## **THE BUREAU OF ECONOMIC ANALYSIS (BEA) RELEASES 2014 ESTIMATES OF GROSS DOMESTIC PRODUCT FOR THE COMMONWEALTH OF THE NORTHERN MARIANA ISLANDS**

CAPITOL HILL, SAIPAN (February 29, 2016) -- Today, the Bureau of Economic Analysis (BEA) is releasing estimates of gross domestic product (GDP) for the Commonwealth of the Northern Mariana Islands (CNMI) for 2014, in addition to estimates of GDP by industry and compensation by industry for 2013.<sup>1</sup> These estimates were developed under the Statistical Improvement Program funded by the Office of Insular Affairs (OIA) of the U.S. Department of the Interior.

This release also includes the results of the first comprehensive revision of the territorial economic accounts. Revised estimates of GDP, GDP by industry, and compensation by industry are presented, extending back to 2002.

### **Gross Domestic Product for 2014**

The economy of the CNMI grew in 2014, for the third consecutive year. The estimates of GDP for the CNMI show that real GDP -- GDP adjusted to remove price changes -- increased 3.0 percent in 2014 (see Table 1.3). For comparison, real GDP for the U.S. (excluding the territories) increased 2.4 percent in 2014.

The growth in the CNMI economy reflected increases in private fixed investment, in consumer spending, and in exports of services (see Table 1.4).<sup>2</sup> These increases were partly offset by an increase in imports of goods and services, which is a subtraction item in the calculation of GDP.

Private fixed investment was the largest contributor to economic growth in 2014, increasing over 50 percent. This increase reflected growth in business purchases of equipment and in private sector construction activity.

Consumer spending increased 9.1 percent, reflecting widespread growth in household purchases of goods and services, including a continued increase in purchases of motor vehicles.

Exports of services, which consists mostly of spending by tourists, increased 2.6 percent in 2014. The growth in tourism spending reflected an increase in visitor arrivals to the CNMI.

<sup>1</sup> These estimates are based on limited source data and are subject to revision.

<sup>2</sup> In this news release, "consumer spending" refers to "personal consumption expenditures."

### **Gross Domestic Product by Industry and Compensation by Industry for 2013**

The estimates of GDP by industry for the CNMI show that the private sector and the government sector both increased in 2013 (see Table 2.4). The increase in the private sector reflected increases in the accommodations and amusement sector and in the distributive services sector. The growth in the government sector reflected an increase in territorial government compensation.

The compensation by industry estimates, which are measured in current dollars, show trends in compensation for major industries (see Table 2.6). Total compensation increased in 2013; the largest contributor to the increase was the accommodations and amusement sector.

The accompanying tables present estimates for GDP and its major components, GDP by industry, and compensation by industry. Also included in this release are estimates for the major components of gross domestic income.

### **Revisions to GDP**

With the comprehensive revision, estimates for 2002 to 2013 have been revised in order to incorporate improvements to source data, including:

- newly available and/or revised source data provided by the CNMI government,
- results from BEA's latest revisions to the national accounts, and
- information from the 2012 Economic Census of Island Areas, which provides the most thorough and detailed information on the structure of the CNMI economy.

The 2012 Economic Census of Island Areas included, for the first time, information for the CNMI on businesses' capital expenditures. This resulted in improved estimates of private fixed investment that replaced indirect measures based on imports of capital goods. The revised estimates are larger than the indirect measures; for example, in 2012, private fixed investment previously represented less than 4 percent of GDP; in the revised estimates, private fixed investment represents over 10 percent of GDP.

The revised estimates show a similar pattern of economic growth as the previously published estimates (see Chart 1).

From 2002 to 2013, real GDP decreased at an average annual rate of 5.7 percent, compared with a decrease of 6.0 percent in the previously published estimates.

**Future directions**

Moving forward, an agreement between OIA and BEA will extend and improve the estimates of GDP for the CNMI. The information provided by the CNMI government will continue to be critical to the successful production of these estimates.

BEA currently plans to release GDP estimates for 2015 in the summer of 2016. GDP by industry and compensation by industry estimates for 2014 will also be released at the same time.

BEA's national, international, regional, and industry statistics; the *Survey of Current Business*; and BEA news releases are available without charge on BEA's Web site at [www.bea.gov](http://www.bea.gov). By visiting the site, you can also subscribe to receive free e-mail summaries of BEA releases and announcements.
