POPULATION, APRIL 1, 1970 756,510

Because the geographic area of the District of Columbia is quite small in comparison with that of the States, and because its future population probably depends upon the resolution of various problems more social than economic, no attempt has been made to project its population. Instead, the 1970 Census count has been held constant throughout the projection period. Earnings of persons working in the District and total personal income of the constant resident population are projected for the District of Columbia in the same manner as for the States.
