

# NEWS RELEASE

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EST, FRIDAY, FEBRUARY 26, 2010

Lisa Mataloni: (202) 606-5304 (GDP)  
Recorded message: (202) 606-5306

BEA 10-05

## **GROSS DOMESTIC PRODUCT: FOURTH QUARTER 2009 (SECOND ESTIMATE)**

Real gross domestic product -- the output of goods and services produced by labor and property located in the United States -- increased at an annual rate of 5.9 percent in the fourth quarter of 2009 (that is, from the third quarter to the fourth quarter) according to the "second" estimate released by the Bureau of Economic Analysis. In the third quarter, real GDP increased 2.2 percent.

The GDP estimates released today are based on more complete source data than were available for the "advance" estimate issued last month. In the advance estimate, the increase in real GDP was 5.7 percent (see "Revisions" on page 3).

The increase in real GDP in the fourth quarter primarily reflected positive contributions from private inventory investment, exports, personal consumption expenditures (PCE), and nonresidential fixed investment. Imports, which are a subtraction in the calculation of GDP, increased.

The acceleration in real GDP in the fourth quarter primarily reflected an acceleration in private inventory investment, an upturn in nonresidential fixed investment, a deceleration in imports, and an acceleration in exports that were partly offset by decelerations in PCE and in federal government spending.

Motor vehicle output added 0.44 percentage point to the fourth-quarter change in real GDP after adding 1.45 percentage points to the third-quarter change. Final sales of computers subtracted 0.01 percentage point from the fourth-quarter change in real GDP after subtracting 0.08 percentage point from the third-quarter change.

---

NOTE.--Quarterly estimates are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and are annualized. "Real" estimates are in chained (2005) dollars. Price indexes are chain-type measures.

This news release is available on [BEA's Web site](#) along with the [Technical Note](#) and [Highlights](#) related to this release.

The price index for gross domestic purchases, which measures prices paid by U.S. residents, increased 1.9 percent in the fourth quarter, 0.2 percentage point less than in the advance estimate; this index increased 1.3 percent in the third quarter. Excluding food and energy prices, the price index for gross domestic purchases increased 1.3 percent in the fourth quarter, compared with an increase of 0.3 percent in the third.

Real personal consumption expenditures increased 1.7 percent in the fourth quarter, compared with an increase of 2.8 percent in the third. Real nonresidential fixed investment increased 6.5 percent, in contrast to a decrease of 5.9 percent. Nonresidential structures decreased 13.9 percent, compared with a decrease of 18.4 percent. Equipment and software increased 18.2 percent, compared with an increase of 1.5 percent. Real residential fixed investment increased 5.0 percent, compared with an increase of 18.9 percent.

Real exports of goods and services increased 22.4 percent in the fourth quarter, compared with an increase of 17.8 percent in the third. Real imports of goods and services increased 15.3 percent, compared with an increase of 21.3 percent.

Real federal government consumption expenditures and gross investment increased 0.1 percent in the fourth quarter, compared with an increase of 8.0 percent in the third. National defense decreased 3.5 percent, in contrast to an increase of 8.4 percent. Nondefense increased 8.3 percent, compared with an increase of 7.0 percent. Real state and local government consumption expenditures and gross investment decreased 2.0 percent, compared with a decrease of 0.6 percent.

The change in real private inventories added 3.88 percentage points to the fourth-quarter change in real GDP, after adding 0.69 percentage point to the third-quarter change. Private businesses decreased inventories \$16.9 billion in the fourth quarter, following decreases of \$139.2 billion in the third quarter and \$160.2 billion in the second.

Real final sales of domestic product -- GDP less change in private inventories -- increased 1.9 percent in the fourth quarter, compared with an increase of 1.5 percent in the third.

### **Gross domestic purchases**

Real gross domestic purchases -- purchases by U.S. residents of goods and services wherever produced -- increased 5.5 percent in the fourth quarter, compared with an increase of 3.0 percent in the third.

### **Current-dollar GDP**

Current-dollar GDP -- the market value of the nation's output of goods and services -- increased 6.3 percent, or \$219.6 billion, in the fourth quarter to a level of \$14,461.7 billion. In the third quarter, current-dollar GDP increased 2.6 percent, or \$90.9 billion.

## Revisions

The second estimate of the fourth-quarter increase in real GDP is 0.2 percentage point, or \$6.1 billion, higher than the advance estimate issued last month, primarily reflected upward revisions to private inventory investment, to exports, and to nonresidential fixed investment that were partly offset by an upward revision to imports and downward revisions to PCE and to state and local government spending.

	Advance (Percent change from preceding quarter)	Second
Real GDP.....	5.7	5.9
Current-dollar GDP.....	6.4	6.3
Gross domestic purchases price index...	2.1	1.9

## 2009 GDP

Real GDP decreased 2.4 percent in 2009 (that is, from the 2008 annual level to the 2009 annual level), in contrast to an increase of 0.4 percent in 2008.

The decrease in real GDP in 2009 primarily reflected negative contributions from nonresidential fixed investment, exports, private inventory investment, residential fixed investment, and personal consumption expenditures (PCE), that were partly offset by a positive contribution from federal government spending. Imports, which are a subtraction in the calculation of GDP, decreased.

The downturn in real GDP primarily reflected downturns in nonresidential fixed investment and in exports and a larger decrease in private inventory investment that were partly offset by a larger decrease in imports and a smaller decrease in residential fixed investment.

The price index for gross domestic purchases was unchanged in 2009, compared with an increase of 3.2 percent in 2008.

Current-dollar GDP decreased 1.3 percent, or \$183.2 billion, in 2009. Current-dollar GDP increased 2.6 percent, or \$363.8 billion, in 2008.

During 2009 (that is, measured from the fourth quarter of 2008 to the fourth quarter 2009), real GDP increased 0.1 percent. Real GDP decreased 1.9 percent during 2008. The price index for gross domestic purchases increased 0.6 percent during 2009, compared with an increase of 1.9 percent during 2008.

<sup>r</sup> Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the third quarter of 2009.

1. Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, taxes on production and imports less subsidies, contributions for government social insurance, net interest and miscellaneous payments, business current transfer payments (net), current surplus of government enterprises, and wage accrals less disbursements, plus personal income receipts on assets, and personal current transfer receipts.

2. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

<sup>r</sup> Revised.

1. For some components of final sales of computers, includes computer parts.

2. Farm output less intermediate goods and services purchased.

3. Consists of GDP less gross value added of farm, of households and institutions, and of general government.

4. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

5. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

See "Explanatory Note" at the end of the tables.

### **Explanatory Note: NIPA Measures of Quantities and Prices**

Current-dollar GDP is a measure of the market value of goods, services, and structures produced in the economy in a particular period. Changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year -- at present, the year 2005 -- equal to 100.

Annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent years. (Quarterly changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent quarters; quarterly indexes are adjusted for consistency to the annual indexes before percent changes are calculated.) For example, the 2007-08 annual percent change in real GDP uses prices for 2007 and 2008 as weights, and the 2007-08 annual percent change in GDP prices uses quantities for 2007 and 2008 as weights. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. Percent changes in Fisher indexes are not affected by the choice of reference year. (BEA also publishes a measure of the price level known as the implicit price deflator (IPD), which is calculated as the ratio of the current-dollar value to the corresponding chained-dollar value, multiplied by 100. The values of the IPD are very close to the values of the corresponding "chain-type" price index.)

Index numbers of quantity and price indexes for GDP and its major components are presented in this release in tables 5 and 6. Percent changes from the preceding period are presented in tables 1, 4, 7, 8, and appendix table A. Contributions by major components to the percent change in real GDP are presented in table 2.

Measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates, which are presented in table 3, are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 (= \$100 x 110 / 100). Percent changes calculated from chained-dollar estimates and from chain-type quantity indexes are the same; any differences will be small and due to rounding.

Chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate). This is because the relative prices used as weights for any period other than the reference year differ from those of the reference year. A measure of the extent of such differences is provided by a "residual" line, which indicates the difference between GDP (or other major aggregate) and the sum of the most detailed components in the table. For periods close to the reference year, when there usually has not been much change in the relative prices that are used as weights, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. Thus, the contributions to percent change shown in table 2 provide a better measure of the composition of GDP growth. In particular, for components for which relative prices are changing rapidly, calculation of contributions using chained-dollar estimates may be misleading even just a few years from the reference year.
