SURVEY OF CURRENT BUSINESS

December 2009

Volume 89 • Number 12

1 GDP and the Economy: Second Estimates for the Third Quarter of 2009

Real GDP increased 2.8 percent after decreasing 0.7 percent in the second quarter. Consumer spending, inventory investment, exports, and residential investment turned up. Corporate profits increased \$130.0 billion after increasing \$43.8 billion in the second quarter.

11 Government Receipts and Expenditures: Third Quarter of 2009

Government transactions continue to be affected by the American Recovery and Reinvestment Act of 2009 and by other programs aimed at providing capital to financial enterprises.

14 American Recovery and Reinvestment Act of 2009

Director's Message

As the new year approaches, I'd like to reemphasize our commitment to presenting our statistics in plain language and easy-to-read formats as well as in more technical presentations. We've also tried to make it easier for our customers to access and download our statistics interactively. The Survey of Current Business, both the traditional printed publication and the online version, has been a big part of our efforts.

Over the past 12 months, we've made some improvements to the Survey. We've taken steps toward integrating our interactive data features with our traditional data presentations. We've enhanced our online Survey search engine. We've made our articles more Web friendly. And we've continued to publish *BEA Briefings* and *Research Spotlights* that explain important services and research in a less technical fashion.

We look forward to the new year. There are many initiatives underway that will result in new products and services from the Bureau of Economic Analysis. As always, the Survey will be a prime tool in communicating these developments to our users.

We appreciate your comments and questions.

J. Steven Landefeld

Director, Bureau of Economic Analysis

Taking Account...

Overview of income taxes and other taxes on MNCs

In a recent paper, Daniel R. Yorgason, economist at the Bureau of Economic Analysis (BEA), discussed the statistics compiled by BEA on corporate income and other taxes paid by multinational companies (MNCs) with a presence in the United States (either as direct investors or direct investment enterprises). The paper includes some examples of how the data can be used to assess various facets of the international economy.

The paper was presented by Obie G. Whichard, Associate Director for International Economics at BEA, at the Fourth Joint Session of the Working Group on International Investment Statistics and the Working Party on Globalisation of Industry Organisation for Economic Co-operation and Development held in October in Paris.

BEA collects two types of MNC tax data: corporate income taxes and "taxes other than income and payroll taxes," also referred to as "indirect business taxes." These data are collected as part of larger surveys—both annual surveys and benchmark surveys, which are conducted roughly every 5 years—that gather financial and operating statistics directly from MNCs.

For U.S. direct investment abroad (outward), the annual and benchmark surveys collect tax data from both U.S. parent companies and their foreign affiliates. For foreign direct investment in the United States (inward), the surveys collect tax data from U.S. affiliates of foreign MNCs; no information is available on the taxes paid by foreign parent companies.

These surveys, which have been used to collect data since 1982 for outward data and since 1976 for inward data, gather comprehensive financial data on MNCs as well as data on a wide range of their activities, including assets, sales, employment, foreign trade, R&D, value added, and net income.

BEA data on the tax liabilities of MNCs can be used for a variety of purposes. At the most basic level, the data on income taxes, which are reported on the income statement in the MNC surveys, illustrate the difference between the pretax and after-tax net incomes of MNCs as a group or of given subsets.

The data can also be used to calculate effective average income tax rates: the total income tax liability of an individual entity or a group of entities divided by the corresponding pretax net income. These data provide an indication of the average burden of taxes borne by MNCs or groups of MNCs.

However, as discussed in the paper, adjustments may be necessary to avoid misleading results. For example, income that affiliates earn by virtue of ownership of other affiliates rather than as a result of their own operations is included in the denominator of the calculation but

is often untaxed. Thus, it may be appropriate to make an adjustment for such income.

Effective average income tax rates typically differ from effective marginal income tax rates—the actual tax rate applicable to the next unit of income received—and from statutory marginal income tax rates—legally mandated tax rates on the next unit of income. The reasons include factors such as deductions, credits, and movement through tax brackets.

As with income tax data, the indirect business tax data can be used variously. One key use is the calculation of MNC value added. BEA computes value added by summing up all costs incurred, except intermediate inputs, and the profits earned in production. Indirect business taxes are one of the cost categories used in this calculation.

Because indirect business taxes are a mix of different types of payments, there is no obvious measure to compare with indirect business taxes—unlike income taxes, which can be compared with pretax net income. However, it is often informative to scale indirect business taxes by value added.

Several academic uses of the MNC tax data are included in "Taxation and Multinational Activity: New Evidence, New Interpretations," in the February 2006 SURVEY OF CURRENT BUSINESS.

Yorgason's paper is available on the BEA Web site in "Papers and Working Papers."

1 December 2009

GDP and the Economy

Second Estimates for the Third Quarter of 2009

 ${
m R}^{
m EAL}$ GROSS domestic product (GDP) increased 2.8 percent at an annual rate in the third quarter of 2009, according to the "second" estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).1 The increase was 0.7 percentage point less in the advance estimate (see page 9). In the second quarter, real GDP decreased 0.7 percent.

The upturn in real GDP in the third quarter primarily reflected upturns in consumer spending, inventory investment, exports, and residential fixed investment and a smaller decrease in nonresidential fixed investment. In contrast, imports turned up, state and local government spending turned down, and federal government spending decelerated.2 For a look at how the American Recovery and Reinvestment Act of 2009 affected the government accounts, see pages 12 and 14.

- Prices of goods and services purchased by U.S. residents increased 1.4 percent in the third quarter; it was revised down 0.2 percentage point. In the second quarter, it rose 0.5 percentage point (see page 8). Energy prices turned up sharply, and food prices decreased less than in the second quarter. Excluding food and energy, gross domestic purchases prices slowed, rising 0.4 percent after increasing 0.8 percent.
- Real disposable personal income (DPI) decreased 1.5 percent in the third quarter; it was revised up 1.9 percentage points. In the second quarter, it increased 6.2 percent (revised) (see page 9). The downturn primarily reflected a slowdown in current-dollar DPI and an acceleration in the PCE implicit price deflator that is used to deflate DPI.
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 4.5 percent; in the second quarter, it was 5.4 percent (revised).
- Profits from current production increased \$130.0 billion after increasing \$43.8 billion (see page 10).

2. In this article, "consumer spending" refers to "personal consumption expenditures (PCE)," "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment.

Christopher Swann prepared this article.

^{1. &}quot;Real" estimates are in chained (2005) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data. More information can be found at www.bea.gov/about/infoqual.htm and www.bea.gov/faq/national/gdp_accuracy.htm. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

computers	99.5	-5.4	-6.5	-0.7	2.9	-5.39	-6.49	-0.69	2.92

The estimates under the contribution columns are also percent changes.
 Note. Percent changes are from NIPA table 1.2.1, contributions are from NIPA table 1.2.2, and shares are calculated from NIPA table 1.2.5.

Consumer spending turned up sharply in the third quarter, primarily reflecting an upturn in spending for goods. The upturn in consumer spending added 2.07 percentage points to real GDP growth after subtracting 0.62 percentage point (see page 3).

Nonresidential fixed investment decreased less than in the second quarter, subtracting 0.40 percentage point from real GDP growth after subtracting 1.01 percentage points (see page 4).

Residential investment turned up, increasing 19.5 percent, the first increase in 15 quarters, after decreasing 23.3 percent; residential investment added 0.45 percentage point to real GDP growth after subtracting 0.67 percentage point.

Inventory investment turned up, adding 0.87 percentage point to real GDP growth after subtracting 1.42 percentage points in the second quarter (see page 5).

Exports turned up, reflecting an upturn in exports of goods and an acceleration in exports of services. Exports added 1.71 percentage points to real GDP growth after subtracting 0.45 percentage point (see page 6).

Imports also turned up, subtracting 2.53 percentage points from real GDP growth and reflecting upturns in both imports of goods and services (see page 6).

Federal government spending decelerated, increasing 8.3 percent after increasing 11.4 percent (see page 7).

State and local government spending turned down, decreasing 0.1 percent after increasing 3.9 percent.

Real final sales of domestic product, real GDP less inventory investment, increased 1.9 percent in the third quarter after increasing 0.7 percent.

Motor vehicle output accelerated sharply, increasing 131.7 percent after increasing 13.3 percent, and added 1.45 percentage points to real GDP growth after adding 0.19 percentage point.

Excluding motor vehicle output, real GDP increased 1.3 percent after decreasing 0.9 percent.

Final sales of computers decreased 22.5 percent after decreasing 7.3 percent.

NPISHs Nonprofit institutions serving households

Changes in Consumer Spending Categories

The comprehensive NIPA revision released in July incorporated a new classification system for consumer spending, which defined new categories of expenditures by type of product and by function. Prominent among these changes are the separate identification within services of household consumption from nonprofit consumption, the addition of new major product categories (such as insurance), and the reclassification of purchased meals and beverages from non-durable goods to services under food services and accommodations.

See "Preview of the 2009 Comprehensive NIPA Revision: New Classification for Personal Consumption Expenditures" in the May 2008 Survey of Current Business.

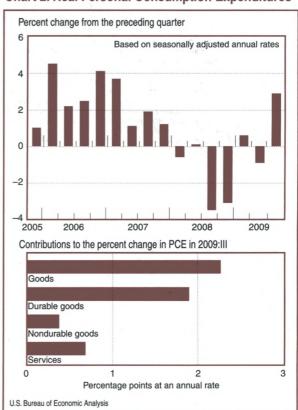

Spending for goods turned up in the third quarter, reflecting upturns in spending for both durable goods and nondurable goods.

The upturn in spending for durable goods was mainly due to upturns in motor vehicles and parts and in recreational goods and vehicles, partly reflecting the federal "cash for clunkers" program, which was in effect in July and August.

The upturn in spending for nondurable goods primarily reflected an upturn in "other" nondurable goods and a smaller decrease in clothing and footwear.

Spending for services accelerated, reflecting a smaller decrease in final consumption expenditures of NPISHs and a pickup in household consumption expenditures. The smaller decrease in spending of NPISHs primarily reflected a deceleration in receipts from sales of health services to households. The pickup in household spending mainly reflected an upturn in housing and utilities; in contrast, spending for health care slowed.

- The estimates under the contribution columns are also percent changes.
- Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
- 3. Excludes software "embedded," or bundled, in computers and other equipment.
- Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
- Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
- Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

Note. Percent changes are from NIPA table 5.3.1, contributions are from NIPA table 5.3.2, and shares are calculated from NIPA table 5.3.5.

Private fixed investment turned up in the third quarter, reflecting an upturn in residential fixed investment and a smaller decrease in nonresidential fixed investment.

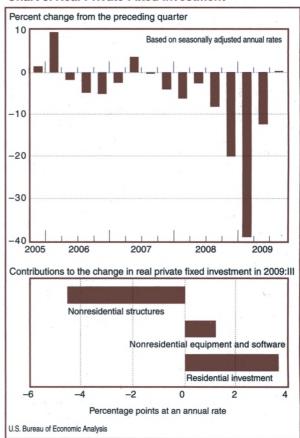

The smaller decrease in nonresidential investment reflected an upturn in equipment and software and a smaller decrease in structures.

The smaller decrease in structures primarily reflected an upturn in mining exploration, shafts, and wells, that was partly offset by a downturn in manufacturing, a slowdown in power and communication, and a larger decrease in "other" structures.

The upturn in equipment and software primarily reflected a smaller decrease in "other" equipment and an acceleration in software.

Residential investment turned up, mainly reflecting upturns in single-family structures and in "other" structures, which includes improvements and brokers' commissions. The increase was the first in 15 quarters.

Private inventories to final sales	2.40	2.44	2.44	2.38	2.33				/
Nonfarm inventories to final sales Nonfarm inventories to final sales of goods and structures	2.21 4.02	2.24 4.15	2.23	2.18 4.09	2.12 3.97				

- 1. The levels are from NIPA table 5.6.6B.
- The residual is the difference between the first line and the sum of the most detailed lines. It reflects that chained-dollar estimates are usually not additive, because they are based on quantity indexes that use weights of more than one period.
- 3. The ratios are from NIPA table 5.7.6B.

Inventory Investment

The change in real private inventories, often called real private inventory investment, represents the change in the physical stock of goods held by businesses. It includes finished goods, goods at various stages of production, and raw materials.

The change in private inventories is a key component of gross domestic product (GDP), which aims to measure output derived from current production. To include the value of currently produced goods that are not yet sold and to exclude the value of goods produced in previous periods, change in private inventories must be included in the GDP calculation.

Thus, GDP can also be seen as the sum of final sales of domestic product and the change in private inventories (table 2).

For most industries, the estimates of change in private inventories are prepared by revaluing book-value estimates of inventories from the Census Bureau to a replacement-cost basis and calculating the change over a quarter or year. BEA does not always have complete data for every industry.

Real inventory investment increased \$26.8 billion in the third quarter after decreasing \$46.3 billion in the second quarter.

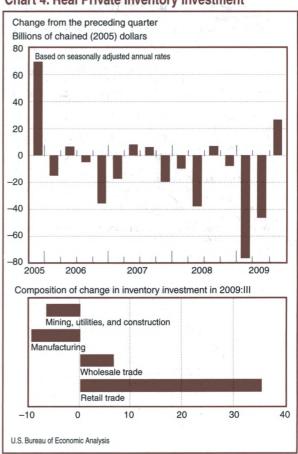

Inventory investment in manufacturing industries decreased \$9.5 billion after decreasing \$10.9 billion, reflecting a larger drawdown in durable-goods industries.

Inventory investment in wholesale trade industries increased \$6.6 billion after decreasing \$30.6 billion. An increase in durable-goods industries was partly offset by a decrease in nondurable-goods industries.

Inventory investment in retail trade industries increased \$35.4 billion after decreasing \$4.2 billion; the increase primarily reflected an increase in motor vehicle and parts dealers.

The ratio of private inventories to final sales decreased to 2.33, down from its previous peak of 2.44 reached in the fourth quarter of 2008 and the first quarter of 2009

1. The estimates under the contribution columns are also percent changes.

Note. Percent changes are from NIPA table 4.2.1, contributions are from NIPA table 4.2.2, and shares are calculated from NIPA table 4.2.5.

Exports of goods and services turned up, increasing 17.0 percent in the third quarter after decreasing 4.1 percent in the second quarter. Exports of goods turned up and exports of services accelerated.

Exports of goods increased 24.5 percent after decreasing 6.3 percent. The upturn reflected upturns in non-automotive capital goods and in automotive vehicles, engines, and parts, an acceleration in industrial supplies and materials, and upturns in nonautomotive consumer goods and in "other" exports.

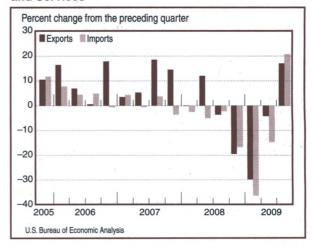

Exports of services picked up somewhat, increasing 3.8 percent after increasing 0.1 percent. The pickup mainly reflected a upturn in travel services.

Imports of goods and services turned up, increasing 20.8 percent after decreasing 14.7 percent. The upturn reflected upturns in both goods and services.

Imports of goods increased 25.6 percent after decreasing 16.5 percent. The upturn mainly reflected upturns in automotive vehicles, engines, and parts, in nonautomotive capital goods, in nonpetroleum industrial supplies and materials, in petroleum and products, and in nonautomotive consumer goods.

Imports of services increased 3.0 percent after decreasing 7.5 percent. The upturn mainly reflected an upturn in travel services and a smaller decrease in "other" transportation services.

Chart 5. Real Exports and Imports of Goods and Services

^{2.} Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services.

Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Government Spending

"Government consumption expenditures and gross investment," or "government spending," consists of two components: (1) consumption expenditures by federal government and by state and local governments and (2) gross investment by government and government-owned enterprises.

Government consumption expenditures consists of the goods and services that are produced by general government (less any sales to other sectors and investment goods produced by government itself). Governments generally provide services to the general public without charge. The value of government production—that is, government's gross output—is measured as spending for labor and for intermediate goods and services and a charge for consumption of fixed capital.¹

Gross investment consists of new and used structures (such as highways and dams) and of equipment and software purchased or produced by government and government-owned enterprises.

Government consumption expenditures and gross investment excludes current transactions of government-owned enterprises, current transfer payments, interest payments, subsidies, and transactions in financial assets and nonproduced assets, such as land.

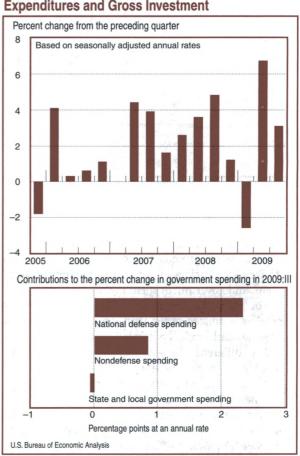

See also "Government Receipts and Expenditures" on page 11.

Government spending slowed, increasing 3.1 percent in the third quarter after increasing 6.7 percent in the second quarter. State and local government spending turned down, and federal government spending slowed.

The slowdown in federal government spending primarily reflected a deceleration in national defense spending that was accounted for by decelerations in both consumption expenditures and investment in equipment and software. Federal nondefense spending picked up slightly. The impact of the American Recovery and Reinvestment Act of 2009 on federal government spending was small. For a look at the impact of the act's tax credits, benefit payments, and other items on the broader government accounts, see pages 12 and 14.

The downturn in state and local government spending mainly reflected a deceleration in investment in structures and a downturn in consumption expenditures.

Chart 6. Real Government Consumption Expenditures and Gross Investment

Note. Percent changes are from NIPA table 3.9.1, contributions from NIPA table 3.9.2, and shares are calculated from NIPA table 3.9.5.

^{1.} Consumption of fixed capital represents a partial measure of the services provided by government-owned fixed capital.

Note on Prices

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services, regardless of whether those goods and services were produced domestically or imported. It is derived from prices of consumer spending, private investment, and government spending.

The GDP price index measures the prices of goods and services produced in the United States, including the prices of goods and services produced for export.

The difference between the gross domestic purchases price index and the GDP price index reflects the differences between the imports prices (included in the gross domestic purchases index) and the exports prices (included in the GDP price index). For other measures that are affected by import and export prices, see the dollar depreciation FAQ Answer ID 498 on BEA's Web site.

Prices paid by U.S. residents, as measured by the gross domestic purchases price index, accelerated, increasing 1.4 percent in the third quarter after increasing 0.5 percent in the second quarter.

Consumer prices picked up, increasing 2.7 percent after increasing 1.4 percent. The pickup was the largest contributor to the acceleration in gross domestic purchases prices and mainly reflected a sharp acceleration in prices paid for gasoline and other energy goods. Services prices accelerated somewhat. The largest contributors were upturns in recreation and transportation services prices.

Prices paid for nonresidential fixed investment decreased slightly more than in the second quarter, mainly reflecting a downturn in prices paid for transportation equipment.

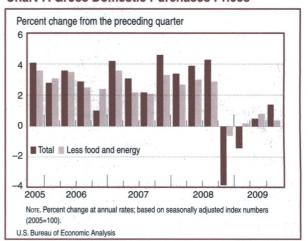

Prices paid for residential investment decreased less than in the second quarter.

Prices paid by government picked up, primarily reflecting accelerations in prices paid by the federal government for national defense purchases and by state and local government. Prices paid by the federal government for nondefense purchases slowed.

Consumer prices excluding food and energy, a measure of the "core" rate of inflation, slowed, increasing 1.3 percent after increasing 2.0 percent.

The GDP price index increased 0.5 percent, 0.9 percentage point less than the percent change in the price index for gross domestic purchases, reflecting a larger increase in import prices than in export prices.

Source Data for the Second Estimates

Personal consumption expenditures: Retail sales for August and September (revised). Motor vehicle registrations for July and August (revised) and September (new). Retail natural gas sales for August (new).

Nonresidential fixed investment: Construction spending (value put in place) for July and August (revised) and September (new). Manufacturers' shipments (M3) of machinery and equipment for August (revised) and September (new). Exports and imports for July and August (revised) and September (new).

Residential investment: Construction spending (value put in place) and one-unit deflator for July and August (revised) and September (new).

Change in private inventories: Manufacturers' inventories and trade inventories for August (revised) and September (new).

Exports and imports of goods and services: International transactions for July and August (revised) and September (new).

Government consumption expenditures and gross investment: State and local construction spending (value put in place) for July and August (revised) and September (new). The "second" estimate of the third-quarter increase in real GDP is 0.7 percentage point lower than the advance estimate, primarily reflecting an upward revision to imports and downward revisions to consumer spending and to nonresidential fixed investment that were partly offset by an upward revision to exports. The average revision (without regard to sign) between the advance estimate and the "second" estimate is 0.5 percentage point.

The downward revision to consumer spending primarily reflected a downward revision to durable goods (mainly motor vehicles and parts).

The downward revision to nonresidential fixed investment was more than accounted for by nonresidential structures (mainly commercial and health care structures and manufacturing structures).

The upward revision to exports was primarily to goods; the largest contributor to the revision was industrial supplies and materials (mainly petroleum and products).

The upward revision to imports was primarily to goods; the largest contributor to the revision was automotive vehicles, engines, and parts (mainly new and used motor vehicles).

Personal Income for the Second Quarter of 2009

With the release of the second estimates of GDP, BEA also releases revised estimates of various income-related measures for the previous quarter. This revision reflects the incorporation of newly available second-quarter tabulations from the Quarterly Census of Employment and Wages from the Bureau of Labor Statistics.

Wage and salary disbursements increased \$5.3 billion, an upward revision of \$82.2 billion. Personal current taxes decreased \$104.7 billion, \$14.4 billion less of a decrease than the previous estimate. Contributions for government social insurance, which are subtracted in calculating personal income, increased \$1.2 billion, an upward revision of \$11.2 billion.

As a result of these revisions

- Personal income increased \$96.1 billion, an upward revision of \$77.0 billion.
- Disposable personal income increased \$200.8 billion, an upward revision of \$62.6 billion.
- Personal saving increased \$192.6 billion, an upward revision of \$62.6 billion.
- The personal saving rate was 5.4 percent, an upward revision of 0.5 percentage point.

Profits from current production increased \$130.0 billion, or 10.6 percent at a quarterly rate, in the third quarter, the largest increase since the first quarter of 2004. In the second quarter, profits increased 43.8 billion.

Domestic profits of financial corporations increased \$97.0 billion, or 36.4 percent, after increasing \$28.5 billion.

Domestic profits of nonfinancial corporations increased \$12.9 billion, or 2.0 percent, after increasing \$29.8 billion.

Profits from the rest of the world increased \$20.1 billion, or 6.7 percent, after decreasing \$14.6 billion. In the third quarter, receipts increased \$19.9 billion, and payments decreased \$0.2 billion.

Taxes on corporate income increased \$6.7 billion, or 2.2 percent, after increasing \$35.6 billion.

Profits after tax increased \$123.3 billion, or 13.4 percent, after increasing \$8.2 billion.

Undistributed corporate profits (a measure of net saving that equals after-tax profits less dividends) increased \$136.1 billion, or 37.3 percent, after increasing \$70.3 billion.

Net cash flow from current production, a profits-related measure of internal funds available for investment, increased \$41.6 billion, or 2.7 percent, after decreasing \$30.5 billion.

Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including Cen-

sus Bureau quarterly financial reports, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service data when the data are available for two reasons: the data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

December 2009

Government Receipts and Expenditures

Third Quarter of 2009

TET GOVERNMENT saving, the difference between current receipts and current expenditures of the federal government and state and local governments, was -\$1,359.8 billion in the third quarter of 2009, decreasing \$66.3 billion from -\$1,293.5 billion in the second quarter.

Government receipts and expenditures in the third quarter were affected by the American Recovery and Reinvestment Act of 2009 (ARRA) (see page 14) and by continued capital injections into financial enterprises.

Net federal government saving was -\$1,342.8 billion in the third quarter, decreasing \$73.9 billion from -\$1,268.9 billion in the second quarter (see page 12). Current receipts decreased more in the third quarter, while current expenditures decelerated.

Net state and local government saving was -\$16.9 billion in the third quarter, increasing \$7.7 billion from -\$24.6 billion in the second quarter (see page 13). Current receipts and current expenditures decelerated in the third quarter.

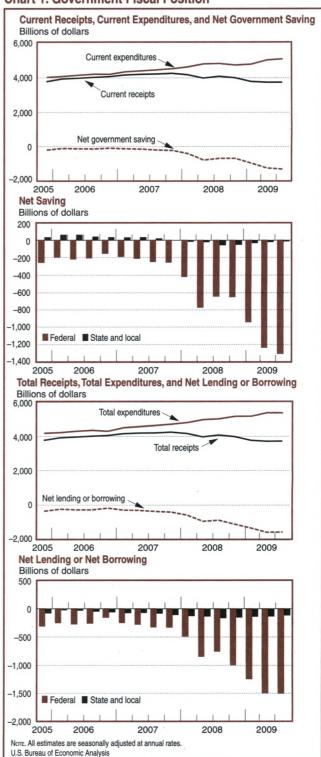

Net borrowing was \$1,638.5 billion in the third quarter, decreasing \$10.0 billion from \$1,648.5 billion in the second quarter. Federal government net borrowing was \$1,518.3 billion in the third quarter, increasing \$8.0 billion from \$1,510.3 billion in the second quarter. State and local government net borrowing was \$120.2 billion in the third quarter, decreasing \$18.0 billion from \$138.2 billion in the second quarter.

Personal current taxes decreased less as a result of a smaller decrease in withheld income taxes. The smaller decrease follows the impact of the reduction in withheld tax rates in the second quarter from the "Making Work Pay" tax credit provision of the ARRA.

Taxes on production and imports decelerated because of a deceleration in excise taxes. Second-quarter excise taxes were boosted by an increase in the tobacco tax that took effect on April 1, 2009.

Income receipts on assets turned down, reflecting a downturn in dividends on preferred stocks.

Current transfer receipts turned down, reflecting a downturn in deposit insurance premiums. Second-quarter receipts were boosted by a special assessment by the Federal Deposit Insurance Corporation.

Government social benefits to persons decelerated, reflecting decreased spending for provisions of the ARRA (see page 14). Benefit payments for unemployment and Medicare programs also decelerated.

Grants-in-aid to state and local governments turned down, reflecting a downturn in Medicaid and education grants authorized by the ARRA.

Other transfer payments to the rest of the world decelerated after a second-quarter payment to Puerto Rico and the Virgin Islands to finance the "Making Work Pay" tax credit.

Interest payments decelerated, reflecting a smaller increase in interest paid to persons and businesses on Treasury Inflation-Protected Securities.

Capital transfers fell less, as capital injected into financial companies fell. About \$10.7 billion was provided to Fannie Mae; of this amount, \$9.6 billion (\$38.4 billion at an annual rate) was treated as capital transfers. About \$3.5 billion was given to financial companies via the Troubled Asset Relief Program; \$2.5 billion (\$10.0 billion at an annual rate) was capital transfers.

Federal Government Estimates

Estimates of federal government current receipts, current expenditures, and net federal government saving are based on data from the federal budget, from the *Monthly Treasury Statement* and other reports from the Department of the Treasury, and from other federal government agencies. Total receipts, total expenditures, and net lending or net borrowing, which are alternative measures of the federal fiscal position, are based on these same sources.

Quarterly and annual estimates are published monthly in NIPA table 3.2. Detailed annual estimates of these transactions by component are published annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at www.bea.gov/national/nipaweb/nipa_underlying/Index.asp.

Each year, BEA translates the information in the federal budget into a NIPA framework.¹ For a historical time series of these estimates, see NIPA table 3.18B, which was published in November 2009.

^{1.} See Benjamin A. Mandel and Bryan A. Williams, "NIPA Translation of the Fiscal Year 2010 Federal Budget," Survey of Current Business 89 (June 2009): 15–24.

Personal current taxes turned up in the third quarter of 2009 as a result of an upturn in personal income taxes.

Taxes on production and imports turned up in the third quarter, reflecting an upturn in sales taxes.

Federal grants-in-aid turned down, reflecting a downturn in Medicaid and education grants from the American Recovery and Reinvestment Act of 2009 (see page 14).

Consumption expenditures decelerated in the third quarter, reflecting a downturn in compensation of government employees that was partly offset by an acceleration in spending for nondurable goods.

Government social benefit payments decelerated, reflecting a deceleration in Medicaid payments.

Capital transfer receipts accelerated, reflecting an acceleration in federal investment grants to state and local governments.

Gross government investment decelerated as a result of a deceleration in investment for structures.

Estimates of State and Local Government Receipts and Expenditures

The estimates of state and local government current receipts and expenditures and total receipts and expenditures are mainly based on compilations of data for state and local government finances. The Census Bureau produces the primary source data: the census of governments that is conducted in years that end in a 2 or a 7 and the Government Finances series of surveys for the other years. In addition, other sources of Census Bureau data are from the "Quarterly Summary of State and Local Government Tax Revenue" and the monthly construction spending (value put in place). Data sources from the Bureau of Labor Statistics include the Quarterly Census of Employment and Wages and the Employment Cost Index.

Quarterly and annual estimates are available monthly in NIPA table 3.3. Detailed annual estimates of state and local government transactions by component are available annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at www.bea.gov/national/nipaweb/nipa_underlying/ Index.asp. For a historical time series of reconciliations of the NIPA estimates with the Census Bureau data from Government Finances, see NIPA table 3.19.

BEA also prepares annual estimates of receipts and expenditures of state governments and of local governments. These estimates are available annually in NIPA table 3.20 (state government receipts and expenditures) and in NIPA table 3.21 (local government receipts and expenditures); see "Newly Available NIPA Tables" in the October 2009 Survey.

^{1.} Bruce E. Baker, "Receipts and Expenditures of State Governments and of Local Governments," Survey 85 (October 2005): 5–10.

American Recovery and Reinvestment Act of 2009

The American Recovery and Reinvestment Act (ARRA) of 2009—which was signed into law on February 17, 2009—includes provisions for reducing taxes, funding state fiscal stabilization, creating and preserving jobs, providing assistance to the unemployed, and investing in infrastructure, energy efficiency, and science. Although the total cost of the ARRA is scheduled to be distributed over many years, the majority of the cost will be incurred by the end of fiscal year 2010. The ARRA also established the Recovery Accountability and Transparency Board to monitor spending authorized by the act and to publicize how and where this spending occurs on Recovery.gov.

BEA tracks the portion of federal government sector receipts and expenditures in the national income and product accounts that are affected by the provisions of the ARRA.1 Many of the ARRA-funded transactions—such as grants, transfers, and tax cuts—are not directly included in gross domestic product (GDP), because GDP only includes government spending on goods and services. However, these transactions affect GDP indirectly by providing resources to households, businesses, and state and local governments to fund personal consumption expenditures, business investment, and state and local government spending. BEA's accounts do not identify the indirect effects of ARRA on these components of GDP, so the overall effect of ARRA on GDP cannot be presented. The estimated impact of tax cuts and spending authorized by the ARRA on specific federal government transactions are shown in the accompanying table.

Spending authorized by the ARRA boosted government social benefits \$65.0 billion in the third quarter, down from \$90.2 billion in the second quarter. The second-quarter amount includes one-time stimulus payments of \$250 to recipients of Social Security, Supplemental Security Income, veterans' benefits, and railroad retirement benefits. Grants authorized by the ARRA boosted grants to state and local governments \$65.0 billion in the third quarter, down from \$82.9 billion in the second quarter. The largest ARRA-funded grants programs provide funding for Medicaid and the State Fiscal Stabilization Fund.

Additional spending authorized by the ARRA boosted capital transfer payments \$21.1 billion in the third quarter, up from \$9.0 billion in the second quarter. Capital transfers include grants to fund highway and public transfers.

sit infrastructure construction and tax credits for first-time homebuyers.

Additional information about federal economic stimulus programs, including an updated version of this table, will be available on the BEA Web site under "National."

BEA Current and Historical Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission. Citing the Survey of Current Business and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at www.bea.gov. These estimates are available in a variety of formats. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

National Data

A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on November 24, 2009. These estimates include the "second" estimates for the third quarter of 2009. Also included are revised estimates of wages and salaries and of affected income-side series for the second quarter of 2009.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to www.bea.gov and subscribe. The "Selected NIPA Tables" are available later that day.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 currentdollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Equals gross domestic product excluding gross value added of households and institutions and of general govern-

Them.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for lenant-occupied housing owned by nonprofit institutions.

4. Equals compensation of general government employees plus general government consumption of fixed capital.

System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Nort. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and the sum of the detailed lines of goods, of services, and of structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

Equals compensation of general government employees plus general government consumption of fixed capital.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Sculudes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Lexcludes software "embedded," or bundled, in computers and other equipment.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Secure of the world; excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world;

includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Sexcludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Excludes software *embedded,* or bundled, in computers and other equipment.

^{1.} Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; exclude own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world;

includes membership dues and fees.

^{4.} Excludes software "embedded," or bundled, in computers and other equipment.

Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the orld; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes

membership dues and fees

Excludes software "embedded," or bundled, in computers and other equipment.

^{1.} Net expenses of NPISHs, defined as their gross operating expenses less primary sales to house-

nent. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2, and real growth rates are shown in table 1.5.1.

5. Excludes software "embedded," or bundled, in computers and other equipment.

Note. The residual line is the difference between the first line and the sum of the most detailed lines.

holds.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. The quantity index for computers can be used to accurately measure the real growth of this compo-

Gross domestic income deflated by the implicit price deflator for gross domestic product.
 Gross national income deflated by the implicit price deflator for gross national product.
 Note tomestic income deflated by the implicit price deflator for net domestic product.
 Note: Except as noted in footnotes 1, 2 and 3, chalanted (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.
 Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.

A. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.
 IVA Inventory valuation adjustment
 CCAdj Capital consumption adjustment

^{1.} The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

Nore. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

 ^{1.} Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 4. Consists of gasoline and other energy goods and of electricity and gas.
 5. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
 6. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and lees.
 Consists of gasoline and other energy goods and of electricity and gas.
 Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

^{1.} Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Consists of gasoline and other energy goods and of electricity and gas.
5. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
Nors. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Consists of gasoline and other energy goods and of electricity and gas.
 Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
 This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on

a. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these partial measure.

^{2.} Consumption in the capital, or deposition in the capital, or deposition in the capital in the

None. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

^{1.} National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

^{1.} National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and soft-

ware).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
 Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

ware).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account

Includes general government intermediate inputs for goods and services soil to other sectors and or own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
 S. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

^{1.} National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and soft-

ware).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account

investment.

^{4.} Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Table 3.11.6. Real National Defense Consumption Expenditures and Gross Investment by Type, Chained Dollars

Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

^{3.} Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar setimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.
 Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets.

^{1.} Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to

ervices. Segiming with 1500, repairs and alletatoris of equipment are reliablished non-goods to services.

2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

are included in services. Deginning with 1966, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2 and real growth rates are shown in table 4.2.1.

<sup>4.2.1.
3.</sup> Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.
Nore. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 Excludes software "embedded," or bundled, in computers and other equipment.
 Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 Excludes net purchases of used structures and brokers' commissions on the sale of residential structures.

^{1.} Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded," or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormolories, net purchases of used structures, and brokers' commissions on the sale of structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

None: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexs uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} This series is derived from the Census Bureau series "current cost inventories."
2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note: Estimates in this table are based on the North American Industry Classification System (NAICS).

Nore. Estimates in this table are based on the North American Industry Classification System (NAICS), Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Durable goods industries	23	236.9	236.9	225.6	213.6	204.
Nondurable goods industries	. 24	144.9	143.3	145.7	141.7	136.
Nonmerchant wholesale trade	. 25	52.7	50.1	47.7	45.3	43.
Final sales of domestic business 2	. 26	760.7	746.0	734.7	734.3	738.
Final sales of goods and structures of domestic business ²	. 27	417.5	402.3	391.9	391.1	394.
Ratios of private inventories to final sales of domestic business:						
Private inventories to final sales		2.40	2.44	2.44	2.38	2.3
Nonfarm inventories to final sales	. 29	2.21	2.24	2.23	2.18	2.13
Nonfarm inventories to final sales of goods and structures	30	4.02	4.15	4.18	4.09	3.9

^{1.} Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Nort. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

Consists of used light trucks only.
 Consists of final sales and change in private inventories of new autos assembled in the United States.
 Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

Consists of used light trucks only.
 Consists of final sales and change in private inventories of new autos assembled in the United States.
 Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.
 Nors: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

B. NIPA-Related Table

Table B.1 presents the most recent estimates of personal income and its disposition. These estimates were released on November 25, 2009.

Table B.1 Personal Income and Its Disposition

r Revised
CCAdj Capital consumption adjustment
IVA Inventory valuation adjustment
1. Consists of nonmortgage interest paid by households.
2. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

^{3.} Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimate.

C. Historical Measures

This table is derived from the "Selected NIPA Tables" that are published in this issue and from the "GDP and Other Major NIPA Series" tables that were published in the September 2009 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
 Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assis-

tance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

International Data

F. Transactions Tables

Selected U.S. international transactions tables are presented in this section. For BEA's full set of detailed estimates of U.S. international transactions, visit BEA's Web site at www.bea.gov.

p Preliminary r Revised

1. Reflects adjustments necessary to bring Census Bureau data in line with the concepts and definitions used by BEA

to prepare international and national accounts.
2. Contains goods that cannot be separately identified.
Source: Bureau of Economic Analysis and Census Bureau.

p Preliminary
r Revised
1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.
2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.
 Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.
 These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary

on line 2; they are not separately available for gross positive fair values and gross negative fair values of financial deriva-tives. Consequently, columns (a) through (d) on lines 4, 5, and 24, 25 are not available.

4. Data are not separately available for the three types of valuation adjustments; therefore, the sum of all three types is

Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.
 7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscella-

7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.
8. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.
9. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. The movement of exchange rates does not affect this valuation.
10. Also includes claims/liabilities reported by U.S. securities brokers.
11. Primarily U.S. government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

r Revised
* Less than \$500,000 (+/–)
..... Not applicable

Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current

 ^{1.} Represents gains of losses on oreign-currency-denorminated assets and natimities due to trein revaluation at current exchange rates.
 2. Includes changes in coverage due to year-to-year changes in the composition of reporting panels, primarily for bank and nonbank estimates, and to the incorporation of survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial flows, price changes, or exchange-rate changes.
 3. Financial flows and valuation adjustments for financial derivatives are evailable only on a reb basis, which is shown

shown in column (d).

5. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

THE U.S. IN THE INTERNATIONAL ECONOMY

D-72 December 2009

Regional Data

I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at www.bea.gov. For information on state personal income, e-mail reis@bea.gov; write to the Regional Economic Information System, BE–55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5360. For information on gross domestic product by state, e-mail gdpbystate@bea.gov; write to the Regional Product Division, BE–61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5340.

p Preliminary r Revised

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 1 in the "Regional Quarterly Report" in the November 2009 Survey or Current Business.

Percent change from preceding period was calculated from unrounded data.

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 in the "Regional Quarterly Report" in the November 2009 SURVEY OF CURRENT BUSINESS

r Revised

1. Per capita personal income was computed using midyear population estimates of the Census Bureau.

2. Percent change from preceding period was calculated from unrounded data.

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 3 in the "Regional Quarterly Report" in the November 2009 Survey of CURRENT BUSINESS

r Revised

1. Per capita disposable personal income was computed using midyear population estimates of the Census Bureau.

2. Percent change from preceding period was calculated from unrounded data.

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

Table I.4. Gross Domestic Product (GDP) by State for Industries, 2008

[Millions of dollars]

State and region	Rank of total GDP by state	Total	Natural resources and mining	Construction	Durable-goods manufacturing	Nondurable- goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

Note. Totals shown for the United States differ from the national income and product account statistics of gross domestic product (GDP) because GDP by state excludes and national GDP includes the compensation of federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad

and for military equipment, except office equipment. Also, GDP by state and national GDP have different revision schedules.

ules.
Source: This table reflects the GDP-by-state statistics for 2008 that were released on June 2, 2009.

Note. The personal income level shown for the United States is derived as the sum of the metropolitan area estimates and an estimate for the nonmetropolitan portion of the United States. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 1 "Personal Income for Metropolitan Areas for 2008" in the September 2009 SURVEY OF CURRENT

p Preliminary

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2005, December 2006, November 2007, and November 2008) for federal statistical purposes.

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.1

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006-2007 uses prices for 2006 and 2007 as weights, and the 2006–2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 (\$100 \times 1.10). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_0 is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, t-0).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at www.bea.gov.

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates.

Concepts and Methods of the U.S. National Income and Product Accounts

Introductory Chapters 1–4 (2008)

Chapter 5: Personal Consumption Expenditures (2009)

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

An Introduction to National Income and Product Accounts (2007)

Measuring the Economy: A Primer on GDP and the National Income and Product Accounts (2007)

The following Survey articles describe the 2009 comprehensive revision of the NIPAs.

"Initial Results of the 2009 Comprehensive NIPA Revision" (August 2009)

"Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision" (September 2009)

Preview of the 2009 Comprehensive NIPA Revision Changes in Definitions and Presentations (March 2009)

New Classifications for Personal Consumption Expenditures (May 2008)

Statistical Changes (May 2009)

Initial Results of the 2009 Comprehensive NIPA Revision (August 2009)

"Preview of the Revised NIPA Estimates for 2002: Effects of Incorporating the 2002 Benchmark I-O Accounts and Proposed Definition and Statistical Changes" (March 2008)

In addition, see the following articles.

"Updated Summary of NIPA Methodologies" (November 2009) describes the source data and methods that are used to prepare the estimates.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Reliability of the NIPA Estimates of U.S. Economic Activity" (February 2005) evaluates the principal NIPA estimates by examining the record of revisions to them.

"Gross Domestic Product: Revisions and Source Data" (February 2006) describes the categories of data that are used for the advance, preliminary, and final quarterly estimates of GDP.

Fixed assets and consumer durable goods. Fixed Assets and Consumer Durable Goods in the United States, 1925–97 (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1999–2008" (November 2009) describes the improvements that were incorporated into these estimates as part of the 2009 comprehensive NIPA revision.

Satellite accounts. These accounts extend the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

"Research and Development Satellite Account" For 1959–2002 (December 2006) For 1959–2004 (October 2007)

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at www.bea.gov under "About BEA."

Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross-domestic-product-by-industry accounts), the benchmark input-output accounts, and one satellite account.

Annual industry accounts. "Improved Annual Industry Accounts for 1998–2003" (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts that features the integration of the two sets of accounts.

"Annual Industry Accounts" (December 2008) presents the annual revision of these accounts and describes the source data and any changes in the methods that are used to prepare the estimates.

"Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-Industry Accounts" (March 2004) provides the details about the comprehensive revision.

Benchmark input-output accounts. "Preview of the Benchmark Input-Output Accounts for 2002" (September 2005) includes the proposed new sectors that are based on the 2002 North American Industry Classification System.

"U.S. Benchmark Input-Output Accounts, 2002" (October 2007)

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts"

For 2002-2005 (June 2006)

For 1998–2006 (June 2007)

For 2004–2007 (June 2008)

For 2005–2008 (June 2009)

International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts. The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the international transactions accounts.

The annual revisions of the international transactions accounts are described in a series of articles, the latest of which was published in the July 2009 SURVEY.

Direct investment. International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a collection of previously published articles on U.S. di-

rect investment abroad and foreign direct investment in the United States. It includes "A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 Survey, and "A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 Survey.

In addition, the updated methodologies are available in U.S. Direct Investment Abroad: Final Results From the 1999 Benchmark Survey (2004) and in Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey (2006).

International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

Regional accounts

The regional accounts include estimates of personal income and gross domestic product. The following methodologies are available on BEA's Web site at www.bea.gov/regional/methods.cfm.

Personal income. Estimates of personal income are prepared for states and for local areas.

State Personal Income (2007) describes the improvements in the methodology that are used to prepare the estimates.

Local Area Personal Income (2007) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan divisions and areas, micropolitan areas, and BEA economic areas and regions.

Gross domestic product. Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

Gross Domestic Product by State (2006) describes the sources and the methods that are used to prepare the estimates.

"Gross Domestic Product by State" (June 2009) presents the most recent annual revision.

"Introducing New Measures of the Metropolitan Economy: Prototype GDP-by-Metropolitan-Area Estimates for 2001–2005" (November 2007) describes the potential uses of the estimates and the methodology used to prepare them.
