

News Release

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EST, FRIDAY, DECEMBER 1, 2017

BEA 17-64

Technical:	Christina Hovland (BEA)	(301) 278-9076	territories@bea.gov
Media:	Jeannine Aversa (BEA)	(301) 278-9003	Jeannine.Aversa@bea.gov
	Tanya Harris Joshua (OIA)	(202) 208-6008	Tanya_Joshua@ios.doi.gov

GDP FOR THE U.S. VIRGIN ISLANDS INCREASES IN 2016

Today, the Bureau of Economic Analysis (BEA) is releasing estimates of gross domestic product (GDP) for the U.S. Virgin Islands (USVI) for 2016, in addition to estimates of GDP by industry and compensation by industry for 2015.¹ These estimates were developed under the Statistical Improvement Program funded by the Office of Insular Affairs (OIA) of the U.S. Department of the Interior.

Revised estimates of GDP for 2013 to 2015, as well as revised estimates of GDP by industry and compensation by industry for 2013 and 2014, are presented in this release.

Gross Domestic Product for 2016

The estimates of GDP for the USVI show that real GDP—GDP adjusted to remove price changes—increased 0.9 percent in 2016 after increasing 0.3 percent in 2015 (see Table 1.3). For comparison, real GDP for the United States (excluding the territories) increased 1.5 percent in 2016 after increasing 2.9 percent in 2015.

¹ These estimates are based on limited source data and are subject to revision.

The growth in the USVI economy primarily reflected increases in inventory investment and exports of goods (see Table 1.4). These increases were partly offset by an increase in imports of goods, which is a subtraction item in the calculation of GDP.

Petroleum product and crude oil transactions accounted for the majority of the growth in inventory investment and in exports and imports of goods, reflecting the reopening of an existing oil storage terminal on St. Croix. A new operator took ownership of the facility previously owned by Hovensa and, in 2016, began receiving shipments of petroleum.

Gross Domestic Product by Industry and Compensation by Industry for 2015

The estimates of GDP by industry for the USVI show that the government sector expanded in 2015, reflecting increases in compensation of territorial and federal government employees (see Table 2.4). The private sector contracted, reflecting a decline in goods-producing industries, including construction.

The compensation by industry estimates, which are measured in current dollars, show trends in compensation for major industries (see Table 2.6). Total compensation increased in 2015, reflecting increases in government and in the accommodation and food services industries.

The accompanying tables present estimates for GDP and its major components, GDP by industry, and compensation by industry. Also included in this release are estimates for the major components of gross domestic income.

Revisions to GDP

Estimates for 2013 to 2015 that were released on December 14, 2016 have been revised in order to incorporate improvements to source data, including:

- newly available data for territorial government spending from government financial statements and
- revised gross business receipts data provided by the USVI government.

The revised estimates show a similar pattern of inflation-adjusted growth as the previously published estimates (see Table 1.7).

Future directions

Moving forward, an agreement between OIA and BEA will extend and improve the estimates of GDP for the USVI. The information provided by the USVI government will continue to be critical to the successful production of these estimates.

BEA currently plans to release GDP estimates for 2017 beginning in the summer of 2018. GDP by industry and compensation by industry estimates for 2016 will also be released at the same time.

Additional Information

Resources

- Stay informed about BEA developments by reading the BEA [blog](#), signing up for BEA's [email subscription service](#), or following BEA on Twitter [@BEA_News](#).
- Historical time series for these estimates can be accessed at BEA's [Gross Domestic Product \(GDP\) for the U.S. Territories](#).
- Access BEA data by registering for BEA's Data [Application Programming Interface \(API\)](#).

Definitions

Gross domestic product (GDP) is the value of the goods and services produced by the U.S. Virgin Islands (USVI) economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, private fixed investment, change in private inventories, net exports of goods and services, and government consumption expenditures and gross investment.

Personal consumption expenditures (PCE), also referred to as “consumer spending,” measures the goods and services purchased by “persons”—that is, by households and by nonprofit institutions serving households (NPISHs)—who are resident in the USVI.

Private fixed investment (PFI) measures spending by private businesses, nonprofit institutions, and households on fixed assets in the USVI economy. Fixed assets consist of structures, equipment, and software that are used in the production of goods and services.

Change in private inventories (CPII), or “inventory investment,” is a measure of the value of the change in the physical volume of the inventories—additions less withdrawals—that businesses maintain to support their production and distribution activities.

Net exports of goods and services is the difference between exports of goods and services and imports of

goods and services. Exports measures the portion of total USVI production of goods and services that is provided to the rest of the world. Imports measures the portion of total USVI expenditures that is accounted for by goods and services provided by the rest of the world.

Government consumption expenditures and gross investment, or “government spending,” measures the portion of GDP that is accounted for by the government sector. Government consumption expenditures consists of spending by government to produce and provide services to the public. Gross investment consists of spending by government for fixed assets that directly benefit the public or that assist government agencies in their production activities.

Gross domestic income (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal.

Current-dollar estimates are valued in the prices of the period when the transactions occurred—that is, at “market value.” Also referred to as “nominal estimates” or as “current-price estimates.”

Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

Statistical Conventions

Quantities and prices. Quantities, or “real” volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2009). Quantity and price indexes are calculated using a Fisher chain-weighted formula that incorporates weights from two adjacent years. “Real” dollar series are calculated by multiplying the quantity index by the current-dollar value in the reference year (2009) and then dividing by 100.

Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year.
