## Preface

This bulletin, *Wholesale Prices and Price Indexes, 1961*, brings together statistical data on primary market prices published by the Bureau of Labor Statistics for 1961. Indexes for all commodities, major groups, subgroups, product classes, special commodity groupings, and individual items, and prices for selected individual commodities are presented. Included are brief technical descriptions of the indexes, specifications for items priced, and a short description of the reweighting of the index that occurred in 1961.

The bulletin was prepared by Edward J. Kazanowski, under the supervision of Lloyd E. Wigren, in the Bureau's Division of Industrial Prices and Price Indexes, under the general direction of Arnold E. Chase, Assistant Commissioner for Prices and Living Conditions.

## Description of Wholesale Price Index 1/

### Purpose of Index

The Wholesale Price Index is designed to measure average changes in prices of all commodities sold in primary markets of the United States. It is often used as a general purpose index because of its broad scope, but it is made up of many special groupings or combinations which serve special purposes.

"Wholesale," as used in the title of the index, refers to sales in quantities, not to prices received by wholesalers, jobbers, or distributors. The index does not measure the price movements of retail transactions, transactions for services (except gas and electricity), construction, real estate, transportation, and securities. The sample of priced items does not include printing and publishing. However, values of physical products of these industries, such as books and magazines, were included in the weight universe for the first time in 1958 and were assigned to the pulp, paper, and allied products major group. The value of separate services performed for others was excluded. Prices of many of the raw and finished materials used in construction or in printing and publishing--lumber, bricks, structural steel, millwork, paper, etc.--are reflected in the index.

### Selection of Sample

The price universe for the index is comprised of all commodities produced or imported for sale in the United States. A sample of approximately 2,100 priced items is chosen to furnish an adequate measure of average price changes in the primary markets of the United States. Although a smaller sample would serve this purpose for an overall average, a larger sample is chosen to measure price changes for the many subgroupings of the index computed for special purposes.

The monthly Wholesale Price Index is based upon a sample of commodities, a sample of specifications for the commodities, and a sample of reporting sources for the specifications. These samples are selected after consultation with trade associations or with other representatives of industry. The commodities chosen generally include those with the largest shipment values as shown by the industrial censuses. Commodities with smaller shipment values are included if their price movements are sufficiently unlike those of other commodities.

The commodities selected are broadly defined in the Census of Manufactures. For example, "jelly, pure, grape" and "unalloyed copper plate, sheet, and strip" are designations of Census product codes (7-digit). To assure that the measure of price changes reflects only price movement without reflecting the influence of changes in quantity, quality, terms of delivery, or type of buyer, the items are defined specifically, such as:

"Jelly, pure, grape, 10 oz.-jar, 2 dozen jars to case, manufacturers' price, in lots of more than 25 cases, f.o.b. distribution point, per case;" and "copper sheet, cold-rolled, 16 oz., 24 inches x 96 inches, in lots of 5,000 lbs. and over, f.o.b. mill with freight allowed, per pound."

Thus, a sample of specifications is chosen to represent the commodity. The specification describes the characteristics of the commodity which define quality and other price-determining factors. The specifications chosen are usually those which describe the largest dollar volume of sales for the commodity.

1/ For a detailed description of the Wholesale Price Index, see Techniques of Preparing Major BLS Statistical Series (BLS Bulletin 1168, 1955), ch. 10.

The reporter sample is selected to give representation by size of company and by geographic distribution of the industry whenever necessary. In all cases, a minimum of three reporters is sought to permit publication of both prices and item indexes. Above this minimum, the number of reporters selected depends on the variability of pricing practices among individual firms, the number of firms producing the item, and the geographic distribution of the industry.

### Prices

The prices used in constructing the index are those which apply as nearly as possible to the first significant commercial transaction in the United States. Later transactions for the same item at other stages in the distribution cycle are not included. However, as raw materials are transformed into semifinished and finished goods, the resulting products are represented according to their importance in primary markets.

Most prices are obtained by mail from the manufacturer or other producer. A few are reported by trade associations, and some are taken from trade publications or from Government agencies which collect price quotations as part of their regular work. Table 5 of this volume shows the number of price series from each type of source as of January 1961.

Prices obtained from manufacturers or other producers are subject to the applicable trade and quantity discounts.<sup>2/</sup> Cash and seasonal discounts are deducted from the price when it is determined that most buyers avail themselves of the reduced prices. Excise taxes are excluded from the price. Closeout sales prices are normally not used. Free deals or allowances are reflected when possible in arriving at the net price to be included in the index calculation. Nominal prices are used when they are indicative of the market situation and no other price is available.

Before 1952, prices were monthly averages of 1-day-a-week prices. Thereafter, prices have been for the most part, those of the Tuesday of the week which includes the 15th of the month. For some commodities, however, another day may be selected as a more representative trading day, e.g., many farm products are priced as of Monday. Whenever possible, commodities are priced at the production point or at the central marketing point. Prices at delivery point are used only when it is the practice of the industry to quote prices on a delivered basis.

The index is intended to measure price changes between two periods of time, without reflecting the influence of changes in quality, quantity, terms of delivery, level of distribution, unit priced, or source of price. To accomplish this, the index calculations between two periods of time are based on the relative changes in prices of items with identical or nearly identical specifications.

### Substitutions of Items

Adherence to specification is especially difficult in a period when there are many changes in the goods marketed, with new items coming on the market and old items disappearing. Although this is particularly true of manufactured products, such as machinery, household appliances, and furniture, it is also true for nonmanufactured products. Changes may occur in the size of containers used in marketing fruit, for example, or in the market grades of livestock or the delivery terms for steel scrap.

---

<sup>2/</sup> For a description of the study of discounts used in the Wholesale Price Index, see Supplementary Inquiry on Wholesale Price Reports, in Wholesale Prices and Price Indexes, 1958 (BLS Bulletin 1257, 1959), p. 10.

When new commodities are introduced or when specifications of existing commodities are changed, every effort is made to insure that only price changes influence the index. The method of introducing an altered article or a change in selling terms is called a substitution. A substitution may be made by direct comparison or by linking. The objective of the linking procedure is to insure that the index will reflect only those changes which are due to actual price differences.<sup>3/</sup> Each time a change in specification occurs, the Bureau appraises the significance of the change to ascertain whether an actual price change occurred. If the specification change was minor and did not involve price-making factors, the substitution is effected by direct comparison. This means that any price change between the old and the new item is reflected in the index. When changes in specification are major and no real price change occurred or no information can be obtained relative to an actual price change, the substitution is made by linking and no change is reflected in the index. This means that the difference in price level is not permitted to affect the index level. Prices before and after the link, however, are not comparable and the decimal part of the code number is changed to show noncomparability. Linking is also used for the addition or deletion of items from the index, the addition or deletion of a company from a composite series, and a change in the source of price.

Some durable goods, such as automobiles, have periodic model changes. Price increases or decreases of these goods which result from the addition of features which formerly sold at extra cost, or from the deletion of equipment which was standard, are not reflected in the index. When the new model is reasonably comparable with the old, a direct comparison of prices is made and the difference is reflected in the index.

In the event production of a specified commodity is discontinued by a reporter, or its importance is reduced, the Bureau collects price data for a similar or a replacement item. This item may or may not vary considerably from the item replaced. Prices are obtained for the new and the discontinued series for a 1-month overlap period. An estimated overlap period price for linking is obtained for an item which is discontinued before its successor is available. The overlap price is used to measure the change between two successive periods for identical items.

### Collection of Data

The initial collection of data for each commodity specification from each reporting source is usually made by a personal visit to the reporting company. At that time, detailed information is obtained concerning the pricing structure of the industry and the commodity. This includes information such as:

1. Price-making factors for the commodity.
2. Distribution of sales to the various classes of buyers.
3. The type and amount of discounts or allowances to each class of buyer.

---

<sup>3/</sup> For example: The September price for a specification for a machinery item used in the calculation of the index was \$2,347.50. In October, a new model of the machine was introduced, priced at \$2,562.60. The new model had a more powerful motor and larger tires valued at \$186.20 more than the value of those used on the former model. For linking, the September price of the new model was estimated at \$2,533.70 (\$2,347.50 September price of former model plus \$186.20 increase in value of motor and tires). The price comparison between September and October was based on the estimated September price of \$2,533.70 and the reported October price of \$2,562.60. Thus a 1.1 percent price increase was reflected in the October index while the price change due to quality improvement (more powerful motor and larger tires) was not reflected.

4. The normal size of sale (quantity) to each class of buyer.
5. The terms of delivery to each class of buyer.
6. The usual method of effecting a price change.
7. Applicable excise tax.
8. The market area served for each commodity and for each class of buyer.
9. Type of packaging for each commodity.
10. Means of delivery for each commodity.

After regular reporting has been established, prices are collected by mail, usually on a monthly basis, by means of a shuttle schedule.

Reporting companies are asked to report all changes in list price, excise tax, discounts or allowances, description of the commodity specification, terms of delivery, and class of buyer. This is necessary in order to insure the reflection of all real price changes and to exclude the effect of a change in quality or a change in the selling terms.

#### Weight Universe

The Wholesale Price Index is calculated as a weighted average of price changes. The weights represent the total net selling value of commodities produced and processed in this country, including Alaska and Hawaii (or imported for consumption), and flowing into primary markets.<sup>4/</sup> The values are f.o.b. production point and are exclusive of excise taxes. The value of interplant transfers, military products, and goods sold at retail directly from producing establishments are also excluded.

The weight universe includes values from industries classified as manufacturing, agriculture, forestry, fishing, mining, quarrying, well operation, and gas and electricity public utilities. It includes values for goods competitive with those produced in the producing sector of the economy, such as waste and scrap materials. All systematic production is included but individually priced items, such as works of art, are excluded.

Civilian goods normally purchased by the Government are included, but production of military goods is excluded. Sales by the Government are excluded because the Wholesale Price Index refers to the private producing sector of the economy. However, Government sales of electric power are included because they are considered competitive with free market sales.

The import values include imports from foreign countries, Puerto Rico, and the Virgin Islands.

Each commodity price series in the index is representative of a class of prices and is assigned its own weight (the shipment value of the commodity) plus the weights of other commodities not directly priced but whose prices are known or assumed to move similarly.

---

<sup>4/</sup> The revised Wholesale Price Index, introduced in January 1952, but calculated retroactively to 1947, represented a changed concept in weighting structure. Priced items in the former index (1926=100) were weighted only by their own market value (quantity marketed times price).

The assignment of price movements for priced commodities to those for which quotations are not obtained is referred to as imputation. For some commodities--such as ships and some kinds of custom-made machinery--it is not possible to obtain direct measures of price movement. The weights for such items are imputed to other commodities or groups of commodities for which prices are available. Usually, this assignment is made to priced commodities which have a similar manufacturing process. In so doing, it is assumed that the movements of prices for these commodities are more accurately estimated on the basis of changes in prices of items to which their weights are assigned than they would be from changes in the all commodities index.

Weights based upon the industrial censuses for 1947 were used in the index from January 1947 through December 1954. Adjustments were made in January 1955 to align the major group weight totals with the 1952-53 average shipment values. Weights introduced in January 1958 were based on the industrial censuses for 1954. These weights were used through 1960.

#### January 1961 Revision of the Weighting Structure

Beginning in 1961, the weighting structure of the Wholesale Price Index reflected revisions made on the basis of the 1958 sales value of commodities. This revision is in accord with the Bureau of Labor Statistics policy of revising the Wholesale Price Index weights whenever comprehensive data from the industrial censuses become available. The next weight revision will follow the 1963 industrial censuses. The current weight revision leaves the Wholesale Price Index concept basically unchanged.

This new weighting structure incorporates statistics on net selling value of commodities in 1958 as they are reported in the U. S. Department of Commerce's 1958 Censuses of Manufactures and Minerals Industries and various other data furnished by the U. S. Department of Agriculture, the U. S. Department of the Interior's Bureau of Mines and Bureau of Fisheries, and other sources. (These new weights were introduced in December 1960. Because the Census data were not available for some time after the date of reference, the new weights were adjusted for price changes from 1958 to December 1960. The reweighted indexes after December were made comparable with indexes for earlier periods by linking.)

Interplant transfers (i.e., the transfer of goods among establishments owned by the same company), for the manufacturing industries, where significant, were separated from commercial shipments in the 1958 Census of Manufactures. For the minerals industries and for imported commodities, special adjustments were made to eliminate the value of interplant transfers from the value of shipments, using data obtained from a variety of sources in industry and Government.

For imports, the U.S. Department of Commerce usually reports market value in the country of export. These values were adjusted to "landed USA values" by adding estimated duty and transportation charges.

Value of duty was based upon tariff rates published by the U.S. Department of Commerce. Transportation costs were calculated from data on ocean freight rates compiled by the Federal Maritime Board from each exporting country to each of four United States entry districts. No attempt was made to estimate the cost of other means of transportation, nor was it feasible to estimate such other costs as insurance and loading and handling charges.

With the introduction of 1958 value data, the total value of shipments for Alaska and Hawaii was included as for the other 48 States. These new States were represented in earlier weight structures only by estimates of imports from the two.

In earlier weight structures, Census of Manufactures data for some commodities, such as dried fruits, hides and skins, and processed fish, were supplemented with estimates of shipments from nonmanufacturing establishments. In this revision, estimates were included for shipments of additional commodities produced in considerable volume outside the manufacturing sector, such as processed poultry, frozen fruits and vegetables, manufactured animal feeds, and converter shipments of finished fabrics. These added values are responsible for some of the increase in relative importance of their respective groups.<sup>5/</sup> Changes in the sample in each of the 15 major groups and further details on the effect of the weight revision are described in the section of this bulletin which relates to that specific commodity group.

In some groups, the weight revision reflects not only shifting market patterns, but also improvements in coverage of data used in development of the weights and changes in imputation patterns. The following discussion sets forth some of the more important reasons for the changes in weights:

#### Farm Products (group 01)

The large increase in farm output between 1954 and 1958 accounts for almost all the rise in relative importance in the farm products group, from 10.156 to 10.589 percent of the total weight of the Wholesale Price Index. The remainder is due to the addition to the 1958 weights of the value of baby chicks produced in commercial hatcheries.

#### Processed Foods (group 02)

Weights in the processed foods group were adjusted to include processed poultry and frozen fruits and vegetables produced in establishments not included in manufacturing industries.

#### Textile Products and Apparel (group 03)

The increase in relative importance of textile products was largely due to the inclusion of the value of converters' shipments of finished goods in the weight structure for the first time.

#### Chemicals and Allied Products (group 06)

Between 1954 and 1958, production of chemicals and allied products increased nearly 30 percent compared with the 8.9-percent increase in total industrial production. Increases in the value of shipments ranged from 35 percent to more than 50 percent for commodities such as soaps and synthetic detergents, photographic supplies, plastic materials, pharmaceuticals, and toilet preparations. As a result, the relative importance of the chemicals and allied products group has increased from 5.777 to 6.643 percent.

#### Pulp, Paper, and Allied Products (group 09)

The small drop in the relative importance of the pulp, paper, and allied products group which resulted from the introduction of 1958 weights was almost entirely due to further exclusions of interplant transfers and direct sales to consumers. In both the earlier revision and the current one, the value for Census Industry No. 27--Printing and Publishing--was adjusted to exclude interplant transfers and sales direct to household users. The exclusions from 1958 weights, however, were considerably larger than those for 1954 weights.

---

<sup>5/</sup> Refer to page 10 for more complete information concerning relative importance of the wholesale price index components.

### Metals and Metal Products (group 10)

The introduction of 1958 weights for metals and metal products caused a drop in relative importance. This decline came about mainly because production of iron and steel was lower in 1958 than in 1954 as a result of the greater impact of recessionary influences on output in 1958 than in the earlier year. In addition, production of fabricated metal products was only moderately above that for 1954, an increase considerably less than that for total industrial production.

### Machinery and Motive Products (group 11)

The machinery and motive products group experienced the greatest change in relative importance, falling from 19.654 to 17.573 percent of all commodities in the WPI.

As in the case of metals, this drop reflected in large part the effect of the especially sharp business recession in 1958 on the output of durable goods. Because of this influence, production of machinery and related products in 1958 was only 2.5 percent above that in 1954 whereas total industrial production was 8.9 percent higher. Many items, such as machine tools, fans and blowers, and motors and generators, actually decreased in volume produced. Production of nonelectrical machinery dropped 4.2 percent. Particularly large decreases in relative importance were shown for the electrical machinery and equipment subgroup and the metal-working machinery and equipment subgroup.

The motor vehicles subgroup dropped .588 percentage points in relative importance, more than 28 percent of the total decrease for the group. This decline was principally due to the low level of output for passenger cars in 1958, more than 12 percent below that of 1954 and well under output for all years since 1952. The decline in relative importance for the passenger car product class itself, within the subgroup, also reflected the withdrawal of imputed weights for parts and accessories and their assignment to a separate product class.

About .250 percentage points of the total decrease of 2.081 points in weight assignment of this group resulted from a change in imputation patterns. A sizable value from Census Industry No. 38--Instruments and Related Products, formerly assigned to the machinery group as a whole--was assigned elsewhere in the weight structure, mainly to the miscellaneous products group or distributed to the items in the 13 major groups other than farm products and processed foods. Also, the weight structure now excludes, for the first time, the values of rebuilt machinery and of railroad cars made in railroad car shops--the former being considered as repair work, and the latter as captive production and thus an interplant transfer.

### Miscellaneous Products (group 15)

The introduction of 1958 weights brought an increase in the relative importance of miscellaneous products, since the production of such items as toys, sporting goods, and phonograph records had risen at a higher rate than industrial output as a whole. In addition, the weight for manufactured animal feeds was increased by inclusion of prepared animal feeds produced in nonmanufacturing establishments.

### Other Commodity Groups

Changes in relative importance in the remaining major commodity groups were small, arising mainly from shifts in production and marketing patterns between 1954 and 1958. Large increases in gas and electricity sales raised the weight for the fuel and related products, and power group. In addition, declining output of lumber and various household appliances reduced the weight for the furniture and other household durables and for the lumber and wood products groups. Higher production of cement, clay products, and concrete and plaster products resulted in greater relative importance for the nonmetallic mineral products group. A less-than-average increase in volume of leather and leather products caused the hides, skins, leather and leather products group to decline despite the addition

to the weights of raw furs and of sheepskins sold for pulled wool. The drop in weight in the rubber and rubber products group resulted from a decline in the value of imports and from the exclusion of interplant transfers for crude natural rubber.

### Index Formula

The index is based on the formula: (1)  $R_i = \frac{\sum q_a P_i}{\sum q_a P_0}$  where the  $(p_0)$ 's are prices in the base period,  $(p_i)$ 's are prices in the current period, and the  $(q_a)$ 's are quantities of commodities implicit in the value data.

In practice, the index is calculated on a variation of this formula as a weighted average of price relatives for each item:

$$(2) R_i = R_{i-1} \frac{\sum q_a P_{i-1} \frac{P_i}{P_{i-1}}}{\sum q_a P_{i-1}}$$

where the  $(R_{i-1})$  is the index for the preceding period, the  $(p_{i-1})$ 's are prices in the preceding period, and the  $(q_a)$ 's and  $(p_i)$ 's are the same as in formula (1).

In each current calculation of the index, the effective weights which are applied to monthly price relatives are average values of transactions in 1958, adjusted for price change to the preceding period.

When substitute specifications are used in the index calculation, this formula is not a precise representation. The price relative  $p_i / p_{i-1}$  becomes  $p_i' / p_{i-1}'$ , where the  $p_i'$  and the  $p_{i-1}'$  are prices of the substitute in the current and preceding periods, respectively. That part of the price change due to the specification substitution is therefore not reflected in the index movement. When index weights are revised, the indicated calculation within the brackets

$$\left[ \frac{\sum q_a P_{i-1} \frac{P_i}{P_{i-1}}}{\sum q_a P_{i-1}} \right]$$

for the first calculation of the index after revision is based on the revised weight structure, while the index for the preceding period  $(R_{i-1})$  is the result of calculations before weight revision. The weight adjustment, therefore, is not reflected in the index movement except insofar as it affects future calculations.

## Publication and Correction Policy

### Publication of Prices and Indexes

The Wholesale Price Index data are published in four forms:

1. Monthly press releases and reports.
2. Annual or other periodic bulletins.
3. Tabulations of historical series.
4. Tables in the Monthly Labor Review.

The first publication of wholesale price data in the press releases and reports are considered preliminary and are so identified. This is necessary because individual reports are often not received in time to be included in the first calculation. Preliminary publication is limited to index numbers. Preliminary prices are not published. Final publication of monthly indexes and prices accompany the publication of preliminary indexes for the succeeding period. Annual average indexes for levels down to and including the product class and for special groupings are published, as final, in a monthly detailed report as soon as practicable after December final figures have become available. Annual average indexes for commodity items are also considered to be final at this time even though they are not published. Complete index and price data are published at a later time in a bulletin covering 1 or more years.

In January 1963, a new policy was initiated concerning the publication standards set for individual item indexes. When a cell drops to one reporter, that particular index is withheld from publication to avoid possible disclosure of information concerning an individual firm. The cell must be rebuilt to three reporters before index publication is resumed.

Monthly prices published by the Bureau are averages of prices obtained directly from reporting firms or from secondary sources, such as trade or Government publications. Monthly prices are not published: (1) When the average price is based on reports from fewer than three companies; (2) for seasonal commodities for those months in which they are not on the market; and (3) if such publication might disclose the activities of an individual firm.

Annual average prices for other-than-seasonal items are based on 10 or more monthly figures published for the same specification. Annual average indexes for other-than-seasonal items are published when 10 or more monthly indexes have been published. Annual average prices for seasonal items are published when prices have been published for more than three-fourths of the "in season" months. Annual average indexes for seasonal items are published when indexes have been published for more than one-half of the "in season" months.

New indexes for individual commodities or for commodity groupings are introduced only once a year--in the (final) January calculation. Until January 1963, the January of the year of introduction was used as the base period for an index. Since then, the base period has been the preceding December. When prices are obtained for earlier periods, item indexes are calculated and are available on request.

#### Comparability of Prices and Indexes

Noncomparability in the price series is shown in the code number by the addition of digits after a decimal (e.g., 01-31-01.01). Each successive break in the same series is numbered consecutively (e.g., 01-31-01.02, 01-31-01.03, etc.). Such prices are not comparable with prices quoted for earlier periods because there has been a break in the series resulting from a change in the reporter sample, a modification in the specification, or a change in the unit of quotation or the delivery terms. The price indexes for the individual commodities, however, are adjusted so that they are continuous and comparable, regardless of breaks in the series of prices.

Specifications. Specification changes during 1961 are shown for each major group in the appropriate section of this bulletin. The specifications represent the composite of the several reporter series included in the average price. Where a specification lists more than one class of buyer or more than one delivery term, the reporter series are not identical. One company's price may be to the jobber, f.o.b. plant; another company's price may be to the wholesaler, f.o.b. plant with freight allowance. The published specification is made broad enough to cover all of the series included in the average price.

A specification change not accompanied by a code change indicates that the change was of a minor nature and prices are comparable before and after the change. Sometimes the decimal part of a code number may be changed and no change in specification is indicated. In this case, a change has been made in source of the price by adding or dropping a reporter series; or the use of an additional discount, previously in effect but not used, has been initiated in the calculation of the index. Prices before and after the change are not comparable.

### Correcting Errors in Published Price Indexes and Prices

Sometimes an error in a reported price or in a calculation is found after the prices and indexes have been issued as final. Corrections of previously published prices and indexes are made under the following circumstances:

Corrections in Prices or Item Indexes. A correction of less than 1 percent in a price or in an item index is not published. An error of 1 percent or more in a price or in an item index is corrected and a corrected figure is published in the next subsequent release which normally carries the series affected. When corrections are made in prices, corresponding corrections are made in the item indexes.

Corrections in summary level indexes. A correction which would cause a change of not more than one-tenth of an index point in the index for any grouping is not published. Adjustment for such an error is made in calculating the current index for the month immediately following its discovery. A correction which would require a larger change in the index for any grouping is made, with appropriate explanation, in the release immediately following the discovery of the error.

An error of no more than one-tenth of an index point in the all-commodities index is not corrected, but adjustment for the error is made in the calculation of the current month's index. An error which affects the published all-commodities index by two-tenths or more of an index point is rare. If such an error does occur, the Bureau usually corrects the published index retroactively to the time when the error occurred but may make the required adjustment in calculating the current index number, depending upon the statistical or economic significance of the correction.

### Relative Importance of Wholesale Price Index Components

The relative importance of an item represents its basic value weight used in the index multiplied by the relative of price change between the weight date to a later date (December 1961, for example) and the result expressed as a percentage of the total for all commodities or for the major group.

Changes in relative importance of an item result from (1) weight revisions such as those of January 1958, and January 1961; (2) minor weight adjustments to take account of the addition of new items or the deletion of an item; and (3) different rates of price change among the various items. If there were no weight revisions or adjustments, and if the prices of all items changed at the same rate, their relative importance in the index would not change.

The relative importance figure for a commodity represents the value of the commodity itself plus the value of unpriced commodities assumed to have price movements similar to those of the priced item. Table A shows the relative importance of the major groups in December 1960 based on both 1954 and 1958 values, and in December 1961 on 1958 values. The December 1960 figures show relative importances both before (1954 values) and after (1958 values) the weight revision that occurred in January 1961. The figures for December 1961 show the changes in relative importance caused by price changes over the year. Information on the use of relative importance data is contained in Wholesale Prices and Price Indexes, 1954-56, (BLS Bulletin 1214, 1957).

Table 2A shows the relative importance of items in the WPI as of December 1960 on both the 1954 and 1958 weights and December 1961 on 1958 weights both before and after the introduction and deletion of items in January 1962.

**Description of Special Commodity Grouping Wholesale Price Indexes**

Special commodity grouping indexes are designed to meet special needs of index users. All of them are made by regrouping commodities included in the comprehensive Wholesale Price Index, and except for Construction Materials (formerly titled Building Materials) the weights, since the beginning of the indexes in 1947, have been those used in the Wholesale Price Index.

The composition of each index is described below. Code numbers refer to the Wholesale Price Index commodities or groupings of commodities. Detailed specifications for each of the items and their relative importance in the all-commodities index are published in the Wholesale Price Index annual bulletins.

Wholesale Price Indexes by Stage of Processing. This set of indexes formerly designated as Economic Sector Indexes, described in an earlier publication, 6/ includes all component series of the comprehensive Wholesale Price Index. Index numbers for 1961 appear in the summary section of this bulletin.

Wholesale Price Indexes by Durability of Product. This set of indexes described in an earlier publication, 7/ includes all component series of the comprehensive Wholesale Price Index. Index numbers for 1961 appear in the summary section of this bulletin.

Construction Materials Index. This index, formerly titled Building Materials, consists of a grouping of selected components of the comprehensive Wholesale Price Index. From 1947 through 1957, it is combined with special weights relating to the use of the included commodities in construction. Beginning in January 1958, the weighting structure was changed to conform to that of the comprehensive Wholesale Price Index. The composition of this index is described in an earlier publication. 8/

The special index for all foods (1947-49=100) has been extended back to 1926 by linking with the former index for foods; and the special index for construction materials has been extended back to 1926 by linking with the former index for building materials. The total steel mill products index has been extended back to 1939 by linking with the combined movement of the steel mill products items in the former index. The "links" were made by means of conversion factors based on the old and the new series as of January 1947. These data are available on request.

The special indexes are calculated by combining the codes listed after each group:

Commodity grouping	Composition of indexes	Bulletin section
All foods -----	Processed foods (code 02) Fresh and dried fruits and vegetables (code 01-1) Eggs (code 01-6)	2
All fish -----	Unprocessed fin fish (code 02-23) Fresh processed fish (code 02-24) Frozen processed fish (code 02-25) Canned fish (code 02-26)	2

<sup>1/</sup> The Wholesale Price Index was revised in January 1952, and calculated retroactively back to January 1947. The above index on the 1926 base was that published prior to this revision covering the years through 1951. For further details see Wholesale Prices and Price Indexes, 1957, BLS Bull. 1235, Summary Volume, pp 0-9.

<sup>2/</sup> Chemicals and Drugs before 1926. In 1940, the group Chemicals and Allied Products replaced the group Chemicals and Drugs. The revision which involved expansion of items included, and adjustment of weights, was made for annual indexes from 1926 and for monthly figures from 1933.

**Section 1. Farm Products**

**Description of Farm Products Group Index**

A new pattern of pricing white potatoes, according to regional origin, was instituted to provide a better indicator for potatoes actually traded in the markets priced. For each of the three markets selected for pricing--Chicago, New York, and Los Angeles--separate specifications were set up for the types most prevalent in that market. Thus, potatoes of both Western (01-13-65) and Midwestern (01-13-66) origin are priced at Chicago. Eastern (01-13-67) and Western (01-13-68) potatoes are priced at New York, but only Western potatoes (01-13-69) are priced at Los Angeles. Before this revision, prices of all varieties and types of Irish potatoes were averaged in each of four markets--Portland (Oreg.), Boston, Chicago, and New York. In the new sample, the Los Angeles market replaced the Portland market for west coast representation. The Boston market was discontinued because the price trend of white potatoes in that market closely follows that of the New York market. The series that were dropped are potatoes, white, Boston (01-13-61), potatoes, white, Chicago (01-13-62), potatoes, white, New York (01-13-63), and potatoes, white, Portland, Oregon (01-13-64). Cantaloupes were transferred from the fresh and dried vegetables product class to the fresh fruits product class, in accordance with the Department of Agriculture (USDA) classification in its series, "Cash receipts from farm marketings," which is the basis for Wholesale Price Index weights.

**1961 Weight Revision**

As a result of the weight revision, there was a small increase in the relative importance of this group in the WPI, reflecting primarily, the large increase in farm output between 1954 and 1958 and partly the introduction of a value for baby chicks produced in commercial hatcheries. The new weights for the baby chicks were imputed to the group and not to any particular subgroup or product class.

Basically, the weights used in Group 01 are derived from the USDA publication "Cash receipts from farm marketings, 1958." Other USDA publications were also used.

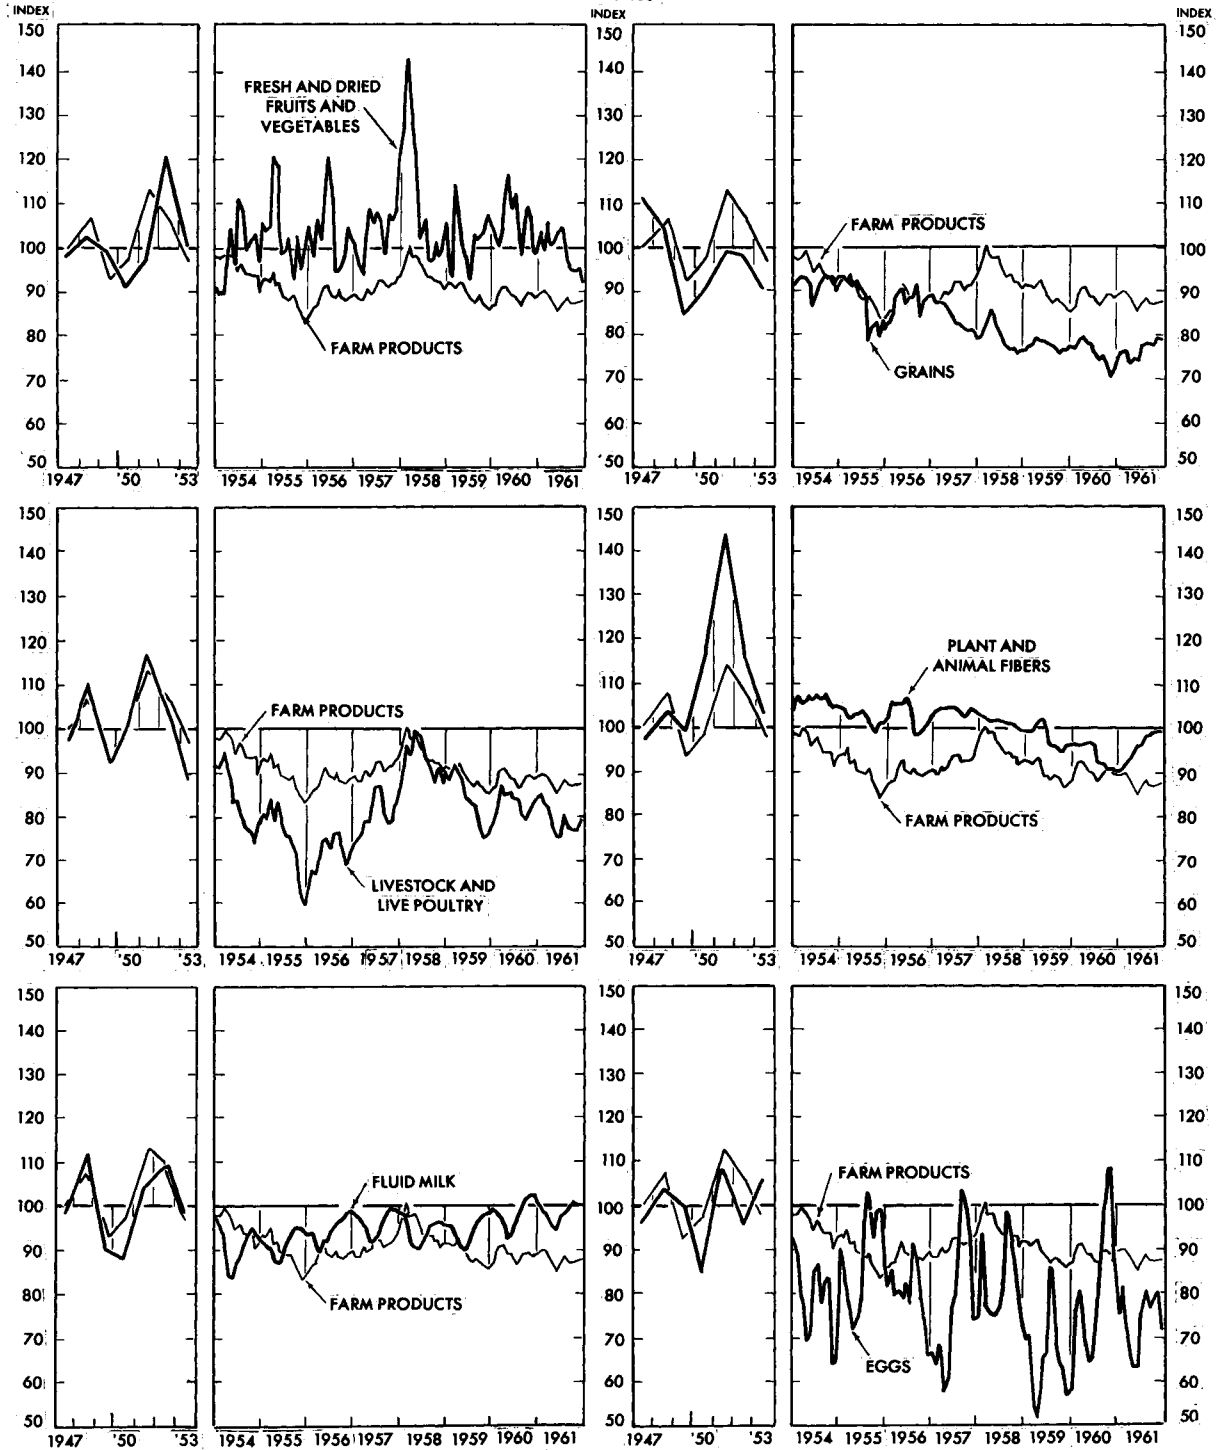

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
01	Farm products -----	104
01-1	Fresh and dried fruits and vegetables -----	30
01-2	Grains -----	8
01-3	Livestock and live poultry -----	22
01-4	Plant and animal fibers -----	17
01-5	Fluid milk -----	8
01-6	Eggs -----	4
01-7	Hay, hayseeds, and oilseeds -----	9
01-8	Other farm products -----	6

**Section 2. Processed Foods**

**Description of Processed Foods Group Index**

An additional specification for cucumber pickles (02-82-02) was introduced. Pricing of whitefish (at New York) (02-23-05) and beef and pork trimmings (02-21-51 and 02-21-61) was discontinued because of the small importance of these items.

**1961 Weight Revision**

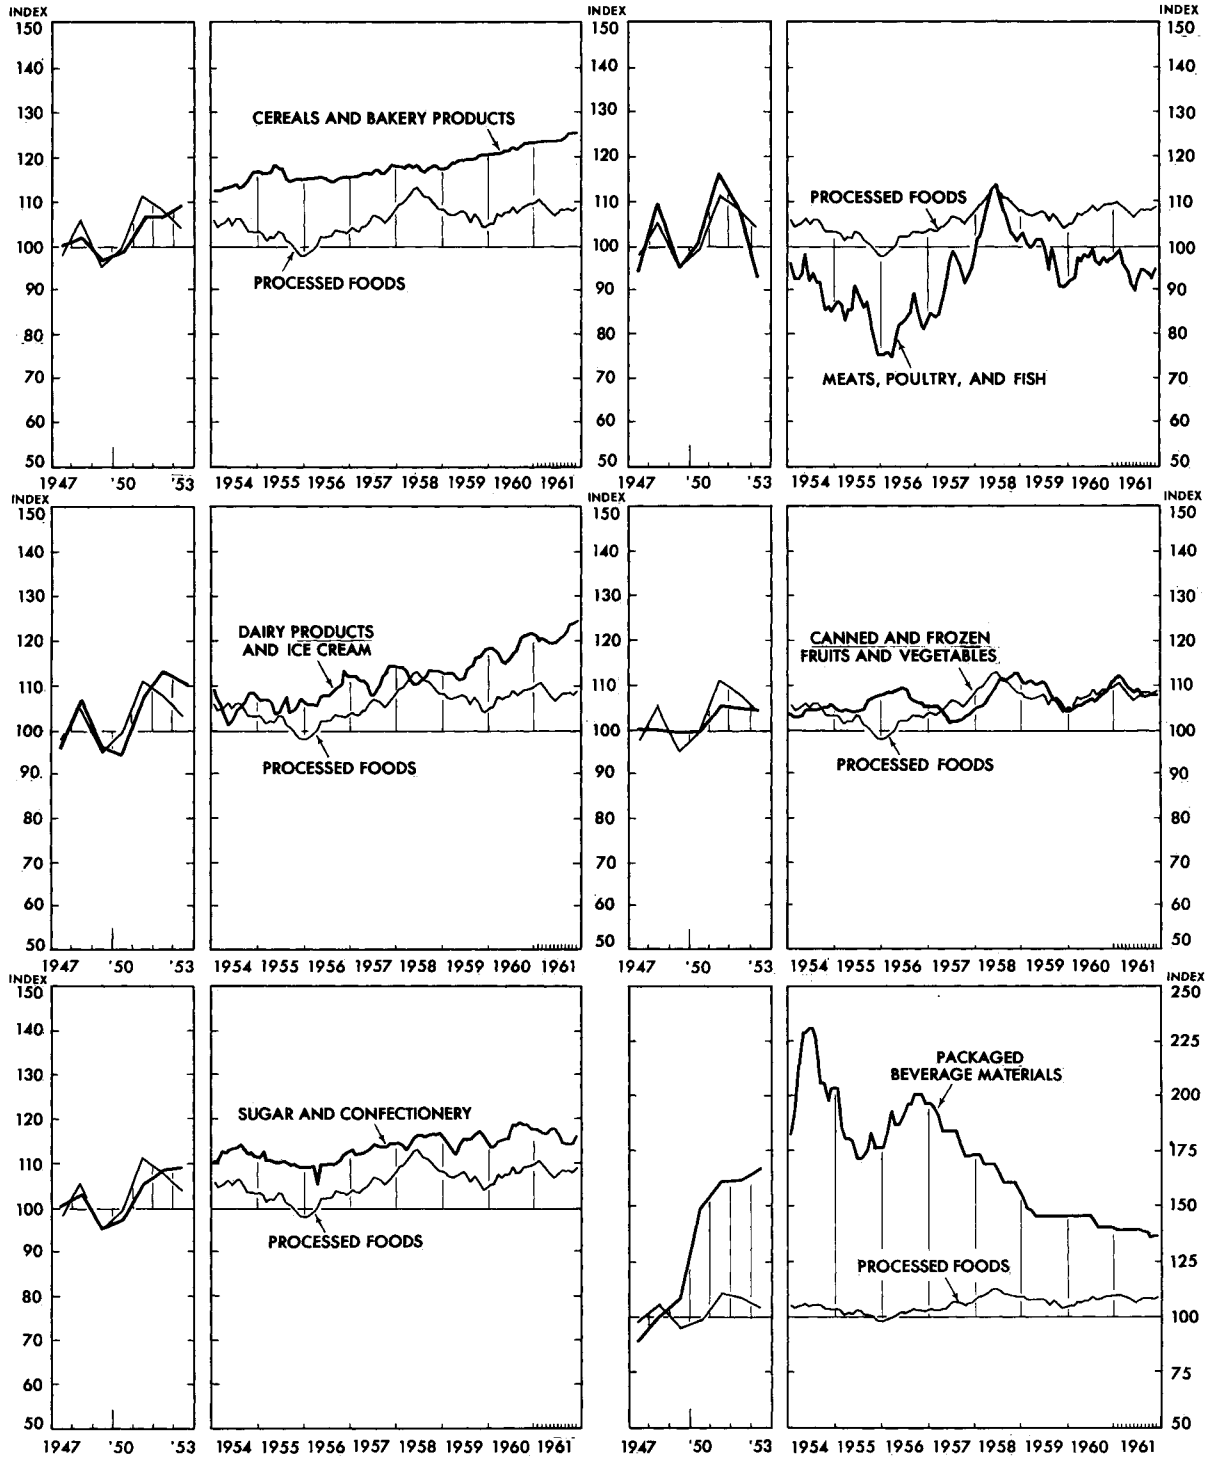

In the weight revision of January 1961, weights in this group were adjusted to include processed poultry and frozen fruits and vegetables produced in establishments not included in manufacturing industries. The weights for this group come, for the most part, from the 1958 Census of Manufactures Industry No. 20--Food and Kindred Products. This group also includes edible fats and oils classified in the Census of Manufactures Industry No. 28--Chemicals and Products. The Bureau of Fisheries of the U.S. Department of the Interior is the source of the value weights for fish.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
02	Processed foods -----	141
02-1	Cereal and bakery products -----	19
02-2	Meats, poultry, and fish -----	43
02-3	Dairy products and ice cream -----	15
02-4	Canned and frozen fruits and vegetables -----	24
02-5	Sugar and confectionery -----	8
02-6	Packaged beverage materials -----	5
02-71	Animal fats and oils -----	4
02-72	Crude vegetable oils -----	5
02-73	Refined vegetable oils -----	4
02-74	Vegetable oil end products -----	4
02-8	Other processed foods -----	10

**Section 3. Textile Products and Apparel**

**Description of Textile Products and Apparel Group Index**

An important change in this group was the regrouping of items to permit the introduction of two new subproduct class indexes for cotton broadwoven goods--finished goods and grey goods. Code changes necessitated by the regrouping of grey and finished goods are shown below.

Commodity	Old code	New code
Cotton broadwoven finished fabrics, except mill finished -----	--	03-12-1
Percalé, 80 by 80 -----	03-12-38	03-12-1-05
Percalé, 64 by 60 -----	03-12-39	03-12-1-07
Broadcloth, finished -----	03-12-54	03-12-1-09
Twill -----	03-12-55	03-12-1-10
Shirting -----	03-12-56	03-12-1-12
Broadcloth, wash-and-wear -----	03-12-58	03-12-1-13
Lawn, wash-and-wear -----	03-12-59	03-12-1-14
Corduroy -----	03-12-62	03-12-1-15
Cotton broadwoven grey fabrics -----	--	03-12-2
Sheeting, Class A -----	03-12-01	03-12-2-20
Sheeting, Class B, 3.75 yd./lb. -----	03-12-02	03-12-2-23
Sheeting, Class C -----	03-12-04	03-12-2-24
Osnaburg -----	03-12-06	03-12-2-25
Drill -----	03-12-11	03-12-2-27
Twill, 4 leaf -----	03-12-16	03-12-2-28

Three new items were introduced in January of 1961. They were sateen, combed, (03-12-60); dacron/cotton broadcloth (03-33-15); and brassiere, bandeaux, cotton (03-51-29).

A number of items were dropped. These were:

Title	Code	Title	Code
Sheeting, Class B, 3.25 yd./lb. -----	03-12-03	Sheet, type 140 -----	03-15-02
Bed sheeting, 64 by 64 ----	03-12-21	Blanket, 25 percent wool --	03-23-11
Bed sheeting, 68 by 70-76 -	03-12-22	Work trousers, men's covert	03-52-53
Pique -----	03-12-57	Overalls, men's bib -----	03-52-56
Chafar fabric -----	03-12-77	Union suits, boys' -----	03-55-03

1961 Weight Revision

The increase in relative importance of textile products was largely due to the inclusion for the first time of the estimated value of converters' shipments of finished goods. The value of these shipments was allocated to the appropriate items in the cotton broadwoven finished fabrics subproduct class (03-12-2) and in the manmade fiber broadwoven goods product class (03-33).

For the most part, the weights for this group have been derived from the Census of Manufactures Industry No. 22--Textile Mill Products and Industry and No. 23--Apparel and Related Products. Weights for manmade fibers come from Industry Group 28--Chemicals and Products.

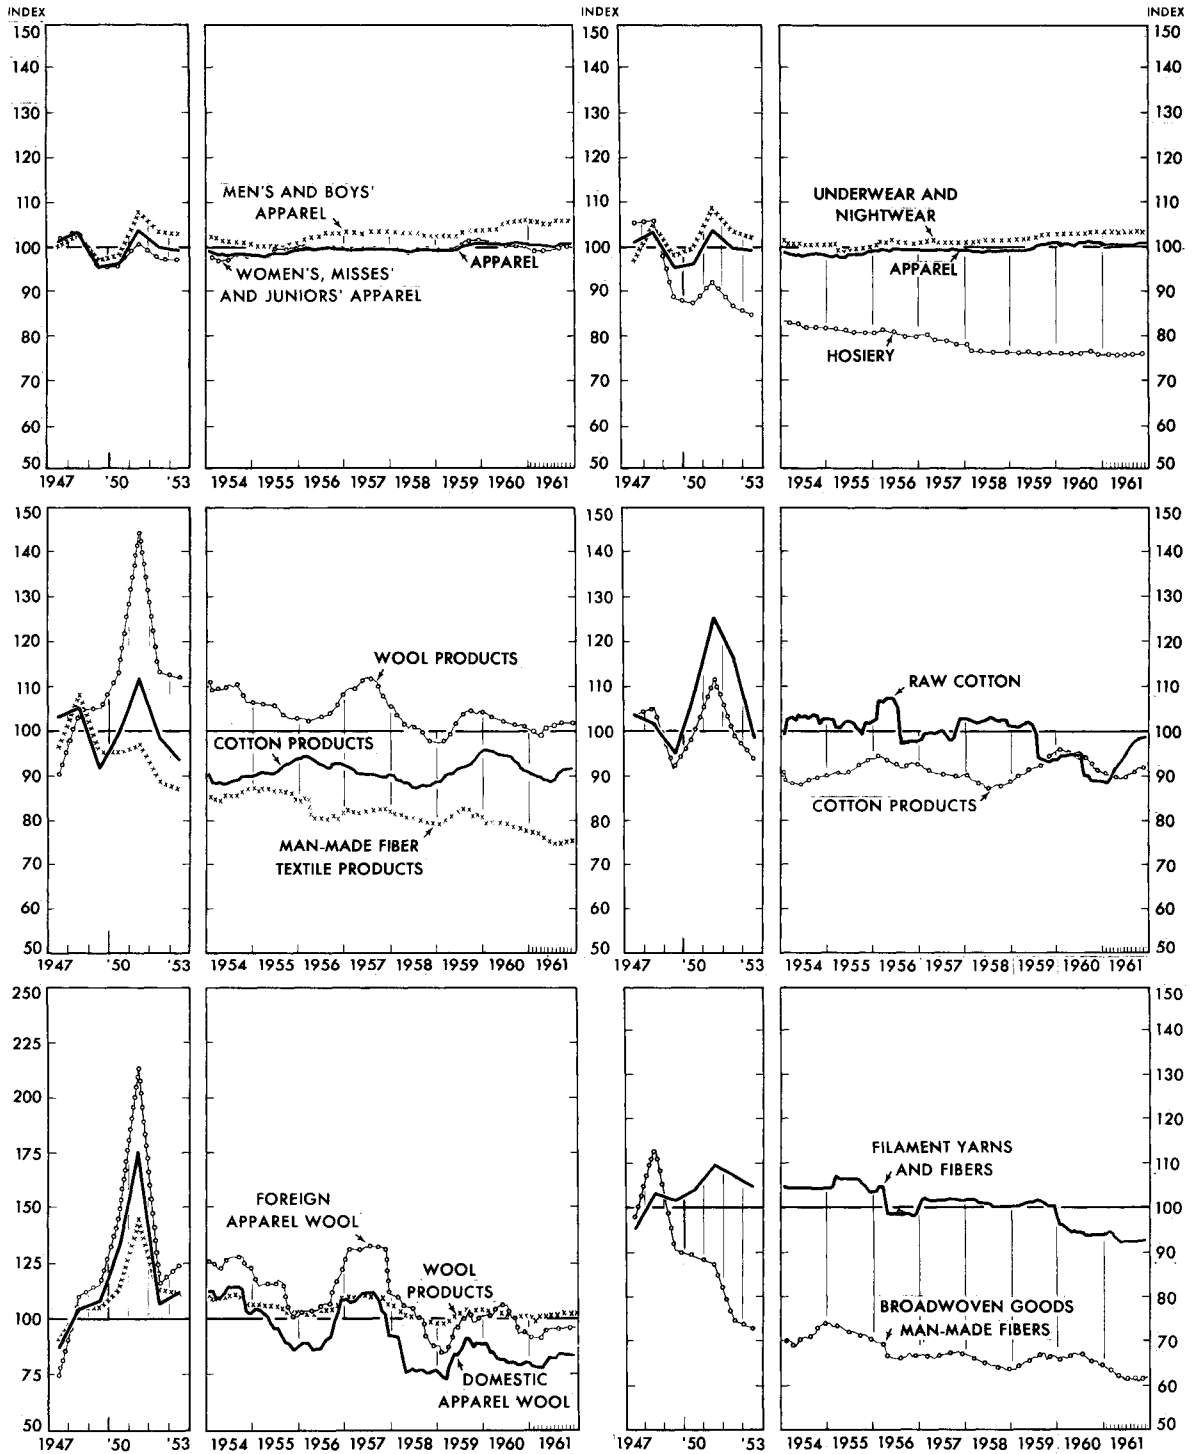

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
03	Textile products and apparel -----	190
03-1	Cotton products -----	56
03-2	Wool products -----	18
03-3	Manmade fiber textile products -----	30
03-4	Silk products -----	2
03-5	Apparel -----	78
03-6	Other textile products -----	6
03-7	Plastic products <u>1</u> /-----	0

1/ Price movement estimated on basis of price for plastic materials.

Section 4. Hides, Skins, Leather, and Leather Products

Description of Hides, Skins, Leather, and Leather Products Group Index

An additional item for children's shoes (04-33-12) was introduced to take into account the increased importance of cement construction shoes. Pricing of women's Goodyear-welt calf pumps (04-32-04) was discontinued because of decreasing production.

In March 1961, men's two-suitier luggage (04-41-01) was discontinued and its weight was assigned to women's weekend case, non-leather (04-41-11).

1961 Weight Revision

A less-than-average increase in the production of leather and leather products, compared with total industrial production, caused this group to decline in relative importance from 1954 to 1958, despite the addition to the weights of raw furs and of sheepskins sold for pulled wool. For the most part, weights for this group are derived from Industry No. 31--Leather and Leather Goods--of the 1958 Census of Manufactures. The values for hides and skins are based partly on Industry No. 20--Food and Kindred Products--and partly on commercial slaughter data from the U.S. Department of Agriculture.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
04	Hides, skins, leather, and leather products -----	48
04-1	Hides and skins -----	12
04-2	Leather -----	11
04-3	Footwear -----	17
04-4	Other leather products -----	8

**Section 5. Fuels and Related Products, and Power**

**Description of Fuels and Related Products and Power Group Index**

The title of the major group (formerly titled Fuel, Power, and Lighting Materials) was changed to Fuels and Related Products, and Power. The titles of four-product classes were also changed. (See below.) These title changes did not destroy the continuity of the series.

In addition, the subgroup for petroleum and products (former code 05-5) was replaced by two new subgroups: crude petroleum and natural gasoline (05-6) and petroleum products refined (05-7). The former is a combination of the product classes for these commodities, and the latter is a continuation of the former special index for refined petroleum products. Code changes and title changes resulting from this reclassification are shown below:

As a result of this reclassification, a number of items were introduced into the index in January 1961. Two of them were in the product class for crude petroleum (05-61). They were Illinois basin, sweet (05-61-01) and Wyoming, sour (05-61-31). In the gasoline product class, one item was introduced--Chicago, 92 oct., reg. (05-71-05). In the light distillate product class (05-72), Chicago, range or No. 1 fuel oil (05-72-05) was introduced; in the middle distillate product class (05-73), Chicago, No. 2 (05-73-05) was introduced; and in the product class for residual fuels (05-74), Chicago, No. 6 low sulphur (05-74-05) was introduced.

Three items were discontinued because of their decreasing importance. They were coke, Swedeland, Pennsylvania (05-21-01); coke, New England (05-21-05); and crude petroleum, Bradford, Pennsylvania (05-56-01). A new regional index for Midwest petroleum products was also introduced into the Refined Petroleum Products special index.

#### 1961 Weight Revision

Large increases in the sale of gas and electricity were responsible for the increase in weights for this group from 1954 to 1958. The value data for coke and refined petroleum products are chiefly derived from commercial shipments for these products as reported in the Census of Manufactures Industry No. 29--Petroleum and Coal Products. Data on electricity have been primarily derived from the Federal Power Commission; gas figures were derived from data of the American Gas Association, the Federal Power Commission, and the Bureau of Mines.

The Bureau of Mines and the Census of Mineral Industries are the sources of data for the other fuel and lighting materials.

The number of items by subgroups as of January 1961 was as follows:

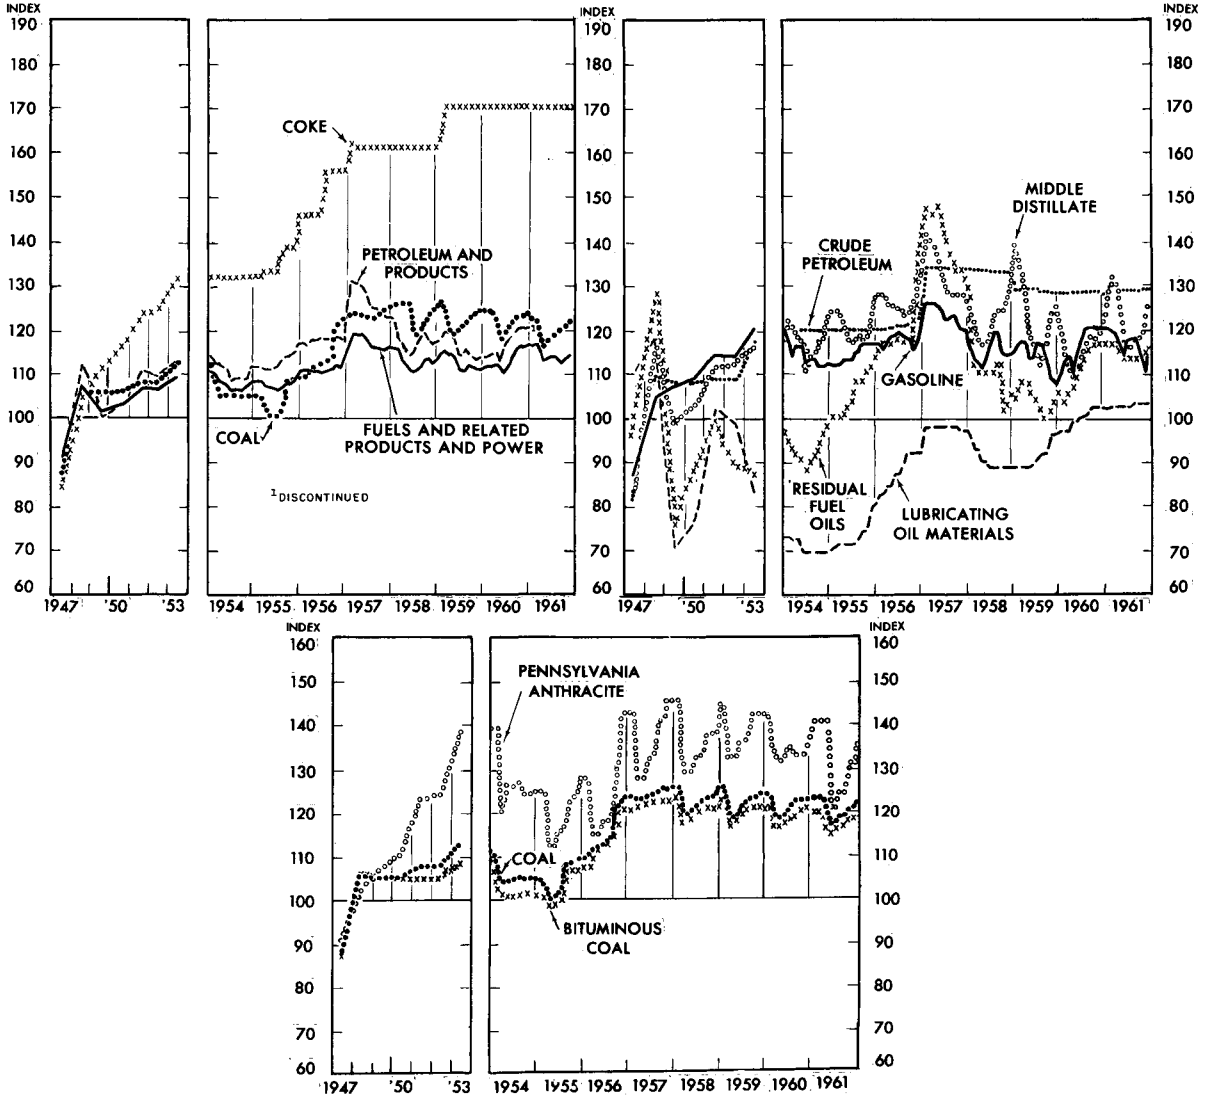

Code	Grouping	Number of items
05	Fuels and related products and power -----	53
05-1	Coal -----	9
05-2	Coke -----	6
05-3	Gas fuels -----	2
05-4	Electric power -----	2
05-6	Crude petroleum and natural gasoline -----	7
05-7	Petroleum products, refined -----	27

Section 6. Chemicals and Allied Products

Description of Chemicals and Allied Products Group Index

The item samples for pharmaceutical preparations and photographic materials were revised in line with changes in their production and sales patterns.

In the pharmaceutical preparations grouping, 52 new commodities have been introduced to provide more adequate representation and the entire grouping has been reclassified by end-use, in line with industry recommendations. This will facilitate comparison with price trends at retail as shown in the Consumer Price Index.

The former product class for pharmaceutical preparations (06-33) has been continued as a special index. It has been replaced in the WPI by two product classes--pharmaceutical ethical preparations (06-35) and pharmaceutical proprietary preparations (06-36). Each of these two product classes is made up of several subproduct classes representing the most important types of preparations by therapeutic use. These subproduct classes or therapeutic categories are:

Code	Title	Code	Title
06-35	Ethical preparations	06-35-13	Analgesics
06-35-1	Anti-infectives	06-35-14	Anti-obesity preparations
06-35-2	Anti-arthritics	06-35-15	Cough and cold preparations
06-35-3	Sedatives and hypnotics	06-35-16	Vitamins
06-35-4	Ataractics	06-36	Proprietary preparations
06-35-5	Anti-spasmodics and anti-cholinergics	06-36-1	Vitamins
06-35-6	Cardiovasculars and anti-hypertensives	06-36-2	Cough and cold preparations
06-35-7	Diabetics	06-36-3	Laxatives and elimination aids
06-35-8	Hormones	06-36-4	Internal analgesics
06-35-9	Diuretics	06-36-5	Tonics and alteratives
06-35-11	Dermatologicals	06-36-6	External analgesics
06-35-12	Hematinics	06-36-7	Antiseptics
		06-36-8	Antacids

In addition to the revision of these two product classes, 11 items were introduced in drug and pharmaceutical materials product class 06-31. They were: folic acid (06-31-06), calcium cyclamate (06-31-18), cellulose gum (06-31-28), cortisone acetate (06-31-32), isoniazid (06-31-42), I-lysine monohydrochloride (06-31-44), pentobarbital (06-31-48), reserpine (06-31-50), neomycin sulfate (06-31-54), vitamin A acetate (06-31-68), vitamin B 12 (06-31-72).

A list of the items discontinued in the group follows:

Code	Title	Code	Title
06-11-21	Calcium arsenate	06-31-57	Sodium bromide
06-31-07	Lactic acid	06-31-75	Vitamin D2
06-31-11	Agar	06-33-05	Vitamin mixture for children
06-31-15	Atropine sulfate	06-33-16	Antibiotic preparation
06-31-21	Cascara sagrada bark	06-33-20	Insulin protamine zinc
06-31-23	Ergot	06-33-21	Methyltestosterone
06-31-25	Ipecac root	06-33-22	Thyroid tablets
06-31-27	Chloroform	06-33-23	Cortisone
06-31-35	Glycerine	06-33-33	Hinkle pills
06-31-43	Magnesium sulfate	06-33-34	Digitalis tablets
06-31-51	Procaine hydrochloride	06-33-43	Sulfadiazine tablets
06-31-53	Quinine sulfate	06-33-44	Sulfathiozole tablets
06-31-55	Sodium bicarbonate	06-33-65	Internal analgesic compound

Five commodities were also discontinued in the photographic materials product class (06-74).

#### 1961 Weight Revision

The relative importance of this group from 1954 to 1958 has increased from 5.777 percent to 6.643 percent because the production of chemicals and allied products increased approximately 30 percent during this period compared with the 8.9 percent increase in total industrial production. The increases ranged from 35 percent to 50 percent for such products as soaps and synthetic detergents, photographic supplies, plastic materials, pharmaceuticals, and toilet preparations.

In large part, the value weights for this group are derived from the Census of Manufactures Industry No. 28--Chemicals and Products. Because of the wide scope of the commodities included in this group, however, some of its weight was derived from other Census of Manufactures Industries. Among these were Industry No. 20--Food and Kindred Products, from which the inedible oils weights have been derived, and Industry No. 38--Instruments and Related Products, the source of the value for photographic materials.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
06	Chemicals and allied products -----	355
06-1	Industrial chemicals -----	115
06-21	Prepared paint -----	7
06-22	Paint materials -----	24
06-3	Drug and pharmaceuticals -----	108
06-4	Fats and oils, inedible -----	8
06-5	Mixed fertilizer -----	28
06-6	Fertilizer materials -----	12
06-7	Other chemicals and allied products -----	53

**Section 7. Rubber and Rubber Products**

**Description of Rubber and Rubber Products Group Index**

No sample changes were made in this group in 1961.

1961 Weight Revision

The drop in the weight of this group was chiefly due to the decline in the value of imported rubber and the exclusion of interplant transfers for crude natural rubber. Weights for this group are mainly derived from the 1958 Census of Manufactures Industry No. 30--Rubber Products. The value for crude natural rubber comes from the U.S. Department of the Interior's Report FT 110 - United States Imports of Merchandise for Consumption, 1958, and that for synthetic rubber comes from Industry 28--Chemicals and Products.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
07	Rubber and rubber products -----	38
07-1	Crude rubber -----	9
07-2	Tires and tubes -----	6
07-3	Other rubber products -----	23

**Section 8. Lumber and Wood Products**

**Description of Lumber and Wood Products Group Index**

No sample changes were made in this group in 1961.

**1961 Weight Revision**

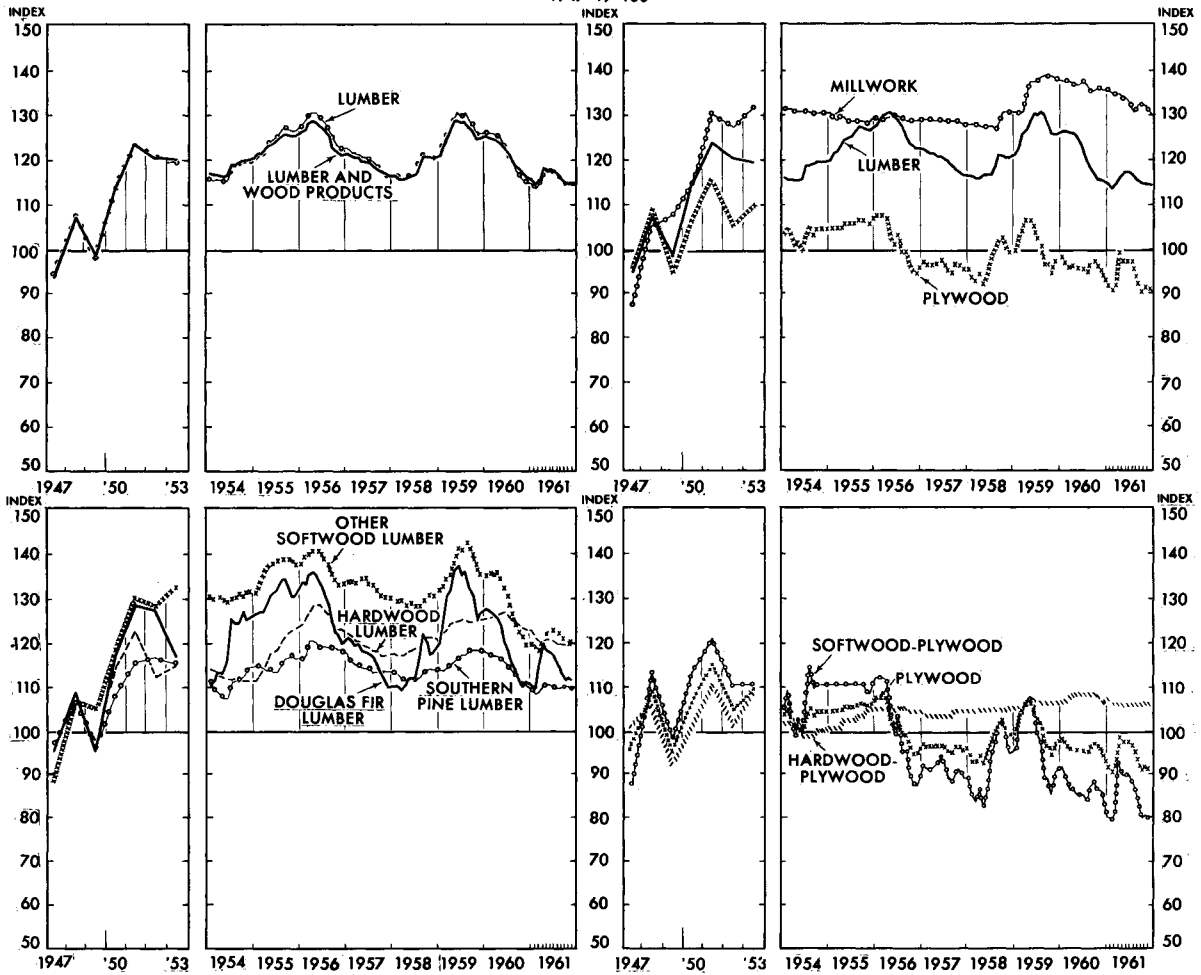

Based on the 1961 weight revision the relative importance for this group declined, reflecting the decline in the output of lumber. For the most part, weights for this group were derived from the Census of Manufactures Industry No. 24--Lumber and Wood Products.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
08	Lumber and wood products -----	68
08-1	Lumber -----	49
08-2	Millwork -----	14
08-3	Plywood -----	5

**Section 9. Pulp, Paper, and Allied Products**

**Description of Pulp, Paper, and Allied Products Group Index**

Corrugated shipping containers (09-53-31) was added to the sample for the paper boxes and shipping containers product class (09-53) at the time of the revision. Before the revision, the product class contained only set-up boxes.

**1961 Weight Revision**

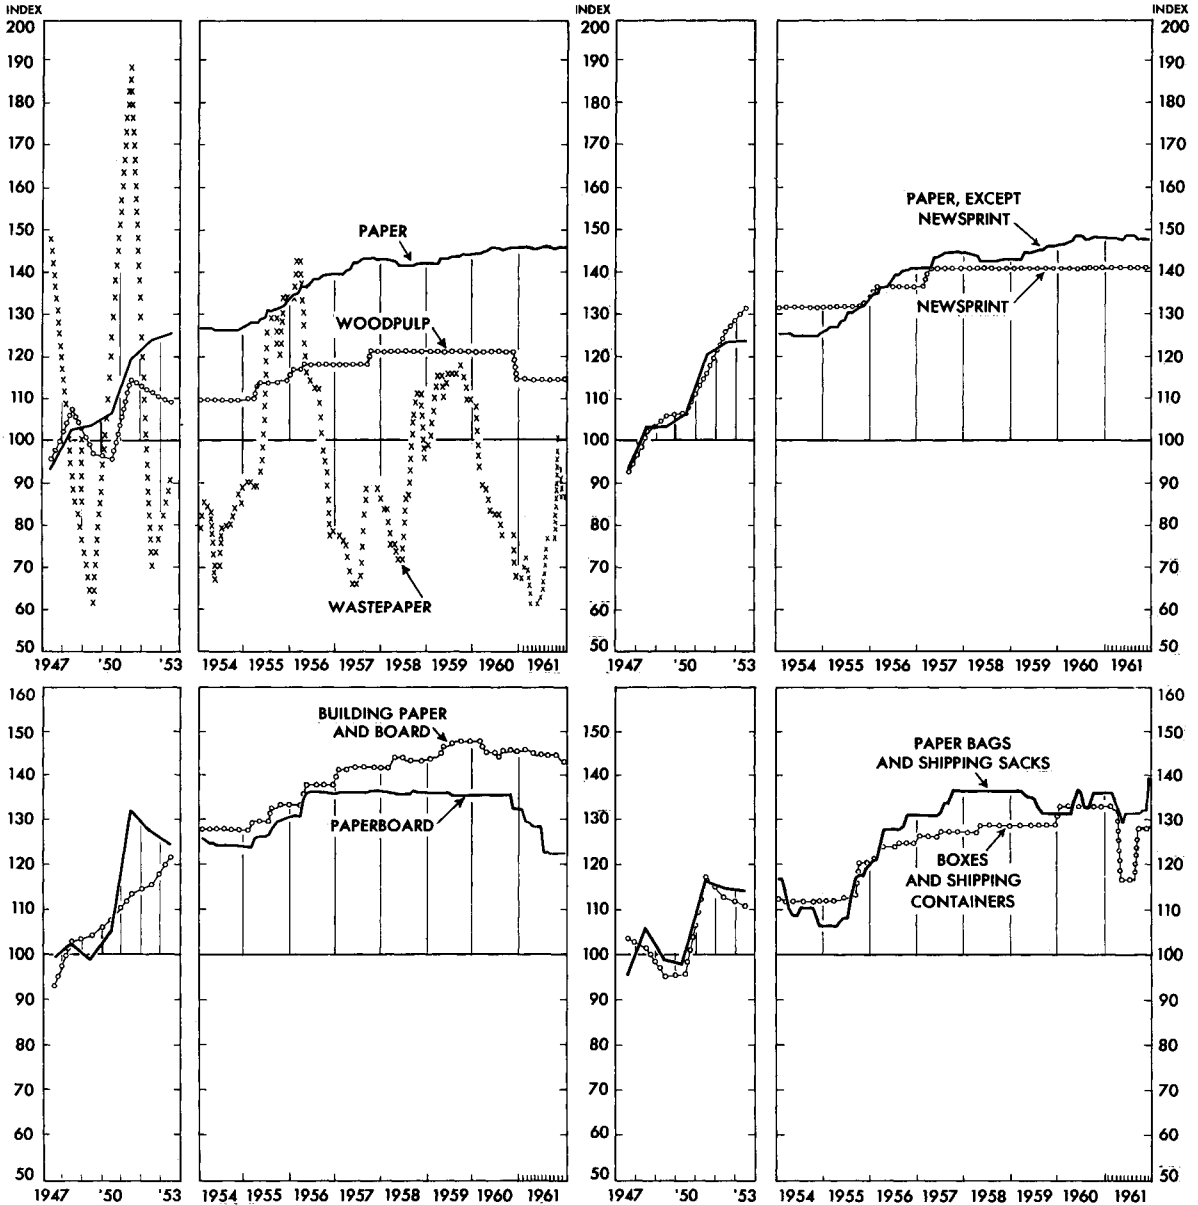

The small drop in the relative importance of this group resulting from the 1961 weight revision reflected the further exclusions of interplant transfers and direct sales to consumers. In both the 1958 and 1961 revisions, the value for Census Industry No. 27--Printing and Publishing, was adjusted to exclude interplant transfers and sales direct to household users. The exclusions from 1958 weights, however, were considerably larger than those for the 1954 weights. The weights for this group come mostly from the Census of Manufactures Industries No. 26--Pulp, Paper, and Products and No. 27--Printing and Publishing.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
09	<b>Pulp, paper, and allied products -----</b>	58
09-1	<b>Woodpulp -----</b>	5
09-2	<b>Wastepaper -----</b>	4
09-3	<b>Paper -----</b>	10
09-4	<b>Paperboard -----</b>	10
09-5	<b>Converted paper and paperboard products -----</b>	24
09-6	<b>Building paper and board -----</b>	5

**Section 10. Metals and Metal Products**

**Description of Metals and Metal Products Group Index**

The product class for boilers, tanks, and sheet metal products (10-72) was divided into 3 product classes: (1) Metal tanks (reassigned code 10-72) has 2 new items added and 6 transferred out; (2) Sheet metal products (10-73) has 7 new products and 4 products transferred from the former product class 10-72; and (3) Structural, architectural and pre-engineered metal products (10-74) has 12 new items and 2 items transferred from the former product class 10-72. Before this revision, the Wholesale Price Index sample was too small to make reliable separate indexes for items now included in the new product classes 10-73 and 10-74.

Lighting fixtures (10-83), with 21 new commodities, comprise another new product class. These fixtures were not previously included in the sample of items priced for the index.

In the iron ore product class, Swedish iron ore (10-11-11) was replaced by Brazilian iron ore (10-11-12) because of decreasing ore imports from Sweden and increasing imports from Brazil.

Items were also added to the sample for the nonferrous metals subgroup and the two fabricated metal products subgroups. In addition, aluminum foil was transferred to the nonferrous metals subgroup from the fabricated structural metal products subgroup in accord with its reclassification by the Census of Manufactures.

The series introduced in January 1961 were:

Code	Title	Code	Title
10-11-12	Iron ore, Brazilian	10-73-59	Grain bin, farm

10-72-57	Elbows, 90 dg. galv., 30 ga., 6 in. dia.	10-73-57	Same
10-72-81	Expanded metal lath	10-74-71	Same
10-72-82	Expanded corner bead	10-74-82	Same

1961 Weight Revision

The introduction of 1958 weights for metals and metal products caused a drop in relative importance mainly because production of iron and steel decreased between 1954 and 1958. In addition, production of fabricated metal products rose considerably less than total industrial production.

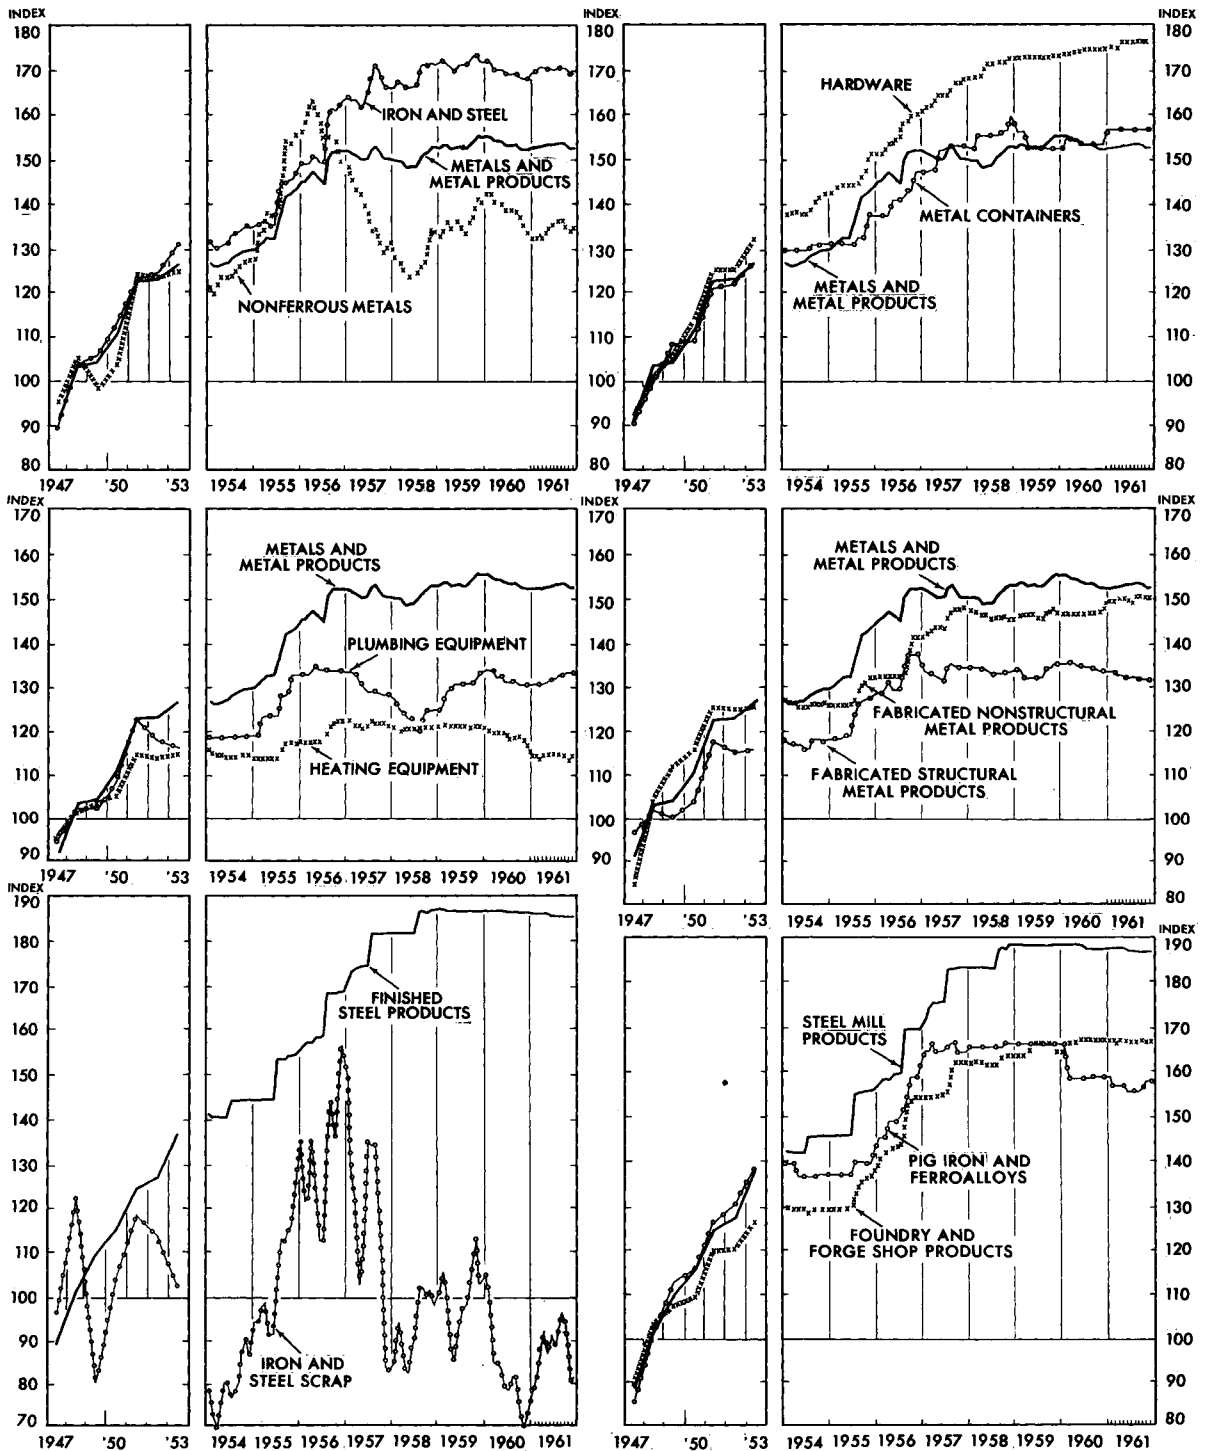

Basically, the weights for this group are derived from the Census of Manufactures Industries No. 33--Primary Metal Industries and No. 34--Fabricated Metal Products. The Minerals Yearbook of the U.S. Department of the Interior's Bureau of Mines, was also used as a supplemental source. The values for scrap metals are estimated from material--consumed data reported by the Census of Manufactures.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	No. of items
10	Metals and metal products -----	299
10-1	Iron and steel -----	90
10-2	Nonferrous metals -----	62
10-3	Metal containers -----	4
10-4	Hardware -----	24
10-5	Plumbing fixtures and brass fittings -----	13
10-6	Heating equipment -----	23
10-7	Fabricated structural metal products -----	40
10-8	Fabricated nonstructural metal products -----	43

Section 11. Machinery and Motive Products

Description of Machinery and Motive Products Group Index

In January 1961, 116 commodities were added to the machinery and motive products group while 5 were dropped.

Seven types of imported and domestic compact passenger automobiles were introduced because of their substantially increasing importance in the U.S. domestic car market. The introduction was made in October 1960, in order to reflect price changes for the 1961 model year. In introducing the 1958 weights for passenger cars, the 1958 total value of passenger car shipments was allocated to the individual models priced (including standard-size domestic cars previously priced), on the basis of their relative importance in the first 10 months of 1960.

Another important change in this major group was the introduction in 1961 of a subgroup for special industry machinery and equipment (11-6). The new subgroup includes indexes for food products machinery, textile machinery and equipment, woodworking machinery, and equipment, printing trades machinery and equipment, and a miscellaneous category for some other types of special industry machinery.

The product class for electric lamps--bulbs,--formerly titled incandescent lamps (11-77), was strengthened by the addition of three new items.

In addition, small increases were made in the sample coverage for agricultural machinery and equipment, general purpose machinery and equipment, office and store machinery and equipment, and some classes of electrical machinery. Price series for railroad rolling stock, electric wiring devices, and motor vehicle parts and accessories were also added at this time.

The series introduced in January 1961 were:

		11-97-13	Hopper, covered
		11-97-14	Piggyback flatcar

The 5 items dropped were motor tiller, 7 h.p. and over (11-11-25), locomotive crane (11-44-81), mine car scale (11-46-21), derrick (11-51-61) and two commodities in the motor vehicles subgroup (11-8).

#### 1961 Weight Revision

As a result of the 1961 weight revision, this group experienced the greatest change in weight, falling from 19.654 to 17.573 percent of all commodities. A large part of this decrease occurred because between 1954 and 1958, production of machinery and related products increased relatively less than total industrial output--only 2.5 percent compared with 8.9 percent. Many items such as machine tools, fans and blowers, and motors and generators actually decreased in volume. Production of nonelectrical machinery dropped 4.2 percent.

About .250 percentage points of the total decrease of 2.081 points in the weight assignment of this group resulted from a change in imputation patterns. A sizable value from Census Industry No. 38--Instruments and related products, formerly assigned to the machinery group as a whole, was assigned elsewhere in the weight structure, mainly to the miscellaneous products group, or distributed to the items in the 13 other major groups other than the farm products and processed foods groups. The weight structure also excludes for the first time the values of rebuilt machinery and of railroad cars made in railroad carshops, the former being considered as repair work and the latter, as captive production and thus an interplant transfer.

On the whole, most of the value weights for this group are derived from the Census of Manufactures Industry No. 35--Machinery, Except Electrical. Certain commodities, however, derive their weights from other census industries. Examples of these would be the products in the electrical machinery and equipment subgroup (11-7) which get their weights from Industry No. 36--Electrical Machinery; products of the motor vehicles subgroup (11-8) which derive most of their weights from Industry No. 37--Transportation Equipment; and the different fabricated metal products throughout the group that have Industry No. 34--Fabricated Metal Products--as the source of their weights.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
11	<b>Machinery and motive products -----</b>	560
11-1	<b>Agricultural machinery and equipment -----</b>	61
11-2	<b>Construction machinery and equipment -----</b>	47

11-76-01.13	Welder, electric arc, a.c., transformer type, up to 180 amperes, 230 volts, 60 cycle, single phase, portable; manufacturer to distributor or dealer, f.o.b. factory with freight allowed, prepaid or delivered.	each		11-78-11.02	Dry cell battery, flashlight, type B, standard No. 2; manufacturer to distributor, f.o.b. destination or freight prepaid on specified amounts.	each	
11-76-11.08	Welder, electric arc, d.c. rectifier type, single operator, 3 to 360 amperes; 220-230/440-460 or 550 volts, 60 cycles, 3 phase, portable; manufacturer to distributor, f.o.b. factory with varying freight allowance.	each		11-78-14.01	Dry cell battery, general purpose, No. 6, 1½ volt; manufacturer to distributor or jobber, f.o.b. destination or freight prepaid on specified amounts.	each	
11-76-12.05	Welder, electric arc, d.c., single operator, portable, 250 amperes, 440 volts, 60 cycle, 3 phase, a.c. motor driven; manufacturer to user, f.o.b. factory with freight prepaid.	each		11-78-15.01	Dry cell battery, lantern, 6 volt; manufacturer to distributor, f.o.b. destination or freight prepaid on specified amounts.	each	
11-76-21.02	Welder, electric arc, d.c., generator type, 300 amperes, 220/440 volts, 60 cycles, 3 phase; manufacturer to user, f.o.b. customer's freight station or f.o.b. factory with freight prepaid.	each		11-78-16.01	Dry cell battery, transistor, 9 volt; manufacturer to distributor, f.o.b. destination or freight prepaid on specified amounts.	each	
11-76-31.02	Welding electrode, electric arc, for mild steel, 3/16" diameter 14" or 18" long, A.W.S. type E 6012, d.c., (straight polarity) or a.c.; manufacturer to user, f.o.b. factory or shipping point with freight prepaid or allowed on specified amounts.	pound		11-79	<u>Miscellaneous Electrical Machinery and Equipment</u>		
11-76-32.01	Welding electrode, electric arc, for mild steel, 3/16" diameter x 14" long, A.W.S. type E 6013, d.c., (straight polarity) or a.c.; manufacturer to user, f.o.b. factory with freight prepaid on specified amounts.	pound		11-79-01	Carbon brush, automotive 7/16" long x ¼" wide x ¼" thick, with copper shunt and radius; manufacturer to original equipment manufacturer, f.o.b. plant.	1000	
11-76-33	Welding electrode, electric arc, for mild steel, 5/32" diameter x 14" long, A.W.S. type E 6012, d.c. (straight polarity) or a.c.; manufacturer to user, f.o.b. factory with freight prepaid on specified amounts.	pound		11-79-02	Carbon brush, fractional h.p. motor, 3/4" long x 3/8" wide x ¼" thick, with beryllium copper spring, cap and radius, with copper shunt; manufacturer to original equipment manufacturer, f.o.b. plant.	1000	
11-76-51.01	Electrical resistance welder, spot, single phase, a.c., air operated, press type, 30-75 kv.-a., 6"-30", throat depth; manufacturer to user, f.o.b. factory.	each		11-79-02.01	Carbon brush, for fractional h.p. motor, 5/8" or 3/4" long x 3/16" or 3/8" wide x 3/16" or ¼" thick with spring, with and without cap and shunt;	100	Oct. 1961
11-76-61.01	Electric resistance welding electrode, class 2 copper base alloy, Morse taper No. 2, overall length 2½"; manufacturer to user, f.o.b. factory.	each		11-79-03	Carbon brush, industrial, 2" long x 1½" wide x 5/8" thick for standard integral horsepower motor; manufacturer to industrial user, f.o.b. plant with freight allowed.	100	
11-77	<u>Electric lamps--bulbs (Former Incandescent Lamps)</u>			11-79-03.01	Carbon-graphite brush, for industrial motors, approximately 2" long x 1½" wide x 5/8" thick; manufacturer to original equipment manufacturer, f.o.b. plant or f.o.b. plant with freight allowed.		Oct. 1961
11-77-01.05	Incandescent lamp, 60 watts, 115 volts, inside frosted, standard package of 120; manufacturer to distributor or large user, delivered or freight allowed to destination.	each		11-79-04	Electrode, carbon, 17" diameter, 72" long, threaded with nipple; manufacturer to user, f.o.b. plant. Wednesday price.	100 lb.	
11-77-02	Photoflash bulb, clear, outside lacquered, 3-45 voltage range for operation, single contact bayonet base, 2 5/8" overall length; manufacturer to distributor, delivered.	each		11-79-04.01	Electrode, graphite, 20" diameter, 72 in. long, threaded with nipple; (Delete Wednesday price)		Oct. 1961
11-77-03	Sealed beam lamp, 7" diameter, 12 volts; manufacturer to distributor, delivered.	each		11-79-31	Battery cable, battery to switch, length 39"; manufacturer to distributor, f.o.b. warehouse with freight allowed.	each	
11-77-04	Fluorescent lamp, preheat, rapid-start, 48" nominal length, 40 nominal lamp watts, medium bipin base, cool white frosted, 7500 rated average hours of life, 2800 rated lumens; manufacturer to wholesaler and large user, delivered.	each		11-79-32.01	Regulator for passenger cars; manufacturer to distributor, dealer, or service station, f.o.b. factory, or f.o.b. factory or warehouse with freight prepaid.	each	
11-77-04.01	7500 or 20,000 rated average hours of life, 2800-3100 rated initial lumens;		Sept. 1961	11-79-33	Cranking motor for passenger cars; manufacturer to dealer or distributor, f.o.b. warehouse with freight prepaid.	each	
11-77-04.02	7500-20,000 rated average hours of life,		Dec. 1961	11-79-34	Ignition coil for passenger cars; manufacturer to distributor, dealer, or service station, f.o.b. factory, or f.o.b. factory or warehouse with freight prepaid.	each	
11-78	<u>Batteries</u>			11-79-35	Spark plug, regular type, .035 gap, 18 mm resistor; manufacturer to wholesaler or dealer, f.o.b. factory with freight prepaid.	each	
11-78-01.09	Storage battery, automotive type, 12 volts, 6 cells, 9 or 11 plates per cell, 53-55 amperes at 20 hour rate; manufacturer to distributor, jobber or dealer, f.o.b. factory or warehouse, freight prepaid, or f.o.b. factory.	each		11-79-36	Breaker point set, for passenger cars; manufacturer to distributor, dealer, or service station, f.o.b. factory, or f.o.b. factory or warehouse with freight prepaid.	each	
				11-79-51	Television receiving tube, type ALP4A, 21" spherical aluminized 90"; manufacturer to wholesaler, f.o.b. factory with freight prepaid.	each

**Section 12. Furniture and Other Household Durables**

**Description of Furniture and Other Household Durables Group Index**

A new product class for porch and lawn furniture (12-15) and new series for tufted wool broadloom carpeting (12-31-71) and plastic dinnerware (12-61-21) were introduced because of their increasing importance. Also, the household appliance subgroup was strengthened by the addition of five items.

Those series being introduced into the new product class, porch and lawn furniture (12-15), were chaise lounge, aluminum (12-15-01); and chair, wrought iron (12-15-11). Tufted broadloom, all wool (12-31-71) was introduced into the soft surface floor covering product class (12-31), plastic dinnerware, 45-piece set (12-61-21) was introduced into the dinnerware product class (12-61); in the household appliances subgroup (12-4), built-in wall oven, gas (12-41-03), built-in wall oven, electric (12-41-32), built-in surface unit, electric (12-41-33), coffee maker, electric (12-46-13), and frying pan, electric (12-46-15), were introduced. One item, hand lawnmowers, (12-66-01), was discontinued.

**1961 Weight Revision**

The declining output, between 1954 and 1958, of a number of household appliances caused the decline in the relative importance of this group.

Because of the varied nature of the items included in this group, a number of sources have been used for the derivation of the weights. The main source is Census of Manufactures Industry No. 25--Furniture and Fixtures--from which the furniture values were derived. Other items and the industry reports from which they are derived are appliances and radios and television receivers from Industry No. 36--Electrical Machinery; glassware from Industry No. 32--Stone, Clay, and Glass Products; rugs and upholstery materials from Industry No. 22--Textile Mill Products; stoves and cooking utensils from Industry No. 34--Fabricated Metal Products; lawnmowers and household machines from Industry No. 35--Machinery, Except Electrical; and silverware and mirrors from Industry No. 39--Miscellaneous Manufactures.

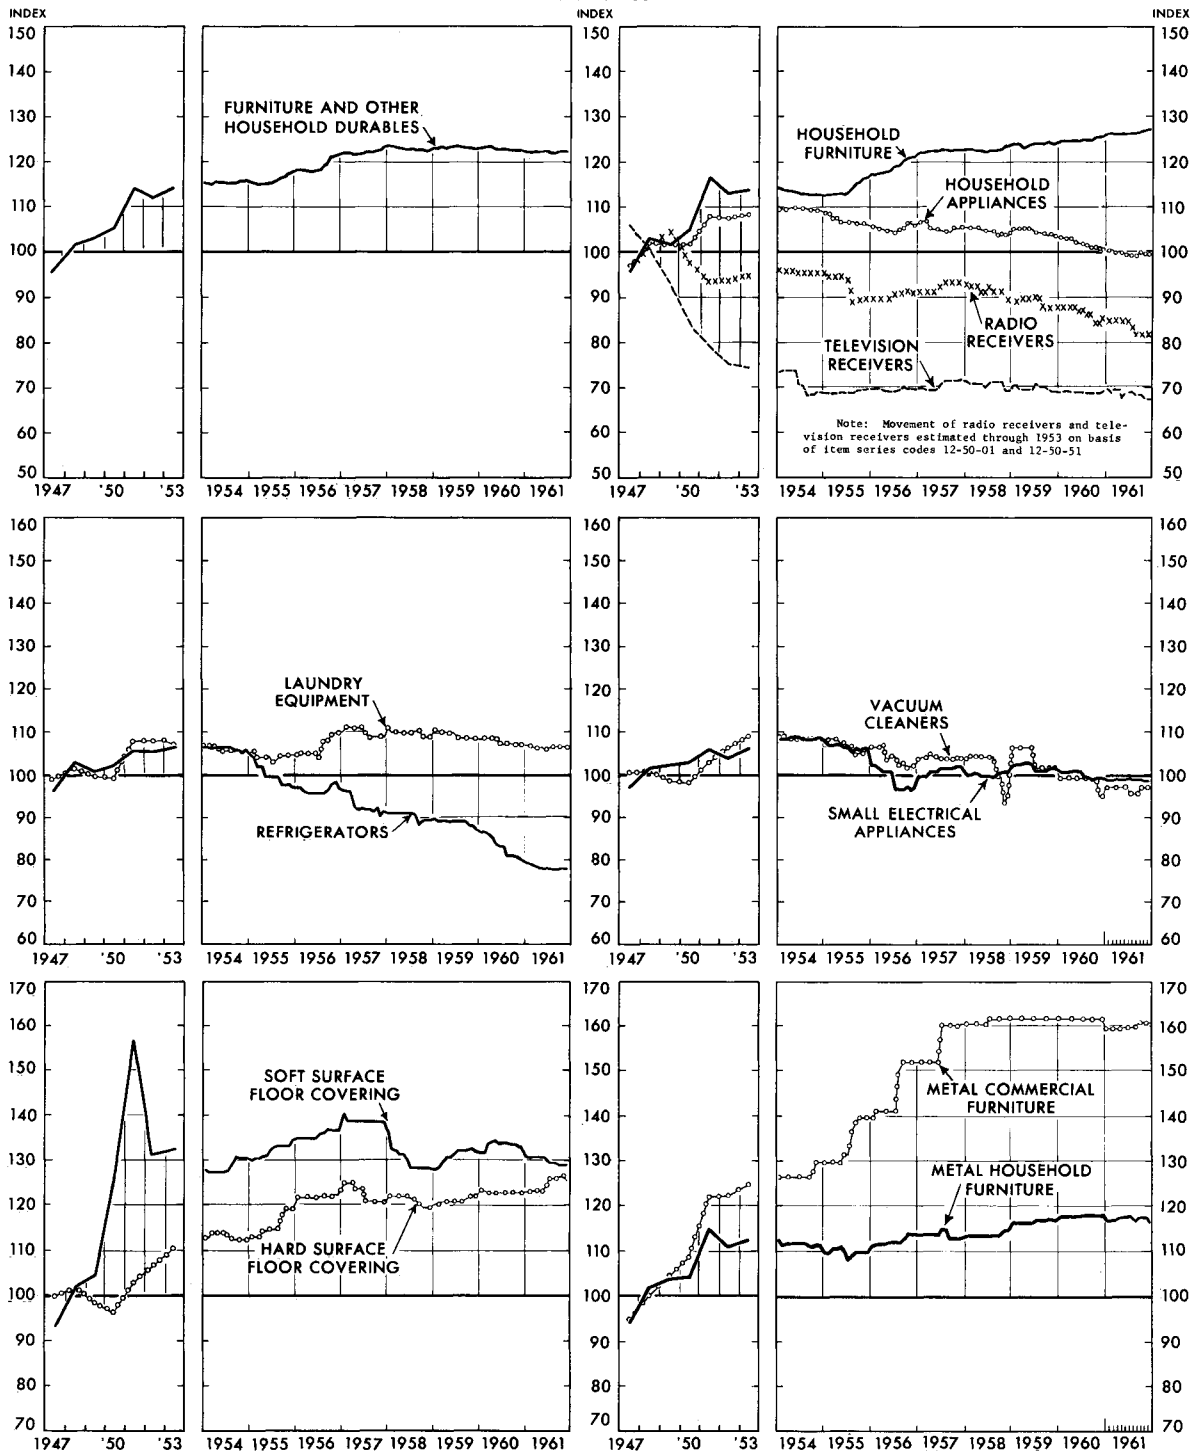

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
12	Furniture and other household durables -----	87
12-1	Household furniture -----	20
12-2	Commercial furniture -----	7
12-3	Floor coverings -----	11
12-4	Household appliances -----	21
12-5	Television, radio receivers, and phonographs -----	7
12-6	Other household durable goods -----	21

**Section 13. Nonmetallic Mineral Products**

**Description of Nonmetallic Mineral Products Group Index**

The group title Nonmetallic Minerals--Structural was changed to Nonmetallic Mineral Products. This title change does not affect the comparability of the indexes.

The item silica brick, superduty (13-42-42) was discontinued in May 1961 and its weight was assigned to silica brick, standard (13-42-41).

**1961 Weight Revision**

The higher production of cement, clay products, and concrete and plaster products in 1958 resulted in the greater relative importance for this group.

The weights used for this group are derived from three main sources: the Census of Manufactures Industries No. 32--Stone, Clay, and Glass Products and No. 29--Petroleum and Coal Products, and the Census of Mineral Industries. Some supplemental data have been derived from the Bureau of Mines.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
13	<b>Nonmetallic mineral products -----</b>	<b>38</b>
13-1	<b>Flat glass -----</b>	<b>4</b>
13-2	<b>Concrete ingredients -----</b>	<b>4</b>
13-3	<b>Concrete products -----</b>	<b>4</b>
13-4	<b>Structural clay products -----</b>	<b>12</b>
13-5	<b>Gypsum products -----</b>	<b>3</b>
13-6	<b>Prepared asphalt roofing -----</b>	<b>4</b>
13-7	<b>Other nonmetallic minerals -----</b>	<b>7</b>

**Section 14. Tobacco Products and Bottled Beverages**

**Description of Tobacco Products and Bottled Beverages Group Index**

The three items formerly included in the subgroup for nonalcoholic beverages (14-5), have been designated product classes--cola drinks (14-51), ginger ale (14-52), and plain soda (14-53). These product class indexes are directly comparable with the previous item series. The sample for cola drinks has been strengthened to take into account the wide dispersion in bottle sizes and prices per ounce, by the addition of a number of series. Code changes resulting from the reclassification into product classes are shown below.

Old Code	Old title	New code	New title
14-51-01	Carbonated beverages	14-51	Cola drinks
14-51-02	Ginger ale	14-52-01	Ginger ale
14-51-03	Plain soda	14-53-01	Plain soda

**1961 Weight Revision**

The weights for tobacco and tobacco products come from Census of Manufactures Industry No. 21--Tobacco Manufactures, and those for the beverages are derived from Industry No. 20--Food and Kindred Products.

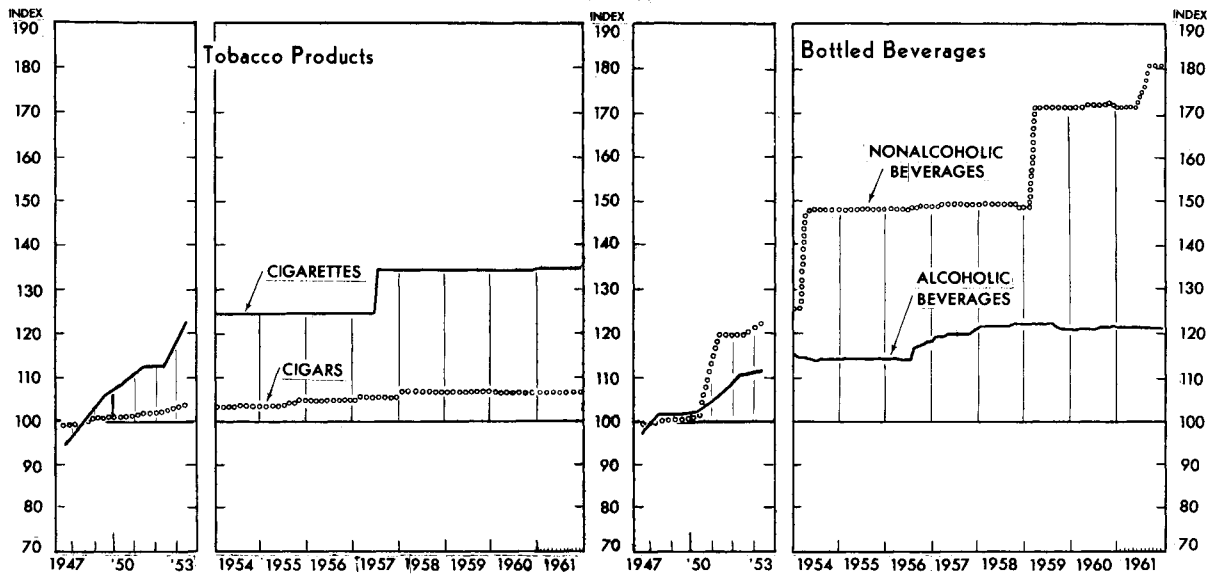

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
14	<b>Tobacco products and bottled beverages -----</b>	22
14-1	<b>Tobacco products -----</b>	9
14-4	<b>Alcoholic beverages -----</b>	8
14-5	<b>Nonalcoholic beverages -----</b>	5

Section 15. Miscellaneous Products

Description of Miscellaneous Products Group Index

An important change in the Miscellaneous Products Group was the complete revision of the sample of items priced for the photographic equipment product class (15-44), where 12 commodities were discontinued and 15 commodities were added. Also, the item stereophonic 33-1/3 r.p.m. phonograph records (15-55-04) was introduced and monaural 78 r.p.m. records (15-55-01) was dropped from the index. Baby strollers (15-11-72) was added to the toys product class because of the increased importance of these products.

1961 Weight Revision

As a result of the weight revision in January 1961, the relative importance for this group increased, due primarily to the higher rate of production of such items as toys, sporting goods, and phonograph records. In addition, the weight for manufactured animal feeds was increased by the inclusion of prepared animal feeds produced in nonmanufacturing establishments.

The value weights for the group are based chiefly upon the value of commercial shipments for Census of Manufactures Industry No. 39--Miscellaneous Manufactures. This group also includes small arms and ammunition from Census Industry No. 19--Ordnance and Accessories; manufactured animal feeds from Industry No. 20--Food and Kindred Products; watches, clocks, and photographic equipment from Industry No. 38--Instruments and Related Products; and phonograph records from Industry No. 36--Electrical Machinery.

The number of items by subgroup as of January 1961 was as follows:

Code	Grouping	Number of items
15	Miscellaneous products -----	93
15-1	Toys, sporting goods, small arms, etc. -----	30
15-2	Manufactured animal feeds -----	8
15-3	Notions and accessories -----	6
15-4	Jewelry, watches, and photographic equipment -----	31
15-5	Other miscellaneous products -----	18
