contrast, services exports decelerated.

Business investment in equipment and software increased 11.0 percent and contributed 0.84 percentage point to real GDP growth after increasing 8.3 percent and contributing 0.64 percentage point. Investment in transportation equipment and in "other" equipment turned up, but investment in industrial equipment turned down and investment in "other" information processing equipment and in software decelerated.

The advance estimates for the second quarter also show the following:

- Consumer spending slowed slightly, increasing 3.3 percent after increasing 3.5 percent. Spending on energy goods decreased after increasing, and spending on food decelerated. In contrast, spending on motor vehicles turned up, increasing 9.9 percent after decreasing 8.0 percent.
- Business investment in structures increased 3.1 percent after decreasing 2.0 percent. Upturns in mining exploration, shafts, and wells and in "other" structures were partly offset by downturns in power and communication structures and in commercial and health care structures.
- •Government spending increased 2.0 percent after increasing 1.9 percent. Spending by state and local governments accelerated, but spending by the Federal Government slowed.
- Residential investment increased 9.8 percent after increasing 9.5 percent. A sharp acceleration in "other" structures, primarily an upturn in brokers' commissions, was partly offset by a deceleration in

- single-family structures and a downturn in multi-family structures.
- Real final sales of domestic product (GDP less the change in private inventories) increased 5.8 percent after increasing 3.5 percent.
- Real gross domestic purchases (real GDP less net exports of goods and services) increased 1.7 percent after increasing 4.0 percent.
- The production of services decelerated, but the production of structures and of goods accelerated (table 2).

Note. Percent changes are from NIPA table 1.2.1, and contributions to percent change are from NIPA table 1.2.2. Shares are calculated from NIPA table 1.2.5.

- Motor vehicle output turned down, subtracting 0.08 percentage point from real GDP growth after contributing 0.15 percentage point.
- Final sales of computers added 0.43 percentage point to real GDP growth after adding 0.37 percentage point.
- Real disposable personal income increased 1.4 percent in contrast to a 2.9-percent decrease in the first quarter; the decrease followed a large increase in the fourth quarter that had primarily resulted from a
- special dividend payment by the Microsoft Corporation (see "Personal Income").
- The personal saving rate fell to 0.2 percent in the second quarter from 0.7 percent in the first quarter.⁵

Second-Quarter 2005 Advance NIPA Estimates: Source Data and Assumptions

The "advance" estimates for the second quarter are based on the following major source data; as more and better data become available, the estimates will be revised. (The number of months for which data were available is shown in parentheses.)

Personal consumption expenditures: Sales of retail stores (3), unit auto and truck sales (3), and consumers' shares of auto and truck sales (2);

Nonresidential fixed investment: Unit auto and truck sales (3), construction put in place (2), manufacturers' shipments of machinery and equipment other than aircraft (3), shipments of civilian aircraft (2), and exports and imports of machinery and equipment (2);

Residential investment: Construction put in place (2), single-family housing starts (3), sales of new homes (3), and sales of existing houses (3);

Change in private inventories: Trade and nondurable manufacturing inventories (2), durable manufacturing inventories (3), and unit auto and truck inventories (3);

Net exports of goods and services: Exports and imports of goods and services (2);

Government consumption expenditures and gross investment: Federal outlays (3), state and local construction put in place (2), and state and local employment (3);

GDP prices: Consumer price indexes (3), producer price indexes (3), U.S. import and export price indexes (3), and values and quantities of petroleum imports (2).

BEA made assumptions for source data that were not available. Table A shows the assumptions for key series; a more comprehensive list is available on BEA's Web site at <www.bea.gov/bea/dn/home/gdp.htm>.

Table A. Summary of Major Source Data and Assumptions for Advance NIPA Estimates, 2005:II
[Billions of dollars, seasonally adjusted at annual rates]

Value of new construction put in place	212.9	222.6	224.9	226.6	230.4	228.

1. Assumption:

Sommonetary gold is included in international-transactions-accounts exports and imports but is not used directly in the estimation of national income and product account exports and imports.

Prices, next page.

^{5.} The personal saving rate is measured as personal saving as a percentage of current-dollar disposable personal income. An estimate of the *national* saving rate (measured as gross saving as a percentage of gross national income), along with the "preliminary" NIPA estimates for the second quarter, will be available at the end of August.

Prices

Inflation as measured by the price index for gross domestic purchases accelerated to 3.2 percent in the second quarter from 2.9 percent in the first quarter (table 3). Both food and energy prices accelerated in the second quarter; excluding prices for food and energy, the price index increased 2.0 percent after increasing 3.0 percent (chart 2).

Prices of goods and services purchased by consumers increased 3.3 percent after increasing 2.3 percent. The prices paid for nondurable goods accelerated, but the prices paid for services decelerated slightly and the prices paid for durable goods turned down.

The prices paid by consumers for gasoline and oil and for food accelerated in the second quarter. The price index for consumer purchases excluding food and energy, which is sometimes viewed as an indicator of the underlying or core rate of inflation, increased 1.8 percent after increasing 2.4 percent. The largest contributors to this deceleration were the prices of motor vehicles and parts and of medical care services.

Personal consumption expenditures: Food	2.5 -1.2 1.5 1.1	2.5 18.3 2.3 2.8 1.8	1.0 3.6 2.4 2.1 2.2	3.5 28.5 1.8 3.5 1.6				
Gross domestic product	1.5	2.7	3.1	2.4				

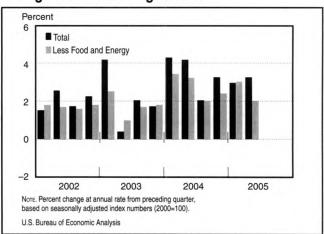

Nore. Most percent changes are from NIPA table 1.6.7; percent changes for personal consumption expenditures on food and on energy goods and services and for personal consumption expenditures excluding food and energy are calculated from index numbers in NIPA table 2.3.4. Contributions to percent change are from NIPA table 1.6.8.

Prices of private nonresidential fixed investment increased 1.8 percent after increasing 3.1 percent. Prices of equipment and software turned down, mainly reflecting a downturn in the prices of transportation equipment and a deceleration in the prices of "other" equipment. Prices of structures decelerated. Prices of residential fixed investment increased 2.5 percent after increasing 1.6 percent.

Prices paid by government increased 3.9 percent after increasing 5.7 percent. The slowdown was accounted for by prices paid by the Federal Government; the first-quarter increase reflected a pay raise for civilian and military personnel.⁶ Prices paid by state and local governments increased at the same rate as in the first quarter.

The GDP price index increased 2.4 percent in the second quarter, 0.8 percentage point less than the price index for gross domestic purchases.⁷ The smaller increase in the GDP price index reflected a smaller increase in export prices (which are included in the GDP price index) than in import prices (which are included in the price index for gross domestic purchases). In the first quarter, a larger increase in export prices than in import prices had resulted in an increase in gross domestic purchases prices that was smaller than the increase in GDP prices.

Chart 2. Gross Domestic Purchases Prices: Change From Preceding Quarter

In the NIPAs, an increase in the rate of Federal employee compensation is treated as an increase in the price of employee services purchased by the Federal Government.

^{7.} The GDP price index measures the prices paid for goods and services produced in the United States. The price index for gross domestic purchases measures the prices paid for goods and services purchased by U.S. residents, regardless of where those goods and services were produced.

Personal Income

Real disposable personal income (DPI) increased 1.4 percent in the second quarter after decreasing 2.9 percent in the first quarter (chart 3). The upturn reflected an upturn in current-dollar DPI (table 4).8 The implicit price deflator for personal consumption expenditures (which is used to deflate DPI) accelerated in the second quarter.

Personal income, which is only measured in current dollars, increased \$143.0 billion (or 5.8 percent) after increasing \$64.4 billion (or 2.6 percent) in the first quarter. The acceleration primarily reflected an upturn in personal dividend income that reflected a return to a

typical pattern of personal dividend income, following the special dividend payment in the fourth quarter by the Microsoft Corporation. Excluding the Microsoft special dividend, personal income increased \$143.0 billion (5.8 percent) in the second quarter after increasing \$163.8 billion (6.8 percent) in the first quarter

Among other components of personal income, compensation of employees and personal current

Quarterly NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter were maintained for a full year. These annual rates are determined simply by multiplying the estimated rate of activity by 4.

For more information on the treatment of dividends in the national accounts, see "The Microsoft Special Dividend" at <www.bea.gov/bea/faq/national/FAQ.htm> on BEA's Web site.

Chart 3. Selected Personal Income and Saving Measures

^{8.} Current-dollar DPI is defined as personal income less personal current taxes.

^{9.} On December 2, 2004, Microsoft paid a special dividend of \$3.00 per share to shareholders of record as of November 17, 2004. The total dividend payout was about \$32 billion (at a quarterly rate). BEA estimates that about three-fourths of the total dividend payout (or \$24.9 billion) was paid to persons; this amount has been converted to an annual rate (\$99.4 billion) and recorded as personal dividend income for the fourth quarter in December.

transfer receipts decelerated, rental income of persons decreased more in the second quarter than in the first quarter, and personal interest income and proprietors' income accelerated in the second quarter.

Compensation of employees increased \$91.3 billion after increasing \$124.0 billion; both wage and salary disbursements and supplements to wages and salaries decelerated. The slowdown in wage and salary disbursements was in both private and government disbursements. In private disbursements, the largest contributor to the slowdown was trade, transportation, and utilities, which increased \$8.8 billion after increasing \$16.4 billion. In government disbursements, the slowdown was primarily in Federal Government disbursements; first-quarter disbursements had reflected the Federal pay raise.

The slowdown in supplements to wages and salaries was both in employer contributions for employee pension and insurance funds and in employer contributions for government social insurance.¹⁰ In employer contributions for employee pension and insurance funds, the slowdown primarily reflected a slowdown in employer contributions to private health insurance

funds. In employer contributions for government social insurance, the larger first-quarter increase had reflected an increase in premiums for supplementary medical insurance.

Personal current transfer receipts increased \$21.1 billion after increasing \$39.6 billion. Government social benefits to persons increased \$21.0 billion after increasing \$40.2 billion. In Federal benefits, the larger increase in the first quarter had reflected cost-of-living adjustments to social security payments and step-ups in the earned income and child tax credits; in state and local benefits, Medicaid payments decelerated in the second quarter.

Rental income of persons decreased \$15.9 billion after decreasing \$10.7 billion. The larger second-quarter decrease resulted from an acceleration in expenses (which are subtracted in the calculation of rental income) and a deceleration in space rent.

Personal interest income increased \$18.4 billion after increasing \$8.0 billion; the acceleration primarily resulted from an increase in interest paid by the Federal Government. Proprietors' income increased \$24.5 billion after increasing \$17.0 billion. The acceleration was primarily in nonfarm proprietors' income; the first-quarter increase had been moderated by the expiration of certain depreciation provisions of the 2002 and 2003 tax acts.

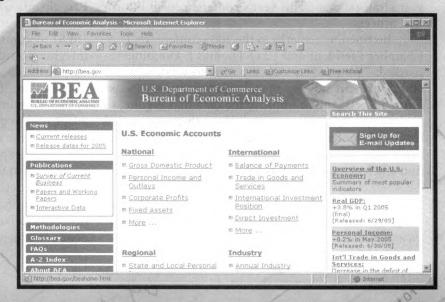

^{10.} Employer contributions for government social insurance do not affect personal income. In the calculation of personal income, they are added in "supplements to wages and salaries" and subtracted in "contributions for government social insurance."

Strengthening America's Economic Infrastructure

A Report on the Conference of the U.S. Chamber of Commerce and the Bureau of Economic Analysis

N July 14, 2005, the U.S. Chamber of Commerce's National Chamber Foundation and the Bureau of Economic Analysis (BEA) jointly hosted a national conference on the U.S. economic accounts. The goal of the conference, entitled "Strengthening America's Economic Infrastructure," was to give data users from business and government an opportunity to share how they use the economic accounts and how the accounts can be strengthened to make their jobs easier. More than 150 people attended the event, including senior business leaders, trade and economic development experts, congressional staff, Government officials, academics, and members of the media. Together, they provided a broad perspective on the future of BEA's economic accounts.

BEA has taken seriously the suggestions for strengthening its accounts. It is incorporating specific recommendations into its statistical research and implementation plans for the next 5 years.

Ten years ago, the U.S. Chamber and BEA held a similar conference to review the programs and services of BEA as they stood in 1995. That conference resulted in substantial changes that improved the accuracy and relevance of the economic accounts. Since then, BEA has further integrated the use of strategic planning into its operations. It annually reviews and updates its 5-year strategic plan. This year's conference will inform that process.

In his opening remarks to the 2005 conference, U. S. Chamber President and CEO Thomas J. Donohue remarked: "We need to look for ways to work together and figure out how to make smart decisions, to use limited assets, and to improve the data that is going to be available for all of us to use." These themes emerged from the conference—the need for data that fit the needs of users and the need for BEA to continue to find efficiencies in using its resources.

This article was prepared by J. Steven Landefeld, Rosemary D. Marcuss, Kerry Sutten, Cindy M. Vojtech, Matthew R. Balazik

U.S. Chamber Vice President and Chief Economist Martin A. Regalia emphasized the fundamental role that accessible statistics play in the U.S. economy, stating: "One of the true public goods, like education or a solid infrastructure system, is infrastructure in data." Conference panelists praised the enhancements to the Nation's statistical infrastructure that BEA has recently delivered. They also noted that the U.S. economic accounts hold their place as world leaders for timely, accurate, and reliable estimates.

Participants made a number of recommendations for new data series and for ways BEA can improve its existing statistics. The recommendations can be grouped under the following topics:

- Improving efficiency: More statistical integration, data sharing, and increased communication with data users and other statistical agencies.
- Measuring change in the economy: Better measurement of services, offshoring, investments in information technology, and health and pension benefits.
- Providing more detail: Better and more detailed measurement of economic activity by industry and geographical area.

Improving efficiency

Participants complimented recent efforts by BEA, the Census Bureau, and the Bureau of Labor Statistics (BLS) to communicate better with the public and to integrate statistical methodologies among themselves, despite the decentralized status of the statistics production system. They did not advocate combining the agencies, pointing to the current system's ability to adapt and supply diverse products. Several panelists noted that the current decentralized system encourages specialized expertise within the agencies, which is important given the size and complexity of the U.S. economy. The Department of Commerce Under Secretary for Economic Affairs Kathleen B. Cooper referred to the statistical agencies' strong customer ratings as evidence of a high level of user satisfaction but noted that

continued success depends on maintaining cooperation.

Integrating economic accounts. Many participants applauded the rich supply of data available in the United States. However, several pointed out that on occasion the trend in an economic statistic from one agency will differ from the trend in a related statistic from another agency. To address that unintended outcome, conference participants called on BEA to continue integrating its accounting methods with those of its statistical partners, in particular, the Census Bureau, BLS, and the Federal Reserve Board (FRB). Im-

proved measurement of productivity, saving, and investment must be addressed through such integration. It was pointed out that a unified statistical architecture, which is the goal of the integration effort, will simplify interagency cooperation. Several participants commented on the central role that BEA plays in the statistical system as the producer of the national income and product accounts (NIPAs), the double-entry economic "books" of the U.S. economy that incorporate components of almost all other statistical efforts.

Data sharing. Some participants mentioned the

Introduced and moderated by Rosemary Marcuss, Deputy Director, BEA, and President, National Association for Business Economics

Closing Remarks (1:40-2:00)

. J. Steven Landefeld, Director, BEA

need for agencies to cooperate better through increased data sharing initiatives. They urged BEA to continue advocating for the passage of legislation that would allow for more data sharing among Federal statistical agencies, including specific business data from the Internal Revenue Service. The Confidential Information Protection and Statistical Efficiency Act of 2002 allows for some data sharing but stops short of allowing BEA, the Census Bureau, and BLS to share taxrelated data. Senator Robert Bennett took a dim view of the current barriers to data sharing, stating, "Failure to share data creates more problems than hanging onto it solves."

Use of tax withholding data. Federal and regional data users argued that more intensive use by BEA of data on income and payroll taxes receipts withheld from paychecks could improve the accuracy of early NIPA wage and salary statistics and reduce the magnitude of subsequent revisions. Further, it was noted that distinction at the time of remittance between income taxes withheld and payroll taxes withheld would provide an important new indicator of wages and salaries. Currently, those remittances are commingled.

Increased communication. Participants spoke of the need for BEA to do more outreach to share information on available data, statistical methodologies, and proper use of BEA measurements. Panelists noted the excellent guidance provided by the staffs of BLS and Census Bureau regional offices and suggested that BEA, with only one office in Washington, DC, consider meeting regularly with broad groups of data users. A suggestion was also made to hold an annual conference specifically for users of regional data. Recognizing that cooperation with data partners does not stop at the Nation's borders, panelists recommended that U.S. statistical experts offer help to other countries' experts, especially those of major trading partners, to improve their trade data. While panelists recognized the need for internationally comparable data, they also believe that international efforts should not hinder work on improving the U.S. economic accounts.

Measuring change in the economy

One of the long-term challenges of the Federal Government statistical system is to better measure a constantly changing economy. Participants in the conference recognized that broad challenge and suggested specific areas that BEA should target.

Services. Many conference participants observed that current economic data provide sufficient breadth and detail of the goods-producing side of the economy

but not of the increasingly important services-producing side. Underscoring the importance of the subject, one data user suggested that BEA design a 5-year plan to improve the measurement of services. In general, panelists did not advocate reassigning efforts away from current measures of goods, but rather creating more and better measures of services. To this end, several speakers commended the recent incorporation of the first components of the new Census Bureau Quarterly Services Survey data into the national accounts and urged the completion of a multiyear phase in of additional industry coverage. No quarterly data on services had been produced before that new survey was put into the field in 2004. As the survey expands in coming years, it will cover additional difficult-to-measure services industries. In addition, the value of expanding the annual Census Bureau survey of services from partial coverage of services to total coverage was emphasized. Participants also asked for more information about trade in services, noting a significant gap between information available for trade in services and information about trade in goods.

Offshoring. Several panelists commented on the need for more data to help disaggregate the complex flows of goods and services in the global market. In particular, they expressed interest in more accurate and more detailed data on international services transactions, which would facilitate research related to "offshoring." In addition, several participants suggested publishing more detailed estimates on the domestic production of services to help in analyzing changing trade flows.

Investments in information technology. Panelists called for BEA to provide more up-to-date information on investments in information technology by producing annual capital flow tables, matrixes that detail specific industries' investment in specific types of equipment. Currently, BEA produces the data only every 5 years. The data are tied to the quinquennial Economic Censuses and become available only 5 years after that census year. Panelists said data that far removed from the year of measurement are out-of-date upon issuance. Similarly, participants requested more timely investment data to better inform policymakers.

Health and pension benefits. Because healthcarerelated spending makes up a rising percentage of the Federal budget, there were requests for new statistics on the healthcare industry that would, among other things, better inform the dilemmas facing policymakers. One recommendation was to create a new health care "satellite" account, a periodic account fully consistent with the NIPAs that provides detailed information on a specific economic sector. Helpful new measures of health care-related economic activity might show, for example, the distribution of goods by geographic region and age and income of the recipient. Such data would more clearly separate cost increases from quality improvements in health care and provide better information on costs, including the cost of insurance coverage. In addition, participants called for more comprehensive data on pension and retirement benefits.

Providing more detail

Given the multiple uses of BEA data by public and private users, participants made numerous recommendations for creating new data series and for improving existing measures to improve productivity analysis, measurement of economic growth, monetary and fiscal policymaking, and regional economic development.

Industry-specific data. Requests for improved capital investment data were made in almost every session of the conference. Several participants asked for more detailed data on capital investment at the industry level with an emphasis on services-producing industries. Such data would result in better input-output measures, which could facilitate improvements to BLS's productivity measures. In addition, some panelists argued that the industry categories published for trade in services do not provide sufficient detail.

Regional-level data. Participants suggested a wide range of improvements to regional-level data. Participants requested that BEA consider publishing state personal income data that are not seasonally adjusted. Currently, they are published only in seasonally adjusted form. Unadjusted data would aid state budget officers in tracking wage patterns. In addition, requests were made for local area data on "transfer payments"—such as Social Security payments, public support payments, and pensions—and for regional data on prices. Other participants lamented the time-series break in gross state product, a measure of the eco-

nomic output of each state, brought about by the otherwise beneficial switch in economic classification from the decades-old Standard Industry Classification to the new North American Industry Classification System. The time-series-break problem is unavoidable when implementing a better classification system, but panelists urged BEA to provide more historical data to relieve those problems.

Country-specific trade data. Panelists mentioned that they would benefit from more detailed quarterly data on trade in services, which are produced by BEA. Such data, now available only on an annual basis, would allow people to better trace the cross-border flows of inputs into the now global production processes of many services.

Next steps

BEA Director J. Steven Landefeld summed up the conference by listing the major themes and important requests presented by participants. He outlined a course of action for evaluating and incorporating key recommendations. He committed BEA to continued meetings with data-producing partners—especially the Census Bureau, BLS, FRB, and the Internal Revenue Service—and with government economic data users, such as the Council of Economic Advisers, the Treasury Department, and the Office of Management and Budget. Importantly, he also committed BEA to new, regular meetings with business data users. More meetings to gauge users' needs will be incorporated into the BEA strategic plan. BEA has already begun incorporating the recommendations expressed at the conference into its strategic plan. The plan for fiscal years 2006–2010 is being reviewed and will be presented to the public and the BEA Advisory Committee at the November 2005 advisory committee meeting.

BEA would like more feedback on these recommendations and other ideas that would allow users to better do their jobs. BEA will evaluate all data user needs and recommendations and implement them when they are analytically and financially feasible.

Economists, accountants, and information technology specialists, BEA has a role for you.

Come work for a top-notch Federal statistical agency:

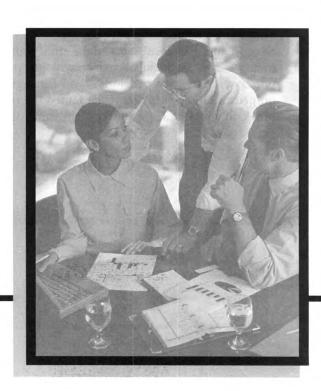

- A recent Federal employee survey named BEA as an "employer of choice," ranking us among the top five agencies.
- A recent Government wide assessment of program effectiveness ranked BEA in the top 1 percent of the programs assessed.

BEA's work makes a difference. It is a world leader in producing vital economic statistics that influence decisions by government officials, business leaders, and households.

Gross domestic product (GDP)
Personal income, spending, and saving
Industry input and output

Annual Revision of the National Income and Product Accounts

Annual Estimates for 2002–2004 Quarterly Estimates for 2002:I–2005:I

By Eugene P. Seskin, Shelly Smith, and Teresa L. Weadock

THE Bureau of Economic Analysis (BEA) released revised estimates of the national income and product accounts (NIPAs) for 2002–2004 and for the first quarter of 2005 on July 29, 2005. As is usual in annual NIPA revisions, these estimates incorporated newly available source data that are more complete, more detailed, and otherwise more reliable than those that were previously incorporated.

This annual revision has not changed the general picture of the economy for the past several years. The revisions to year-to-year growth rates of real gross domestic product (GDP) are small by historical standards. In addition, the quarterly pattern of real GDP growth shown by the revised estimates is similar to the pattern shown by previously published estimates. The revised estimates of prices show a somewhat faster rate of increase than the previously published estimates.

The following are the highlights of the revision:

- From 2001 to 2004, real GDP grew at an average annual rate of 2.8 percent, 0.3 percentage point less than in the previously published estimates. From the fourth quarter of 2001 to the first quarter of 2005, real GDP grew at an average annual rate of 3.3 percent, 0.2 percentage point less than in the previously published estimates.
- From the fourth quarter of 2001 to the first quarter of 2005, the average rate of increase in the price index for gross domestic purchases was revised up 0.3 percentage point to 2.5 percent.
- Both the revised estimates and the previously published estimates show similar quarterly patterns of growth in real GDP.

•From 2001 to 2004, the average annual rate of growth of real disposable personal income was unrevised at 3.0 percent.

In this article, the impact of the revisions on key NIPA measures of economic activity is discussed, and a summary of the revisions and the major source data underlying them are provided. In addition, several changes in the methodology that is used to prepare the estimates are described. Appendix A shows the revised annual estimates and the revisions for the seven summary accounts of the NIPAs in current dollars. An extensive set of tables presenting revised monthly, quarterly, and annual NIPA estimates and the "advance" estimates for the second quarter of 2005 are available in "National Income and Product Accounts Tables" in this issue. In addition, historical estimates are presented in "GDP and Other Major NIPA Series, 1929–2005:II."

Impact of the Revisions

According to the revised estimates, the average annual rate of growth of real GDP from the fourth quarter of 2001 to the first quarter of 2005 was revised down 0.2 percentage point to 3.3 percent (table 1). In the revised estimates, equipment and software, personal consumption expenditures (PCE) for goods and services, residential fixed investment, change in private inventories, exports of goods, and imports of goods were weaker than in the previously published estimates; imports of services, nonresidential structures, exports of services, and state and local government spending were stronger. Federal Government spending was little revised.²

In the revised estimates, the cyclical recovery since 2001 was slightly milder than previously estimated.

^{1.} Information about the structure, definitions, presentation, and methodologies that underlie the NIPAs and that reflect the 2003 comprehensive NIPA revision is available on BEA's Web site; go to <www.bea.gov>, and click on "Methodologies."

^{2.} In this article, "government spending" is shorthand for the NIPA series "government consumption expenditures and gross investment."

From the third quarter of 2001 to the first quarter of 2005, the revised estimates show that real GDP increased at an average annual rate of 3.1 percent; the previously published estimates showed an average increase of 3.4 percent.

For 2002, the percent change in real GDP from the preceding year was revised down from 1.9 percent to 1.6 percent (chart 1). For 2003, the percent change was revised down from 3.0 percent to 2.7 percent. For 2004, the percent change was revised down from 4.4 percent to 4.2 percent.

From fourth quarter to fourth quarter, the percent change in real GDP was revised down from 2.3 percent to 1.9 percent for 2002, was revised down from 4.4 percent to 4.0 percent for 2003, and was revised down from 3.9 percent to 3.8 percent for 2004.

The revised estimates of prices show a somewhat faster rate of increase than the previously published estimates. From the fourth quarter of 2001 to the first quarter of 2005, the average annual rate of increase in the price index for gross domestic purchases was revised up 0.3 percentage point to 2.5 percent, and the average annual rate of increase in the GDP price index was also revised up 0.3 percentage point to 2.3 percent

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type

quantity indexes uses the weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

(table 2). The percent change from the preceding year for the price index for gross domestic purchases was revised up 0.1 percentage point to 1.6 percent for 2002, was revised up 0.2 percentage point to 2.2 percent for 2003, and was revised up 0.5 percentage point to 2.9 percent for 2004 (chart 1).

Summary of the Revisions

In general, the annual revisions to real GDP reflect four factors: (1) Revisions to the current-dollar components of GDP for which chained-dollar estimates are prepared by deflation, (2) revisions to the prices used in deflation, (3) revisions to the quantities used to estimate components of real GDP by extrapolation or direct valuation, and (4) revisions resulting from the use of revised and updated weights in the calculation of real GDP.³ In this year's annual revision, the first and third factors accounted for most of the revisions.

Annual estimates of real GDP

The annual percent change in real GDP was revised down for all 3 years: From 1.9 percent to 1.6 percent for 2002, from 3.0 percent to 2.7 percent for 2003, and from 4.4 percent to 4.2 percent for 2004 (table 3).

For 2002, the largest contributor to the downward revision to real GDP growth was PCE for services. For 2003, the largest contributors to the downward revision to real GDP were fixed investment in equipment and software and PCE; the contributions of these components were partly offset by an upward revision to change in private inventories. For 2004, the largest contributors to the downward revision were a

^{3.} For the GDP components for which chained-dollar estimates are prepared by extrapolation or direct valuation, the current-dollar and chained-dollar estimates are based on independent source data; consequently, the corresponding revisions are unrelated. For a list of these components, see table 2 in "Updated Summary NIPA Methodologies," Survey of Current Business 84 (November 2004): 28–32.

downward revision to fixed investment in equipment and software and an upward revision to imports of goods and services.

Revisions to the components of real GDP. The annual percent change in real PCE was revised down 0.4 percentage point to 2.7 percent for 2002, was revised down 0.4 percentage point to 2.9 percent for 2003, and was revised up 0.1 percentage point to 3.9 percent for 2004 (table 4). For 2002, the revision was more than accounted for by a downward revision to PCE for services (mainly to housing services). For 2003, the revision reflects downward revisions to all three subcategories of PCE; the largest contributor to the revision was a downward revision to food. For 2004, the revision primarily reflects an upward revision to PCE for services (which was more than accounted for by housing services) that was partly offset by a downward revision to PCE for durable goods (which was more than accounted for by motor vehicles and parts).

The annual percent change in nonresidential fixed investment was revised down for all 3 years: 0.3 percentage point to –9.2 percent for 2002, 2.0 percentage points to 1.3 percent for 2003, and 1.2 percentage points to 9.4 percent for 2004. For all 3 years, the revisions were more than accounted for by downward revisions to equipment and software. For 2002, in equipment and software, downward revisions to computers and peripheral equipment, to "other information processing equipment and software," and to industrial equipment were partly offset by an upward revision to software. For 2003, the revision to equipment and software was more than accounted for by a

downward revision to information processing equipment and software. For 2004, the revision to equipment and software was mostly accounted for by a downward revision to information processing equipment and software.

The percent change in residential fixed investment was unrevised at 4.8 percent for 2002, was revised down 0.4 percentage point to 8.4 percent for 2003, and was revised up 0.6 percentage point to 10.3 percent for 2004. For 2003, the revision was primarily accounted for by a downward revision to single-family structures, and for 2004, the revision was more than accounted for by a downward revision to single-family structures.

The change in private inventories (in chained 2000 dollars) was revised up for all 3 years: \$0.8 billion for 2002, \$16.3 billion for 2003, and \$6.3 billion for 2004. Nonfarm inventory investment more than accounted for the revision for all 3 years.

The annual percent change in exports of goods and services was unrevised at -2.3 percent for 2002, was revised down 0.1 percentage point to 1.8 percent for 2003, and was revised down 0.2 percentage point to 8.4 percent for 2004. For 2003, the revision reflects a downward revision to exports of goods that was partly offset by an upward revision to exports of services. For 2004, the revision reflects a downward revision to exports of services.

The percent change in imports of goods and services was unrevised at 3.4 percent for 2002, was revised up 0.2 percentage point to 4.6 percent for 2003, and was revised up 0.8 percentage point to 10.7 percent for 2004. For 2003, the revision reflects an upward

revision to imports of goods. For 2004, the revision reflects upward revisions to imports of services and to imports of goods.

The percent change in government spending was unrevised at 4.4 percent for 2002, was unrevised at 2.8 percent for 2003, and was revised up 0.3 percentage point to 2.2 percent for 2004. For 2004, the revision reflects an upward revision to Federal Government spending that was more than accounted for by Federal nondefense consumption expenditures.

Quarterly estimates

The revisions to the quarterly (and monthly) NIPA estimates reflect the revisions to the annual estimates that result from the incorporation of newly available annual source data, the incorporation of new and revised monthly and quarterly source data (including the updating of the seasonal factors that are used to indicate quarterly patterns), and the introduction of changes in methodology (see "Changes in Methodology").

For real GDP, the revisions to the 13 quarterly percent changes (at annual rates) averaged 0.3 percentage point (without regard to sign). (In the annual NIPA revisions since 1979, the revisions to the quarterly estimates have averaged 0.7 percentage point.)

Both the revised estimates and the previously published estimates show similar quarterly patterns of growth in real GDP. The largest downward revision to the percent changes in real GDP was 0.7 percentage point, from 3.4 percent to 2.7 percent, for the first quarter of 2002 (table 5 and chart 2). The largest contributors to the revision were downward revisions to PCE for services and to equipment and software investment; the negative contributions of these components were partly offset by an upward revision to PCE for durable goods.

In general, the percent changes for the gross domestic purchases price index were revised up; the revisions to the 13 quarterly percent changes (at annual rates) averaged 0.3 percent (with regard to sign). The price index was revised up for 10 quarters, was revised down for 1 quarter (0.1 percentage point for the third quarter of 2002), and was unchanged for 2 quarters. The largest upward revision was 0.8 percentage point, to 4.2 percent, for the first quarter of 2004; the major contributors to the revision were prices of PCE for services, of Federal Government consumption expenditures, and of residential fixed investment.

Annual current-dollar estimates

A summary of the current-dollar revisions to major NIPA components is presented in table 6. It shows the subcomponent series for which revisions were \$5.0 billion or more (absolute value) for any of the years covered by this annual revision, and it lists the major source data that underlie the revised estimates. Note that the incorporation of new and revised source data for a year usually results in a revision to the level of an estimate both for that year and for subsequent years.

This annual revision incorporated data from the following Federal statistical sources: Census Bureau economic census for 2002; Census Bureau annual surveys of manufactures, of merchant wholesale trade, and of retail trade for 2003 and revised monthly indicators for 2002-2004 of merchant wholesale trade and of retail trade; Census Bureau annual surveys of services for 2002 and 2003 (revised) and 2004 (preliminary) and of state and local governments for 2002 (revised) and 2003 (preliminary); Census Bureau monthly survey of construction put in place for 2002-2004 (revised); Census Bureau quarterly survey of services for 2004; Census Bureau survey of housing for 2003; Federal Government budget data for fiscal years 2004 and 2005; Internal Revenue Service tabulations of tax returns for corporations for 2002 (revised) and 2003 (preliminary) and for sole proprietorships and partnerships for 2003; Bureau of Labor Statistics quarterly census of employment and wages for 2004 (revised); Department of Agriculture farm statistics for 2002-2004; and BEA's international transactions accounts for 2002-2004 (revised).

Domestic income and product

Gross domestic product (GDP). The level of current-dollar GDP was revised down for all 3 years: \$17.4 billion, or 0.2 percent, for 2002, \$32.8 billion, or 0.3 percent, for 2003, and \$0.7 billion, or less than 0.1 percent, for 2004.

By major component, the revision to current-dollar GDP for 2002 was more than accounted for by a downward revision to PCE for services. For 2003, the revision primarily reflects downward revisions to PCE for services, to equipment and software investment, and to PCE for goods that were partly offset by upward revisions to change in private inventories, to nonresidential structures, and to state and local government spending. For 2004, downward revisions to equipment and software and to PCE for goods and an upward revision to imports of goods and services were partly offset by upward revisions to nonresidential structures, to Federal Government spending, to state and local government spending, and to change in private inventories.

Gross domestic income (GDI) and the statistical discrepancy. GDI, which measures the costs incurred and the incomes earned in the production of GDP, was revised down for all 3 years: \$11.7 billion for 2002, \$54.3 billion for 2003, and \$45.5 billion for 2004 (see table 6).

For 2002, the revision to GDI reflects downward revisions to net operating surplus and to consumption of fixed capital (CFC) that were partly offset by an upward revision to supplements to wages and salaries. The revision to net operating surplus reflects

Data Availability

An extensive set of estimates are presented in "National Income and Product Accounts" in this issue. These estimates and annual estimates for 1929 forward and quarterly estimates for 1946 forward are available on BEA's Web site at <www.bea.gov>. Later this year, the NIPA estimates will be available on a CD-ROM; its availability will be announced in the Survey of Current Business and on BEA's Web site.

Selected revised NIPA estimates and related estimates will be published in upcoming issues of the Survey. The September Survey will present NIPA table 7.19 (which shows the relationship between personal income in the NIPAs and adjusted gross income from the IRS); it will also present new estimates of fixed assets and consumer durable goods for 2004 and revised estimates for 2002 and 2003.

The October Survey will present the following NIPA

tables: Tables 3.15–3.17 (government spending by function), tables 3.18–3.19 (government sector reconciliation tables), and tables 8.1–8.6 (seasonally unadjusted estimates). It will also present revised real inventories, sales, and inventory-sales ratios for manufacturing and trade for 2002:I–2005:I. In addition, the revised estimates of state personal income that incorporate the results of this annual revision of the NIPAs will be presented.

The November Survey will feature the "Updated Summary NIPA Methodologies," which lists the principal source data and estimating methods that are used in preparing the current-dollar and real estimates of GDP.

Revised and updated estimates of GDP by industry will be available in the late fall of 2005. A future issue of the SURVEY will feature NIPA table 2.9 (personal income by households and by nonprofits institutions serving households) and table 7.20 (nonprofits reconciliation table).

downward revisions to rental income of persons with capital consumption adjustment (CCAdj) and to domestic net interest and miscellaneous payments that were partly offset by an upward revision to domestic corporate profits with inventory valuation adjustment (IVA) and CCAdj.

For 2003, the revision to GDI reflects downward revisions to net operating surplus and to CFC that were partly offset by upward revisions to supplements to wages and salaries and to wages and salaries. The revision to net operating surplus reflects downward revisions to domestic net interest and miscellaneous payments, to proprietors' income with IVA and CCAdj, to rental income of persons with CCAdj, and to the surplus of government enterprises that were partly offset by an upward revision to domestic corpo-

rate profits with IVA and CCAdj.

For 2004, the revision to GDI reflects a large downward revision to the net operating surplus that was partly offset by upward revisions to CFC, to supplements to wages and salaries, to wages and salaries, and to taxes on production and imports. The revision to net operating surplus reflects downward revisions to domestic net interest and miscellaneous payments, to rental income of persons with CCAdj, to proprietors' income with IVA and CCAdj, to domestic corporate profits with IVA and CCAdj, and to the current surplus of government enterprises that were partly offset by an upward revision to "business current transfer payments (net)."

Details about the sources of the major revisions to the NIPA components continue on page 24.

Acknowledgments

Carol E. Moylan, Chief of the National Income and Wealth Division, supervised the preparation of this year's annual revision of the national income and product accounts. Brooks B. Robinson, Chief of the Government Division, directed major parts of the revision. Brent R. Moulton, Associate Director for National Economic Accounts, provided overall supervision. Kali K. Kong—together with Jennifer A. Bennett, Velma P. Henry, Andrew K. Hummel, Arnold J. Katz, Janet H. Kmitch, Charles I. Mead, Denise A. McBride, Brian C. Moyer, and David F. Sullivan—coordinated and conducted the estimation and review process.

Eugene P. Seskin, Shelly Smith, and Teresa L. Weadock wrote the article. Duane G. Hackmann, Shaunda M. Villones, and Teresa L. Weadock prepared analyses and other review materials for both the article and the news release. Michael J. Boehm, Soo N. Kim, Ross F. Metzger, Shane A. Murray, Lisa C. Ninomiya, Michael J. Ocasio, James J. Raley III, Michael D. Randall, Karl V. Rohrer, Andrew G. Schmidt, Christopher M. Siwy, Eric M. Weiss, and Mary D. Young, under the direction of Robert A. Hill, developed and operated the computer systems that were used to compile, check, analyze, and report the final estimates.

Other BEA staff who made significant contributions to the revision are listed below by area of expertise.

Personal consumption expenditures: Clinton P. McCully. Goods: Tony Troy, Harvey L. Davis, Jr., Everette P. Johnson, Matthew D. Tschetter. Services: Michael Armah, Robert N. Ganz III, Brendan J. Leary, Dennis R. Weikel.

Investment and foreign transactions: Paul R. Lally. Inventories, foreign transactions, and prices: Jennifer A. Ribarsky, Lisa A. Dawn, John W. Drewry, Andrew K. Hummel, Soo Jeong Kim, Todd P. Siebeneck, Enrico Tan. Structures, equipment, and software: Jeffrey W. Crawford, Velma P. Henry, Bonnie A. Retus, Todd P. Siebeneck,

Linden L. Webber.

Federal Government: Pamela A. Kelly, W. Robert Armstrong, Peter G. Beall, Jennifer A. Bennett, Andrew P. Cairns, Andrea L. Cook, Christopher G. Falcone, Gregory J. Kuczura, Raymen G. Labella, Benjamin A. Mandel, Farah Naz, Michelle D. Robinson, Mary L. Roy, Benyam Tsehaye, Andrew E. Vargo.

Special studies: Robert J. Kornfeld, Wanda Y. Chambers, Gary W. Davis, Francesca B. Holzheimer, Mark A. Ledbetter, Zhi Wang.

State and local government: Bruce E. Baker, Steven J. Andrews, Benjamin D. Cowan, Aya Hamano, Alyssa E. Holdren, Erin M. Ludlow, Rebecca A. Rider.

Chain-type quantity and price measures and nominal measures: Michael J. Boehm, James J. Raley III, Karl V. Rohrer, Mary D. Young.

Personal income: Kurt Kunze, Toui C. Pomsouvan.

Employee compensation: Kurt Kunze, Jennifer R. Mykijewycz, James E. Rankin, Elijah Slack, Ernest D. Wilcox.

Business income: Kurt Kunze, M. Greg Key, Charles S. Robinson, Jerry L. Stone, Garth K. Trinkl.

Property income: Nicole M. Mayerhauser. Farm output and income: Gregory J. Shotwell. Interest income: Shaunda M. Villones. Rental income of persons and housing output: Denise A. McBride. Insurance: Clark F. Schier.

Consumption of fixed capital: Private: David B. Wasshausen, Michael T. Cusick, Michael D. Glenn, Leonard J. Loebach, Julia T.D. Nguyen. Government: Robert J. Kornfeld, D. Timothy Dobbs.

NIPA information: Marilyn E. Baker, Virginia H. Mannering, Teresa L. Weadock.

Secretarial and program assistance: Adrienne M. Burch, Esther M. Carter, Katherine Dent, Angela P. Pointer.

Other contributors to the review process include Florence H. Campi, Adrienne S. Evans, Lauren C. Morse, and Qing Zhao.

^{1.} In these descriptions, "new" indicates this is the first time that data from the specific source are being incorporated into the component estimate for the given year, and "revised" indicates that data from the specific source were incorporated previously and now revised data from that source are being incorporated.
2. The statistical discrepancy is goss national product (GNP) less gross national income (GNI), it is also the difference between gross domestic product (GDP) and gross domestic income (GDI), which is GNI less net income receipts from the rest of the world. The statistical discrepancy arises because the product-side measures of GNI and GDP are estimated independently from the income-side measures of GNI and GDI.
3. Net interest is the sum of monetary interest paid by domestic business and by the rest of the world and imputed interest paid by domestic financial corporate business, less monetary interest received by domestic business and by the rest of the world.

BEA Bureau of Economic Analysis
BUREAU of Labor Statistics
CCAdj Capital consumption adjustment
DHHS Department of Health and Human Services
FRB Federal Reserve Board
FIX IRS Internal Revenue Service
IVA INVENTIONAL OF T

The statistical discrepancy is the difference between GDP and GDI.⁴ For 2002, the statistical discrepancy was revised down from –\$15.3 billion to –\$21.0 billion (from –0.1 percent to –0.2 percent of GDP). For 2003, the statistical discrepancy was revised up from \$25.6 billion to \$47.1 billion (from 0.2 percent to 0.4 percent of GDP). For 2004, the statistical discrepancy was revised up from \$31.9 billion to \$76.8 billion (from 0.3 percent to 0.7 percent of GDP). The revision to the discrepancy for 2002 reflects a larger downward revision to GDP than to GDI. For 2003 and 2004, the revisions to the discrepancy reflect smaller downward revisions to GDP than to GDI.

Product-side components

Personal consumption expenditures (PCE) for goods. PCE for goods was revised up \$7.3 billion for 2002, was revised down \$11.7 billion for 2003, and was revised down \$14.9 billion for 2004. For each year, most of the revision was accounted for by "goods other than motor vehicles and parts," but motor vehicles and parts also contributed.

"Goods other than motor vehicles and parts" was revised up \$4.2 billion for 2002, was revised down \$10.7 billion for 2003, and was revised down \$8.8 billion for 2004. These revisions resulted from the incorporation of revised annual data on retail sales and food services sales for 2002, of newly available annual data for 2003, and of revised monthly sales data for 2004.

For 2003 and 2004, the revisions were more than accounted for by downward revisions to food (specifically, both "food purchased for off-premise consumption" and "purchased meals and beverages").

Motor vehicles and parts was revised up \$3.2 billion for 2002, was revised down \$1.0 billion for 2003, and was revised down \$6.0 billion for 2004. For 2004, the revision was primarily accounted by a downward revision to "net purchases of used autos and used light trucks," reflecting the incorporation of new trade source data on unit sales and on average prices for new cars.

PCE for services. PCE for services was revised down for all 3 years: \$32.6 billion for 2002, \$39.3 billion for 2003, and \$0.8 billion for 2004. For 2002, the revision primarily reflects downward revisions to housing services and to "other services." The revision to housing services was more than accounted for by downward revisions to owner- and tenant-occupied space rent, reflecting the incorporation of revised 2001 data and new 2003 data on owner- and tenant-occupied housing units and on average rents for tenant-occupied

units from the biennial American Housing Survey (AHS). The revision to "other services" was more than accounted for by a downward revision to "services furnished without payment by financial intermediaries except life insurance carriers"—specifically, to commercial bank services—reflecting a downward revision to services furnished to depositors that was partly offset by an upward revision to services furnished to borrowers. These revisions reflect a downward revision to the reference rate of interest that was used to allocate imputed bank output between depositor and borrower services, and as a result, services to borrowers increased, and services to depositors decreased (see "Changes in Methodology"). Because consumers account for a lower percentage of borrower services than of depositor services, PCE for implicit banking services was revised down.

For 2003, the downward revision to PCE for services was also accounted for by downward revisions to housing services and to "other services." The revision to housing services was more than accounted for by downward revisions to owner- and tenant-occupied rent, reflecting the incorporation of the new AHS data on owner- and tenant-occupied units and on average rents for tenant-occupied units. The revision to "other services" reflects a downward revision to "services furnished without payment by financial intermediaries except life insurance carriers," specifically, to commercial bank services and to services of "other" financial institutions. The downward revision to commercial banks again reflects the downward revision to the reference rate. The downward revision to services of "other" financial institutions was more than accounted for by a downward revision to regulated investment companies, reflecting the incorporation of newly available Internal Revenue Service (IRS) tabulations of corporate expense data.

For 2004, the small downward revision reflects downward revisions to housing services and to household operation services that were mostly offset by upward revisions to medical care services, to transportation services, and to "other services." The downward revision to housing services was more than accounted for by downward revisions to owner- and tenant-occupied rent, reflecting the incorporation of newly available Census Bureau current population survey data on owner- and tenant-occupied housing units. The revision to household operation services was mostly accounted for by downward revisions to electricity and gas and to cellular telephone services. The revision to electricity and gas reflects the incorporation of newly available data on residential consumption from the Energy Information Administration, and the revision to cellular telephone services reflects the

^{4.} See the box "The Statistical Discrepancy" in Robert P. Parker and Eugene P. Seskin, "Annual Revision of the National Income and Product Accounts," Survey 77 (August 1997): 19.

incorporation of newly available Census Bureau Service Annual Survey (SAS) data.

The upward revision to medical care services was mostly accounted for by an upward revision to medical care and hospitalization insurance, reflecting the incorporation of newly available Bureau of Labor Statistics (BLS) data on employer costs for employee compensation. The upward revision to transportation services was mostly accounted for by an upward revision to net motor vehicle insurance premiums, reflecting the incorporation of newly available trade source data on the projected growth rate of personal auto insurance premiums. The upward revision to "other services" reflects upward revisions to personal care services and to net foreign travel and a slight upward revision to personal business services that were partly offset by a downward revision to religious and welfare activities. The revision to personal care services reflects the incorporation of newly available SAS data. The revision to net foreign travel reflects revised travel and passenger fare imports and exports from the BEA international transactions accounts.

In personal business services, upward revisions to brokerage charges and investment counseling and to "other personal business" were mostly offset by a downward revision to "services furnished without payment by financial intermediaries except life insurance carriers." The revision to brokerage charges reflects the incorporation of revised Securities and Exchange Commission (SEC) data on securities commissions and newly available Federal Reserve Board flow-offunds data on equity and debt holdings by households. The revision to investment counseling reflects the incorporation of newly available SAS data and revised SEC data. The revision to "other personal business" was accounted for by upward revisions to professional association expenses, employment agency fees, and tax return preparation services, reflecting the incorporation of newly available SAS data, and by an upward revision to labor union expenses, reflecting the incorporation of BLS tabulations from the quarterly census of employment and wages. The revision to "services furnished without payment by financial intermediaries except life insurance carriers" was more than accounted for by a downward revision to commercial bank services, reflecting the downward revision to the reference rate. The revision to religious and welfare activities was accounted for by a downward revision to religious organizations, reflecting an extrapolation of revised 2003 estimates, which incorporated new trade source data on church membership and contributions.

Nonresidential structures. Nonresidential structures was revised up for all 3 years: \$7.6 billion for

2002, \$15.3 billion for 2003, and \$20.2 billion for 2004.

For all 3 years, the revisions primarily reflect upward revisions to petroleum and natural gas structures that resulted from the incorporation of newly available trade source data on drilling costs. For 2004, the revision to nonresidential structures was also attributable to an upward revision to commercial and health care structures, primarily reflecting the incorporation of revised Census Bureau data on the value of construction put in place.⁵

Equipment and software. Equipment and software was revised down for all 3 years: \$5.3 billion for 2002, \$27.5 billion for 2003, and \$42.0 billion for 2004. For 2002 and for 2003, downward revisions to computers and peripheral equipment, to communication equipment, and to industrial equipment were partly offset by upward revisions to software. For 2004, all of these categories were revised down.

The revisions to computers and peripheral equipment, to communication equipment, and to industrial equipment primarily resulted from the incorporation of revised shipments data from the Census Bureau's Annual Survey of Manufactures (ASM) for 2002 and newly available ASM data for 2003. The revisions to software primarily resulted from the incorporation of revised detailed product receipts data from the Census Bureau's 2002 and 2003 SAS and newly available data from the 2004 SAS.

Residential fixed investment. Residential fixed investment was revised down \$0.2 billion for 2002, was revised up \$0.2 billion for 2003, and was revised up \$10.4 billion for 2004. For 2004, an upward revision to single-family structures accounted for most of the revision and resulted from the incorporation of revised Census Bureau data on the value of construction put in place.

Change in private inventories. The change in private inventories was revised up for all 3 years: \$0.7 billion for 2002, \$16.6 billion for 2003, and \$12.0 billion for 2004.6

The change in farm inventories was revised down

^{5.} The Census Bureau data on the value of construction put in place are the major source data for the estimates of both nonresidential and residential structures. The revised estimates are based on the "best period-toperiod change" rather than on the "best level" of the appropriate Census Bureau series; see the box "Incorporating Source Data on the Basis of 'Best Change'" in Eugene P. Seskin and David F. Sullivan, "Annual Revision of the National Income and Product Accounts," Survey 80 (August 2000): 16.

^{6.} Change in private inventories is calculated by adjusting inventories reported by businesses on a non-LIFO (last-in-first-out) book value basis to a current-period replacement-cost basis; this revaluation eliminates gains or losses that result from holding inventories when prices change. The inventory valuation adjustment (IVA), which is calculated as the change in private inventories less the change in book values, reflects inventory price changes for firms that value inventory withdrawals at acquisition (historical) cost

\$1.0 billion for 2002, was revised down slightly for 2003, and was revised up \$4.3 billion for 2004.⁷

The change in private nonfarm inventories was revised up for all 3 years: \$1.7 billion for 2002, \$16.7 billion for 2003, and \$7.8 billion for 2004. For 2003, the revision primarily reflects upward revisions to inventories for manufacturing and for mining, utilities, and construction industries. The revisions to inventories reflect the incorporation of newly available annual book value data from the Census Bureau's annual survey of manufacturers and from IRS tabulations of tax return data for corporations and for sole proprietorships and partnerships. For 2004, the revision primarily reflects upward revisions to inventories for mining, utilities, and construction industries and for retail trade. The largest contributors to the revisions were utilities, reflecting the incorporation of revised Energy Information Administration data, and retail motor vehicle dealers, reflecting the incorporation of revised inventory data from trade sources.

Net exports of goods and services. Net exports of goods and services was revised down \$0.5 billion for 2002, was revised down \$2.8 billion for 2003, and was revised down \$17.8 billion for 2004. For 2004, the revision primarily reflects an upward revision to imports of goods and services.

The revisions reflect the annual revision to BEA's international transactions accounts (ITAs), which incorporated new and updated source data, including data from BEA's new quarterly surveys of transactions with unaffiliated residents abroad.⁸

For most components, the revisions to the ITAs for 2002–2004 were incorporated into the NIPAs at their "best level." As a result, there are small discontinuities between the NIPA estimates for 2001 and those for 2002 (table 7). For current-dollar net exports of goods and services (and for current-dollar GDP), the change from 2001 to 2002 was understated by less than \$0.1 billion. (The revisions to the ITAs for years before 2002 will be incorporated in the next comprehensive NIPA revision.)

Government consumption expenditures and gross investment. Government spending was revised up for all 3 years: \$4.5 billion for 2002, \$16.4 billion for 2003, and \$32.0 billion for 2004.

Federal Government spending was revised down \$1.1 billion for 2002, was revised up \$2.6 billion for 2003, and was revised up \$17.7 billion for 2004. For 2004, the revision was primarily accounted for by an upward revision to nondefense spending, primarily

reflecting the incorporation of revised Federal budget data for fiscal year 2004, preliminary budget data for fiscal year 2005, and revised tabulations from the BLS quarterly census of employment and wages.

State and local government spending was revised up for all 3 years: \$5.7 billion for 2002, \$13.8 billion for 2003, and \$14.4 billion for 2004. Consumption expenditures was revised up for all 3 years: \$8.8 billion for 2002, \$16.3 billion for 2003, and \$18.0 billion for 2004. The revisions were primarily accounted for by upward revisions to employee compensation and to "sales to other sectors," which is subtracted in the derivation of consumption expenditures, that were partly offset by downward revisions to intermediate goods and services. The revisions to compensation resulted from the incorporation of revised data for fiscal year 2002 and newly available data for fiscal year 2003 on employer contributions to employee retirement plans from the Census Bureau Government Finances, of Medical Expenditures Panel Survey data on employer contributions to employee health insurance for 2002-2004 from the Department of Health and Human Services, and of revised tabulations from the BLS quarterly census of employment and wages. The

^{1.} Equals the revisions to the U.S. international transactions accounts that have not been carried back in the NIPAs at this time.

^{7.} The IVA is not needed for farm inventories, because they are measured on the basis of current market price.

^{8.} See Christopher L. Bach, "Annual Revision of the U.S. International Accounts, 1991–2004," SURVEY 85 (July 2005): 54–67.

^{9.} The value of services produced by general government is measured by the cost of inputs, including compensation of employees, consumption of fixed capital, and intermediate goods and services purchased.

revisions to "sales to other sectors" and to intermediate goods and services reflect the incorporation of revised data for fiscal year 2002 and newly available data for fiscal year 2003 from the Census Bureau *Government Finances*.

Income-side components

Compensation of employees, paid. "Compensation of employees, paid" was revised up for all 3 years: \$21.7 billion for 2002, \$32.2 billion for 2003, and \$36.7 billion for 2004. For 2002 and 2003, the revisions were mostly accounted for by upward revisions to supplements to wages and salaries (specifically, to employer contributions for employee pension and insurance funds), but upward revisions to wage and salary accruals also contributed. For 2004, the revision reflects similar upward revisions to employer contributions for employee pension and insurance funds and to wage and salary accruals.

For 2002 and 2003, the revisions to employer contributions were more than accounted for by upward revisions to employer contributions to private pension and profit-sharing plans. For 2004, the revision to employer contributions reflects upward revisions to employer contributions to private pension and profitsharing plans and to group health insurance. The revisions to employer contributions to private pension and profit-sharing plans primarily reflect the incorporation of revised corporate financial data for 2002 and 2003 and newly available corporate financial data for 2004. For 2004, the revision to employer contributions to group health insurance reflects extrapolations of newly available tabulations of these contributions from the Department of Health and Human Services Medical Expenditures Panel Survey for 2003. The revisions to wage and salary accruals reflect the incorporation of revised data for 2002 and 2003 and newly available data for 2004 from the quarterly census of employment and wages.

Net operating surplus. Net operating surplus consists of net operating surplus of private enterprises (proprietors' income, rental income of persons, corporate profits, net interest, and business current transfer payments) and the current surplus of government enterprises. This component was revised down for all 3 years: \$21.5 billion for 2002, \$67.3 billion for 2003, and \$118.9 billion for 2004.

Consumption of fixed capital (CFC). CFC, which is the charge for the using up of private and government fixed capital, was revised down \$11.9 billion for 2002, was revised down \$22.6 billion for 2003, and was revised up \$28.0 billion for 2004. The revisions for 2002 and 2003 were more than accounted for by downward revisions to the private component of CFC that

resulted from the incorporation of improvements to the fixed assets series. ¹⁰ The revision for 2004 was mostly accounted for by an upward revision to the private component of CFC, reflecting the replacement of estimates derived from quarterly extrapolations with estimates derived from detailed annual source data, including revised BEA estimates of fixed investment and revised prices for 2002–2004. (The estimates of investment and prices are direct inputs into the calculation of both private and government net capital stocks, which are used to calculate the CFC.)

Private capital consumption allowances (CCA) is tax-return-based depreciation for corporations and nonfarm proprietorships and historical-cost depreciation (using consistent service lives) for farm proprietorships, rental income of persons, and nonprofit institutions. CCA was revised down for all 3 years: \$17.0 billion for 2002, \$98.0 billion for 2003, and \$123.1 billion for 2004. These revisions primarily resulted from the incorporation of revised and newly available IRS tax return data that affect both the corporate and noncorporate components. For corporations, the revisions for 2002 and 2003 resulted from the incorporation of revised and newly available IRS tax return data. For sole proprietorships and partnerships, the revision for 2003 resulted from the incorporation of newly available IRS tax return data. For 2004, the revision resulted from the incorporation of revised BEA projections of IRS depreciation and amortization on the basis of BEA estimates of investment flows and IRS service lives and depreciation conventions.

Private capital consumption adjustment (CCAdj) converts depreciation that is on a historical-cost (book value) basis—CCA—to depreciation that is on a current-cost (replacement) basis—CFC—and it is derived as the difference between private CCA and private CFC. Private CCAdj was revised up \$2.1 billion for 2002, was revised down \$66.8 billion for 2003, and was revised down \$129.1 billion for 2004.

Proprietors' income with IVA and CCAdj. Proprietors' income with IVA and CCAdj was revised down for all 3 years: \$1.2 billion for 2002, \$23.9 billion for 2003, and \$13.2 billion for 2004. For all 3 years, the revisions reflect downward revisions to nonfarm proprietors' income that were partly offset by upward revisions to farm proprietors' income.

Farm proprietors' income was revised up for all 3 years: \$0.9 billion for 2002, \$5.9 billion for 2003, and \$17.6 billion for 2004. For 2002 and 2003, the upward revisions resulted from the incorporation of revised information from the U.S. Department of Agriculture

^{10.} This series was posted on BEA's Web site in March 2005 at <www.bea.gov/bea/dn/FA2004/index.asp>.

(USDA) and revised BEA estimates of depreciation. For 2004, the revision resulted from the incorporation of newly available data from the USDA and revised BEA estimates of depreciation.

Nonfarm proprietors' income with IVA and CCAdj was revised down for all 3 years: \$2.1 billion for 2002, \$29.9 billion for 2003, and \$30.8 billion for 2004. For 2003, the revision reflects downward revisions to the CCAdj and to nonfarm proprietors' income without CCAdj; the revision to nonfarm proprietors' income was based on newly available IRS tabulations of sole proprietorship and partnership tax returns for 2003. For 2004, the revision mostly reflects a downward revision to the CCAdj. (For more information about the CCAdj, see "Consumption of fixed capital.")

Rental income of persons with CCAdj. Rental income of persons with CCAdj was revised down for all 3 years: \$18.0 billion for 2002, \$22.1 billion for 2003, and \$30.9 billion for 2004. For all 3 years, the revisions were primarily accounted for by downward revisions to rental income of persons without CCAdj for nonfarm residential dwellings, reflecting downward revisions to nonfarm permanent-site space rent and to space rent for manufactured homes. For 2004, the revision also reflects an upward revision to nonfarm permanent-site expenses, specifically, revisions to closing costs and to maintenance and repairs that resulted from the incorporation of data from regular sources and an improved procedure for estimating maintenance and repairs (see "Changes in Methodology").

Corporate profits with IVA and CCAdj. Corporate profits with IVA and CCAdj was revised up \$11.7 billion for 2002, was revised up \$10.7 billion for 2003, and was revised down \$20.1 billion for 2004. For 2002, the revision reflects upward revisions to profits before tax and to the CCAdj. For 2003, the revision reflects an upward revision to profits before tax that was partly offset by a downward revision to the CCAdj. For 2004, the revision reflects a downward revision to the CCAdj that was partly offset by an upward revision to profits before tax. (For more information about the CCAdj, see "Consumption of fixed capital.") The revisions to profits before tax resulted from the incorporation of revised 2002 and newly available 2003 IRS tabulations of corporate tax return data and profits data for 2004 from regulatory agencies and public financial reports.

For all 3 years, domestic profits were revised up, and rest-of-the-world profits were revised down. The revisions to domestic profits primarily resulted from the incorporation of revised 2002 and newly available 2003

IRS tabulations of corporate tax return data and of other data from regular sources. The revisions to rest-of-the-world profits resulted from the incorporation of the annual revision of the international transactions accounts (ITAs).

Net interest and miscellaneous payments. Net interest and miscellaneous payments was revised down for all 3 years: \$12.0 billion for 2002, \$14.5 billion for 2004, and \$44.0 billion for 2004. The revisions were accounted for by revisions to net interest.¹²

For 2002, the revision reflects downward revisions to both monetary and imputed interest paid by domestic corporate business that were partly offset by downward revisions to both monetary and imputed interest received by domestic corporate business and by an upward revision to monetary interest paid by the rest of the world.

For 2003, downward revisions to monetary interest paid by domestic business, to imputed interest paid by domestic business, and to imputed interest paid by the rest of the world were partly offset by downward revisions to monetary interest received by domestic business, to imputed interest received by domestic corporate business, and to imputed interest received by the rest of the world.

The revisions to domestic monetary interest resulted from the incorporation of revised and newly available IRS tabulations of tax return data for corporations and for sole proprietorships and partnerships. The revisions to rest-of-the-world monetary interest resulted from the incorporation of the results of the annual revision of the ITAs. The revisions to imputed interest paid resulted from the incorporation of the methodological change for estimating imputed commercial bank services (see "Changes in Methodology") and the incorporation of revised Federal Reserve Board (FRB) tabulations of commercial bank Call Report data, of newly available trade source data, and of the results of the annual revision of the ITAs. The revisions to imputed interest received resulted from the revisions to imputed interest paid, from the incorporation of revised data from the FRB flow-of-funds accounts on business deposits at commercial banks, and from the annual revision of the ITAs.

For 2004, the upward revision to net interest was attributable to the revisions to the 2003 levels and to newly incorporated regular source data from regulatory agencies, particularly data from the FRB

 $^{11. \} The \ revisions \ to \ space \ rent \ were \ discussed in the section "PCE for services."$

^{12.} Net interest is calculated as the sum of monetary interest paid by domestic business, by owner-occupied housing, by nonprofit institutions serving households, by the rest of the world and imputed interest paid by these sectors, less monetary interest received by domestic business, by owner occupied-housing, by the rest of the world and imputed interest received by these sectors.

flow-of-funds accounts.13

Taxes on production and imports. Taxes on production and imports was revised up for all 3 years: \$0.2 billion for 2002, \$3.3 billion for 2003, and \$11.7 billion for 2004. The revision for 2004 was mostly accounted for by revisions to state and local government sales taxes and property taxes, reflecting extrapolations of newly available tabulations of Census Bureau *Government Finances* data for 2003.

Subsidies. Subsides was revised up \$0.2 billion for 2002, was unrevised for 2003, and was revised up \$3.1 billion for 2004.

Business current transfer payments (net). This component consists of "transfer payments to persons (net)," "business transfer payments to government (net)," and "business transfer payments to the rest of the world (net)."

"Business current transfer payments (net)" was revised up for all 3 years: \$3.4 billion for 2002, \$3.9 billion for 2003, and \$9.0 billion for 2004. For 2004, the upward revision primarily reflects an upward revision to payments to the rest of the world (net), reflecting the incorporation of the annual revision of the ITAs.

Current surplus of government enterprises. The current surplus of government enterprises was revised down for all 3 years: \$1.9 billion for 2002, \$8.2 billion for 2003, and \$9.9 billion for 2004. The current surplus of state and local government enterprises was revised down \$4.3 billion for 2003 and was revised down \$5.1 billion for 2004; the revisions resulted from the incorporation of newly available tabulations from the Census Bureau Government Finances on revenue and expenditures for local electric utilities and for housing and urban development programs. The current surplus of Federal Government enterprises was revised down \$3.9 billion for 2003 and was revised down \$4.9 billion for 2004, primarily reflecting the incorporation of new and improved tabulations of financial data from the Tennessee Valley Authority.

Net receipts of income. Net receipts of income from the rest of the world, which is excluded from GDP but is included in gross national product (GNP), was revised up for all 3 years: \$3.6 billion for 2002, \$13.0 billion for 2003, and \$9.8 billion for 2004. For all 3 years, the upward revisions primarily reflect upward revisions to income receipts from the rest of the world.

The revisions for all 3 years primarily resulted from the incorporation of the results of the annual revision of the ITAs. Specifically, the revised estimates of income receipts primarily resulted from the incorporation of revised estimates of direct investment income receipts, which resulted from the incorporation of updated source data. The revised estimates of income payments primarily resulted from the incorporation of updated source data.

As a result of the incorporation of the ITA revisions into the NIPAs at "best level," the NIPA estimates for 2001 and for 2002 are discontinuous (table 7). For net receipts of income, the change from 2001 to 2002 was understated by \$1.6 billion. The discontinuity was primarily accounted for by interest received from the rest of the world and resulted from the incorporation of revised data from the U.S. Treasury Department's benchmark survey of U.S. portfolio investment abroad as part of the annual revision of the ITAs. For GNP, which includes both net exports of goods and services and net receipts of income, the change was understated by \$1.6 billion.

Gross national product. GNP was revised down \$13.9 billion, or 0.1 percent, for 2002, was revised down \$19.9 billion, or 0.2 percent, for 2003, and was revised up \$9.1 billion, or 0.1 percent, for 2004. The revisions to GNP differ from those to GDP because of the revisions to net receipts of income.

Personal income and its disposition

Personal income. Personal income was revised up for all 3 years: \$3.0 billion for 2002, \$7.3 billion for 2003, and \$23.7 billion for 2004. These revisions partly reflect the previously described revisions to the components of national income that are included in personal income—wage and salary disbursements, supplements to wages and salaries, proprietors' income, and rental income of persons—and they reflect the revision to the component of personal income—personal income receipts on assets—that is derived from related components of national income. The revisions also reflect revisions to personal current transfer receipts and to contributions for government social insurance.

Compensation of employees, received. These revisions primarily reflect the revisions to "compensation of employees, paid."

Personal income receipts on assets. This aggregate consists of personal interest income and personal dividend income. Personal interest income consists of monetary and imputed interest received by persons from all sources; it is calculated as net interest plus interest paid by persons and interest paid by government less interest received by government. Personal interest income was revised down for all 3 years: \$10.6 billion for 2002, \$12.3 billion for 2003, and \$40.3 billion for 2004. These revisions primarily reflect the revisions to net interest.

Personal dividend income consists of dividend income received by persons from all sources and is equal

^{13.} For 2004, the revision cannot be attributed to the same level of component detail as that for 2003, because for 2004, the previously published estimates were prepared at a less detailed level.

to net corporate dividends less dividends received by government. Personal dividend income was revised up for all 3 years: \$9.3 billion for 2002, \$28.3 billion for 2003, and \$49.5 billion for 2004. These revisions resulted from the incorporation of revised and newly available IRS tabulations of corporate tax return data, of the results from the annual revision of the ITAs, and of data from public financial statements.

Personal current transfer receipts. Personal current transfer receipts consists of government social benefits and business current transfer payments to persons. Personal current transfer receipts was revised up for all 3 years: \$3.5 billion for 2002, \$8.6 billion for 2003, and \$21.6 billion for 2004.

Government social benefits to persons was unrevised for 2002, was revised up \$7.1 billion for 2003, and was revised up \$21.3 billion for 2004. Federal Government social benefits to persons was revised up \$6.1 billion for 2003 and was revised up \$15.7 billion for 2004, primarily as a result of upward revisions to medical care payments, reflecting extrapolations of newly available tabulations of Medicare payments for 2002 from the Centers for Medicare and Medicaid Services (CMS) using Medicare outlays from the Treasury Department. For 2004, state and local government social benefits to persons was revised up \$5.8 billion; the revision resulted from the incorporation of newly available tabulations of Medicaid payments for 2004 from the CMS.

The revisions to business current transfer payments to persons were small.

Contributions for government social insurance. These contributions are deducted in the calculation of personal income, and they consist of both personal and employer contributions. Contributions for government social insurance was revised up \$1.7 billion for 2002, was revised up \$3.4 billion for 2003, and was revised down \$0.4 billion for 2004.

Personal current taxes. This component was revised up \$0.6 billion for 2002, was revised down \$2.0 billion for 2003, and was revised up \$6.5 billion for 2004. For 2004, the upward revision was more than accounted for by an upward revision to Federal income taxes that resulted from the incorporation of newly available data on personal income tax receipts from the Treasury Department.

Disposable personal income (DPI). Reflecting the revisions to personal income and to personal current taxes, DPI was revised up for all 3 years: \$2.4 billion for 2002, \$9.3 billion for 2003, and \$17.3 billion for 2004.

Personal outlays. This category consists of PCE, personal interest payments, and personal current transfer payments. This aggregate was revised down for all 3 years: \$23.2 billion for 2002, \$53.0 billion for

2003, and \$19.4 billion for 2004. Revisions to PCE more than accounted for the revision for 2002 and accounted for most of the revisions for 2003 and 2004.

Personal saving. Personal saving—the difference between DPI and personal outlays—was revised up for all 3 years: \$25.5 billion for 2002, \$62.2 billion for 2003, and \$36.8 billion for 2004. For 2002, the revision mostly reflects the downward revision to personal outlays. For 2003 and 2004, the upward revisions reflect both the upward revisions to DPI and the downward revisions to personal outlays. Mainly reflecting the revisions to personal saving, the personal saving rate—personal saving as a percentage of DPI—was revised up for all 3 years: From 2.0 percent to 2.4 percent for 2002, from 1.4 percent to 2.1 percent for 2003, and from 1.3 percent to 1.8 percent for 2004.

Saving and investment

Gross saving consists of net saving and consumption of fixed capital (CFC). Net saving consists of net private saving and net government saving. Gross saving was revised up \$4.8 billion for 2002, was revised down \$13.6 billion for 2003, and was revised down \$66.9 billion for 2004. Gross saving as a percentage of gross national income was revised up 0.1 percentage point to 14.2 percent for 2002, was revised down 0.1 percentage point to 13.4 percent for 2003, and was revised down 0.6 percentage point to 13.4 percent for 2004.

For 2002, an upward revision to net saving was partly offset by a downward revision to CFC. The revision to net saving reflects an upward revision to net private saving that was partly offset by a downward revision to net government saving. In net private saving, an upward revision to personal saving was partly offset by a downward revision to undistributed corporate profits with IVA and CCAdj. In net government saving, a downward revision to state and local government net saving was partly offset by an upward revision to Federal Government net saving.

For 2003, a downward revision to CFC was partly offset by an upward revision to net saving. The revision to net saving reflects an upward revision to net private saving that was partly offset by a downward revision to net government saving. In net private saving, an upward revision to personal saving was partly offset by a downward revision to undistributed corporate profits with IVA and CCAdj. The revision to net government saving reflects downward revisions to state and local government net saving and to Federal Government net saving.

For 2004, a downward revision to net saving was partly offset by an upward revision to CFC. The revision to net saving reflects downward revisions to net private saving and to net government saving. The revision to net private saving reflects a downward revision to undistributed corporate profits with IVA and CCAdj that was partly offset by an upward revision to personal saving. The revision to net government saving reflects downward revisions to Federal Government net saving and to state and local government net saving.

"Net lending or net borrowing, NIPAs"—the difference between the sum of gross saving and the statistical discrepancy and the sum of gross domestic investment and capital account transactions (net)—was revised down \$0.8 billion for 2002, was revised up \$6.3 billion for 2003, and was revised down \$16.1 billion for 2004. For 2002, the revision reflects a downward revision to the statistical discrepancy that was largely offset by an upward revision to gross saving. For 2003, the revision primarily reflects an upward revision to the statistical discrepancy that was partly offset by a downward revision to gross saving and an upward revision to gross domestic investment. For 2004, the revision reflects a downward revision to gross saving that was partly offset by an upward revision to the statistical discrepancy and a downward revision to gross domestic investment.

Annual price estimates

Revisions to the chain-type price indexes result from the incorporation of newly available and revised source data and from the regularly scheduled incorporation of annual weights for the most recent year (2004). In this annual revision, the source data for price indexes that are used for deflation and the source data that affect implicit prices were revised. ¹⁴ A change in methodology for computing the implicit services of commercial banks also affected the chain-type price indexes (see the section "Changes in Methodology"). In addition, the prices used for deflation reflect updated seasonal factors.

The percent change from the preceding year in the price index for gross domestic purchases was revised up 0.1 percentage point to 1.6 percent for 2002, was revised up 0.2 percentage point to 2.2 percent for 2003, and was revised up 0.5 percentage point to 2.9 percent for 2004 (see the addendum to table 8 and chart 1). The annual percent change in the price index for GDP was unrevised at 1.7 percent for 2002, was revised up 0.2 percentage point to 2.0 percent for 2003, and was revised up 0.4 percentage point to 2.6 percent for 2004.

For 2002, the upward revision to the price index for gross domestic purchases primarily reflects an upward revision to the price index for nonresidential structures. The revision to the price index for nonresidential structures primarily reflects an upward revision

Table 8. Revisions to Percent Change in GDP Price Indexes

[Percent change from preceding year]

			2002			2003			2004

^{14.} The implicit prices are computed by dividing the current-dollar estimates by the chained-dollar estimates that are derived from the quantity data used in quantity extrapolation and direct valuation. Thus, differences between the current-dollar revisions and the chained-dollar revisions to these components are reflected as revisions to their implicit prices.

to the implicit price for "mining exploration, shafts, and wells," which reflects the revisions to the current-dollar estimates.

For 2003, the revision to the price index for gross domestic purchases primarily reflects upward revisions to the price indexes for state and local government spending and for nonresidential structures. The revision to the price index for state and local government spending reflects an upward revision to compensation. The revision to the price index for nonresidential structures reflects an upward revision to the implicit price for "mining exploration, shafts, and wells."

For 2004, the revision to the price index for gross domestic purchases primarily reflects upward revisions to the price indexes for PCE for services, for Federal defense and nondefense spending, and for residential fixed investment. The revision to the price index for PCE for services was attributable to an upward revision to the price index for the implicit services of other financial institutions, reflecting the incorporation of newly available source data, and an upward revision to the price index for medical care services, reflecting revised BLS producer price indexes. The revisions to the price index for Federal defense and nondefense spending reflect upward revisions to compensation. The revision to the price index for residential fixed investment primarily reflects a revision to the price of single-family structures, reflecting a revised Census Bureau price index.

Changes in Methodology

As part of the annual revision to the NIPAs, several changes in methodology were incorporated.¹⁵

Motor vehicles. The procedure used to prepare the quarterly estimates of change in private inventories for new domestic autos and for new domestic light trucks has been improved so that the change in unit inventories is now consistent with unit inventories reported in *Ward's Automotive Reports*.

Change in unit inventories is calculated as vehicle production plus Canadian and Mexican imports less sales and exports. ¹⁶ Each of these components is seasonally adjusted. Before being seasonally adjusted, the quarterly estimates of change in unit inventories for both new domestic autos and new domestic light trucks are now adjusted to ensure consistency with monthly inventory data from *Ward's*. Previously, only

the annual estimate of change in unit inventories for new domestic autos was adjusted to the *Ward's* unit inventory data, and no adjustment was made for new domestic light trucks.

In addition, the estimates of final sales and change in private inventories for new domestic autos reflect new source data on retail and wholesale prices, beginning with the first quarter of 2005. The data on retail prices are monthly dealer transactions prices by model and model year from a trade source and reflect all discounts and customer rebates. The monthly wholesale prices used for the valuation of inventories reflect factory-to-dealer rebates. Previously, the source data for retail prices were not transactions prices; the data were based on annual price lists by model and model year published by the Automobile Invoice Service (AIS) and adjusted with BLS monthly data on transportation charges, markups or discounts, and customer rebates. The AIS data on wholesale prices that were previously used did not include factory-to-dealer rebates.

New quarterly services survey. Beginning with this annual revision, BEA is incorporating data from the Census Bureau's new quarterly services survey into the estimates of investment in prepackaged and custom software and of the several components of PCE for services, including cellular telephone, cable television, local telephone, long-distance telephone, and internet service providers, legal services, and "other transportation services." The quarterly services survey is the Federal Government's first new economic indicator in nearly 30 years and provides timely information on economic performance in the services industries.

Implicit services of banks. In the 2003 comprehensive revision of the NIPAs, a reference rate of interest that represents the risk-free opportunity cost of borrowing or lending funds was introduced in the calculation of the implicit services of banks. The rate was calculated using U.S. Treasury and Federal agency securities from Federal Reserve Board tabulations of the Federal Financial Institutions Examination Council Call Report data on commercial banks. However, the resulting estimates of the depositors' share and borrowers' share of the implicit services of commercial banks exhibited a considerable degree of volatility because of the inclusion of mortgage-backed securities.

Beginning with this annual revision, mortgagebacked securities have been eliminated from the reference-rate calculation in an effort to obtain a more risk-free rate and to reduce the volatility of the resulting estimates of personal interest income, personal

^{15.} These changes update the methodological information in the two tables that were published in "Updated Summary NIPA Methodologies."

^{16.} Sales and inventories of domestic autos and light trucks consist of units assembled in the United States, Canada, and Mexico. Domestic production consists only of units that are assembled in the United States, so that Canadian and Mexican imports must be added to production and exports must be subtracted to obtain a measure of domestic supply, from which sales are subtracted to obtain a measure of change in unit inventories

^{17.} The PCE services components that now incorporate data from the quarterly services survey account for between 3 and 4 percent of total PCE.

18. See Brent R. Moulton and Eugene P. Seskin, "Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts: Changes in Definitions and Classifications," Survey 83 (June 2003): 23–27.

interest payments, net interest, and PCE for services.

The quarterly and monthly estimates are now interpolated and extrapolated from the annual estimates by an indicator series that is based on the quarterly *Call Report* data. Beginning with this annual revision, the quarterly indicator used for estimating depositor services excludes three types of deposits that are made mostly by business: Large time deposits, other time deposits, and other interest bearing liabilities.

Improved estimates of maintenance and repairs. The estimates of rental income of persons with capital consumption adjustment are primarily calculated as space rent less expenses. Maintenance and repairs is a relatively large and often volatile component of expenses; the estimates are based on data from the Census Bureau "Expenditures for Residential Improvements and Repairs" (C–50 report). The revised annual

estimates have been improved to reflect a growth rate based on a 3-year centered moving average of the C–50 report data, and the quarterly estimates are interpolations and extrapolations of the resulting annual estimates. ¹⁹ Previously, the annual estimates reflected only the annual growth rate of the C–50 report data, and the quarterly estimates were interpolations and extrapolations of the annual estimates.

Appendix A follows.

^{19.} This change is consistent with the method used for estimating residential improvements included in private fixed investment; see Carol E. Moylan and Brooks B. Robinson, "Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts: Statistical Changes," Survey 83 (September 2003): 23.

National Income and Product Accounts Tables

This set of tables presents the results of the annual revision of the national income and product accounts (NIPAs) that have been released beginning July 29, 2005. This set presents revised annual estimates for 2002–2004, revised quarterly estimates for the first quarter of 2002 through the first quarter of 2005, revised monthly estimates for January 2002 through May 2005, and "advance" estimates for the second quarter of 2005 and for June 2005. For additional information, see the article "Annual Revision of the National Income and Product Accounts" in this issue. The estimates for all the currently released NIPA series for

1929 forward are available on BEA's interactive Web site at <www.bea.gov>.

A few tables from the annual revision are scheduled to be published in upcoming issues of the Survey of Current Business. Table 7.19 is scheduled for publication in the September 2005 issue. Tables 3.15–3.19 and 8.1–8.6 are scheduled for the October 2005 issue. Tables 2.9 and 7.20 will be published when the estimates become available.

The historical estimates of gross domestic product (GDP) are presented in "GDP and Other Major NIPA Series, 1929–2005:II" in this issue.

Summary Tables

A. Summary National Income and Product Accounts, 2004	42
1. Domestic Product and Income	
1.1.1. Percent Change From Preceding Period in Real Gross Domestic Product	44
1.1.2. Contributions to Percent Change in Real Gross Domestic Product	44
1.1.3. Real Gross Domestic Product, Quantity Indexes	45
1.1.4. Price Indexes for Gross Domestic Product	45
1.1.5. Gross Domestic Product	46
1.1.6. Real Gross Domestic Product, Chained Dollars	46
1.1.7. Percent Change From Preceding Period in Prices for Gross Domestic Product	47
1.1.8. Contributions to Percent Change in the Gross Domestic Product Price Index	47
1.1.9. Implicit Price Deflators for Gross Domestic Product	
1.1.10. Percentage Shares of Gross Domestic Product	
1.2.1. Percent Change From Preceding Period in Real Gross Domestic Product by Major Type of Product	49
1.2.2. Contributions to Percent Change in Real Gross Domestic Product by Major Type of Product	49
1.2.3. Real Gross Domestic Product by Major Type of Product, Quantity Indexes	50
1.2.4. Price Indexes for Gross Domestic Product by Major Type of Product	
1.2.5. Gross Domestic Product by Major Type of Product	
1.2.6. Real Gross Domestic Product by Major Type of Product, Chained Dollars	
1.3.1. Percent Change From Preceding Period in Real Gross Value Added by Sector	
1.3.3. Real Gross Value Added by Sector, Quantity Indexes	
1.3.4. Price Indexes for Gross Value Added by Sector	
1.3.5. Gross Value Added by Sector	
1.3.6. Real Gross Value Added by Sector, Chained Dollars	
1.4.1. Percent Change From Preceding Period in Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers	53
1.4.3. Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers, Quantity Indexes	54
1.4.4. Price Indexes for Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers	54
1.4.5. Relation of Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers	54
1.4.6. Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers, Chained Dollars	54
1.5.1. Percent Change From Preceding Period in Real Gross Domestic Product, Expanded Detail	55

1.5.2. Contributions to Percent Change in Real Gross Domestic Product, Expanded Detail	56
1.5.3. Real Gross Domestic Product, Expanded Detail, Quantity Indexes	57
1.5.4. Price Indexes for Gross Domestic Product, Expanded Detail	58
1.5.5. Gross Domestic Product, Expanded Detail	59
1.5.6. Real Gross Domestic Product, Expanded Detail, Chained Dollars	60
1.6.4. Price Indexes for Gross Domestic Purchases	61
1.6.7. Percent Change From Preceding Period in Prices for Gross Domestic Purchases	62
1.6.8. Contributions to Percent Change in the Gross Domestic Purchases Price Index	63
1.7.1. Percent Change From Preceding Period in Real Gross Domestic Product, Real Gross National Product, and Real Net National Product	64
1.7.3. Real Gross Domestic Product, Real Gross National Product, and Real Net National Product, Quantity Indexes	
1.7.4. Price Indexes for Gross Domestic Product, Gross National Product, and Net National Product	64
1.7.5. Relation of Gross Domestic Product, Gross National Product, Net National Product, National Income, and Personal Income	65
1.7.6. Relation of Real Gross Domestic Product, Real Gross National Product, and Real Net National Product, Chained Dollars	66
1.8.3. Command-Basis Real Gross National Product, Quantity Indexes	66
1.8.6. Command-Basis Real Gross National Product, Chained Dollars	66
1.9.3. Real Net Value Added by Sector, Quantity Indexes	67
1.9.4. Price Indexes for Net Value Added by Sector	67
1.9.5. Net Value Added by Sector	67
1.9.6. Real Net Value Added by Sector, Chained Dollars	67
1.10. Gross Domestic Income by Type of Income	68
1.11. Percentage Shares of Gross Domestic Income	68
1.12. National Income by Type of Income	69
1.13. National Income by Sector, Legal Form of Organization, and Type of Income	70
1.14. Gross Value Added of Domestic Corporate Business in Current Dollars and Gross Value Added of Nonfinancial Domestic Corporate Business in Current and Chained Dollars	71
$1.15.\ Price, Costs, and\ Profit\ Per\ Unit\ of\ Real\ Gross\ Value\ Added\ of\ Nonfinancial\ Domestic\ Corporate\ Business\$	72
1.16. Sources and Uses of Private Enterprise Income	72
2. Personal Income and Outlays	
2.1. Personal Income and Its Disposition	
2.2B. Wage and Salary Disbursements by Industry	74
2.3.1. Percent Change From Preceding Period in Real Personal Consumption Expenditures by Major Type of Product	
2.3.2. Contributions to Percent Change in Real Personal Consumption Expenditures by Major Type of Product	
2.3.3. Real Personal Consumption Expenditures by Major Type of Product, Quantity Indexes	
2.3.4. Price Indexes for Personal Consumption Expenditures by Major Type of Product

Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
 Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
 For some components of final sales of computers, includes computer parts.

^{1.} Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. For some components of final sales of computers, includes computer parts.

Note: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories; the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Equals gross domestic product excluding gross value added of households and institutions and of general government.
 Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
 Equals compensation of general government employees plus general government consumption of fixed capital.

Equals gross domestic product excluding gross value added of households and institutions and of general government.
 Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

^{4.} Equals compensation of general government employees plus general government consumption of fixed capital.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

Nore. The residual line is the difference between the first line and the sum of the most detailed lines.

Table 1.6.4. Price Indexes for Gross Domestic Purchases

Gross domestic income deflated by the implicit price deflator for gross domestic product.
 Gross national income deflated by the implicit price deflator for gross national product.
 Not domestic income deflated by the implicit price deflator for net domestic product.
 Not. Except as noted in footnotes 1, 2 and 3, chained (2000) dollar series are calculated as the product of the chain-type quantity indexe and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and services and income payments
 Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100.

 Nort. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Equals net domestic product excluding net value added of households and institutions and of general government.
 Equals net domestic business value added excluding net farm value added.
 Equals gross value added of nonprofit institutions excluding consumption of fixed capital on fixed assets owned and used by nonprofit institutions serving households.
 Equals compensation of general government employees.

Equals net domestic product excluding net value added of households and institutions and of general government.
 Equals net domestic business value added excluding net farm value added.
 Equals government institutions serving consumption of fixed capital on fixed assets owned and used by nonprofit institutions serving households.
 Equals grows value added of nonprofit institutions serving households.
 Equals compensation of general government employees.

Equals net domestic product excluding net value added of households and institutions and of general government.
 Equals net domestic business value added excluding net tarm value added.
 Equals goss value added of nonprofit institutions excluding consumption of fixed capital on fixed assets owned and used by nonprofit institutions serving households.
 Equals compensation of general government employees.

^{1.} Equals net domestic product excluding net value added of households and institutions and of general government.
2. Equals net domestic business value added excluding net farm value added.
3. Equals gross value added of nonprofit institutions excluding consumption of fixed capital on fixed assets owned and used by nonprofit institutions serving households.
4. Equals compensation of general government employees.

Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
 The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.
 Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100.
 Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

Consists of aid to families with dependent children and, beginning with 1996, assistance programs operating under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996.
 Consists of nonmortgage interest paid by households.
 Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series.

Nors: The figures in parentheses are the line numbers of the corresponding items in table 2.5.5.

Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

- 1. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premise.

 2. Includes luggage.

 3. Consists of watch, clock, and jeweiry repairs, costume and dress suit rental, and miscellaneous personal services.

 4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.

 5. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.

 6. Consists of transient hotels, motels, other traveler accommodations, clubs, schools, and other group housing.

 7. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air conditioners, sewing machines, vacuum cleaners, and other appliances.

 8. Includes such house furnishings as floor coverings, picture frames, mirrors, art products, portable lamps, clocks, blinds, shades, drapery hardware, and telephone equipment. Also includes writing equipment and hand, power, and garden tools.

 9. Consists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes lamp shades, brooms, and brushes.

 10. Consists of repair and maintenance services for appliances and house furnishings, moving and warehouse expenses,

- Consists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes tamp shades, brooms, and brushes.
 Consists of repair and maintenance services for appliances and house furnishings, moving and warehouse expenses, postage and parcel delivery charges, premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles), and miscellaneous household operation services.
 Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
 Consists of offices of physicians, HMO medical centers, and freestanding ambulatory surgical and emergency centers.
 Consists of chiropractors, optometrists, mental health practitioners (except physicians), physical, occupational and speech therapists, and audiologists, podiatrists, all other miscellaneous health practitioners, ambulance services, kidney dialysis centers, family planning services, outpatient mental health and substance abuse centers, all other outpatient care centers, blood and organ banks, all other miscellaneous ambulatory health care services, home health furniture and equipment rental, medical and diagnostic laboratories, and home health care.
 Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.
 Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.
 Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.
 Consists of primiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.
 Consists

- 19. Consists of current expenditures (including consumption of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other personal business services. 20. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor
- vehicle insurance
- 21. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, airport bus fares, and limousine

- vehicle insurance.

 21. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, airport bus fares, and limousine services.

 22. Consists of admissions to professional and amateur athletic events and to racetracks.

 23. Consists of current expenditures (including consumption of fixed capital) of nonprofit clubs and fraternal organizations and dues and fees paid to proprietary clubs.

 24. Consists of billiard partors; bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; skining facilities; marinas; sightseeing; private flying operations; casino gambling, recreational equipment rental, and other commercial participant amusements.

 25. Consists of lotteries, pets and pet care services, cable TV, film processing, photographic studios, sporting and recreation camps, video rentals; internet access fees, and recreational services, not elsewhere classified.

 26. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For government institutions, equals student payments of turion. Excludes child day care services, which are included in religious and welfare activities.

 27. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures. For government institutions, equals student payments of turion. Excludes child day care services, which are included in religious and welfare activities.

 28. Consists of (1) lees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services, and (2) current expenditures (including consumption of fixed capital) by nonprofi

- Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, drining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premise.
 Includes luggage.
 Consists of waitch, clock, and jewelry repairs, costume and dress suit rental, and miscellaneous personal services.
 Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, lineleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
 Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
 Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.

- purchases of fuel and electricity.

 5. Consists of space rent (see bontote 4) and rent for appliances, furnishings, and furniture.

 6. Consists of transient hotels, motels, other traveler accommodations, clubs, schools, and other group housing.

 7. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air conditioners, sewing machines, vacuum cleaners, and other appliances.

 8. Includes such house furnishings as floor coverings, picture frames, mirrors, arl products, portable lamps, clocks, blinds, shades, drapery hardware, and telephone equipment. Also includes writing equipment and hand, power, and garden tools.

 9. Consists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes lamp shades, brooms, and brushes.

 10. Consists of repair and maintenance services for appliances and house furnishings, moving and warehouse expenses, postage and parcel delivery charges, premiums plus premium supplements less normal losses and dividends paid to policy-holders for insurance on personal property (except motor vehicles), and miscellaneous household paration services.

 11. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.

 12. Consists of offices of physicians, HMO medical centers, and freestanding ambulatory surgical and emergency centers.

 13. Consists of chiorpractors, optometrists, mental health practitioners (except physicians), physical, occupational and speech therapists, and audiologists, podiatrists, all other miscellaneous health practitioners (except physicians), physical, occupational and speech therapists, and audiologists, podiatrists, all other miscellaneous health practitioners, ambulance services, kidney diahysis centers, family planning services, outpatient mental health and substance abuse centers all other outpatient care centers, load organ banks, all other miscellaneous ambulatory health care services, home health furniture and equipment

- 18. Consists of (1) operating expenses of commercial life insurance carriers and fraternal benefit life insurance and (2) administrative expenses of private noninsured pension plans and publicly administered government employee retirement plans. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies. For pension and retirement plans, excludes services furnished without payment by banks, credit agencies, and investment companies.

- 19. Consists of current expenditures (including consumption of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other personal business services.
 20. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor
- 21. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, airport bus fares, and limousine
- ervices.

 22. Consists of admissions to professional and amateur athletic events and to racetracks.

 23. Consists of current expenditures (including consumption of fixed capital) of nonprofit clubs and fraternal organizations
- and dues and fees paid to proprietary clubs.

 24. Consists of billiard parlors; bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; skiing facilities; marinas; sightseeing; private flying operations; casino gambling; recreational equipment rental, and other commercial participant amusements.

- ment rental, and other commercial participant amusements.

 25. Consists of lotteries, pels and pet care services, cable TV, film processing, photographic studios, sporting and recreation camps, video rentals, internet access fees, and recreational services, not elsewhere classified.

 26. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For government institutions, equals student payments of tuition.

 27. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures. For government institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare activities.
- ties.

 28. Consists of (1) fees paid to business schools and computer and management fraining, technical and trade schools, other schools and instruction, and educational support services, and (2) current expenditures (including consumption of fixed capital) by nonprofit research organizations and by grantmaking foundations for education and research.

 29. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious organizations, child day care services (excluding educational programs), social advocacy organizations, human rights organizations, civic and social organizations, residential mental health and substance abuse facilities, homes for the elderly, other residential care facilities, social assistance services, political organizations, museums, libraries, and grantmaking dying services. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial functions. Includes meals and beverages consumed both on- and off-premise.

Includes luggage.
 Consists of watch, clock, and jewelry repairs, costume and dress suit rental, and miscellaneous personal services.
 Consists of varieth for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, lineleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.

leum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.

5. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.

6. Consists of transient hotels, motels, other traveler accommodations, clubs, schools, and other group housing.

7. Consists of transient hotels, motels, other traveler accommodations, clubs, schools, and other group housing.

7. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stowes, room air conditioners, sewing machines, vacuum cleaners, and other appliances.

8. Includes such house furnishings as floor coverings, picture frames, mirrors, art products, portable lamps, clocks, blinds, shades, drapery hardware, and telephone equipment. Also includes writing equipment and hand, power, and garden tools.

9. Consists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes lamp shades, brooms, and brushes.

10. Consists of repair and maintenance services for appliances and house furnishings, moving and warehouse expenses.

11. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.

12. Consists of offices of physicians, HMO medical centers, and freestanding ambulatory surgical and emergency centers.

13. Consists of chiropractors, optometrists, mental health practitioners (except physicians), physical, occupational and speech therapists, and audiologists, podiatrists, all other miscellaneous health practitioners, all other outpatient care enters, blood and organ banks, all other miscellaneous ambulatory health care services, home health furniture and equipment rental, medical and diagnostic laboratories, and home health care.

14. Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes.

15. Consists of premiums less benefits for income loss insurance.

16. Co

employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other personal business services.

20. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor

vehicle insurance 21. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, airport bus fares, and limousine

services.

22. Consists of admissions to professional and amateur athletic events and to racetracks.

23. Consists of current expenditures (including consumption of fixed capital) of nonprofit clubs and traternal organizations

23. Consists of current expenditures (including consumption of fixed capital) of nonprofit clubs and fraternal organizations and dues and fees paid to proprietary clubs.
24. Consists of billiard parlors, bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; skiing facilities; marinas; sightseeing; private flying operations; casino gambing; recreational equipment rental, and other commercial participant amusements.
25. Consists of lotteries, pets and pet care services, cable TV, film processing, photographic studios, sporting and recreation camps, video rentals, internet access fees, and recreational services, not elsewhere classified.
26. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For government institutions, equals student payments of tuttion.

research and development institution.

27. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures. For government institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare activitions.

ties.

Consists of (1) fees paid to business schools and computer and management training, technical and trade schools other schools and instruction, and educational support services, and (2) current expenditures (including consumption of fixed capital) by nonprofit research organizations and by grantmaking foundations for education and research.

29. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious organizations, child day care services (excluding educational programs), social advocacy organizations, human rights organizations, critic and social organizations, residential mental health and substance abuse facilities, nomes for the elderly, other residential care facilities, social assistance services, political organizations, museums, libraries, and grantmaking and giving services. The expenditures are net of receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and exclude relief payments within the United States and expenditures for grantmaking foundations for education and research. For proprietary and government institutions, equals receipts from users.

30. Beginning with 1981, includes nonresidents' student and medical care expenditures were \$0.3 billion in 1981.

31. Beginning with 1981, includes nonresidents' student and medical care expenditures were \$0.3 billion in 1981.

32. Beginning with 1984, includes in the United States; migratory worker and breign professional expenditures in the United States; student expenditures were \$0.1 billion and foreign professional expenditures were \$0.1 billion and foreign professional expenditures were \$0.1 billion and foreign professional expenditures were \$0.1 billion and foreign professional expenditures were \$0.1 billion and foreign professional expenditures were \$0.1 billion and foreign professional expenditures were \$0.1 billion and foreign professional expenditures were \$0.1 billion and foreign professional expenditures were \$0.1 billion and

- Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premise.
- 2. Includes luggage.
 3. Consists of watch, clock, and jewelry repairs, costume and dress suit rental, and miscellaneous personal services.
 4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.

- purchases of fuel and electricity.

 5. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.

 6. Consists of transient hotels, motels, other traveler accommodations, clubs, schools, and other group housing.

 7. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air conditioners, sewing machines, vacuum cleaners, and other appliances.

 8. Includes such house furnishings as floor coverings, picture frames, mirrors, art products, portable lamps, clocks, blinds, shades, drapery hardware, and telephone equipment. Also includes writing equipment and hand, power, and parden tools.

 9. Consists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes lamp shades, brooms, and brushes.
- snades, prooms, and prusnes.

 10. Consists of repair and maintenance services for appliances and house furnishings, moving and warehouse expenses, postage and parcel delivery charges, premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles), and miscellaneous household operation services.

 11. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.

 12. Consists of offices of physicians, HMO medical centers, and freestanding ambulatory surgical and emergency centers.

 13. Consists of chiropractors, optometrists, mental health practitioners (except physicians), physical, occupational and speech therapists, and audiologists, podiatrists, all other miscellaneous health practitioners, ambulance services kidney dialescenters, termity depending experies extracting the protection of survey centers.
- speech therapists, and audiologists, podiatrists, all other miscellaneous health practitioners, ambulance services, kidney dialysis centers, tamily planning services, outpatient mental health and substance abuse centers, all other outpatient care centers, blood and organ banks, all other miscellaneous ambulatory health care services, home health furniture and equipment rental, medical and diagnostic laboratories, and home health care.

 14. Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.

 15. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.

 16. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.

- 17. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.

 18. Consists of (1) operating expenses of commercial life insurance carriers and fraternal benefit life insurance and (2) administrative expenses of private noninsured pension plans and publicity administered government employee retirement plans. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies. For pension and retirement plans, excludes services furnished without payment by banks, credit agencies, and investment companies. 19. Consists of current expenditures (including consumption of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other

- personal business services.

 20. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor
- 21. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, airport bus fares, and limousine
- 22. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate

- series.
 23. Consists of admissions to professional and amateur athletic events and to racetracks.
 24. Consists of current expenditures (including consumption of fixed capital) of nonprofit clubs and fraternal organizations and dues and feas paid to proprietary clubs.
 25. Consists of billiard parlors; bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; skiing facilities; marinas; sightseeing; private flying operations; casino gambling; recreational equipment rental, and other commercial participant amusements.
 26. Consists of lotteries, pets and pet care services, cable TV, flim processing, photographic studios, sporting and recreation camps, video rentals, internet access fees, and recreational services, not elsewhere classified.
 27. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For government institutions, equals student payments of tuition.
- 28. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures. For government institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare activities.
- tions, equals student payments of tuition. Excludes child day care services, which are included in temporal and mention days.

 29. Consists of (1) fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services, and (2) current expenditures (including consumption of fixed capital) by nonprofit research organizations and by granthaking foundations for education and research.

 30. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious organizations, child day care services (excluding educational programs), social advocacy organizations, human rights organizations, child cand social organizations, residential mental health and substance abuse facilities, homes for the elderly, other residential care facilities, social assistance services, political organizations, museums, libraries, and granthaking and giving services. The expenditures are net of receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and exclude relief payments within the United States and expenditures by granthaking foundations for education and research. For proprietary and government institutions, equals receipts from users.

 31. Beginning with 1981, includes of six students expenditures abrad.

 32. Beginning with 1981, includes of loreing professional expenditures in the United States. Beginning with 1986, includes migratory worker and foreign professional expenditures in the United States.

 Note: Consumer durable goods are designated (d.), nondurable goods (n.d.), and services (s.).

Consists of nonmortgage interest paid by households.
 Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.
 Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of the estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

August 2005 95

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Covernment consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investmen (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and in software in table 3.9.5.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and in software in table 3.9.5.

Table 3.10.6. Real Government Consumption Expenditures and General Government Gross Output, Chained Dollars [Billions of chained (2000) dollars]

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services soid to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Note: Chained (2000) older series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first fine and the sum of the most detailed lines.

^{1.} National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment:
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
 Gross government investment consists of general government enterprise expenditures for fixed assets; inventory investment is included in government expenditures.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in ourrent dollars by compensation of general government placement government investment is measured in ourrent dollars by compensation of general government placement government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

^{1.} National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government enterprise expenditures for fixed assets; inventory investment is included in government expenditures.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
 Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
 Notro. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity index such as the difference between the first line and the sum of the most detailed lines.

^{1.} Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.
2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

CALLET																				

^{1.} Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

^{1.} Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services. 2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

^{1.} Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services. 2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the components relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2. and real growth rates are shown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and materials, and materials, and materials. An onautomotive consumer goods.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

^{1.} Exports and imports of gold in the NIPAs differ from those in the ITAs. ITA gold exports (line 2) and imports (line 19) are excluded from the NIPAs; imports of gold in the NIPAs (line 21) is the excess of the value of gold in gross domestic purchases over the value of U.S. production of gold.

2. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs and statistical revisions to the NIPAs that have not yet been incorporated into the ITAs.

3. Consists of statistical revisions between the United States and its territories, Puerto Rico, and the Northern Mariana Islands. The reatment of U.S. territories, Puerto Rico, and the Northern Mariana Islands in the NIPAs differs from that in the ITAs. In the NIPAs, they are included in the rest of the world, in the ITAs they are treated as part of the United States. The adjustment to unilateral current transfers, net (line 42) consists only of transfer payments from persons, because transfer payments, subsidies, and grants-in-aid from the Federal Government to residents of U.S. territories, Puerto Rico, and the Northern Mariana Islands are excluded from NIPA transfer payments to the rest of the world.

4. Beginning with 1988, the ITAs classify certain military grants as services that the NIPAs do not. In the NIPAs these transactions are excluded from exports and included in transfer payments from government.

5. In the ITAs, income transactions between parents and affiliates are recorded on a net basis. In ITA exports, U.S. parents' receipts from foreign affiliates for interest are net of such payments by U.S. parents to foreign parents for interest are net of such payments by U.S. parents to foreign parents for interest are net of such payments by U.S. parents to foreign parents for interest are net of such payments and in income receipts and, thus, does not affect NIPA net income receipts or balance on current account.

ITAs International transactions accounts.

Gross government investment consists of general government and government enterprise expenditures for fixed assets; change in inventories is included in government consumption expenditures.

^{1.} Gross government investment consists of general government and government enterprise expenditures for fixed assets; change in inventories is included in government consumption expenditures. Note: Chain-type quantity indexes for net investment are computed from chained (2000) dollar estimates of net investment by scaling the chained-foldiar estimates to 100 in the reference year (2000). Chained (2000) dollar estimates of net investment appear in table 5.2.6.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; change in inventories is included in government consumption expenditures. Noτε. Most chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chained (2000) dollar estimates of net investment are calculated by subtracting consumption of fixed capital from gross investment.

Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 Excludes software "embedded," or bundled, in computers and other equipment.
 Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 Consists primarily of manulactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 Excludes net purchases of used structures and brokers' commissions on the sale of residential structures.

Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 Excludes software "embedded," or bundled, in computers and other equipment.
 Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 Excludes software "embedded," or bundled, in computers and other equipment.
 Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 Consists primarily of turniture and fixtures, agricultural machinery, construction machinery, mining and oiffield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 Excludes net purchases of used structures and brokers' commissions on the sale of structures.

^{1.} Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the components relative importance or its contribution to the growth rate of more aggregate series, accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded," or bundled, in computers and other equipment.

4. Includes communication equipment, normedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of transfured homes, improvements, dormitories, net purchases of used structures and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of residential structures.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity index uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings. Medical buildings are included in health care.

2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

3. Consists primarily of railroads.

4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.

Thickness man supply, social and development.
 Excludes net purchases of used structures and brokers' commissions on the sale of structures.

3. Consists primarily of railroads.
4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.
5. Excludes net purchases of used structures and brokers' commissions on the sale of structures.
Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-oldar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

and development.

5. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Residual	3/	-0.5	-2.4	-5.5	-14.3

^{1.} The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.5.1
2. Excludes software "embedded," or bundled, in computers and other equipment.
Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} This series is derived from the Census Bureau series "current cost inventories."
2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

^{1.} Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

^{1.} Implicit price deflators are as of the end of the quarter and are consistent with inventory stocks. Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.
 Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.
 Nore. Estimates in this table are based on the North American Industry Classification System (NAICS).
 Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal.

Consists of general government and government enterprise expenditures for fixed assets.
 Structures and software include compensation of government employees engaged in new own-account investment and related expenditures for goods and services.
 Consists of Department of Defense new structures, except family housing.
 Consists of lodging, religious, communication, sewage and waste disposal, water supply structures, and manufacturing.

manufacturing.
5. Consists of lodging, communication, and manufacturing.

^{1.} Consists of general government and government enterprise expenditures for fixed assets.
2. Structures and software include compensation of government employees engaged in new own-account investment and related expenditures for goods and services.
3. Consists of Department of Defense new structures, except family housing.
4. Consists of lodging, religious, communication, sewage and waste disposal, water supply structures, and manufacturing.
5. Consists of lodging, communication, and manufacturing.
Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexs uses weights of more than one period, the corresponding chained-follar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

^{1.} NAICS crop and animal production.
2. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers, health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers.
3. Consists of scenic and sightseeing transportation; transportation; transportation; transportation; transportation support activities; and couriers and messengers.
4. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
5. Consists of accounting, tar preparation, bookkeeping, and payroll services; architectural, engineering, and related services; advertising and related services; and other professional, scientific, and technical services.
6. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.
7. Includes Coast Guard.
8. Employees of Indian tribal governments are classified in state and local government.
9. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.
Note: Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

^{1.} NAICS crop and animal production.
2. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers, and nonstore retailers.
3. Consists of scenic and sightseeing transportation; transportation; transportation support activities; and couriers and messengers.
4. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
5. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; advertising and related services; and other professional, scientific, and technical services.
6. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.
7. Includes Coast Guard.
8. Employees of Indian tribal governments are classified in state and local government.
9. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.
Note: Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

^{1.} Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.

2. NAICS crop and animal production.

3. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers; and nonstore retailers; and nonstore retailers; and nonstore retailers; and monstore retailers; and nonstore retailers; and couriers and messengers.

5. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.

6. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; advertising and related services; and other professional, scientific, and technical services.

7. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.

8. Includes Coast Guard.

9. Employees of Indian tribal governments are classified in state and local government.

10. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

Note. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

^{1.} Equals the number of full-time equivalent employees plus the number of self-employed persons. Unpaid family workers are not included.

2. NAICS crop and animal production.

3. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.

4. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.

5. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.

6. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; advertising and related services; and other professional, scientific, and technical services.

7. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.

8. Includes Coast Guard.

9. Employees of Indian tribal governments are classified in state and local government.

10. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

Note: Estimates in this table are based on the 1997 North American industry Classification System (NAICS).

Consists of professional, scientific, and technical services; management of companies and enterprises; and administrative and waste management services.
 Consists of civil service, foreign service, Public Health Service officers, Tennessee Valley Authority, Thrift Savings Fund, and several small retirement programs.
 Includes the Coast Guard. Beginning with October 2002, includes the Uniformed Services Retiree Health Care Fund.
 Nore. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

Consists of NAICS crop and animal production.
 Excludes owner-occupied housing and nonprofit institutions serving households.
 Note. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

3. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
4. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.
5. Consists of tax and other holding companies.
6. Consists of (1) receipts by U.S. residents of dividends from foreign corporations, plus (2) earnings distributed by unincorporated foreign affiliates to their U.S. parents.
7. Consists of (1) payments by U.S. corporations of dividends to foreign residents, plus (2) earnings distributed by unincorporated U.S. affiliates to their foreign parents.
Note. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

^{1.} Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.
Nore. Channed (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Proprietors' income	25	~0.6	-0.5	-0.5	-0.6

Except for farm proprietorships and partnerships (line 15) and other private business (line 19), the capital consumption adjustment is calculated in two parts. The adjustment for consistent accounting at historical cost converts depreciation, based on the service lives and depreciation schedules employed by firms when filing their income tax returns, to consistent service lives and empirically based depreciation schedules. The adjustment for current-cost valuation converts the historical-cost series with consistent accounting to a series valued at current cost. For farm proprietorships and partnerships and for other private business, the historical-cost series is based on consistent service lives and empirically based depreciation schedules, so the adjustment reflects only a conversion to surrent-cost valuation. reflects only a conversion to current-cost valuation.

Employer contributions to privately administered programs and to publicly administered government employee refirement plans are classified as employer contributions for employee pension and insurance funds. Employer contributions to other publicly administered programs are classified as employer contributions to government social insurance.

2. Government contributions to privately administered health, life, and workers' compensation insurance for government employees are classified as employer contributions for employee pension and insurance funds. Nore. The numbers in parentheses indicate the tables and line numbers from which the entries in this table are derived.

Consists largely of losses by business due to fraud and unrecovered thefts, corporate cash prizes, and payments from personal injury trust funds.
 For detail, see table 3.7.
 Consists of net insurance settlements paid to the rest of the world less net insurance settlements received from the rest of the world.

Nore. In this table, imputed interest paid (line 41) is the sum of (1) premium supplements paid to property and casually insurance carriers by households and institutions, governments, domestic business, and the rest of the world as a measure of imputed services provided to these sectors by the property and casually insurance providers, (2) the difference between the property income received by financial intermediantes from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, households and institutions, governments, and the rest of the world, and (3) the imputed services provided to these sectors in the role of borrowers of financial services; these services are included as negative amounts paid by the borrowers and received by the financial intermediaries.

Excludes interest paid or received by government enterprises, which is included in the government sector.
 Consists of interest paid on the deposit liabilities of commercial and mutual savings banks, savings and loan associations, and credit unions.
 Consists of nonmortgage interest paid by households.
 Interest received by nonfinancial sole proprietorships and partnerships is considered interest received by persons and is included in line 32.
 Beginning with October 2002, includes the Uniformed Services Retiree Health Care Fund.
 Includes nonprofit institutions primarily serving households.

^{1.} Residential dwellings owned and used by nonprofit institutions serving households are included in owner-occupied

Residential dwellings owned and used by nonprofit institutions serving households are included in owner-occupied housing categories.
 Includes services furnished without payment by financial intermediaries except life insurance carriers to government employee retirement plans.
 Classified as a service in exports, and as an income payment to the rest of the world.
 Classified as a service in exports, and as an income receipt from the rest of the world.
 For general government employees, recorded as compensation of employees (wages and salaries) and as a saie; does not affect government consumption expenditures. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the surplus of government enterprises.

included in government consumption expenditures; they are deducted in the calculation of the "health insurance" category of personal consumption expenditures (PCE); life insurance premiums paid by employers are included in the calculation of the "health insurance" category of personal consumption expenditures (PCE); life insurance premiums paid by employers are included in the calculation of the "expenses of handling life insurance and pension plans" category of PCE.

7. Consists of the programs for which a social insurance fund is imputed, and for which contributions are set equal to benefits paid. These payments are funded directly out of the current budget. The specific programs consist of workers compensation, unemployment insurance, and medical services for the dependents of active dutly military resonnel at normilitary facilities. Source data are not available for the corresponding treatment for similar state and local government programs. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the surplus of government enterprises.

^{8.} Consists of owner-occupant purchases of new single-family dwellings, including manufactured homes, expenditures on improvements, and payments of commissions on new and existing residential dwellings, less sales of dwellings to government. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.4.5 because the series shown in that table reflect total purchases by private business.

9. Excludes investment by nonprofit institutions serving households in residential properties, which is included in owner-occupant investment (see footnote 1) and in sales of existing structures to governments. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.4.5 because the series shown in that table reflect total purchases by private business.

10. The consumption of fixed capital (CPC) of government enterprises is not included in government consumption expenditures; it is deducted in the calculation of the current surplus of government enterprises and is recorded as part of total government CFC.

11. Includes gross investment of government enterprises.

Nore: "Imputations" are transactions recorded in the national income and product accounts that are not transactions of the market economy. In this table, the imputations shown in the "specific imputations" section are those that affect gross domestic product (BDP). In table 7.11, imputed interest paid by life insurance carriers (line 46) consists of the property incomes earned on life insurance and pension reserves. These incomes are considered to be incomes received by persons and not by the insurance carriers; this reclassification is not considered an imputation for purposes of table 7.12, because it does not affect GDP.

August 2005 173

GDP and Other Major NIPA Series, 1929–2005:II

The historical series from the national income and product accounts (NIPAs) have been updated to present revised estimates from the 2004 annual revision and the "advance" estimates for the second quarter of 2005.

Table 1 presents current-dollar estimates of gross domestic product (GDP) and its components. Table

2A presents estimates of real GDP and its components in chained dollars, and table 2B presents estimates of real GDP and its components in chain-type quantity indexes. Table 3 presents price indexes. Table 4 presents national income and personal income.

The estimates are available on BEA's Web site at <www.bea.gov>.

See the footnote and note at the end of the table.

Note. Chain-type estimates provide the best available method for comparing the level of a given series at two points in time. Chained-dollar estimates are obtained by multiplying the chain-type quantity index for an aggregate by its value in current dollars in the reference year (currently 2000) and dividing by 100. For an analysis of changes over time in an aggregate or in a component, the percentage changes calculated from the chained-dollar estimates and the chain-type quantity indexes are the same. Thus, chained-dollar estimates can be used to compute "real" (that is, inflation-adjusted) rates of growth. However, comparisons of two or more different chained-dollar series must be made with caution, because the prices used as weights in the chained-dollar calculations usually differ from the prices in the reference period, and the resulting chained-dollar values for detailed GDP components usually do not sum to the chained-dollar estimate of GDP or to any intermediate aggregate. A measure of the extent of such differences is provided in most chained-dollar tables by a "residual" line, which indicates the difference between GDP (or another major aggregate) and the sum of the most detailed components in

the table.

It is usually best to make comparisons of aggregate series in current dollars or to use BEA's estimates of contributions to percent change. Measures of the contributions of components to the percentage change in real GDP and to the percentage change in other major aggregates are provided in NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, 5.3.2, 5.4.2A, 5.4.2B, and 5.5.2. In general, the use of chained-dollar estimates to calculate component shares or component contributions may be misleading for periods away from the reference year; component shares of GDP are provided in table 1.1.10. In the November 2003 Survey, the article "Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" discussed the advantages of using chain-weighted indexes and the challenges of using chained dollars. To assist users in undertaking historical analysis, BEA provides supplemental tables that present estimates for selected timespans in chained 1937, 1952, 1972, and 1982 dollars (see tables 1.1.6A, 1.1.6B, 1.1.6C, and 1.1.6D).

U.S. Affiliates of Foreign Companies

Operations in 2003

By William J. Zeile

PRELIMINARY results from the Bureau of Economic Analysis' latest annual survey of foreign direct investment in the United States (FDIUS) indicate that growth in the current-dollar value added of majority-owned nonbank U.S. affiliates of foreign companies slowed in 2003, following a sharp rebound in 2002. However, employment by affiliates decreased for the third consecutive year, partly as a result of foreign selloffs of U.S. companies. Acquisitions of new affiliates continued to lag behind the levels reached in previous years.

In 2003, the current-dollar value added of majorityowned nonbank U.S. affiliates ("U.S. affiliates") increased 6 percent, from \$461 billion to \$486 billion,

Table 1. Value Added and Employment of Majority-Owned Nonbank U.S. Affiliates of Foreign Companies, 1988–2003

	Value	added	Emplo	yment
	Millions of dollars	As a percentage of U.S. private industry value added	Thousands of workers	As a percentage of U.S. private industry employment

p Preliminary

Note. For improved comparability with U.S. affiliate value added, U.S. private industry value added was adjusted to exclude value added in depository institutions and private households, imputed rental income from owner-occupied housing, and business transfer payments. For the latest estimates of U.S. private industry value added, see Erich H. Strassner and Thomas F. Howells III, "Annual Industry Accounts: Advanced Estimates for 2004," Survey of Current Business 85 (May 2005): 7–19.

following a 10-percent increase in 2002 (table 1). In comparison, total U.S. current-dollar value added in nonbank private industries increased 5 percent, compared with a 4-percent increase in 2002. As a result, after increasing in 2002, the affiliate share of value added in private industries remained virtually flat in 2003, at 5.8 percent, just below the 5.9-percent peak reached in 2000 (chart 1).

As in 2002, the increase in affiliate value added in 2003 largely resulted from expansions in existing affiliate operations rather than from new foreign investment, which remained below the levels reached in 1998–2000.² The slowdown in growth for affiliates in

Chart 1. Majority-Owned Nonbank U.S.-Affiliate Share of Value Added in Private Industries, 1988–2003

For the latest estimates of U.S. private industry value added, see Erich H. Strässner and Thomas F. Howelis III, "Annual Industry Accounts: Advanced Estimates for 2004," Survey or Cunears Useinses 85 (Massives 88). For improved comparability with U.S. affiliate employment, U.S. private industry employment was adjusted to exclude employment in depository institutions and private households. For consistency with the coverage of the data on U.S. private industry employment, U.S. affiliate employment in Puerto Rico, in "other U.S. areas," and in "foreign" was excluded from the U.S. affiliate total when the employment shares were computed.

^{1.} This article focuses on the operations of nonbank U.S. affiliates that are majority-owned by foreign direct investors. The Bureau of Economic Analysis (BEA) also collects annual data on the operations of nonbank U.S. affiliates that are owned 50 percent or less by foreign direct investors; however, beginning with the 2002 benchmark survey, the data for these affiliates are less extensive than the data for majority-owned affiliates. (Data on the operations of bank affiliates are collected only in benchmark survey years.) Selected data on the operations of all (majority-owned and minority-owned) nonbank U.S. affiliates are presented in tables that can be accessed on BEA's Web site at <www.bea.gov/bea/di/di1fdiop.htm>. In 2003, majority-owned nonbank U.S. affiliates accounted for 92 percent of the employment of all nonbank U.S. affiliates.

^{2.} According to data from BEA's survey of new foreign investments, outlays by foreign direct investors to acquire or establish businesses in the United States, which exceeded \$200 billion in each year in 1998–2000, totaled \$55 billion in 2002 and \$64 billion in 2003. The outlays for new investment had peaked at \$336 billion in 2000 before falling to \$147 billion in 2001; see Thomas W. Anderson, "Foreign Direct Investment in the United States: New Investment in 2004," Survey of Current Business 85 (June 2005): 30–37.

2003 partly represented a dampening of momentum from the quick rebound in 2002, following a 7-percent drop in value added in 2001. Several affiliates that had experienced large increases in value added in 2002 experienced much slower growth in 2003; for most of these affiliates, the large increases in 2002 reversed reductions in value added in 2001. In addition, the slow-down in 2003 reflected selloffs of foreign ownership interests in a number of U.S. companies, including subsidiary units of large affiliates.³

Reductions in foreign ownership—through selloffs and through company reorganizations—were primarily responsible for the 3-percent drop in affiliate employment in 2003, which followed decreases of 3 percent in 2002 and 1 percent in 2001. Reductions in employment associated with ongoing affiliate operations also contributed to the decrease in 2003 but were less prominent than those in 2002. Total U.S. employment in private industries, which had decreased more than 1 percent in 2002, decreased 0.5 percent in 2003. The affiliate share of private industry employment thus decreased, from 4.9 percent in 2002 to 4.7 percent

in 2003.4

The following are additional highlights of the operations of U.S. affiliates in 2003.

- By country of ownership, the United Kingdom remained the largest investing country as measured by affiliate value added, followed by Japan and Germany. The Netherlands' rank increased from fifth to fourth. France ranked fifth.
- By industrial sector, affiliates' shares of U.S. employment were highest in mining and in manufacturing. Affiliates' shares increased substantially in the utilities and information sectors and decreased substantially in transportation and warehousing and in mining (where the share remained high).
- By state, the affiliate share of U.S. employment was highest in South Carolina, followed by Hawaii.
 South Carolina also had the highest share in 2002; before 2002, the affiliate share had been highest in Hawaii.
- Affiliates continued to account for large shares of U.S. exports and imports of goods. The affiliate

Key Terms

The following key terms are used to describe U.S. affiliates of foreign companies and their operations.

U.S. affiliate. A U.S. business enterprise in which there is foreign direct investment—that is, in which a single foreign person owns or controls, directly or indirectly, 10 percent or more of the voting securities of an incorporated U.S. business enterprise or an equivalent interest in an unincorporated U.S. business enterprise. "Person" is broadly defined to include any individual, corporation, branch, partnership, associated group, association, estate, trust, or other organization and any government (including any corporation, institution, or other entity or instrumentality of a government). A "foreign person" is any person that resides outside the United States—that is, outside the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and all U.S. territories and possessions.

Majority-owned U.S. affiliate. A U.S. affiliate that is owned more than 50 percent by foreign direct investors.

Foreign parent. The first person outside the United States in a U.S. affiliate's ownership chain that has a direct investment interest in the affiliate.

Ultimate beneficial owner (UBO). That person, proceeding up a U.S. affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. Unlike the foreign parent, the UBO of an affiliate may be located in the United States. The UBO of each U.S. affiliate is identified

to ascertain the person that ultimately owns or controls the U.S. affiliate and that therefore ultimately derives the benefits from ownership or control.

Foreign parent group. Consists of (1) the foreign parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, up to and including the UBO, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

Value added. The contribution to U.S. gross domestic product, which is the market value of the goods and services produced by labor and property located in the United States. Value added can be measured as gross output (sales or receipts and other operating income plus inventory change) minus intermediate inputs (purchased goods and services). Alternatively, it can be measured as the sum of the costs incurred (except for intermediate inputs) and the profits earned in production. The valueadded estimates for U.S. affiliates were prepared by summing cost and profit data collected in the annual and benchmark surveys of foreign direct investment in the United States. The estimates are measures of gross value added rather than measures of net value added because they are calculated without the deduction for the consumption of fixed capital used in production.

The estimates of value added of U.S. affiliates are conceptually consistent with BEA's estimates of U.S. value added by industry.

^{3.} In a number of cases, however, the units that were sold off were poorly performing units whose contributions to affiliate value added may have been limited.

^{4.} Because U.S. affiliates tend to be concentrated in industrial sectors with relatively high value added per employee (such as manufacturing and wholesale trade), their share of U.S. employment has consistently been lower than their share of U.S. value added.

share of exports increased from 20 percent in 2002 to 21 percent in 2003; the affiliate share of imports decreased from 29 percent to 28 percent.

This article examines changes in the value added, employment, and trade in goods of U.S. affiliates in 2003, particularly as they relate to changes in the corresponding totals for the U.S. economy. For each of these measures, changes in affiliate operations are examined both in the aggregate and by major investing country. For value added, the changes are also examined by industry of affiliate, and for employment, the affiliate shares of the economy are examined by industry and by state. Several additional measures of U.S.-affiliate operations are presented in tables at the end of this article.

Value Added

In 2003, the current-dollar value added of majorityowned nonbank U.S. affiliates increased 6 percent, from \$461 billion to \$486 billion. In comparison, total U.S. current-dollar value added in private nonbank industries increased 5 percent.⁵ The share of U.S. value added in private industries accounted for by affiliates remained unchanged, at 5.8 percent.

By country of ownership

In 2003, more than three-fourths of the value added of majority-owned nonbank U.S. affiliates was accounted for by affiliates with ultimate beneficial owners (UBOs) in seven major investing countries: Canada, France, Germany, Japan, the Netherlands, Switzerland, and the United Kingdom (table 2 and chart 2). As in

Chart 2. Investing-Country Shares of Value Added of U.S. Affiliates, 2003

^{5.} The rate of change in U.S. value added in private industries serves as a convenient benchmark against which the increase in U.S.-affiliate value added can be evaluated. However, the two growth rates are not strictly comparable, because the growth rate of U.S.-affiliate value added partly reflects changes in ownership that do not represent changes in production for the whole economy. Similarly, changes in U.S.-affiliate employment, exports, and imports partly reflect changes in ownership. Thus, they are not strictly comparable with the corresponding changes for the whole economy.

every other year since 1977 (the initial year covered by BEA's annual surveys of U.S.-affiliate operations), the largest investing country in terms of affiliate value added was the United Kingdom; in 2003, Britishowned affiliates accounted for 20 percent of the value added of all majority-owned U.S. affiliates and for 1 percent of total U.S. value added in private industries. Japanese- and German-owned affiliates accounted for the next largest shares of affiliate value added (13 percent each).

For each of the seven major investing countries, the value added of affiliates increased in 2003. In percent-

age terms, the increases were most pronounced for affiliates with UBOs in the Netherlands and Switzerland. For Netherlands-owned affiliates, value added increased 13 percent, pushing the Netherlands ahead of France to rank as the fourth-largest investing country in 2003; much of this increase reflected improvements in the operating performance of Netherlands-owned affiliates in the insurance and petroleum refining industries.⁶ The value added of Swiss-owned affiliates

6. The Netherlands also ranked as the fourth-largest investing country in 2000–2001; in 2002, France ranked as the fourth-largest investing country.

Benchmark surveys are BEA's most comprehensive sur-

veys of foreign direct investment in terms of both cover-

age of companies and subject matter and are conducted

every 5 years. The data cover U.S. affiliates' balance sheets

and income statements, employment and compensation

Data on Foreign Direct Investment in the United States

BEA collects three broad sets of data on foreign direct investment in the United States (FDIUS): (1) Financial and operating data of U.S. affiliates, (2) data on U.S. businesses newly acquired or established by foreign direct investors (new investment data), and (3) international transactions (balance of payments) and direct investment position data. This article presents the financial and operating data. The new investment data were published in "Foreign Direct Investment in the United States: New Investment in 2004" in the June 2005 issue of the Survey OF CURRENT BUSINESS. The international transactions and direct investment position data were published in the articles "The International Investment Position of the United States at Yearend 2004," "U.S. International Transactions: First Quarter of 2005," and "Direct Investment Positions for 2004: Country and Industry Detail," in the July 2005 Survey.

Each of the three data sets focuses on a distinct aspect of FDIUS. The financial and operating data provide a picture of the overall activities of the U.S. affiliates; the new investment data provide information about U.S. businesses that are newly acquired or established by foreign direct investors, regardless of whether the invested funds were raised in the United States or abroad; and the international transactions and direct investment position data cover foreign investors' transactions with, and positions in, both new and existing U.S. affiliates.¹

Financial and operating data of U.S. affiliates. The data on the overall operations of U.S. affiliates are collected in BEA's annual and benchmark surveys of FDIUS.

of employees, trade in goods, research and development expenditures, sources of finance, and selected data by state. In addition, the value added of affiliates is estimated from data reported in these surveys.

Except in benchmark survey years, these data, unlike the new investment data, cover only nonbank affiliates. The financial and operating data for affiliates are on a fiscal year basis. The data cover the entire operations of the U.S. affiliate regardless of the percentage of foreign ownership.

New investment data. The data on outlays by foreign

New investment data. The data on outlays by foreign direct investors to acquire or establish affiliates in the United States are collected on a calendar year basis in BEA's annual survey of new FDIUS. In addition, the surveys of new investment collect selected data on the operations of the newly acquired or established affiliates. For newly acquired affiliates, these data are for (or as of the end of) the most recent fiscal year preceding the acquisition, and for newly established businesses, they are projected for (or as of the end of) the first year of operation. The data cover the entire operations of the business irrespective of the percentage of foreign ownership.

International transactions and direct investment position data. These data are collected in the quarterly surveys of FDIUS. The data cover the U.S. affiliate's transactions and positions with its foreign parent and with other members of its foreign parent group, so these data focus on the foreign parent's share, or interest, in the affiliate rather than on the affiliate's overall size or level of operations. The major items included in the U.S. international transactions (balance of payments) accounts are direct investment financial flows, direct investment income, royalties and license fees, and other services transactions with the foreign parent group.

^{1.} For a more detailed discussion of the differences between these three sets of data, see Alicia M. Quijano, "A Guide to BEA Statistics on Foreign Direct Investment in the United States," SURVEY 70 (February 1990): 29–37; www.bea.gov/bea/mp_international.htm.

For a comparison of the data on affiliate operations with the data on new investment, see the appendix "Sources of Data" in Mahnaz Fahim-Nader and William J. Zeile, "Foreign Direct Investment in the United States: New Investment in 1994 and Affiliate Operations in 1993," Survey 75 (May 1995): 68–70; www.bea.gov/bea/pubs.htm.

increased 12 percent, largely as a result of increased sales by affiliates in the insurance, nonbank finance, and pharmaceutical manufacturing industries.

For Canadian-, French-, and German-owned affiliates, value added increased at a substantially slower pace in 2003 than in 2002. For all three countries, the robust growth rates in 2002 reversed decreases in value added in 2001; these reversals (and the subsequent slowdowns in growth in 2003) were particularly pronounced for several affiliates in the manufacturing and information sectors.

Among other investing countries, the value added of Australian-owned affiliates increased 25 percent, reflecting both new acquisitions and increased production by existing affiliates. For affiliates with UBOs in the "United Kingdom Islands, Caribbean," value added increased 20 percent, mainly because of expanded sales by existing affiliates.

Affiliate value added decreased 9 percent for affiliates with UBOs in Mexico and decreased 4 percent for affiliates with UBOs in Bermuda. For both countries, the decreases reflected reductions in sales by several large affiliates. For Bermuda-owned affiliates, much of the decrease can also be attributed to affiliate selloffs. The decrease in 2003 marked the first decrease in value added for Bermuda-owned affiliates since 1991. In 1997–2002, the value added of Bermuda-owned affiliates increased more than sixfold, partly as a result of inversions in ownership for multinational companies that had previously been headquartered in the United

States or that had been units of U.S.-headquartered companies.⁷

By industry of affiliate

In 2003, affiliates in manufacturing accounted for 47 percent of the value added of all majority-owned non-bank affiliates (table 3).8 Affiliates in wholesale trade, which includes several large affiliates with substantial secondary operations in manufacturing, accounted for the next largest share of affiliate value added (17 percent).9

Much of the increase in affiliate value added in 2003 was accounted for by affiliates in two sectors: "Finance (except depository institutions) and insurance" and wholesale trade. In "finance (except depository institutions) and insurance," the value added of affiliates increased \$10 billion, or 68 percent, reflecting both new acquisitions and improvements in the ongoing operations of affiliates that had large operating losses in 2001–2002. In wholesale trade, the value added of

D Suppressed to avoid disclosure of data of individual companies

^{7.} A corporate inversion occurs when a U.S. multinational corporation forms a corporation, typically in a foreign low- or no-tax country, and simultaneously "inverts" the corporate chain of ownership, so that the new foreign corporation becomes the parent company and the U.S.-based company becomes its affiliate.

^{8.} The industry classification system used for affiliates is based on the 2002 revision of the North American Industry Classification System.

^{9.} Each U.S. affiliate is classified in the industry that accounts for the largest portion of its sales; however, many large affiliates are involved in a variety of business activities. Changes in value added (or other measures of affiliate operations) by industry of affiliate may thus reflect changes in activities outside of the industry of classification.

affiliates increased \$8 billion, or 11 percent, in 2003, mainly because of expanded sales by affiliates specializing in petroleum and in motor vehicles.

In manufacturing, the value added of affiliates decreased 1 percent in 2003 after increasing 14 percent in 2002. The 2003 decrease reflected reductions in affiliate production in several manufacturing industries. Among these industries, the value added of affiliates in primary metals decreased 20 percent, partly as a result of selloffs. In the machinery industry, affiliate value added decreased 6 percent, largely because of reduced production from ongoing affiliate operations. In food manufacturing, affiliate value added dropped 35 percent; however, most of this decrease reflected shifts within manufacturing in the industry classification of affiliates that had sales in multiple industries.¹⁰

Among other manufacturing industries, the value added of affiliates in electrical equipment increased 23 percent. The increase reflected a combination of new foreign investments, reductions in affiliate operating losses, and shifts in the industry classification of affiliates. The value added of affiliates in beverages and tobacco products increased 22 percent, mainly reflecting foreign acquisitions of U.S. companies. The value

10. For affiliates involved in a variety of business activities, an affiliate's industry classification may change as a result of changes in the mix of these activities if the changes are expected to be sustained.

added of affiliates in the chemical industry increased 11 percent, stemming mainly from shifts in industry classification, new acquisitions, and expanded sales in the pharmaceutical industry.

Employment

In 2003, employment by majority-owned nonbank U.S. affiliates of foreign companies decreased 3 percent, from 5.4 million employees to 5.2 million employees (table 1). The decrease followed decreases of 3 percent in 2002 and 1 percent in 2001. In each of these years, employment by affiliates decreased at a faster pace than total U.S. employment in private industries, partly because of the relative concentration of affiliate employment in industrial sectors in which reductions in employment for all U.S. businesses were relatively large. For example, in 2003, employment in manufacturing, which decreased 5 percent for all U.S. businesses, accounted for 34 percent of employment by U.S. affiliates, but it accounted for only 13 percent of total U.S. employment in private industries. In contrast, employment in health care and social assistance, which increased 2 percent for all U.S. businesses, accounted for less than 2 percent of employment by affiliates, but it accounted for 13 percent of total U.S. private industry employment.

The faster decline in employment by affiliates in 2001–2003 also reflected reductions in foreign owner-

Using Employment Data to Estimate Affiliate Shares of the U.S. Economy by Industry

The data on employment are used to estimate affiliate shares of the U.S. economy by industry on the basis of the North American Industry Classification System (NAICS) because these data can be disaggregated by industry of sales, a basis that approximates the disaggregation of the data for all U.S. businesses by industry of establishment. Thus, using the data on affiliate employment, the affiliate shares of the U.S. economy can be calculated at a greater level of industry detail than is possible using the value-added estimates or other data, which can only be disaggregated on the basis of industry of affiliate.²

In the classification by industry of sales, the data on affiliate employment and sales are distributed among all of the industries in which the affiliate reports sales. As a result, employment classified by industry of sales should approximate that classified by industry of establishment (or plant), because an affiliate that has an establishment in an industry usually also has sales in that industry.³

In contrast, in the classification by industry of affiliate, all of the operations data (including the employment data) for an affiliate are assigned to that affiliate's "primary" industry—that is, the industry in which it has the most sales. As a result, any affiliate operations that take place in secondary industries will be classified as operations in the primary industry.

^{1.} The data for all U.S. businesses used to compute the affiliate shares of employment by NAICS industry are from the national income and product accounts (see table 4, footnote 1).

^{2.} Establishment-level data from a joint project of BEA and the Bureau of the Census can be used to calculate affiliate shares at an even greater level of detail. For affiliate shares based on establishment data for six-digit manufacturing and five-digit nonmanufacturing NAICS industries for 1997, see Foreign Direct Investment in the United States: Establishment Data for 1997 at <www.bea.gov/bea/ai/iidguide.htm>. Similar data on a Standard Industrial Classification basis for 1987 and 1992 are also available. Data only for manufacturing industries are available for 1988–91. The data for foreign-owned establishments are analyzed in Survey articles at <www.bea.doc.gov/bea/ai/iidguide.htm>.

^{3.} However, this is not the case if one establishment of an affiliate provides all of its output to another establishment of that affiliate. For example, if an affiliate operates both a metal mine and a metal-manufacturing plant and if the entire output of the mine is used by the manufacturing plant, all of the affiliate's sales would be in metal manufacturing, and none, in metal mining. Thus, when the mining employment is distributed by industry of sales, all of it would be classified in manufacturing even though the industry of the establishment is mining.

^{4.} An affiliate's primary industry is based on a breakdown of the affiliate's sales by BEA's NAICS-based International Surveys Industry classification.

ship of U.S. companies, particularly in 2003. As a result of this decline, the affiliate share of total U.S. employment in private industries, after peaking at 5.0 percent in 2000, decreased to 4.9 percent in 2001 and 2002 and to 4.7 percent in 2003.

By industry

In 2003, as in earlier years, the affiliate share of U.S. employment at the sector level was highest in mining (19.5 percent), followed by manufacturing (12.0 percent) (table 4).11 Within manufacturing, the affiliate share was highest in chemicals (28.3 percent), fol-

11. The estimates of shares are based on affiliate employment broken down by industry of sales; this basis approximates the establishment-based disaggregation of the corresponding data for all U.S. businesses. See the box "Using Employment Data to Estimate Affiliate Shares of the U.S. Economy by Industry." Because employment by industry of sales more precisely reflects the industrial composition of affiliate business activities than data by industry of affiliate, the industry presentation in this section is more detailed than that presented in the section on value added by industry of

D Suppressed to avoid disclosure of data of individual companies.

D Suppressed to avoid disclosure of data of individual companies.

n.a. Not applicable.

The data on U.S. employment in private industries that were used in calculating these percentages are classified by industry of establishment. They are from table 6.40 of the "National Income and Product Accounts (INPA) Tables." The total for U.S. employment in onobank private industries is equal to employment in private industries less the employment of depository institutions and private households. The U.S. private industry employment totals used to calculate affiliate shares in 'all industries' in this table differ from the U.S. employment totals used to calculate affiliate shares in table 5; the latter are from BEA's Regional Economic Information System. The estimates in table 5, unlike those in this table, include employment in depository institutions. In addition, the estimates in table 5, unlike those in this table, exclude U.S. residents temporarily employed abroad by U.S. businesses. They may also differ from NIPA estimates used for "all industries" in this table because of different definitions and revision schedules.

2 For consistency with the coverage of the data on U.S. employment in private industries, U.S.-affiliate employ-

different definitions and revision schedules.

2. For consistency with the coverage of the data on U.S. employment in private industries, U.S.-affiliate employment in Puerto Rico, in "other U.S. areas," and in "foreign" was excluded from the U.S.-affiliate employment total when the percentage shares on this line were computed.

3. Total affiliate manufacturing employment and the shares of all-U.S.-business manufacturing employment accounted for by affiliates shown in this table differ from those shown in table 6. In this table, U.S.-affiliate employment is classified by industry of sales, and the total for manufacturing includes some nonmanufacturing employees (see the box "Using Employment Data to Estimate Affiliate Shares of the U.S. Economy by Industry"), whereas in table 6, affiliate manufacturing employment consists only of employees on the payrofts of manufacturing plants. Data on the latter basis are not available for the industries within manufacturing shown in this table.

In addition, the total for manufacturing in this table includes oil and gas extraction, which is excluded from the total in table 6.

¹⁴⁰¹e o.

4. For both U.S. affiliates and all U.S. businesses, includes oil and gas extraction. (See note below.)

5. Employees on the payrolls of administrative offices and other auxiliary units. Includes employees of units that erform scientific research, data processing, warehousing and storage, and advertising services for other units of

the same enterprise.

6. This line includes all employment that U.S. affiliates did not specify in terms of industry of sales when they filled out their survey forms. Affiliates that filed the long form (that is, affiliates with assets, sales, or net income or loss greater than \$100 million in 1998–2001 and greater than \$150 million in 2002–2003) had to specify only their 10 largest sales categories, and affiliates that filed the short form had to specify only their 4 largest sales categories.

ries.

Nors: A significant portion of U.S. affiliate employment in petroleum and coal products is accounted for by integrated petroleum companies that have, in addition to their manufacturing employees, substantial numbers of employees in petroleum extraction; because these employees cannot be identified separately, they are included in petroleum and coal products manufacturing. For consistency, employees of affiliates classified in the "oil and gas extraction without refining" industry and employees of all U.S. businesses in oil and gas extraction are also included in petroleum and coal products manufacturing after than in miring.

The following ranges are given in employment cells that are suppressed: A—1 to 499; F—500 to 999; G—1,000 to 24,999; K—25,000 to 49,999; L—5,000 to 99,999; M—100,000 or more.

lowed by motor vehicles, bodies and trailers, and parts (24.8 percent), nonmetallic mineral products (23.6 percent), and electrical equipment, appliances, and components (19.4 percent).

In mining, the affiliate share of employment in 2003 was less than the share in 2002, partly reflecting foreign selloffs of U.S. companies. The affiliate share had jumped from 14.6 percent in 2001 to 20.6 percent in 2002 as a result of foreign acquisitions.

In manufacturing, the affiliate share was slightly higher in 2003 than in 2002 despite a 4-percent decrease in affiliate employment, reflecting an even sharper decrease in manufacturing employment by all U.S. businesses. Within manufacturing, the affiliate shares increased significantly in motor vehicles, bodies and trailers, and parts (from 23.3 percent in 2002 to 24.8 percent in 2003), in nonmetallic mineral products (from 22.5 percent to 23.6 percent), and in food, beverage, and tobacco products (from 7.7 percent to 8.6 percent). In the motor vehicles industry, employment by affiliates increased 3 percent in the face of a 3-percent reduction in total U.S. employment in the industry, reflecting expanded production in auto plants by German- and Japanese-owned affiliates. In nonmetallic mineral products, affiliate employment increased slightly despite a 4-percent reduction in industry employment, largely as a result of new acquisitions by existing affiliates. Acquisitions of new affiliates by foreign investors boosted affiliate employment in the food, beverage, and tobacco products industry, which increased 9 percent in the face of a 2-percent decrease in industry employment.

Among other manufacturing industries, the affiliate share of employment in computers and electronic products decreased from 13.2 percent to 12.4 percent. The share decreased for a third consecutive year after peaking at 15.8 percent in 2000; employment by affiliates decreased 15 percent in 2003, following decreases of 18 percent in 2002 and 16 percent in 2001. The affiliate share in electrical equipment, appliances, and components decreased from 20.3 percent to 19.4 percent; employment by affiliates decreased 12 percent in 2003. In both industries, the decreases in employment reflected a combination of affiliate selloffs of subsidiary units and workforce reductions associated with unfavorable market conditions.

Among other industrial sectors, the affiliate shares of employment in the utilities and information sectors

increased significantly in 2003. In utilities, the affiliate share increased from 5.3 percent to 6.1 percent; employment by affiliates increased 12 percent, as gains in employment from new foreign investments more than made up for reductions in employment connected with ongoing affiliate operations. (In 1998– 2002, affiliate employment had increased more than sixfold—pushing the affiliate share from less than 1 percent to more than 5 percent—largely as a result of several foreign acquisitions in the electric power industry.) In the information sector, the affiliate share of employment increased from 6.1 percent in 2002 to 6.8 percent in 2003; employment by affiliates increased 5 percent in the face of a 5-percent decrease for all U.S. businesses, partly because of acquisitions in the motion picture and data processing services industries.

In transportation and warehousing, the affiliate share of employment decreased from 5.8 percent in 2002 to 4.7 percent in 2003. Employment by affiliates decreased 20 percent, mainly as a result of a corporate restructuring that shifted the nationality of a large transportation services company to the United States.

By state

Among the 50 states and the District of Columbia, the shares of private-industry employment accounted for by majority-owned U.S. affiliates in 2003 were highest in South Carolina (8.4 percent), Hawaii (7.8 percent), New Hampshire (7.7 percent), Connecticut (7.3 percent), and Delaware (7.3 percent) (table 5). South

Acknowledgments

The 2003 annual survey of foreign direct investment in the United States was conducted under the direction of Joseph F. Cherry III. Charles R. Gravitz supervised the processing of the survey. The following staff contributed to the processing and editing of the survey reports: Chester C. Braham, Sarah E. Braham, Nichole M. Brooks, Karen M. Dennison, Constance T. Deve, Lonnie A. Hunter, Edna A. Ludden, Isabel L. McConnell, Demetria A. McCormick, Gregory L. McCormick, Sidney A. Moskowitz, Chad M. Poist, Joseph N. Poist III, Ronald L. Ross, Clarence D. Smith, Marie P. Smith, Amy Song, John R. Starnes, Christopher J. Stein, and Diann L. Vann.

Computer programming for data estimation and for the generation of tables was provided by Diane I. Young, Neeta B. Kapoor, and Tara L. O'Brien.

^{12.} Most of this decrease was accounted for by affiliates classified in other manufacturing industries that had secondary operations in electrical equipment.

Carolina also had the highest affiliate share of employment in 2002. In each year in 1988-2001, the affiliate share was highest in Hawaii; however, the share in Hawaii has declined since 1997, when it peaked at 9.9 percent.

In 2003, as in earlier years, more than three-fourths of the affiliate employment in South Carolina was

accounted for by European-owned affiliates, mainly affiliates in manufacturing and in wholesale and retail trade. In contrast, most of the affiliate employment in Hawaii was by Japanese-owned affiliates, particularly affiliates in the accommodation, real estate, and retail trade industries.

In manufacturing, the affiliate shares of employ-

n.a. Not available.

1. The data on U.S. employment in private industries used to calculate the shares shown in this table are from BEA's Regional Economic Information System. The totals are equal to employment in private industries less employment of private households. The U.S. employment totals used to calculate affiliate thars in this table differ from those used for tables 1 and 4, which are from tables 6.4D of the "National Income and Product Accounts (NIPAs) Tables." They differ from the NIPA estimates of employment because they include despository

institutions, and, by definition, they exclude U.S. residents temporarily employed abroad by U.S. businesses. They also may differ from the NIPA estimates because of different definitions and revision schedules. 2. For consistency with coverage of the private-industry employment data, U.S.-affiliate employment in Puerto Rico, in "other U.S. areas," and in "foreign" was excluded from the U.S.-affiliate employment total when the percentage shares on this line were computed. 3. Consists of the U.S. Virgin Islands, Guarn, American Samoa, and all other outlying areas. 4. Consists of employees of U.S. affiliates working abroad.

ment in 2003 were highest in Delaware (24.3 percent), South Carolina (23.3 percent), and New Hampshire (22.6 percent) (table 6). In both Delaware and New Hampshire, most of the manufacturing employment of affiliates was by British- and German-owned affiliates. In South Carolina, most of the manufacturing employment of affiliates was by German-, Japanese-, and French-owned affiliates.

D Suppressed to avoid disclosure of data of individual companies.
* Fewer than 50 employees.
n.a. Not available.
1. The data on employment in manufacturing used to calculate the shares shown in this table are from BEA's Regional Economic Information System. The U.S. manufacturing employment totals used to calculate shares in this table differ from the NIPA data for manufacturing used for table 4 (see footnote 1 to table 4).
2. Total affiliate manufacturing employment and the shares of all-U.S.-business manufacturing employment accounted for by affiliates in this table differ from those shown in table 4 (see footnote 3 to table 4). For consis-

tency with the coverage of the employment data for all U.S. manufacturing plants, U.S. affiliate employment in Puerto Rico, in "other U.S. areas," and in "foreign" was excluded from the U.S. affiliate total when the percentage shares on this line were computed.

3. Consists of the U.S. Virgin Islands, Guam, American Samoa, and all other outlying U.S. areas.

4. Consists of employees of U.S. affiliates working abroad.

Note. The following ranges are given in employment cells that are suppressed: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—5,500 to 4999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999; L—50,000 to 99,999; M—100,000 or more.

In about three-fourths of the states, total employment by affiliates decreased in 2003. The largest reductions were in California (where affiliate employment dropped 52,000, or 8 percent), Texas (where affiliate employment decreased 13,000, or 4 percent), and North Carolina (where affiliate employment decreased 10,000, or 5 percent). The decreases in these three states accounted for more than 40 percent of the nationwide decrease in affiliate employment. In California and in Texas, the decreases mainly reflected shifts in the nationality of ownership in U.S. companies, including ownership changes related to a corporate restructuring in the transportation industry and several selloffs of affiliate subsidiary units in computer and electronics products manufacturing. In North Carolina, the decrease reflected a combination of foreign selloffs and cutbacks in ongoing affiliate operations, particularly operations in manufacturing.

The manufacturing employment of affiliates decreased in all but six states in 2003, largely reflecting a widespread reduction in manufacturing employment by U.S. businesses.¹³ In contrast to the regional pattern for total employment by affiliates, the decreases in affiliate manufacturing employment were more evenly distributed across states: The four states with the largest reductions in affiliate manufacturing employment-California, Texas, New Jersey, and North Carolina—together accounted for about a third of the nationwide decrease in affiliate manufacturing employment.

Trade in Goods

In recent years, majority-owned U.S. affiliates have accounted for about 20 percent of total U.S. exports of goods and for about 30 percent of total U.S. imports of goods (table 7). These shares are much larger than the affiliate shares of either value added or employment, reflecting both the general international orientation of foreign-owned companies and their specific production and distribution ties to their foreign parents. Much of the trade in goods by affiliates—nearly 50 percent of exports and 80 percent of imports—is accounted for by intrafirm transactions between the affiliates and their foreign parents or other member companies of their foreign parent groups. The intrafirm trade of majority-owned U.S. affiliates has generally accounted for 8–10 percent of U.S. exports and

for 22-25 percent of U.S. imports.14

Since the early 1990s, imports by U.S. affiliates have usually been at least twice as high as their exports, and the gap in earlier years was even larger. This trade gap for affiliates is substantially larger than the gap between total U.S. imports and exports. The gap for affiliates is largely accounted for by wholesale trade affiliates, many of which were established to facilitate imports of goods manufactured abroad by their foreign parents. Since the late 1980s, the imports of wholesale trade affiliates have been two to four times as large as their exports, and these affiliates have consistently accounted for more than two-thirds of the total import-export gap for U.S. affiliates.¹⁵

15. Although wholesale trade affiliates have consistently accounted for a dominant share of the affiliate import-export gap, their shares of both affiliate exports and imports have declined since the late 1980s. Their share of affiliate exports declined from 66 percent in 1987 to 35 percent in 2003, and their share of affiliate imports declined from 78 percent in 1987 to 58 percent in 2003.

p Preliminary

^{13.} In 2003, manufacturing employment by all U.S. businesses decreased in all but two states.

^{14.} A portion of the remaining trade, trade between U.S. parent companies and their majority-owned foreign affiliates, is also intrafirm trade. Together, the intrafirm trade of foreign-owned U.S. affiliates and the intrafirm trade of U.S. multinational companies have accounted for 30-36 percent of U.S. exports and for 36-40 percent of U.S. imports. See William J. Zeile, "Trade in Goods Within Multinational Companies: Survey-Based Data and Findings for the United States of America" (paper prepared for the Organisation for Economic Co-operation and Development Committee on Industry and Business Environment Working Party on Statistics, Session on Globalisation, Paris, November 3-4, 2003); <www.bea.gov/bea/ papers.htm>

Note. The data on U.S. exports and imports of goods used to compute the affiliate shares in this table are from the U.S. Census Bureau.

Exports

In 2003, exports of goods by majority-owned U.S. affiliates increased 7 percent, to \$151 billion, rebounding from decreases of 3 percent in 2002 and 4 percent in 2001 (table 7). In comparison, exports of goods by all U.S. businesses increased 5 percent, following a 5-percent decrease in 2002 and a 7-percent decrease in 2001. The affiliate share of total U.S. exports of goods thus increased for a third consecutive year, to 21 percent.

Much of the increase in affiliate exports was accounted for by wholesale trade affiliates specializing in equipment and other durable goods, including affiliates with substantial secondary operations in motor vehicle manufacturing. The increase also reflected acquisitions by affiliates of several export-oriented companies.

By country of ownership, exports of Korean-owned affiliates increased 20 percent, and the exports of Canadian-owned affiliates increased 11 percent; for affiliates of both countries, the increases partly reflected an expansion in sales of electronic components to customers in East Asia (table 8). Exports of Swiss-owned affiliates decreased 16 percent, partly because of decreased exports by affiliates in the chemical and electrical equipment industries.

Japanese-owned affiliates continued to account for the largest share of affiliate exports (27 percent), followed by German-owned affiliates (21 percent). 16 As in past years, about two-thirds of the exports of Japaneseowned affiliates were by wholesale trade affiliates, including affiliates of Japan's large general trading companies. In contrast, the exports of German-owned affiliates were predominantly by manufacturing affiliates.

Imports

In 2003, imports of goods by majority-owned U.S. affiliates increased 6 percent, to \$357 billion, following an increase of less than half a percent in 2002. Total U.S. imports of goods also increased at a faster pace of 8 percent in 2003, following a 2-percent increase in 2002, so the affiliate share of U.S. imports of goods dipped from 29 percent to 28 percent.

About half of the increase in affiliate imports in 2003 was accounted for by affiliates in the petroleum wholesale trade and natural gas distribution industries,

^{16.} Japanese-owned affiliates have accounted for the largest shares of affiliate exports and imports since at least 1977.

D Suppressed to avoid disclosure of data of individual companies.

Nore, Affiliates of the eight countries listed in this table accounted for the largest shares of affiliate trade in each of the years 1998–2003.

reflecting a pronounced step-up in U.S. imports of mineral fuels.¹⁷ Another major contributor to the increase in affiliate imports was an expansion in sales of imported vehicles by several affiliates with operations in motor vehicle wholesale trade.

By country of ownership, the imports of Canadianowned affiliates increased 22 percent, mainly as a result of increased imports by affiliates in the natural gas distribution and petroleum wholesale trade industries. The imports of British-owned affiliates increased 20 percent, reflecting expanded imports by manufacturing affiliates specializing in pharmaceuticals and transportation equipment and increases by affiliates in the petroleum wholesale trade and natural gas distribution industries. For Korean-owned affiliates, imports increased 13 percent, largely as a result of increased

17. The Census Bureau's product-level data for total U.S. imports reveal that a 33-percent increase in imports of petroleum and natural gas accounted for 40 percent of the total increase in U.S. imports of goods in 2003. For both petroleum and natural gas, the increases in nominal import levels partly reflected increases in world fuel prices.

Data Availability

This article summarizes the preliminary estimates from the 2003 annual survey of foreign direct investment in the United States. More detailed estimates will be posted this fall in files that can be downloaded at no charge from BEA's Web site at <www.bea.gov>. Revised estimates will be released next year.

Detailed estimates of U.S. affiliate operations for 1977–2002 are also available from BEA's Web site.

For more information on these products and how to order them, see the International Investment Division Product Guide at <www.bea.gov/bea/ai/iidguide.htm>.

imports by wholesale trade affiliates specializing in motor vehicles, professional equipment, and electrical goods.

For Japanese-owned affiliates—which have long accounted for the largest share of affiliate imports—imports increased at a relatively modest pace of 5 percent; as a result, their share of affiliate imports dipped from 38 percent to 37 percent, continuing a downward trend. German-owned affiliates continued to account for the second-largest share, which held steady at 17 percent.

Revisions

The estimates of U.S.-affiliate operations in 2003 presented in this article are preliminary. The estimates of employment, sales, and expenditures for property, plant, and equipment supersede the advance summary estimates for majority-owned affiliates that were released on April 19 (BEA news release 05–15). From the advance estimates to the preliminary estimates, the estimate of employment was revised up 0.4 percent, the estimate of sales was revised up 0.3 percent, and the estimate of expenditures was revised down less than 0.1 percent.

The final estimates of U.S.-affiliate operations in 2002 are also presented. The final estimates of employment, sales, and expenditures for property, plant, and equipment (which were also presented in the April news release) supersede the preliminary estimates that were released in August 2004. 18 From the preliminary estimates to the final estimates, the estimate of employment was revised up 0.1 percent, the estimate of sales was revised down 0.6 percent, and the estimate of expenditures was revised down 0.4 percent.

Tables 9.1–10.2 follow.

^{18.} See William J. Zeile, "Operations of U.S. Affiliates of Foreign Companies: Preliminary Results From the 2002 Benchmark Survey," Survey 84 (August 2004): 192–217.

The European Union (15) comprises Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom.

2. OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Indonesia, Iran,

Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela.

Notes. The following ranges are given in employment cells that are suppressed: A—1 to 499; F—500 to 999;
G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999;
E—50,000 to 99,999; M—100,000 or more.

Estimates for 2002 are revised.

D Suppressed to avoid disclosure of data of individual companies.
1. The European Union (15) comprises Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom.
2. OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Indonesia, Iran,

Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela.

Noтs: The following ranges are given in employment cells that are suppressed: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999: L—50,000 to 99,999; M—100,000 or more.

Estimates for 2003 are preliminary.

BEA Current and Historical Data

National, International, and Regional Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission, and citing the Survey of Current Business and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at <www.bea.gov>. These estimates are available in a variety of formats, including interactive access. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

As a result of the annual revision of the national income and product accounts (NIPAs), the tables in section A, table B.1, table C.1, and the NIPA charts in section D are not included in this issue. See "National Income and Product Accounts Tables" and "GDP and Other Major NIPA Series" in this issue.

D-2 August 2005

B. Other NIPA and NIPA-Related Tables

The estimates in this table were published in tables 1 and 4 in "Annual Industry Accounts: Advance Estimates for 2004" in the May 2005 Survey.

^{1.} Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of not allocated by industry reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

^{3.} Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Note. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

August 2005 D-3

International Data

E. Transactions Tables

Table E.1 presents estimates of U.S. international trade in goods and services that were released on August 12, 2005. It includes preliminary estimates for June 2005 and revised estimates for May 2005. The sources for the other tables in this section are noted.

p Preliminary.

1. Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

2. Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

4. These reflect the premiums explicitly charged by, or paid to, insurers and reinsurers.

Source: Table 3 in "U.S. International Transactions: First Quarter of 2005" in the July 2005 Survey of Current Business.

Footnotes to Tables E.2. and E.3.

Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, - Imports of goods and services and income payments; unilateral current transfers to foreigners; capital accounts transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

- transactions payments; hancial outflows—decrease in foreign-owned assets (U.S. alaims).

 2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export comments, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2 in "U.S. International Transactions: First Quarter of 2005" in the July 2005 Suver or Curener Dusesss.

 3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fusit purchased by airline and steamship operators in lines 8 and 25.
- 25.
 4. Includes transfers of goods and services under U.S. military grant programs.
 5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to toriegn affiliates and to exclude U.S. affiliates' receipts from foreign parents.
 6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
 7. At the present time, all U.S. Treasury-owned gold is held in the United States.
 8. Includes sales of foreign obligations to toreigners.
 9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

- To. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S.
- Government corporations and agencies.

 11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions

- arranged with or through foreign official agencies; see table 5 in "U.S. International Transactions: First Quarter of 2005" in the July 2005 Surver.

 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local government.
- 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.

 13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the toreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private norinsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in the Survey. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.39 of the full set of NIPA tables.

 Additional footnotes to Table E.3:

 14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netheriands, Portugal, Spain, United Kingdom, beginning with the first quarter of 1995, also includes Austria, Firland, and Sweden; and beginning with the second quarter of 2004, also includes Cyprus, Czech Republic, Estonia, Hungary, Lalvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The "European Union" also includes the European Anomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.

 15. Quarterly estimates for Mexico are available, beginning with 2004.

 16. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated direct investment in foreign

p Preliminary.
r Revised.

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.
2. Includes changes in coverage, capital gains and losses of direct investment affiliates, and other adjustments to the value of assets and liabilities.
3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.
4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

^{5.} Also includes paid-in capital subscriptions to international financial institutions and resources provided to foreigners under foreign assistance programs requiring repayment over several years. Excludes World War I debts that are not being

under foreign assistance programs requiring repayment over several years. Excludes wond war i debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

THE U.S. IN THE INTERNATIONAL ECONOMY

D-15 August 2005

Regional Data

H. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross state product are available on CD-ROM. For information on state personal income, e-mail reis.remd@bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross state product, e-mail gspread@bea.gov; write to the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

Source: The estimates of state personal income in this table were released on June 22, 2005; the estimates are also available on our Web site at <www.bea.gov>. See also "State Personal Income: First Quarter of 2005" in the July 2005 SURVEY OF CURRENT BUSINESS.

Percent change was calculated from unrounded data.
 Nors. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table H.2. Personal Income and Per Capita Personal Income by State and Region

methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 in "State Personal Income for the Fourth Quarter of 2004 and State Per Capita Personal Income for 2004" in the April 2005 Survey or Current Busness.

Per capita personal income was computed using midyear population estimates of the Bureau of the Census.
 Percent change was calculated from unrounded data.
 Nors. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the

Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census.
 Percent change was calculated from unrounded data.
 Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. Source: Table 3 in "State Personal Income for the Fourth Quarter of 2004 and State Per Capita Personal Income for 2004" in the April 2005 Survey of Current Business.

Table H.4. Gross State Product (GSP) by Industry for States and Regions, 2003

Note. Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for mili-

tary equipment except office equipment. GSP and GDP also have different revision schedules.

Source: This table reflects the GSP estimates for 2003 that were released on June 23, 2005. Detailed estimates are available on BEA's Web site at <www.bea.gov>.

August 2005 D-19

DIG OILY, OD																	

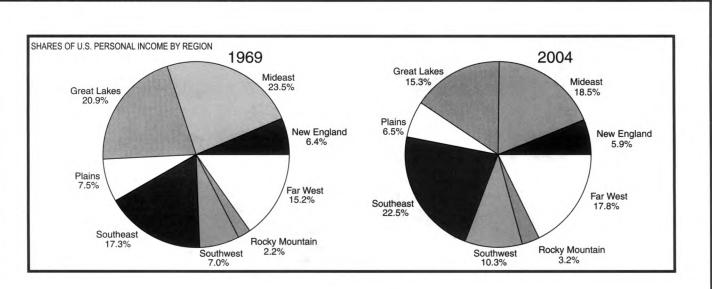

Per capita personal income was computed using Census Bureau midyear population estimates.
 Percent change calculated from unrounded data.
 The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

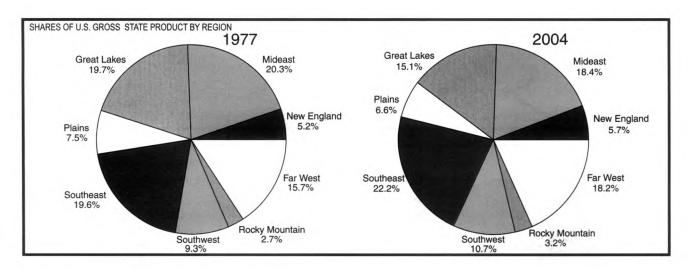

^{4.} The metropolitan area definitions used by BEA for its personal income estimates are the new county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004 and February 2005) for Federal statistical purposes.

Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2000—equal to 100.1

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2001-2002 uses prices for 2001 and 2002 as weights, and the 2001-2002 annual percent change in the GDP price index uses quantities for 2001 and 2002 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2000) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2000 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2000 and if real output for this component increased by 10 percent in 2001, then the chained (2000) dollar value of this component in 2001 would be \$110 ($$100 \times 1.10$). The percent changes calculated from the chained (2000) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_o} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_o is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, t-0).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

^{1.} See J. Steven Landefeld, Brent R. Moulton, and Cindy M. Vojtech, "Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes," Survey of Current Business (November 2003): 8–16.

Reconciliation Tables

"Table 1. Reconciliation of Changes in BEA-Derived Compensation Per Hour With BLS Average Hourly Earnings" is being revised to reflect the results of the comprehensive revision of the national income and product accounts. It will be published in an upcoming issue of the Survey.

Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. In addition, most of this information is available on BEA's Web site at <www.bea.gov>. Look under "Methodologies"; for articles from the Survey of Current Business, look under "Publications."

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of wealth and related estimates.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting (1985) [also in the March 1985 Survey]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

Government Transactions (1988)

Personal Consumption Expenditures (1990)

The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPAs.

The following Survey articles describe the most recent comprehensive revision of the NIPAs.

"Improved Estimates of the National Income and Product Accounts for 1929–2002: Results of the Comprehensive Revision" (February 2004)

"Preview of the Revised NIPA Estimates for 1997 Effects of Incorporating the 1997 Benchmark I-O Accounts and Proposed Definitional and Statistical Changes" (January 2003)

"Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts"

Changes in Definitions and Classifications (June 2003)

New and Redesigned Tables (August 2003) Statistical Changes (September 2003) In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2005).

"Updated Summary NIPA Methodologies" (November 2004) describes the source data and the methods that are used to prepare the current-dollar and real estimates of GDP.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Measuring the Services of Commercial Banks in the NIPAs: Changes in Concepts and Methods" (September 2003)

"Measuring the Services of Property-Casualty Insurance in the NIPAs: Changes in Concepts and Methods" (October 2003)

"Reliability of the NIPA Estimates of U.S. Economic Activity" (February 2005) evaluates the principal NIPA estimates by examining the record of revisions to them.

Fixed assets and consumer durable goods. Fixed Assets and Consumer Durable Goods in the United States, 1925–97 (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925–2002" (May 2004) describes the improvements that were incorporated into these estimates as part of the comprehensive NIPA revision. "Fixed Assets and Consumer Durable Goods for 1993–2003" (September 2004) describes additional improvements that were incorporated into these estimates as part of the annual NIPA revision.

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov> under "About BEA."

Industry accounts

The industry accounts consist of the input-output accounts, the gross-domestic-product-by-industry accounts, and one satellite account.

"Improved Annual Industry Accounts for 1998–2003" (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts that features the integration of the two sets of accounts.

In addition, see the following articles.

"Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-Industry Accounts" (March 2004) provides the details about the comprehensive revision.

"Annual Industry Accounts" (January 2005)

"Benchmark Input-Output Accounts for the U.S. Economy, 1997" (December 2002)

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts" For 1996 and 1997 (July 2000) For 1998–2003 (September 2004) For 2001–2004 (June 2005)

International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITAs). The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITAs.

The annual revisions of the ITAs are described in a series of articles, the latest of which was published in the July 2005 Survey.

Direct investment. International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

The "Methodology for U.S. Direct Investment Abroad," which is also available in U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results (1998)

"A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 Survey

"A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 SURVEY

In addition, the updated methodology for foreign direct investment in the United States is available in Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey (2001).

International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

Regional accounts

The regional accounts include estimates of personal income and gross state product.

Personal income. Estimates of personal income are prepared for states and for local areas.

"Comprehensive Revision of State Personal Income for 1969–2003" (May 2004) describes the improvements in the methodology that are used to prepare the estimates and that are part of a comprehensive revision.

"The Reliability of the State Personal Income Estimates" (December 2003) evaluates the estimates of state personal income and of selected components by examining the revisions of these estimates.

"Comprehensive Revision of Local Area Personal Income for 1969–2002" (June 2004) summarizes the improvements in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD-DOM Regional Economic Information System, 1969–2003.

Gross state product. "Comprehensive Revision of Gross State Product" (January 2005) summarizes the sources and the methods that are used to prepare the estimates.

"Gross State Product by Industry for 1997–2004" (July 2005) presents the most recent annual revision of these estimates.
