## SURVEY OF CURRENT BUSINESS

September 2010

Volume 90 • Number 9

#### 1 GDP and the Economy: Second Estimates for the Second Quarter of 2010

Real GDP increased 1.6 percent after increasing 3.7 percent in the first quarter. Imports picked up, and inventory investment slowed. But consumer spending picked up.

#### 11 Government Receipts and Expenditures: Second Quarter of 2010

Net government saving decreased \$18.4 billion to -\$1,304.1 billion. Net federal government saving decreased \$11.1 billion to -\$1,325.3 billion. Net state and local government saving decreased \$7.4 billion to \$21.2 billion.

#### 14 Newly Available NIPA Tables

Statistics on government spending by function, changes in the net stock of fixed assets, and a comparison of NIPA and USDA net farm income. All reflect the 2010 annual NIPA revision.

#### 21 Fixed Assets and Consumer Durable Goods for 2000–2009

Statistics on the net stock of (1) equipment and software and of business and government structures and (2) consumer durable goods. Both reflect the 2010 annual NIPA revision.

#### 34 BEA Briefing

GDP for American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and the U.S. Virgin Islands for 2002–2007

According to new estimates, real GDP over this period increased in American Samoa (annual rate of 0.4 percent), Guam (1.8 percent) and the U.S. Virgin Islands (2.9 percent). In the Commonwealth of the Northern Mariana Islands, real GDP declined at a rate of 4.2 percent.

## **Director's Message**

Health care spending ranks as one of the most significant economic issues of our time. To facilitate analysis and policy making, sound accounting for health care spending is of paramount importance. One important step toward this goal is reconciling various estimates of health care spending. In this issue, we present an article authored by economists at the Centers for Medicare and Medicaid Services (CMS) and the Bureau of Economic Analysis (BEA) that summarizes recent research aimed at reconciling health care spending estimates from both organizations. This effort builds on previous research and finds that the health care spending estimates from national health expenditures accounts from CMS and the national income and product accounts (NIPAs) from BEA are similar, differing less than 2 percent in most years back to 1960.

Also in this issue, we present the results of a recent effort to measure gross domestic product for American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and the U.S. Virgin Islands. The estimates were developed in partnership with the Department of the Interior's Office of Insular Affairs, which provided funding for this project. In the future, BEA hopes to integrate these estimates into the NIPAs.

Elsewhere in this issue, we present estimates of metropolitan area personal income for 2009. Personal income declined in 223 metropolitan areas, increased in 134 areas, and was unchanged in 9 areas. On average, metropolitan area personal income fell 1.8 percent in 2009 after rising 2.7 percent in 2008.

This month, we also provide a look at government receipts and expenditures for the second quarter of 2010 and detail the second estimates of GDP for the second quarter.

J. Steven Landefeld

### Taking Account...

## KLEMS, other industry data updated on Web site

The Bureau of Economic Analysis (BEA) has updated various sets of statistics that underlie its annual industry accounts. The update covers KLEMS (capital, labor, energy, materials, and services) statistics, personal consumption expenditures (PCE) "bridge table" statistics, and private equipment and software (PES) bridge table statistics. Bridge tables show the relationship between annual industry account final use categories and their counterparts in the national income and product accounts (NIPAs).

BEA makes these statistics available largely in response to demand from its data users.

The updated KLEMS estimates contain detailed annual statistics of the intermediate inputs used by industries grouped in one of the three categories: energy, materials, or purchased services. These intermediate input statistics are consistent with, but more detailed than, the intermediate inputs published in BEA's core annual industry accounts. These more detailed intermediate inputs are valued at producers' prices consistent with the intermediate inputs included in the core annual input-output accounts.

While these detailed intermediate input statistics underlie the annual industry accounts formally published on the BEA Web site and in the Survey of Current Business, BEA does not

include these detailed statistics in the published tables, because their quality is not on par with higher level aggregates. These underlying statistics are more likely to be based on judgmental trends, on trends in the higher level aggregate, or on less reliable source data.

These PCE bridge tables show the commodities included in each consumer spending category and the value of the transactions in producers' purchasers' prices as well as the associated transportation costs and trade margins. The purchasers' value is the NIPA expenditure value. The rows of the bridge table show the commodities included in the PCE category, the producers' value of the commodity, and the transport costs and the trade margins (including sales taxes) that are required to move the commodity from producer to consumer.

The PES bridge tables show the commodities included in each expenditure category and the value of the transactions in producers' and purchasers' prices as well as the associated transportation costs and trade margins. The purchasers' value is the NIPA expenditure value. The rows of the bridge table show the commodities included in the PES category, the producers' value of the commodity, and the transport costs and the trade margins (including sales taxes) that are required to move the commodity from producer to consumer.

These updated tables are available on BEA's Web site at www.bea.gov/industry/ more.htm.

Information on the BEA annual industry accounts is available at www.bea.gov/industry/index.htm.

## ASA/NSF/BEA fellowship program seeks applicants

In conjunction with the American Statistical Association (ASA) and the National Science Foundation (NSF), BEA offers a fellowship program aimed at improving the collaboration between government and academic research.

The program allows research fellows to work for short stints at BEA, collaborating with the agency's economists, statisticians, and other professionals. Applicants should have academically recognized research records and strong expertise in their areas of proposed research. Detailed research proposals must be submitted for competitive evaluation by a review board representing BEA, ASA, and various academics. Proposed research may be in any area related to the measurement of economic activity and may take the form of conceptual or methodological studies related to the BEA economic accounts. Fellows will conduct research at BEA in Washington, DC, and will be reimbursed through ASA.

Visit www.bea.gov/research/fellowship\_program.htm for more information.

1 September 2010

## GDP and the Economy

#### Second Estimates for the Second Quarter of 2010

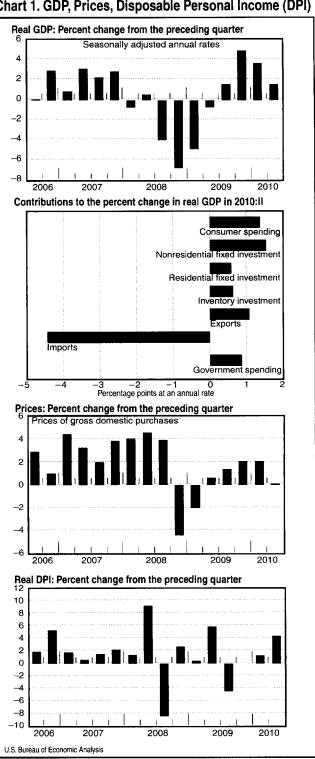

**TEAL GROSS domestic product (GDP) increased at**  $oldsymbol{\Gamma}$  an annual rate of 1.6 percent in the second quarter of 2010, according to the "second" estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).1 The "second" estimate of real GDP growth was revised down 0.8 percentage point from the "advance" estimate, reflecting an upward revision to imports, downward revisions to inventory investment and to exports, and an upward revision to consumer spending (see page 9). In the first quarter of 2010, real GDP increased 3.7 percent.

The deceleration in real GDP in the second quarter primarily reflected a sharp acceleration in imports and a sharp deceleration in inventory investment. In contrast, residential fixed investment turned up, nonresidential fixed investment accelerated, state and local government spending turned up, and federal government spending accelerated.<sup>2</sup>

- Prices of goods and services purchased by U.S. residents increased 0.1 percent in the second quarter, unrevised from the advance estimate, after increasing 2.1 percent in the first quarter (see page 8). Energy prices turned down in the second quarter, and food prices decelerated slightly. Excluding food and energy, gross domestic purchases prices increased 0.8 percent after increasing 1.6 percent.
- Real disposable personal income (DPI) increased 4.4 percent, unrevised from the advance estimate, after increasing 1.3 percent (revised). The acceleration resulted from an unchanged PCE implicit price deflator, a pickup in current-dollar personal income, and a deceleration in personal current taxes.
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 6.1 percent in the second quarter; in the first quarter, it was 5.5 percent.

Christopher Swann prepared this article.

Chart 1. GDP, Prices, Disposable Personal Income (DPI)

<sup>1. &</sup>quot;Real" estimates are in chained (2005) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data. More information can be found at www.bea.gov/about/infoqual.htm and www.bea.gov/faq/national/gdp\_accuracy.htm. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

<sup>2.</sup> In this article, "consumer spending" refers to "personal consumption expenditures," "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment.

#### **Real GDP Overview**

**Table 1. Real Gross Domestic Product and Components**

State and local	12.3	-1.0	-2.3	-3.8	1.2	-0.12	-0.29	-0.48	0.14		

The estimates under the contribution columns are also percent changes.
 Note. Percent changes are from NIPA table 1.1.1, contributions are from NIPA table 1.1.2, and shares are from

Consumer spending picked up very slightly in the second quarter, adding 1.38 percentage points to real GDP growth after adding 1.33 percentage points.

Nonresidential fixed investment accelerated, adding 1.54 percentage points to real GDP growth after adding 0.71 percentage point. The acceleration reflected an upturn in structures and an acceleration in equipment and software (page 4).

Residential fixed investment turned up, increasing 27.2 percent after decreasing 12.3 percent, and added 0.58 percentage point to real GDP growth.

Inventory investment added 0.63 percentage point to real GDP growth after adding 2.64 percentage points in the first quarter (page 5).

Exports slowed, adding 1.08 percentage points to real GDP growth after adding 1.30 percentage points; the slowdown reflected slowdowns in both goods and services exports (page 6).

Imports accelerated sharply, subtracting 4.45 percentage points from real GDP growth after subtracting 1.61 percentage points, reflecting an acceleration in goods imports. Imports of services slowed.

Federal government spending accelerated, adding 0.72 percentage point to real GDP growth after adding 0.15 percentage point. National defense spending and nondefense spending both accelerated (page 7).

State and local government spending turned up, adding 0.14 percentage point to real GDP growth after subtracting 0.48 percentage point.

GDP excluding final sales of computers	99.5	1.6	5.0	3.7	1.6	1.61	4.92	3.63	1.58

 The estimates under the contribution columns are also percent changes.
 Νοτε. Percent changes are from NIPA table 1.2.1, contributions are from NIPA table 1.2.2, and shares are calculated from NIPA table 1.2.5.

Real final sales of domestic product, real GDP less inventory investment, increased 1.0 percent in the second quarter after increasing 1.1 percent in the first quarter.

Motor vehicle output turned down, decreasing 3.8 percent after increasing 42.3 percent.

Final sales of computers slowed, increasing 5.3 percent after increasing 19.2 percent.

<sup>.</sup> The estimates under the contribution columns are also percent changes

NPISHs Nonprofit institutions serving households

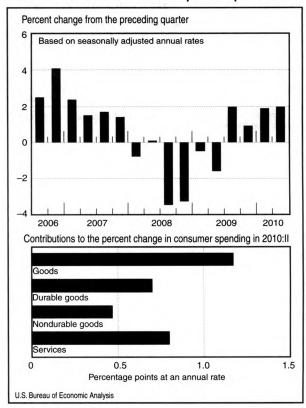

The very small second-quarter pickup in consumer spending reflected an acceleration in spending for services that was largely offset by slowdowns in spending for both durable goods and nondurable goods.

The slowdown in spending for durable goods reflected a downturn in "other" durable goods, which was widespread, and decelerations in furnishings and durable household equipment and in recreational goods and vehicles that were partly offset by an upturn in spending for motor vehicles and parts.

The slowdown in spending for nondurable goods reflected a downturn in food and beverages for off-premises consumption and a deceleration in clothing and footwear that were partly offset by accelerations in gasoline and other energy goods and in "other" nondurable goods, mainly pharmaceuticals.

The acceleration in spending for services reflected upturns in financial services and insurance, in housing and utilities, in health care, and in "other" services that were partly offset by a slowdown in food services and accommodations and a larger decrease in recreation services.

1. The estimates under the contribution columns are also percent changes.

Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Excludes software "embedded," or bundled, in computers and other equipment.

Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

Note. Percent changes are from NIPA table 5.3.1, contributions are from NIPA table 5.3.2, and shares are calculated from NIPA table 5.3.5.

Private fixed investment accelerated in the second quarter, reflecting an acceleration in nonresidential fixed investment and an upturn in residential fixed investment.

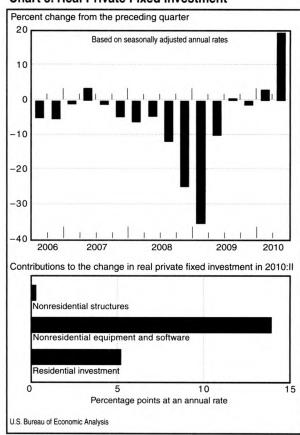

The acceleration in nonresidential fixed investment reflected an upturn in structures and a pickup in equipment and software.

Structures turned up, reflecting smaller decreases in power and communication, in manufacturing, in commercial and health care, and in "other" structures. In contrast, mining exploration, shafts, and wells decelerated.

Equipment and software accelerated, reflecting a sharp acceleration in industrial equipment and an acceleration in information processing equipment and software that were partly offset by decelerations in transportation equipment and in "other" equipment.

The upturn in residential fixed investment mainly reflected an upturn in "other" structures, especially brokers' commissions on the sale of residential structures and improvements.

of goods and structures	4.09	3.99	3.92	3.91	3.95				

- 1. The levels are from NIPA table 5.6.6B.
- 2. The residual is the difference between the first line and the sum of the most detailed lines.
- 3. The ratios are from NIPA table 5.7.6B.

Note. The chained-dollar series are calculated as the period-to-period change in end-of-period inventories. Quarterly changes are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, chained-dollar estimates are usually not additive.

#### **Inventory Investment**

The change in real private inventories, often called real private inventory investment, represents the change in the physical stock of goods held by businesses. It includes finished goods, goods at various stages of production, and raw materials.

The change in private inventories is a key component of gross domestic product (GDP), which aims to measure output derived from current production. To include the value of currently produced goods that are not yet sold and to exclude the value of goods produced in previous periods, change in private inventories must be included in the GDP calculation.

Thus, GDP can also be seen as the sum of final sales of domestic product and the change in private inventories (table 2).

For most industries, the estimates of change in private inventories are prepared by revaluing book-value estimates of inventories from the Census Bureau to a replacement-cost basis and calculating the change over a quarter or a year. BEA does not always have complete data for every industry.

Inventory investment increased \$19.1 billion in the second quarter after increasing \$80.8 billion in the first quarter.

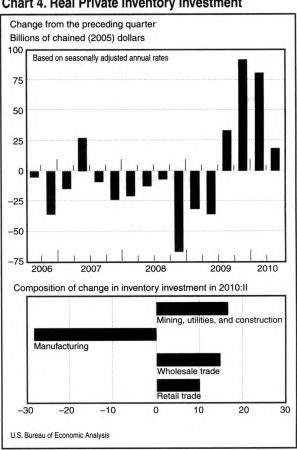

Inventory investment in manufacturing industries decreased \$28.3 billion. A drawdown that followed an accumulation in nondurable goods industries was partly offset by a larger accumulation in durable goods industries.

Inventory investment in wholesale trade inventories increased \$14.8 billion, reflecting larger accumulations in both nondurable goods and durable goods industries.

Inventory investment in retail trade industries increased \$10.1 billion, mainly reflecting larger accumulations in "other" retail stores and in motor vehicle and parts dealers. An increase in inventory investment by general merchandise stores also contributed. Food and beverage stores reduced inventory investment.

The ratio of private inventories to final sales increased to 2.35 in the second quarter. In the first quarter, it was 2.33.

goods	67.8	27.2	24.3	15.9	32.1				

The estimates under the contribution columns are also percent changes

Exports of goods and services slowed, reflecting decelerations in exports of both goods and services.

The deceleration in exports of goods mainly reflected a larger decrease in foods, feeds, and beverages, a downturn in nonautomotive consumer goods, and a slowdown in automotive vehicles, engines, and parts that were partly offset by an upturn in "other" exports of goods.

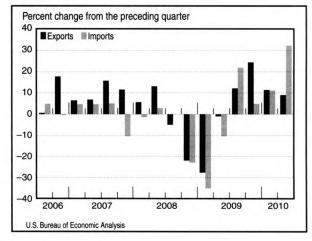

The slowdown in exports of services mainly reflected downturns in travel and in transfers under U.S. military agency sales contracts that were partly offset by an upturn in royalties and license fees and an acceleration in other private services.

Imports of goods and services accelerated sharply, reflecting an acceleration in imports of goods. Imports of services slowed.

The acceleration in imports of goods mainly reflected an upturn in petroleum and products and accelerations in nonautomotive capital goods, in automotive vehicles, engines, and parts, and in nonautomotive consumer goods that were partly offset by a downturn in "other" imports of goods.

The slowdown in imports of services reflected downturns in royalties and license fees and travel that were partly offset by an acceleration in other private services.

Chart 5. Real Exports and Imports of Goods and Services

Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services.

Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Nore. Percent changes are from NIPA table 4.2.1, contributions are from NIPA table 4.2.2, and shares are calculated from NIPA table 4.2.5.

#### **Government Spending**

 The estimates under the contribution columns are also percent changes.
 Note. Percent changes are from NIPA table 3.9.1, contributions from NIPA table 3.9.2, and shares are calculated. lated from NIPA table 3.9.5.

Government spending turned up, increasing 4.3 percent after decreasing 1.6 percent. State and local government spending turned up, and federal government spending accelerated.

The acceleration in federal government spending reflected pickups in both defense and nondefense spending. For defense, both consumption expenditures and investment in equipment and software accelerated. The pickup in nondefense spending was more than accounted for by an acceleration in consumption expenditures, partly as a result of spending for the 2010 census.

The upturn in state and local government spending mainly reflected an upturn in investment in structures.

#### **Government Spending**

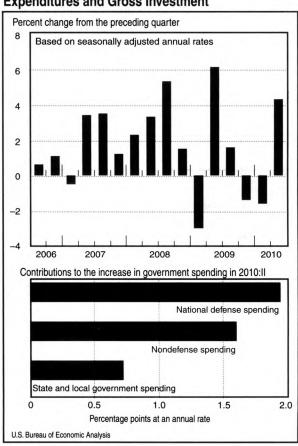

"Government consumption expenditures and gross investment," or "government spending," consists of two components: (1) consumption expenditures by federal government and by state and local governments and (2) gross investment by government and government-owned enterprises.

Government consumption expenditures consists of the goods and services that are produced by general government (less any sales to other sectors and investment goods produced by government itself). Governments generally provide services to the general public without charge. The value of government production—that is, government's gross output—is measured as spending for labor and for intermediate goods and services and a charge for consumption of fixed capital (which represents a partial measure of the services provided by government-owned fixed capital).

Gross investment consists of new and used structures (such as highways and dams) and of equipment and software purchased or produced by government and government-owned enterprises.

Government consumption expenditures and gross investment excludes current transactions of government-owned enterprises, current transfer payments, interest payments, subsidies, and transactions in financial assets and nonproduced assets, such as land.

#### **Note on Prices**

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services, regardless of whether those goods and services were produced domestically or imported. It is derived from prices of consumer spending, private investment, and government spending.

The GDP price index measures the prices of goods and services produced in the United States, including the prices of goods and services produced for export.

The difference between the gross domestic purchases price index and the GDP price index reflects the differences between imports prices (included in the gross domestic purchases index) and exports prices (included in the GDP price index). For other measures that are affected by import and export prices, see the dollar depreciation FAQ Answer ID 498 on BEA's Web site.

Prices paid by U.S. residents, as measured by the gross domestic purchases price index, slowed in the second quarter. Excluding food and energy, prices also slowed. About 0.2 percentage point of the first-quarter increase in the gross domestic purchases price index had reflected the pay raise for federal civilian and military personnel, which is treated as an increase in the price of employee services purchased by government.

Consumer prices were unchanged after increasing 2.1 percent. Prices paid for gasoline and other energy goods turned down, and prices paid for financial services and insurance decelerated.

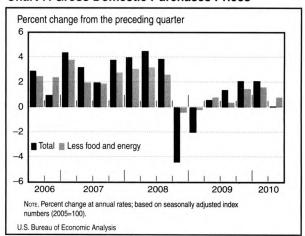

Prices paid for nonresidential fixed investment turned up, primarily reflecting a smaller decrease in prices paid for transportation equipment, an upturn in prices paid for "other" equipment, and an acceleration is prices paid for structures.

Prices paid for residential fixed investment turned down, decreasing 3.4 percent after increasing 0.6 percent.

Prices paid by government decelerated, reflecting slowdowns in prices paid by state and local governments and by the federal government. The slowdown in state and local government prices primarily reflected a downturn in petroleum prices. The slowdown in federal government prices primarily reflected the effects on compensation from the first-quarter pay raise.

The GDP price index increased 1.9 percent, 1.8 percentage points more than the increase in the price index for gross domestic purchases, reflecting a downturn in import prices relative to a slight slow-down in export prices.

#### **Chart 7. Gross Domestic Purchases Prices**

Note. Most percent changes are from NIPA table 1.6.7; percent changes for PCE for food and energy goods and services and for PCE excluding food and energy are calculated from index numbers in NIPA table 2.3.4. Contributions are from NIPA table 1.6.8.

<sup>1.</sup> The estimates under the contribution columns are also percent changes.

#### Personal Income for the First Quarter of 2010

With the release of the second estimates of GDP, BEA also releases revised estimates of various income-related measures for the previous quarter. This revision reflects the incorporation of newly available first-quarter tabulations from the Quarterly Census of Employment and Wages from the Bureau of Labor Statistics.

Wage and salary disbursements increased \$6.5 billion, a downward revision of \$12.3 billion. Personal current taxes increased \$17.5 billion, a downward revision of \$2.1 billion. Contributions for government social insurance, which is subtracted in calculating personal income, increased \$13.0 billion, a downward revision of \$1.6 billion.

As a result of these revisions,

- Personal income increased \$111.3 billion, a downward revision of \$11.5 billion.
- Disposable personal income increased \$93.9 billion, a downward revision of \$9.4 billion.
- Personal saving decreased \$4.2 billion, a downward revision of \$9.3 billion.
- The personal saving rate was 5.5 percent, unrevised.

The second estimate of the second-quarter increase in real GDP was 0.8 percentage point less than the advance estimate. The average revision (without regard to sign) between the advance estimate and the second estimate is 0.5 percentage point. The downward revision to the percent change in real GDP primarily reflected an upward revision to imports and downward revisions to inventory investment and to exports that were partly offset by an upward revision to consumer spending.

The upward revision to consumer spending was primarily to services. Within services, the largest contributor to the revision was electricity and gas.

The downward revision to inventory investment primarily reflected a large downward revision to manufacturing inventories that was partly offset by an upward revision to mining, utilities, and construction inventories.

The downward revision to exports was to exports of goods and was widespread; the largest contributors to the revision were computers, peripherals, and parts and nonautomotive consumer goods.

The upward revision to imports was primarily to imports of goods and was also widespread; the largest contributors to the revision were petroleum and products and "other" goods. A small upward revision to imports of services also contributed.

#### Source Data for the Second Estimates

Personal consumption expenditures: retail sales for April, May, and June (revised). Motor vehicle registrations for June (new). Retail electricity sales and unit value data for May (revised) and June (new) and natural gas sales and unit value data for May (new) from the Energy Information Administration.

Nonresidential fixed investment: construction spending (value put in place) for April and May (revised) and June (new). Manufacturers' shipments (M3) of machinery and equipment for May and June (revised). Exports and imports for May (revised) and June (new).

Residential fixed investment: construction spending (value put in place) for April and May (revised) and June (new).

Change in private inventories: manufacturers' inventories for May and June (revised) and trade inventories for May (revised) and June (new).

Exports and imports of goods and services: international transactions for April and May (revised) and June (new).

Government consumption expenditures and gross investment: state and local construction spending (value put in place) for April and May (revised) and June (new).

Note. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D. IVA Inventory valuation adjustment CCAdj Capital consumption adjustment

Profits from current production increased \$72.7 billion, or 4.6 percent at a quarterly rate, in the second quarter after increasing \$148.4 billion in the first quarter.

Domestic profits of financial corporations decreased \$0.4 billion, or 0.1 percent, after increasing \$5.2 billion.

Domestic profits of nonfinancial corporations increased \$67.9 billion, or 8.1 percent, after increasing \$117.2 billion.

Profits from the rest of the world increased \$5.3 billion, or 1.4 percent, after increasing \$25.9 billion. In the second quarter, receipts increased \$10.0 billion, and payments increased \$4.8 billion.

Taxes on corporate income increased \$39.0 billion, or 9.7 percent, after increasing \$84.1 billion.

Profits after tax increased \$33.8 billion, or 2.9 percent, after increasing \$64.1 billion.

Undistributed corporate profits (a measure of net saving that equals after-tax profits less dividends) increased \$29.2 billion, or 6.6 percent, after increasing \$52.4 billion.

Net cash flow from current production, a profits-related measure of internal funds available for investment, increased \$53.7 billion, or 3.5 percent, after increasing \$33.3 billion.

#### **Measuring Corporate Profits**

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including Cen-

sus Bureau quarterly financial reports, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service data when the data are available for two reasons: the data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

September 2010 11

## Government Receipts and Expenditures

#### Second Quarter of 2010

TET GOVERNMENT saving, the difference be-Ntween current receipts and current expenditures of the federal government and state and local governments, was -\$1,304.1 billion in the second quarter of 2010, decreasing \$18.4 billion from -\$1,285.7 billion in the first quarter of 2010.

Net federal government saving was -\$1,325.3 billion in the second quarter, decreasing \$11.1 billion from -\$1,314.2 billion in the first quarter (see page 12). Both current receipts and current expenditures decelerated in the second quarter.

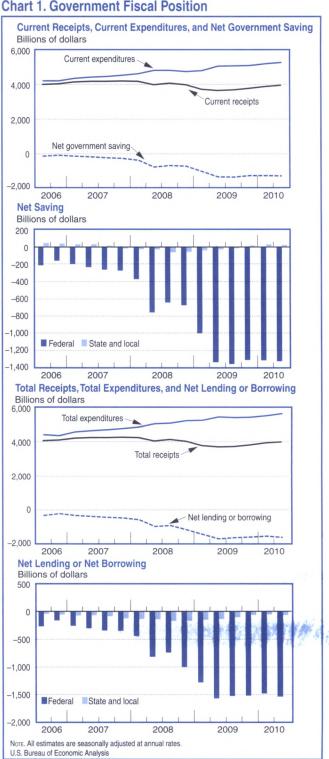

Net state and local government saving was \$21.2 billion in the second quarter, decreasing \$7.4 billion from \$28.6 billion in the first quarter (see page 13). Both current receipts and current expenditures decelerated in the second quarter.

Net borrowing was \$1,606.5 billion in the second quarter, increasing \$65.1 billion from \$1,541.4 billion in the first quarter. Federal government net borrowing was \$1,540.8 billion in the second quarter, increasing \$57.2 billion from \$1,483.6 billion in the first quarter. State and local government net borrowing was \$65.7 billion, increasing \$8.0 billion from \$57.7 billion in the first quarter.

Personal current taxes decelerated in the second quarter, reflecting a deceleration in withheld income taxes and a downturn in nonwithheld income taxes.

Taxes on corporate income decelerated as a result of a deceleration in corporate profits

Income receipts on assets turned up because of an increase in dividend payments from Fannie Mae and Freddie Mac.

Nondefense consumption expenditures accelerated, reflecting an upturn in spending for services and an acceleration in compensation of general government employees driven by an increase in temporary Census Bureau workers.

Government social benefits to persons decelerated as a result of downturns in unemployment benefits and the Supplemental Nutrition Assistance Program (SNAP).

Other current transfer payments to the rest of the world turned down after first-quarter economic support payments to Egypt and Israel.

Interest payments accelerated in the second quarter, reflecting an increase in interest paid to persons and business on Treasury Inflation-Protected Securities.

Capital transfer payments turned up in the second quarter because of an upturn in transportation capital grants. With the Troubled Asset Relief Program (TARP) drawing to a close, payments to financial companies continued to decrease. Spending on the ARRA-funded homebuyer tax credit turned up, and capital injected into Fannie Mae and Freddie Mac accelerated. About \$19.0 billion (\$76.0 billion at an annual rate) was provided to Fannie Mae and Freddie Mac, an increase of \$14.8 billion at an annual rate.

#### **Federal Government Estimates**

Estimates of federal government current receipts, current expenditures, and net federal government saving are based on data from the federal budget, from the *Monthly Treasury Statement* and other reports from the Department of the Treasury, and from other federal government agencies. Total receipts, total expenditures, and net lending or net borrowing, which are alternative measures of the federal fiscal position, are based on these same sources.

Quarterly and annual estimates are published monthly in NIPA table 3.2. Detailed annual estimates of these transactions by component are published annually in NIPA tables

3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at www.bea.gov/national/nipaweb/nipa\_underlying/Index.asp.

Each year, BEA translates the information in the federal budget into a NIPA framework. For a historical time series of these estimates, see NIPA table 3.18B, which is scheduled to be published in October 2010.

<sup>1.</sup> See Mark S. Ludwick and Andrew P. Cairns, "NIPA Translation of the Fiscal Year 2011 Federal Budget," Survey of Current Business 90 (March 2010): 11–19.

#### **State and Local Government**

Table 3. State and Local Government Current Receipts and Expenditures

[Billions of dollars, seasonally adjusted at annual rates]

Less: Consumption of fixed capital	204.2	-0.6	0.3	1.5	1.9
Net lending or net borrowing (-)	-65.7	30.1	43.4	8.2	-8.0

Personal current taxes decreased more in the second quarter than in the first quarter as a result of a larger decrease in income tax receipts.

Taxes on corporate income decelerated, reflecting a deceleration in corporate profits.

Federal grants-in-aid decelerated in the second quarter as a result of a downturn in education grants that was partly offset by an acceleration in Medicaid grants.

Consumption expenditures turned down because of a downturn in expenditures for nondurable goods.

Government social benefits accelerated as a result of an acceleration in Medicaid expenditures.

Capital transfer receipts turned up, reflecting an upturn in transportation grants that was primarily driven by an upturn in highway grants.

Gross government investment turned up in the second quarter because of an upturn in spending for structures.

#### Estimates of State and Local Government Receipts and Expenditures

The estimates of state and local government current receipts and expenditures and total receipts and expenditures are mainly based on compilations of data for state and local government finances. The Census Bureau produces the primary source data: the census of governments that is conducted in years that end in a 2 or a 7 and the Government Finances series of surveys for the other years. In addition, other sources of Census Bureau data are from the Quarterly Summary of State and Local Government Tax Revenue and the monthly Value of Construction Put in Place. Data sources from the Bureau of Labor Statistics include the Quarterly Census of Employment and Wages and the Employment Cost Index.

Quarterly and annual estimates are available monthly in NIPA table 3.3. Detailed annual estimates of state and local government transactions by component are available annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at www.bea.gov/national/nipaweb/nipa\_underlying/Index.asp. For a historical time series of reconciliations of the NIPA estimates with the Census Bureau data from Government Finances, see NIPA table 3.19.

BEA also prepares annual estimates of receipts and expenditures of state governments and of local governments.<sup>1</sup> These estimates are available annually in NIPA table 3.20 (state government receipts and expenditures) and in NIPA table 3.21 (local government receipts and expenditures), which are scheduled to be published in the October 2010 SURVEY.

<sup>1.</sup> Bruce E. Baker, "Receipts and Expenditures of State Governments and of Local Governments," Survey 85 (October 2005): 5–10.

14 September 2010

#### **Newly Available NIPA Tables**

This report continues the presentation of the 2010 annual revision of the national income and product accounts (NIPAs), which began in the August 2010 issue of the Survey of Current Business. The current issue presents NIPA tables 3.15.1–3.15.6, 3.16, 3.17, and 7.15.

The August 2010 Survey includes an article that summarizes the results of the annual revision followed by the presentation of most of the NIPA tables. It also includes historical estimates in "GDP and Other Major NIPA Series, 1929–2010:II."

Publication of the estimates from the annual revision will continue in the October issue and will conclude with two tables in the November Survey. Six tables will be published in the October issue: tables 3.18B and 3.19 (government-sector tables that reconcile BEA estimates with

the federal government budget and with data from the Census Bureau), tables 3.20 and 3.21 (current receipts and expenditures for state governments and for local governments), and tables 3.22 and 3.23 (government-sector estimates that are not seasonally adjusted). The November Survey will include NIPA table 2.9 (personal income and its disposition by households and by nonprofit institutions serving households) and table 7.20 (a comparison of NIPA income and outlays of nonprofit institutions serving households with Internal Revenue Service data for revenue and expenses).

The NIPA tables that were published in the August issue and those that appear in this issue are available on BEA's Web site at www.bea.gov. For access to the interactive tables, click on "National."

	1	0.2	0.0	2.7	

Note. Government consumption expenditures and gross investment is net of sales to other sectors. Thus, growth in the prices or quantities of sales to other sectors may partially, exactly, or more than offset the growth in the prices or quantities of gross consumption expenditures and gross investment.

The residual line is the difference between the first line and the sum of the most detailed lines.

<sup>1.</sup> Equals federal government current expenditures less grants-in-aid to state and local governments plus state and local government current expenditures. Federal grants-in-aid to state and local governments by function are shown in table 3.17.

2. Prior to 1960, federal interest receipts are not available separately but are included in interest payments, which is shown net of lederal interest receipts.

3. Equals unallocable state and local government expenditures, less "wage accruals less disbursements" shown in table 3.1; includes federal government revenue sharing grants to state and local governments beginning with 1972 and ending with 1987.

4. Consists of state and local government publicly owned liquor store systems, government-administered

lotteries and parimutuels, and other commercial activities.

5. Consists of social insurance funds, including old age, survivors, and disability insurance (social security), and railroad retirement. Excludes government employee retirement plans.

6. Consists primarily of deetaal government revenue sharing grants to slate and local governments beginning with 1972 and ending with 1987, less "wage accruals less disbusements" shown in table 3.2.

7. Equais unallocable slate and local government expenditures less "wage accruals less disbusements" shown in table 3.3.

8. Consists of current expenditures for sanitation. Beginning with 2007, includes housing subsidies related to Hurricanes Katrina and Rita.

Equals consumption expenditures, government social benefits, interest payments, subsidies, less "wage accruals less disbursements," for federal government, also includes grants-in-aid to state and local governments and other current transfer payments to the rest of the world (net). Government, federal government, and state and local government current expenditures are shown separately in tables 3.1, 3.2, and 3.3, 2. Federal grants-in-aid to state and local governments are included in federal current expenditures; because the grants are transactions between levels of government, they are eliminated in the consolidation of the

government sector.

3. For more information regarding capital transfers, please see NIPA table 5.10.

4. Federal investment grants to state and local governments are excluded in the consolidation of the federal and state and local sectors.

5. Includes federal investment grants to state and local governments.

6. Consists of disaster-related benefits payments by state-owned insurance entities.

#### Fixed Assets and Consumer Durable Goods for 2000–2009

New statistics on fixed assets and consumer durable goods for 2009 and revised statistics for 2000–2008 are presented in this report. These statistics reflect the annual revision of the national income and product accounts (NIPAs), released on July 30, 2010, the harmonization of the fixed assets accounts (FAAs) private nonresidential structures types with the NIPA nonresidential structures types, and the incorporation of updated legal form of organization ratios.

## Harmonization of private nonresidential structures types

The estimates of fixed assets of private nonresidential structures, beginning with the estimates for 1901, now are classified by *function* rather than by *type*. This change brings the classification of these estimates into harmonization with the NIPA estimates of nonresidential structures and it reflects the current Census Bureau classification of the value of construction put in place for nonresidential structures.

In the 2003 comprehensive revision, NIPA estimates of nonresidential structures, beginning with the estimates for 1997, were classified by function rather than by type. The classification for the earlier years continued to be presented by type. With the release of the 2009 comprehensive revision, NIPA estimates were restated on the new by-function classification, beginning with estimates for 1929. With the 2010 release of the FAAs, this classification is now reflected in the private fixed assets estimates.

Detailed estimates of private fixed investment by industry and by legal form were developed for the "new" nonresidential structures by type of function, beginning with the estimates for 1901. Previously published current-dollar private fixed investment by industry was gen-

David B. Wasshausen prepared this report and supervised the preparation of the statistics on private fixed assets and consumer durable goods. Jennifer A. Bennett supervised the preparation of the statistics on government fixed assets. Debasis Chaudhuri, Michael T. Cusick, Michael D. Glenn, Christopher B. Mbu, and Nadia F.P. Sadée prepared the statistics.

erally preserved; however, revisions to the asset mix within the industry were sometimes unavoidable. Small revisions to "real" private fixed investment by industry reflect revisions to the asset mix as well as the introduction of "new" nonresidential structure-type price indexes. Depreciation rates for the "new" nonresidential structures types were taken from existing corresponding categories. (For example, the depreciation rate for "new" structure-type "multimerchandise shopping" is taken from the previously published category, "other commercial buildings," which included "multimerchandise shopping" structures.) Estimates for net stock and depreciation by industry showed some revisions as a result of this conversion, but overall trends were not affected.

#### Updating legal form of organization ratios

The estimates of private nonresidential fixed assets presented in this report also reflect revised LFO ratios for all estimates starting in 1998. Private nonresidential fixed assets are calculated for six different LFO types: corporate business, sole proprietorships, partnerships, nonprofit institutions, households, and tax-exempt cooperatives. Industry-level LFO ratios were developed for 2002 primarily using employment and receipts statistics from the 2002 Economic Census. The revised 2002 ratios were interpolated back to existing 1997 ratios in order to ensure a smooth transition over time, and were held constant for years 2002 forward. Revised LFO ratios were applied to detailed private nonresidential fixed investment, and corresponding net stocks and depreciation are derived from these revised fixed investment estimates. Overall, there were notable downward revisions to sole proprietorships and corporate business that were offset by upward revisions to partnerships and nonprofit institutions.

#### Statistics presented in this report

The complete FAAs are available interactively by industry, by legal form of organization, and by asset type on BEA's Web site at www.bea.gov/national/FA2004/index.asp. Statistics on net stocks, depreciation (consumption of fixed capital), "other changes in volume of assets," and the average age of net stocks are available, beginning with 1925; estimates of fixed investment are available, beginning with 1901.

Tables 1 through 15 follow.

Excludes software "embedded" or bundled in computers and other equipment.
 Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.
 Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

<sup>4.</sup> Consists primarily of railroads.
5. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.
6. Consists primarily of dormitories and of fraternity and sorority houses.

	11										

Excludes software "embedded" or bundled in computers and other equipment.
 Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.
 Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

<sup>4.</sup> Consists primarily of railroads.

Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.
 Consists primarily of dormitories and of fraternity and sorority houses.

NAICS crop and animal production.
 Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.
 Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
 Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services;

scientific research and development services; advertising and related services; and other professional, scientific, and technical services.

5. Consists of bank and other holding companies.

Note: Estimates in this table are based on the North American Industry Classification System (NAICS).

Table 6. Chain-Type Quantity Indexes for Net Stock of Private Fixed Assets by Industry

NAICS crop and animal production.
 Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.
 Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
 Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering,

and related services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.

5. Consists of bank and other holding companies.

Nore. Estimates in this table are based on the North American Industry Classification System (NAICS).

Consists of the fixed assets of general government and government enterprises.
 Due to a reclassification of underlying source data, "Industrial Buildings" for years 1987-1996 includes both defense-related and nondefense facilities, while "Industrial Structures," for years 1999-forward includes only defense-related facilities. For years 1999-forward, nondefense industrial facilities fall under several categories of nondefense structures.

Consists of Department of Defense structures, except family housing.
 Consists of lodging, religious, communication, sewage and waste disposal, water supply structures, and manufacturing.
 Consists of lodging, communication, and manufacturing.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type

quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

34 September 2010

### BEA BRIEFING

# GDP for American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and the U.S. Virgin Islands

#### Annual Estimates for 2002–2007

By Aya Hamano, Nicole M. Mayerhauser, Clinton P. McCully, Carol E. Moylan, and Marc Rubin

IN EARLY 2009, the Bureau of Economic Analysis (BEA) began work on a project to develop the first official estimates of gross domestic product (GDP) for American Samoa, the Commonwealth of the Northern Mariana Islands (CNMI), Guam, and the U.S. Virgin Islands. The estimates were developed in partnership with the Department of the Interior's Office of Insular Affairs (OIA), which provided funding for this project (called the Statistical Improvement Program) and facilitated interactions between BEA and the territorial governments. The purpose of this ongoing project is to provide data users with a comprehensive, objective measure of economic growth for these four U.S. territories.

GDP measures the value of final goods and services produced by an economy (in this case, the economies of the four territories) in a given period. The estimates of total GDP described in this article were initially released in May. Estimates of the components of GDP were later released during separate visits to the four territories. According to these estimates, real GDP—GDP adjusted to remove price changes—grew

Aya Hamano, Nicole M. Mayerhauser, Clinton P. McCully, and Carol E. Moylan are all economists at the Bureau of Economic Analysis. Marc Rubin, senior economist at the Census Bureau's International Programs Center, previously developed a set of preliminary gross domestic product estimates for the territories. His work was based on the five summary account framework used by BEA before its 2003 comprehensive revision of the national income and product accounts.

in each of the territories except the CNMI from 2002 to 2007. American Samoa's GDP grew at an average annual rate of 0.4 percent; Guam's GDP grew at an average annual rate of 1.8 percent; and the U.S. Virgin Islands' GDP grew at an average annual rate of 2.9 percent. In contrast, the CNMI's GDP decreased at an average annual rate of 4.2 percent. (For comparison, the average annual growth rate for the United States excluding the territories was 2.7 percent over this period.)<sup>2</sup>

This GDP measurement project represents an important first step toward achieving BEA and OIA's ultimate goal: to integrate these territories not only into the estimates of national GDP but also into the full set of the national income and product accounts (NIPAs). Currently, the NIPAs cover the 50 states and the District of Columbia, and transactions with the territories are included in transactions with the "rest-of-theworld."

A primary obstacle to realizing this long-term goal is the lack of coverage of these four territories by most of the major surveys used by BEA to produce its estimates of GDP and related economic measures.<sup>3</sup> Because the territories are not within the scope of most of these surveys, BEA depended heavily on the assistance and information provided by each of the territorial governments. (For a complete list of contributors, see the box "Acknowledgments.")

The estimates of GDP for American Samoa, the CNMI, Guam, and the U.S. Virgin Islands are presented in this article. The accompanying tables show

<sup>1.</sup> OIA is the federal agency that manages the federal government's relations with the governments of American Samoa, CNMI, Guam, and the U.S. Virgin Islands. It works with these territories to encourage economic development, transparency of government, financial stability, and accountability.

<sup>2.</sup> Before the release of the 2010 annual revision of the NIPAs, the average annual growth rate for U.S. real GDP from 2002 to 2007 was 2.8 percent, as stated in the territorial GDP releases.

<sup>3.</sup> These surveys include merchant wholesale trade and retail trade surveys; the annual capital expenditures survey; value of construction put in place; the service annual survey; the annual survey of manufactures; manufacturers' shipments, inventories, and orders; and government finances.

estimates of GDP and its major components, including consumer spending, private fixed investment, private inventory investment, net exports of goods and services, and government spending.4 The methods used to derive the estimates for all four territories are described in the appendix "Summary of Methodologies."

#### Real GDP Growth Highlights

#### American Samoa

From 2002 to 2007, real gross domestic product of American Samoa increased at an average annual rate of 0.4 percent. Real GDP increased in each year except 2006 (table 1). The population of American Samoa increased at an average annual rate of 2.3 percent, and per capita real GDP decreased at an average annual rate of 1.9 percent. The price index for GDP decreased at an average annual rate of 0.5 percent; the price index for consumer spending increased at an average annual rate of 3.0 percent.

The largest private industry in American Samoa from 2002 to 2007 was the tuna canning industry. Between 2002 and 2007, the tuna cannery share of total private employment averaged 42 percent.<sup>5</sup> Exports of the canneries accounted for over 90 percent of total exports from 2002 to 2007. Imports associated with the canneries accounted for a large portion of total imports. These imports included tin plates, landed fish, and petroleum products used by the canneries. The primary component of inventory investment was tin plates used by the canneries.

The estimates of GDP for American Samoa show the impact of the tuna canning industry on the economic growth of the territory. Changes in exports, imports, and inventory investment associated with the tuna canning industry accounted for much of the yearto-year variation in real GDP growth between 2002 and 2007. For example, the increase in real GDP in 2005 reflected an increase in cannery exports and a decrease in cannery imports that were partly offset by a decrease in cannery inventory investment. The decrease in real GDP in 2006 reflected a decrease in cannery exports that was partly offset by a decrease in cannery imports and a smaller decumulation of cannery inventories.

Consumer spending and government spending also significantly affected economic growth from 2002 to 2007. The growth in real GDP in 2003 reflected an increase in consumer spending (in addition to an

These estimates are percent changes

<sup>4.</sup> Private inventory investment is assumed to be negligible for the CNMI and Guam and is not shown in the tables for these territories. "Consumer spending" refers to "personal consumption expenditures," "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment.

<sup>5.</sup> See Department of Commerce Statistics Division, American Samoa Statistical Yearbook 2008.

increase in inventory investment of the canneries). Consumer spending also increased in 2004; however, this growth was offset by a decrease in government spending that reflected a decrease in major public construction projects. Government spending continued to decrease in each year from 2005 to 2007, largely reflecting decreases in public construction activity.

### **Commonwealth of the Northern Mariana Islands**

From 2002 to 2007, real GDP of CNMI decreased at an average annual rate of 4.2 percent. Real GDP increased in 2003 but decreased in each year from 2004 to 2007 (table 2). The population of the CNMI decreased rapidly as foreign workers left the territory, and per capita real GDP increased at an average annual rate of 0.5 percent. The price index for GDP decreased at an average annual rate of 2.0 percent; the price index for personal consumption expenditures increased at an average annual rate of 0.4 percent.

From 2002 to 2007, the largest private industries in the CNMI were the garment manufacturing industry and the tourism industry. Exports associated with these industries accounted for the vast majority of exports of goods and services. Imports of the garment manufacturing industry were also a major component of total imports of goods. From 2002 and 2007, the garment manufacturing and tourism industries in the CNMI experienced a number of economic shocks. Garment manufacturing was impacted by a reduction of quotas on imports to the United States of foreign textiles and garments. Tourism was affected by the SARS epidemic, the outbreak of avian flu, and the suspension of two major airline carriers' daily flights from Japan.<sup>6</sup>

The estimates of GDP for the CNMI highlight the impact that the garment manufacturing and tourism industries had on the CNMI's economy. For example, the notable decrease in real GDP in 2005 reflected significant decreases in exports of garments and in exports of tourism services. Real GDP continued to decrease in 2006 and 2007, reflecting further decreases in both types of exports.<sup>7</sup>

Consumer spending and territorial government spending also contributed to variations in real GDP growth from 2002 to 2007. The increase in real GDP in 2003 was more than accounted for by an increase in

<sup>1.</sup> These estimates are percent changes

<sup>6.</sup> See Marianas Visitors Authority "Japan Arrivals Down 28% in April" (May 2007) at www.mymarianas.com/html/display.cfm?sid=1676.

<sup>7.</sup> According to data published by the CNMI Department of Commerce, from 2005 to 2007, exports of garments measured in current dollars fell by over 50 percent, and the number of visitor arrivals decreased by over 20 percent. See "Economic Indicator" (January–March 2009).

consumer spending.8 The decrease in real GDP in 2004 was more than accounted for by decreases in territorial government spending and in consumer spending. The decrease in real GDP in 2005 reflected continued decreases in consumer spending and territorial government spending in addition to the decrease in exports. The decrease in real GDP in 2007 also reflected a significant decrease in territorial government spending.

#### Guam

From 2002 to 2007, the real GDP of Guam grew at an average annual rate of 1.8 percent (table 3). The population increased at an average annual rate of 1.5 percent, and real GDP per capita increased at an average annual rate of 0.3 percent. The price index for GDP increased at an average annual rate of 1.9 percent; the price index for personal consumption expenditures increased at an average annual rate of 2.6 percent.

The primary sectors of Guam's economy are government and tourism. The federal government's presence in Guam is much larger than in American Samoa, the CNMI, and the U.S. Virgin Islands. In 2007, federal government expenditures accounted for more than 25 percent of current-dollar GDP; the majority of these expenditures reflected federal defense spending. Exports of tourism services were the primary component of exports of services, accounting for more than 15 percent of current-dollar GDP in 2007.9 Guam's tourism industry was affected by a number of external factors during this period, including the SARS epidemic and the outbreak of avian flu that also affected the CNMI's tourism industry.

The estimates of the major components of Guam's GDP show that changes in government spending and in exports of tourism services accounted for much of the year-to-year volatility in real GDP growth. The estimates also show that changes in consumer spending significantly affected economic growth. The decrease in real GDP in 2003 reflected decreases in consumer spending and in exports of tourism services that were partly offset by a decrease in imports and an increase in government spending (including construction spending). 10 After contracting in 2003, Guam's economy rebounded in 2004. The growth in real GDP

Contributions to Percent Change in Real GDP

Services.....

<sup>8.</sup> Prices of consumer good and services decreased in 2003 (table 2). This decrease primarily reflected movements in the consumer price index for the territory published by the Central Statistics Division of the CNMI Department of Commerce.

<sup>9.</sup> The tourism industry in Guam is highly dependent on visitors from Asia, particularly visitors from Japan and Korea. Together, these two markets accounted for almost 90 percent of total air arrivals in Guam from 2002 to 2007. See Bureau of Statistics and Plans, Guam Statistical Yearbook

<sup>10.</sup> Guam's economy was affected in 2003 by the aftermath of Typhoon Pongsona, which struck Guam in December 2002.

<sup>-0.03</sup> -0.14-0.030.01 -0.24 Government consumption 0.93 2.28 2.85 -0.27expenditures and gross investment

These estimates are percent changes

in 2004 was more than accounted for by increases in consumer spending and in exports of tourism services. Real GDP continued to increase in 2005; this increase was more than accounted for by increases in consumer spending and in government spending. The largest contributor to the decrease in real GDP in 2006 was a decrease in exports of tourism services. In 2007, real GDP increased, reflecting positive contributions from all major components of GDP except net exports of goods and services; the largest positive contributions were from government spending and consumer spending.

#### **U.S. Virgin Islands**

From 2002 to 2007, real GDP of the U.S. Virgin Islands grew at an average annual rate of 2.9 percent. Real GDP decreased in 2003 but increased in each year from 2004 to 2007 (table 4). The population increased at an average annual rate of 0.8 percent, and per capita real GDP increased at an average annual rate of 2.0 percent. The price index for GDP increased at an average annual rate of 5.2 percent; the price index for personal consumption expenditures increased at an average annual rate of 4.5 percent.

The estimates of GDP for the U.S. Virgin Islands highlight the effect that the oil refining industry has had on the territory's economic growth from 2002 to 2007. Along with tourism, oil refining ranks among the most important industries in the territory. In fact, the Hovensa oil refinery, located on St. Croix, is one of the world's largest oil refineries. Changes in exports, imports, and investment (including inventory investment) associated with the oil refining industry accounted for much of the year-to-year variation in real GDP growth. For example, the decrease in real GDP in 2003 reflected a decrease in construction activity due to the completion in 2002 of several large private and public sector projects, including a \$0.5 billion coker unit for the oil refinery in St. Croix.<sup>13</sup> The increase in real GDP in 2005 also reflected an increase in construction activity associated with the oil refinery: specifically, the construction of a desulfurization unit that began in September of that year.<sup>14</sup> The increase in real GDP in 2007 largely reflected trade activities associated with the oil refining industry. The decrease in imports of crude oil was far greater than the decrease in exports

<sup>1.</sup> These estimates are percent changes.

<sup>11.</sup> Total air arrivals increased by 31 percent in 2004 following a decrease of 17 percent in 2003. See 2008 Guam Statistical Yearbook.

<sup>12.</sup> The decrease in exports of tourism services partly reflected a decrease in average on-island expenditures by Japanese tourists. See 2008 Guam Statistical Yearbook.

<sup>13.</sup> See Virgin Islands Bureau of Economic Research, *U.S. Virgin Islands Economic Review* (January 2003) at www.usviber.org/pdfs/EconReviewJan2003.pdf.

<sup>14.</sup> See Virgin Islands Bureau of Economic Research, U.S. Virgin Islands Economic Review and Industry Outlook (March 2006) at www.usviber.org/pdfs/EconReviewMar2006.pdf.

of refined petroleum, resulting in a large increase in net exports of goods and services. A decrease in petroleum inventory investment partly offset the increase in net exports.

The strength of the private economy and growth in corporate profits tax revenue in 2006 and 2007 helped to fund increases in territorial government spending. These increases in government spending contributed significantly to real GDP growth in 2006 and 2007.

Other notable factors affecting economic growth in the U.S. Virgin Islands were changes in territorial government spending (other than those described above), changes in exports of tourism services, and changes in consumer spending. As noted previously, the decrease in real GDP in 2003 reflected the completion in 2002 of several private and public sector construction projects. The major government construction projects included the expansion of St. Croix's Henry E. Rohlsen Airport and various road and housing construction projects.<sup>15</sup> The increase in real GDP in 2004 largely reflected an increase in exports of tourism services, which is the primary component of exports of services for the U.S. Virgin Islands. In 2005 and 2006, increases in consumer spending contributed significantly to the increases in real GDP.

#### **Future Directions**

Over the next several months, BEA will continue to work closely with the territorial governments to extend the estimates of GDP for the four territories. Estimates for 2008 and 2009, in addition to revised estimates for 2002–2007, are scheduled to be released in the spring of 2011.

It is important to note that GDP is only one summary measure of economic activity. Future enhancements to the estimates for the four territories (subject to data availability) include developing other measures found in the full set of the NIPAs, such as personal income and saving rates.

#### Appendix: Summary of Methodologies

Gross domestic product (GDP) is measured as the sum of consumer spending (or "personal consumption expenditures"), private investment, net exports (exports less imports) of goods and services, and government spending (or "government consumption expenditures and gross investment"). The methodologies used to estimate the major components of GDP for American

Samoa, the Commonwealth of the Northern Mariana Islands (CNMI), Guam, and the U.S. Virgin Islands are summarized below. These methods are consistent with the methods used to estimate U.S. GDP. Information from the Economic Census of Island Areas was used to establish levels of GDP for each territory for 2002 and 2007. Annual series were then developed and used to estimate GDP for the intervening years.

Consumer spending. Personal consumption expenditures (PCE) consists primarily of purchases of goods and services by households.16 For American Samoa, the CNMI, and Guam, economic census data on the consumer shares of sales for each industry sector were used to benchmark the estimates of household purchases of most goods. For the CNMI and Guam, annual growth rates for most goods and services were derived using gross business revenue data; for American Samoa, annual growth rates for most goods were derived using data on imports of goods. Annual estimates of goods for the U.S. Virgin Islands were mostly based on imports data from the Census Bureau's U.S.Trade With Puerto Rico and U.S. Possessions (series FT895) and U.S. International Trade in Goods and Services (series FT900).17

Economic census data on the consumer shares of sales for each industry sector were used for all four territories to benchmark the estimates of most services except housing and utilities. Annual growth rates were derived primarily using gross business revenue data for the CNMI and Guam and wage data for American Samoa and the U.S. Virgin Islands. Housing services and utilities services were estimated independently. Housing services were estimated using information on the number of occupied housing units and average rental rates reported in the Census of Population and Housing. Utilities services were estimated using revenue data reported by government-owned utilities and by the U.S. Energy Information Administration. Other services not covered by the economic census —such as financial services furnished without payment, insurance, and sales by government—were also estimated independently.

**Private investment.** Private investment consists of spending on new fixed assets—equipment, software and structures by private businesses, and improvements to existing assets. It also includes the construc-

<sup>15.</sup> See Virgin Islands Bureau of Economic Research, U.S. Virgin Islands Economic Review (January 2003).

<sup>16.</sup> A small portion of PCE consists of purchases by nonprofit institutions serving households.

<sup>17.</sup> It was assumed for both American Samoa and the U.S. Virgin Islands that most consumer purchases of goods were imported.

#### **Acknowledgments**

Aya Hamano of the Bureau of Economic Analysis (BEA) and Wali Osman of the Office of Insular Affairs (OIA) oversaw the preparation of the first official estimates of gross domestic product for American Samoa, the Commonwealth of the Northern Mariana Islands (CNMI), Guam, and the U.S. Virgin Islands.

From BEA, Clinton P. McCully prepared the estimates of GDP for American Samoa, Nicole M. Mayerhauser prepared the estimates of GDP for the CNMI and Guam, and Carol E. Moylan prepared the estimates of GDP for the U.S. Virgin Islands. Brent R. Moulton, Associate Director for National Economic Accounts, and Brian C. Moyer, Associate Director for Industry Economic Accounts, provided overall supervision.

Other significant contributors from BEA were: Jennifer A. Bennett, Elizabeth C. Bernstein, Eric A. Bryda, Benjamin D. Cowan, Matthew M. Donahoe, Alyssa E. Holdren, Robert J. Kornfeld, Dennis Lally, Kristina L. Maze, Charles Ian Mead, Edward T. Morgan, William H. Nicolls IV, Lisa C. Ninomiya, Nadia F. Sadée, Andrew G. Schmidt, Shane T. Taylor, Elizabeth M. Terroni, and Matthew D. Tschetter.

From the U.S. Census Bureau, Marc Rubin prepared data analysis and provided a detailed methodological and data review of the GDP estimates. The Company Statistics Division provided data from the Economic Census of Island Areas.

From the U.S. Department of the Interior, Tony Babauta, Assistant Secretary for Insular Affairs, and Nikolao Pula, Director of OIA, provided support throughout the project. Lydia Faleafine-Nomura, Basil Ottley, and R. Jeffrey Schorr of OIA served as liaisons between BEA and the territorial governments.

Brian Hannon, Survey Statistics Consultant, provided Household Income and Expenditure Survey data.

BEA would also like to thank the governor's offices of the four territories for their contributions. Governor Togiola T.A. Tulafono and Lieutenant Governor Faoa A. Sunia of American Samoa, Governor Benigno Fitial and Lieutenant Governor Eloy Inos of the CNMI, Governor Felix P. Camacho and Lieutenant Governor Michael W. Cruz, MD of Guam, and Governor John P. de Jongh and Lieutenant Governor Gregory R. Francis of the U.S. Virgin Islands contributed guidance and support throughout the project. Other key contributors are listed below.

American Samoa: Faleseu Eliu Paopao, Director, Department of Commerce (DOC); Lelei Peau, Deputy Director, DOC; Vai Filiga, Chief Statistician, DOC; Alex Zodiacal, Manager, DOC; Ma'u A-Leha, Economic Planner Practitioner, DOC; Melvin Joseph, Manager, Tax Office, Department of Treasury; and Glen Lefiti, Chief Customs Officer, Department of Treasury.

CNMI: Michael Ada, Secretary, Department of Commerce; Ivan A. Blanco, Director, Central Statistics Division (CSD); Justin H. Andrew, Computer Specialist, CSD; Edward Deleon Guerrero, Director, Commonwealth Ports Authority (CPA); MaryAnn Q. Lizama, Manager of the Port of Saipan, CPA; Derek T. Sasamoto, Comptroller, CPA; Perry J. P. Tenorio, Director, Marianas Visitors Authority (MVA); Judy C. Torres, Deputy Director, MVA; Robert A. Schrack, Acting Secretary, Department of Finance (DOF); Connie Salas, Acting Secretary, DOF; Canice Diaz, Revenue Agent, DOF; Marie T. Muna, Computer Programmer, DOF; Vivian P. Nogis, Statistics Specialist, DOF.

Guam: J. George Bamba, Chief of Staff, Office of the Governor; Alberto A. Lamorena V, Director, Bureau of Statistics and Plans (BSP); Albert Perez, Chief Economist, BSP; Machelle Leon Guerrero, Chief Planner, BSP; Bertha Duenas, Director, Bureau of Budget and Management; Lourdes Perez, Director, Department of Administration (DOA); Ken Borja, Management Analyst, DOA; Goody Rosario, Accounting Supervisor, DOA; Maria S. Connelley, Director, Department of Labor (DOL); Gary Hiles, Chief Economist, DOL; Gerard Limtiaco, Program Coordinator, DOL; Artemio Ilagan, Director, Department of Revenue and Taxation (DRT); Paul J. Pablo, Deputy Tax Commissioner, DRT; Jennifer Untalan, Revenue Agent, DRT; Doris F. Brooks, Public Auditor, Office of the Public Auditor; Gerry Perez, General Manager, Guam Visitors Bureau (GVB); Deborah M. Phillips, Administrator, GVB.

U.S. Virgin Islands: Lauritz Mills, Director, Virgin Islands Bureau of Economic Research (VIBER); Donnie Dorsett, Senior Economist, VIBER; Claudette Watson-Anderson, Director, Virgin Islands Bureau of Internal Revenue; Sandra Rey, Senior Research Analyst, Virgin Islands Department of Labor; Virgin Islands Office of Management and Budget; Virgin Islands Department of Finance.

tion of new residential structures and the improvements to these structures. <sup>18</sup> Because of data limitations, estimates of private investment in equipment and software and in structures were indirectly measured. Investment in equipment and software was estimated based on the value of imports of capital goods or on economic census data on the business share of sales of the wholesale durable goods sector. <sup>19</sup> Investment in structures was estimated using building permit data and construction industry receipts less sales to other construction firms and less sales to government as reported in the economic census. <sup>20</sup>

Net exports of goods and services. The estimates of exports of goods to the United States from the four territories reflected data from the Census Bureau's FT895 publication. Estimates of exports of goods from American Samoa, the CNMI, and Guam to the rest of the world were based on information compiled by the territorial governments. Estimates of exports of goods from the U.S. Virgin Islands to the rest of the world were based on data from the series FT900 publication. Estimates of imports of goods for American Samoa, the CNMI, and Guam were based on values or quantities of imported commodities reported by the territorial governments. For the U.S. Virgin Islands, estimates of imports of goods reflected data from the series FT895 and FT900 publications.

Information on imports of services and on exports of services other than tourism was limited. Estimates of exports of tourism services for the CNMI and Guam were based on survey data on tourist expenditures and visitor arrivals provided by the territorial government visitors' authorities. For the U.S. Virgin Islands, the estimate of exports of tourism services was based on total visitor expenditures published by the Virgin Islands Bureau of Economic Research.<sup>21</sup>

Government consumption expenditures and gross investment. The estimates of government expenditures were prepared separately for the territorial governments and for the federal government sector. The primary sources of information for the territorial governments estimates were financial statements of the primary government and of the government component units. The main data source for the federal government estimates was the *Consolidated Federal Funds Report*, an annual report published by the U.S. Census Bureau.

Estimates of real GDP. Inflation-adjusted estimates of total GDP and its components were derived within a chain-type Fisher Index framework. For most of the detailed components of GDP, inflation-adjusted estimates were calculated by deflating each component using an appropriate price index. Consumer price indexes produced by each territorial government were used to deflate most of the detailed components of PCE. Inflation-adjusted estimates for most components other than PCE were calculated using U.S. prices from the U.S. Bureau of Labor Statistics.

<sup>18.</sup> For American Samoa and the U.S. Virgin Islands, private investment also includes private inventory investment (or "change in private inventories").

<sup>19.</sup> For Guam, after discussion with officials in the Guam Bureau of Statistics and Plans, it was assumed that a majority of the goods purchased by durable goods wholesalers for resale were imported.

<sup>20.</sup> The method assumed that the receipts by construction industry reported in the economic census were collected for work done in the same year.

<sup>21.</sup> Exports of tourism services were a small component of American Samoa's economy and are not discussed.

### Research Spotlight

# A Reconciliation of Health Care Expenditures in the National Health Expenditures Accounts and in Gross Domestic Product

By Micah B. Hartman, Robert J. Kornfeld, and Aaron C. Catlin

THE SIZE and scope of the recently passed Patient ■ Protection and Affordable Care Act highlights the importance of health care spending to our economy. Understanding and accounting for health care spending in a comprehensive and consistent way continues to be of paramount importance to researchers, policymakers, and business leaders. Much of this attention results from the dramatic increase in the share of the economy devoted to health care over the past half-century, from 5.2 percent in 1960 to 16.2 percent in 2008, as well as the expectation that the share will increase to more than 19 percent by 2019. To gain insights into the consumption of medical goods and services, the financing of these purchases, and the share of our nation's economic output that is devoted to health care spending, it is important to understand and reconcile different, widely cited estimates of health care expendi-

This article presents a summarized overview of a new working paper, "Health Care Expenditures in the National Health Expenditures Accounts and in Gross Domestic Product: A Reconciliation." This paper reconciles the national health expenditure accounts (NHEA), the official estimates of health care spending in the United States from the Centers for Medicare and Medicaid Services (CMS), and the estimates of health expenditures that are part of gross domestic product (GDP) produced by the Bureau of Economic Analysis (BEA) as part of the national income and product accounts (NIPAs). This research provides a detailed reconciliation of estimates of specific categories of health expenditures and identifies and quantifies the similarities and differences between the two accounts, building

Micah B. Hartman is a statistician with the Centers for Medicare and Medicaid Services, Office of the Actuary. Aaron C. Catlin is the Deputy Director of the National Health Statistics Group at the Centers for Medicare and Medicaid Services, Office of the Actuary. Robert J. Kornfeld is the Deputy Chief of the National Income and Wealth Division at the Bureau of Economic Analysis.

on previous research to provide the most complete indepth reconciliation to date.<sup>2</sup>

This reconciliation marks a milestone in BEA's longterm efforts to create a health care expenditures satellite account. The goal of the account is to provide detailed statistics about the health care industry and its role in the economy.<sup>3</sup>

The estimates of total national health spending in the NHEA and in the GDP data are relatively similar; they differ by less than 2 percent in most years back to 1960 (chart 1). This similarity is not surprising as the two accounts measure spending for a similar set of medical goods and services and rely on many similar data sources. At a disaggregated level, however, larger differences in the estimates of narrower categories of health care spending emerge. These differences need to be explained so that data users understand how to use each data set to best meet their needs.

### Health Expenditures in the NHEA and GDP: Key Differences

Both the NHEA and the health-related expenditures within GDP are generally consistent with the definitions of health care activities in the *System of Health Accounts* from the Organisation for Economic Co-Operation and Development. In the United States, the Census Bureau uses the North American Industry

Classification System (NAICS) to classify all business establishments, including those in the health care sector. BEA, CMS, and many of the agencies that collect primary source data used to produce the NHEA and GDP estimates also rely on NAICS to classify statistics on the U.S. economy (table 1). However, this data often requires numerous adjustments to produce estimates consistent with the primary goals of BEA and CMS. These adjustments are the focus of the reconciliation as they ultimately define the majority of the differences between the two accounts.

The primary goal of the NHEA is to measure total domestic health sector expenditures in a comprehensive and consistent way that allows for analysis of spending for health care goods and services and the sources of funds that pay for that care. An important goal of the NIPAs is to produce internationally

NHEA National health expenditure accounts

<sup>1.</sup> In the GDP statistics, most of the receipts of each industry are for purchases of a main or primary commodity. Industry receipts differ from commodity expenditures because commodity expenditures exclude industry receipts from other sources and include commodity sales by other industries, and for other reasons.

<sup>2.</sup> In the NHEA, optometrists' services are classified with "other" professional services; eyewear is classified with durable medical equipment

<sup>3.</sup> Unless funded by Medicare, Medicaid, or Children's Health Insurance Program

comparable estimates of GDP, which measures the final demand for goods and services produced in the United States. The GDP estimates, unlike the NHEA estimates, do not identify the sources of funds (such as out-of-pocket spending, private insurance, or Medicaid and other government programs) for each of the categories of health spending in GDP.

CMS and BEA have identified five general sources of discrepancies between the estimates of spending for health care goods and services in the NHEA and in GDP:

- The classification of certain industries, goods, and services
- The treatment of government facilities and expenditures
- BEA's adjustments to estimate final commodity demand by households
- The treatment of nonprofit institutions serving households (NPISHs)
- The use of some different data sources and estimation methodologies

#### Classification of industries and commodities

Differences in the classification of health spending in the NHEA and GDP accounts contribute to discrepancies in total health spending and in the underlying detailed estimates. The two accounts define "health-related" spending in different ways, contributing to some instances where detailed spending categories are classified as health-related in one account, but not in the other. Additionally, some categories of health spending that are included in both accounts are classified under different major spending categories. For example, services of optometrists are classified under personal consumption expenditures (PCE) for therapeutic appliances and equipment in the GDP statistics but are included in other professional services in the NHEA.

### The treatment of government facilities and expenditures

Government agencies may directly purchase health care that is provided by a government-owned health care facility (such as a Department of Veterans Affairs hospital) or that is provided by privately owned facilities (such as a private hospital where a veteran may receive care paid for by a Department of Veterans Affairs facility). The treatment of government-purchased health care differs in the NHEA and GDP accounts: the NHEA estimates classify government outlays for these public facilities with the spending for the related health care industry (for example, with hospitals or physicians), while the GDP estimates classify these expenditures as part of government consumption ex-

penditures. This different treatment of governmentowned health care providers results in discrepancies in the estimates of some categories of health care spending (such as hospitals) but does not lead to large discrepancies in total health care spending.

The two accounts, on the other hand, have a similar treatment of sales of health care to households by government-owned facilities, such as state and local government hospitals. These sales (financed by households or government or private insurers) are treated as expenditures for the industry in the NHEA (hospitals) or the commodity in GDP (hospital services).

Additionally, the two accounts have a slightly different treatment of expenditures financed by the major government insurance programs (Medicare, Medicaid, and Childrens' Health Insurance Program). In the NIPAs, these insurance programs are classified as "government social benefits" that finance expenditures that make up GDP; in the NHEA, these programs are a "source of funding" for health care expenditures. With few exceptions, the NHEA classify all of these expenditures, including Medicaid waiver spending that is intended to improve the quality of life and reduce costly inpatient stays, as health spending. While these funds also generally pay for health-related spending in the GDP data, some of these funds may purchase services that are grouped with nonhealth spending categories, such as social assistance, in the GDP estimates. This different treatment of government insurance programs contributes to slightly higher total health care spending in the NHEA.

### BEA's adjustments to estimate final commodity demand

While the NHEA measure total revenues of NAICSbased health care industries (such as freestanding nursing homes), the GDP data measure spending for health care commodities (goods or services), such as nursing home services. For example, in the GDP accounts, expenditures for nursing home care include the sales of nursing home services from both freestanding nursing homes and other providers (such as hospitals) and exclude receipts from nonpatient services (such as parking lots) and for other commodities provided by nursing homes to patients (drugs or lab work). In the NHEA, nursing home care includes total revenues of establishments classified as freestanding nursing homes by the NAICS, while hospital-based nursing home care is included in the estimate of hospital spending. As a result, the sales of a health care industry are generally different from the sales of the industry's primary health care commodity. The GDP estimates reflect numerous adjustments that convert industry sales data that are commonly reported in source data to final commodity demand.

In addition, the NHEA include adjustments for intermediate sales, nonbenchmark-year interpolation and extrapolation, the inclusion of nonpatient revenues, and other miscellaneous adjustments. The GDP statistics incorporate adjustments to estimate final commodity demand and other adjustments.

#### The treatment of NPISHs

In the GDP data, the large portion of PCE for services known as household consumption expenditures (HCE) consists mainly of receipts from sales of services to households. The GDP data also report a second category of PCE for services that are not reported explicitly in the NHEA: final consumption expenditures of nonprofit institutions serving households, or NPISHs. These expenditures are measured residually as gross output (the cost of inputs to produce the service, including compensation and intermediate purchases) less sales to households and other sectors and less ownaccount investment (construction and software produced by NPISHs for their own use). Final consumption expenditures by NPISHs measure the production of services provided to households without charge. In the NHEA, health care provided by nonprofit (and forprofit) institutions is measured as total net revenue, which includes nonpatient and nonoperating revenue. Although the final expenditures of NPISHs in the GDP estimates are to some extent funded by nonpatient revenues that are included in the NHEA, these two items are not necessarily equal, so the different treatment of nonprofits leads to some differences in estimated health expenditures.

### The use of different data sources and methodologies

While many of the data sources used in the NHEA and NIPA are the same, in some estimates, CMS and BEA rely on different data sources. For example, expenditures for hospital care are measured in the GDP estimates using data from the Census Bureau, while in the NHEA, the American Hospital Association (AHA) Annual Survey is used as a benchmark source. Also, the two agencies have different revision schedules, which stipulate the release dates for revised data (which incorporate revisions of source data and other changes) and often lead to the use of different "vintages" of source data. Even when the two accounts use the same data sources and vintages, some differences in methodologies (other than those described above) can lead to different estimates.

#### Summary of the Reconciliation of Expenditures for Health-Related Goods and Services

Most health care spending in the United States, more than 80 percent, can be attributed to expenditures for medical goods and services—including care provided by physicians and clinics, hospitals, other professionals, dentists, nursing homes, home health agencies—as well as purchases of nondurable and durable goods and retail prescription drugs (tables 2 and 3). For the estimates of most, but not all, of these goods and

services, CMS and BEA rely on the same data sources, such as the quinquennial Economic Census and the Service Annual Survey from the Census Bureau. However, the NHEA and GDP estimates incorporate several adjustments to the source data to produce estimates consistent with the core functions of each program (chart 2 and table 4).

## Aggregate expenditures for physician, clinical, medical lab, and other professional services

At the most detailed level, the NHEA and the GDP data classify spending for physician, clinical, medical lab, and other professional services (in 2008, \$561.9 billion in NHE, compared with \$565.8 billion in HCE) in slightly different ways, making it difficult to reconcile detailed categories. The annual discrepancy between the sums of estimates of NHE and HCE for these services ranges from \$1.8 to -\$8.7 billion, or no more than 2 percent. The differences are mainly due to BEA's adjustments to estimate final commodity demand, the treatment of optometrists' services, and other differences in the way revenues are classified.

The more detailed estimate of NHE for physician and clinical services is relatively higher than the estimate of HCE for physician services and medical labs mainly because it includes expenditures for a broader array of outpatient care centers services. The NHE estimate also includes government spending for public health clinics run by the Department of Veterans Affairs, the Indian Health Service, and the Coast Guard Academy, while the GDP data classify this spending as part of government consumption expenditures.<sup>4</sup> The HCE estimate for physician services and medical labs also incorporates several adjustments which, on balance, subtract from the level of total industry sales to derive an estimate of final commodity demand.

The estimate of HCE for other professional medical services is larger than the estimate of NHE for other professional services mainly because it includes spending for services from a wider array of industries that are included in the estimate of NHE for physician and clinical service. In addition, BEA's adjustments to estimate final commodity demand by household have the net effect of raising the estimate of HCE for other professional medical services slightly above the level of industry sales in most years. Both agencies include estimates of select expenditures for ambulance services, although the NHEA estimate only covers Medicare and

Note: The total NHEA health expenditures less total GDP health expenditures difference results from summing all of the detail differences as well as NHE other personal health care and NHE for administration of philanthropy and private research and then subtracting the GDP final consumption expenditures of nonprofit institutions serving households

HCE Household consumption expenditures

NHE National health expenditures

NIPAs National income and product accounts

PCE Personal consumption expenditures

<sup>1.</sup> National health expenditures are from the national health expenditure accounts of the Centers for Medicare and Medicaid Services. Household consumption expenditures and PCE are part of GDP and

#### **Dental services**

For 1997–2008, the estimate of HCE for dental services exceeds the estimate of NHE for dental care by \$0.7–\$2.9, or 2–3 percent (in 2008, \$101.2 billion in NHE, compared with \$103.5 billion in HCE). Both estimates consist mainly of the sales of offices of dentists (NAICS 6212), as reported by the Economic Census and the Service Annual Survey. The main source of the discrepancy in the two estimates is BEA's adjustments to estimate final commodity demand. CMS makes minor adjustments to its estimates based on data from the consumer price index and current employment statistics from BLS.

#### Home health care

For 1997–2008, HCE for home health care services exceeds the NHE for home health care by \$11.1-\$13.4 billion, or 19–41 percent of the NHE estimate (in 2008, \$64.7 billion in NHE, compared with \$77.9 billion in HCE). Both NHE and HCE for home health care consist mostly of the sales of for-profit and nonprofit home health care agencies (NAICS 6216), as reported by the Economic Census and the Service Annual Survey. Data from the Economic Census and Service Annual Survey only cover private providers of home health care so both agencies add an independent estimate of government provided home health care. The HCE estimate for government sales of home health care is \$9-\$13 billion, while the NHEA estimate is under \$2 billion annually. The HCE estimate includes a net upward adjustment to estimate final commodity demand and the NHE estimate adds other miscellaneous statistical adjustments.

#### Nursing home care

For 1997-2008, NHE for nursing home care exceeds HCE for nursing home services by \$7.1-\$11.4 billion annually, or by 7–11 percent (in 2008, \$138.4 billion in NHE, compared with \$127.0 billion in HCE). Both measures include the sales of nursing care facilities (NAICS 623110) and continuing care retirement communities (NAICS 623311), based on the Economic Census and the Service Annual Survey. The NHE estimate is larger because it includes government outlays for nursing homes operated by the Department of Veterans Affairs and because BEA's adjustments to estimate final demand reduce the estimates of HCE below the level of industry sales. The two accounts also differ in the treatment of expenditures for facilities for persons with developmental disabilities; these estimated expenditures are larger in the GDP data in most years. The NHE estimate includes all Medicaid program

spending for Intermediate Care Facilities for the Mentally Retarded. The HCE estimate includes final household demand for the services of residential mental retardation facilities (NAICS 62321), as reported by the Census Bureau.<sup>5</sup>

#### Hospital care

Almost one-third of health care spending pays for hospital services. For 1997-2008, NHE for hospital care exceeds HCE for hospital services by \$16.1-\$48.4 billion annually, or 4–8 percent (in 2008, \$718.4 billion in NHE, compared with \$680.0 billion in HCE). The NHE estimate is relatively higher because it includes government outlays for federal, state, and local government-owned hospitals, while BEA's adjustments to estimate final commodity demand remove a significant amount of hospital spending including nonpatient revenue and revenue for hospital-based home health and nursing home care. The BEA estimate of total spending for nonfederal hospitals is, on the other hand, higher than the CMS estimate: the BEA estimate is based on data from the Census Bureau, while the CMS estimate is based primarily on AHA data.

#### **Prescription drugs**

The estimates of both PCE and NHE for prescription drugs are based on the Economic Census and sales data from IMS Health, Inc. Both estimates include sales of drug stores, grocery stores, department stores, mail order, and other retailers. For 1997-2008, the estimates of PCE for prescription drugs are nevertheless \$4.5-\$19.9 billion, or 4-12 percent, higher than the NHE estimates (in 2008, \$234.1 billion in NHE, compared with \$244.4 billion in PCE). While both CMS and BEA estimate prescription drug sales by combining estimates of the same two data sources, the two agencies use slightly different methodologies. The PCE estimates are also relatively higher because the NHEA remove manufacturers' rebates and because the PCE estimates include additional prescription drug sales by health care service providers. Only the NHE estimate, on the other hand, adds government outlays for drugs provided by government-owned mail-order facilities.

#### Nondurable medical products

In both the NHEA and the NIPA PCE estimates, "non-durable medical products" consists of nonprescription

<sup>5.</sup> CMS does not include nonMedicaid spending for NAICS 63221 because some of the services provided fall outside the current boundary of health care in the NHEA. Both measures of health care spending exclude homes for the elderly (623312) and other residential care facilities (6239). These industries provide residential facilities rather than health care.

drugs, medical sundries, and related products. From 1997–2008, the NHE for nondurable medical goods exceeds PCE for nondurable medical goods by \$2.5–\$5.8 billion, or 9–27 percent (in 2008, \$39.0 billion in NHE, compared with \$35.1 billion in PCE). The two estimates have a different methodology for estimating spending for nonprescription drugs, and the NHE estimate is relatively higher. In addition, CMS includes the purchases of a slightly different array of goods.

### NHE for durable medical equipment, PCE for therapeutic appliances and equipment

Expenditures in this category represent retail sales of health-related items that have a useful life of more than 3 years, such as contact lenses, eyeglasses and other ophthalmic products, surgical and orthopedic products, medical equipment, and hearing aids. The NHEA estimates are based partly on BEA's benchmark input-output tables and PCE estimates. From 1997–2008, the PCE estimate is \$7.2–\$18.0 billion, or 40–69 percent, larger (in 2008, \$26.6 billion in NHE. compared with \$44.6 billion in PCE). Some of the discrepancy arises because only the PCE estimate includes the services of optometrists, which the NHEA classifies as part of other professional services. The remainder is due in large part to a different selection of goods for this category.<sup>6</sup>

#### **Other Health-Related Expenditures**

#### NHE for other personal health care

NHE for other personal health care includes two types of expenditures that are not explicitly reported in the GDP data. Employers spend an estimated \$3.6-\$6.6 billion per year on industrial inplant services for employees at work. These expenditures are not included in BEA's estimates of health care spending in GDP.<sup>7</sup> Other personal health care also includes "expenditures for medical care not delivered in traditional medical providers sites," which consist of care delivered at homes, community centers, senior citizens centers, schools, and military field stations. One of the largest categories of these expenditures is the Home and Community Waivers programs under Medicaid. Some, but probably not all, of these expenditures appear as part of other categories of health spending in GDP. It seems likely that medical care delivered by nontraditional medical providers is at least partly included in nonhealth categories of expenditures in GDP, such as social assistance.

#### Net cost of private health insurance

In both the NHE and HCE estimates, the net cost of private health insurance is measured as the difference between premiums (paid by employers and employees) and benefits. HCE for net health insurance services includes accident insurance, income loss, private workers compensation as well as employer-sponsored health insurance premiums (for both private and public sector employees), while the NHE net cost of private health insurance includes the net cost of group, individual, self-insured and the health portion of property and casualty insurance. The net cost of private plans that administer public programs such as Medicare Advantage and Medicaid Health Maintenance Organizations are removed from the NHE estimate (but not the HCE estimate) to avoid doublecounting, as these net costs are already counted as administrative costs of government programs. For 1997-2008, the HCE estimate exceeds the NHE estimate by \$28.9–\$69.8 billion annually, or as much as 85 percent, because of the inclusion of different types of insurance services, the use of different data sources, and the different treatment of the net cost of private plans that administer public programs such as Medicare and Medicaid.

#### Capital formation—structures and equipment

For 1997–2008, BEA's estimate of investment by business and government in health-related structures and equipment is \$4.9-\$19.6 billion, or 8-21 percent, higher than CMS's estimate of investment in structures and equipment. Most of the discrepancy between the two estimates of health-related investment arises from a discrepancy in the estimates of investment in private equipment, which are based on different data sources. The two agencies also define investment in equipment in slightly different ways: the NHE estimate includes all capital equipment purchased by medical establishments and is not limited to specific medical equipment or devices, while the GDP estimate measures private investment in all types of health care-related equipment, even if purchased by companies in nonhealth industries. The discrepancies in private investment in structures and government investment in structures and equipment are relatively minor.

### Private research and the administration of philanthropic organizations

The NHEA include two categories of spending that are not included in health-related expenditures of GDP. Private noncommercial research spending (\$4.7 billion in 2008) includes research performed primarily by universities and other nonprofit medical research organizations and is classified as spending for education

CMS includes an estimate for durable medical equipment rental and oxygen rental.

<sup>7.</sup> The estimates of these expenditures are based on private surveys, not the Economic Census or the Service Annual Survey.

in the GDP data. The administrative costs of philanthropic organizations that pay for health care goods and services (\$1.7 billion in 2008) are included as administrative spending in the NHEA.

#### **NPISHs**

Only the GDP data include an estimate of final consumption expenditures of nonprofit institutions serving households, or NPISHs. For 1997–2008, the estimate of final consumption expenditures of NPISHs (outpatient services, hospitals, and nursing homes) ranges from roughly zero to \$13.5 billion. These estimates are well under the levels of nonpatient revenues reported by nonprofit health care providers, which the NHEA include since some of the nonpatient revenues are used by nonprofit health care providers to offset the expenses of providing health care. Consequently, the different treatment of nonprofit providers in the two accounts may lead to discrepancies in estimates of total health care expenditures.

### Government Spending in the NHEA and in GDP

Government consumption, public health, government administration. The remaining expenditures for health care in the two accounts pay for a range of government health-related programs that are not part of the other health-related expenditures. In the NHEA, these remaining expenditures include the administrative expenses of government programs, government public health activity, and government-sponsored research. In the GDP estimates within the NIPAs, these expenditures consist of health-related federal and state and local government consumption expenditures.

Federal government programs. Estimates of federal government consumption expenditures in GDP exceed estimates of the remaining NHE government programs (that is, NHE for administration of government programs, public health programs, and publicly funded research) for 1997-2001. For 2002-2008, the reverse is true. Several categories of expenditures are present in only one of the two measures of federal health expenditures. Some of the health-related federal government consumption expenditures in the GDP estimates are included in NHE for health care goods and services, such as physicians in public clinics (part of physicians and clinical services in the NHEA) and government-owned nursing homes (part of NHE for nursing home care) and hospitals (part of NHE for hospitals). Health-related federal government consumption expenditures in GDP that are excluded from the NHEA include some Environmental Protection

Agency-administered programs, government consumption of fixed capital, and some payments for the retirement funds of retired federal health care workers. Only the NHEA estimate, on the other hand, separately identifies some health-related Department Of Defense (DOD) spending (counted as defense spending in GDP) and spending for federal research grants (counted as spending for education in GDP) and the net cost of private insurance plans that administer portions of the Medicare, Medicaid, Children's Health Insurance Program, and DOD and Department of Veterans Affairs programs.

State and local government programs. For 1997-2008, NHE for the state and local government health care programs (NHE for administration of government programs, public health programs, and publicly funded research) exceeds state and local government consumption expenditures for health in GDP by \$20.2–\$31.6 billion annually. Only the NHEA estimate includes state and local government research funding and the private net cost of public programs administered by private plans. Only the estimate of health-related government consumption expenditures in GDP includes an estimate of the government consumption expenditures of government health care providers, such as home health care providers and hospitals that sell services to households (these types of sales are included in the NHEA estimates for these industries). BEA estimates these government consumption expenditures as gross output (total expenses) less sales (which are classified as HCE or intermediate sales).

#### Conclusion

This reconciliation of estimates of annual health care expenditures in the NHEA and the GDP estimates shows that the two measures capture many similar types of spending for health care goods and services. However, the estimates of specific categories of health expenditures in the two accounts differ for several key reasons. BEA and CMS have slightly different rules for classifying goods and services in categories of healthrelated (and nonhealth-related) spending. The two accounts measure and classify expenditures for government-owned and nonprofit health care providers in different ways. BEA makes several adjustments to estimate final commodity demand by households, while the NHEA remains mostly on an industry basis. In some cases, BEA and CMS rely on different data sources.

Many of the discrepancies in categories of health care spending reflect different rules for classifying similar expenditures; as a result, these discrepancies cancel one another in the summation of total health care spending. CMS and BEA have fairly similar estimates of spending for the sum of physician services, medical labs, and other professional medical services, dental services, home health care services, and nursing home services because those estimates are mostly based on the same source data from the Census Bureau. The estimates of spending for hospitals, retail prescription drugs, nondurable goods, and durable goods also reflect broadly similar definitions and concepts, although some differences in data sources, definitions, and methods contribute to important differences in the estimates. The hospital estimate, in particular, contributes to a large share of the overall difference in estimates of health spending; BEA excludes nonpatient revenues and outlays for DOD and other government hospitals, and CMS and BEA use different data sources. The GDP data have a larger estimate of the net cost of health insurance because CMS and BEA have different data sources and use different definitions of health insurance services.

Additionally, several expenditures in the NHEA are not counted in health-related expenditures for GDP. For example, only the NHEA separately identify some DOD expenditures, and at least some of NHE for other personal health care appears to be counted as expenditures in GDP for nonhealth commodities, such as social assistance. Other health-related expenditures in GDP, such as the nonhealth portion of workers compensation, are not counted in the NHEA. Additional details can be found in the working paper produced by BEA and CMS.

This work also raises several topics for further research, such as the reasons for differences in estimates of spending for hospital care, the treatment of many government programs in the two accounts, the measurement of private investment in equipment in the two accounts, and the nature of services funded by other personal health care services in the NHEA. This reconciliation explains many of the similarities and differences in the estimates of health expenditures in the NHEA and GDP statistics and hopefully enables analysts to choose which measure of health care expenditures is most appropriate for their purposes.

### Direct Investment, 2007–2009

### Detailed Historical-Cost Positions and Related Financial and Income Flows

By Jeffrey H. Lowe

THIS ARTICLE presents detailed statistics on direct investment positions at historical cost (book value) and related financial and income flows for U.S. direct investment abroad and foreign direct investment in the United States. Summary estimates of services transactions with foreign affiliates and foreign parent companies are also presented.¹ (For definitions, see the box "Key Terms.") The statistics for both U.S. direct investment abroad and for foreign direct investment in the United States cover 2007–2009. These statistics complement the statistics presented in two articles in the July 2010 Survey of Current Business by providing more detail by country, industry, and account.²

For both U.S. direct investment abroad—or "outward direct investment"—and foreign direct investment in the United States—or "inward direct investment"—the statistics for 2007 forward reflect the incorporation of new or revised data from BEA's quarterly surveys of transactions between parents (both U.S. and foreign) and their affiliates and annual surveys of financial and operating data of U.S. parent companies, their foreign affiliates and U.S. affiliates of foreign companies.

Two changes to the statistics in this report reflect BEA's efforts to align its statistics with recently updated guidelines for international economic accounts.<sup>3</sup> The

first is a change in the classification of permanent bank debt. Beginning with the statistics for 2007, permanent debt between affiliated domestic and foreign banks is reclassified from direct investment to other investment accounts. This change reduces the outward direct investment position for 2008 by \$5.3 billion, and it reduces the inward direct investment position for 2008 by \$6.5 billion. This change also affects financial flows through its impact on intercompany debt flows and direct investment income through its impact on net interest. (For additional details, see the box "Change in the Treatment of Permanent Bank Debt" in Ibarra-Caton, 28.) The second is a change in terminology: "financial flows" replaces "capital flows," and "equity" or "equity investment" replaces "equity capital."

#### **Tables**

After this article, two sets of tables are presented—one for outward direct investment and one for inward direct investment. In each set, tables 1–15 present similar data.

#### **Data Availability**

Detailed statistics on the direct investment positions and on transactions between parents and their affiliates that enter the U.S. international transactions (balance of payments) accounts are available on BEA's Web site. To access the series featured in this report, go to www.bea.gov, and under "International," click on "Operations of Multinational Companies." Under either "U.S. direct investment abroad" or "Foreign direct investment in the United States," click on the link to either "Selected Tables" or "Interactive Tables" that appears next to "Balance of payments and direct investment position data." The interactive tables allow users to access detailed balance of payments and direct investment position data, including statistics for years earlier than those presented in this report.

<sup>1.</sup> Global totals (all countries and all industries) for royalties and license fees and other private services are shown in table 2 (for outward investment, see page 60 and for inward investment, see page 95). Breakdowns by country and by industry are not included in this presentation. Country detail and detail by type of service or intangible asset will be available in the October Survey of Current Business article on U.S. international services.

<sup>2.</sup> See Marilyn Ibarra-Caton, "Direct Investment Positions for 2009: Country and Industry Detail," SURVEY 90 (July 2010): 20–35 and Helen Y. Bai and Mai-Chi Hoang, "Annual Revision of the U.S. International Transactions Accounts," SURVEY 90 (July 2010): 36–50.

<sup>3.</sup> Balance of Payments and International Investment Position Manual, 6<sup>th</sup> ed. (Washington, DC: International Monetary Fund, 2009) and Benchmark Definition of Foreign Direct Investment, 4<sup>th</sup> ed. (Paris: Organisation for Economic Co-operation and Development, 2008). See Kristy L. Howell and Robert E. Yuskavage, "Modernizing and Enhancing BEA's International Economic Accounts," SURVEY 90 (May 2010): 6–20 for a discussion of BEA's plans to introduce other changes recommended in the new international statistical standards in its international economic accounts.

- Table 1 shows the direct investment positions and rates of return at historical cost, current cost, and market value.
- Table 2 presents the position and related flows for 1998-2009 at historical cost and as they are presented in the international investment position accounts and international transactions accounts.
- Tables 3–16 for outward direct investment and 3-17 for inward direct investment present the direct investment positions and international transactions by country of foreign affiliate or foreign parent, by industry of affiliate, and by account. For outward direct investment, table 16 presents estimates that are also classified by industry of U.S. parent. For inward direct investment, table 16 presents estimates that are classified not only by country of foreign parent but also by country of ultimate beneficial owner (UBO).
- Table 17 for inward direct investment provides a breakdown of the foreign direct investment position in the United States by the industry of the UBO of the U.S. affiliate. It shows the value of investments owned by private entities (businesses and individuals, estates, and trusts) and the value owned by foreign governments and government-related entities.

The statistics in this report differ from some of the counterpart statistics in the international investment position and international transactions accounts.<sup>4</sup>

- The statistics in this report are at historical cost, the only way detailed statistics by country and industry are available. In contrast, the statistics on the direct investment position in the international investment position accounts are presented at current cost and market value.
- The statistics in this report are presented without a current-cost adjustment. In contrast, the statistics on direct investment income (in the current account) and financial flows (in the financial account) in the U.S. international transactions accounts are presented with a current-cost adjustment.

#### Revisions

#### **Outward direct investment**

The revised statistics on the U.S. direct investment position abroad at yearend, financial flows, and income reflect the incorporation of revised data from quarterly surveys of transactions between U.S. parents and their foreign affiliates and annual surveys of financial and operating data of foreign affiliates.

As noted in the July 2010 Survey article on direct investment positions for all areas, the outward direct investment position at historical cost was revised up \$77.1 billion for 2007 and \$57.7 billion for 2008

#### **Acknowledgments**

The statistics on the U.S. direct investment position abroad and related financial and income flows are based largely on data from BEA's quarterly surveys of transactions between U.S. parent companies and their foreign affiliates. The surveys were conducted under the supervision of Mark W. New, who was assisted by Iris Branscome, Laura A. Downey, David L. Grayton, Anthony A. Ippoliti, Marie K. Laddomada, Sherry Lee, Louis C. Luu, Leila C. Morrison, and Dwayne Torney. Computer programming for data estimation and tabulation was provided by Marie Colosimo and Kevin R. Smith.

The statistics on the foreign direct investment position in the United States and related financial and income flows are based largely on data from BEA's quarterly surveys of transactions between U.S. affiliates of foreign companies and their foreign parents. The surveys were conducted under the supervision of Gregory G. Fouch, who was assisted by Peter J. Fox, Barbara C. Huang, Susan M. LaPorte, Robert L. Rosholt, and Helen P. Yiu. Computer programming for data estimation and tabulation was provided by Karen E. Poffel and Paula D. Brown.

The statistics on royalties and license fees and other private services (shown in table 2) are based largely on data from BEA's quarterly surveys of transactions in selected services and intangible assets with foreign persons. The surveys were conducted under the supervision of Christopher J. Emond.

<sup>4.</sup> See Elena L. Nguyen, "The International Investment Position of the United States at Yearend 2009," SURVEY 90 (July 2010): 9–19 and Sarah Scott Thomas, Erin M. Whitaker, and Daniel R. Yorgason, "U.S. International Transactions: First Quarter of 2010," SURVEY 90 (July 2010): 56–101.

(table A). The upward revision for 2007 mostly resulted from a large upward revision to valuation adjustments and a smaller upward revision to financial outflows without current-cost adjustment. (Financial outflows without current-cost adjustment, which increase the U.S. direct investment position abroad, consist of reinvested earnings without current-cost adjustment and equity and intercompany debt transactions. Financial inflows reduce the position.) The upward revision for 2008 was the net result of the upward revision to the position for 2007, a smaller upward revision to 2008 financial outflows, and a downward revision to 2008 valuation adjustments.

Financial outflows without current-cost adjustment were revised up \$15.2 billion for 2007, \$18.7 billion for 2008, and \$46.8 billion for 2009. For 2007 and 2008, the revisions were more than accounted for by upward revisions to equity investment; in both years, the upward revisions to equity investment were partly

offset by downward revisions to intercompany debt investment and reinvested earnings. For 2009, the revision mainly resulted from a large upward revision to reinvested earnings; an upward revision to intercompany debt investment also contributed.

Income without current-cost adjustment was revised up for all 3 years—\$7.2 billion for 2007, \$32.0 billion for 2008, and \$43.3 billion for 2009. In all 3 years, the revisions resulted from upward revisions to earnings.

#### Inward direct investment

The revised statistics on the foreign direct investment position at yearend, financial flows, and income reflect the incorporation of revised data from quarterly surveys of transactions between U.S. affiliates and their foreign parents and annual surveys of financial and operating data of U.S. affiliates.

As noted in the July 2010 Survey article on direct

The only accounts for which 2009 statistics were previously available by country were financial outflows without current-cost adjustment and income without current-cost adjustment. The estimates of the direct invest

ment position for 2009 are preliminary and were first published in the July 2010 SURVEY OF CURRENT BUSINESS.

Note. The statistics in the "revised" columns were presented in the July 2010 SURVEY.

investment positions, for all areas, the inward direct investment position at historical-cost was revised down \$54.7 billion for 2007 and down \$113.1 billion for 2008 (table B). The revision for 2007 was mainly attributable to a downward revision to valuation adjustments; a small downward revision to financial inflows also contributed. The revision for 2008 was the net result of the downward revision to the 2007 position and a downward revision to valuation adjustments that were partly offset by an upward revision to financial inflows. (Financial inflows without current-cost adjustment, which increase the foreign direct investment position in the United States, consist of rein-

vested earnings without current-cost adjustment and equity and intercompany debt transactions. Financial outflows reduce the position.)

Financial inflows without current-cost adjustment were revised down \$5.2 billion for 2007, up \$8.4 billion for 2008, and down \$18.6 billion for 2009. The downward revision for 2007 was accounted for by downward revisions to intercompany debt investment and equity investment that were partly offset by an upward revision to reinvested earnings. The upward revision for 2008 resulted from upward revisions to equity investment and to intercompany debt investment that were partly offset by a downward revision to reinvested

The only accounts for which 2009 statistics were previously available by country were financial inflows without current-cost adjustment and income without current-cost adjustment. The estimates of the direct invest-

ment positions for 2009 are preliminary and were first published in the July 2010 Survey of Current Business. Note. The statistics in the "revised" columns were presented in the July 2010 Survey.

earnings. The downward revision for 2009 was more than accounted for by a sizable downward revision to intercompany debt investment that was partly offset by small upward revisions to equity investment and to reinvested earnings.

Income without current-cost adjustment was

revised up \$1.9 billion for 2007, down \$5.5 billion for 2008, and down \$2.3 billion for 2009. The revisions for all years were entirely attributable to revisions to earnings. For 2008, the downward revision to affiliates' earnings was partly offset by an upward revision to interest payments.

**Key Terms**—Continues

For a more detailed discussion of the terms in this box, see Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey and U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey. These methodologies are available on BEA's Web site at www.bea.gov.

#### **Direct investment**

This is investment in which a resident (in the broad legal sense, including a company) of one country obtains a lasting interest in, and a degree of influence over a business enterprise in another country. In the United States (and in the international statistical guidelines), the criterion used to define direct investment is ownership of at least 10 percent of the voting securities of an incorporated business enterprise or the equivalent interest in an unincorporated business enterprise.

U.S. direct investment abroad (outward direct investment) represents the ownership or control, directly or indirectly, by one U.S. resident (U.S. parent) of at least 10 percent of a foreign business enterprise, which is called a foreign affiliate.

Foreign direct investment in the United States (inward direct investment) represents the ownership or control, directly or indirectly, by one foreign resident (foreign parent) of at least 10 percent of a U.S. business enterprise, which is called a U.S. affiliate. Foreign direct investment includes equity and net debt investments by the foreign parent as well as net debt investment by any other members of the foreign parent group. The foreign parent group consists of (1) the foreign parent, (2) any foreign person (including a company), proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, up to and including the ultimate beneficial owner (UBO), and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

The UBO of a U.S. affiliate is the first person, proceeding up the affiliate's ownership chain beginning with the foreign parent, that is not more than 50 percent-owned

by another person. The UBO ultimately owns or controls the affiliate and derives the benefits and assumes the risks associated with ownership or control. Unlike the foreign parent, the UBO of a U.S. affiliate may be located in the United States.

#### **Direct investment position**

This is the value of direct investors' equity in, and net outstanding loans to, their affiliates. The direct investment position may be viewed as the direct investors' net financial claims on their affiliates. BEA prepares statistics of the positions for U.S. direct investment abroad and foreign direct investment in the United States at historical cost, current cost, and market value. In this report, the historical-cost measure is featured. This valuation is principally derived from the financial accounting records of affiliates and generally reflects the acquisition cost of the investments, cumulative reinvested earnings, and cumulative depreciation of fixed assets. For additional information, see the box "Alternative Measures of the Direct Investment Positions" in Ibarra-Caton, 23.

Direct investment financial flows arise from transactions that change financial claims (assets) and liabilities between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreign parents. Financial outflows arise from transactions that increase U.S. assets or decrease U.S. liabilities. Financial inflows arise from transactions that decrease U.S. assets or increase U.S. liabilities. Direct investment financial flows consist of equity investment, intercompany debt investment, and reinvested earnings.

Equity investment is the difference between equity increases and equity decreases. Equity increases arise from (1) parents' establishments of new affiliates, (2) payments by parents to unaffiliated parties for the purchase of capital stock or other equity interests when they acquire an existing business, (3) payments made to acquire additional ownership interests in their affiliates, and (4) capital contributions to their affiliates. Equity decreases are the funds parents receive when they reduce their equity interest in their affiliates.

#### **Key Terms**

Intercompany debt investment results from changes in net outstanding loans between parents (or, for inward investment, other foreign parent group members) and their affiliates, including loans by parents to affiliates and loans by affiliates to parents.

Reinvested earnings (without current-cost adjustment) are the parents' share of the current-period operating earnings of their affiliates, less distributions of earnings that affiliates make to their parents. A related measure of reinvested earnings is featured in the international transactions accounts; this measure includes a current-cost adjustment that reflects current-period prices. This adjustment converts depreciation charges to a current-cost, or replacement-cost, basis; it adds charges for depletion of natural resources back to income and reinvested earnings because these charges are not treated as production costs in the national income and product accounts; and it reallocates expenses for mineral exploration and development across periods, so that they are written off over their economic lives rather than all at once.

Various valuation adjustments to the historical-cost position are made to account for the differences between changes in the historical-cost positions, which are measured at book value, and direct investment financial flows, which are measured at transaction value. (Unlike the positions on current-cost and market-value bases, the historical-cost position is not usually adjusted to account for changes in the replacement cost of the tangible assets of affiliates or in the market value of parent companies' equity in affiliates.)

Valuation adjustments to the historical-cost position consist of currency-translation adjustments and "other" adjustments. Currency-translation adjustments account for changes in the exchange rates that are used to translate affiliates' foreign-currency-denominated assets and liabilities into U.S. dollars. "Other" valuation adjustments are made to account for (1) differences between the proceeds from the sale or liquidation of affiliates and their book values, (2) differences between the purchase

prices of affiliates and their book values, (3) writeoffs resulting from uncompensated expropriations of affiliates, (4) the reclassification of investment positions between direct investment and other investment, and (5) capital gains and losses (excluding currency-translation adjustments) on transactions, such as the sale of assets (excluding inventories) or capital gains and losses that represent the revaluation of the assets of ongoing affiliates for reasons other than exchange-rate changes, such as the write-down of assets. In addition, for individual industries, offsetting valuation adjustments may be made to effect changes in the industry classification of an affiliate. For individual countries, offsetting adjustments may be made when the political boundaries of countries change. In addition, for inward direct investment, offsetting adjustments are made when transactions between foreign residents result in a change in the country of the foreign parent.

### Direct investment income (without current-cost adjustment)

This is the return on the direct investment position. It consists of (1) earnings, that is, the parents' shares in the net income from the operations of their affiliates and (2) net interest received by parents (or parent groups) from affiliates from outstanding loans and trade accounts. As in the case of reinvested earnings (see above), a related measure including a current-cost adjustment is featured in the international transactions accounts.

#### Services transactions

These are receipts and payments between parents and their affiliates for services provided by one to the other. They consist of **royalties and license fees** for the use or sale of intangible property or rights (including patents, trademarks, and copyrights) and **other private services** (consisting of service charges, including management fees and allocated expenses, rentals for tangible property, and film and television tape rentals).

U.S. direct investment abroad tables 1–16 and foreign direct investment in the United States tables 1–17 follow.

59 September 2010

#### U.S. Direct Investment Abroad Tables

Two changes to the statistics in these tables have been made to introduce new international statistical standards into BEA's international economic accounts. These changes are described on page 53.

#### **General Notes to the Tables**

- Detail may not add to totals, because of rounding.
- An asterisk "(\*)" indicates a nonzero value between -\$500,000 and \$500,000 or between -0.5 percent and 0.5 percent.
- A "(D)" indicates that the data in the cell have been suppressed to avoid the disclosure of data of individual companies.
- The European Union (27) comprises Austria, Belgium,

Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.

 OPEC is the Organization of Petroleum Exporting Countries. In 2007, its members were Algeria, Angola, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. Ecuador reactivated its membership in November 2007, but it was not included as a member in these annual tabulations until 2008. Indonesia left OPEC at the end of 2008.

Tables 1 through 16 follow.

 <sup>1.</sup> The direct investment position, financial outflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository institutions from direct investment to other investment accounts.

2. Historical-cost financial outflows include reinvested earnings without the current-cost adjustment, and current-cost and market-value financial outflows include reinvested earnings with the adjustment.

3. Historical-cost direct investment income excludes capital gains and losses and he current-cost adjustment to earnings. The historical-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year historical-cost direct investment positions. In accordance with international guidelines, this measure of income, like the other measures in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest.

<sup>4.</sup> Current-cost direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings that adjusts depreciation, depletion, and expensed petroleum exploration and development costs to reflect current-period prices and to more closely align income earned in a period with charges against income in the same period, as required for the national and international economic accounts. Current-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.
5. Market-value direct investment income measures the financial return to investors, so it includes capital gains and losses of the affisite but expludes the current-cost adjustment and currency-translation adjustments.

gains and losses of the affiliate but excludes the current-cost adjustment and currency-translation adjustment The market-value rate of return equals this measure of income divided by the average of the beginning- and end-of-year market-value direct investment positions.

<sup>1.</sup> Prior to 2006, the income, royalties and license fees, and other private services statistics in the top panel are presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, these statistics are presented gross, or before deduction, of U.S. and foreign withholding taxes.

2.The direct investment position, financial outflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income,

between affiliated depository institutions from direct investment to other investment accounts.

3. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals.

Nore. See the text for details on how the statistics shown in the top panel differ from those in the international investment position accounts and the international transactions accounts.

The direct investment position reflects a discontinuity between 2006 and 2007 because of the reclassification of permanent debt between affiliated depository institutions from direct investment to other investment accounts. In 2007, if permanent debt had remained in direct investment, the outward direct investment would

have increased 21.1 percent. n.d. Not defined

Table 4. U.S. Direct Investment Position Abroad on a Historical-Cost Basis by Account, 2007–2009 [Millions of dollars]

foreign affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual countries and industries, adjustments may also be made to effect changes in the country or industry classification of a foreign affiliate.

An increase in U.S. parents' payables is a decrease in net intercompany debt and a financial inflow.
 Represents gains or losses that arise because of changes from the end of one accounting period to the next in exchange rates applied in translating affiliates' assets and liabilities from foreign currencies into dollars.
 Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of

foreign affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual countries and industries, adjustments may also be made to effect changes in the country or industry classification of a foreign affiliate.

An increase in U.S. parents' payables is a decrease in net intercompany debt and a financial inflow.
 Represents gains or losses that arise because of changes from the end of one accounting period to the next in exchange rates applied in translating affiliates' assets and liabilities trom foreign currencies into dollars.
 Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of

An increase in U.S. parents' payables is a decrease in net intercompany debt and a financial inflow.
 Represents gains or losses that arise because of changes from the end of one accounting period to the next in exchange rates applied in translating affiliates' assets and liabilities from foreign currencies into dollars.
 Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of

foreign affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual countries and industries, adjustments may also be made to effect changes in the country or industry classification of a foreign affiliate.

Reinvested earnings without current-cost adjustment divided by earnings without current-cost adjustment.
 Note. In this table, earnings and distributed earnings are shown before deduction of withholding taxes.
 n.d. Reinvestment ratio is not defined because reinvested earnings without current-cost adjustment are negative.

Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia and Spain. For 2009, the U.S. direct investment position in the "Euro area" was \$1,194,266 million; financial outflows without current-cost adjustment were \$102,087 million; and direct investment income without current-cost adjustment was \$120,428 million.
4. For years prior to 2007, data for Monaco are included in France. Beginning with 2007, data for Monaco are shown separately.

OWH Other Western Hemisphere

For years prior to 2006, income is presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, income is presented gross, or before deduction, of U.S. and foreign withholding taxes.
 The direct investment position, financial outflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository institutions from direct investment to other investment accounts.
 Service 2009, the "Euro area" includes Austria, Belgium, Cyprus, Finland, France, Germany, Greece, Ireland, Italy,

 <sup>1.</sup> For years prior to 2006, income is presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, income is presented gross, or before deduction, of U.S. and foreign withholding taxes.
 2. The direct investment position, financial outflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository institutions from

direct investment to other investment accounts.

3. Petroleum consists of oil and gas extraction; support activities for oil and gas extraction; petroleum and coal products manufacturing; petroleum and petroleum products wholesale trade; gasoline stations; petroleum tanker operations; pipeline transportation of crude oil, refined petroleum products, and natural gas; and petroleum storage for hire.

## Foreign Direct Investment in the United States Tables

Two changes to the statistics in these tables have been made to introduce new international statistical standards into BEA's international economic accounts. These changes are described on page 53.

## **General Notes to the Tables**

- Detail may not add to totals, because of rounding.
- An asterisk "(\*)" indicates a nonzero value between -\$500,000 and \$500,000 or between -0.5 percent and 0.5 percent.
- A "(D)" indicates that the data in the cell have been suppressed to avoid the disclosure of data of individual companies.
- The European Union (27) comprises Austria, Belgium,

Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.

• OPEC is the Organization of Petroleum Exporting Countries. In 2007, its members were Algeria, Angola, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. Ecuador reactivated its membership in November 2007, but it was not included as a member in these annual tabulations until 2008. Indonesia left OPEC at the end of 2008.

Tables 1 through 17 follow.

 <sup>1.</sup> The direct investment position, financial inflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository institutions from direct investment to other investment accounts.

2. Historical-cost infancial inflows include reinvested earnings without the current-cost adjustment, and current-cost and market-value financial inflows include reinvested earnings with the adjustment.

3. Historical-cost direct investment income excludes capital gains and losses and the current-cost adjustment to earnings. The historical-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year historical-cost irrect investment positions. In accordance with international guidelines, this measure of income, like the other measures in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest.

<sup>4.</sup> Current-cost direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings that adjusts depreciation, depletion, and expensed petroleum expioration and development costs to reflect current-period prices and to more closely align income earned in a period with charges against income in the same period, as required for the national and international economic accounts. Current-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.
5. Market-value direct investment income measures the financial return to investors, so it includes capital agains and losses of the affidise but excludes the current-cost adjustment and currency-translation adjustments.

gains and losses of the affiliate but excludes the current-cost adjustment and currency-translation adjustments. The market-value rate of return equals this measure of income divided by the average of the beginning- and end-of-year market-value direct investment positions

Prior to 2006, the income, royalties and license fees, and other private services estimates in the top panel are presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, these accounts are presented gross, or before deduction, of U.S. and foreign withholding taxes.
 The direct investment position, financial inflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income,

between affiliated depository institutions from direct investment to other investment accounts.

3. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals.

Nore. See the text for details on how the statistics in the top panel differ from those in the international investment position accounts and the international transactions accounts.

The direct investment position reflects a discontinuity between 2006 and 2007 because of the reclassification of permanent debt between affiliated depository institutions from direct investment to other investment accounts. In 2007, if permanent debt had remained in direct investment, the inward direct investment would

have increased 11.8 percent. n.d. Not defined

An increase in U. S. affiliates' receivables is a decrease in net intercompany debt and a financial outflow.
 Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of

U.S. affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual industries, adjustments may also be made to effect changes in the industry classification of a U.S. affiliate.

An increase in U. S. affiliates' receivables is a decrease in net intercompany debt and a financial outflow.
 Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of

U.S. affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual industries, adjustments may also be made to effect changes in the industry classification of a U.S. affiliate.

Reinvested earnings without current-cost adjustment divided by earnings without current-cost adjustment.
 Noτε. In this table, earnings and distributed earnings are shown before deduction of withholding taxes.
 n.d. Reinvestment ratio is not defined because reinvested earnings without current-cost adjustment are negative.

Note. Reinvested earnings are equal to earnings less distributed earnings. Positive reinvested earnings increase the foreign direct investment position in the United States; negative reinvested earnings decrease it.

For years prior to 2006, income is presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, income is presented gross, or before deduction, of U.S. and foreign withholding taxes.
 The direct investment position, financial inflows, and income reflect of discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository institutions from direct investment to other investment accounts.
 3. In 2009, the "Euro area" includes Austria, Belgium, Cyprus, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg,

Malta, the Netherlands, Portugal, Slovakia, Slovenia, and Spain. For 2009, the "Euro area" direct investment position in the United States was \$908,632 million; financial inflows without current-cost adjustment were \$71,077 million; and income without current-cost adjustment was \$35,681 million.

4. For years prior to 2007, data for Monaco are included in France. Beginning with 2007, data for Monaco are shown separately. OWH Other Western Hemisphere

Table 15. Foreign Direct Investment in the United States: Selected Items by Detailed Industry of U.S. Affiliate, 2005–2009—Continues [Millions of dollars]

For years prior to 2006, income is presented net, or after deduction of U.S. and foreign withholding taxes. Beginning with 2006, it is presented gross, or before deduction of U.S. and foreign withholding taxes.
 The direct investment position, financial inflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of debt, between affiliated depository insti-

tutions from direct investment to other investment accounts.

3. Petroleum consists of oil and gas extraction; support activities for oil and gas extraction; petroleum and coal products manufacturing; petroleum and petroleum products wholesale trade; gasoline stations; petroleum tanker operations; pipeline transportation of crude oil, refined petroleum products, and natural gas; and petroleum storage for hire.

<sup>1.</sup> The ultimate beneficial owner is that person, proceeding up a U.S. affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. The country of ultimate beneficial owner is often the same as that of the foreign parent, but it may be a different foreign country or the United States.

## Personal Income for Metropolitan Areas for 2009

### By David G. Lenze

PERSONAL INCOME declined in 2009 in most of the nation's 366 metropolitan statistical areas. Personal income declined in 223 metropolitan areas, increased in 134, and remained unchanged in 9. On average, metropolitan area personal income fell 1.8 percent in 2009, after rising 2.7 percent in 2008. Personal income growth ranged from 14 percent in Jacksonville, NC, to -7.1 percent in Naples-Marco Island, FL. Inflation declined to 0.2 percent in 2009 from 3.3 percent in 2008.<sup>2</sup>

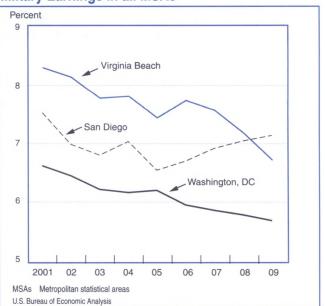

For most of the 134 metropolitan areas in which personal income grew, the growth reflected an increase in transfer receipts. Only in 57 metropolitan areas did the net earnings of workers increase in 2009. In most of these 57 areas, the gains were concentrated in the government sector. Military earnings growth was particularly strong in 7 of the 10 metropolitan areas with the fastest personal income growth in 2009: Jacksonville and Fayetteville, NC, Manhattan, KS, Elizabethtown, KY; Lawton, OK, Clarksville, TN-KY, and Killeen-Temple-Fort Hood, TX. Military earnings growth was also particularly strong in San Diego-Carlsbad-San Marcos, CA, which overtook Virginia Beach-Norfolk-Newport News, VA-NC, as the area with the nation's largest military establishment, accounting for 7.1 percent of military earnings in the metropolitan portion of the United States, compared with 6.7 percent in Virginia Beach-Norfolk-Newport News, VA-NC, and 5.7 percent in Washington-Arlington-Alexandria, DC-VA-MD-WV (chart 1).

Only in five metropolitan areas—Kennewick-Pasco-Richland, WA, Cumberland, MD-WV, Morgantown, WV, Cape Girardeau-Jackson, MO-IL, and Ithaca, NY—did the private sector account for most of earnings growth in 2009.

Large metropolitan areas. Among the 52 metropolitan areas with a population of 1 million or more, only 3 had an increase in both net earnings and personal income in 2009: Washington-Arlington-Alexandria, DC-VA-MD-WV, San Antonio-New Braunfels, TX, and Virginia Beach-Norfolk-Newport News, VA-NC. The biggest gains in compensation in these three areas were in the federal government (civilian and military combined). Private sector compensation declined in each of these areas.

Two additional large metropolitan areas—Baltimore-Towson, MD, and Pittsburgh, PA—had an increase in personal income despite a decline in net

Chart 1. Military Earnings in San Diego, Virginia Beach, and Washington, DC as a Percentage of Military Earnings in all MSAs

<sup>1.</sup> Personal income is the current-dollar income received by all persons from all sources. Personal income is the sum of net earnings by place of residence, property income, and personal current transfer receipts. Net earnings is earnings by place of work (the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors' income) less contributions for government social insurance, plus an adjustment to convert earnings by place of work to a place-of-residence basis. Property income is rental income of persons, personal dividend income, and personal interest income. Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

No inflation measures are available for metropolitan areas. The inflation rate in the text is calculated using the national price index for personal consumption expenditures.

earnings, because of relatively large gains in transfer receipts.

On average, personal income declined 2.3 percent for these 52 areas, with growth rates ranging from 1.2 percent in Virginia Beach-Norfolk-Newport News, VA-NC, to –5.0 percent in Las Vegas-Paradise, NV.

Earnings by industry. Even though earnings for the aggregate private sector fell in 2009 in most metropolitan areas, a few industries continued to grow: health care, educational services, and utilities (table A). Private educational services and utilities typically contribute only a small amount to personal income growth—less than 0.1 percentage point for the metropolitan portion of the United States in 2009. However, in Ithaca, NY, South Bend-Mishawaka, IN-MI, New Haven-Milford, CT, and Winston-Salem, NC, educational services earnings grew substantially. Bonuses paid in the utilities industry in Niles-Benton Harbor, MI, accounted for that industry's notably strong earnings growth.

Per capita personal income. Per capita personal income growth rates ranged from 12 percent in Jackson-ville, NC, to -8.4 percent in Midland, TX. Per capita personal income growth is a measure that highlights differences in economic conditions across metropolitan areas by removing the effect of differential population growth rates. In 2009, population growth rates ranged from 5.9 percent in Hinesville-Fort Stewart, GA, to -1.1 percent in Flint, MI. The metropolitan portion of the United States grew 1.0 percent.

State and local	0.51	0.10	0.26

Note. An industry's contribution to percent change in personal income equals the dollar change in that industry's compensation divided by personal income in the previous year times 100.

Countercyclical income transfers. In many metropolitan areas, legislated income transfers intended to combat the weak economy were an important part of personal income growth in 2009, as they were in 2008; however, the regional distribution of the transfers was different in each year. The American Recovery and Reinvestment Act (ARRA) provided income transfers of \$61.3 billion to metropolitan areas in 2009, most of which were directed toward unemployed workers (see table B on page 133). As a consequence, the contribution of these income transfers to personal income growth tended to vary with metropolitan area unemployment rates.<sup>3</sup> For example, in 2009 these income transfers contributed 1.9 percentage points to personal income growth in El Centro, CA, the area with the highest unemployment rate in the nation, but they contributed only 0.2 percentage point to growth in

#### **Acknowledgments**

The advance estimates of personal income for metropolitan areas were prepared by the Regional Income Division under the direction of Sharon C. Carnevale, Chief. Joel D. Platt, Associate Director for Regional Economics, provided general guidance.

Nonfarm compensation statistics were prepared by Tina C. Highfill and Michael G. Pilot, under the supervision of Sharon C. Carnevale, Acting Chief of the Compensation Branch. All other components of personal income were prepared by Brian J. Maisano (with assistance from Carrie L. Litkowski and Michelle A. Harder on the farm income components), under the supervision of Mauricio Ortiz, Acting Chief of the Regional Income Branch. Methodological research and analysis of the estimates was provided by David G. Lenze, Assistant to the Chief of the Regional Income Division. The database and tables were prepared by Michael J. Paris, Callan S. Swenson, and Jonas D. Wilson under the supervision of Kathy A. Albetski, Chief of the Regional Economic Information System Branch.

<sup>3.</sup> State estimates of ARRA receipts were allocated to metropolitan areas by program using the following indicator series: Supplemental Security Income (SSI), number of SSI recipients by county in 2009; Old Age, Survivors, and Disability Insurance (OASDI), number of OASDI recipients by county in 2008; Railroad Retirement, BEA estimates of railroad retirement and disability benefits by county in 2008; veterans pensions, BEA estimates of veterans pension and disability benefits by county in 2008; Supplemental Nutrition Assistance Program (SNAP), BEA estimates of SNAP benefits by county in 2008; additional and extended Unemployment Insurance, Bureau of Labor Statistics estimate of number of unemployed persons by county in 2009; Consolidated Omnibus Budget Reconciliation Act (COBRA) health insurance subsidy, Bureau of Labor Statistics estimate of number of unemployed persons by county in 2009; Pell Grants, BEA estimate of Pell Grants by county in 2008; and TV converter box coupons, number of coupons distributed by county.

Bismarck, ND, the area with nation's lowest unemployment rate. In contrast, the Economic Stimulus Act of 2008 provided income transfers of \$24.1 billion targeted towards lower income persons in the form of income tax rebates. In 2008, these income transfers contributed 1.6 percentage points to personal income growth in McAllen-Edinburg-Mission, TX, the area with the lowest per capita income, but they contributed only 0.1 percentage point to growth in Bridge-port-Stamford-Norwalk, CT, the area with the nation's highest per capita personal income.

Homeowner assistance programs. The amount distributed under the federal homeowner assistance program to rebuild residences destroyed or damaged in metropolitan Louisiana and Mississippi by Hurricane Katrina continued to decline (table C). This component of the rental income of persons fell from \$2.5 billion in 2008 to less than \$1.0 billion in 2009. Payments declined for all of the metropolitan areas receiving these payments except for Gulfport-Biloxi, MS, where payments increased slightly.<sup>4</sup>

New Orleans-Metairie-Kenner, LA, was affected the most. The reduction in homeowner assistance reduced its personal income growth by 2.5 percentage points in 2009 and 5.3 percentage points in 2008, putting this area among the metropolitan areas with the largest personal income declines in both years. Nevertheless, the assistance has supported the local construction industry. Construction earnings have been somewhat steady at \$2.5 billion for the last 3 years, down only

Table C. Homeowner Assistance Payments by Metropolitan Area in Louisiana and Mississippi

<sup>(</sup>L) Less than \$500,000

slightly from the peak of \$2.6 billion in 2006. At the same time construction earnings in all other areas fell 24 percent from 2006 to 2009 (chart 2).

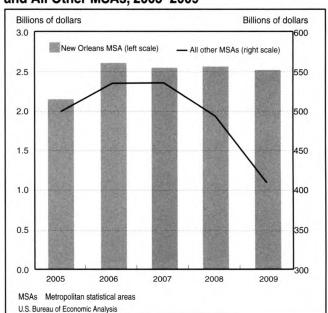

Alaska Permanent Fund benefits. Alaska Permanent Fund benefits declined 60 percent from \$3,269 per eligible resident in 2008 to \$1,305 in 2009. A portion of oil lease rents and royalties received by the state are deposited in this fund and invested. The fund in turn pays benefits, based on a 5-year earnings average, to residents of Alaska. The benefits are recorded in the transfer receipts component of personal income. The 2009 decline was large enough to offset increases in all other transfer programs and to make Fairbanks and Anchorage the only two metropolitan areas in the country with a decline in total transfer receipts.

#### Source data

Wages from the Bureau of Labor Statistics Quarterly Census of Employment and Wages for all four quarters of 2009 were used in the estimation of metropolitan area personal income. Wage and salary disbursements represented 54 percent of 2009 personal income in metropolitan areas on average but as little as 22 percent in Palm Coast, FL, and as much as 88 percent in Hinesville-Fort Stewart, GA. Other components of compensation—such as employer contributions for social insurance—were extrapolated from 2008 on the basis of wage and salary disbursements.

Some metropolitan area data on crop and livestock

Chart 2. Construction Earnings in New Orleans and All Other MSAs, 2005–2009

<sup>4.</sup> State estimates of homeowner assistance payments were allocated to metropolitan areas on the basis of disbursements by county from the states administering the programs.

Note: The contribution of homeowner assistance payments to metropolitan area personal income growth equals the change in amount of those payments divided by personal income in the previous year times 100.

production and complete metropolitan area data on government payments to farmers were available for estimating farm proprietors' income.

The number of unemployed persons during 2009 was available from the Bureau of Labor Statistics for estimating state unemployment insurance transfer receipts.

Other personal income components—personal current transfer receipts and property income (dividends, interest, and rent)—were extrapolated on the basis of resident population estimates prepared by the Census Bureau.

Additional state and national data for 2009 were used indirectly in the metropolitan area estimates because the national income and product accounts estimates determine the sum of the state personal income estimates just as the state estimates determine the metropolitan area estimates.<sup>5</sup>

#### **Data Availability**

This article presents summary advance estimates of metropolitan area personal income and per capita personal income for 2009 as well as previously published estimates for 2007–2008. More detailed estimates for 1969–2009 are also available.

The following estimates for metropolitan areas are available at www.bea.gov/regional/reis:

- Metropolitan area income and employment summary (featuring personal income—both farm and nonfarm—and per capita personal income as well as the derivation of personal income, 1969–2009, and employment totals, which are available only for 1969–2008)
- Compensation of employees by industry by North American Industry Classification System (NAICS) subsectors for 2001–2008, by NAICS sectors for 2009, and by Standard Industrial Classification System (SIC) two-digit industries for 1998–2000
- Personal income by major source and earnings by NAICS subsectors for 2001–2008, by NAICS sectors for 2009, and by SIC two-digit industries for 1969–2000

For more information, call BEA's Regional Economic Information System at 202–606–5360, fax 202–606–5322, or e-mail reis@bea.gov.

Table B and table 1 follow.

<sup>5.</sup> The state estimates of personal income are designed to be conceptually and statistically consistent with the national estimates of personal income in the national income and product accounts (NIPAs). State estimates together with the estimate for the District of Columbia sum to a national total that is similar to the NIPA estimate except for some minor differences in the timing of the availability of source data, the treatment of U.S. residents working abroad, and the income of foreign residents working in the United States. See Tina C. Highfill, "Personal Income in the NIPAs and State Personal Income," Survey of Current Business 89 (November 2009):

Per capita personal income was computed using Census Bureau midyear population estimates.
 Percent change calculated from unrounded data.
 The metropolitan area definitions used by BEA for its personal income estimates are the county-based.

definitions issued by the Office of Management and Budget as of December 2009, for federal statistical purposes.

### **BEA Current and Historical Data**

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission. Citing the Survey of Current Business and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at www.bea.gov. These estimates are available in a variety of formats. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

#### **National Data**

#### A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on August 27, 2010. These estimates include the "second" estimates for the second quarter of 2010. Also included are revised estimates of wages and salaries and of affected income-side series for the first quarter of 2010.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to www.bea.gov and subscribe. The "Selected NIPA Tables" are available later that day.

Residual	26	16.2	37.8	41.9	40.4	33.8	26.5	14.7	

Nore. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
 Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
 Some components of final sales of computers include computer parts.

<sup>1.</sup> Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.
2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of non-profit institutions serving households.

Nore. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

3. Some components of final sales of computers include computer parts.

Nort: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and the sum of the detailed lines of goods, of services, and of structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Nore. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

ment.

2. Equals gross domestic business value added excluding gross farm value added.

3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

4. Equals compensation of general government employees plus general government consumption of fixed capital. Nore. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type antity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 4. Excludes software "embedded," or bundled, in computers and other equipment.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Excludes software "embedded," or bundled, in computers and other equipment.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Excludes software "embedded," or bundled, in computers and other equipment.

 <sup>1.</sup> Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and lees.
 4. Excludes software "embedded," or bundled, in computers and other equipment.

Residual	60	-5.7	2.3	11.0	4.7	-13.7	-22.1	-37.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.
 Note. The residual line is the difference between the first line and the sum of the most detailed lines.

Gross domestic income deflated by the implicit price deflator for gross domestic product.
 Gross national income deflated by the implicit price deflator for gross national product.
 Nort. Except as noted in footnotes 1, 2 and 3, chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity index such series are current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Deflator is the gross domestic purchases price index.
 This measure is called "real gross domestic income" in the System of National Accounts, 2008.
 This measure is called "real gross national income" in the System of National Accounts, 2008.
 Deflator is the net domestic purchases price index.

Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the vortd; includes membership dues and fees.
 Food consists of lood and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
 Consists of gasoline and other energy goods and of electricity and gas services.
 Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Food consists of food and beverages purchased for off-premises consumption; tood services, which include purchased meals and beverages, are not classified as tood.
 Consists of gasoline and other energy goods and of electricity and gas services.
 Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Food consists of load and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
 Consists of gasoline and other energy goods and of electricity and gas.
 Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

<sup>1.</sup> Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Nors. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-follar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Compensation of general government intermediate inputs for goods and services sold to durier sectors and for dwin-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

 A. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

<sup>1.</sup> Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services soid to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets, the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

Includes general government intermination investment.
 Win-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
 S. Gross government investment consists of general government and government enterprise expenditures for fixed assets, inventory investment is included in government consumption expenditures.

Investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

<sup>2.</sup> Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

A. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment is included in government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

None: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

<sup>1.</sup> Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

<sup>1.</sup> Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series, accurate estimates of these contributions are shown in table 4.2.2 and real growth rates are shown in table 4.2.1.

3. Includes parts of tools, feets, and bevarages of produzable industrial smaller and materials, and in activate the components.

<sup>4.2.1.
3.</sup> Includes parts of toods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.
Norr. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

## 5. Saving and Investment

Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 Excludes software "embedded," or bundled, in computers and other equipment.
 Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 Consists primarily of turniture and fixtures, agricultural machinery, construction machinery, mining and oiffield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 Excludes confunction equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 Consists primarily of furniture and fixture, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 Excludes net purchases of used structures and brokers' commissions on the sale of residential structures.

Residential structures	29	3/2.0	2/0.0	2/0.8	2/4.5	208.7	∠00.3	2/8.0

<sup>1.</sup> Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded," or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of truntiture and fixtures, agricultural machinery, construction machinery, mining and oillield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonmerchant wholesale trade	25	0.4	-9.5	-15.4	-6.9	-1.9	6.9	10.9

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

<sup>1.</sup> This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Private inventories to final sales		2.44	2.41	2.44	2.47	2.45
Nonfarm inventories to final sales	28	2.21	2.19	2.22	2.23	2.22
Nonfarm inventories to final sales of goods and structures		4.24	4.19	4.28	4.32	4.29

<sup>1.</sup> Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonlarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

<sup>1.</sup> Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

Consists of used light trucks only.
 Consists of final sales and change in private inventories of new autos assembled in the United States.
 Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

<sup>1.</sup> Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

Nors. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

D-50 September 2010

## **B. NIPA-Related Table**

Table B.1 presents the most recent estimates of personal income and its disposition. These estimates were released on August 30, 2010.

p Preliminary r Revised CCAdj Capital consumption adjustment IVA Inventory valuation adjustment 1. Consists of nonmortgage interest paid by households.

Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.
 Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

## C. Historical Measures

This table is derived from the "Selected NIPA Tables" that are published in this issue and from the "GDP and Other Major NIPA Series" tables that were published in the August 2010 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1. GDP and Other Major NIPA Aggregates—Continues

p Preliminary
r Revised
1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.
2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual properly rights.
 Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.
 These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary r Revised \* Less than \$500,000 (+/-)

Not applicable
 Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.

<sup>2.</sup> Includes changes in coverage due to year-to-year changes in the composition of reporting panels, primarily for bank and nonbank estimates, and to the incorporation of survey results. Also includes capital gains and losses of direct invest-ment affiliates and changes in positions that cannot be allocated to financial flows, price changes, or exchange-rate

filent allitates and changes in process.

3. Financial flows and valuation adjustments for financial derivatives are available only on a net basis, which is shown on line 2; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives. Consequently, columns (a) through (d) on lines 4, 5, and 24, 25 are not available.

4. Data are not separately available for the three types of valuation adjustments; therefore, the sum of all three types is shown in column (d).

<sup>5.</sup> Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

6. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and buillion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

8. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

9. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve Systems balance sheet. The movement of exchange rates does not affect this valuation.

10. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

The direct investment position, financial outflows, and income reflect a discontinuity between 2006 and 2007 because
of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository
institutions from direct investment to other investment accounts.

Note. The data in this table are from tables 14 and 15 in "U.S. Direct Investment Abroad Tables" in the September 2010 SURVEY OF CURRENT BUSINESS.

D Suppressed to avoid disclosure of data of individual companies.

1. The direct investment position, financial inflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository

institutions from direct investment to other investment accounts.

Note. The data in this table are from tables 14 and 15 in "Foreign Direct Investment in the United States Tables" in the September 2010 Survey of Currient Business.

# **Regional Data**

## I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at www.bea.gov. For information on state personal income, e-mail reis@bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail gdpbystate@bea.gov; write to the Regional Product Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

p Preliminary r Revised

Percent change from preceding period was calculated from unrounded data.
 Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 1 in the "Regional Quarterly Report" in the July 2010 SURVEY OF CURRENT BUSINESS.

Table I.2. Annual Personal Income and Per Capita Personal Income by State and Region

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 in the "Regional Quarterly Report" in the April 2010 SURVEY OF CURRENT BUSINESS

p Preliminary r Revised 1. Per capita personal income was computed using midyear population estimates of the Census Bureau. 2. Percent change from preceding period was calculated from unrounded data.

Table I.3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 3 in the "Regional Quarterly Report" in the April 2010 Survey or Current Business

p Preliminary
r Revised
1. Per capita disposable personal income was computed using midyear population estimates of the Census Bureau.
2. Percent change from preceding period was calculated from unrounded data.

Table I.4. Gross Domestic Product (GDP) by State for Industries, 2008

[Millions of dollars]

State and region	Rank of total GDP by state	Total	Natural resources and mining	Construction	Durable-goods manufacturing	Nondurable- goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

Note. Totals shown for the United States differ from the national income and product account statistics of gross domestic product (GDP) because GDP by state excludes and national GDP includes the compensation of federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad

and for military equipment, except office equipment. Also, GDP by state and national GDP have different revision schedules.

Source: This table reflects the GDP-by-state statistics for 2008 that were released on June 2, 2009.

D-78 September 2010

Per capita personal income was computed using Census Bureau midyear population estimates.
 Percent change calculated from unrounded data.
 The metropolitan area definitions used by BEA for its personal income estimates are the county-based.

definitions issued by the Office of Management and Budget as of December 2009, for federal statistical purposes.

### A. Additional Information About the NIPA Estimates

#### Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.1

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006-2007 uses prices for 2006 and 2007 as weights, and the 2006-2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 ( $$100 \times 1.10$ ). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_0$  is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, t-0).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

Preview of the 2009 Comprehensive NIPA Revision Changes in Definitions and Presentations (March 2009)

New Classifications for Personal Consumption Expenditures (May 2008)

Statistical Changes (May 2009)

"Preview of the Revised NIPA Estimates for 2002: Effects of Incorporating the 2002 Benchmark I-O Accounts and Proposed Definition and Statistical Changes" (March 2008)

In addition, see the following articles.

"Annual Revision of the National Income and Prod-

uct Accounts" (August 2010) presents revisions and describes any changes in the data and the methods used to prepare the estimates.

"Updated Summary of NIPA Methodologies" (November 2009) describes the source data and methods that are used to prepare the estimates.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"The Reliability of the GDP and GDI Estimates of U.S. Economic Activity" (February 2008) evaluates the principal NIPA estimates by examining the record of revisions to them.

"Gross Domestic Product: Revisions and Source Data" (February 2006) describes the categories of data that are used for the advance, preliminary (now called second), and final (now called third) quarterly estimates of GDP.

Fixed assets and consumer durable goods. Fixed Assets and Consumer Durable Goods in the United States, 1925–97 (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 2000–2009" (September 2010) describes the improvements that were incorporated into these estimates as part of the 2010 annual NIPA revision.

**Satellite account.** This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

"Research and Development Satellite Account" For 1959–2002 (December 2006) For 1959–2004 (October 2007)

#### **Mission Statement and Strategic Plan**

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at www.bea.gov under "About BEA."

#### Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

Annual industry accounts. "Preview of the Comprehensive Revision of the Annual Industry Accounts" (March 2010) provides the details about the upcoming comprehensive revision.

"Annual Industry Accounts" (June 2010) presents the comprehensive revision of these accounts and summarizes the source data and any changes in the methods that are used to prepare the estimates.

**Benchmark input-output accounts.** Concepts and Methods of the U.S. Input-Output Accounts (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

**Satellite accounts.** These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts"

For 2002–2005 (June 2006)

For 1998–2006 (June 2007)

For 2004–2007 (June 2008)

For 2005–2008 (June 2009)

#### International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts and international investment position accounts. "A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts" (February 2010) introduces these accounts.

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2010 Survey.

"Modernizing and Enhancing BEA's International Economic Accounts: Recent Progress and Future Directions" (May 2010) provides an overview of BEA's initial and long-term plans to introduce the new international statistical standards from recently updated manuals and other improvements to the accounts.

**Direct investment.** Updated methodologies are available in U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey (2008) and in Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey (2006).

Additional improvements are described in the following annual articles: "Direct Investment Positions: Country and Industry Detail" (September) and Operations of U.S. Multinational Companies (August) and of U.S. Affiliates of Foreign Companies (November).

International services. The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2009 Survey.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

#### Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

**Personal income.** Estimates of personal income are prepared for states and for local areas.

State Personal Income (2009) describes the improvements in the methodology that is used to prepare the quarterly and annual estimates. This methodology has been updated in "Regional Quarterly Report: Comprehensive Revision" (November 2009).

Local Area Personal Income (2009) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan divisions and areas, micropolitan areas, and BEA economic areas and regions. This methodology has been updated in "Comprehensive Revision of Local Area Personal Income" (May 2010).

Gross domestic product. Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

Gross Domestic Product by State (2006) describes the sources and the methods that are used to prepare the estimates.

"Gross Domestic Product by State" (June 2009) presents the most recent annual revision.

"Introducing New Measures of the Metropolitan Economy: Prototype GDP-by-Metropolitan-Area Estimates for 2001–2005" (November 2007) describes the potential uses of the estimates.
