The SURVEY OF CURRENT BUSINESS (ISSN 0039-6222) is published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Send editorial correspondence to customerservice@bea.gov.

Subscriptions to the SURVEY OF CURRENT BUSINESS are maintained, and the prices are set, by the U.S. Government Printing Office, an agency of the U.S. Congress. To subscribe, call 202-512-1800 or go to bookstore.gpo.gov.

The information in this journal is in the public domain and may be reprinted without the permission of the Bureau of Economic Analysis. Citation of the SURVEY OF CURRENT BUSINESS as the source is appreciated.

The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of the Department.

SURVEY OF CURRENT BUSINESS

November 2013

Volume 93 • Number 11

- 1 GDP and the Economy: Advance Estimates for the Third Quarter of 2013**
Real GDP rose 2.8 percent after rising 2.5 percent in the second quarter of 2013. Business investment and state and local government spending picked up. Consumer spending slowed.
- 6 Updated Summary of NIPA Methodologies**
The data and methods used to prepare current-dollar and real gross domestic product and current-dollar gross domestic income, reflecting the 2013 comprehensive NIPA revision.
- 27 Research Spotlight**
Alternative Measures of Implicitly Priced Financial Services of Savings Institutions and Credit Unions
A look at various methods for measuring the output of these entities that are consistent with the methods used in the Bureau of Economic Analysis (BEA) national economic accounts.
- 37 U.S. Multinational Companies: Operations of U.S. Parents and Foreign Affiliates in 2011**
The value added of U.S. multinational companies rose 8.3 percent. The value added of U.S. parents rose 4.9 percent, and the value added of their affiliates rose 16.3 percent.
- 48 Regional Quarterly Report**
State personal income grew in all but three states in the second quarter of 2013. Growth ranged from 1.5 percent in Arizona and Florida to -0.7 percent in Nebraska.

Looking Ahead

Local Area Personal Income. Preliminary estimates for 2012 and revised estimates for 2001–2011 that reflect the comprehensive revision of local area personal income.

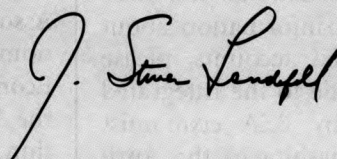

Director's Message

In this issue of the SURVEY OF CURRENT BUSINESS, we're pleased to present a *Research Spotlight* that looks at various measures of implicitly priced financial services for savings institutions and credit unions. The article develops methods for measuring the output of these entities that are consistent with the methods used in the Bureau of Economic Analysis (BEA) national economic accounts.

Another article summarizes the major results of the 2011 Annual Survey of U.S. Direct Investment Abroad, which collects statistics on the worldwide operations of U.S. multinational companies. Full statistics are available on the BEA Web site. Because of budget reductions under the 2013 sequester, BEA is not publishing an indepth article about these statistics this year.

In addition, we present our annual guide to the methodologies and source data for the national income and product accounts, a valuable resource for all users of the statistics. The advance estimates for the third quarter of 2012 are also presented.

A *Regional Quarterly Report* takes a look at state personal income for the second quarter of 2013. Personal income grew in all but three states and ranged from 1.5 percent growth in Arizona and Florida to -0.7 percent in Nebraska. The report also discusses the initial results of BEA's latest comprehensive revision of the quarterly and annual state personal income statistics, which was released in September 2013.

J. Steven Landefeld
Director, Bureau of Economic Analysis

Taking Account...

Integrated macroeconomic accounts updated

The Bureau of Economic Analysis (BEA) has recently updated the integrated set of macroeconomic accounts that harmonizes its national income and product accounts (NIPAs) with the Federal Reserve Board's financial accounts of the United States (FAUS).

With this update, these integrated accounts, which are available on the BEA Web site, now reflect the 2013 comprehensive, or benchmark, revision of the NIPAs. Comprehensive revisions of the NIPAs occur roughly every 5 years.

Traditionally, comprehensive revisions differ from annual revisions because of the scope of the changes and because of the number of years subject to revision. The 2013 comprehensive revision included changes to the way the NIPAs treat research and development; movies, books, television shows, and other artistic originals; pension contributions; and residential assets.

The integrated macroeconomic accounts comprise a sequence of macroeconomic accounts that link production and income to changes in net worth for the U.S. economy. The accounts detail the sources and uses of the funds that are made available for capital formation or net lending as well as track assets and liabilities of major sectors of the economy. In identifying the sources of changes in net worth, the ac-

counts provide information on changes in the market values of assets and liabilities, which are important drivers of changes in net worth.

The integrated macroeconomic accounts (IMAs) also bring the NIPAs and FAUS into closer accordance with the national accounting guidelines offered by the international community in the *System of National Accounts*.

BEA and the Federal Reserve Board jointly prepare the IMAs for the United States.

In addition to bringing together data from the NIPAs and the FAUS, these integrated accounts use consistent economic and accounting definitions and present the information in a unified framework.

The IMAs are part of an inter-agency effort to integrate the NIPAs and the FAUS, to fill information gaps, and to enhance international comparability of the U.S. national accounts.

For more information about the integrated accounts, please view "A Guide to the Integrated Accounts," by BEA economist Takashi Yamashita in the April 2013 issue of the *SURVEY OF CURRENT BUSINESS*.

The guide summarizes the accounts and explains the structure of the accounts, the advantages, and the special features. It also looks at a few examples that use the accounts to analyze the U.S. economy before the financial crisis and the recession of 2007.

Additional information about the 2013 comprehensive revision of the NIPAs is also available on the BEA Web site.

Nominations for the 2014 Julius Shiskin Award

Nominations are being accepted for the 2014 Julius Shiskin Memorial Award for Economic Statistics. It is given in recognition of unusually original and important contributions to the development of economic statistics or to the use of statistics in interpreting the economy.

Contributions are accepted in the following areas: development of new statistical measures, statistical research, use of economic statistics to analyze and interpret economic activity, development of statistical tools, management of statistical programs, or application of data production techniques.

The Julius Shiskin Award is cosponsored by the Washington Statistical Society, the National Association for Business Economics, and the Business and Economics Statistics Section of the American Statistical Association.

The award carries an honorarium of \$1,000, plus additional recognition from sponsors.

Nomination forms are available at the following page: www.amstat.org/sections/bus_econ/shiskin.html. Forms are due on March 15, 2014.

For more information, please email paben.steven@bls.gov.

GDP and the Economy

Advance Estimates for the Third Quarter of 2013

REAL GROSS domestic product (GDP) increased 2.8 percent at an annual rate in the third quarter of 2013, according to the advance estimates of the national income and product accounts (NIPAs) (chart 1 and table 1). In the second quarter of 2013, real GDP increased 2.5 percent.¹

The acceleration in real GDP growth in the third quarter primarily reflected a deceleration in imports and accelerations in inventory investment and in state and local government spending that were partly offset by decelerations in exports, in nonresidential fixed investment, and in consumer spending.²

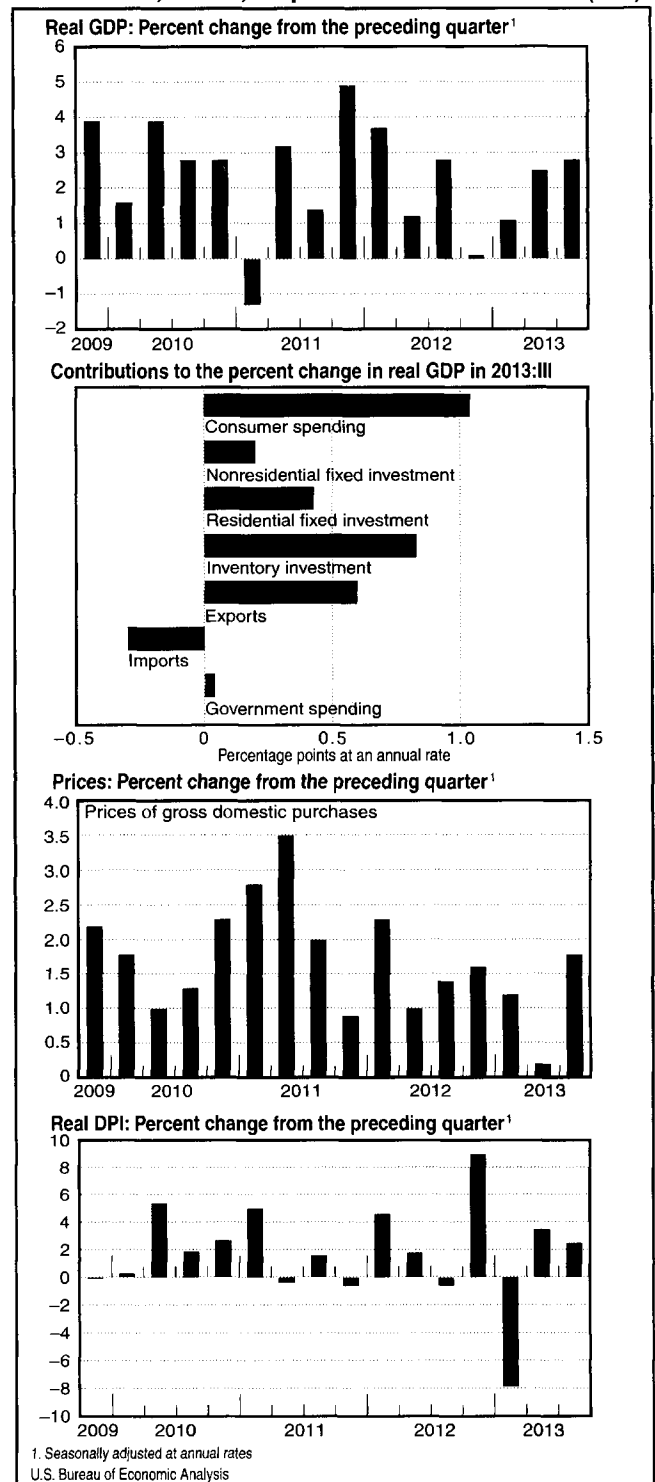

- Prices of goods and services purchased by U.S. residents, as measured by the gross domestic purchases price index, increased 1.8 percent in the third quarter after increasing 0.2 percent in the second quarter. Energy prices turned up in the third quarter and food prices accelerated slightly. Excluding food and energy, prices increased 1.5 percent after increasing 0.8 percent (table 2).
- Real disposable personal income (DPI) increased 2.5 percent in the third quarter after increasing 3.5 percent in the second quarter. Current-dollar DPI increased 4.5 percent (\$138.1 billion) after increasing 3.4 percent (\$103.2 billion). The deceleration in real DPI reflected an upturn in the implicit price deflator for consumer spending, which is used to deflate DPI, that was partly offset by the acceleration in current-dollar DPI (table 3).
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 4.7 percent in the third quarter; in the second quarter, the rate was 4.5 percent.

1. "Real" estimates are in chained (2009) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data; for more information, see "Revisions to GDP, GDI, and Their Major Components" in the July 2011 SURVEY OF CURRENT BUSINESS. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

2. In this article, "consumer spending" refers to "personal consumption expenditures," "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment."

Lisa S. Mataloni prepared this article.

1. The estimates of GDP under the contribution columns are also percent changes.
NOTE: Percent changes are from NIPA tables 1.1.1 and 1.2.1, contributions are from NIPA tables 1.1.2 and 1.2.2, and shares are from NIPA table 1.1.10, or they are calculated from NIPA table 1.2.5.

Consumer spending slowed in the third quarter, reflecting a deceleration in services that was partly offset by a pickup in goods.

The largest contributors to the pickup in goods were food and beverages purchased for off-premises consumption and motor vehicle and parts, both of which turned up, and widespread accelerations in "other" nondurable goods, notably prescription drugs.

The largest contributors to the deceleration in spending for services were a downturn in housing and utilities (primarily due to a downturn in spending for natural gas that was partly offset by a smaller decrease in spending for electricity) and a slowdown in health care.

Nonresidential fixed investment slowed, reflecting a downturn in equipment and a deceleration in nonresidential structures that were partly offset by an upturn in intellectual property products (which was more than accounted for by software).

Inventory investment picked up, primarily reflecting a pickup in nonfarm inventory investment. Farm inventory investment increased at about the same rate as in the second quarter.

Exports slowed; the slowdown reflected decelerations in both goods and services.

Imports slowed; the slowdown reflected decelerations in both goods and services, but primarily in goods. The main contributors to the deceleration in goods were "other" goods and nonautomotive consumer goods, both of which turned down, and a deceleration in automotive vehicles, engines, and parts.

Government spending turned up, reflecting a pickup in state and local government spending that was partly offset by a slightly larger decrease in federal government spending.

The pickup in state and local government spending primarily reflected an upturn in gross investment in structures.

Real final sales of domestic product, real GDP less inventory investment, increased 2.0 percent in the third quarter after increasing 2.1 percent in the second quarter.

Prices

Table 2. Prices for Gross Domestic Purchases

[Percent change at annual rates; based on seasonally adjusted index numbers (2009=100)]

	Change from preceding period (percent)				Contribution to percent change in gross domestic purchases prices (percentage points)

Excluding food and energy	1.3	1.4	0.8	1.5	1.20	1.29	0.68	1.33
Personal consumption expenditures (PCE):								
Food and beverages purchased for off-premises consumption	1.8	1.3	0.5	1.2				
Energy goods and services	6.6	-3.4	-11.9	11.7				
Excluding food and energy	1.3	1.4	0.6	1.4				
Gross domestic product (GDP)	1.1	1.3	0.6	1.9				
Exports of goods and services	1.5	1.4	-3.2	0.9				
Imports of goods and services	4.1	0.5	-5.0	0.2				

1. The estimates of gross domestic purchases under the contribution columns are also percent changes.

NOTE: Most percent changes are from NIPA table 1.6.7; percent changes for PCE for food and energy goods and services and for PCE excluding food and energy are from NIPA table 2.3.7. Contributions are from NIPA table 1.6.8. GDP, export, and import prices are from NIPA table 1.1.7.

Prices paid by U.S. residents, as measured by the gross domestic purchases price index, picked up, increasing 1.8 percent in the third quarter after increasing 0.2 percent.

Consumer prices turned up, primarily reflecting an upturn in prices paid for consumer spending on non-durable goods, notably gasoline and other energy goods.

Prices paid for nonresidential fixed investment slowed slightly, primarily reflecting a slowdown in prices paid for structures.

Prices paid by government picked up, primarily reflecting an upturn in prices paid by state and local governments, primarily for petroleum.

Consumer prices excluding food and energy, a measure of "core" inflation, increased 1.4 percent after increasing 0.6 percent.

The GDP price index increased 1.9 percent in the third quarter, 0.1 percentage point more than the increase in the price index for gross domestic purchases. Export prices increased 0.9 percent after decreasing 3.2 percent, and import prices increased 0.2 percent after decreasing 5.0 percent.

Note on Prices

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services. It is derived from the prices of personal consumption expenditures (PCE), private investment, and government consumption expenditures and gross investment.

BEA also produces price indexes for all the components of GDP. The PCE price index is a measure of the total cost of consumer goods and services, including durable goods, nondurable goods, and services. PCE prices for food, energy goods and services, and for all items except food and energy are also estimated and reported.

Because prices for food and energy can be volatile, the

price measure that excludes food and energy is often used as a measure of underlying, or "core," inflation. The core PCE price index includes purchased meals and beverages, such as restaurant meals and pet food. (See the FAQ "What is the core PCE price index and why has it been redefined?" on BEA's Web site.)

BEA also prepares a supplemental PCE price index, the "market-based" PCE price index, that is based on market transactions for which there are corresponding price measures. This index excludes many imputed expenditures, such as financial services furnished without payment, that are included in PCE and the PCE price index. BEA also prepares a market-based measure that excludes food and energy.

1. Includes COLAs for social security, veterans benefits, railroad retirement, and supplemental security income. In the first quarter, the social security COLA boosted benefits \$13.2 billion.
 Note: Dollar levels are from NIPA tables 2.1 and 2.2B. CCAAdj Capital consumption adjustment
 FICA Federal Insurance Contributions Act IVA Inventory valuation adjustment
 SECA Self-Employed Contributions Act SMI Supplementary Medical Insurance

Personal income, which is measured in current dollars, slowed slightly in the third quarter, increasing \$132.7 billion after increasing \$139.1 billion in the second quarter. The deceleration primarily reflected decelerations in personal dividend income and in wages and salaries that were partly offset by an acceleration in government social benefits to persons and an upturn in farm proprietors' income.

The deceleration in private wages and salaries primarily reflected the pattern of monthly employment, hours, and earnings data from the Bureau of Labor Statistics for the third quarter.

Government wages and salaries decreased more in the third quarter than in the second quarter. The larger decrease reflected the effects of administrative furloughs associated with sequestration; for example, approximately 640,000 civilian workers at the Department of Defense were furloughed for a total of 6 days in July and August.

The upturn in farm proprietors' income partly reflected payments by the U.S. government to farmers as part of a farm loan lawsuit settlement that boosted farm proprietors' income by approximately \$3.4 billion.

The deceleration in personal dividend income reflected estimates based on data from corporate financial reports.

The acceleration in government social benefits primarily reflected an upturn in Medicare payments and an acceleration in Medicaid payments. Medicare payments in the second quarter reflected a reduction in physicians' reimbursement rates that took effect in April.

A downturn in personal current taxes primarily reflected a downturn in state and local income taxes that largely reflected a return to normal levels following strong growth in the first and second quarters of 2013 as taxpayers made payments on income that had been accelerated before anticipated increases in income tax rates.

Change in private inventories:						
Change in inventories for nondurable manufacturing ²	-1.1	-2.9	7.6	3.6	14.7	-5.2
Change in inventories for merchant wholesale and retail industries other than motor vehicles and equipment	5.8	-22.5	-6.7	38.3	32.1	-7.6
Net exports:³						
Exports of goods:						
U.S. exports of goods, international-transactions-accounts basis	1,570.9	1,560.3	1,605.7	1,592.3	1,589.2	1,611.6
Excluding gold	1,525.9	1,529.0	1,570.4	1,552.1	1,559.6	1,576.7
Imports of goods:						
U.S. imports of goods, international-transactions-accounts basis	2,273.2	2,317.2	2,254.4	2,289.5	2,287.9	2,317.0
Excluding gold	2,257.0	2,298.6	2,237.3	2,274.3	2,271.0	2,301.0
Net exports of goods	-702.3	-756.8	-648.7	-697.2	-698.6	-705.4
Excluding gold	-731.1	-769.7	-666.9	-722.2	-711.5	-724.3
State and local government structures:						
Value of new construction put in place	240.1	245.3	249.0	249.6	251.6	250.6

1. All the values except the value for inventory investment for nondurable manufacturing are assumptions.

2. The value for September reflects data from the Census Bureau.

3. Nonmonetary gold is included in balance-of-payments exports and imports, but it is not used directly in estimating exports and imports in the national income and product accounts.

Source Data and Key Assumptions for the Advance Estimates of GDP

The advance estimates of many components of GDP are based on 3 months of source data, but the estimates of some components are based on only 2 months of data. For the following items, the number of months for which data are available is shown in parentheses.

Consumer spending: sales of retail stores (3), unit auto and truck sales (3), consumers' shares of auto and truck sales (2), motor vehicle fuels data (3), and electricity and gas usage and unit-value data (3);

Nonresidential fixed investment: unit auto and truck sales (3), construction spending (value put in place) (2), manufacturers' shipments of machinery and equipment (3), and exports and imports of machinery and equipment (2);

Residential fixed investment: construction spending (value put in place) (2), single-family housing starts (2), sales of new homes (2), and sales of existing houses (3);

Change in private inventories: trade and manufacturing inventories (2), durable-goods and nondurable-goods manufacturing inventories (3), and unit auto and truck inventories (3);

Net exports of goods and services: exports and imports of goods and services (2);

Government spending: federal government outlays (3),

state and local government construction spending (value put in place) (2), and state and local government employment (3);

Compensation: employment, average hourly earnings, and average weekly hours (3); and

Prices: consumer price indexes (3), producer price indexes (3), and values and quantities of petroleum imports (2).

Key assumptions

When source data were unavailable, BEA made various assumptions for September, including the following (table 4):

- A slight decrease in nonresidential structures,
- An increase in single-family structures,
- A slight increase in multifamily structures,
- A decrease in nonmotor vehicle merchant wholesale and retail inventories,
- An increase in exports of goods excluding gold and a larger increase in imports of goods excluding gold, and
- A slight decrease in state and local government construction spending.

A more comprehensive list is available on BEA's Web site at www.bea.gov.

Updated Summary of NIPA Methodologies

The Bureau of Economic Analysis (BEA) has recently improved its estimates of current-dollar gross domestic product (GDP), current-dollar gross domestic income (GDI), and real GDP as part of the 2013 comprehensive revision of the national income and product accounts (NIPAs).¹ The sources of data and the methodologies that are now used to prepare the NIPA estimates are summarized in this report.²

Current-dollar estimates of GDP and GDI

The major components and subcomponents of GDP and GDI are listed in table 1. In column 1 of the table, the name of the component is shown along with the current-dollar estimate of that component for 2012. In column 2, information about the sources of data and the methods that are used to prepare the estimates for the comprehensive benchmark revisions and for the annual revisions in nonbenchmark years are also presented, and the major differences between the data and the methods used in the benchmark revisions and those used in the annual revisions are noted. For example, for “Furnishings and durable household equipment” in personal consumption expenditures (PCE) (the second item in table 1), the table indicates that one methodology (commodity flow) is used to prepare the estimates for benchmark years, and another methodology (retail control) is used to prepare the estimates for all the other years.

In column 3, information about the current quarterly estimates is also presented. For most components, information about the advance quarterly estimates, which are prepared about a month after the end of the quarter, are provided because more attention tends to be focused on this “first look” at GDP for a quarter. Major source data that become available for the “second” or “third” quarterly estimates for some NIPA components are also noted. Only the source data and methods are listed; the number of months of available source data and whether

or not the source data will be revised by the source agency are not included.³

Source data

The source data include a variety of economic measures, such as sales or receipts, wages and salaries, unit sales, housing stock, insurance premiums, expenses, interest rates, mortgage debt, and tax collections.

For most components, the estimates are derived from source data that are “value data”: they encompass both the quantity data and the price data required to prepare the current-dollar estimates. For these components, the value data are adjusted to derive estimates that are consistent with NIPA definitions and coverage.

For the estimates that are not derived from value data, the sources of the quantity and price data that are used to prepare value estimates are indicated, and the major adjustments that are needed to derive estimates that are consistent with NIPA definitions and coverage are specified.

For the current-dollar estimates of GDP, a “physical quantity times price” method is used for several components. For example, the annual estimate of expenditures on new autos in a nonbenchmark year is calculated as unit sales times expenditure per auto (the average transactions price that reflects all discounts and customer rebates).

For the current-dollar estimates of GDI, two general methods are used for several components—an “employment times earnings times hours” method and variations of a “stock of assets/liabilities times an effective interest rate” method.

Some quarterly (or monthly) estimates are derived using source data as indicators to interpolate or extrapolate annual estimates. In other cases, extrapolation and interpolation may be based on trends; in those cases, the use of “judgmental trend” is indicated.

Estimation methods

For some components, BEA uses one of four methods: the commodity-flow method, the retail-control method, the perpetual-inventory method, and the fiscal year analysis method.

The commodity-flow method involves estimating values based on various measures of output. For example,

3. For specific information on key monthly source data incorporated in the current quarterly estimates, see “GDP and the Economy” in the SURVEY.

1. The concepts and methodologies that underlie the NIPAs are subject to periodic improvements as part of the comprehensive and annual NIPA revisions, and these improvements are described in a series of articles in the SURVEY OF CURRENT BUSINESS; for a list of these articles, see appendix B at the back of this issue. See also Stephanie H. McCulla, Alyssa E. Holdren, and Shelly Smith, “Improved Estimates of the National Income and Product Accounts: Results of the 2013 Comprehensive Revision,” SURVEY 93 (September 2013): 14–45.

2. For detailed descriptions of the fundamental concepts, definitions, classifications, and accounting framework that underlie the NIPAs and of the general sources and methods that are used to prepare the estimates, see *Concepts and Methods of the U.S. National Income and Product Accounts* on BEA’s Web site at bea.gov/methodologies/index.htm.

the estimates of PCE for “Furnishings and durable household equipment” in benchmark years are based on data on manufacturers’ shipments from the Census Bureau, and BEA adjusts the data for imports and exports. In general, this method is used to derive estimates of various components of PCE, of equipment investment, and of the commodity detail for state and local government consumption expenditures and gross investment.⁴ An abbreviated form of this method is used to prepare estimates of equipment investment in nonbenchmark years, and an even more abbreviated form is used to prepare the current quarterly estimates of equipment investment.

The retail-control method uses retail sales data, usually compiled by the Census Bureau, to estimate expenditures.⁵ It is used to prepare estimates of many subcomponents of PCE for durable and nondurable goods in nonbenchmark years. This method ensures that the growth rate for these subcomponents is the same rate as the “retail control” group, a measure based on the total sales of most kinds of businesses selling goods from the Census Bureau’s monthly and annual retail trade surveys.

The perpetual-inventory method is used to derive estimates of fixed capital stock, which are used to estimate consumption of fixed capital—the economic depreciation of private and government fixed capital. This method is based on investment flows and a geometric depreciation formula.⁶

The fiscal year analysis method is used to estimate annual and quarterly estimates of consumption expenditures and gross investment by the federal government. The estimates of expenditures are calculated by program, that is, by activity for a single line item or for a group of line items in the *Budget of the U.S. Government*. For most programs, BEA adjusts budget outlays so that they conform to NIPA concepts and definitions and classifies the expenditures in the appropriate NIPA category—such as current transfer payments or interest payments—with nondefense consumption expenditures and gross investment determined residually. When a fiscal year analysis is completed, the detailed array of NIPA expenditures by program and by type of expenditure provides a set of control totals for the quarterly estimates.⁷

International transactions accounts

The source data for the foreign transactions that are reflected in most NIPA components—such as net exports of goods and services, net income receipts, and rest-of-

the-world corporate profits—are from the international transactions accounts (ITAs) that are prepared by BEA.⁸ As noted in table 1, for some NIPA components, the ITA estimates are adjusted to conform to NIPA concepts and definitions. For the annual estimates of these adjustments and their definitions, see NIPA table 4.3B in the September 2013 *SURVEY* (page 143).⁹

Reconciliation tables. In preparing the annual estimates of several components of GDI, BEA adjusts the source data to conform to NIPA concepts and coverage. For each subcomponent, an annual NIPA table reconciles the value published by the source agency with the NIPA value published by BEA, and the adjustments are listed. Reconciliation tables for the following subcomponents were published in “National Income and Product Accounts Tables” in the September 2013 *SURVEY*: consumption of fixed capital in table 7.13; nonfarm proprietors’ income in table 7.14; corporate profits in table 7.16; net monetary interest in table 7.17; and wages and salaries in table 7.18.

Estimates of real GDP

BEA uses three methods to estimate real GDP: the deflation method, the quantity extrapolation method, and the direct valuation method. These methods and the source data that are used for estimation are listed in table 2.

The deflation method is used for most components of GDP. A quantity index is derived by dividing the current-dollar index by an appropriate price index that has the base year—currently 2009—equal to 100. The result is then multiplied by 100.

The quantity extrapolation method uses quantity indexes that are obtained by using a quantity indicator to extrapolate from the base-year value of 100.

The direct valuation method uses quantity indexes that are obtained by multiplying the base-year price by actual quantity data for the index period. The result is then expressed as an index with the base year equal to 100.

The subcomponents in table 2 are the same as those shown in table 1, but the detail differs to highlight the alternative methodologies that are used to calculate the real estimates.¹⁰

8. See *U.S. International Transactions Accounts: Concepts and Estimation Methods* at www.bea.gov under “International” and “Methodologies.” Improvements in methodology are usually introduced as part of annual ITA revisions; see Barbara H. Berman and Jeffrey R. Bogen “Annual Revision of the U.S. International Transactions Accounts” *SURVEY* 93 (July 2013): 43–54.

9. Quarterly estimates are presented in NIPA underlying detail table 4.3BU.

10. For the real estimates, the distinction between annual and quarterly methodologies is less important than it is for the current-dollar estimates. For the relatively few cases in which the annual and quarterly source data differ, the major differences are noted.

4. For additional information on the commodity-flow method, see “Chapter 4: Estimating Methods” in *Concepts and Methods of the U.S. National Income and Product Accounts*, 4–8 and 4–9.

5. For additional information, see “Estimating Methods,” 4–9 and FAQ 519 “What is the retail-control method?” at faq.bea.gov.

6. For additional information, see “Estimating Methods,” 4–11.

7. For details, see “Chapter 9: Government Consumption Expenditures and Gross Investment.”

Tables 1 and 2 follow.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Gross domestic product of \$16,244.6 billion for 2012		
Personal consumption expenditures (\$11,149.6 billion)		
Goods (\$3,769.7 billion)		
Durable goods (\$1,202.7 billion)		
Motor vehicles and parts (\$401.7 billion)	<p>Benchmark years. For new motor vehicles, physical quantity purchased times average retail price: unit sales, information to allocate sales among consumers and other purchasers, and average transactions prices that reflect all discounts and customer rebates, all from trade sources. For net transactions, residual based on net sales by other sectors. For dealers' margins, retail sales from Census Bureau quinquennial census and margin rates from Census Bureau annual survey of retail trade (ARTS). For motor vehicle parts and accessories, commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data.</p> <p>Other years except the most recent year. For new motor vehicles, same as the benchmark years. For net transactions, change in consumer stock of motor vehicles from trade sources. For dealers' margins, for franchised dealers, unit sales and sales prices from trade sources times margin rates for independent dealers from Census Bureau ARTS. For motor vehicle parts and accessories, retail-control method, using retail sales from Census Bureau ARTS.</p> <p>Most recent year. For new motor vehicles and for net transactions, same as the annual estimates for other years. For dealers' margins, for franchised dealers, unit sales and sales prices from trade sources. For independent dealers, sales from Census Bureau monthly survey of retail trade. For motor vehicles parts and accessories, retail-control method, using retail sales from Census Bureau monthly survey of retail trade.</p>	For new motor vehicles, same as the annual estimates for other years. For net transactions, extrapolated by retail sales of used vehicle dealers from Census Bureau monthly survey of retail trade. For dealers' margins, same as the annual estimates for the most recent year and judgmental trend. For motor vehicle parts and accessories, same as the annual estimates for the most recent year.
Furnishings and durable household equipment (\$275.1 billion)	<p>Benchmark years. Commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data.</p> <p>Other years except the most recent year. Retail-control method, using retail sales from Census Bureau ARTS.</p> <p>Most recent year. Retail-control method, using Census Bureau monthly survey of retail trade.</p>	Same as the annual estimates for the most recent year.
Recreational goods and vehicles (\$334.5 billion)	<p>Benchmark years. Commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data.</p> <p>Other years except the most recent year. Retail-control method, using retail sales from Census Bureau ARTS.</p> <p>Most recent year. Retail-control method, using Census Bureau monthly survey of retail trade.</p>	Same as the annual estimates for the most recent year.
Other durable goods (\$191.3 billion)	<p>Benchmark years. Commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data.</p> <p>Other years except the most recent year. Retail-control method, using retail sales from Census Bureau ARTS.</p> <p>Most recent year. Retail-control method, using Census Bureau monthly survey of retail trade.</p>	Same as the annual estimates for the most recent year.
Nondurable goods (\$2,567.0 billion)		
Food and beverages purchased for off-premises consumption (\$863.3 billion)	<p>Benchmark years. Commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data. For food produced and consumed on farms, USDA data.</p> <p>Other years except the most recent year. Retail-control method, using retail sales from Census Bureau ARTS. For food produced and consumed on farms, same as for benchmark years.</p> <p>Most recent year. Retail-control method, using Census Bureau monthly survey of retail trade. For food produced and consumed on farms, same as for benchmark years.</p>	For food produced and consumed on farms, judgmental trend. For all others, same as the annual estimates for the most recent year.

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Clothing and footwear (\$354.6 billion)	<p>Benchmark years. For standard clothing issued to military personnel, data from OMB's <i>Budget of the United States</i>. For all others, commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data.</p> <p>Other years except the most recent year. For standard clothing issued to military personnel, same as for benchmark years. For all others, retail-control method, using retail sales from Census Bureau ARTS.</p> <p>Most recent year. For standard clothing issued to military personnel, same as for benchmark years. For all others, retail-control method, using Census Bureau monthly survey of retail trade.</p>	For standard clothing issued to military personnel, judgmental trend. For all others, same as the annual estimates for the most recent year.
Gasoline and other energy goods (\$417.0 billion)	<p>Benchmark years. For gasoline and other motor fuels, merchandise line data on receipts of automotive fuels from Census Bureau quinquennial census. For all others, commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data.</p> <p>Other years except the most recent year. For nondiesel gasoline, quantity shipments from the Energy Information Administration (EIA) times average retail price from BLS. For diesel gasoline, data from BLS consumer expenditure survey. For lubricants and fluids, manufacturers' shipments Census Bureau annual survey. For fuel oil and other fuels, retail-control method, using Census Bureau ARTS.</p> <p>Most recent year. For nondiesel gasoline, same as other years. For diesel gasoline, quantity shipments from EIA times average retail price from BLS. For lubricants and fluids, quantity shipments from EIA times CPI for motor oil, coolants, and fluids. For fuel oil and other fuels, retail-control method, using Census Bureau monthly survey of retail trade.</p>	Same as the annual estimates for the most recent year.
Other nondurable goods (\$932.1 billion)	<p>Benchmark years. For prescription drugs, Census Bureau quinquennial product-line data on retail sales for prescription drugs. For expenditures abroad by U.S. residents (net), BEA international transactions accounts. For all others, commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data.</p> <p>Other years except the most recent year. For prescription drugs, value of sales to consumers from a trade source. For tobacco, quantity shipped times consumer price: quantity shipments data from the U.S. Department of the Treasury, Alcohol and Tobacco Tax and Trade Bureau times the CPI for tobacco and smoking products from BLS. For expenditures abroad by U.S. residents (net), same as for benchmark years. For all others, retail-control method, using retail sales from Census Bureau ARTS.</p> <p>Most recent year. For prescription drugs, for tobacco, and for expenditures abroad by U.S. residents (net), same as other years. For all others, retail-control method, using Census Bureau monthly survey of retail trade.</p>	For expenditures abroad by U.S. residents (net), same as for benchmark years. For all others, same as the annual estimates for the most recent year.

Food services and accommodations (\$701.7 billion)	<p>Benchmark years. Commodity-flow method, starting with receipts from Census Bureau quinquennial census, census of governments, and federal government agency data.</p> <p>Other years. Receipts from Census Bureau ARTS, annual surveys of state and local governments, adjusted to a calendar year basis from a fiscal year basis, trade sources, and judgmental trend.</p>	<p>For food services, monthly food services sales from Census Bureau monthly survey of retail trade and food services. For all others, trade source and judgmental trend.</p>
Financial services and insurance (\$821.0 billion)	<p>Benchmark years. For insurance services, trade sources. For all others, commodity-flow method, starting with receipts from Census Bureau quinquennial census, and data from federal and state government administrative agencies and from trade sources.</p> <p>Other years. For insurance services, same as benchmark years and judgmental trend. For all others, Census Bureau services annual survey, federal and state government administrative data, and trade sources.</p>	<p>For financial service charges and fees and for trust, fiduciary, and custody activities, advance and second estimates, judgmental trend; third estimate, Federal Deposit Insurance Corporation <i>Call Report</i> data. For financial services furnished without payment, advance and second estimates, judgmental trend; third estimate, FRB tabulations of <i>Call Report</i> data. For all others, wages and salaries derived from BLS monthly employment times earnings times hours, trade sources, and judgmental trend.</p>
Other services (\$970.4 billion)	<p>Benchmark years. For net foreign travel, estimated as part of the international transactions accounts, see the entry "Exports and imports of services" under "Net exports of goods and services." For all others, commodity-flow method, starting with receipts from Census Bureau quinquennial census, census of governments, and trade sources.</p> <p>Other years. For net foreign travel, same as benchmark years. For all others, receipts from Census Bureau services annual survey, trade sources, annual survey of state and local government finances, and judgmental trend.</p>	<p>For telephone services, for other delivery services, for internet service providers, for commercial and vocational schools, for day care and nursery school, for legal services, for nonprofit professional associations services, for funeral services, for personal care and clothing services, for child care, for individual and family services, for vocational rehabilitation services, for community food and housing/emergency/other relief services, for social advocacy and civic and social organizations, and for household maintenance, advance and second estimates, wages and salaries derived from BLS monthly employment times earnings times hours and judgmental trend; third estimate, receipts from Census Bureau quarterly services survey. For net foreign travel, same as benchmark years. For all others, wages and salaries derived from BLS monthly employment times earnings times hours, trade sources, and judgmental trend.</p>
Final consumption expenditures of nonprofit institutions serving households (\$290.5 billion)	<p>Benchmark years. For gross output of nonprofit institutions, operating expenses from Census Bureau quinquennial census for tax-exempt and religious organizations and trade source.</p> <p>Other years. For gross output of nonprofit institutions, operating expenses from Census Bureau annual survey for tax-exempt organizations and trade sources.</p>	<p>For gross output of health services, for recreation services, for nonprofit commercial and vocational schools, for nonprofit day care and nursery schools, for nonprofit child care providers, for nonprofit individual and family services, for nonprofit vocational rehabilitation services, for nonprofit community food and housing services, for foundations and grant making, for social advocacy organizations, for civic and social organizations, for professional associations, and for "all other similar organizations," advance and second estimates, wages and salaries derived from BLS monthly employment times earnings times hours and judgmental trend; third estimate, operating expenses from Census Bureau quarterly services survey. For all others, wages and salaries derived from BLS monthly employment times earnings times hours and judgmental trend.</p>

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Fixed investment (\$2,409.1 billion)		
Nonresidential structures (\$437.3 billion)		
Commercial and health care (\$103.2 billion)	Benchmark years. BEA's benchmark input-output accounts. Other years. Construction spending (value put in place) from Census Bureau monthly construction survey.	Same as the annual estimates for other years.
Manufacturing (\$45.8 billion)	Construction spending (value put in place) from Census Bureau monthly construction survey.	Same as the annual estimates.
Power and communication (\$100.5 billion)	Construction spending (value put in place) from Census Bureau monthly construction survey.	Same as the annual estimates.
Mining exploration, shafts, and wells (\$125.5 billion)	Benchmark years. Expenditures from Census Bureau quinquennial census. Other years except the most recent year. For petroleum and natural gas, physical quantity times average price, footage drilled completions from a trade source, composite index of BLS PPIs for oil and gas wells and for oil and gas field services, and base-year cost per footage drilled from Census Bureau annual capital expenditures survey, and footage drilled from a trade source. For other mining, expenditures from Census Bureau annual capital expenditures survey. Most recent year. For petroleum and natural gas, physical quantity times average price, footage drilled from a trade source, composite index of BLS PPIs, base-year cost per footage drilled from a trade source, footage drilled completions from a trade source, and judgmental trend. For mining, BEA data on private investment in mining equipment.	For petroleum and natural gas, average physical quantity times average price, weighted average of footage drilled completions and of rotary rig counts from trade sources, and weighted average of BLS PPIs for oil and gas wells and for oil and gas field services. For mining, same as the annual estimates for the most recent year.
Other structures (\$62.3 billion)	Benchmark years. BEA's benchmark input-output accounts. Other years. Construction spending (value put in place) from Census Bureau monthly construction survey.	Same as the annual estimates for other years.
Nonresidential equipment (\$907.6 billion)		
Equipment except new autos, new light trucks, and net purchases of used autos and used light trucks (\$787.3 billion)	Benchmark years. Commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data. Other years except the most recent year. Abbreviated commodity-flow method, starting with manufacturers' shipments from Census Bureau annual survey, adjusted for exports and imports. Most recent year. For computers, manufacturers' shipments from Census Bureau monthly survey of manufactures and FRB industrial production index, adjusted for exports and imports. For heavy trucks, physical quantity purchased times average price: unit sales and information to allocate sales among business and other purchasers, from trade sources; for truck trailers, shipments from trade source. For all others, abbreviated commodity-flow method, starting with manufacturers' shipments from Census Bureau monthly survey of manufactures, adjusted for exports and imports.	Same as the annual estimates for the most recent year but with less detail.
New autos, new light trucks, and net purchases of used autos and used light trucks (\$120.3 billion)	See the entry "Motor vehicles and parts" under "Personal consumption expenditures."	See the entry under "Personal consumption expenditures."
Nonresidential intellectual property products (\$625.0 billion)		
Software (\$281.6 billion)	Benchmark years. For purchased software, commodity-flow method, starting with industry receipts from Census Bureau quinquennial census, including an adjustment for exports and imports from Census Bureau foreign trade data. For own-account software, production costs based on BLS occupational employment data and on Census Bureau quinquennial census. Other years. For purchased software, commodity-flow method, starting with industry receipts from Census Bureau services annual survey, including an adjustment for exports and imports from Census Bureau foreign trade data. For own-account software, production costs based on BLS occupational employment data.	For purchased software, advance and second estimates, receipts from company reports to the Securities and Exchange Commission; third estimate, receipts from Census Bureau quarterly services survey. For own-account software, BLS monthly current employment statistics for select industries.
Research and development (\$269.1 billion)	Benchmark years. National Science Foundation (NSF) data and BEA's benchmark input-output accounts. Other years. NSF data adjusted for software overlap, imports and exports, and capital consumption adjustment.	For business research and development (R&D), advance estimate, BLS monthly current employment statistics for select industries; second and third estimates, R&D expenses from publicly traded corporations financial statements. For academic R&D, BLS monthly current employment statistics for education industry.

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Entertainment, literary, and artistic originals (\$74.3 billion)	Benchmark years. BEA's benchmark input-output accounts. Other years. Revenues from Census Bureau services annual survey, adjusted for nonartwork costs.	For movies, advance and second estimates, judgmental trend. For television, advance and second estimates, BLS monthly current employment statistics for select industries. For all others, advance and second estimates, BLS monthly current employment statistics for select industries and judgmental trend. For all components, third estimates, revenues from Census Bureau quarterly services survey.
Residential investment (\$439.2 billion) ²		
Permanent-site new single-family structures (\$132.0 billion)	Construction spending (value put in place) based on phased housing starts and average construction cost from Census Bureau monthly construction survey.	Same as the annual estimates.
Permanent-site new multi-family structures (\$22.2 billion)	Construction spending (value put in place) from Census Bureau monthly construction survey.	Same as the annual estimates.
Manufactured homes (\$5.1 billion)	Benchmark years. See the entry "Equipment except new autos, new light trucks, and net purchases of used autos and used light trucks" under "Nonresidential equipment." Other years. Physical quantity shipped times price: shipments from trade source and average retail price from Census Bureau monthly survey.	Same as the annual estimates for other years.
Improvements (\$163.9 billion)	Benchmark years. Construction spending (value put in place) from Census Bureau construction survey. Others years. A weighted 3-year moving average of the improvements estimates from Census Bureau construction spending (value put in place) survey.	Retail sales of building materials and garden supply stores from Census Bureau monthly survey of retail trade and earnings data from BLS monthly current employment statistics.
Brokers' commissions and other ownership transfer costs (\$106.9 billion)	For brokers' commissions on sale of structures and of land, physical quantity of houses sold times mean sales price, number of new single-family houses sold and average sales price from Census Bureau monthly survey of construction, and number of existing houses sold and average sales price from a trade source. For stamp taxes, state and local government annual document stamp taxes from Census Bureau annual survey of government finances. For title insurance, operating revenue and loss adjusted expense data from a trade source. For all other closing costs, number of new and existing single-family houses sold and their associated average sales price from Census Bureau monthly survey of construction and from a trade source weighted by BEA estimate of average commission rates.	Physical quantity of houses sold times mean sales price times BEA estimate of average commission rates for sale of new and existing houses; number of single-family houses sold and mean sales price from Census Bureau monthly survey of construction and from a trade source.
Equipment (\$9.0 billion)	See the entry "Furnishings and durable household equipment" under "Personal consumption expenditures."	Same as the annual estimates.
Change in private inventories (\$66.1 billion)		
Farm (-\$1.7 billion)	USDA change in inventories adjusted to exclude Commodity Credit Corporation (CCC) forfeitures and to include net CCC loans at market value.	For crops, BEA quarterly allocation of USDA annual projections of crop output and cash receipts. For livestock, USDA quarterly data.
Manufacturing and trade (\$62.5 billion)	Benchmark years. Inventories from Census Bureau quinquennial census and annual surveys revalued to current replacement cost, with information on the proportions of inventories reported using different accounting methods, on the commodity composition of goods held in inventory, and on the turnover period, all from Census Bureau quinquennial census and annual surveys, combined with prices, largely based on BLS producer price indexes. (The difference between Census Bureau change in inventories and BEA change in private inventories is the inventory valuation adjustment.) Other years except the most recent year. For auto retail dealers, an average of quantities times average prices from trade sources and of retail inventories from Census Bureau annual surveys minus half of manufacturing and merchant wholesale inventories from Census annual surveys; for all others, inventories from Census Bureau annual surveys, revalued as described above. Most recent year. Inventories from Census Bureau monthly surveys and trade sources, revalued as described above.	Same as the annual estimates for the most recent year.

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Mining, utilities, construction, and other nonfarm industries (\$15.3 billion)	<p>Benchmark years. Mining and construction inventories from Census Bureau quinquennial census, publishing inventories from the Census Bureau services annual survey, revalued to current replacement cost as described above for "Manufacturing and trade."</p> <p>Other years except the most recent year. For publishing inventories, same as the annual estimates for benchmark years. For all others, IRS tabulations of business tax returns, revalued as described above.</p> <p>Most recent year. For mining and publishing inventories, Census Bureau quarterly financial report of corporations, revalued as described above. For electric utilities, monthly physical quantities from EIA combined with BLS producer price indexes. For all others, judgmental trend.</p>	For mining and publishing inventories, advance estimates, judgmental trend; second and third estimates, same as the annual estimates for most recent year. For electric utilities, same as the annual estimate for the most recent year. For all others, judgmental trend.
Net exports of goods and services (–\$547.2 billion)		
Exports and imports of goods, net (–\$759.4 billion)	Estimated as part of the international transactions accounts: export and import documents compiled monthly by the Census Bureau with adjustments by BEA for coverage and valuation to convert the data to a balance-of-payments basis. Balance-of-payments transactions adjusted for coverage of U.S. territories and Puerto Rico using data from the Commonwealth of Puerto Rico, the U.S. Virgin Islands, and the Census Bureau, and for coverage of gold transactions using data from the U.S. Geological Survey and trade sources.	For territorial adjustment, Census Bureau foreign trade data and judgmental trend. For gold, judgmental trend. For all others, same as the annual estimates.
Exports and imports of services, net (\$212.2 billion)	Estimated as part of the international transactions accounts: for government transactions, reports by federal agencies on their purchases and sales abroad. For most others in this group (including travel, passenger fares, other transportation, and royalties and license fees), BEA quarterly or annual surveys (supplemented with data from other sources). Transactions adjusted for the balance-of-payments coverage of U.S. territories and Puerto Rico (see the above entry), and to include financial services furnished without payment (see the entry "Banks, credit agencies, and investment companies" under "Net interest and miscellaneous payments").	For territorial adjustment, judgmental trend. For all others, same as the annual estimates.
Government consumption expenditures and gross investment (\$3,167.0 billion)		
Federal government (\$1,295.7 billion)		
National defense except consumption of general government fixed capital (\$656.1 billion)	Within a control total established by fiscal year analysis: for compensation, military wages from OMB's <i>Budget of the United States</i> , civilian wages from BLS tabulations from the quarterly census of employment and wages (QCEW), civilian benefits from the Office of Personnel Management (OPM), and employer contributions for federal employee retirement plans from military and civilian plan actuarial reports; for other than compensation by type, based mainly on data from Department of Defense (DOD) reports; for research and development, data from National Science Foundation (NSF) and from OMB's <i>Budget</i> ; for software, see the entry under "Nonresidential intellectual property products."	For components of compensation, military employment from DOD and civilian employment from BLS and projections from military and civilian actuarial reports. For other than compensation, same as the annual estimates. For software, see the entry under "Nonresidential intellectual property products."
National defense consumption of general government fixed capital (\$161.1 billion)	Perpetual-inventory method, based on gross investment estimates and on investment prices.	Same as the annual estimates.
Nondefense except consumption of general government fixed capital (\$384.3 billion)	Within a control total established by fiscal year analysis: for compensation, civilian wages from BLS tabulations from the QCEW, civilian benefits from OPM, and employer contributions for federal employee retirement plans from civilian actuarial reports; for CCC inventory change, book values of acquisitions and physical quantities of dispositions from agency reports times average market prices from USDA; for petroleum sales, distribution and price data from the Department of Energy; for research and development, data from NSF and from OMB's <i>Budget</i> ; for construction, construction spending (value put in place) from Census Bureau monthly construction survey; for software, see the entry under "Nonresidential intellectual property products." For financial services furnished without payment, see the entry "Banks, credit agencies, and investment companies" under "Net interest and miscellaneous payments." For all others, outlays from the <i>Monthly Treasury Statement</i> .	For components of compensation, employment from BLS and projections from civilian pension plan actuarial reports. For software, see the entry under "Nonresidential intellectual property products." For all others, same as the annual estimates.
Nondefense consumption of general government fixed capital (\$94.3 billion)	Perpetual-inventory method, based on gross investment estimates and on investment prices.	Same as the annual estimates.

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
State and local government (\$1,871.3 billion)		
Consumption expenditures and gross investment except those items listed below (\$305.6 billion)	All years except the 3 most recent years. Total expenditures from Census Bureau census of governments and annual surveys of state and local governments, selectively replaced with source data that are more appropriate for the NIPAs and adjusted for coverage, for netting and grossing differences, to a calendar year basis from a fiscal year basis, for other timing differences, to exclude items not directly included in GDP (interest, subsidies, net expenditures of government enterprises, and transfer payments), and to exclude items described below. The 3 most recent years. Judgmental trend.	Judgmental trend.
Compensation of general government employees (\$1,178.5 billion)	For wages and salaries, BLS tabulations from the QCEW. For employer contributions for government social insurance, tabulations from the Social Security Administration and other agencies administering social insurance programs. For employer contributions for employee pension plans, actuarial reports from state pension plans. For other insurance plans, data from trade sources, CMS, and Census Bureau annual surveys of state and local governments, adjusted to a calendar year basis from a fiscal year basis, and judgmental trend.	For wages and salaries, BLS monthly employment times earnings from BLS employment cost index. For other compensation, judgmental trend.
Consumption of general government fixed capital (\$178.8 billion)	Perpetual-inventory method based on gross investment estimates and on investment prices.	Same as the annual estimates.
Structures (\$262.7 billion)	Construction spending (value put in place) from Census Bureau monthly construction survey, benchmarked to quinquennial census of governments and annual surveys of state and local governments.	Construction spending (value put in place) from Census Bureau monthly construction surveys.
Intellectual property products (\$31.2 billion)	See the entries for "Software" and for "Research and development" under "Nonresidential intellectual property products."	See the entries for "Software" and for "Research and development" under "Nonresidential intellectual property products."
Brokerage charges and financial services furnished without payment (\$10.3 billion)	See the entry "Financial services and insurance" under "Personal consumption expenditures."	See the entry "Financial services and insurance" under "Personal consumption expenditures."

Gross domestic income of \$16,261.6 billion for 2012**Compensation of employees, paid (\$8,620.0 billion)****Wage and salaries (\$6,935.1 billion)**

Private industries (\$5,737.8 billion)	For most industries, BLS tabulations from the QCEW. For others, wages from a variety of sources (such as USDA for farms and the Railroad Retirement Board for railroad transportation), adjusted for understatement of income on tax returns and for coverage differences.	For most industries, wages and salaries derived from BLS monthly employment times earnings times hours. For others, judgmental trend.
Federal government (\$328.0 billion)	For civilians, wages from BLS tabulations from the QCEW adjusted for coverage differences; for military personnel, wages from OMB's <i>Budget of the United States</i> .	For civilians, employment from BLS and judgmental trend. For military personnel, DOD employment and judgmental trend.
State and local government (\$869.3 billion)	BLS tabulations from the QCEW adjusted for coverage differences.	Derived from BLS employment times earnings from BLS employment cost index.
Employer contributions for employee pension and insurance funds (\$1,170.6 billion) ³		
Private pension plans (\$218.0 billion)	Defined contribution plans All years except the 2 most recent years. Tabulations from Department of Labor. Two most recent years. Judgmental trend. Defined benefit plans All years except the most recent. Tabulations from Pension Benefit Guaranty Corporation and corporate financial data Most recent year. Judgmental trend.	Judgmental trend.
Government employee pension plans (\$262.8 billion)	All years except the most recent year. For federal defined benefit plans, actuarial reports for federal retirement plans, adjusted to a calendar year basis. For federal defined contribution plans, Thrift Savings Plan annual reports. For state and local government plans, actuarial reports for state retirement plans. Most recent year. For federal plans, same as all years except the most recent. For state and local government plans, judgmental trend.	For federal plans, judgmental trend. For state and local plans, wages and salaries and judgmental trend.

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Group health insurance (\$602.5 billion)	All years except the most recent year. For private and for state and local government, employer contributions from CMS. For federal government, premiums paid by the federal government to the Federal Employee Health Benefit Fund from OMB. Most recent year. For private, CMS tabulations. For state and local government, judgmental trend. For federal government, same as all years except the most recent.	For private and for state and local government, judgmental trend. For federal government, employment from BLS.
Group life insurance (\$11.7 billion)	All years except the most recent year. Group premiums and estimates of employer share from trade sources. Most recent year. Judgmental trend.	Same as the most recent year.
Workers' compensation (\$64.3 billion)	All years except the most recent year. Employer contributions from trade sources. Most recent year. Judgmental trend.	Same as the most recent year.
Publicly administered government employee insurance funds (\$10.5 billion)	All years. Employer contributions to the Medicare-Eligible Retiree Health Fund from the <i>Monthly Treasury Statement</i> .	DOD employment.
Employer contributions for government social insurance (\$514.3 billion)	Tabulations from the Social Security Administration and other agencies administering social insurance programs.	For federal programs, BEA-derived wages and salaries of employees covered by the programs. For state and local programs, judgmental trend.
Taxes on production and imports (\$1,122.9 billion)		
Federal government (\$118.0 billion)	For excise taxes, collections from the Alcohol and Tobacco Tax and Trade Bureau and from the IRS. For customs duties, receipts from the <i>Monthly Treasury Statement</i> .	For customs duties, receipts from the <i>Monthly Treasury Statement</i> . For most excise taxes, derived from indicators of activity (such as gasoline production for gasoline tax). For others, judgmental trend.
State and local government (\$1,004.9 billion)	Receipts from Census Bureau quinquennial census and annual surveys, adjusted to a calendar year basis from a fiscal year basis.	For state general sales taxes, advance estimate: state tax collections data; second estimate: Rockefeller Institute of Government sales tax data; third estimate: Census Bureau quarterly tax survey. For all other state sales taxes, advance and second estimates: derived from indicators of activity (such as gasoline sales for gasoline sales tax); third estimate: Census Bureau quarterly tax survey and indicators of activity. For all others, advance and second estimates: judgmental trend; third estimate: Census Bureau quarterly tax survey and judgmental trend.
Less: Subsidies (\$57.3 billion)		
Federal government (\$56.8 billion)	For agricultural subsidy payments, data from USDA reports. For all others, data from OMB's <i>Budget of the United States</i> .	USDA reports and judgmental trend.
State and local government (\$0.5 billion)	For railroad and electric power, Census Bureau annual surveys of expenditures adjusted to a calendar year basis from a fiscal year basis and California administrative records.	Judgmental trend and California administrative records.

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Net operating surplus (\$4,033.2 billion)		
Private enterprises (\$4,060.9 billion)		
Net interest and miscellaneous payments, domestic industries (\$597.4 billion)		
Domestic monetary interest, net (-\$51.3 billion)	<p>All years except the most recent year. For farm interest paid, USDA surveys. For residential mortgage interest paid, mortgage debt from FRB times a BEA interest rate. For most other interest paid and received by business, IRS tabulations of business tax returns, adjusted for misreporting on tax returns and for conceptual differences.</p> <p>Most recent year. For farm and mortgage interest paid, same as all years except the most recent. For other interest, interest receipts and payments from regulatory agencies (such as the Federal Deposit Insurance Corporation), from trade sources, or derived by applying BEA interest rates to interest-bearing assets/liabilities from FRB flow of funds accounts.</p>	Derived by combining estimates of (1) interest received by persons, (2) government interest paid less received, and (3) interest paid by persons. For (1), judgmental trend. For (2), data from the <i>Monthly Treasury Statement</i> and the Bureau of the Public Debt for federal and judgmental trend for state and local; and for (3), for margin interest, advance estimate; judgmental trend; second or third estimate: data from regulatory agencies. For other than margin interest, consumer debt from FRB times BEA estimates of interest rates.
Domestic imputed interest, net (\$627.2 billion)		
Banks, credit agencies, and investment companies (\$231.5 billion)		
Depositor services (\$206.7 billion)	All years. For commercial banks, FRB tabulations of Federal Financial Institutions Examination Council (FFIEC) <i>Call Reports</i> used to calculate the interest rate spread between a risk-free reference rate and the average interest rate paid to depositors times the average balance of deposits. Depositor services allocated to persons, to government, and to the rest of the world on the basis of deposit liabilities from FRB. For credit agencies and investment companies, property income earned on investment of deposits less monetary interest paid to depositors (and for mutual depositories, profits from IRS tabulations of business tax returns) from annual reports of regulatory agencies and FRB. Depositor services allocated to persons, to government, and to the rest of the world on the basis of deposit liabilities from FRB.	For commercial banks, advance estimate, judgmental trend; for second and third estimates, same as annual estimates. For investment companies, advance estimate, judgmental trend; for second and third estimates, mutual fund data from a trade source. For all others, judgmental trend.
Borrower services (\$24.8 billion)	All years. For commercial banks, data from FRB tabulations of FFIEC <i>Call Reports</i> used to calculate the interest rate spread between the average rate paid by borrowers and the reference rate times the average balance of borrowers.	For advance estimate, judgmental trend. For second or third estimates, same as annual estimates for commercial banks.
Life insurance carriers (\$234.6 billion)	All years. Property income earned on investment of policyholders' reserves from trade source.	Judgmental trend.
Property and casualty insurance companies (\$6.0 billion)	All years. Expected investment income derived using premiums earned and investment gains from trade source.	Judgmental trend.
Employee pension plans (\$155.1 billion)	<p>All years except the most recent year. For private defined benefit pension plans, tabulations from the Pension Benefit Guaranty Corporation. For federal defined benefit pension plans, actuarial reports for federal retirement plans, adjusted to a calendar year basis. For state and local government defined benefit pension plans, actuarial reports for state retirement plans.</p> <p>Most recent year. For private defined benefit pension plans, judgmental trend. For federal defined benefit pension plans, same as all years except the most recent year. For state and local government defined benefit pension plans, judgmental trend.</p>	Same as most recent year.
Miscellaneous payments (\$21.5 billion)		
Federal government rents and royalties (\$9.6 billion)	All years. Receipts from land and mineral leasing, <i>Combined Statement of Receipts and Expenditures</i> , U.S. Department of the Treasury.	For offshore leases, projections of receipts from OMB <i>Budget</i> ; for land and onshore mineral leasing, data from the <i>Monthly Treasury Statement</i> .
State and local government rents and royalties (\$11.9 billion)	All years except the 3 most recent years. Census Bureau census of governments and annual surveys of state and local governments. The 3 most recent years. Judgmental trend.	Same as the annual estimates for the 3 most recent years.

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Business current transfer payments (net) (\$106.9 billion)		
To persons (net) (\$41.4 billion)	All years except the most recent year. For payments to persons for charitable contributions, IRS tabulations of business tax returns. For other components (such as liability payments for personal injury and net insurance settlements), information from government agency reports and trade sources.	Same as the annual estimates for the most recent year.
To government (net) (\$70.6 billion)	Most recent year. Judgmental trend. For federal, receipts from OMB's <i>Budget of the United States</i> . For state and local, receipts from Census Bureau quinquennial census of governments and from annual surveys, adjusted to a calendar year basis from a fiscal year basis and net insurance settlements, as described above.	Judgmental trend.
To the rest of the world (net) (-\$5.1 billion)	Estimated as part of the international transactions accounts.	Same as the annual estimates.
Proprietors' income with inventory valuation and capital consumption adjustments (\$1,224.9 billion)		
Farm proprietors' income with inventory valuation adjustment (\$81.3 billion)	USDA data on net income, obtained by deriving gross income (cash receipts from marketing, inventory change, government payments, other cash income, and nonmoney income) and subtracting production expenses, adjusted to exclude corporate income based on USDA quinquennial census and annual survey data.	For crops, BEA quarterly allocation of USDA annual projections of crop output. For livestock, USDA quarterly projections of cash receipts and inventories. For both crops and livestock, quarterly allocation of USDA annual projections of government subsidy payments and production expenses.
Farm capital consumption adjustment (-\$5.9 billion)	See the entry "Less: capital consumption adjustment" under "Consumption of fixed capital."	See the entry under "Consumption of fixed capital."
Nonfarm proprietors' income (\$1,004.9 billion)	All years except the most recent year. Income from IRS tabulations of business tax returns, adjusted for understatement of income on tax returns and for conceptual differences. Most recent year. For construction, trade, and services, indicators of activity such as construction spending (value put in place). For others, judgmental trend.	Same as the annual estimates for the most recent year.
Nonfarm inventory valuation adjustment (-\$1.6 billion)	See the entry "Inventory valuation adjustment" under "Corporate profits."	See the entry under "Corporate profits."
Nonfarm capital consumption adjustment (\$146.2 billion)	See the entry "Less: capital consumption adjustment" under "Consumption of fixed capital."	See the entry under "Consumption of fixed capital."

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Continues

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Rental income of persons with capital consumption adjustment (\$541.2 billion)		
Owner-occupied nonfarm housing (\$361.7 billion)	Benchmark years. Derived as imputed rental of nonfarm housing (see the entry "Housing and utilities" under "Personal consumption expenditures") less related expenses, including property insurance from a trade source, mortgage interest (mortgage debt from FRB times a BEA interest rate), and property taxes from Census Bureau annual surveys of state and local government tax collections. Other years. Same as benchmark years.	For imputed rental of owner-occupied housing, same as the annual estimates. For depreciation, interest, financing-related closing costs, and taxes, NIPA estimates of those components. For other expenses, judgmental trend.
Tenant-occupied nonfarm housing (\$139.9 billion)	Benchmark years. Derived as actual value of housing less related expenses (see preceding entry). Other years. Same as benchmark years except for mortgage interest, mortgage debt from FRB times a BEA interest rate, and property taxes from Census Bureau annual surveys of state and local tax collections.	Same as owner-occupied nonfarm housing.
Owner-occupied farm housing (\$5.6 billion)	Benchmark years. Derived as imputed rental of farm housing (see the entry "Housing and utilities" under "Personal consumption expenditures") less related expenses, such as mortgage interest and property taxes, from USDA data. For farms owned by nonoperator landlords, derived from USDA data. Other years. Imputed rental of farm housing (see the entry "Housing and utilities" under "Personal consumption expenditures"); expenses from USDA data.	Judgmental trend.
Tenant-occupied farm housing (\$7.2 billion)	Benchmark years. For farm housing owned by farm operator landlords, imputed rental of farm housing (see the entry "Housing and utilities" under "Personal consumption expenditures") less related expenses, such as mortgage interest and property taxes, from USDA data. For farms owned by nonoperator landlords, from USDA data. Other years. For farm housing owned by farm operator landlords, derived as imputed rental of farm housing; expenses from USDA data. For farms owned by nonoperator landlords, from USDA data.	Judgmental trend.
Nonfarm nonresidential properties (\$0.1 billion)	Benchmark years. Nonfarm nonresidential fixed assets from BEA capital stock series times a rate of return on capital based on IRS tabulations of business tax returns. Other years. BEA capital stock series and judgmental trend.	Judgmental trend.
Royalties (\$26.7 billion)	All years except the most recent year. IRS tabulations of royalties reported on individual income tax returns. Most recent year. Judgmental trend.	Same as the annual estimates for the most recent year.
Corporate profits with inventory valuation and capital consumption adjustments, domestic industries (\$1,590.5 billion)		
Domestic profits before tax (\$1,771.1 billion)	All years except the most recent year. Receipts less deductions from IRS tabulations of business tax returns, adjusted for understatement of income on tax returns and for conceptual differences. Most recent year. Profits from Census Bureau <i>Quarterly Financial Report</i> , regulatory agency reports, and compilations of publicly available corporate financial statements.	For some industries in transportation and in finance, judgmental trend. For others, same as the annual estimates for the most recent year. (Preliminary profits estimate is released with the second estimate of GDP for the first, second, and third quarters and with the third estimate of GDP for the fourth quarter.)

See the footnotes at the end of the table.

Table 1. Source Data and Methods for Current-Dollar GDP and Current-Dollar GDI—Table Ends

Component	Annual estimates: Source data and methods used to determine level for benchmark and other years or used to prepare an extrapolator or interpolator	Current quarterly estimates: Source data and methods used to prepare an extrapolator ¹
Inventory valuation adjustment (IVA) (−\$10.0 billion)	The IVA on the income side (for corporations and for nonfarm sole proprietorships and partnerships) and the IVA on the product side (see the entry “Change in private inventories”) differ because the source data reflect different proportions of inventories reported using different accounting methods (such as last-in-first out (LIFO)). The income-side IVA is based on the product-side IVA, adjusted by the relationship between non-LIFO inventories from IRS tabulations of business tax returns and non-LIFO inventories from the Census Bureau.	Same as the annual estimates.
Capital consumption adjustment (−\$170.5 billion)	See the entry “Less: Capital consumption adjustment” under “Consumption of fixed capital.”	See the entry under “Consumption of fixed capital.”
Current surplus of government enterprises (−\$27.7 billion)		
Federal government (−\$13.4 billion)	Mainly reports of various agencies, such as the Postal Service, and consumption of fixed capital (CFC) estimates derived with perpetual inventory calculations at current cost, based on gross investment estimates and on investment prices.	For CFC estimates, same as the annual estimates. For all others, judgmental trend.
State and local government (−\$14.3 billion)	For current operating receipts, mainly revenue data from Census Bureau annual surveys of state and local governments, adjusted to a calendar year basis from a fiscal year basis. For current operating expenditures, see the entries “Consumption expenditures and gross investment” and “Consumption of general government fixed capital” under “State and local government.”	Judgmental trend.
Consumption of fixed capital (\$2,542.9 billion)		
Government (\$493.6 billion)		
General government (\$434.2 billion)	Perpetual-inventory method, based on gross investment estimates and on investment prices.	Same as the annual estimates.
Government enterprises (\$59.4 billion)	Perpetual-inventory method, based on gross investment estimates and on investment prices.	Same as the annual estimates.
Private (\$2,049.3 billion)		
Domestic business (\$1,639.4 billion)	Perpetual-inventory method, based on gross investment estimates and on investment prices.	Same as the annual estimates.
Capital consumption allowances (\$1,595.0 billion)	All years except the most recent year. For depreciation of corporations and of nonfarm sole proprietorships and partnerships, IRS tabulations of business tax returns, adjusted for conceptual differences. For other depreciation (including farm proprietorships and partnerships and other private business), perpetual inventory calculations based on investment at acquisition cost. Most recent year. For depreciation of corporations and of nonfarm sole proprietorships and partnerships, BEA estimates of tax-return-based depreciation. For other depreciation, same as above.	Perpetual inventory calculations based on investment at acquisition cost.
Less: Capital consumption adjustment (−\$44.4 billion)	The difference between capital consumption allowances and consumption of fixed capital.	Same as the annual estimates.
Households and institutions (\$409.9 billion)	Perpetual-inventory method, based on gross investment estimates and on investment prices.	Same as the annual estimates.

Alternative Measures of Implicitly Priced Financial Services of Savings Institutions and Credit Unions

By Kyle K. Hood

SAVINGS INSTITUTIONS, credit unions, and commercial banks all offer a generally similar selection of financial services, though each differs in the ability to make certain kinds of loans.¹ As a result, many personal sector customers of these institutions would likely be unable to identify any distinguishing characteristics. Indeed, savings institutions and commercial banks sometimes change their charter types (“flip” their charters) without any substantive change in their operations; credit unions may also undergo such a process, and though rare, banks may even convert to credit unions.² Nevertheless, in the case of a charter flip, the measure of the institution’s output in the national income and product accounts (NIPAs) changes substantially. If a commercial bank becomes a savings institution, for example, the implicitly priced financial intermediation services that had been allocated to borrowers when the institution was chartered as a commercial bank are instead allocated to depositors.

The goal of this article is to determine the extent to which harmonization of the methods used for savings institutions, credit unions, and commercial banks would alter the picture of the production and consumption of implicitly priced financial services in the United States. To this end, the paper develops methods for measuring the output of savings institutions and credit unions (referred to as “nonbank depository institutions”) that are similar to those already used for commercial banks. It should be noted that no time line for bringing the methods outlined in this paper into the NIPAs has been established; this paper is merely meant to illustrate the sort of revisions that could result if methods like those now used for commercial bank were to be implemented.

1. Savings institutions consist of depository institutions chartered as thrift banks and mutual or stock savings banks. Although the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2011 abolished the Office of Thrift Supervision and eliminated some regulatory advantages that thrift banks enjoyed, the thrift charter itself remains intact.

Credit unions are member-owned not-for-profit associations that accept deposits from members and make loans (usually) to members. In 2009, savings institutions accounted for about 10 percent and credit unions about 8 percent of the approximately \$8.9 trillion in deposits at U.S. depository institutions.

2. For example, see Alan Kline, “Thrivent Financial Bank Converting to a Credit Union,” *American Banker* (January 13, 2012); accessed on October 29, 2012 at www.americanbanker.com.

Measurement of financial services in the NIPAs

National accounts statisticians have long recognized that the measurement of the financial intermediation services provided by depository institutions requires some special treatment because depository institutions generally embed a charge for services in their interest rates. The implicit service charges reduce the rate paid to depositors, who forego some interest in exchange for services, and increase the rates charged to borrowers. These implicitly priced services include processing of checks and electronic payments, disbursing or transferring funds when and where needed, protecting deposited funds, bookkeeping, bill payment, check cashing, investment services, screening and monitoring borrowers, and loan underwriting. In the *2008 System of National Accounts (2008 SNA)*, services for which depository institutions are remunerated through adjustments to interest rates are referred to as “Financial Intermediation Services Indirectly Measured,” or FISIM (*2008 SNA*, paragraph 6.163, 115). In this paper, they will simply be referred to as “implicit services.”

Hood (2013) provides an overview of the history of the measurement in the *SNA* of implicit services of commercial banks. The *1993 System of National Accounts* recognized that some implicit intermediation services are provided to borrowers, and it measured these services based on the margin between loan rates and a reference rate that represented the bank’s opportunity cost of funds. Previously, all of banks’ net interest income (the difference between the interest receipts and interest payments) had been treated as implicit services consumed by depositors.

This reference-rate approach to measuring borrower and depositor services was implemented in the NIPAs in 2003 (Fixler, Reinsdorf, and Smith 2003), but only the method for estimating the services of commercial banks was revised. The methods used for savings institutions and credit unions continued to treat depositors as the consumers of all of the implicit services. One major effect of the 2003 change in methodology was to reduce implicit services allocated to final uses (the portion that contributes to gross domestic product (GDP)). Whereas deposits are held to a large extent by persons, borrowing is dominated by both corporate and household business (primarily owner-

occupied housing). In addition, total implicit services were reduced to some extent, as loans funded through the bank's own funds do not produce any depositor services. These revisions and the subsequent improvements introduced as part of the 2013 comprehensive revision of the NIPAs will be discussed in more detail below.

Because of disparate accounting methods, changes in market shares of commercial banks and nonbank depository institutions may produce a misleading picture of the growth of financial intermediation services. To investigate this problem, this paper harmonizes the methods for computing implicit services for each of these types of institution. The methods that the NIPAs currently use for commercial banks provide better measures of the production and consumption of implicit services and conforms to the recommendations of the 2008 SNA. This paper therefore applies these methods to savings institutions and credit unions, instead of applying the method currently used for savings institutions and credit unions to the commercial banking sector.

The new methods produce quite a different picture of the consumption of the output of these institutions from the methods presently used in the NIPAs. Although output does not fall by much, measured services for final use are substantially reduced, resulting in a downward revision to the estimate of GDP. Most of the downward revision results from a reduction in personal consumption expenditures. Additionally, the picture of the history of consumption of depository institution output changes. The new methodology reduces the volatility of measured output of savings institutions in the wake of the financial crisis and the recession and the subsequent recovery. It also shows that during this period, credit unions fared quite well.³

Current methods for measuring implicit services of nonbank depository institutions

The current method for computing the implicit output of savings institutions and credit unions assumes that the total value of this output equals the net interest income of these institutions. Consumption of this output is then apportioned to depositors in different sectors. For savings institutions, implicit services are allocated to households and other sectors based on their deposits at these institutions. For credit unions, households consume all such services.

The estimates that are currently published in the

3. This fits what is generally seen in the pattern of credit union membership, asset holdings, and performance during this period; for example, see Richard G. Anderson and Yang Liu, "Banks and Credit Unions: Competition Not Going Away," *The Regional Economist* 21, no. 2 (April 2013): 4–9; accessed on May 2, 2013 at www.stlouisfed.org.

NIPAs are not used as the baseline for comparison because they differ from the experimental estimates in ways other than the methods discussed in this article. To illustrate the effects of the change in methods, an alternative "current method" measure of the output of savings institutions and credit unions will be used as the baseline. The use of a simulated version of "current method" output means that the revisions calculated below reflect a concise set of effects: (1) the reduction in total implicit services due to the different treatment of own funds, (2) a reallocation of final and intermediate uses of implicit services due to sectoring changes, and (3) some other changes in implicit services that result from the methodological update for implicit services of commercial banks that were part of the 2013 comprehensive NIPA revision, discussed below. While the use of a simulation of current methods as the benchmark for comparison makes the results easier to interpret, it means that the revisions reported in this article will not necessarily be the same as the revisions that would be expected to result from the implementation of the new methodology in the accounts.

To get an idea of the size of the nonbank depository institution sector, in the 2012 revision of the NIPAs, credit unions were estimated to produce approximately \$25.3 billion in implicit services in 2008. Savings institutions produced approximately \$34.0 billion in that year, of which \$22.8 billion was consumed by persons and \$11.2 billion by businesses. This means that only about 19 percent of the output of these institutions was consumed by businesses, whereas 81 percent went to final consumption. From 2000 to 2008, the output of savings institutions grew by approximately 19 percent, and the output of credit unions grew by approximately 92 percent.

Current methodology for implicit services of commercial banks

In 2003, the NIPA methods for computing implicit services of commercial banks underwent a substantial revision (Fixler, Reinsdorf, and Smith 2003). This change recognized that some of the implicit services produced by commercial banks are consumed by borrowers. The updated approach, known as the reference rate approach, allocates services to borrowers and depositors using a reference rate of interest that lies between the average interest rate that banks pay on liabilities and the average interest rate that banks earn on assets. The reference rate was computed as the interest rate that the bank earned on its holdings of Treasury and agency debt. The margin between the reference rate and the interest rate paid on liabilities is known as the service margin on liabilities, and the margin between the asset interest rate and the reference rate is the service margin

on assets. The output of implicit depositor services is computed as the product of the liability service margin and total liabilities. The output of implicit borrower services is computed as the product of the asset service margin and total assets. Other depository institutions were not included in this methodological change and in some subsequent changes because of the lack of sufficient resources to complete all of the needed revisions in a timely fashion.

This methodological improvement resulted in revisions both to the total estimate of implicit services of commercial banks and to the estimates of these services' uses. The downward revision to total implicit services produced by banks was equal to the banks' equity capital (assets less liabilities or own funds) multiplied by the reference rate. This amount represents the interest expense that the banks avoided by obtaining their funding from stockholders rather than borrowing at the reference rate of interest. This revision was small, because own funds were small relative to assets and liabilities. Nevertheless, while using the reference rate approach resulted in small revisions to *total* implicit services of commercial banks, the assignment of some services to borrowers did substantially affect how the consumption of bank services was apportioned between the personal sector and the business sector. These revisions to the estimates of the uses of imputed services resulted in large reductions in estimated final consumption of implicit services by persons, because borrower services are consumed as intermediate inputs in higher proportion than depositor services. Consequently, the methodological change of 2003 was associated with significant reductions in estimates of GDP.

Another revision to these methods was part of the 2013 comprehensive revision of the NIPAs released in July 2013 (Hood 2013). Three changes were incorporated into the commercial bank implicit services methodology: the boundaries of the sets of assets and liabilities included in computations of implicit services were narrowed to include only loan and trading account assets and deposit and deposit-like liabilities; loan interest rates were adjusted for expected losses of principal due to borrower default; and a new method was introduced to reduce spurious volatility in implicit services due to fluctuations in the relative position of the reference rate.

Methods and data

The method used for computing the output of savings institutions and credit unions matches closely the method that is now used to compute output of commercial banks. However, some minor differences, due mostly to data limitations, are unavoidable. Reference rates and the default adjustment method will differ

from those used for commercial banks, as will details on how total implicit services are apportioned among sectors of the economy.

Measures of implicit services are computed based on loan interest rates, loan balances, deposit interest rates, deposit balances, and a reference rate. Loan and deposit interest rates are computed by dividing the interest income on loans and interest expense on deposits by loan balances and deposit liabilities to derive "book" interest rates. After adjusting loan rates for the expected rate of losses of principal from borrower defaults, the service margin on loans is computed as the net loan rate less the reference rate. The service margin on deposits is the reference rate less the deposit rate, because no default adjustment is needed. Output is measured by multiplying service margins by loan or deposit balances.

Default adjustments. As in the 2013 revision of the methods used for commercial banks, loan interest rates are adjusted for the expected losses of principal due to borrower defaults. Costs of borrower defaults are measured using net charge-offs. A charge-off is an accounting entry made when a loan is recognized as having gone bad and is removed from the institution's balance sheet. Thus, charge-offs represent the amount of principal lost to default during the accounting period; the charge-off rate is total charge-offs divided by total loan principal. Because loan interest rates are set in advance and reflect expected rates of loss based on historical default patterns, a measure of expected default is used to adjust loan interest rates; expected charge-off rates are calculated using geometrically declining weighted averages of past realizations as described in Hood (2013). However, charge-offs of credit unions are already quite smooth, so the smoothing procedure is not applied.⁴ The term "expected default" is used to refer to the smoothed charge-off measure for savings institutions and the charge-off rate for credit unions, and the expected-default rate is expected default divided by loan balances. Loan interest rates are adjusted by subtracting the expected-default rate from the interest rate earned on loans, and then the adjusted rates are used to measure implicit services to borrowers.

Reference rate calculation. Because of differences in data availability, the methods for computing reference rates are not precisely the same for commercial banks, credit unions, and savings institutions. The specification of the reference rate for each class of institution is discussed in more detail below. The reference

4. If this method were used for credit unions in the NIPAs, smoothing might be appropriate, because the stability of past charge-off rates cannot guarantee that future charge-off rates will be smooth.

rate may be derived from two possible sources: 1) a book interest rate on a service-free asset or liability class on the institution's balance sheet, and (2) a "market" interest yield on government bonds. It may also be computed as an average of (1) and (2). The source of the book rate depends on the type of institution. As was done for commercial banks, the reference rate is also stabilized to dampen spurious volatility. This stabilization allows the allocation between borrower services and depositor services to change slowly, reflecting the lags that are built into the repricing of loans and deposits.

The method used in this article allocates consumption of borrower and depositor services to sectors in a way that is similar to the method used for commercial banks. The data that are used to estimate services of nonbank depository institutions do not indicate loan or deposit balances for each sector (or how much interest each sector pays and receives), but the Federal Reserve Board releases data on categories of loans and deposits on sector balance sheets in the flow of funds accounts (FFAs). Savings institution and credit union data indicate interest paid and received and balances by category of loan or deposit. Output is computed separately for each category; categories are assigned to sectors based mostly on FFA information.

Savings institutions

Annual estimates of implicit output of savings institutions from 1993 to 2002, and quarterly output estimates from 2003 to 2011 were computed. The dates were based on the availability of source data.

Basic data for savings institutions are available from *Statistics on Depository Institutions (SDI)* from the Federal Deposit Insurance Corporation. These data are aggregated from Thrift Financial Report (TFR) filings and from the reports of condition and income administered by the Federal Financial Institutions Examination Council, known as Call Report filings. The recent transfer of supervisory powers from the OTS to the Office of Controller of the Currency and other regulators has resulted in the elimination of the TFR; savings institutions that formerly filed TFRs now file Call Reports.⁵ Some savings institutions that were not regulated by the OTS before its elimination also filed Call Reports.

The SDI data contain savings institutions' asset and

liability balances by type of asset and liability as well as interest income and expenses. These data are available on a quarterly basis from the first quarter of 2002 to the present quarter, and on an annual basis from 1992 forward. Asset data include loans and leases by type of loan (residential real estate loans, other real estate loans, commercial loans, personal loans, and other loans), cash and balances due, securities, and federal funds sold and reverse repurchase agreements. Liability data include deposits (total deposits, time/saving deposits and other deposits, and interest-bearing/non-interest-bearing deposits), federal funds purchased and repurchase agreements, and borrowings. Total interest income is available for loans, and a combination of securities and other deposit-like assets; total interest expenses are available for deposits, Federal Home Loan Bank advances, and some other categories of borrowing. Savings institutions also report net charge-offs on loans and leases. Because of the way that interest income and expense detail are reported in TFRs, a method for allocation of interest rates to the asset/liability categories above was necessary. (For the sake of brevity, the method is not discussed here in detail.)

The income statement data reported in the TFRs is also lacking in detail, so selecting an appropriate definition for the reference rate for computing the implicit output of savings institutions is not straightforward. Based on available data from the TFRs and other sources, the potential rates from savings institutions that could approximately meet the SNA criteria are: (1) the rate of return on securities assets including mortgage-backed securities (MBSs) and deposit assets (the latter of which are deposits in other depository institutions), (2) the rate of return on securities assets excluding mortgage-backed securities but including deposit assets, (3) the rate of return on Federal Home Loan Bank advances, (4) the market yield on a government security, such as the 5-year Treasury bond, or (5) the reference rate used to compute implicit services of commercial banks. From these alternatives, the one that produced a split that was closest to the split used in the NIPAs for the commercial banking sector was used.

The illustrative computations of output use an average of the interest rate earned on securities (excluding mortgage-backed securities) and deposit assets and the interest rate paid on FHLB advances; this rate is averaged with a four-quarter moving average of 5-year treasury bond yields. While it is possible that the set of securities on savings institution balance sheets includes some securities that would preferably not be included in the reference rate (such as corporate

5. Section 313 of the Dodd-Frank Wall Street Reform and Consumer Protection Act abolished the Office of Thrift Supervision, which was the main regulator overseeing savings institutions (U.S. House (2010), *The Dodd-Frank Wall Street Reform and Consumer Protection Act*, 111th Congress, 2nd Session, H.R. 4173).

bonds), this rate produces a split of borrower and depositor services that is relatively stable.⁶ The split is also on average close to the one that the reference rate for commercial banks generates. While this rate is quite close to the reference rate used to compute the implicit output of commercial banks, it appears to better match the turning points in the interest rates earned on assets and paid on liabilities of savings institutions; if the commercial bank reference rate had been used, the results would have been quite similar (chart 1).

The relative position of the reference rate is stabilized using the methodology that was developed for commercial banks (Hood 2013). Intuitively, this procedure ensures that any changes in relative borrower services and depositor services are incorporated over a period of about 3 years that approximately equals the maturity of loans held by savings institutions. Chart 2 shows the stabilized reference rate and the unstabilized rate, along with the effect of the charge-off adjustment on the rate of return earned on assets.

6. An appropriate reference rate should be risk-free and service-free, and it should match the maturity structure of the loans and deposits on the institutions' balance sheets (2008 SNA, paragraph 6.166, 116). For commercial banks, the book rate earned on Treasury and agency securities (excluding mortgage-backed securities) is used, averaged with a four-quarter moving average of 5-year Treasury bond yields. However, a series for savings institutions' holdings of Treasury and agency securities cannot be computed, because of the lack of interest income detail; in particular, all savings institution securities and deposit assets are combined on the income statement and cannot be further decomposed into the constituent parts (except for mortgage-backed securities).

Chart 1. Interest Rates and Unstabilized Reference Rates, Savings Institutions, 2003–2011

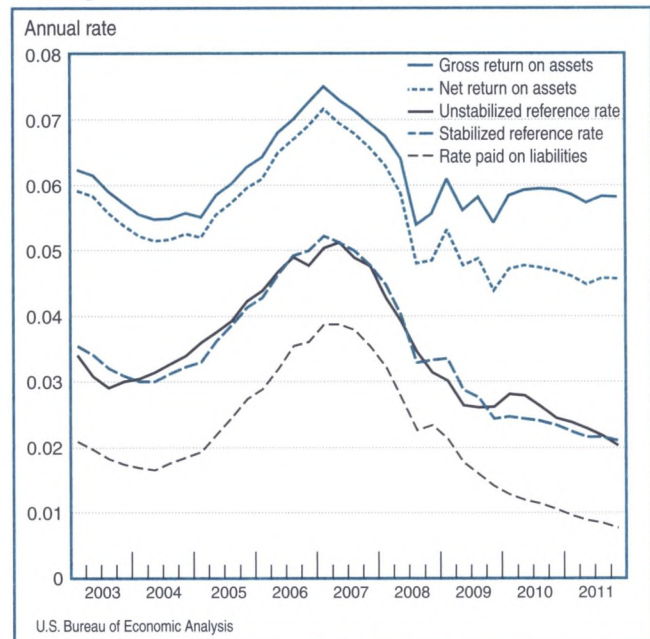

Chart 2 also shows the effect of the abrupt increase in charge-offs in the wake of the 2007 financial crisis on the interest margin used to calculate implicit borrower services. For savings institutions, expected high default rates continued into 2011.

Chart 2. Interest Rates Showing the Effect of Default Adjustment and Reference Rate Stabilization, Savings Institutions, 2003–2011

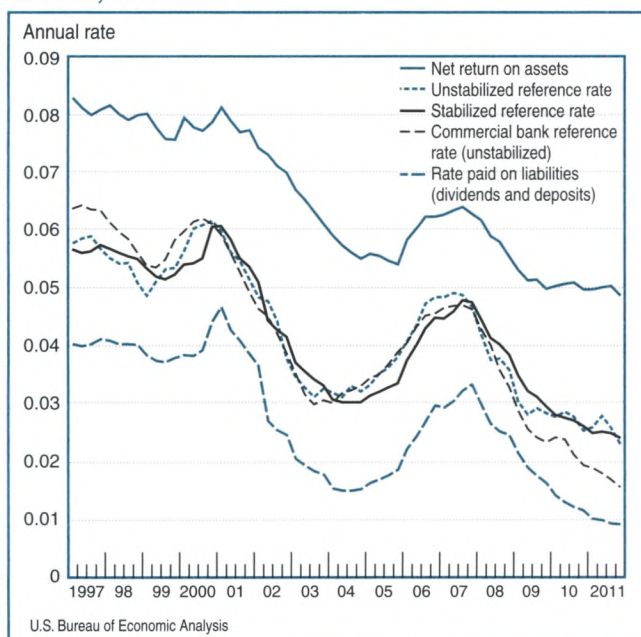

Credit unions

Basic data on condition and income for credit unions are available on a quarterly basis from Financial Performance Reports from the National Credit Union Administration (NCUA), a federal agency which serves as the primary regulator for federally chartered credit unions and administers the National Credit Union Share Insurance Fund (NCUSIF).⁷ All NCUSIF participants (including state-chartered credit unions) submit FPRs, which thus cover the vast majority of credit unions. (Only a handful of small credit unions are not insured by the NCUSIF, and all federally chartered credit unions are required to be insured by this fund; because the number of uninsured is so small, no adjustment is made for those credit unions not in the data.) Because basic quarterly data are available for a longer time span than what is available for savings institutions, output for credit unions is computed quarterly from 1997 to 2011, and annually from 1985 to 1996.

7. Aggregated FPR data are available at www.ncua.gov. Some inconsistencies were noted in some of these data before 2002. Each quarterly summary reports several previous quarters of data, and in some quarters, the data were different across files. The data were checked against the credit union reports from the Credit Union National Association to ensure that the levels of each reported aggregate figure were correct.

Like savings institutions, credit unions are asked to report substantial detail regarding balance sheet items, but report income and expense items at a higher level of aggregation. (Credit unions report interest income on loans, investments, and trading securities; they report interest expense on shares, deposits, and borrowed money.) As was the case with savings institutions, the lack of detail on interest income and expense prevents use of the same reference rate definition that is used for commercial banks. Testing the same set of alternatives for the definition of the reference rate that was mentioned in the previous section revealed that the rate paid on all interest-bearing liabilities excluding deposits, denoted as “other borrowing,” gives a more stable picture of output for credit unions than alternative that was selected for the reference rate for savings institutions. On average, this reference rate is quite close to commercial bank reference rate, and it seems to respond to the interest rate environment similarly to the way that credit union loan and deposit rates respond. On the other hand, interest rates that credit unions report earning on investments are quite a bit more volatile than loan or deposit rates, so that using investments as part of the reference rate calculation would generate an unnecessarily large amount of volatility in credit union output. The rate paid on borrowings is averaged over four quarters, and this figure is averaged with a four-quarter moving average of the yield on 5-year Treasury bonds (as was done with savings institutions) to form an unstabilized reference rate, and then the stabilization procedure is applied. Chart 3 shows how the rates on assets (loans) and lia-

Chart 3. Interest Rates and Reference Rates, Credit Unions, 1997-2011

bilities (dividends and deposits), the unstabilized reference rate, the stabilized reference rate, and the reference rate used for commercial banks trended over time.

The output of credit unions is apportioned to the types of loans on the basis of loan balances. Mortgage loans are subsequently sectorized according to monetary interest paid on mortgage loans by sector, resulting in the same ratios as those used to sector mortgage loans of savings institutions and commercial banks. Business loans are assigned entirely to nonfinancial business, and deposits and personal loans to personal consumption expenditures.

Results

The discussion of the results is organized in two sections. The first section presents estimates of implicit services implied by applying the reference rate approach to savings institutions and credit unions. The second section presents the differences in the estimates of GDP and of personal consumption expenditures implied by the current method and the reference rate method. Note that these results are experimental.

Consumption of implicit intermediation services by sectors

The implicit output of depositor services produced by savings institutions that was calculated with the new method climbs from 2001 to 2006 and then begins to drop off in 2007, which was the year when prices of securities backed by subprime mortgages collapsed (chart 4). The fall in depositor services continues until 2009, and remains well below the precrisis peak in 2011.

In chart 5, the imputed borrower services produced by savings institutions exhibits a similar pattern of increasing up to 2006, and starting to drop in 2007. However, borrower services have not recovered since the recession. Much of the increased output of these services during the boom of the first part of the 2000s was consumed by businesses, and thus neither the increase nor the subsequent decrease in output would directly affect the calculation of GDP using the final expenditures approach.

Chart 6 shows the new measures of imputed output of credit unions, and the line shows the estimate of total imputed output implied by the current method. All credit union depositor services are consumed by persons, so no breakdown of the consumption by different sectors of the imputed output calculated with the current method is shown. Interestingly, credit union output using the new method follows a different pattern than that of savings institutions, showing more counter-cyclicality. Credit unions have not experienced

highly cyclical charge-off rates, so the default adjustment is more stable for them. Credit unions have also tended to expand during recessions over this period. Finally, when interest rates are increasing, deposit rates at credit unions tend to increase more quickly than loan rates, which compresses their total net interest margin; when interest rates are decreasing, the oppo-

site happens. Over the period shown, interest rates have increased in booms and decreased in recessions.

Differences between the current method and the new method

Chart 7 shows total imputed output of savings institutions and final consumption of this imputed output

Chart 4. Imputed Output of Depositor Services of Savings Institutions by Sector, 1993–2011

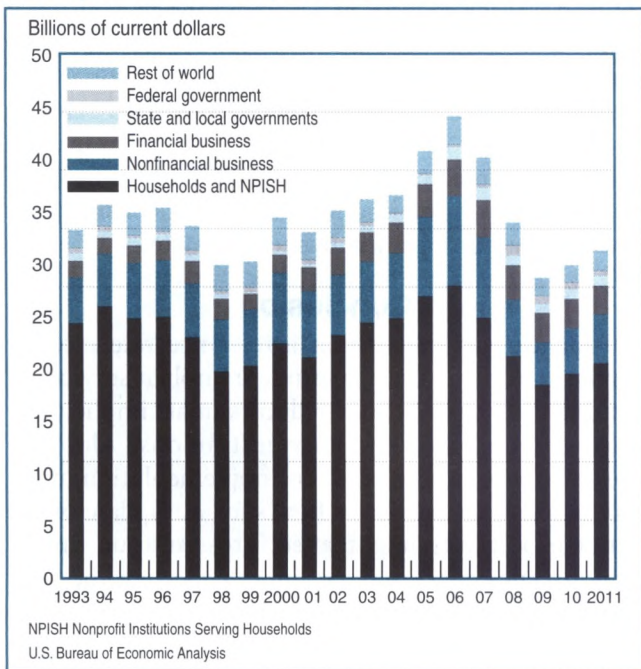

Chart 6. Imputed Services of Credit Unions by Type of Service and by Sector, 1985–2011

Chart 5. Imputed Gross Output of Borrower Services of Savings Institutions, 1993–2011

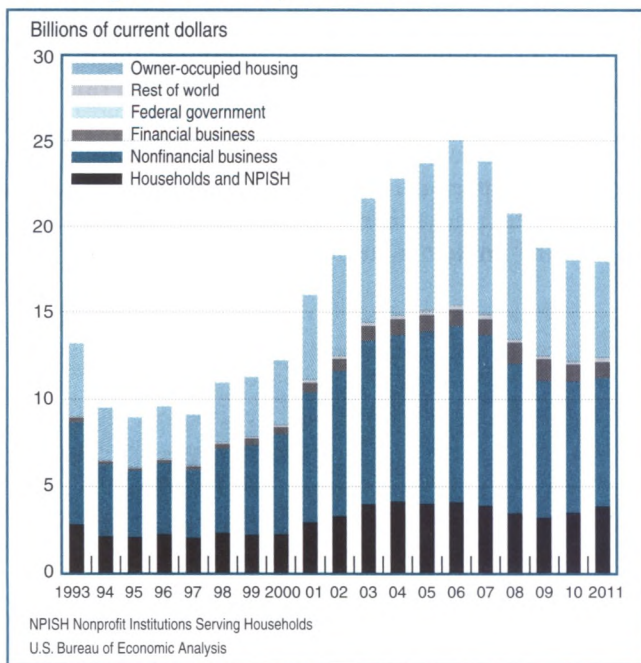

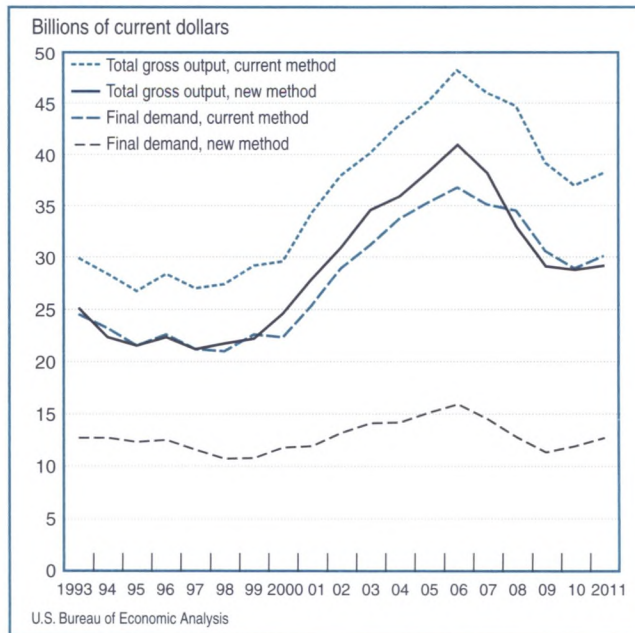

Chart 7. Total Gross Output and Final Demand by Method for Imputed Services of Savings Institutions, 1993–2011

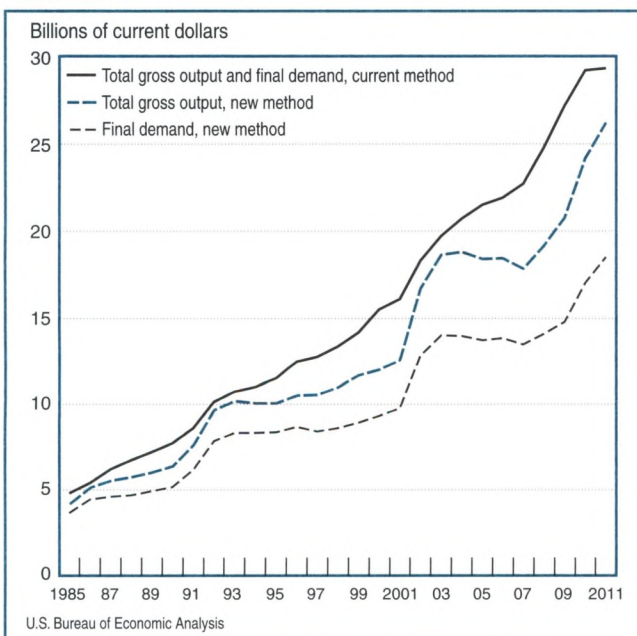

using the current method and using the new method proposed in this paper. The patterns of overall output are similar for the two methods; however, the new method gives much lower estimates of final consumption of this output. These estimates are also less volatile, especially during the run-up to the subprime crisis and during its aftermath. The difference in estimates of final consumption of imputed services (and thus to GDP) ranges from just under \$10 billion to more than \$20 billion. Over this time period, the average difference in the estimate of savings institution output for final demand using the new method is about 54 percent of the estimate based on the current methodology.

Chart 8 shows the analog of chart 7 for credit unions. A downward level shift can be seen here, as well. It is initially somewhat smaller, around \$2.5 billion in 1993. However, it rapidly increases to more than \$10 billion in recent years. The overall pattern of

credit union output also changes, with a flat pattern over the 2000s but a sharp increase after the crisis. This has followed a large increase in credit union memberships during the crisis period. Over this period, the average difference between the estimate of final demand using the new method is about 36 percent of the estimate using the current method.

These results show a downward revision in total GDP that ranges from under \$15 billion to more than \$30 billion in 1993–2011 (table 1). These figures represent an approximation of the revisions to GDP that would be expected, if this new methodology were to be implemented in the NIPAs. In 2008, the revision would represent about 16 percent of total imputed services from all depository institutions (including commercial banks) consumed by persons or 13 percent of the final expenditures on the implicit output of depository institutions, according to published estimates.

Chart 8. Total Gross Output and Final Demand by Method for Imputed Services of Credit Unions, 1985–2011

Conclusion

This article has shown that a reference rate method similar to the one used to estimate implicit services of commercial banks can be used to estimate implicit services of nonbank depository institutions. Although this method is not yet ready for implementation in the NIPAs, this exercise shows how such an update of the national accounts might affect gross output, and it demonstrates concerns that linger regarding the suitability of available data—in particular, with regard to the choice of reference rate.

The change in methodology would yield a downward restatement of GDP ranging from about \$15 billion in the mid-90s to more than \$30 billion in recent years, or about half of the published contributions of these institutions to GDP. The revisions show a similar picture of the growth of output of savings institutions over this period; however, they suggest that final demand is somewhat more stable. The new method picks up a relatively solid performance of credit unions over recessionary periods. The results suggest a continued goal of further developing these methods with the goal of eventual implementation in the NIPAs.

U.S. Multinational Companies

Operations of U.S. Parents and Foreign Affiliates in 2011

By Kevin B. Barefoot

THE BUREAU of Economic Analysis (BEA) has just released preliminary results from the 2011 Annual Survey of U.S. Direct Investment Abroad. The statistics collected on this survey cover the worldwide operations of U.S. multinational companies (MNCs). The survey collects data on the finance and operations of U.S. MNCs, including balance sheet and income statement details, employment and employee compensation, sales, capital expenditures, trade in goods, and expenditures for research and development (see the box “Data Availability”). Unlike previous years, BEA

will not publish an article that analyzes these statistics (see the box “Impact of Sequestration on Analytical Articles”), but some major results are noted below.

The worldwide operations of a U.S. MNC can be split between its domestic operations, represented by the U.S. parent company, and its foreign operations, represented by foreign affiliates. Data for foreign affiliates are presented for two categories—all affiliates and majority-owned foreign affiliates (MOFAs), which are those that are owned more than 50 percent by their U.S. parents. Most foreign affiliates are in fact majority-owned; MOFAs accounted for 86.1 percent of employment by all foreign affiliates in 2011. Data are available in greater detail for MOFAs because some data items are collected only for MOFAs. A focus on MOFAs puts the statistics on foreign affiliates on the same basis as the statistics on U.S. parents, which are defined to include all domestic operations that are majority-owned. For the remainder of this report, U.S. MNCs refers to the combined operations of U.S. parent companies and their MOFAs.

The value added of U.S. MNCs rose 8.3 percent to \$4,538.6 billion in 2011 after rising 12.0 percent in 2010 (table 1). The increase reflected a 4.9 percent increase in the value added of U.S. parents and a 16.3 percent increase in the value added of their MOFAs.

Data Availability

Detailed preliminary statistics from the 2011 Annual Survey of U.S. Direct Investment Abroad have been posted in electronic files that can be downloaded free of charge from BEA’s Web site at www.bea.gov. Revised statistics will be released in 2014. Detailed statistics on U.S. MNC operations for 1983–2010 are also available on BEA’s Web site.

More information about these products and how to access them is available at www.bea.gov/international/di1usdop.htm.

Impact of Sequestration on Analytical Articles

The automatic federal government spending cuts that went into effect in January 2013—known as the sequestration—necessitated that the Bureau of Economic Analysis (BEA) eliminate analytical activities related to foreign direct investment and the operations of multinational companies. This includes elimination of the detailed analytical SURVEY OF CURRENT BUSINESS article that has historically accompanied the release of statistics from BEA’s Annual Survey of U.S. Direct Investment Abroad. The collection of data on direct investment flows and on the finance and operations of multinational compa-

nies is unaffected by sequestration reductions. The BEA Web site presents the full set of 2011 statistics on the finance and operations of U.S. multinational companies.

BEA understands that all of its analytical products and statistical programs are of high value to public and private sector decisionmakers. Very careful consideration was given to program reductions in an effort to minimize the impact on data users. For more information, see “BEA FY 2013 Budget Impacts” at www.bea.gov under “Media,” “News Releases,” and “What’s New.”

U.S. parent value added grew only slightly faster than overall U.S. GDP for private industries in 2011 (4.4 percent). As a result, the share of U.S. private industry GDP accounted for by U.S. parents remained at about 24 percent. The value added of MOFAs grew faster in 2011 than that of U.S. parents; however, U.S. parents continued to account for roughly two-thirds or more of U.S. MNC combined value added (68.2 percent), capital expenditures (73.1 percent), R&D (83.0 percent), and employment (66.0 percent).

Employment by U.S. MNCs increased 1.6 percent to 34.7 million workers in 2011 after increasing 1.1 percent in 2010. The increase reflected a 0.4 percent increase in the employment of U.S. parents and a 4.2 percent increase in the employment of MOFAs. U.S. parents accounted for one-fifth of total U.S. private industry employment in 2011.

Some additional highlights of the data:

- U.S. MNC capital expenditures rose 16.4 percent in 2011, reflecting growth for both U.S. parents (17.2 percent) and MOFAs (14.1 percent).
- U.S. MNC research and development expenditures rose 9.5 percent in 2011, reflecting growth for both U.S. parents (8.5 percent) and MOFAs (14.7 percent).
- Fifteen countries—the United Kingdom, Canada, Ireland, Germany, Japan, Australia, France, Brazil, Mexico, China, Switzerland, Singapore, the Netherlands, Italy, and Norway—accounted for more than two-thirds of value added by MOFAs in 2011.
- U.S. exports of goods shipped by U.S. parents rose 15.3 percent in 2011 (tables 2.1. and 2.2). U.S. imports of goods shipped to U.S. parents rose 13.5 percent.
- U.S. exports of goods shipped to all foreign affiliates rose 10.7 percent in 2011 (table 3). U.S. imports of goods shipped by all foreign affiliates rose 13.6 percent.

Tables 1 through 6.2 follow.

^p Preliminary

^f Revised

1. For the years shown prior to 2009, the data items needed to calculate value added for individual U.S. parents and foreign affiliates were collected for nonbank businesses only. The value added statistics for bank parents and affiliates for those years are estimates.

2. Break in series. (Beginning with 1999, BEA expanded its statistics to include data for "very small" foreign affiliates and for parents that had only "very small" foreign affiliates. For details, see the technical note on page 121 of the December 2002 Survey of Current Business.)

3. For 1989, 1994, 1999, and 2004, the capital expenditure data for individual U.S. parents and foreign affiliates were collected for nonbank businesses only. The capital expenditure statistics for bank parents and affiliates for those years are estimates.

4. For the years shown prior to 2009, data on R&D expenditures were collected for nonbank U.S. parents and foreign affiliates only. R&D expenditures are assumed to be zero for bank U.S. parents and foreign affiliates in those years.

MNC Multinational company.

MOFA Majority-owned foreign affiliate.

n.a. Not available.

REGIONAL QUARTERLY REPORT

State Personal Income and More . . .

In this report...

- Second-quarter 2013 state personal income, page 48
- Annual state personal income for 2012, page 51
- Comprehensive revision of state personal income, page 52
- Personal income in the NIPAs and state personal income, page 57
- Data availability, page 58

For information about BEA regional statistics, go to www.bea.gov.

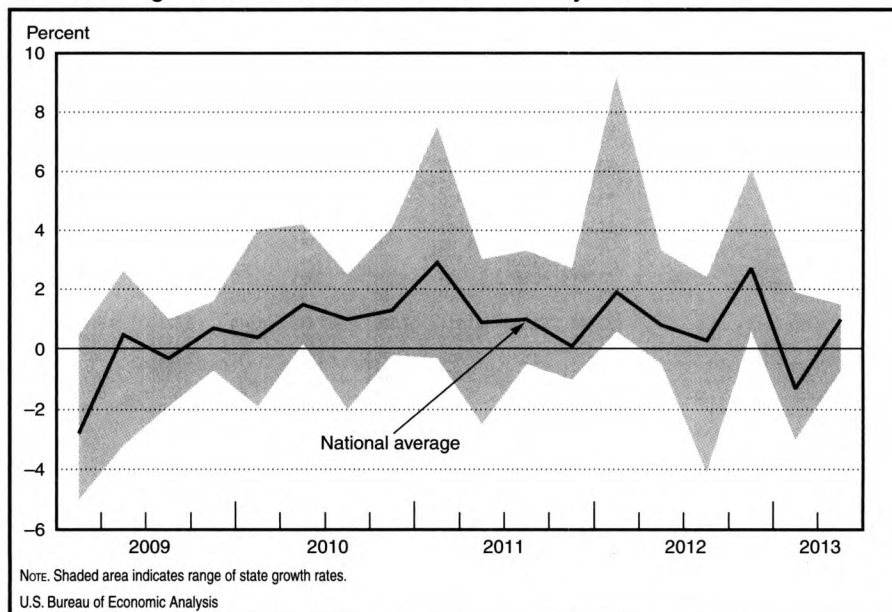

Second quarter of 2013

Personal income grew in all but three states in the second quarter of 2013 after falling in all but five states in the first quarter.¹ Second-quarter growth rates ranged from 1.5 percent in Arizona and Florida to -0.7 percent in Nebraska, or 1.0 percent on average (chart 1). Personal income also declined in South Dakota and Iowa. The national price index for personal consumption expenditures was unchanged in the second quarter after rising 0.3 percent in the first quarter.

The second-quarter personal income growth completely offset the first-quarter decline in 20 states and the District of Columbia. The first-quarter declines in personal income mainly reflected the effects of special factors, such as the expiration of the “payroll tax holiday” and the acceleration of bonuses and personal dividend income to the fourth quarter of 2012 in anticipation of changes in individual tax rates.

1. State personal income, which is measured in current dollars, is the sum of net earnings by place of residence, property income, and personal current transfer receipts.

Chart 1. Range of State Personal Income Quarterly Growth Rates

David G. Lenze prepared the report on state personal income.

Quarterly State Personal Income

The special factors were most prominent in three components of personal income: wages and salaries, employee and self-employed contributions for government social insurance, and dividends.

- Wage growth for most states accelerated in the second quarter; only in nine states and the District of Columbia did wage growth slow (table A). The slowdown in eight of these states continued a slowdown that began with the first quarter; the second-quarter slowdown in North Carolina was the third in a row.
- Employee and self-employed contributions for government social insurance grew \$3.7 billion or 0.7 percent in the second quarter, close to the 0.8 percent growth in wages at the national level (table A). Because these contributions (which include social security and Medicare contributions) are to a large

extent based on wages, contributions and wages tend to grow at similar rates, unlike the first quarter when contributions grew 27.9 percent while wages fell 0.7 percent.

- Personal dividend income resumed growing in the second quarter, rising 6.8 percent after falling 14.7 percent in the first quarter. The second-quarter dividend increase accompanied a 4.3 percent increase in after-tax profits (chart 2).² Personal dividend income, which includes the imputed receipt of dividend income from pension plans, grew \$5.1 billion in Florida. This exceeded the \$3.1 billion gain in substantially more populous Texas. Similarly, the \$227

2. Chart 2 displays domestic after tax profits only. Some personal dividend income is received from the rest of the world (see table 7.10 in the national income and product accounts).

Quarterly State Personal Income

million gain in Wyoming (which has more million-dollar income tax filers per capita than all but five states) was more than double the \$111 million gain in Alaska and the \$105 million gain in Vermont, even though those states have more residents.³

Earnings by state and industry

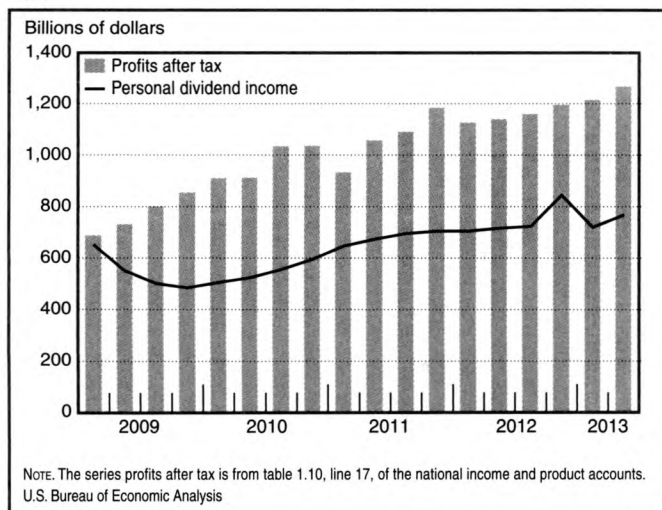

U.S. farm earnings fell 14.6 percent in the second quarter (table B). In South Dakota, Iowa, and Nebraska, the declines in farm earnings were so large that they offset growth in all other components of income, resulting in a decline in total personal income in those three states.

Private nonfarm earnings for the nation grew 1.0 percent in the second quarter, matching the average for the last 4 years. Growth was above the national average in North Dakota (1.6 percent), Louisiana (1.5 percent), Texas (1.3 percent), and Wyoming (1.2 percent), with mining and construction making the largest contributions to private nonfarm earnings growth in each state. Nebraska's private nonfarm earnings grew 0.5 percent, the smallest increase of all states in the second quarter of 2013. Nebraska was the only state with a decline in finance earnings (0.9 percent) and one of only two states where construction earnings fell. Construction earnings fell 0.5 percent in Nebraska and 0.9 percent in Nevada.

The compensation of civilian federal employees fell in the District of Columbia and in most states in the second quarter. The \$2.3 billion decline nationwide was the largest of six consecutive quarterly declines. Overall, civilian federal government earnings fell 0.8 percent, military

3. Based on adjusted gross income in the 2011 Statistics of Income data from the Internal Revenue Service.

Chart 2. U.S. Personal Dividend Income and Profits After Tax

earnings rose 0.2 percent, and state and local government earnings were essentially unchanged in the second quarter.

Personal current transfer receipts

Personal current transfer receipts (which, among other things, include payments made directly, or through intermediaries, to vendors for care provided to individuals under the Medicare and Medicaid programs) increased 0.1 percent in the second quarter, the slowest pace since the third quarter of 2011 when transfer receipts fell 0.4 percent (table C). The biggest decline was in Connecticut, where total transfers fell 2.0 percent, mostly because of declines in Medicaid benefits and state unemployment insurance (UI) compensation. In North Dakota, state UI compensation rose for the third consecutive quarter and reached the highest level in 3 years.

Annual State Personal Income

As is customary in September, BEA released several sets of detailed statistics for the previous year: tax payments by level of government; transfer receipts by major program; detailed farm income and expenses; and wages, compensation, and earnings for three-digit North American Industry Classification System (NAICS) industries.

The employment statistics in particular provide additional perspective on the compensation growth of the last several years. Forty-nine states and the District of Columbia have recorded compensation growth over the period 2008–2012, ranging from 0.8 percent in Idaho to 48.0 percent in North Dakota (table D). Only Nevada recorded a decline (5.5 percent). In contrast, wage and salary jobs increased in only four states—Alaska, North and

South Dakota, and Texas—and the District of Columbia over that period. Employment levels for 2012 in the other states are below the levels for 2008—by as much as 9.6 percent in the case of Nevada.

**Table D. Employment and Compensation, Percent Change
2008–2012, Select States**

United States.....	-2.5	6.5

Acknowledgments

The annual revision of state personal income was prepared by the Regional Income Division under the direction of Mauricio Ortiz, Chief. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. The preparation of the revised estimates was a division-wide effort.

The estimates of nonfarm wages and salaries, supplements to wages and salaries, and personal current tax receipts were prepared by the Compensation Branch under the supervision of John A. Rusinko, Chief. Major responsibilities were assigned to Peter Battikha, Michael L. Berry, Elizabeth P. Cologer, John D. Laffman, David G. Lenze, Paul K. Medzerian, and Joseph L. Stauffer. Contributing staff members were Susan P. Den Herder, Terence J. Fallon, Michael W. Jadoo, Russell C. Lusher, Nathaniel R. Milhous, Michael A. Reid, and Ross A. Stepp.

The quarterly estimates of state personal income and the annual estimates of nonfarm proprietors' income, property income, personal current transfer receipts, contributions for government social insurance, and the adjustment for residence were prepared by the Regional Income Branch. Major

responsibilities were assigned to Brian J. Maisano, Lisa C. Ninomiya, James P. Stehle, and Matthew A. von Kerczek. Contributing staff members were Nacola A. Alexander, Suet M. Boudhraa, Andy K. Kim, B. Enrique Lopez, Toan A. Ly, W. Timothy McKeel, Linda M. Morey, Anand N. Seeram, and Troy P. Watson.

The estimates of farm wages and salaries, farm supplements to wages and salaries, and farm proprietors' income were prepared by the Farm Income and Employment Section under the supervision of James M. Zavrel, Assistant to the Division Chief. Major responsibilities were assigned to Carrie L. Litkowski. Contributing staff members were Daniel R. Corrin and Michelle A. Harder.

The public use tabulations and data files were assembled and the tables were prepared by the Data and Administrative Systems Group. Major responsibilities were assigned to Jeffrey L. Newman, Michael J. Paris, and Callan S. Swenson. Contributing staff members were Brooke N. Huotari, Monique B. Tyes, Melanie N. Vejdani, and Jonas D. Wilson.

Comprehensive Revision of State Personal Income

On September 30, 2013, the Bureau of Economic Analysis (BEA) released the initial results of its latest comprehensive, or benchmark, revision of the quarterly and annual state personal income statistics; the results of the previous comprehensive revision were released in October 2009.

The first installment of the 2013 revision consists of new and revised statistics for the years and quarters covered by NAICS, that is, from the first quarter of 2001 through the second quarter of 2013. Additional revisions, covering 1929–2000 for the annual estimates and covering the first quarter of 1948 through the fourth quarter of 2000 for the quarterly statistics, are scheduled to be released in the spring of 2014.

Comprehensive revisions, which are conducted every 4 or 5 years, adopt various changes in definitions, classifications, statistical methods, and concepts that make the BEA economic accounts more informative and more accurately portray the evolution of the national and state economies.

Comprehensive revisions also incorporate newly available and revised state source data that are more complete and more detailed than those previously available (see table E). Especially noteworthy is the introduction of state-level data from the Medical Expenditure Panel Survey and from the actuarial and financial reports of state and local government retirement systems in the estimation of employer contributions for employee pension and insurance funds.

The 2013 state personal income comprehensive revision incorporated the changes that were adopted as part of the comprehensive revision of the national income and product accounts (NIPAs), which was released in July 2013.⁴ A preview of the major changes to the state accounts was published in the July 2013 *SURVEY OF CURRENT BUSINESS* and a summary of the changes to both the state and national accounts (as they affect state personal income) are listed in tables F and G.

The picture of state personal income that is shown by the revised estimates is similar to the picture shown by the previous estimates:

- The revisions to state personal income were generally small and fell within a relatively narrow range (table H). The largest downward revision was 2.1 percent for Montana in 2001, and the largest upward revision was 5.7 percent for Alaska and North Dakota in 2012.
- The revisions to U.S. personal income were upward in all years except 2008.

- Similarly, the revisions to personal income for most states were generally upward with downward revisions being most frequent in 2008.
- Downward revisions were more common for a few states and the District of Columbia, especially in the earlier years. For example, Montana was revised downward by 0.9 percent or more in each year in 2001–2008.
- The revisions tended to be larger in 2012 for the United States and most states because the preliminary estimates for that year (released in March) were based on extrapolations of many components. Those extrapolations have now been replaced with source data released in the interim.
- The effect of the comprehensive revision on the growth rates of state personal income was generally small (table I). For 2001–2012, the average annual growth rate of U.S. personal income was 3.9 percent, 0.1 percentage point higher than in the previously published estimates. The revision to growth in all but four states ranged from –0.1 percentage point to 0.3 percentage point.
- Average personal income growth was revised up 0.5 percentage point in North Dakota and Wyoming, giving the two states with the fastest personal income growth rates in the previously published estimates an even wider lead over the other states in the revised estimates.
- Michigan's long-term personal income growth, 2.1 percent, remains the lowest of all states, even after being revised up 0.2 percentage point.
- The effect on the rankings of state per capita personal income in 2012 was generally small (table J). Most states changed no more than two positions in rank.
- Oklahoma moved up to 28th from 32nd in the per capita personal income rankings, the largest change of all states.
- The 10 states with the highest and the 10 states with the lowest per capita personal incomes were the same in the revised estimates and in the previously published estimates.
- Seven states had personal income revisions of 4.0 percent or more in 2012 (table K). In all cases, property income (dividends, interest, and rent) accounted for more than half of the revision.⁵ Property income is one of the more volatile components of personal income and the source data become available only after a lag of several years.

4. See Robert Kornfeld, "Initial Results of the 2013 Comprehensive Revision of the National Income and Product Accounts," *SURVEY OF CURRENT BUSINESS* 93 (August 2013): 6–17.

5. In the case of Oklahoma, nonfarm proprietors' income also accounted for more than half of the upward revision to total personal income; other components, such as supplements to wages and salaries, were revised downward.

Comprehensive Revision of State Personal Income

Table F. Changes in State Source Data, Definitions, and Statistical Methods

Changes	Major components affected
New employers' normal cost data from the financial and actuarial reports of a sample of state and local government defined benefit (DB) plans and membership data from the Census Bureau's Annual Survey of Public Pension Plans.	Employer contributions for employee pension and insurance funds.
New data by state for employer contributions to defined contribution (DC) pension plans from state and local government financial reports.	Employer contributions for employee pension and insurance funds.
New data by state for employer contributions to employee health insurance funds from the Medical Expenditure Panel Survey of the Agency for Healthcare Research and Quality.	Employer contributions for employee pension and insurance funds.
New Social Security taxable wage data and Medicare taxable wage data by state from the Social Security Administration.	Contributions for government social insurance and supplements to wages and salaries.
New quarterly data by state for Medicaid transfers from the Centers for Medicare and Medicaid Services.	Personal current transfer receipts.
New child tax credits data by state from the Statistics of Income Division of the Internal Revenue Service.	Personal current transfer receipts.
New employee contributions data from the Census Bureau Survey of Public Pension Plans, financial reports of pension plans, and other surveys and reports to estimate a portion of wages excluded from Alaska's Quarterly Census of Employment and Wages.	Wages and salaries.
New private household wages and salaries and employment from American Community Survey of the Census Bureau.	Wages and salaries.
New national controls for the wages of border workers.	Residence adjustment.
New payments to annuitants data by state from the U.S. Office of Personnel Management and the Department of Defense.	Dividends, interest, and rent.

Table G. Major Changes in Definitions and Statistics in the National Income and Product Accounts Affecting State Personal Income

Changes	Major components affected
Definition changes	
Recognize expenditures by business, on research and development as fixed investment.	Proprietors' income.
Recognize expenditures by business on entertainment, literary, and other artistic originals as fixed investment.	Proprietors' income.
Expand the ownership transfer costs of residential fixed assets that are recognized as fixed investment and improve the accuracy of the associated asset values and services lives.	Proprietors' income and rental income of persons.
Measure transactions of defined benefit (DB) pension plans on an accrual-accounting basis by recognizing the costs of unfunded liabilities.	Supplements to wages and salaries and personal interest income.
Harmonize the treatment of wages and salaries by using accrual-based estimates consistently throughout the accounts.	Wages and salaries.
Statistical changes	
Improve estimates of implicit services of commercial banks	Personal interest income
Improve estimates of employers' contributions to state and local government-sponsored defined contribution (DC) pension plans	Compensation of state and local government employees
Improve methodology for estimating the corporate partners' adjustment made to nonfarm proprietors' income	Proprietors' income.
Update measures of misreporting	Wages and salaries and proprietors' income.
Improve methodology for distributing the income of regulated investment companies by type	Personal dividend income and personal interest income.
Improve measures of wages paid by Indian tribal governments	Compensation of state and local government employees
Incorporate new data on supplemental unemployment insurance.	Compensation of employees

Personal Income in the NIPAs and State Personal Income

The level of personal income in the national income and product accounts (NIPAs) differs from the national total in the state personal income statistics because of differences in coverage and timing of the availability of source data.

The differences in coverage stem from different concepts of residence. For NIPA personal income, a U.S. resident has a center of economic interest in the country and resides, or expects to reside, in the country for a year or more. For state personal income, a resident is a participant in a U.S. regional economy, regardless of the individual's national citizenship or duration of residence.¹

In general, the NIPA measure of personal income is broader than state personal income. The following are some key coverage differences:

- NIPA personal income includes the earnings of federal civilian and military personnel stationed abroad and the property income received by the federal retirement plans of these workers. The regional measure of personal income does not include this income.²
- NIPA personal income includes all income earned by U.S. citizens living abroad for less than a year. State personal income excludes the portion earned while an individual lives abroad.
- NIPA personal income includes the income of foreign nationals only if they live and work in the United States for a year or more. State personal income includes the income of resident foreign nationals working in the United States—including migrant workers—regardless of length of residency.

The annual estimates of personal income in the NIPAs also diverge from the national totals of state personal income because of differences in the timing of the avail-

ability of source data. For example, farm proprietors' income in the NIPAs differs from state personal income, because the state estimates of farm proprietors' income incorporated revised U.S. Department of Agriculture data that were not available until after the national estimate was released.

Both NIPA and state personal income include the income of U.S. residents employed by international organizations or by other countries while living in the United States and exclude the income of foreign nationals employed by their home governments. NIPA personal income also includes the income of foreign nationals working at international organizations in the United States.³ In addition, both measures exclude the income of private U.S. citizens living outside the country for a year or more.

3. For more information on the treatment of border workers in the residence adjustment, see *State Personal Income and Employment*.

State and National Estimates of Personal Income

[Billions of dollars]

Statistical discrepancy ³	-1.0	-0.9	-1.1
Equals: State personal income	12,423.3	13,179.6	13,729.1

1. Employer contributions for government social insurance and for employee pension and insurance funds for Federal workers stationed abroad.

2. Investment income received by Federal retirement plans that is attributed to Federal workers stationed abroad.

3. Includes revisions made in the NIPAs that are not yet reflected in state personal income concerning wages of border workers and foreign nationals working for international organizations.

Jeffrey L. Newman

1. See *State Personal Income and Employment* at www.bea.gov/regional/methods.cfm.

2. For a description of military coverage in state personal income, see "New Treatment of State Estimates of Military Compensation," SURVEY 85 (October 2005): 116.

Data Availability

The complete set of quarterly and annual state personal income and employment statistics for all states and the District of Columbia and for all years are available interactively on BEA's Web site.

Estimates for 2001 forward reflect the results of the comprehensive revision to the national income and product accounts (NIPAs) released in July 2013. As a result, there is a temporary break in the state personal income time series for earlier years. Revised annual estimates back to 1929 and revised quarterly estimates back to the first quarter of 1948 will be released in the spring of 2014.

The following annual estimates are available interactively at www.bea.gov:

- Personal income, per capita personal income, and population for 1929–2012
- Disposable personal income and per capita disposable personal income for 1948–2012
- State income and employment summary, 1929–2012
- Personal income by major source and earnings by industry (North American Industry Classification System (NAICS) three digit) for 1990–2012, (Standard Industrial Classification System (SIC) two digit) for 1958–2000, and (SIC division level) for 1929–57
- Compensation of employees by industry (NAICS three digit) for 1990–2012 and (SIC two digit) for 1958–2000
- Wages and salaries by industry (NAICS three digit) for 1990–2012, (SIC two digit) for 1958–2000, and (SIC division level) for 1929–57
- Full-time and part-time employment by industry (NAICS three digit) for 1990–2012 and (SIC two digit) for 1969–2000
- Full-time and part-time wage and salary employment by industry (NAICS three digit) for 1990–2012 and (SIC two digit) for 1969–2000
- State economic profiles (a selection of personal income and employment data for each state) for 1958–2012
- Personal current transfer receipts by major program for 1948–2012
- State property income for 1958–2012
- Farm income and expenses (including the major categories of gross receipts and expenses for all farms and for measures of farm income) for 1969–2012
- Personal current tax receipts by level of government and by type for 1948–2012
- BEARFACTS, a computer generated narrative with analytical charts and graphs, that describes a state's personal income using current estimates, growth rates, and a breakdown of the sources of personal income

The following quarterly estimates are also available interactively at www.bea.gov:

- Personal income for the first quarter of 1948 to the second quarter of 2013
- Quarterly income summary for the first quarter of 1948 to the second quarter of 2013
- Personal income by major source and earnings by major industry (NAICS two digit) for the first quarter of 1990 to the second quarter of 2013
- Personal income by major source and earnings by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2000
- Compensation of employees by industry (NAICS two digit) for the first quarter of 1990 to the second quarter of 2013
- Compensation of employees by industry (SIC division level) for the first quarter of 1958 to the fourth quarter of 2000
- Wages and salaries by major industry (NAICS two digit) for the first quarter of 1990 to the second quarter of 2013
- Wages and salaries by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2000
- Personal current transfer receipts for the first quarter of 2001 to the second quarter of 2013

The state personal income statistics are also available through the members of the BEA User Group, which consists of state agencies and universities that help BEA disseminate the statistics in their states. A list of the BEA user groups is available on BEA's Web site.

For more information about the statistics, contact the Regional Income Division at 202–606–5360, fax 202–606–5322, or e-mail reis@bea.gov.

Tables 1 through 5 follow.

Table 1. Personal Income by State and Region

[Millions of dollars, seasonally adjusted at annual rates]

* Revised

1. Percent change was calculated from unrounded data.

Note: The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

Area	Disposable personal income					Per capita disposable personal income								
	Millions of dollars					Percent change ¹	Rank of percent change	Dollars					Rank in United States	Percent of the U.S. Average
	2008 ^r	2009 ^r	2010 ^r	2011 ^r	2012 ^r			2011-2012	2008 ^r	2009 ^r	2010 ^r	2011 ^r

r Revised

1. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 4. Personal Income by Major Source

[Millions]

Item	Line	United States			Alabama			Alaska			Arizona

r Revised

D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.

L Less than \$500,000, but the estimates for this item are included in the total.

1. The industry classification uses the 2012 North American Industry Classification System (NAICS) for 2012-2013.

2. Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income.

3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it

consists of adjustments for border workers: Wages and salaries to U.S. residents commuting to Canada less wages and salaries to Canadian and Mexican residents commuting into the United States.

4. Rental income of persons includes the capital consumption adjustment.

5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Schedule of BEA News Releases in 2014

January	U.S. International Trade in Goods and Services, November 2013*	January 7
	Gross Domestic Product, 4 th quarter 2013 and 2013 (advance estimate)	January 30
	Personal Income and Outlays, December 2013	January 31
February	U.S. International Trade in Goods and Services, December 2013*	February 6
	Gross Domestic Product, 4 th quarter 2013 and 2013 (second estimate)	February 28
March	Personal Income and Outlays, January 2014	March 3
	U.S. International Trade in Goods and Services, January 2014*	March 7
	U.S. International Transactions, 4 th quarter 2013 and 2013	March 19
	U.S. Travel and Tourism Satellite Accounts, 4 th quarter 2013	March 20
	State Quarterly Personal Income, 1 st quarter 2013–4 th quarter 2013 and State Annual Personal Income, 2013 (preliminary estimates)	March 25
	U.S. Net International Investment Position: End of 4 th quarter 2013 and 2013	March 26
	Gross Domestic Product, 4 th quarter 2013 and 2013 (third estimate) and Corporate Profits, 4 th quarter 2013 and 2013	March 27
	Personal Income and Outlays, February 2014	March 28
	April	U.S. International Trade in Goods and Services, February 2014*
Real Personal Income for States and Metropolitan Areas, 2008–2012		April 24
Gross Domestic Product by Industry, 4 th quarter 2013 and 2013		April 25
Gross Domestic Product, 1 st quarter 2014 (advance estimate)		April 30
May		Personal Income and Outlays, March 2014
	U.S. International Trade in Goods and Services, March 2014*	May 6
	Gross Domestic Product, 1 st quarter 2014 (second estimate) and Corporate Profits, 1 st quarter 2014 (preliminary estimate)	May 29
	Personal Income and Outlays, April 2014	May 30
June	U.S. International Trade in Goods and Services, April 2014*	June 4
	U.S. International Trade in Goods and Services Annual Revision, 2013*	June 4
	Gross Domestic Product by State, 2013 (advance estimates) and 1997–2012 (revised estimates)	June 11
	U.S. International Transactions, 1 st quarter 2014 and Annual Revisions	June 18
	State Quarterly Personal Income, 1 st quarter 2013–1 st quarter 2014	June 24
	Gross Domestic Product, 1 st quarter 2014 (third estimate) and Corporate Profits, 1 st quarter 2014 (revised estimate)	June 25
	Personal Income and Outlays, May 2014	June 26
	U.S. Travel and Tourism Satellite Accounts, 1 st quarter 2014	June 27
	U.S. Net International Investment Position: End of 1 st quarter 2014 and 2013 and Annual Revisions	June 30

All releases except “Personal Income and Outlays, November 2014” are scheduled for 8:30 a.m. This release is scheduled for 10 a.m.

*Joint release by the Census Bureau and the Bureau of Economic Analysis

July	U.S. International Trade in Goods and Services, May 2014*	July 3
	Gross Domestic Product by Industry, 1 st quarter 2014	July 25
	Gross Domestic Product, 2 nd quarter 2014 (advance estimate) and Historical Revisions	July 30
August	Personal Income and Outlays, June 2014 and Revised Estimates for 2011–May 2004	August 1
	U.S. International Trade in Goods and Services, June 2014*	August 6

	Personal Income and Outlays, October 2014	November 26
December	U.S. International Trade in Goods and Services, October 2014*	December 5
	U.S. International Transactions, 3 rd quarter 2014	December 17
	U.S. Travel and Tourism Satellite Accounts, 3 rd quarter 2014	December 18
	State Quarterly Personal Income, 1 st quarter 2013–3 rd quarter 2014	December 19
	Gross Domestic Product, 3 rd quarter 2014 (third estimate) and Corporate Profits, 3 rd quarter 2014 (revised estimate)	December 23
	Personal Income and Outlays, November 2014	December 23
U.S. Net International Investment Position: End of 3 rd quarter 2014	December 30	

BEA Current and Historical Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission. Citing the SURVEY OF CURRENT BUSINESS and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at www.bea.gov. These estimates are available in a variety of formats. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

National Data

A. Selected NIPA tables [A,Q]

- 1. Domestic product and income D-2
- 2. Personal income and outlays D-22
- 3. Government current receipts and expenditures ... D-27
- 4. Foreign transactions D-40
- 5. Saving and investment D-44
- 6. Income and employment by industry D-51
- 7. Supplemental tables..... D-52

B. NIPA-related table

- B.1 Personal income and its disposition [A, M] D-56

C. Historical measures [A, Q]

- C.1 GDP and other major NIPA aggregates..... D-57

D. Charts

- Selected NIPA series D-61

Industry Data

E. Industry table

- E.1 Value added by industry [A]..... D-67

International Data

F. Transactions table

- F.1 U.S. international transactions in goods and services [A, M] D-68
- F.2 U.S. international transactions [A, Q]..... D-69
- F.3 U.S. international transactions by area [Q]..... D-70
- F.4 Private services transactions [A] D-73

G. Investment tables [A]

- G.1 U.S. international investment position D-74
- G.2 USDIA: Selected items D-75
- G.3 Selected financial and operating data of foreign affiliates of U.S. companies..... D-76
- G.4 FDIUS: Selected items D-77
- G.5 Selected financial and operating data of U.S. affiliates of foreign companies..... D-78

H. Charts

- The United States in the international economy D-79

Regional Data

I. State and regional tables

- I.1 Personal income [Q] D-80
- I.2 Personal income and per capita personal income [A]..... D-81
- I.3 Disposable personal income and per capita disposable personal income [A] D-82
- I.4 Gross domestic product by state [A]..... D-83

J. Local area tables

- J.1 Personal income and per capita personal income by metropolitan area [A] D-84
- J.2 Gross domestic product by metropolitan area for industries [A] D-89

K. Charts

- Selected regional estimates..... D-93

Appendixes

A. Additional information about the NIPA estimates

- Statistical conventions..... D-95
- Reconciliation table [A, Q] D-96

B. Suggested reading D-97

National Data

A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on November 7, 2013. These estimates include the advance estimates for the third quarter of 2013.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables. Estimates for all NIPA series for 1929 forward are on BEA's Web site at www.bea.gov.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to www.bea.gov and subscribe. The "Selected NIPA Tables" are available later that day.

Personal consumption expenditures excluding food and energy ¹	38	1.8	1.7	1.5	1.2	1.2
Market-based PCE ²	39	1.5	1.5	1.3	1.0	1.1
Market-based PCE excluding food and energy ²	40	1.7	1.5	1.4	1.1	1.1

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE: Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.
5. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

5. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

Residual	63	-20.6	-34.1	-34.6	-45.1	-38.0	-41.2	-42.1

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

NOTE: The residual line is the difference between the first line and the sum of the most detailed lines.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.
 2. Gross national income deflated by the implicit price deflator for gross national product.
 3. Net domestic income deflated by the implicit price deflator for net domestic product.
 Note: Except as noted in footnotes 1, 2 and 3, chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Uses gross domestic purchases price index as deflator.

2. This measure is called "real gross domestic income" in the System of National Accounts, 2008.

3. This measure is called "real gross national income" in the System of National Accounts, 2008.

4. Uses net domestic purchases price index as deflator.

5. Ratio (multiplied by 100) of price index for gross domestic product to the price index for gross domestic purchases.

6. Ratio (multiplied by 100) of the price index for exports of goods and services to the price index for imports of goods and services.

7. Ratio (multiplied by 100) of the price index for goods exports to the price index for goods imports.

8. Ratio (multiplied by 100) of the price index for goods exports to the price index for nonpetroleum goods imports.

CCAAdj Capital consumption adjustment

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

After-tax income received by the personal sector:								
Disposable personal income	14	2.4	2.0	-0.6	9.0	-7.9	3.5	2.5

1. In this table, the net measures are the corresponding gross measures excluding the depreciation of fixed assets as measured by the consumption of fixed capital.

2. Gross domestic purchases excluding change in private inventories.

3. The command-basis estimates (lines 10-13) measure the purchasing power of the income generated by the sale of goods and services produced; they reflect gains or losses in real income resulting from changes in the terms of trade for exports and imports. For more detail on the command-basis measures, see NIPA tables 1.8.3 and 1.8.6.

Disposable personal income, chained (2009) dollars	42	2.4	2.0	-0.6	9.0	-7.9	3.5	2.5

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.
2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.
3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.
4. Consists of nonmortgage interest paid by households.
5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

PCE excluding food and energy ⁴	25	3.0	2.5	1.8	2.7	1.3	2.3	2.1
Energy goods and services ⁵	26	-2.3	-1.8	0.5	-12.2	18.6	-1.3	-9.0
Market-based PCE ⁶	27	2.7	2.4	2.1	2.0	2.7	1.8	1.3
Market-based PCE excluding food and energy ⁶	28	3.1	2.8	2.2	3.2	1.7	2.4	1.9

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).
2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).
2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).
 2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
 NOTE: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local government.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

NOTE: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

4. Foreign Transactions

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. Includes petroleum and mineral exploration.
 2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 5. Excludes software "embedded," or bundled, in computers and other equipment.
 6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.
 7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.
 8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.
 9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

Private fixed investment in information processing equipment and software.....	32	557.7	581.6	575.5	595.3	598.9	600.9	600.5

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Excludes software "embedded," or bundled, in computers and other equipment.

7. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

8. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

9. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

10. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2009) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonfarm inventories to final sales	28	2.33	2.31	2.31	2.29	2.28
Nonfarm inventories to final sales of goods and structures	29	4.26	4.21	4.24	4.19	4.14

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Ratios of private inventories to final sales of domestic business:						
Private inventories to final sales	28	2.33	2.30	2.31	2.31	2.31
Nonfarm inventories to final sales	29	2.15	2.13	2.13	2.12	2.12
Nonfarm inventories to final sales of goods and structures	30	3.87	3.81	3.82	3.80	3.78

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2009) dollar inventory series are calculated to ensure that the chained (2009) dollar change in inventories for 2009 equals the current-dollar change in inventories for 2009 and that the average of the 2008 and 2009 end-of-year chain-weighted and fixed-weighted inventories are equal.

Addenda:								
Final sales of motor vehicles to domestic purchasers	43	429.9	481.1	486.1	492.0	498.0	504.1	508.9
Private fixed investment in new autos and new light trucks	44	155.6	175.7	175.1	184.8	192.3	193.9	195.6
Domestic output of new autos ²	45	83.6	111.3	114.8	113.9	117.1	114.2	110.8
Sales of imported new autos ³	46	91.7	100.0	96.2	102.8	100.6	102.8	105.9

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Table 7.5. Consumption of Fixed Capital by Legal Form of Organization and Type of Income

[Billions of dollars]

C. Historical Measures

This table presents historical time series for several estimates presented in the "Selected NIPA Tables" that are published in this issue. The time series are also presented in the NIPA tables on BEA's Web site, www.bea.gov.

Table C.1. GDP and Other Major NIPA Aggregates—Continues

[Quarterly estimates are seasonally adjusted at annual rates]

Year	Billions of chained (2009) dollars			Percent change from preceding period		Chain-type price indexes [2009=100]		Implicit price deflators [2009=100]		Percent change from preceding period			
	Gross domestic product	Final sales of domestic product	Gross national product	Real gross domestic product	Real final sales of domestic product	Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product	Chain-type price index		Implicit price deflators	
										Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product

D. Charts

All series are seasonally adjusted at annual rates. The percent changes in real gross domestic product are based on quarter-to-quarter changes. The shaded areas mark the beginning and end of recessions as determined by the Business Cycle Dating Committee of the National Bureau of Economic Research.

p Preliminary

r Revised

(*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

p Preliminary

r Revised

1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.

4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary

r Revised

1. The statistics for each quarter are the values as of the last day of the quarter; the first quarter ends on March 31; the second quarter ends on June 30; the third quarter ends on September 30; and the fourth quarter ends on December 31 of the year.

2. U.S. official gold stock is valued at market price.

3. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

4. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

5. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. Changes in exchange rates do not affect this valuation.

6. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

D Suppressed to avoid disclosure of data of individual companies.

Notes: The data in this table are from BEA's annual survey of the operations of U.S. affiliates of foreign companies; see "U.S. Affiliates of Foreign Companies: Operations in 2011" in the August 2013 Survey of Current Business.

The following ranges are given in employment cells that are suppressed: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999; L—50,000 to 99,999; M—100,000 or more.

H. Charts

THE UNITED STATES IN THE INTERNATIONAL ECONOMY: QUARTERLY SERIES ¹

1. All series are based on seasonally adjusted data when adjusted data are available. The series for the international investment position is annual before the fourth quarter of 2005. All series are from table F.2, with opposite signs in some cases, and table G.1. U.S. Bureau of Economic Analysis

Regional Data

I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at www.bea.gov. For information on state personal income, e-mail reis@bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail gdpbystate@bea.gov; write to the Regional Product Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

p Preliminary

r Revised

1. Percent change was calculated from unrounded data.

Note: The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and the timing of the availability of source data.

Source: Table 2 in the "Regional Quarterly Report" in the November 2013 SURVEY OF CURRENT BUSINESS

Table I.3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

Area	Disposable personal income						Per capita disposable personal income ²

p Preliminary

r Revised

1. Percent change was calculated from unrounded data.

Note: The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change was calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the

timing of the availability of source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2006, November 2007, November 2008, and December 2009) for federal statistical purposes.

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or “real” measures, and prices are expressed as index numbers with the reference year—at present, the year 2009—equal to 100.¹

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2008–2009 uses prices for 2008 and 2009 as weights, and the annual percent change in the GDP price index uses quantities for 2008 and 2009 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are “chained” (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding “chain-type” price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated “chained (2009) dollar estimates.” For most series, these estimates are computed by multiplying the current-dollar value in 2009 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2009 and if real output for this component increased by 10 percent in 2010, then the chained (2009) dollar value of this component in 2010 would be \$110 (\$100 × 1.10). The percent changes calculated from the chained (2009) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a “residual” line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_0 is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, $t - 0$).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

 ITAs International transactions accounts
 NIPAs National income and product accounts

B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. All of this information is available on BEA's Web site at www.bea.gov.

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

National income and product accounts (NIPAs).

The chapters in *Concepts and Methods of the U.S. National Income and Product Accounts* document the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates. The chapters have been updated to reflect the 2012 annual NIPA revision.

“Introductory Chapters 1–4: Concepts, Source Data, and Estimating Methods”

“Chapter 5: Personal Consumption Expenditures”

“Chapter 6: Private Fixed Investment”

“Chapter 7: Change in Private Inventories”

“Chapter 8: Net Exports of Goods and Services”

“Chapter 9: Government Consumption Expenditures and Gross Investment”

“Chapter 10: Compensation of Employees”

“Chapter 13: Corporate Profits”

In addition, see *Measuring the Economy: A Primer on GDP and the National Income and Product Accounts* (2007).

The following SURVEY article describes the most recent comprehensive NIPA revision.

“Initial Results of the 2013 Comprehensive Revision of the National Income and Product Accounts” (August 2013)

“Improved Estimates of the National Income and Product Accounts: Results of the 2013 Comprehensive Revision” (September 2013)

“Preview of the 2013 Comprehensive NIPA Revision”

“Changes in Definitions and Presentations” (March 2013)

“Statistical Changes” (May 2013)

In addition, see the following articles.

“Updated Summary of NIPA Methodologies”

(November 2013) describes the source data and methods that are used to prepare the estimates.

“Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes” (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

“Revisions to GDP, GDI, and Their Major Components” (July 2011) evaluates the principal NIPA estimates by examining the record of revisions to them.

Fixed assets and consumer durable goods. *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

“Fixed Assets and Consumer Durable Goods for 2003–2012: Results of the 2013 Comprehensive NIPA Revision” (October 2013) reflect the changes that were incorporated as part this revision.

Satellite account. This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

“Research and Development Satellite Account”

For 1959–2002 (December 2006)

For 1959–2004 (October 2007)

For 1959–2007 (December 2010)

Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

“Preview of the 2013 Comprehensive Revision of the Industry Economic Accounts” describes the changes in definitions and in classifications and statistical changes as part of this upcoming comprehensive revision (June 2013).

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at www.bea.gov under “About BEA.”

Annual industry accounts. *Measuring the Nation's Economy: An Industry Perspective* (2011) provides an overview of these accounts and how they can be used to examine industry activity in the U.S. economy and to track the flow of goods and services throughout the economy.

Benchmark input-output accounts. *Concepts and Methods of the U.S. Input-Output Accounts* (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

“U.S. Travel and Tourism Satellite Accounts”

For 2005–2008 (June 2009)

For 2004–2009 (November 2010)

For 2007–2010 (June 2011)

For 2003–2011 (June 2012)

For 2009–2012 (June 2013)

International accounts

The international accounts encompass the international transactions accounts and the international investment position accounts, direct investment, and international transactions in services.

International transactions accounts and international investment position accounts. “A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts” (February 2010) introduces these accounts.

U.S. International Transactions Accounts: Concepts and Estimation Methods (2011) describes the methodologies used to prepare the estimates. The methodology is usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2013 SURVEY.

“Modernizing and Enhancing BEA’s International Economic Accounts: A Progress Report and Plans for Implementation” (May 2013) updates BEA’s plans to introduce the new international statistical standards from recently updated manuals and its plans for changes for the 2013 and 2014 annual revisions.

“An Analysis of the Revisions to BEA’s International Economic Accounts” (November 2012) examines the accuracy of the estimates by analyzing the size and pattern of revisions to the quarterly estimates.

Direct investment. Updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 2009 Benchmark Survey* (2013) and in *Foreign Direct Investment in the United States: Final Results*

From the 2007 Benchmark Survey (2011).

Additional improvements are described in the following annual articles: “Direct Investment: Detailed Historical-Cost Positions and Related Financial and Income Flows” (September 2013), “Direct Investment Positions: Country and Industry Detail” (July 2013), “Operations of U.S. Multinational Companies” (November 2012), and “Operations of U.S. Affiliates of Foreign Companies” (August 2013).

International services. The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2013 SURVEY.

“Selected Issues in the Measurement of U.S. International Services” (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services.

Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

Personal income. Estimates of personal income are prepared for states and for local areas.

State Personal Income and Employment (2012) describes the detailed methodology that is used to prepare the quarterly and annual estimates for the states, the District of Columbia, the eight BEA regions, and the United States.

“An Examination of Revisions to the Quarterly Estimates of State Personal Income” (August 2012) analyzes the pattern of revisions in the various stages of the estimation cycle.

Local Area Personal Income and Employment (2012) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan areas, metropolitan divisions, micropolitan areas, combined statistical areas, and BEA economic areas and regions.

Gross domestic product. Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

Gross Domestic Product by State (2006) describes the sources and the methods that are used to prepare the estimates.

“Gross Domestic Product by State” (December 2010) presents the results of the most recent comprehensive revision.

“Introducing New Measures of the Metropolitan Economy: Prototype Estimates of GDP by Metropolitan Area” (November 2007) describes the potential uses of the estimates.
