

News Release

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EST, TUESDAY, FEBRUARY 26, 2019

BEA 19-04

Technical: Todd Siebeneck (301) 278-9705 gdpbystate@bea.gov
 Catherine Wang (301) 278-9670
 Media: Jeannine Aversa (301) 278-9003 Jeannine.aversa@bea.gov

Gross Domestic Product by State, Third Quarter 2018

Washington Had the Fastest Growth in the Third Quarter

Real gross domestic product (GDP) increased in 49 states and the District of Columbia in the third quarter of 2018, according to statistics released today by the U.S. Bureau of Economic Analysis. The percent change in real GDP in the third quarter ranged from 5.8 percent in Washington to 0.0 percent in West Virginia (table 1).

U.S. Bureau of Economic Analysis

Wholesale trade, information services, finance and insurance, and retail trade were the leading contributors to the increase in real GDP nationally (table 2). Information services and retail trade were the leading contributors to the increase in real GDP in Washington, the fastest growing state.

Other highlights

- Nationally, wholesale trade, information services, finance and insurance, and retail trade increased 7.4 percent, 7.6 percent, 5.5 percent, and 6.3 percent, respectively ([GDP by Industry table 1](#)). Wholesale trade contributed to growth in 49 states, while information services, finance and insurance, and retail trade contributed to growth in all 50 states and the District of Columbia.
- Finance and insurance was the leading contributor to growth in Utah—the second fastest growing state.
- Information services was the leading contributor to growth in Arizona—the third fastest growing state.
- For the nation, real GDP for mining was virtually unchanged from the second quarter. This industry subtracted from growth in Wyoming, Alaska, and West Virginia—the three slowest growing states.

Next release: May 1, 2019 at 8:30 A.M. EDT
Gross Domestic Product by State, Fourth Quarter 2018 and Annual 2018 (preliminary)

Additional Information

Resources

- Stay informed about BEA developments by reading the BEA [blog](#), signing up for BEA's [email subscription service](#), or following BEA on Twitter [@BEA_News](#).
- Historical time series for these estimates can be accessed in BEA's [Interactive Data Application](#).
- Access BEA data by registering for BEA's Data [Application Programming Interface](#) (API).
- For more on BEA's statistics, see our monthly online journal, the [Survey of Current Business](#).
- BEA's [news release schedule](#).

Definitions

Gross domestic product (GDP) by state is the market value of goods and services produced by the labor and property located in a state. GDP by state is the state counterpart of the Nation's GDP, the Bureau's featured and most comprehensive measure of U.S. economic activity.

Current-dollar statistics are valued in the prices of the period when the transactions occurred—that is, at “market value.” Also referred to as “nominal GDP” or “current-price GDP.”

Real values are inflation-adjusted statistics—that is, these exclude the effects of price changes.

Contributions to growth are an industry's contribution to the state's overall percent change in real GDP. The contributions are additive and can be summed to the state's overall percent change.

Statistical conventions

Seasonal adjustment and annual rates. Quarterly values are expressed at seasonally-adjusted annual rates (SAAR).

For details, see the FAQ “[Why does BEA publish estimates at annual rates?](#)”

Quantities and prices. Quantities, or “real” measures, are expressed as index numbers with a specified reference year equal to 100 (currently 2009). Quantity indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). “Real” dollar series are calculated by multiplying the published quantity index by the current dollar value in the reference year (2009) and then dividing by 100. Percent changes calculated from chained-dollar levels and quantity indexes are conceptually the same; any differences are due to rounding.

Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year.

Chained-dollar values of GDP by state are derived by applying national chain-type price indexes to the current dollar values of GDP by state for the 21 NAICS-based industry sectors. The chain-type index formula that is used in the national accounts is then used to calculate the values of total real GDP by state and real GDP by state at more aggregated industry levels. Real GDP by state may reflect a substantial volume of output that is sold to other states and countries. To the extent that a state's output is produced and sold in national markets at relatively uniform prices (or sold locally at national prices), real GDP by state captures the differences across states that reflect the relative differences in the mix of goods and services that the states produce. However, real GDP by state does not capture geographic differences in the prices of goods and services that are produced and sold locally.
