## CONTENTS

Page.
Introduction and summary ..... 1-18
Index numbers, by departments ..... 3-5
Full-time working days per week ..... 5-8
Full-time working hours per week ..... 8-12
Common laborers ..... 12, 13
Average hourly earnings in departments, 1922, by districts ..... 13, 14
Scope of 1922 data ..... 14, 15
Explanation of tables ..... 15-18
Blast furnaces ..... 19-35
Bessemer converters ..... 36-53
Open-hearth furnaces ..... 53-69
Puddling mills ..... 70-84
Blooming mills ..... 85-99
Plate mills ..... 100-114
Standard rail mills ..... 115-12s
Bar mills ..... 129-146
Sheet mills ..... 147-160
Tin-plate mills ..... 161-174

## GENERAL TABLES.

Table A.-Average customary full-time hours per week, average earnings per hour, and average full-time weekly earnings, and index numbers therefor, 1907 to 1922, by occupations:
(1) Blast furnaces ..... 20-23
(2) Bessemer converters ..... 37-42
(3) Open-hearth furnaces ..... 54-57
(4) Puddling mills ..... 71-73
(5) Blooming mills ..... 86, 87
(6) Plate mills ..... 101-104
(7) Standard rail mills ..... 116-119
(8) Bar mills ..... 130-133
(9) Sheet mills ..... 148-150
(10) Tin-plate mills ..... 162-165
Table B.-Number and per cent of employees who customarily worked
each specified number of days per week, in each district and all districtscombined, 1907 to 1922, by years:
(1) Blast furnaces ..... 25, 26
(2) Bessemer converters ..... 43, 44
(3) Open-hearth furnaces ..... 59-61
(4) Puddling mills. ..... 75
(5) Blooming mills ..... 89-91
(6) Plate mills ..... 105, 106
(7) Standard rail mills ..... 120, 121
(8) Bar mills ..... 135-137
(9) Sheet mills ..... 152, 153
(10) Tin-plate mills ..... 166
Table C.-Average customary full-time hours worked and averageactua, earnings per pay period and per hour, 1922, by occupations anddistricts:
(1) Blast furnaces ..... 28-31
(2) Bessemer converters ..... 46-49
(3) Open-hearth furnaces ..... 63-65
(4) Puddling mills ..... 77-81
(5) Blooming mills ..... 93-95
(6) Plate mills ..... 108-111
(7) Standard rail mills ..... 123-125
(8) Bar mills ..... 139-142
(9) Sheet mills ..... 155-157
(10) Tin-plate mills ..... 168-171
Page.
Table D.-Average and classified earnings per hour for two selected occupations, 1922, by districts:
(1) Blast furnaces (keepers and laborers) ..... 32
(2) Bessemer converters (blowers and vessel men) ..... 50
(3) Open-hearth furnaces (melters' helpers, first, and ladle cranc- men) ..... 66
(4) Puddling mills (puddlers, level handed, and rollers) ..... 82
(5) Blooming mills (heaters and roll engineers) ..... 96
(6) Plate mills (screw men, sheared-plate mills, and shearmen) ..... 112
(7) Standard rail mills (guide setters and straighteners, gag-press) ..... 126
(8) Bar mills (roughers and hotbed men) ..... 143
(9) Sheet mills (rollers and matchers) ..... 158
(10) Tin-plate mills (heaters and doublers) ..... 172
Table E.-Customary turns per week and hours per turn of employeeswho worked 7 turns per week or 12 or more hours per day all or part ofthe time, 1922, by districts:
(1) Blast furnaces ..... 33-35
(2) Bessemer converters ..... 51, 52
(3) Open-hearth furnaces ..... 67-69
(4) Puddling mills ..... 83, 84
(5) Blooming mills ..... 97-99
(6) Plate mills ..... 113, 114
(7) Standard rail mills. ..... 127
(8) Bar mills ..... 144, 146
(9) Sheet mills ..... 159, 160
(10) Tin-plate mills ..... 173, 174

## WAGES AND HOURS OF LABOR IN THE IRON AND STEEL INDUSTRY: 1907 TO 1922.

INTRODUCTION AND SUMMARY.
Earnings per hour, customary hours of labor, and actual hours and earnings for one pay period in 1922, together with summary figures for preceding years taken from previous reports, ${ }^{1}$ for 10 departments of the iron and steel industry in the United States are presented in this report.

These statistics may be taken as fairly representative of the industry, as they are based on a sufficient number of representative plants in each district to show conditions in their locality.

Statistics are presented in this report for employees in-
Blast furnaces, 1907-1922. ${ }^{2}$
Bessemer converters, 1907-1922. ${ }^{2}$
Open-hearth furnaces, 1910-1922. ${ }^{2}$
Puddling mills, 1914-1922.3
Blooming mills, $1910-1922 .{ }^{2}$
Plate mills, 1910-1922. ${ }^{2}$
Standard rail mills, 1910-1922. ${ }^{3}$
Bar mills, 1907-1922. ${ }^{3}$
Sheet mills, 1910-1922. ${ }^{2}$
Tin-plate mills, 1910-1922.3
The greater part of the data was obtained through personal visits of agents of this bureau to the several plants, the remainder being obtained from the plants through correspondence.

The figures for 1922 are based on actual pay-roll data for one pay period. The period selected for the survey was from October 1st to 15th, and the majority of the reports were for that time. In a few instances, when conditions in the plants in October were not representative, the reports were made for a normal period as near October as available. Care was exercised, however, in selecting another period, to obtain one which included the general pay increase to all employees effective in September just prior to this survey. The figures for the years 1907 to 1915 are in most cases for the second half of May; those for 1917 are for a pay period in September of that year; while those for 1919 are nearly all for a half-month pay period in the first three months of that year. The 1920 investigation covered the last half of October, and the figures for that year relate in practically all instances to that period.

[^0]While wages in 1922 show a marked decrease from the earnings in 1920, the data collected during this survey do not reflect the still lower point to which earnings declined in 1921 and the first nine months of 1922. Reductions in the rates paid employees in this industry began early in 1921 and continued into the following year. However, owing to economic conditions, these reductions were followed by increases, some of which were made prior to this investigation, including one general increase of approximately 10 per cent in September, 1922. The general tables in this report refer to one specific period in each year and do not, therefore, in any way reflect month-to-month changes.

In the 1922 investigation agents were instructed, in all cases where it was necessary to obtain data for a different pay period, to adjust the working time of the period selected to conform in length to that of the first half of October, that is 15 days, including 2 Saturdays and 3 Sundays. In order to adjust all schedules to that basis, it was necessary in some cases entirely to rearrange the company's pay-roll data and to compute the hours and earnings for each individual separately for the period desired. This method was decided upon in order to eliminate, as far as possible, all theoretical computations.

The average earnings per hour in each occupation were obtained by dividing the total amount earned by the total hours actually worked, and where averages are shown for individual enployees they have been derived by the same method. The earnings per hour shown in the tables include both the earnings of time workers and those of tonnage or piece workers. All earnings per hour are for individuals, as no contract work for groups of employees is included.

The full-time hours of labor per week shown in the tables in this report are the customary regular hours of work of individual employees under normal conditions in the establishment. The working time is the time on duty, including intervals of waiting for work-in other words, the time between the hour of reporting for duty and the hour of going off duty. The working time of individual employees is not always the working time of their occupation as a whole. Some plants which operate seven days per week make provision for laying off each employee one day a week. In such a plant the full-time hours per week of an employee working 12 hours a day is 72 hours. In all tables in this report, whether the number of positions have been used as the number of employees, as is the case for the years up to and including 1917, or the actual number of individual employees has been reported, as for the years 1919 to 1922 , the full-time hours of the man in the position have been shown and not the hours of the position. The term "jobs" or "positions" used in this report is defined as the number of employees working the regular full time required to operate a plant under normal working conditions, with provision for two or three shifts or turns per day, but with no provision for relief of employees.

The full-time weekly earnings are the earnings per week of employees working their customary full time or the earnings on broken time reduced to equivalent earnings for a full week.

Five general statistical tables are presented in this report. Summary figures for preceding years are brought into comparison with figures for 1922 in Tables A and B, while Tables C, D, and E contain data for 1922 only. Probably the two most important of these
tables are Tables C and E , which show the earnings and customary working time of employees for 1922 in great detail, thus adding considerably to the completeness of the report. A statement and explanation of the data contained in each table is given on pages 15 to 18. All of these tables are published in parts, one part for each of the ten departments, each part being placed under the heading of the department to which it relates.

## INDEX NUMBERS, BY DEPARTMENTS.

In the sections of this report relating to the several departments, the full-time weekly earnings, the full-time hours of labor per week, and the earnings per hour are shown for each of the principal productive occupations. These occupation figures have been consolidated and are presented in the form of index numbers for each department. The purpose of these indexes is to indicate the direction and extent of the change in labor conditions which have taken place from year to year. In the wage studies of this industry for the earlier years, data covering the principal productive occupations only were obtained, data for secondary productive and nonproductive labor not being collected. All occupations have been included in the wage investigations of $1914,1915,1920$, and 1922 , but the principal productive, or selected, occupations only have been used in computing index numbers for the departments for those years. This was done so that the data used for the several years, though not complete, would be strictly comparable.

Table 1 shows for each department separately index numbers for average full-time hours per week, earnings per hour, and full-time weekly earnings, computed from the data for the principal productive occupations. The index for each year is simply the per cent that the average for that year is of the average for 1913. The year 1913 is taken as the base as it was the last full year before the World War. For puddling mills 1914 is taken as the base, as data for this department were first obtained for that year. The years shown are those for which data are available.

TABLE 1.-INDEX NUMBERS OF AVERAGE FULLTIME HOURS PER WEEK, EARNINGS PER HOUR, AND FULLTTIME WEEKIY EARNINGS IN COMBINED SELECTED OCCUPATIONS IN THE SEVERAL DEPARTMENTS OF THE IRON AND STEEL INDUSTRY, BY YEARS.
$[1913=100$, except for puddling mills, for which $1914=100$.

| Department and year. | Average fulltime hours per week. | Average earnings per hour. | Average fulltime weekly earnings. | Department and year. | Average fulltime hours per week. | Average earnings per hour. | Average time weekly carnings. |

| 1922. | $9 \tilde{9}$ | 169 | 166 |  |  |  |  |

[^1]In addition to the index numbers in the above table, percentages have been computed showing the increase or decrease in earnings per hour for employees in all occupations and for those in selected occupations combined. Data for all occupations were obtained for the first time in 1914, and Table 2 shows the per cent of increase or decrease in each separate department in 1922 as compared with 1914 and 1920. No information was collected in 1921, so that 1920 is the latest year available for comparison. The differences between the increases or decreases in the "selected occupations" and those in "all occupations" are due mainly to the variations in the proportion of skilled and unskilled labor in the two groups.

[^2]| Department. | Per cent of increase ( + ) or decrease$(-) \mathrm{in}-$ |  |  |  |

FULL-TIME WORKING DAYS PER WEEK.
Table 3 shows for the several years a percentage distribution of employees in each department according to their customary number of turns per week. The figures for all years preceding 1919 are based on the number of jobs or positions required under normal conditions to operate a plant or such units of it as were operating, while those for 1919, 1920, and 1922 are based on the number of men actually appearing on the pay rolls. Figures are presented for employees working in "selected occupations" and also for those working in "all occupations" of a department.

TABLE 3.-PER CENT OF EMPLOYEES IN SELECTED OCCUPATIONS AND IN ALL OCCU. PATIONS IN EACH DEPARTMENT WORKING EACH SPECLFIED NUMBER OF DAYS PER WEEK, BY YEARS.

1 Less than 1 per cent.
A blast furnace is the only department in the industry which from the nature of its process must be in continuous operation day and night for seven days per week. The report for blast furnaces shows, therefore, the actual change in the amount of necessarily regular 7-day work throughout the entire period covered by these reports. Before the war the provision for laying off each employee in rotation one day in seven, by a system of relief men (started in 1910), had so far obtained that the percentage of employees doing 7-day work in the principal productive occupations of blast furnaces had decreased from 95 in 1910 to 59 in 1915, with an additional 4 per cent working seven days in alternate weeks. During the war period relief systems were largely abandoned, with a consequent increase in 7-day work, but in 1922 the practice of relieving employees had been so far restored that only 31 per cent were working seven days regularly.

## FULL-TIME WORKING HOURS PER WEEK.

In Table 4 is shown a percentage distribution according to the average full-time hours per week of employees in the several departments of the iron and steel industry. The percentages for the years 1907 to 1917 are based on the number of jobs or positions normally required to operate the different plants or such units as were being
oporated at the time data were obtained, while those for 1919, 1920; and 1922, are based on the number of employees actually appearing on the pay rolls.
The classified hours of the table are average hours and do not reflect the long hours of one week that may alternate with much shorter hours the next. Thus a man who works 72 hours one week and 84 hours the next has an average of 78 hours, which is tabulated in the group "Over 72 and under 84." As in Table 3, the data presented are for two groups of employees, those working in selected occupations and those working in all occupations.

TABLE 4.-PER CENT OF EMPLOYEES IN SELECTED OCCUPATIONS AND IN ALL OCCUPATIONS IN EACH DEPARTMENT WORKING EACH SPECIFIED NUMBER OF AVERAGE FULL-TIME HOURS PER WEEK, BY YEARS.

${ }^{1}$ Less than 1 per cent.
The relief provision in blast furnaces referred to in the discussion of customary working turns per week is reflected in this table in a marked degree. In 1910, 75 per cent of the employees in the principal productive occupations worked 84 hours per week regularly and 8 per cent over 72 and under 84 hours. Following 1910, however, as the practice of laying off employees at regular intervals became general, there was a material reduction in 7-day work, and in 1915 these percentages had dropped to 47 and 7, respectively. Employees necessarily worked longer hours during the war period, but in 1922 full-time hours per week reached the lowest point in blastfurnace history, only 19 per cent being shown as working 84 hours with 11 per cent working over 72 and under 84 hours.

## COMMON LABORERS.

Nearly all common laborers in the iron and steel industry are paid on an hourly basis and their earnings depend upon the number of hours worked. The basic labor rate is practically the same in all departments of a plant, and by it, to a large extent, are determined the rates for other occupations requiring little skill. The rate for common labor, therefore, is of importance beyond the limits of the occupation proper.

In this survey "common labor" has been confined to laborers, wholly unskilled and more or less a floating gang, who worked in and about the mill proper, but upon whose work the mill was not primarily dependent for operation.

Average earnings per hour of common laborers in each of the 10 departments treated in this report are shown in Table 5. The figures here presented are also published in the several sections of this report relating to specific departments:
TABLE 5--AVERAGE EARNINGS PER HOUR OF COMMON LABORERS IN SPECIFIED DEPARTMENTS OF THE IRON AND STEEL INDUSTRY, 1907 TO 1922, BY DISTRICTS AND BY YEARS.
\For number of plants reporting see sections relating to the specific departments, published elsewhere in this report.]

## AVERAGE HOURLY EARNINGS IN DEPARTMENTS, 1922, BY DISTRICTS.

Table 6 shows, by districts, the average hourly earnings in 1922 in each department as a whole, all occupations combined. The average was obtained by dividing the total earnings by the total hours worked.

TABLE 6.-AVERAGE HOURISY EARNINGS IN EACH DEPARTMENT, ALL OCCUPATIONS COMBINED, 1922, BY DISTRICTS.

The highest hourly averages are found in the sheet and tin-plate mill departments, the rolling crews in these mills working in three shifts at high speed and making exceptionally high hourly rates. The lowest hourly average is found in the blast-furnace department, owing to the preponderance of common labor or of occupations requiring only very moderate skill. The hourly arerages for the two steel-making departments, the pudding mill department, and the remaining rolling mills all fall within a range of two cents, the puddling mill average being the highest.

The Pittsburgh and the Great Lakes and Middle West districts show considerably higher average hourly earnings than the Eastern and Southern districts, in all departments except blooming mills. This condition was due to the lower rates paid to common labor in the Eastern and Southern districts. The proportion of common labor and of occupations requiring little skill in nearly every department was sufficient to affect materially the average for all occupations, even though there was in many cases much less variation between the rates of highly skilled occupations in the several districts. In the blooming mill department some of the highly skilled occupations were paid unusually high rates in the Eastern district.

## SCOPE OF 1922 DATA.

In 1922 information was obtained from plants located in 13 States. The plants covered have been grouped into four districts. These districts were established, not strictly on geographical lines, but rather according to similar industrial conditions. The "Eastern" district covers the eastern part of New York, of Pennsylvania, and of Maryland. The "Pittsburgh" district includes not only the plants in Pittsburgh proper, but also others in western Pennsylvania, those along the border line in Ohio from Youngstown south to Bellaire, and those located in the "Panhandle" of West Virginia. The "Great Lakes and Middle West" district includes plants scattered along the Great Lakes, and also some in inland districts, including Colorado. Although this is a very large territory geographically, it is essentially a unit industrially, as far as the iron and steel industry is concerned, the wage rates of the entire district being based largely on those paid in the two producing centers, Buffalo and Chicago. The "Southern" district includes plants in Virginia, Tennessee, Alabama, Kentucky, and the southern part of Ohio. The southern Ohio plants are included in the Southern district because the conditions, both as to wages paid and the general class of labor employed, resemble much more closely the conditions of the Alabama and Kentucky plants than they do those of the other plants of Ohio.

The actual number of employees reported in each district in each department and the number of plants covered in 1922 are shown in Table 7. Each department of an establishment has been counted as a separate plant.

## EXPLANATION OF TABLES.

Following is a brief explanation of the data contained in the five major statistical tables, parts of which appear in each of the sections relating to the several departments.

Table A.-Average customary full-time hours per week, average carnings per hour, and average full-time weekly earnings, together with the index numbers computed from these averages, are presented in this table for the principal productive occupations in each department separately. The average customary full-time hours per week of employees have been classified and the percentages of employees working such hours are also shown in the table. Data are presented for all years for which information is available. Figures for 1922 were compiled for this report and those for earlier years were taken from prerious reports published by this bureau.

The number of employees reported for all years up to and including 1917, with the exception of laborers and those employed in certain other unskilled general positions, is the number of jobs or positions required in each occupation to operate the plants under normal conditions or such units as were operated for the pay period scheduled. For the years 1919, 1920, and 1922 the actual number of individuals appearing on the pay rolls in all occupations, both skilled and unskilled, have been reported.

The index numbers have been added as an aid in making a comparison of the actual data over a period of years. The index for each year is the per cent that the average for that year is of the average for 1913.

Table B.-A classification showing numbers and percentages of employees according to the number of days, or turns, per week customarily worked is presented in Table B. The figures are presented for the years 1907 to $1922,{ }^{4}$ for each district reported and for all districts combined. In the data for 1922 all employees have been classified as nearly as possible by their regular working time. Gas or repair turns, however, have been disregarded when employees customarily work such turns at less frequent intervals than once

[^4]every three weeks. In a few instances relief systems have also been omitted where the periods elapsing between reliefs were longer than three weeks. Such variations in the regular working time of employees have been cared for in the past by notes attached to the table. ${ }^{5}$ These variations, however, while many in number, affect only a very small per cent of the employees, and in most cases the change in working time would be so slight as to be almost negligible. As data for each new year are added to the table, the notes likewise increase, and in order to avoid this great multiplicity of notes, which on the whole are of little consequence, they have been entirely omitted.

With the exception of laborers and those employed in certain other unskilled general positions, the number of employees reported for each year up to and including 1917 represent the number of jobs or positions required to operate the plants under normal operating conditions, or such units as were operated for the period scheduled, and does not necessarily mean the number of men who actually worked during the pay period. All figures shown for 1919, 1920, and 1922 are based on the number of individuals appearing on the pay rolls. In the data for 1922 all employees who worked at two or more occupations during the pay period in which the number of turns, or days, per week differed have been tabulated as often as their turns per week changed. This method has, of course, led to duplications in the actual number of employees in many instances and in connection with Table $B$ a text table is published for each department, showing the number of actual employees in each district together with the number of duplications or repeated employees in both selected and all occupations. Data for all occupations were first obtained in 1914, and a separate tabulation has been made for all occupations (in addition to that for selected occupations) for 1914, 1915, 1920, and 1922.

Table C.-This table covers the most important facts relative to the customary working time, actual earnings, and actual hours of employees in the principal productive occupations in each department. Data for each occupation are presented for each district and for all districts combined.

The customary working time has been divided into average turns per week, average hours per turn, and average full-time hours per week. These averages are based on the number of jobs or positions required in each occupation to operate the plants under normal conditions or such units as were operated for the period scheduled. However, allowance has been made for the regular relief of employees, if any, so that the report shows average customary hours and turns for individual employees, provided they work regularly and remain in the same position throughout the pay period. The actual number of employees engaged in each occupation is also shown, and they have been classified according to their average customary full-time hours per week. These hours are average hours and do not show the full-time hours of an employee for any one week, unless such employee does not alternate between day and night shifts, or works day and night shifts of equal length.

The average hours worked, average earnings per pay period, and average earnings per hour are based on the total hours and earnings

[^5]of each employee as taken from the pay rolls. The average earnings per hour were computed by dividing the total actual earnings received for the pay period by the total actual hours worked in each occupation. The average hours worked and the average earnings received for the half-month period have been obtained by dividing the totals in each case by the actual number of employees engaged in the occupation.

In addition the table shows similar averages for all work done in the department by employees, whether in the occupation under consideration or in any other occupation at which they may have worked during the period scheduled. This second set of averages is deemed necessary, as the average for the specified occupation alone fails to indicate the entire time and earnings of the individuals under consideration. These averages have been computed by the same method as the averages for the specified occupation.

Table D.-Classified hourly earnings are shown in this report for employees in two occupations only in each department. These occupations have been selected as representative of the degree of variation or spread of wages in all occupations. In no case does the same occupation appear in any two departments, except that of rollers, which appears in puddling mills and sheet mills, and that of heaters, which appears in blooming mills and tin-plate mills, and in these departments the duties of the repeated occupations vary so widely that they may be considered two distinct occupations. Exceptionally high or low earnings per hour in practically all occupations indicate that the employees were working under unusual conditions, such as performing work on Sunday at time and one-half rate, or working on a turn which produced exceedingly high or low tonnage.

Table E.-This table presents in detail the number of turns, hours per turn, and full-time hours per week of employees who regularly work 7 days per week or 12 hours or more per ďay either all or a part of the time. Data are shown for three groups of employees for each department, by districts, as follows: Those who work days only, those who work nights only, and those who alternate or rotate from day to night shift. All employees who changed occupations during the pay period scheduled, when the customary working time of the new occupation was different from the old in any way, have been omitted from this table in order to reduce the complications which arise from duplicated or repeated employees. For example, if an employee worked as a laborer on the basis of seven turns per week of 12 hours each and a cinderman on the basis of six turns of 13 hours each, he would not appear in this table.

There are many divisions of the 24 -hour workday, brought about in numerous instances by employees arranging to divide day and night work into rarious lengths to suit their desires, and employers have recognized these divisions. This accounts for such turns as 11 hours for day and 13 hours for night, 10 hours for day and 14 hours for night, or $10 \frac{1}{2}$ hours for day and $13 \frac{1}{2}$ hours for night. While these turns are equivalent to a regular 12 hour shift, the different length of turns customarily worked by employees are shown in this table.

Owing to the gas and fix-up or repair turns necessary in many of the departments a number of employees customarily work a week
of 7 days at very infrequent intervals or occasionally a 12 -hour turn. Such employees have not been considered as regular 7-day or 12-hour workers and have not been included.

Employees in two crews who alternate on day and night work and who work seven days on day turn and seven nights on night turn, must work a long shift of 18 to 24 hours when changing turns unless there is some system of relief provided. ${ }^{-}$Likewise, when on a threeshift system, emplovees must work more than 8 hours out of 24 when changing turns. There are, however, varied systems of relief in force in many plants whereby this long tum is avoided.

In some instances in the table hours are reported for seven days, yet the number of days worked are reported as six. The figures are for $\mathfrak{a}$ seven-day occupation wherein each employee was relieved one day in seven, but either this was not always on the same day each week, or information as to which day was not available; therefore the hours for all days have been shown and the relief indicated in the full-time hours per week.

The regular relief systems in force in many plants are shown to a large extent by this table, but it must not be assumed that there was no chance for rest where such have not been shown. In some plants, while there is no regular system of relief, the employees are not held strictly to the working days of the plant and can often take a day off as they desire it, the plant putting another man in the place of the one absent. As it was impossible to determine when or how often a man might be excused under such conditions, such plants have been treated in this table as though no relief was granted.

Workmen whose labor is continuous and who are subjected to high temperatures usually have spell hands-that is, three men work on a two-man position, or two men work on a one-man position, which arrangement allows each man in rotation intervals for rest. Such intervals of rest are considered as time on duty.

[^6]
## BLAST FURNACES.

The 1922 survey includes 32 representative blast-furnace plants which employed 10,556 men in all occupations. The number of employees reported in 1922 is somewhat less than in 1920, although data were obtained from a greater number of establishments, as in most cases companies were operating a fewer number of stacks. Of the 10,556 employees reported 6,037 are found in the principal productive occupations for which separate figures are given. Data were first obtained for this department in 1907 and comparative figures are presented for the period 1907 to $1922 .{ }^{1}$

Considering the principal productive occupations as a whole, average full-time hours per week for 1922 show no change when compared with 1920, and a decrease of 7 per cent as compared with 1913. Average hourly earnings, however, declined 33 per cent during the period 1920 to 1922 but were 91 per cent higher than in 1913. Average full-time weekly earnings followed very closely the course of hourly earnings, as changes in full-time hours per week were very slight as compared with the variations in hourly earnings. The average earnings per hour of all employees in all occupations in 1922 was 39.8 cents as compared with 57.1 cents in 1920.

The most significant facts concerning average earnings and average hours in each of the principal productive occupations of blast furnaces are shown in Table A (1). While the customary working time of the 16 selected occupations combined shows no change in 1922 as compared with 1920, when considered separately the average full-time hours per week of 11 of the occupations show increases and 5 decreases. Increases range from 0.5 hours for blowing engineers to 5.7 hours for bottom fillers. The largest decrease is found in the occupation of laborers, which contains 25 per cent of all employees in selected occupations. The average full-time hours per week of laborers in 1907 were 75.8 which were reduced in 1913 to 72.5 . In 1914 and 1915 working time again decreased to 70.8 and 71.3 hours respectively, but in 1917, owing to war conditions, hours began to increase and the high mark of 77.9 was reached in 1919. By 1920 the average had decreased to 72.3 hours per week and by 1922 to 67.7 hours.

Average earnings per hour have decreased in each of the 16 selected occupations when 1922 is compared with 1920 and 1919 but the 1922 figures are greater in each instance than those for any other year for which data are presented. The decreases between 1920 and 1922 range from 13.6 cents per hour for iron handlers and loaders to 23.7 cents for blowing engineers. For example, the average earnings per hour of blowing engineers fluctuated between 23 and 26.2 cents from 1909 to 1915. In 1917 earnings began to increase, and the average for that year was 39.1 cents per hour. The increase continued through 1919 to the high mark of 72 cents in 1920. The average for 1922 was 48.3 cents. Table A (1) shows like figures for the other occupations as well.
Average full-time weekly earnings in each selected occupation decreased in about the same proportion as average hourly earnings.

[^7]From the nature of its process a blast furnace is in continuous operation seven days per week. However, owing to the various systems of relief in force in many plants, only 31 per cent or less of the employees in any selected occupation worked an average full time of 84 hours per week in 1922. A few 7 -day workers were on an 8 -hour basis and are included in the group "Over 48 and under 60." The large majority of the employees in this department are found in the groups " 72 " and "Over 72 and under 84 .

Index numbers for full-time hours per week, earnings per hour, and full-time weekly earnings are also contained in Table A(1). These are simply percentages computed from the averages presented in the table, using the average for 1913 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 4.

Table A (1)-AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULLTIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1907 TO 1922, BY OCCUPATIONS-BLAST FURNACES. ${ }^{1}$

${ }^{8}$ Including less than 1 per cent whose full-time hours were 91.

The number of employees reported in 1922 includes some duplications, or repeated employees, as stated in the general explanation of Table B (p. 15). Of the 6,164 employees reported in the selected occupations for all districts combined there were 127 duplications, leaving 6,037 actually engaged, and the total of 10,716 employees shown for all occupations represents 10,556 individuals.

The gross number of employees reported, together with the net number of actual employees for selected occupations and for all occupations in each district and in all districts combined, are shown in Table 8.

[^8]| District. | Employees in selected occupations. |  |  | Employees in all occupations. |  |  |

The customary working time per week of employees in the blastfurnace department has been classified, and the number and per cent of employees coming under each classification are shown in Table B (1).

While the blast furnace process is a continuous operation, the amount of 7 -day work among the employees varies according to the prevalence of systems for relieving men one day each week. These systems developed between 1910 and 1915, but were interrupted by the war. The percentage of seven-day workers in the combined selected occupations declined from 95 in 1910 to 81 in 1913 and to 59 in 1915, but owing to the war, increased to 80 in 1919, and then dropped to 54 in 1920. In 1922 the number of employees working the 7-day week was still further reduced and less than onethird, or 31 per cent, worked that number of turns. The number working six days per week has, however, increased from 5 per cent in 1910 to 57 per cent in 1922.

The greatest reduction in seven-day workers in 1922 was in the Southern district, 35 per cent working these turns as compared with 84 per cent in 1920, and the six-day workers increased from 16 per cent in 1920 to 63 per cent in 1922. There was also a material decrease in working time in the Great Lakes and Middle West district, where 28 per cent worked the seven-day week in 1922 as compared with 68 per cent in 1920.

In all occupations and all districts combined the percentage of regular seven-day workers was 29 in 1922; 54 in 1920, and 53 in 1914.

Table B (1)--NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1907 TO 1922, BY YEARS-BLAST fURNACES.
[For explanation of this table see p. 15.]

1 The figures in this column for the years 1907 to 1917 represent the number of jobs and for the years 1919, 1920, and 1922 the actual number of men employed.

2 Less than 1 per cent.

TABLE B. (1)-NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OE DAYS PER WEEK IN EACH BISTRICT AND ALL DISTRICTS COMBINED, 1907 TO 1922, BY YEARS—BLAST FURNACES-Concluded.

${ }^{9}$ Less than 1 per cent.
Table C (1) presents the most significant facts relative to customary and actual working time, actual earnings per pay period, and earnings per hour of employees in 32 bliast furnace plants, by occupations and districts, for the year 1922. In addition, for each occupation are shown the number of positions and the number of employees actually working during the pay period and also the time and earnings of the same employees during the same period at occupations other than the occupation specified.

Referring to the occupation of stockers, by way of illustration, 771 positions were filled by a total of 1,316 men during the pay period seheduled. The average customary full time of the men working in these positions was 6.4 turns per week, 11.6 hours per turn, and 74.4 hours per week. In the distribution of the customary working time of the 1,316 actual employees, 289 , or 22 per cent, worked 84 hours per week, while 522 , or 40 per cent, worked 72 hours per week.

The average hourly earnings of stockers ranged from 27.4 cents in the Southern district to 37.6 cents in the Great Lakes and Middle West district, with an average of 35.2 cents for all districts combined. The range for average full-time weekly earnings was from $\$ 20.85$ in the Southern district to $\$ 27.94$ in the Pittsburgh district, and the average for all districts was $\$ 26.06$.

Owing to the fact that a large number of the employees worked in more than one occupation during the pay period and in order to give the complete hours and earnings for such employees, separate figures are given which include all occupations at which they worked. While 1,316 men working as stockers averaged 96.9 hours per pay period, they also averaged 29.3 hours at other work, making a total of 126.2 average hours per pay period in specified (stocker) and other occupations. During the 96.9 hours they worked as stockers they earned an average of $\$ 34.13$, or 35.2 cents per hour. When the work of these men in all occupations is considered, they earned $\$ 44.32$-that is, $\$ 10.19$ was earned in some other occupation than stocker.

The average earnings per hour in the principal productive occupations in this department in 1922 ranged from 30.7 cents for iron handlers and loaders to 67.8 cents for blowers, and the average actual hours worked per pay period ranged from 72.6 for laborers to 125.7 for blowers. Employees who worked as larrymen's helpers earned the greatest amount at "other occupations." These employees earned an average of $\$ 34$ as larrymen's helpers and an additional $\$ 17.54$ at other work.

Iron handlers and loaders earned the least at other occupations, the amount being $\$ 3.99$.

Table C (1).-AVERAGE CUSTOMARY FULL-TIME HOURS WORKED AND AVERAGE ACTUAL EARNINGS PER PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-BLAST FURNACES.

Table D (1) shows the number of employees and the average and classified earnings per hour of keepers and laborers in 1922, by districts and all districts combined.

The average hourly earnings for keepers was 42 cents and for laborers 31.6 cents, and for the most part the earnings of employees did not vary more than 20 to 25 cents per hour. In some few instances, however, owing to unusual conditions, employees earned considerably more or less than the average.

TAble D (1)-AVERAGE AND CLASSIFIED EARNINGS PER HOUR FOR TWO SELECTED OCCUPATIONS, 1922, BY DISTRICTS-BLAST FURNACES.

The customary turns per week, hours per turn, and full-time hours per week of those employees in the blast-furnace department who worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of their time, are presented in detail in Table E (1). As stated in the general explanation of this table (p. 17), data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

Table E (1).-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-BLAST FURNACES.
[This table includes only employees who worked but one combination of customary days and hours du:ing pay period. For explanation of this table see p. 17.]

TABLE E (1).-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-BLAST FURNACES-Concluded.
sUmMARy.

| Item. | Eastern district. | Pittsburgh district. | Great <br> Lakes <br> and <br> Middle <br> West district. | Southern district. | Total. | Per cent of employees who worked but one combination of days and hours. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Total blast furnsce employees. . . . . . . . . . . . . | 853 | 3,382 | 3,379 | 2,942 | 10,556 |  |
| Employees who worked- |  |  |  |  |  |  |
| One combination of days and hours only ..... | 768 | 3,095 | 3,222 | 2,670 | 9,755 | 100 |
| 7 -day week or straight or average day of 12 or more hours all or part of the tme........... |  |  |  |  |  | 84 |
| 7-day week all of the time.............................. | 480 | 2,695 612 | 2,604 804 | 2,167 | 8,151 | 89 |
| 7-day week part of the time. . . . . . . . . . . . . . . . | 144 | 683 | 471 | 26 | 1,324 | 14 |
| Straight or average day of 12 or more hours all of the time. | 531 | 2,514 | 2,086 | 1,717 | 6,848 | 70 |
| Straight or average day of 12 or more hours part of the time. | 39 | 252 | 9 |  | 300 | 3 |
| 7 -day week and straight or average day of 12 or more hours all of the time. | 423 | 522 | 262 | 443 | 1,600 | 17 |

Of the total number of blast-furnace employees reported, 9,755 worked but one combination of customary days and hours. Of these 9,755 employees, 8,151 , or 84 per cent, regularly worked a 7 -day week or a straight or average day of 12 or more hours all or part of the time, 1,025 working days only, 64 working nights only, and 7,062 alternating between day and night work. Seventy per cent $(6,848)$ worked a straight or average day of 12 or more hours all of the time, and 17 per cent $(1,650)$ regularly worked a 7 -day week and a straight or average day of 12 or more hours all of the time.

## BESSEMER CONVERTERS.

The 1922 survey includes 11 representative Bessemer converting plants, which employed 2,294 men in all occupations. The number of employees reported in 1922 is somewhat smaller than in 1920, as many of the plants were operating only part time and some were using only a portion of their full equipment. Of the total number of employees presented, 1,091 are found in the principal productive occupations for which separate figures are given. Some duplexing (a combination of the Bessemer and basic open-hearth processes) was done by a few of the establishments from which data were obtained, although there was only one plant which was engaged the majority of its time on this work. Data were first obtained for this department in 1907 and comparative figures are presented for the period 1907 to $1922 .{ }^{1}$

Data for this department were first obtained for the year 1907, and since that time the regular working time of employees as a whole has changed very little. In 1907 the average full-time hours per week of employees in all selected occupations combined were 69.5, in 1913 68.1, in 192067.2 , and in 1922 they were reduced to 66.5. During the same period, however, earnings more than doubled. In 1907 the average hourly earnings for employees in the same occupations was 25.7 cents per hour, in 1913 they had increased to 30.2 cents, and in 1920 an average of 72.7 cents per hour was reached. This marks the high point of wages in this department, and in the early part of 1921 they began to decline. The average for 1922 was 51.4 cents, which, while considerably less than the averages for 1919 and 1920 , is still double the average for 1907 and much higher than that for 1913.

The average full-time weekly earnings followed very closely the course of average earnings per hour, as full-time hours per week were subject to only slight variations. When the earnings of all employees in all occupations are considered, the average per hour decreased from 67.7 cents in 1920 to 47 cents in 1922.

The most significant facts concerning average earnings and average hours in each of the principal productive occupations in this department for the years 1907 to 1922 are shown in Table A (2). When the average full-time hours of the 19 selected occupations are considered separately, 16 of them show an increase in average fulltime hours per week in 1922 over 1920, 2 show a decrease, and I remains unchanged, while as a whole a slight decrease is shown. This is caused by the fact that laborers, one of the occupations in which a decrease occurred, comprise practically one-third of the employees reported in selected occupations. In 1907 laborers were working an average full time of 78 hours per week. This average decreased to 75.1 hours in 1913 and continued to decrease to 70.8 in 1919. It advanced to 74.9 in 1920 but again decreased to 70.7 in 1922.

[^9]Average earnings per hour have decreased perceptibly in each of the occupations when 1922 is compared with 1919 and 1920, and in some cases the 1922 average is below that for 1917, but in all instances the 1922 figures represent a substantial increase over other years. When 1922 is compared with 1920, the year in which earnings reached the peak in all occupations, decreases in average hourly earnings ranged from 17.4 cents for laborers to 43.9 cents for stopper setters. The skilled occupations of blowers and vessel men were the least affected. In 1907 stopper setters received an average of 63 cents per hour. Wages during the next few years were subject to considerable fluctuation but the average remained below that for 1907 until 1917, when an average of 81.5 cents was reached. Due to war conditions wages rapidly advanced from that point to the high average of $\$ 1.225$ per hour in 1920. In 1922 the average for stopper setters decreased to 78.6 cents per hour.

The changes in full-time weekly earnings were approximately the same as in hourly earnings, as fluctuations in full-time hours were very slight as compared with the movement in earnings per hour.

In 1922 only 4 of the 19 selected occupations reported any employees who worked 84 hours per week, as shown by the percentage distribution of full-time hours per week. Twenty per cent of the cinder pitmen, 13 per cent of the ingot strippers, 6 per cent of the laborers, and 3 per cent of the stockers were reported as being on that basis.
Index numbers for full-time hours per week, earnings per hour, and full-time weekly earnings are also contained in Table A (2). These are simply percentages computed from the averages presented in the table, using the average for 1913 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 4.

Table A (2)-AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULL-TIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1907 TO 1922, BY OCCUPATIONS-BESSEMER CONVERTERS. ${ }^{1}$

Table A (2).-AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULL-TYME W.EEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1907 TO 1922, BY OCCUPATIONS—BESSEMER CONVERTERS-Concluded.

${ }^{2}$ Including 7 per cent whose full-time hours per week were 91.
Less than 1 per cent.
The number of employees reported in 1922 includes some duplications, or repeated employees, as stated in the general explanation of Table B (p. 15). Of the 1,216 employees reported in selected occupations for all districts combined there were 125 duplications, leaving 1,091 actually engaged, and the total of 2,451 employees shown for all occupations represents 2,294 individuals.
The gross number of employees reported, together with the net number of actual employees, for selected occupations and for all occupations, in each district and in all districts combined, are shown in Table 9.

TABLI 9-NUMBER OF EMPEOYEES REPORTED, NUMBER OF DUPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELGCTED OGCUPATIONS AND IN ALL.OQCUPATIONS, BY DISTRICTS, 1922-BESSEMER. CO NVER TERS.

The customary working time per week of employees in the Bessemer converting department for the years 1907 to 1922 has been classified, and the number and per cent of employees coming under each classification are shown in Table B (2).

The working time of employees in the Bessemer converting department does not show as wide a variation of days or turns per week as most of the other departments, practically all of the employees working either 6 days, 7 days, or 6 days and 7 days alternately. The heading in Table B (2) " 6 days and 7 days alternately" indicates that the plants were running 6 days and 7 nights or 7 days and 6 nights each week, being shut down one day or one night each week, and that the employees reported under this heading worked 6 turns one week and 7 turns the next. In 1922, 83 per cent of the employees in the selected occupations of Bessemer converters worked 6 days per week. This is the largest percentage for any year reported except 1917, when 85 per cent worked 6 days. In 1922, 6 per cent of the employees in selected occupations regularly worked 7 days per week, as compared with 23 per cent in 1920.

When all occupations are considered, 81 per cent worked 6 days per week, as compared with 59 per cent in 1920. As 6 -day work increased, 7 -day work doclined, and the 10 per cent in 1922 is the smallest percentage shown in any year for which data are presented.
$T_{\text {Able }} \mathbf{B}$ (2).-NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK, IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1907 TO 1922, BY YEARS-BESSEMER CONVERTERS.
[For explanation of this table see p. 15.]

1 The figures in this column for the years 1907 to 1917 represent the number of jobs, and for the years 1919, 1920, and 1922 the actual number of men employed.
2 Less than 1 per cent.

Table B (2).-NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1907 TO 1922, BY YEARS-BESSEMER CONVERTERS—Concluded.

${ }^{2}$ Less than 1 per cent.

Table C (2) presents the most significant facts relative to customary and actual working time, actual earnings per pay period, and earnings per hour of employees in the Bessemer converting department, by occupations and districts, for the year 1922. In addition, for each occupation are shown the number of positions and the number of employees actually working during the pay period and also the time and earnings of the same employees during the same period at occupations other than the occupation specified.

Taking the occupation of first regulators, for example, 24 positions were filled by 32 employees during the scheduled pay period of onehalf month. The average customary full time of the men working as first regulators was 6 turns per week, 10.6 hours per turn, and 64.3 hours per wreek. Of the 32 actual employees 18 , or 56 per cent, customarily worked 72 hours per week, while 12 , or 38 per cent, worked under 72 hours. The average hourly earnings of first regulators in the Pittsburgh and Great Lakes and Middle West districts combined were 65 cents, while the full-time weekly earnings were $\$ 46.85$ in the Pittsburgh district and $\$ 36.90$ in the Great Lakes and Middle West district.
Owing to the fact that a large number of the employees worked in more than one occupation during the pay period and in order to give the complete hours and earnings for such employees, separate figures are presented which include all occupations at which they worked. While 32 men working as first regulators averaged 96.8 hours per pay period, they also averaged 28.4 hours at other work, making a total of 125.2 average hours per pay period in specified (first regulators) and other occupations. During the 96.8 hours they worked as first regulators they earned an average of $\$ 62.96$, or 65 cents per hour. When the work of these men in all occupations in which they were engaged is considered, they earned $\$ 78.56$-that is, $\$ 15.60$ was earned in some occupation other than first regulators-and their hourly average earnings dropped to 62.8 cents.

The average earnings per hour in the principal productive occupations of this department in 1922 ranged from 36.3 cents for laborers to 95.1 cents for blowers, and the average actual hours worked per pay period ranged from 48.5 hours for laborers to 121 for ingot strippers.

In only two occupations were the average hourly earnings for specified and other occupations greater than the average earnings per hour in the specified occupation.

[^11]Table C (2)--AVERAGE CUSTOMARY FULL-TIME HOURS WORKED AND AVERAGE ACTUAL EARNINGS PER PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-BESSEMER CONVERTERS.

Table $D$ (2) shows the number of employees and the average and classified earnings per hour for blowers and vessel men in 1922, by districts, and all districts combined.

For blowers the range in earnings for both districts was from 70 cents to $\$ 1.25$, with an average of 95 cents for both districts combined. The largest number of employees in any classification, 13, or 39 per cent, were found under the heading "\$1 and under \$1.25," and 10 , or 30 per cent, earned between 80 and 90 cents.

The earnings of vessel men ranged from 40 cents to $\$ 1.75$ per hour, with an average of 89.4 cents for all districts combined.

Table D (2)--AVERAGE AND CLASSIFIED EARNINGS PER HOUR FOR TWO SELECTED OCCUPATIONS, BY DISTRICTS, 1922-BESSEMER CONVERTERS.
[For explanation of this table see p. 17.]

Customary turns per week, hours per turn, and full-time hours per week of those employees who regularly worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of their time, are presented in detail in Table E (2) for the Bessemer-converter department. As stated in the general explanation of this table (p. 17), data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

Table E (2)-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-BESSEMER CONVERTERS.
[This table includes only employees who worked but one combination of customary days and hours during pay period. For explanation of table see p. 17.]

SUMMARY.

| Item. | Pittsburgh district. | Great <br> Lakes and Middle West district. | Total. | Per cent of employees whoworked but one combination of days and hours. |
| :---: | :---: | :---: | :---: | :---: |
| Total Bessemer converter employees. | 1,309 | 985 | 2,294 |  |
| Employees who worked- |  |  |  |  |
| One combination of days and hours only ........... | 1,089 | 765 | 1,854 | 100 |
| 7 -day week or straight or average day of 12 or more hours all or part of the time.. | 883 | 616 | 1,499 | 81 |
| 7-day week all of the time... | 184 | 13 | 197 | 11 |
| 7-day week part of the time............................ | 95 | 55 | 150 | 8 |
| Straight or average day of 12 or more hours all of the time. | 700 | 561 | 1,261 | 68 |
| Straight or average day of 12 or more hours part of the time | 144 | 5 | 149 | 8 |
| 7 -day week and straight or average day of 12 or more hours all of the time. | 166 | 13 | 179 | 10 |

- Of the total number of Bessemer-converter employees reported, 1,854 worked but one combination of customary days and hours. Of these 1,854 employees, 1,499 , or 81 per cent, regularly worked a 7-day week or a straight or average day of 12 or more hours all or part of the time, 117 working days only, 27 working nights only, and 1,355 alternating between day and night work. Sixty-eight per cent $(1,261)$ had a straight or average day of 12 or more hours all of the time, and 10 per cent (179) regularly worked a 7 -day week and a straight or average day of 12 or more hours all of the time.

## OPEN-HEARTH FURNACES.

The basic open-hearth process alone is treated in this report and only furnaces of the fixed or stationary type have been included. While tilting or rolling furnaces are used to some extent by a few companies in different localities, this type of furnace is chiefly of local significance and is not general to the industry. Consequently the material used has been limited to stationary furnaces in which the basic process is employed and all figures presented are strictly, comparable.

The 1922 survey includes 22 representative open-hearth furnace plants which employed 7,954 employees in all occupations. Of the total number of employees reported 4,515 are included in the principal productive occupations for which separate figures are given. Data were first obtained for this department in 1910 and comparative figures are presented for the years 1910 to $1922 .{ }^{1}$

Considering the principal productive occupations as a whole, in 1922 earnings in this department were at a higher level, as shown by the index numbers for departments, than any other department for which data are presented. However, owing to economic conditions, average earnings per hour had decreased 28 per cent since 1920 and were 15 per cent less than in 1919, but the 1922 figure was still 102 per cent greater than that of 1913 and 1914. Full-time hours per week decreased 7 per cent in 1922 as compared with 1913, although a slight increase of 4 per cent since 1920 is noted. Fulltime weekly earnings followed very closely the course of hourly earnings, as the changes in full-time hours were very slight as compared with those in hourly earnings. When all occupations are considered, earnings decreased from 67.1 cents per hour in 1920 to 48 cents in 1922.

The most significant facts concerning average earnings and average hours in each of the 15 principal productive occupations are summarized in Table A (3). When 1922 is compared with 1920, average full-time hours per week increased in 13 of the occupations and decreased in 2. Increases ranged from 1.8 hours per week for locomotive engineers to 5.5 hours for stock cranemen, and the decreases were 4.5 hours for mold cappers and 0.6 hour for laborers. The 1922 averages, while greater than those for 1920 in most cases, are lower than those for any other year in each occupation except ingot strippers. The working time of ingot strippers increased 3.5 hours per week from 1920 to 1922, marking the highest point in full-time hours since 1915.

Earnings have decreased considerably since 1920 in each occupation and are lower than the earnings for 1919, but as compared with any other year for which data are presented the 1922 averages show an increase in each instance. Some idea of the changes in earnings in this department which have taken place from year to year may be gained from a study of the occupation of charging-machine

[^12]operators. Employees in that occupation in 1910 earned an average of 29.4 cents per hour, with possible full-time earnings of $\$ 22.52$ per week. During the next few years earnings varied but slightly and it was not until 1917 that any considerable change was noticed. In that year earnings had advanced to 46.7 cents per hour and $\$ 35.91$ per week. Wages increased rapidly during the next three years, reaching the high average of 89.5 cents per hour and $\$ 59.83$ per week in 1920. The increase in earnings during the war period was followed by a decline of 27 cents per hour and $\$ 14.74$ per week, in 1922 as compared with 1920, the averages for 1922 being 62.5 cents and $\$ 45.09$, respectively.

The increase in customary working time of the different selected occupations is best illustrated by reference to the classification of employees according to their full-time hours per week. The percentage of employees in 1922 who customarily worked 84 hours per week has increased over that in 1920 in each occupation except mold cappers and ingot strippers. There were no 84 -hour workers in the occupation of mold cappers in either year and ingot strippers decreased from 21 per cent in 1920 to 20 per cent in 1922. The greatest increase, from 1 per cent in 1920 to 21 per cent in 1922, occurred in the occupation of melters' third helpers. In a few of the occupations a small percentage of employees are found for the first time in the group " 48 and under."

Index numbers for full-time hours per week, earnings per hour, and full-time weekly earnings are also contained in Table A (3). These are simply percentages computed from the averages in the table, using the average for 1913 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 4.
Table A (3)--AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULL-TIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCUPATIONS-OPEN-HEARTH FURNACES. ${ }^{1}$

TABLEA (3)--AVERAGE CUSTOMARY FULLLTIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULL-TIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCUPATIONS-OPEN-HEARTH FURNACES--Concluded.

2 less than 1 per cent.
The number of employees reported in 1922 includes some duplications, or repeated employees, as stated in the general explanation of Table B ( p .15 ). Of the 4,778 employees reported in selected occupations for all districts combined in 1922, there were 263 duplications, leaving 4,515 actually engaged, and the total of 8,298 employees shown for all occupations represents 7,954 individuals.

The gross number of employees reported, together with the net number of actual employees for selected occupations and all occupations in each district and all districts combined, are shown in Table 10.

TABLE 10-NUMBER OF EMPLOYEES REPORTED, NUMBER OF DUPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELECTED OCCUPATIONS AND ALL OCCUPations, 1922, BY districts-open-heartil fur naces.

| Total. | 4,778 | 263 | 4,515 | 8,298 | 344 | 7,954 |

The customary working time per week of employees in the open-hearth-furnace department for the years 1910 to 1922 has been classifred, and the number and per cent of employees coming under each classification are shown in Table B (3).

The working time of employees in the open-hearth furnace department shows a wide variation of days or turns per week-5 days, 6 days, and 7 days, with the many combinations thereof. However, nearly all of the employees were found working 6 days, 7 days, or 6 and 7 days alternately, with only a few employees found in the other classifications. The heading " 6 days and 7 days alternately" indicates that the plants were running 7 days and 6 nights or 6 days and 7 nights each week, being shut down for one day or one night each week, or that the employees were relieved one turn every two weeks while the plant itself was in continuous operation and that the employees reported under this heading worked 7 turns one week and 6 turns the next.

A study of Table $\mathbf{B}$ (3) will show some material changes between 1920 and 1922. In 1920 in selected occupations, all districts combined, 25 per cent worked 6 days per week, while in 1922 the per cent of employees working 6 days had increased to 53 . In 1920, 42 per cent worked 6 days and 7 days alternately, while in 1922 only 17 per cent worked these turns. The per cent of employees who worked 7 days per week had decreased from 30 in 1920 to 23 in 1922. When the total employees for all occupations combined are considered, the percentages under each heading are practically the same as they were for selected occupations alone. When each district is studied separately some marked changes appear in the 7 -day workers between the years 1920 and 1922 , but when taken as a whole the changes are not so great.

TABLE B (3).-NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1910 TO 1922, BY YEARS-OPEN-HEARTH FURNACES.
[For explanation of this table, see p. 15.]

1 The figures in this cahum for the years 1910 to 1917 represent the number of johs and for the years 1919, 1920, and 1922 the actual number of men employed.
L Less than 1 per cent

Table $\mathbf{B}$ (3).-NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED 1910 TO 1922, BY YEARS-OPEN-HEARTH FURNACES-Concluded.

2 Less than 1 per cent.

Table C (3) presents the most significant facts relative to customary and actual working time, actual earnings per pay period, and earnings per hour of employees in 22 open-hearth furnace plants in 1922, by occupations and districts. In addition, for each occupation are shown the number of positions and the number of employees actually working during the pay period and also the time and earnings of the same employees during the same period at occupations other than the occupation specified.

Referring to the occupation of melters' first helpers by way of illustration: In 22 plants the 454 positions were filled by 622 men during the pay period scheduled. The average customary full time of the men working in the positions was 6.3 turns per week, 11.4 hours per turn, and 71.4 hours per week. In the distribution of the customary working time of the 622 actual employees, 289, the largest number in any one group, were found under the heading " 72 hours." The next highest number, 198, came under the classification "Over 72 and under 84." The average hourly earnings of melters' first helpers ranged from 63.4 cents in the eastern district to 83.9 cents in the Pittsburgh district, with an average of 77.5 cents for all districts combined. The range of average full-time weekly earnings was from $\$ 48.31$ in the eastern district to $\$ 60.58$ in the Pittsburgh district, with an average for all districts of $\$ 55.34$.

Owing to the fact that a large number of the employees worked in more than one occupation during the pay period and in order to give the complete hours and earnings for such employees, separate figures are shown which cover all occupations at which they worked. While 622 men working as melters' first helpers averaged 108.9 hours per pay period, they also averaged 28.3 hours at other work, making a total of 137.2 average hours per pay period in specified (melters' first helpers) and other occupations. During the 108.9 hours they worked as melters' first helpers they earned an average of $\$ 84.32$, or 77.5 cents per hour. When the work of these men in all occupations is considered they earned $\$ 100.10$-that is, $\$ 15.78$ was earned in some occupation or occupations other than melters' first helpers.

The average earnings per hour in the principal productive occupations in this department ranged from 27.9 cents for door operators to 77.5 cents for melters' first helpers, and the average actual hours worked per pay period ranged from 66.7 for laborers to 124.4 for charging-machine operators. Employees who worked as laborers averaged the highest number of hours at other occupations (47.4), while melters' second helpers received the largest earnings for work in addition to their regular occupation (\$20.07). Locomotive engineers worked the smallest number of hours outside their regular occupation (9.2) and likewise received the smallest earnings (\$4) for work in addition to their regular occupation.

TABLE C (3).-AVERAGE CUSTOMARY FULL-TIME HOURS WORKED AND AVERAGE ACTUAL EARNINGS PER PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-OPEN-HEARTH FURNACES.

${ }^{1}$ Including 18 employees who worked 874 hours.

Table $D$ (3) shows the number of employees and the average and classified earnings per hour for melters' first helpers and ladle cranemen in 1922, by districts, and for all districts combined.

The average earnings per hour of melters' first helpers ranged between 30 cents and \$1.25. Sixty-three per cent, however, of the 622 employees earned 60 and under 90 cents per hour. The largest number in any one group, 137, or 22 per cent of the total, earned from 60 to 70 cents per hour; and 125, or 20 per cent, earned " 70 and under 80 cents." The average for all employees was 77.5 cents per hour.

Ladle cranemen in all districts earned an average of 59.1 cents per hour, and the range in classification-from 40 to 90 cents per houris not so wide as that for melters' first helpers. The largest number in any one group, 68 , or 44 per cent of the total, earned " 60 and under 70 cents" per hour.

Customary turns per week, hours per turn, and full-time hours per week of those employees in the open-hearth furnace department who regularly worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of their time, are presented in detail in Table E (3). As stated in the general explanation of this table (p. 17), data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

Table E (3)-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-OPEN-HEARTH FURNACES.
[This table includes only employees who worked but one combination of customary days and hours during pay periods. (For explanation see p. 17.)]

| 7 -day week part of the time.................... | 343 | 956 | 167 | 8 | 1,474 | 22 |
| Straight or average day of 12 or more hours all of the time. | 582 | 878 | 1,888 | 455 | 3,803 | 56 |
| Straight or average day of 12 or more hours part of the time. | 245 | 836 | 27 |  | 1,108 | 16 |
| 7-day week and straight or average day of 12 or more hours all of the time. | 47 | 82 | 1,001 | 162 | 1,292 | 19 |

Of the total number of open-hearth furnace employees, 6,811 worked but one combination of customary days and hours. Of these 6,811 employees, 5,843 , or 86 per cent, regularly worked a 7-day week or a straight average day of 12 or more hours all or part of the time, 476 working days only, 54 working nights only, and 5,313 alternating between day and night work. Thirty per cent $(2,036)$ had a 7 -day week all of the time and 56 per cent $(3,803)$ worked a straight or average day of 12 or more hours all of the time. Nineteen per cent $(1,292)$ regularly worked a 7 -day week and a straight or average day of 12 or more hours all of the time.

## PUDDLING MILLS.

The 1922 survey includes 13 representative puddling mills which employed 2,758 men in all occupations. Of the total number of employees reported 2,316 are found in the principal productive occupations for which separate figures are given. Wages and hours of labor in this department were first obtained for the year 1914 and comparative figures are presented for the years 1914 to $1922 .{ }^{1}$

Considering the principal productive occupations as a whole, the average full-time hours per week of employees in 1922 were 7 per cent less than in 1920 and 4 per cent less than in 1914. Again comparing the same years, average hourly earnings show a decline of 44 per cent since 1920, but the 1922 figure is still 55 per cent greater than that for 1914. Average full-time weekly earnings show a reduction of 48 per cent in 1922 as compared with 1920 , and are 54 per cent greater than the 1914 average. The average hourly earnings for the department as a whole, including all occupations, were 49.6 cents in 1922 as compared with 88.5 cents in 1920.

The puddling mill produces wrought iron by oxidizing and removing most of the silicon, carbon, manganese, and phosphorus contained in pig iron, the operation being conducted on the hearth of a reverberatory furnace. On account of the intense heat and heavy labor involved in the puddling operation fewer workmen than formerly are taking up the puddling trade, as men can earn as much money in other skilled occupations and work under more favorable conditions. This shortage of apprentices has been mainly responsible for the combination "level-handed" which is reflected in the number of furnaces in operation.

In the last few years rapid progress has been made along the lines of developing mechanical puddling devices to counteract conditions which have led to the shortage of puddlers. As yet, however, no such method has been devised that will produce wrought iron in large quantities with uninterrupted success.

The work of bushelers is practically the same as that of puddlers except that scrap iron instead of pig iron is charged into the furnace.

The most significant facts concerning average hours and average earnings in each of the principal productive occupations of puddling mills are presented in Table A (4). Rollers and their crews are not shown for every plant reported. This is due to the fact that in some plants the money for total tonnage rolled was paid in a lump sum to the roller who was responsible for the work, and in a few of such instances it was impossible to get reliable data as to wages paid individuals in the rolling crew.

Considering the 20 selected occupations separately ( 21 occupations are shown for all years except 1922, no bushelers level-handed, with helpers, being reported for that year) and comparing 1922 with 1920 , 16 show a decrease in average full-time hours per week ranging from 8.5 hours for hook-ups to 0.7 hour for puddlers ${ }^{\prime}$ helpers. The remaining 4 occupations show only slight increases. Nine of the 16 occupa-

[^13]tions which reported decreases show a smaller full-time average in 1922 than for any year covered by this bureau. Hook-ups in 1914 worked an average of 54.4 hours per week, which decreased to 51.8 in 1919. This average increased to 56.5 in 1920, but again decreased to 48 in 1922.

Average hourly earnings decreased perceptibly in all selected occupations when 1922 is compared with 1920 and 1919, but the 1922 averages still show a considerable increase over those for 1914 and 1915. While all 10 departments show a decrease in average hourly earnings in 1922 as compared with 1920, the greatest reduction is found in the puddling-mill department. For example, puddlers, level-handed, received an average of 41.6 cents per hour in 1914, which decreased to 39.2 cents in 1915. Owing to war conditions the average advanced to $\$ 1.101$ per hour in 1919 and continued to $\$ 1.227$ in 1920. In 1921, however, wages declined and in 1922 employees received an average of 62.9 cents per hour.

Average full-time weekly earnings followed very closely the course of average earnings per hour as full-time hours per week on the whole varied but little.

Puddling mills are usually in operation 6 days and 5 nights per week, the hours per turn (day) varying anywhere from 7 to 12 hours, with an average of about 9 hours, and Table A (4) shows that the hours worked by these employees as a whole were quite generally less than those worked in other departments. Only one occupation, that of roll engineers, shows any employees working over 72 hours per week in 1922. Twenty-one per cent of the employees in that occupation worked 84 hours in 1920, with 8 per cent in the group "over 72 and under 84 ," but in 1922 no 84 -hour-week work was reported and only 14 per cent were classified as "Over 72 and under 84. ."

Index numbers for full-time hours per week, earnings per hour, and full-time weekly earnings are also contained in Table A (4). These are simply percentages computed from the averages presented in the table, using the average for 1914 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 4.

The number of employees reported in 1922 includes some duplications, or repeated employees, as stated in the general explanation of Table B (p. 15). Of the 2,412 employees reported in selected occupations for all districts combined there were 96 duplications, leaving 2,316 actually engaged, and the total of 2,859 employees shown for all occupations represents 2,758 individuals.

The gross number of employees reported, together with the net number of actual employees in selected occupations and in all occupations in each district and all districts combined, are shown in Table 11.

TAble 11--NUMBER OF EMPLOYEES REPORTED, NUMBER OF DUPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELECTED OCCUPATIONS AND IN ALL OCCU. PATIONS, 1922, BY DISTRICTS-P UDNLING MILLS.

The customary working time per week of employees in the puddlingmill department for the years 1914 to 1922 has been classified, and the number and per cent of employees coming under each classification are shown in Table B (4).

Puddling mills are most commonly operated 6 days and 5 nights per week, as shown by the percentages in the column " 5 days and 6 days alternately" in Table B (4).

Forty-nine per cent of the employees in selected occupations worked these turns in 1922 as compared with 65 per cent in 1920. Eighteen per cent came under the classification " 5 days" per week in 1922, as compared with less than 1 per cent in 1920.

When all employees in all occupations are considered, 47 per cent worked 5 days and 6 days alternately, as compared with 60 per cent in 1920.

The largest percentage of 5 -day workers in 1922 was reported in the Eastern district, while the greatest percentage of 6 -day workers was shown in the Southern district.

Table B (4)- NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK, IN EACH DISTRICTAND ALL DISTRICTS COMBINED, 1914 TO 1922, BY YEARS-PUDDLING MILLS.
[For explanation of this table see p. 15.]

[^14]Table $C$ (4) presents the most significant facts relative to customary and actual : working time, actual earnings per pay period, and earnings per hour of employees in puddling mills, by occupations and districts, for the year 1922. In addition, for each occupation are shown the number of positions and the number of employees actually working during the pay period and also the time and earnings of the same employees during the same period at occupations other than the occupation specified.

Referring to the occupation of puddlers, level handed, by way of illustration: Seven hundred and twenty-five positions were filled by a total of 936 men during the pay period scheduled. The average customary full time of the men working in these positions was 5.4 turns per week, 8.7 hours per turn, and 47 hours per week. In the distribution of the customary working time of the 936 actual employees, 554 , or 59 per cent, worked 48 hours per week or under, and 374, or 40 per cent, worked over 48 and under 60 hours per week. Only 8 employees worked over 60 hours per week. The average full-time hours per week of roll engineers were higher than those of any other occupation.

The average hourly earnings of heaters were 91.5 cents, the highest of any selected occupation. The average hourly earnings for puddlers, level handed, were 62.9 cents for all districts combined, and ranged from 52 cents in the Eastern district to 79.6 cents in the Great Lakes and Middle West district. The range for average fulltime weekly earnings in the same occupation was from $\$ 25.32$ in the Eastern district to $\$ 36.78$ in the Great Lakes and Middle West district.

Owing to the fact that a large number of the employees worked in more than one occupation during the pay period and in order to give the complete hours and earnings for such employees, separate figures are shown for each occupation, covering all occupations in which the employees were engaged. For example, 214 stockers averaged 80.5 hours during the pay period and also averaged 24.7 hours in other occupations, making a total of 105.2 hours per pay period in specified (stocker) and other occupations.

During the 80.5 hours they earned an average of $\$ 31.91$, or 39.6 cents per hour. When the work of these men in all occupations is considered, they earned $\$ 41.25$-that is, $\$ 9.34$ was earned in some other occupation than stocker.

The average earnings per hour in this department ranged from 30.5 cents for laborers to 91.5 cents for heaters. The average earnings per hour for all selected occupations combined were 52.8 cents.

Table C (4),-AVERAGE CUSTOMARY FULL-TIME HOURS WORKED AND AVERAGE ACTUAL EARNINGS PER PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-PUDDLING MILLS.

Table $D$ (4) shows the number of employees and the average and classified earnings per hour for puddlers, level handed, and rollers, in 1922, by districts, and for all districts combined.

The range of hourly earnings for puddlers, level handed, was from 35 cents to $\$ 1$, with an average of 62.9 cents for all districts combined. The largest number of employecs in any one group, 414, or 44 per cent, is shown in the classification " 60 and under 70 cents."

In the occupation of rollers the average hourly earnings for the 33 employees shown were 90 cents. The distribution of earnings ranged from 50 cents to $\$ 1.50$.

Table D (4).-AVERAGE AND CLASSIFIED EARNINGS PER HOUR FOR TWO SELECTED OCCUPATIONS, 1922, BY DISTRICTS-PUDDLING MILLS.
[For explanation of this table see p. 17.]

Customary turns per week, hours per turn, and full-time hours per week of those employees who regularly worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of their time, are presented in detail in Table E (4) for the puddling-mills department. As stated in the general explanation of this table (p. 17) data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

TABLE E (4)-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-PUDDLING MILLS.
[This table includes only employees who worked but one combination of customary days and hours during pay period. For explanation of table see p. 17.)

| Straight or average day of 12 or more hours part of the time | -14 | 23 | -196 | 6 | 239 | 9 |
| 7 -day week and straight or average day of 12 or more hours all of the time. | 11 | 28 8 | 196 | 4 | 23 | 1 |

${ }^{3}$ Less than 1 per cent.
Of the total number of puddling-mill employees reported, 2,522 worked but one combination of customary days and hours. Of these 2,522 employees, 394 , or 16 per cent, regularly worked a 7 -day week or a straight or average day of 12 or more hours all or part of the time, 46 working days only, 73 working nights only, and 275 alternating between day and night work. Two per cent (50) worked a 7 -day week all of the time, and 5 per cent (128) worked a straight or average day of 12 or more hours all of the time.

## BLOOMING MILLS.

The 1922 survey includes 24 representative blooming mills which employed 4,132 men in all occupations. Of the total number of employees reported, 1,675 are found in the principal productive occupations for which separate figures are given. Data were first obtained for this department in 1910 and comparative figures are presented for the years 1910 to $1922 .{ }^{1}$

Average full-time hours per week in all selected occupations combined have increased to some extent when 1922 is compared with 1920 , but average earnings per hour and per week, as in all other departments, have decreased during that time. While average full-time hours in 1922 are 4 per cent higher than in 1920, they are still less than the average for any other year for which data are presented. Earnings per hour in 1921 began to decline and in 1922 were 28 per cent less than in 1920 and 23 per cent less than in 1919. When all occupations are considered, average earnings per hour decreased from 65.9 cents in 1920 to 47.2 cents in 1922.

The most significant facts concerning average hours and average earnings in each of the principal productive occupations of blooming mills are shown in Table A (5). Of the 12 occupations presented all show increases in arerage full-time hours per week when 1922 is compared with 1920, with the exception of laborers whose average decreased from 71.1 to 70.7 hours. Increases ranged from 1.9 hours for shearmen's helpers to 6.2 hours for pit cranemen. The average full-time hours per week of pit cranemen in 1922 were 68.6 hours, which is the highest average of any year in this occupation since 1913, when employees worked an average of 69.3 hours.

Again comparing 1922 with 1920, all selected occupations show decreases in average hourly earnings ranging from 16 cents for shearmen's helpers to 36.7 cents for heaters. In 1910 heaters received an average of 52.1 cents per hour and until 1917 the average fluctuated between 50 and 60 cents. In 1917 earnings advanced to an average of 75.6 cents and the increase continued to $\$ 1.271$ in 1920. Earnings declined to 90.4 cents per hour in 1922.

Average full-time weekly earnings followed very closely the course of average hourly earnings, as the variations in average full-time hours per week were very slight as compared to the changes in hourly earnings.

The increase in customary working time in this department in 1922 as compared with 1920 is easily seen from a study of the classification of employees by average full-time hours per week shown in this table. The heating crew and roll engineers have been the most affected by the increase. The rolling crew were also affected, but the outstanding fact shown as to them is the change of employees from the group " 48 and under" to the group "Over 48 and under 60." The average full-time hours of laborers actually decreased, only 1 per cent working 84 hours in 1922 as compared with 15 per cent in 1920.
Index numbers for full-time hours per week, earnings per hour, and full-time weekly earnings are also contained in Table A (5). These are simply percentages computed from the averages presented in the table, using the average for 1913 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 15.

Table A (5).-AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULLTIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCUPATIONS-BLOOMING MILLS. ${ }^{1}$

The number of employees reported in 1922 is not always the actual number of employees, as the totals in most cases contain some duplications, or repeated employees, as has been explained in the general explanation of Table B (p. 15). Of the 1,908 employees reported in selected occupations for all districts combined 1,675 are actually engaged and the 4,411 employees shown in all occupations represent 4,132 actual employees.

The number of employees reported, together with the net number of actual employees for selected and all occupations, in each district and for all districts combined, are shown in Table 12.

TABLE 12.-NUMBER OF EMPLOYEES REPORTED, NUMBER OF DUPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELECTED OCCUPATIONS AND ALL OCCUPATIONS, 1922, BY DISTRICTS.-BLOO MING MILIS.

| District. | Emplorees in selected occupations. |  |  | Employees in all occupations. |  |  |

| Pittsbarrgh.. | 826 | 135 | 691 | 1,716 | 150 | 1,566 |
| Freat Lakes and Midd | 578 | 71 | 507 | 1,610 | 90 | 1,520 |
| Total. | 1,908 | 233 | 1,675 | 4,411 | 279 | 4,132 |

The customary working time per week of employees in the bloomingmill department for the years 1910 to 1922 has been classified, and the number and per cent of employees coming under each classification are shown in Table B (5):

Practically all employees in the blooming-mill department work 6 days, 7 days, or 6 days and 7 days alternately, the largest percentage working 6 days. The heading " 6 days and 7 days alternately" indicates that the plants were running 7 days and 6 nights or 6 days and 7 nights each week, being shut down for one day or one night each week, and that the employees reported under this heading worked 7 turns one week and 6 turns the next. Employees working on continuous operations and who are relieved one turn every two weeks are also included under this heading.

When employees for selected occupations in all districts combined are considered, the percentage working 6 days per week in 1922 is 53 , which is the lowest for any year data are presented. There was a slight increase in 1922 in the number of employees working 6 days and 7 days alternately, the percentage for that year being 22 as compared with 19 in 1920.

Fifty-six per cent of the employees in all occupations worked 6 days per week in 1922 as compared with 67 per cent in 1920 and 74 per cent in 1914.
The greatest change in 7-day workers in the selected occupations took place in the Pittsburgh district. In 1922, 14 per cent were found regularly working a week of this length as compared with 3 per cent in 1920. The percentage of employees in selected occupations in all districts combined working 7 days per week remained the same in 1922 as in 1920.

Table B (5).-NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1910 TO 1922. BY YEARS-BLOOMING MILLS.

2 Less than 1 per cent.

Table C (5) presents the most significant facts relative to customary and actual working time, actual earnings per pay period, and earnings per hour of employees in the selected occupations in blooming mills in 1922, by occupations and districts. In addition, for each occupation are shown the number of positions and the number of employees actually working during the pay period and also the time and earnings of the same employees during the same period at occupations other than the occupation specified.

Referring to the occupation of pit craneman by way of illustration: In the 24 plants reported there were 133 positions. Some employees worked short or broken time during the pay period scheduled and 156 men were required to fill these positions.

The number of turns per week for all employees in the different occupations for all districts combined ranged from 6 to 6.3 per week. The heating crew and roll engineers had a slightly higher average number of turns than the rolling crew, as the heating crew often worked on gas or repair turns when the mill was not producing.

The average hours per week for rollers were lower than those for any occupation ( 60.9 ), while those for laborers were the highest (70.7). In the occupation of bottom makers 11 employees out of a total of 119 worked 84 hours per week regularly. This is the largest number in any occupation who worked 84 hours.

Rollers receired the highest arerage hourly earnings in this department, ranging from $\$ 1.143$ in the Great Lakes and Middle West district to $\$ 1.225$ in the Eastern district. The average for all districts combined was $\$ 1.175$. Earnings for laborers were the lowest, the range being from 28.3 cents in the Southern district to 37.4 cents cents per hour in the Great Lakes and Middle West district. The average for all districts combined was 35 cents.

Average hours actually worked per pay period ranged from 71.2 for laborers to 121.5 for pit cranemen. Arerage earnings per pay period for selected occupations ranged from $\$ 24.93$ for laborers to $\$ 118.23$ for rollers.

Owing to the fact that many of the employees worked at more than one occupation during the period reported, separate figures which include the data for all occupations at which such employees worked are shown for each occupation. For example, the 115 heaters averaged 105.4 hours and earned $\$ 95.22$, or an arerage of 90.4 cents per hour. During the same period of time they averaged 30.4 hours at other occupations, giving them a total average of 135.8 hours and $\$ 117.60$ in earnings, or an arerage of 86.6 cents per hour.

Table C (5),-AVERAGE CUSTOMARY FULL-TIME HOURS WORKED AND AVERAGE ACTUAL EARNINGS PER PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-BLOOMING MILLS.

Table D (5) shows the number of employees and the average and classified earnings per hour for heaters and roll engineers in 1922, by districts, and for all districts combined.

The range of hourly earnings for roll engineers was 45 cents to $\$ 1.25$ and for heaters 40 cents to $\$ 1.50$. The highest average hourly earnings for both heaters and roll engineers were found in the Eastern district, while the lowest for both occupations were found in the Great Lakes and Middle West district.

Table D (5).-AVERAGE AND CLASSIFIED EARNINGS PER HOUR FOR TWO SELECTED OCCUPATIONS, 1922, BY DISTRICTS - BLOOMING MILLS.
[For explanation of this table see p. 17.]

Customary turns per week, hours per turn, and full-time hours per week of those employees who regularly work 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of their time, are presented in detail in Table $\mathbf{E}$ (5) for the blooming-mills department. As stated in the general explanation of this table (p.17), data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

TABLE E (5).-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-BLOOMING MILLS.
[This table includes only employees who worked but one combination of customary days and hours during pay period. For explanation of table see p. 17.]

DAY TURNS.

| Total blooming-mill employees. | 598 | 1,566 | 1,520 | 448 | 4,132 |  |
| Employees who worked- |  |  |  |  |  |  |
| One combination of days and hours only..... | 558 | 1,361 | 1,310 | 405 | 3,634 | 100 |
| 7 -day week, or a straight or average day of 12 or more hours, all or part of the time......... | 384 |  | 1.046 | 290 |  | 71 |
| 7-day week all of the time....................... | 81 | 214 | , 311 | 51 | , 657 | 18 |
| 7 -day week part of the time | 142 | 291 | 300 | 38 | 771 | 21 |
| Straight or average day of 12 or more hours all of the time. | 296 | 541 | 894 | 251 | 1,982 | 55 |
| Straight or average day of 12 or more hours part of the time | 72 | 167 | 7 | 5 | 251 | 7 |
| 7 -day week and straight or average day of 12 or more hours all of the time. | 69 | 154 | 264 | 33 | 520 | 14 |

Of the total number of blooming-mill employees reported, 3,634 worked but one combination of customary days and hours. Of these 3,634 employees, 2,587 , or 71 per cent, regularly worked 7 days per week or a straight or average day of 12 or more hours all or part of the time, 346 working days only, 21 working nights only, and 2,220 alternating between day and night work. Fifty-five per cent $(1,982)$ worked a straight or average day of 12 or more hours all of the time.

## PLATE MILLS.

The 1922 survey includes 12 representative plate mills, which employed 3,545 men in all occupations. Of the 12 plants reported 7 . operated sheared-plate mills in which the edges of the plates are not rolled and must be sheared off, 2 operated universal mills in which the edges of the plates are rolled and therefore only the ends need be cut, and 3 operated both sheared-plate and universal mills. Of the 3,545 employees reported 1,655 are found in the principal productive occupations for which separate figures are given. Data were first obtained for this department in 1910 and comparative figures are presented for the period 1910 to $1922 .{ }^{1}$

The average earnings per hour for the principal productive occupations combined in 1922 were 30 per cent less than in 1920, 20 per cent less than in 1919, and 84 per cent greater than in 1914. Average fulltime hours per week have declined 4 per cent since 1920 and are now at the lowest point of any year for which data are presented. Average full-time weekly earnings followed very closely the course of hourly earnings and decreased 34 per cent in 1922 as compared with 1920 and 26 per cent as compared with 1919. When all employees in all occupations are considered average hourly earnings decreased from 67.1 in 1920 to 47.6 in 1922.

The most significant facts concerning average earnings and average hours in each of the principal productive occupations of plate mills are shown in Table A (6).

The customary working time of employees shows a reduction in 15 of the 16 selected occupations in 1922 as compared with any other year for which data are presented. The average full-time hours of heaters' helpers were at the same level in 1922 as in 1911, although in all other years they were greater than the average for these two years. The rolling crew in universal mills, the shear crew, and laborers were most affected by the decrease from the working hours of 1920, the heating crew and rolling crew in sheared-plate mills showing very little change.

Earnings show reductions in all selected occupations when 1922 is compared with 1920 and 1919, but the average hourly earnings in 1922 are greater than those for any other year for which data are presented. The reductions from the 1920 figures range from 11.7 cents for heaters' helpers to 43.2 cents per hour for rollers, sheared-plate mills. The earnings of the rolling crew for universal mills were not affected by the reductions to such a large extent as were the earnings of the sheared-plate rolling crew. Rollers, sheared-plate mills, in 1920 received an average of $\$ 1.558$ per hour as compared with $\$ 1.372$ for rollers, universal mills, while in 1922 rollers, sheared-plate mills, were reduced to $\$ 1.126$ per hour as compared with $\$ 1.187$ for rollers. universal mills.
Full-time weekly earnings were reduced approximately the same percentage as hourly earnings, since changes in full-time hours were very slight.

[^15]In the distribution of employees according to their full-time hours per week, 25 per cent or more of the employees in each selected occupation in 1922 worked 60 hours per week or less, except heaters and heaters' helpers; Five per cent of the heaters are shown in the group " 48 and under" and 13 per cent of the heaters' helpers reported are shown in the two groups " 48 and under 60 " and " 60 " hours per week. In former years only a very small percentage of those in selected occupations were reported 60 hours or under.

Index numbers for full-time hours per week, earnings per hour, and full-time weekly earnings are also contained in Table A (6). These are simply percentages computed from the averages presented in the table, using the average for 1913 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 4.

TABLE A (6)--AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULLTIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCUPATIONS-PLATE MILLS. ${ }^{1}$

Table A (6)-AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULLTIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCEPATIONS-PLATE MILLS-Concluded.

2 Less than 1 per cent.
${ }^{3}$ Inciuding 3 per cent whose full-lime hours per week were 91.
. The number of employees reported in 1922 includes some duplications, or repeated employees, as stated in the general explanation of Table B (p. 15). Of the 1,838 employees reported in selected occupations for all districts combined there were 183 duplications, leaving 1,655 actually engaged, and the total of 3,766 employees shown for all occupations represents 3,545 individuals.

The gross number of employees, together with the net number of actual employees in selected occupations and in all occupations in each district and all districts combined, are shown in Table 13.

TABLE 13.-NUMBER OF EMPLOYEES REPORTED, NUMBER OF DCPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELECTED OCCEPATIONS AND ALL OCCEPATIONS, 1922, BY DISTRICTS-PLATE MILLS.

| District. | Employees in selected occupations. |  |  | Employees in all occupations. |  |  |

| Great Lakes-and Middl | 499 | 18 | 481 | 1,050 | 28 | 1,922 |
| Total. | 1,838 | 183 | 1,655 | 3,766 | 221 | 3,545 |

The customary working time per week of employees in the platemills department for the years 1910 to 1922 has been classified, and the number and per cent of employees coming under each classification are shown in Table B (6).

Nearly all of the employees worked 6 days, or 5 days and 6 days alternately. The largest number in all occupations in 1922, 2,257, or 60 per cent, is shown under " 6 days." The heading " 5 days and 6 days alternately" indicates that the plants were running 6 days and 5 nights each week, being shut down approximately 36 hours each week, and that the employees reported under this heading worked six turns one week and 5 turns the next.

In $\cdot$ selected occupations in all districts combined 28 per cent worked 5 days and 6 days alternately in 1922 as compared with 20 per cent in 1920. The percentage of six-day workers decreased considerably in 1922 when compared with either 1919 or 1920. In 1922 the percentage was 66.

The changes in the percentages of employees in all occupations who worked 6 days, and 6 days and 5 days alternately were almost the same as in selected occupations.

The greatest change in 6-day workers was reported in the Pittsburgh district. Employees in selected occupations in that district decreased from 89 per cent in 1920 to 60 per cent in 1922. Employees who worked 5 days and 6 days alternately increased from 9 per cent in 1920 to 33 per cent in 1922.

Table B (6)--NUMBER and PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1910 TO 1922, BY YEARS-PLATE MILLS.

${ }^{2}$ Less than 1 per cent.

Table C (6) presents the most significant facts relative to customary and actual working time, actual earnings per pay period, and earnings per hour of employees in the plate-mill department for the year 1922, by occupations and districts. In addition, for each occupation are shown the number of positions and the number of employees actually working during the pay period and also the time and earnings of the same employees during the same period at occupations other than the occupation specified.

Rollers in sheared-plate mills are reported for 10 plants and rollers in universal mills for 5 plants. Apparently data were obtained from 15 plants, instead of 12 as shown in Table 7. This seeming inconsistency is due to the fact that 3 of the plants reported have both sheared-plate and universal plate mills.

Referring to the occupation of charging-crane and chargingmachine operators by way of illustration: The 12 plants reported had 58 positions to be filled under normal working conditions. However, 72 men occupied these positions during the pay period scheduled. The average customary full time of these men was 6 turns per week, 11.2 hours per turn and 66.9 hours per week. In the distribution of the customary working time of the 72 actual employees, 23 , or 32 per cent, worked over 60 and under 72 hours per week, and 21, or 29 per cent, worked over 72 hours per week.

The average hourly earnings for charging-crane and chargingmachine operators in all districts combined were 56.3 cents, and the full-time weekly earnings ranged from $\$ 31.39$ in the Eastern district to $\$ 41.57$ in the Great Lakes and Middle West district.

Owing to the fact that a large number of the employees worked in more than one occupation during the pay period and in order to give the complete hours and earnings for them, separate figures including all occupations at which such employees worked are given for each occupation. While 72 men working as charging-crane and charging-machine operators averaged 99.5 hours per pay period, they also averaged 16.3 hours at other work, making a total of 115.8 hours per pay period in specified (charging-crane and chargingmachine operators) and other occupations." During the 99.5 hours they worked as charging-crane and charging-machine operators they earned an average of $\$ 56.01$, or 56.3 cents per hour. When the work of these men in all occupations is considered they earned \$62.87that is, $\$ 6.86$ was earned in some occupation other than that of charging-crane and charging-machine operators.

The average earnings per hour in this department ranged from 33.6 cents for laborers to $\$ 1.187$ for rollers, universal mills, and the average actual hours worked per day period ranged from 45.1 for laborers to 107.9 for roll engineers.

Of the 16 selected occupations reported in this table only four had any employees regularly working as much as 84 hours per week, and the percentage of employees in these occupations in only one case was as much as 10 per cent. The highest average customary hours per week of all employees was 69.6 for roll engineers.

Table C (6).-AVERAGE CUSTOMARY FULL-TIME HOURS WORKED AND AVERAGE ACTUAL EARNINGS PER PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-PLATE MILLS.

Table C (6).-AVERAGE CUSTOMARY FULL-TIME HOURS WORKED AND AVERAGE ACTUAL EARNINGS PER PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-PLATE MILLS-Coneluded.

## 112 WAGES AND HOURS OF LABOR-IRON AND STEEL INDUSTRY.

Table D (6) shows the number of employees and the average and classified earnings per hour for screw men, sheared-plate mills, and shearmen, in 1922, by districts and for all districts combined.

There was a wide range of earnings in the Pittsburgh district for both occupations, while the range for screw men, sheared-plate mills, in the Great Lakes and Middle West district was very slight, all employees earning between 90 cents and $\$ 1.25$. The highest average hourly earnings for screw men, sheared-plate mills, are shown in the Great Lakes and Middle West district, and those for shearmen in the Pittsburgh district. In all districts combined the average hourly earnings of screw men, sheared-plate mills, was 86.3 cents per hour and for shearmen 66.6 cents.

Customary turns per week, hours per turn, and full-time hours per week of those employees who regularly worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours, regardless of the number of days per week, either all or part of their time, are presented in detail in Table $\mathbf{E}$ (6) for the plate-mill department. As stated in the general explanation of this table (p. 17) data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

Table E (6).-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-PLATE MILLS.
[This table includes only employees who worked but one combination of customary days and hours during pay period. For explanation of table see p. 17.]

Table E (6)-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-PLATE MILLS-Concluded.

SUMMART.

| Item. | East-District. | Pittsburgh trict. | Great Lakes and Middle West Dis- | Total. | Per cent of employees who worked but one combination of days and hours. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Total plate mill employees. | 1,132 | 1,391 | 1,022 | 3,545 |  |
| Employees who worked- |  |  |  |  |  |
| One combination of days and hours only | 984 | 1,229 | 940 | 3,153 | 100 |
| 7 -day week or a straight or average day of 12 or more hours all or part of the time. | 539 | 555 | 657 | 1,751 | 56 |
| 7 -day week all of the time. | 116 | 96 | 59 | 271 | 9 |
| 7-day week part of the time. . . . . . . . . . . . . . . . | 36 | 31 | 37 | 104 | 3 |
| Straight or average day of 12 or more hours all of the time. | 166 | 461 | 630 | 1,257 | 40 |
| Straight or average day of 12 or more hours part of the time. | 342 | 93 | 15 | 450 | 14 |
| 7 -day week and straight or average day of 12 or more hours all of the time. | 91 | 73 | 59 | 225 | 7 |

Of the total number of plate-mill employees reported, 3,153 worked but one combination of customary days and hours. Of these 3,153 employees, 1,751 , or 56 per cent, regularly worked 7 days per week or a straight or average day of 12 or more hours all or part of the time, 64 working days only, 7 working nights only, and 1,680 alternating between day and night work. Of the 1,751 employees, 72 per cent $(1,257)$ worked a straight or average day of 12 or more hours all of the time, while 13 per cent (225) employees had a 7 -day week and a straight or average day of 12 or more hours all of the time.

## STANDARD RAIL MILLS.

The 1922 survey includes 4 representative standard rail mills which employed 1,270 men in all occupations. Of the total number of employees reported 661 are shown in the principal productive occupations for which separate figures are given. Wages and hours of labor were first obtained for this department in 1910 and comparative figures are presented for the years 1910 to $1922 .{ }^{1}$

Considering the principal productive occupations as a whole, the average full-time hours per week of employees in 1922 were lower than in any other year for which data are available, or 3 per cent less than in 1920, the previous low mark in customary working time in this department. Earnings have also declined but show reductions only when compared with 1919 and 1920, as the wages received in all other years are lower than in 1922. Earnings per hour were 23 per cent lower in 1922 than in 1920 , but are 96 per cent higher than in 1913. Full-time weekly earnings followed very closely the course of hourly earnings, as the changes in full-time hours were very slight as compared with those in hourly earnings.

The most significant facts concerning average earnings and average hours in each of the 21 selected occupations are summarized in Table A (7). While selected occupations as a whole show a decrease in full-time hours in 1922 as compared with 1920, when the various occupations are considered separately only 12 show decreases, the other 9 reporting increases. Table lever men and table men, however, are the only occupations in which 1922 shows an increase over 1919 and all occupations show reductions when 1922 is compared with any other year.

Earnings per hour and per week show a material reduction in each occupation since 1920, and are lower in most instances in 1922 than in 1919, but the earnings in 1922 represent a large increase over all the other years presented.

For example, in 1910 table lever men received an average of 45.4 cents per hour, with possible full-time earnings of $\$ 28.25$ per week. Wages during the next few years declined slightly and in 1914 they received 32.4 cents per hour and $\$ 20.49$ per week, the low point of earnings in this occupation. In the following year, 1915, there was only a slight upward trend, but by 1919 the effect of speeding up production for war emergencies is noticed, earnings for that year averaging 82.5 cents per hour, with a corresponding increase in fulltime weekly earnings to $\$ 49.91$. The movement in earnings was still upward in 1920 , averaging $\$ 1.052$ per hour and $\$ 54.77$ per week. Wage reductions were made in 1921, and in 1922 earnings had declined to 58 cents per hour and $\$ 35.86$ per week. Table A (7) shows like figures for the other occupations as well.

In 1922 there was no 84 -hour week work reported in any occupation, and in only one occupation, roll engineers, was there any employees shown in the group "Over 72 and under 84." All other occupations had a maximum full-time of 72 hours per week, with a large percentage in the lower groups of 60 hours per week and under.

[^17]
## 116 wages and hours of labor-iron and steel industry.

Index numbers for average full-time hours per week, average earnings per hour, and average full-time weekly earnings are also contained in Table A (7). These are simply percentages computed from the averages presented in the table, using the average for 1913 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 4.

Table A (7)--AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULLTIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCUPATIONS-STANDARD RAIL MILLS. ${ }^{1}$

The number of employees reported in 1922 is not always the actual number of employees, as the totals in most cases contain some duplications, or repeated employees, as stated in the general explanation of Table B (p. 15). Of the 662 employees reported in selected occupations for all districts combined, 661 are actually engaged and the 1,308 shown in all occupations represent 1,270 actual employees.

The number of employees reported, together with the net number of actual employees for selected occupations and for all occupations in each district and all districts combined, are shown in Table 14.

TABLE 14.-NUMBER OF EMPLOYEES REPORTED, NUMBER OF DUPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELECTED OCCUPATIONS AND ALL OCCURATIONS, 1922, BY DISTRICTS-S TA NDARD RATL MILLS.

| District. | Employecs in selected oceupations. |  |  | Employees in all occupations. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number reported. | Number <br> of dupli- <br> cations. | Actual number. | Number reported. | Number of duplications. | Actual number. |
|  | $\begin{aligned} & 377 \\ & 285 \end{aligned}$ | 1 | $\begin{aligned} & 376 \\ & 285 \\ & \hline \end{aligned}$ | $\begin{aligned} & 633 \\ & 675 \end{aligned}$ | 3 35 | 630 640 |
| Total.. | 662 | 1 | 661 | 1,308 | 38 | 1,270 |

The customary working time per week of empleyees in the standard rail mill department for the years 1910 to 1922 has been classified, and the number and per cent of employees coming under each classification are shown in Table B (7).

In 1922, 99 per cent of the employees in selected occupations in standard rail mills worked 6 days per week, the remainder working 7 days all or part of the time.

Nearly all employees in selected occupations have worked 6 turns per week since 1911. In 1919, 100 per cent worked 6 turns per week, while in 1920 and 1922,98 and 99 per cent, respectively, worked a week of this length.

When employees in all occupations for all districts combined are considered, the per cent of employees working 6 days per week in 1922 is somewhat lower than in selected occupations alone. This decrease was absorbed by an increase in 7-day workers.

Table (B) (7)--NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED 1910 TO 1922, BY YEARS-STANDARD RAIL MILLS.
[For explanation of this table see p. 15.]

Less than 1 per cent.

The most significant facts concerning customary and actual working time, actual earnings per pay period, and earnings per hour of employees in 4 standard rail mills, for the year 1922, by occupations and districts, are shown in Table C (7). In addition, for each occupation are shown the number of positions and the number of employees actually working during the pay period and also the time and earnings of the same employees during the same period at occupations other than the occupation specified.

Referring to the occupation of guide setters, for example, there were 13 positions in the 4 plants reported and 18 men worked in these positions during the pay period scheduled. These men averaged 6 turns per week, 9.8 hours per turn, and 58.8 hours per week. The longest hours per turn in any occupation were 10.9 for roll engineers, and the shortest were 8 for reheaters.

The occupation of rollers shows that the employees who filled these positions worked regularly, as the eight positions required in these plants under normal operations were worked full time by the same number of employees as there were positions.

In no selected occupation were there any employees working 84 hours per week, and only 1 employee in 1 occupation worked over 72 hours per week.

In this department the highest average hourly earnings were $\$ 1.079$ for straighteners, gag press, followed by $\$ 1.076$ for rollers, while the lowest were 35.4 cents for laborers.

Employees in most occupations frequently work also at other occupations. This is the case in every selected occupation in this department with the exception of roll engineers. Separate figures are therefore given showing the total average hours and earnings for such employees at all occupations in which they were engaged. In many instances the secondary occupations were those paying lower rates than the chief occupation of the employee-this is especially true in the more skilled occupations. For example, straighteners, gag press, averaged $\$ 1.079$ per hour at their regular occupation, but when their average hourly earnings at all occupations were considered they earned 93.2 cents. For unskilled occupations the average hourly earnings at all occupations is often higher than that of their regular occupation, due to their being advanced to more skilled work when such employees are not available. Thus, while laborers averaged 35.4 cents per hour, the same employees averaged 45.9 cents when their total time and earnings are considered.

Table $D$ (7) shows the number of employees and the average and classified earnings per hour for guide setters and straighteners, gag press, in 1922, by districts and all districts combined.

The range of classified earnings for guide setters was from 50 to 90 cents, with an average of 69.1 cents. The range for straighteners, gag press, was from 35 cents to $\$ 1.75$, with an average of $\$ 1.084$.

In the occupation of guide setters there is very little difference in the average hourly earnings for employees in the two districts, but for straighteners, gag press, there is a difference of 20.4 cents.

Customary turns per week, hours per turn, and full-time hours per per week of those employees who regularly worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of the time, are presented in detail in Table E (7) for the standard rail mill department. As stated in the general explanation of this table (p. 17) data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

Table E (7).-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICIS-STANDARD RAIL MILLS.
[This table includes only those employees who worked bat one combination of customary days and hours during pay period. For explanation of table see p. 17.]

| 7-day week all of the time.......... | 24 | 90 | 114 | 10 |
| 7-day week part of the time....................................... | 25 | 11 | 36 | 3 |
| Straight or average day of 12 or more hours all of the time. | 153 | 211 | 364 | 33 |
| Straight or average day of 12 or more hours part of the time... | 159 | ........ | 159 | 14 |
| 7-day week and straight or average day of 12 hours or more all of the time. | 22 | 43 | 65 | 6 |

Of the total number of standard rail mill employees reported, 1,104 worked but one combination of customary days and hours. Of these 1,104 employees, 583 , or 53 per cent, regularly worked 7 days per week or a straight or average day of 12 or more hours all or part of the time, 5 working days only, and 578 alternating between day and night work. Thirty-three per cent (364) worked a straight or a a erage day of 12 or more hours all of the time. Six per cent (65) regularly worked 7 days per week and a straight or average day of 12 or more hours all of the time.

## BAR MLLLS.

The 1922 survey includes 25 representative bar mills which employed 6,399 men in all occupations. Of the total number of employees reported 4,664 are included in the principal productive occupations for which separate figures are given. Data were first obtained for this department in 1907 and comparative figures are presented for the years 1907 to $1922 .{ }^{1}$

Considering the principal productive occupations as a whole, the average full-time hours per week of employees in 1922 are lower than in any year since 1907 or 1 per cent less than in 1920, the previous low mark in customary working time in this department. The trend of earnings has been in the opposite direction. Average earnings per hour, while 19 per cent lower in 1922 than in 1919 and 31 per cent lower than in 1920, were still much higher than in any other year reported. Hourly earnings were 73 per cent greater in 1922 than in the base year, 1913. Full-time weekly earnings followed very closely the course of hourly earnings, as the changes in full-time hours per week were very slight as compared with the variations in earnings per hour. The average earnings per hour in 1922 for the department as a whole, including all selected occupations and others, were 48.6 cents, or 32 per cent less than in 1920.

The most significant facts concerning average earnings and average hours in each of the 18 selected occupations are summarized in Table A (8).

While the customary working time of employees in selected occupations as a whole was less in 1922 than in any other year reported, when each occupation is considered separately the number of fulltime hours per week in 11 of the 18 occupations was smaller than in any other year for which data were obtained, in 1 occupation it was smaller than in any year except 1920, when it was the same, and in 6 occupations it was only slightly larger than the smallest number shown for any year, the increases ranging from 0.2 hours per week for stockers and heaters to 2 hours per week for laborers. Hours per week in 1922 ranged from 56.6 hours for stranders to 69.1 hours for roll engineers.

Average earnings per hour in all of the 18 selected occupations, while high in 1922 as compared with any year for which data are presented from 1907 to 1915 , were somewhat smaller than the hourly earnings in 1919 and 1920. The peak in earnings was reached in 1920, and decreases since that time ranged from 17.3 cents per hour for bundlers to 53.3 cents for rollers. The earnings per hour of bundlers ranged from 17.4 cents in 1908 to 55.5 cents in 1920 . In 1922 they received 38.2 cents per hour. Rollers were paid an average of $\$ 1.416$ in 1922 as compared with $\$ 1.949$ in 1920 and 98.5 cents in 1913. Average fulltime weekly earnings decreased in each selected occupation in about the same proportion as average hourly earnings.

In only two occupations in 1922 was there reported any 84 -hour week work, according to the classification of the full-time hours of

[^18]employees in Table A (8). For laborers there was less than 1 per cent reported and in roll engineers only 3 per cent of the employees were on that basis. Nearly all employees customarily worked 72 hours per week or less.

Index numbers for full-time hours per week, earnings per hour, and full-time weekly earnings are also contained in Table A (8). These are simply percentages computed from the averages presented in the table, using the average for 1913 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 4.

[^19]The number or employees reported in 1922 includes some duplications, or repeated employees, as stated in the general explanation of Table B ( p . 15). Of the 4,950 employees reported in selected occupations for all districts combined there were 286 duplications, leaving 4,664 actually engaged, and the total of 6,717 employees shown for all occupations represents 6,399 individuals.

The gross number of employees reported, together with the net number of actual employees, for selected occupations and for all occupations, in each district and all districts combined, are shown in Table 15.

TABLE 15, NUMBER OF EMPLOYEES REPORTED NUMBER OF DUPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELECTED OCCUPATIONS AND ALL OCCUPATIONS, 1922, BY DISTRICTS-BAR MILLS.

| District. | Employees in selected cocupations. |  |  | Employees in all occupatiens. |  |  |

The customary working time per week of employees in the bar-mill department has been classified, and the number and per cent of employees coming under each classification for the years 1907 to 1922 are shown in Table B (8).

The working time of employees in the bar-mill department shows a wide variation of days or turns per week- 5 days, 6 days, and 7 days, with the many combinations thereof. However, in 1922, 47 per cent of all employees worked 6 days and 35 per cent worked 5 days and 6 days alternately.

When 1922 is compared with 1920, there were only a few slight changes in the working time of employees in selected occupations in this department.

The greatest changes in the working time are shown in the Eastern district, where, in 1922, 1 per cent of all employees worked 5 days per week as compared with 14 per cent in 1920. The per cent of employees working 5 days and 6 days alternately shows a decrease from 45 to 30 during the same years. The per cent working 6 days per week increased from 30 in 1920 to 57 in 1922.

TABLE B (8).-NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1907 TO 1922, BY YEARS-BAR MILLS.

${ }^{2}$ Less than 1 per cent.

Table C (8) presents the most significant facts relative to customary and actual working time, actual earnings per pay period, and earnings per hour of employees in 25 bar mills for the year 1922, by occupations and districts. In addition, for each occupation are shown the number of positions and the number of employees actually working during the pay period and also the time and earnings of the same employees during the same period at occupations other than the occupation specified.

Referring to the occupation of heaters, by way of illustration, 143 positions were filled by 169 actual employees during the pay period scheduled. The average turns per week of the employees working in these positions were 5.8 , the average length of these turns were 10.4 hours, and the average full-time hours per week were 59.9. Of the 169 actual employees who worked as heaters 73 , or 43 per cent, customarily worked under 60 hours per week, 87 , or 51 per cent, worked "over 60 and under 72 " hours, while only 9 employees worked " 72 and under 84 " hours per week. The average hourly earnings for heaters ranged from 66.1 cents in the Eastern district to 83.9 cents in the Pittsburgh district, while the average for all districts combined was 75.9 cents. The range for average full-time weekly earnings was from $\$ 39.07$ for the Eastern district to $\$ 49.38$ in the Southern district. While heaters in the Pittsburgh district have the highest average hourly earnings, they have next to the lowest full-time weekly earnings, due to the fact that their average full-time weekly hours are the lowest for any of the four districts reported.

Owing to the fact that a large number of the employees worked in more than one occupation during the pay period and in order to give the complete hours and earnings for them, separate figures are shown which include all occupations at which they worked. While 169 men were working as heaters, they averaged 94.3 hours per pay period and also averaged 12.4 hours at other work, making a total of 106.7 average hours per pay period in specified (heaters) and other occupations. During the 94.3 hours they worked as heaters they earned $\$ 71.64$, or 75.9 cents per hour. When the work of these men in all occupations is considered they earned $\$ 78.01$ that is, $\$ 6.37$ was earned in some other occupation than that of heater.

Average earnings per hour in this department ranged from 31.6 cents for laborers to $\$ 1.416$ for rollers, and the average actual hours worked ranged from 55.3 for laborers to 119.2 for roll engineers. In only 2 occupations, that of roll engineers and laborers, were any employees shown working 84 hours per week regularly and only 6 employees in the 2 occupations combined worked these hours.

Roll engineers worked the highest customary full-time hours per week of 69.1 .

Table D (8) shows the number of employees and the average and classified earnings per hour for roughers and hotbed men, in 1922, by districts and all districts combined.

Of the 288 roughers, 261 , or 91 per cent, earned 50 cents per hour, or more, and 27 , or 9 per cent, earned less than that amount. The Pittsburgh district shows the widest range of hourly earnings, from 30 cents to $\$ 1.25$.

The average hourly earnings for the 755 hotbed men were 43.9 cents. Seventy-six per cent (571) earned less than 50 cents per hour, and 184, or 24 per cent, earned 50 cents or over.

Customary turns per week, hours per turn, and full-time hours per week of those employees who regularly worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of their time, are presented in detail in Table E (8) for the bar-mill department. As stated in the general explanation of this table (p. 17) data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

Table ${ }^{\text {E }}$ (8).-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-BAR MILLS.
[This table includes only employees who worked but one combination of customary days and hours during pay period. For explanation of table, see p.17.]

| Straight or average day of 12 or more hours all of the time. | 15 | 198 | 437 | 8 477 | 1,127 | 10 |
| Straight or average day of 12 or more hours part of the time. | 422 | 546 | 682 | 12 | 1, 082 | 28 |
| 7-day week and straight or average day of 12 or more hours all of the time. | 0 | 8 | 19 | 10 | 37 | 1 |

Of the total number of bar-mill employees 5,855 worked but one combination of customary days and hours. Of these 5,855 employees, 3,278 , or 56 per cent, regularly worked 7 days per week or a straight or average day of 12 or more hours all or part of the time, 398 working days only, 115 working nights only, and 2,765 alternating between day and night work. Nineteen per cent $(1,127)$ worked a straight or average day of 12 or more hours all of the time, and only 1 per cent (37) regularly worked 7 days per week and a straight or average day of 12 or more hours all of the time.

## SHEET MILLS.

The 1922 survey includes 14 representative sheet mills which employed 9,242 men in all occupations. Of the total number of employees reported, 5,785 are included in the principal productive occupations for which separate figures are given. Data were first obtained for this department in 1910 and comparative figures are presented for the period 1910 to $1922 .{ }^{1}$

Considering the principal productive occupations as a whole, average full-time hours per week in 1922 were 1 per cent greater than in 1920,3 per cent less than in 1917, the highest point of customary working time in this department, and the same as in 1913. Average hourly earnings in 1922, while still high as compared with any year from 1910 to 1915 , have decreased 36 per cent from the earnings of 1920, 24 per cent from those of 1919, and 18 per cent from those of 1917. Full-time weekly earnings followed very closely the course of hourly earnings, as full-time hours per week were subject to only slight variations. The average earnings per hour in 1922 for the department as a whole, including all occupations, were 69.4 cents, or 33 per cent less than in 1920.

The most significant facts concerning average hours and average earnings for each of the 18 principal productive occupations in this department are shown in Table A (9). Comparative figures are presented for 13 of the occupations for the years 1910 to 1922, the other 5 occupations having been added at different times during that period. The custom of level-handed work (two employees dividing the work and pay of one or more occupations evenly) has been increasing in rccent years, and sheet heaters, level handed, were included in the bureau's reports for 1913. In 1920 rollers, level handed, and openers, level handed, were also added. However, not all of the level-handed work in selected occupations has been included, as there are many working combinations which are of local interest only and not general to the industry. As hot-mill crews in sheet mills work in 8 -hour shifts, 3 shifts per day, and usually either 5 , 5 and 6 , or 5,6 , and 6 days per week in rotation, the average full-time hours per week of employees in selected occupations in this department has been subject to but slight variation, since the large majority of the employees are hot-mill workers.

Average earnings per hour in each of the 18 selected occupations were higher in 1922 than in any year from 1910 to 1915 , but in most instances have decreased considerably from the earnings of 1917, 1919, and 1920. In 1910 the average hourly earnings for laborers were 16.4 cents, as compared with 19 cents in 1913 , 33.1 cents in $1917,46.2$ cents in 1919 , and 53.6 cents in 1920 . In 1922 the average dropped to 35.6 cents, or 34 per cent less than in 1920 . The movement in full-time weekly earnings was approximately the same as in hourly earnings, as the variations in full-time hours were very slight as compared with the fluctuations in earnings per hour.

In 15 of the 18 selected occupations the employees in 1922 all customarily worked 48 hours per week or less, and in 12 of those 15 occupations the full-time hours were never more than 48 hours per week in any year from 1910 to 1922. No 84 -hour week work has been reported in any selected occupation since 1915.

Index numbers for full-time hours per week, earnings per hour, and full-time weekly earnings are also contained in Table A (9). These are simply percentages computed from the averages presented in the table, using the average for 1913 as the base, or 100 per cent. The index numbers for this department as a whole (all selected occupations combined) are shown on page 4.

Table A (9).-AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULLTIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCUPATIONS-SHEET MILLS. ${ }^{1}$

Table A (9).-AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGE FULL TIME WEEKLY EARNINGS, AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCUPATIONS-SHEET MILLS-Concluded.

The number of employees reported in 1922 is not always the actual number of employees, as the totals in most cases contain some duplications, or repeated employees, as has been explained in the general description of Table B (p. 15). Of the 6,082 employees reported in selected occupations for all districts combined, 5,785 were actually engaged, and the 9,661 employees shown in all occupations represents 9,242 actual individuals.

The number of employees reported, together with the net number of actual employees for selected and all occupations in each district and all districts combined, are shown in Table 16.

TABLE 16.-NUMBER OF EMPLOYEES REPORTED, NUMBER OF DUPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELECTED OCCUPATIONS AND ALL OCCU. PATIONS, 1922, BI DISTRICTS—SHEET MILLS.

| District. | Employees in selected oceupations. |  |  | Employees in all occupations. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number reported. | Number of duplications. | Actual number | Number reported. | Number <br> of dupli- <br> cations. | Actual Number. |
| Pittsburgh.................... | 3,528 2,554 | 176 | $\begin{aligned} & 3,352 \\ & 2,433 \end{aligned}$ | 5,798 $\mathbf{3 , 8 6 3}$ | 250 169 | 5,548 3,694 |
| Total. | 6,082 | 297 | 5,785 | 9,661 | 419 | 9,242 |

The customary working time per week of employees in the sheetmill department has been classified, and the number and per cent of employees coming under each classification, for the years 1910 to 1922, are shown in Table B (9).

In all of the plants covered in the sheet-mill department the regu-lar-turn employees, comprising the employees in most of the selected occupations, were divided into three crews, each working eight hours per turn. The employees shown under the heading " 5 days, 5 days, and 6 days in rotation" work five turns per week, Monday to Friday, inclusive, with one crew working an extra turn Saturday morning. Each crew advances one turn each week, thus giving to each the extra Saturday turn every third week. Those working 5 days, 6 days, and 6 days in rotation follow the same plan, except that two turns are worked on Saturday instead of one.
Considering the selected occupations alone, considerable change is seen in the later years in the percentage of employees working in the various groups. These changes are due to a change of custom in a few plants; that is, working two shifts on Saturday instead of only one, as in the earlier years.
Laborers and other unskilled employees in sheet mills frequently work six days regularly. This fact is reflected in the percentage of employees shown in this column for all occupations.

When the percentage of employees working each specified number of turns per week in 1922 is compared with like data for 1920, there are only slight changes noted, the greatest change being in the per cent of employees in the selected occupations of the Great Lakes and Middle West district who regularly work 5 days, 5 days, and 6 days in rotation. In 1920, 56 per cent of the employees worked these turns, as compared with 62 per cent in 1922.

TABLe B (9)- NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1910 TO 1922, BY YEARS—SHEET MILLS.
[For explanation of this table see p. 15.]

1 The fgures in this column for the years 1910 to 1917 represent the number of jobs and for the years 1919, 1920, and 1922 the actual number of men employed.
I Less than 1 per cent.

Table C (9) shows by districts for each of the principal productive occupations the number of employees, the customary full time, and the actual working time and earnings of employees in 1922, together with the additional time and earnings of the same employees at occupations other than the one specified.

Referring to the occupation of roughers as an illustration: In the 14 plants reported there were 438 positions under normal operating conditions. On account of employees working short or broken time 590 men were required to fill these 438 positions. The customary working time of the men in these positions was 5.4 turns per week, 8 hours per turn, and 43.3 hours per week.

During the pay period scheduled they worked an average of 61.7 hours as roughers, and earned $\$ 61.30$, or 99.4 cents per hour. During the same time they worked an average of 21.4 hours at other occupations, for which they received an average of $\$ 20.38$ additional pay.

In the distribution of customary full-time hours per week there were only three occupations, picklers, feeders, and laborers, that had any employees working over 48 hours per week. The average customary full-time hours per week of these three occupations ranged from 61.4 for feeders to 65.9 for picklers.

The range of average hourly earnings in this department was from 35.6 cents for laborers to $\$ 1.895$ for rollers, while the average earnings per pay period for the same occupations were $\$ 24.04$ and $\$ 133.29$, respectively.

Rollers, level-handed, worked 34.1 hours per pay period which is the lowest average actual hours worked in any of the selected occupations. In 1920 this occupation in this department appeared in the Pittsburgh district only, but in 1922 working conditions had changed and this occupation was reported in the Great Lakes and Middle West district only. Rollers' helpers and finishers show the least variation in average full-time weekly earnings between the two districts, the average for the Pittsburgh district being $\$ 31.13$ and that for the Great Lakes and Middle West district $\$ 30.64$.

The average hourly earnings for combined selected occupations in this department were 89.6 cents, which is higher than that for any other department. Likewise the average hourly earnings of 69.4 cents for all occupations combined were higher than in any other department.

Table C (9),-AVERAGE CUSTOMARY FULL-TIME HOURS AND AVERAGE ACTUAL EARNINGS PER PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-SHEET MILLS.

Table $D$ (9) shows the number of employees and the average and classified earnings per hour for rollers and matchers in 1922, by districts and all districts combined.

The classified earnings per hour for rollers ranged from 70 cents to $\$ 3$, with an average of $\$ 1.894$. The largest number of employees (170) were shown in the group " $\$ 1.75$ and under $\$ 2$."

The classified earnings of matchers covers a very wide range, extending from 25 cents to $\$ 1.75$ per hour, with an average of 79.1 cents for both districts combined.

Table ID (9).-AVERAGE AND CLASSIFIED EARNTNGS PER HOUR FOR TWO SELECTED OCCUPATIONS, 1922, BY DISTRICTS-SHEET MILLS.
[For explanation of this table see p. 17.]

Customary turns per week, hours per turn, and full-time hours per week of those employees who regularly worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of their time, are presented in detail in Table E (9) for the sheet-mill department. As stated in the general explanation of this table (p.17) data are presented only for those employees whose customary working time remained the same throughout the pay period although they may.have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

| 7-day week and straght or average day of 12 or more hours all of the time. | 83 | 135 | 218 | 3 |

Of the total number of sheet-mill employees reported, 8,630 worked but one combination of customary days and hours. Of these 8,630 employees, 1,450 , or 17 per cent, regularly worked 7 days per week or a straight or average day of 12 or more hours all or part of the time, 294 working days only, 202 working nights only, and 954 alternating between day and night work. Twelve per cent $(1,062)$ worked a straight or average day of 12 or more hours all of the time, and 3 per cent (251) worked a straight or average day of 12 or more hours part of the time.

## TIN-PLATE MILLS.

The 1922 survey includes 9 representative tin-plate mills, and covers 8,992 employees in all occupations. Of the total number of employees reported, 4,613 are found in the principal productive occupations for which separate figures are given. Data were first obtained for this department in 1910 and comparative figures are presented for the period 1910 to $1922^{1}$

Considering the principal productive occupations as a whole, average full-time hours per week in 1922 were 1 per cent less than in 1920 and 6 per cent less than in 1913. Average hourly earnings, while 75 per cent greater in 1922 than in 1913, were 20 per cent less than in 1919 and 31 per cent less than in 1920. Average full-time earnings per week followed very closely the course of hourly earnings, as changes in full-time hours were very slight as compared with the variations in hourly earnings. The average earnings per hour of all employees in all occupations were 65 cents in 1922 as compared with 94.9 cents in 1920.

The most significant facts concerning average earnings and average hours in each of the principal productive occupations of tin-plate mills are shown in Table A (10). The customary working time of all occupations in the heating and rolling crews remained the same, 42.7 hours per week, throughout the entire period 1910 to 1922. The other occupations, consisting of the shearing crew, tinning department, and laborers, show various changes in full-time hours per week from year to year. The change in full-time hours of these employees in 1922 as compared with 1920 ranged from a decrease of 7.2 hours per week for openers, male, to an increase of 2.7 hours for branners, male. The occupation of redippers showed no change, and openers, female, branners, female, and assorters, male, are shown for the first time in this report, hence no comparison is possible for these three occupations. The full-time hours of openers, male, during the period 1910 to 1915 were subject to only slight variations, the hours in 1910 being 57.5 as compared with 57.2 in 1915. In 1919 the working time dropped to 52.3 hours per week but advanced again in 1920 to 56.2 . In 1922 the average was 49 hours.
Average earnings per hour have decreased in each of the selected occupations in which comparative figures are available when 1922 is compared with 1920 or 1919, but in each instance the 1922 figures are higher than those in any other year for which data are presented. The decreases in 1922 when compared with 1920 ranged from 9.7 cents per hour for openers, male, to 84.1 cents for rollers. For example, the average earnings per hour of openers, male, were 22.1 cents in 1910. Earnings advanced during the next two years to 29.6 cents per hour. The movement of wages in 1913, 1914, and 1915 was in the opposite direction, the hourly earnings for those years being 27.4, 26.6, and 24.7 respectively. The average of 80 cents per hour in 1919 was influenced to a large extent by war conditions. Earnings decreased to 72.8 cents per hour in 1920 and 63.1 cents in 1922.

Average full-time weekly earnings decreased in each selected occupation in about the same proportion as average hourly earnings.

[^20]The distribution of employees according to average hours per week shows no change from year to year for the heating and the rolling crews, all appearing in the group " 48 and under." The employees in the other principal productive occupations worked 60 hours per week or less in 1922, except branners, male, and laborers. Twenty-five per cent of the branners, male, are shown in the group "Over 72 and under 84 " and 38 per cent worked "Over 60 and under 72." Nine per cent of the laborers are shown in the group "Over 60 and under 72 ."

Index numbers for average full-time hours per week, average earnings per hour, and average full-time weekly earnings are also contained in Table A (10). These are simply percentages computed from the averages presented in the table, using the average for 1913 as the base, or 100 per cent. The index number for this department as a whole (all selected occupations combined) is shown on page 4.

Table A (10).-AVERAGE CUSTOMARY FULL-TIME HOURS PER WEEK, AVERAGE EARNINGS PER HOUR, AND AVERAGF FULLTIME WEEKLY EARNINGS AND INDEX NUMBERS THEREFOR, 1910 TO 1922, BY OCCUPATIONS—TIN-PLATE MILLS-Concluded.

${ }^{2}$ Less than 1 per cent.
The number of employees reported in 1922 is not always the actual number of employees, as the totals in most cases contain some duplications, or repeated employees, as stated in the general explanation of Table B. Of the 4,695 employees reported in selected occupations for all districts combined 4,613 were actually engaged, and the 9,166 employees shown in all occupations represent 8,992 actual employees.

The number of employees reported, together with the net number of actual employees for selected occupations and for all occupations in each district and in all districts combined, are shown in Table 17.

TABLE 1\%-NUMBER OF EMPLOYEES REPORTED, NUMBER OF DUPLICATIONS, AND ACTUAL NUMBER OF EMPLOYEES IN SELECTED OCCUPATIONS AND ALL OCCUPATIONS, 1922, BY DISTRICTS-TIN-PLA TE MTLLS.

The customary working time per week of employees in the tinplate department has been classified, and the number and per cent of employees coming under each classification for the years 1910 to 1922 are shown in Table B (10).

The working time of practically all of the employees in the tinplate department was either " 5 days, 5 days, and 6 days in rotation," or 6 days. In all of the plants covered the regular turn employees, comprising most of the employees in the selected occupations, were divided into three crews, each working eight hours per turn, five turns per week, Monday to Friday, inclusive, with one crew working an extra turn Saturday morning. Each crew advanced one turn each week, thus giving to each the extra Saturday turn every third week. Most of the employees reported in the unclassified occupations were largely mechanics or laborers, and usually worked 6 days per week.

Table B (10)- NUMBER AND PER CENT OF EMPLOYEES WHO CUSTOMARILY WORKED EACH SPECIFIED NUMBER OF DAYS PER WEEK IN EACH DISTRICT AND ALL DISTRICTS COMBINED, 1910 TO 1922, BY YEARS-TIN-PLATE MILLS.

[^21]Table C (10) shows by districts for each of the principal productive occupations in 9 tin-plate mills, the number of employees, the customary full time, and the actual working time and earnings in 1922, together with the additional time and earnings of the same employees at occupations other than the one specified.

Referring to the occupation of catchers, for example: In the 9 plants scheduled 321 positions were filled during the pay period by 456 actual employees. The customary working time was 5.3 turns per week, 8 hours per turn, and 42.7 hours per week, which is also the average for the entire heating and rolling crews. In the distribution of the customary full-time hours per week for the heating and rolling crews no employee regularly worked over 48 hours.

During the period scheduled the 456 men who worked as catchers averaged 55 hours and earned $\$ 44.86$, or 81.6 cents per hour. During the same time they worked an average of 14.2 hours at other occupations and received an average of $\$ 7.74$ additional pay.

Members of the shear crew, some occupations in the tinning department, and laborers regularly worked more hours per week than did the heating and rolling crews. The occupation of branners, male, was the only one in which any employees regularly worked as much as 72 hours per week.

Data for openers, female, and assorters, male, in 1922 are here presented. No data for the former has been shown since 1913, and for the latter since 1912. Branners, female, are presented for the first time in this report.

Rollers, level-handed, working at that occupation only, earned 92.4 cents per hour, but when working at other occupations in addition to their regular occupation they earned $\$ 1.344$ per hour. The difference, amounting to 42 cents, is the greatest earned in this manner in any occupation and is accounted for by reason of the work other than that of roller, level-handed, being work as straight roller.
With out one exception, that of sheet mills, the average houriy earnings for selected occupations in this department show a wider range than that for selected occupations of any other department, the range being from $\$ 1.701$ for rollers to 28.7 cents for branners, female.

Openers, remale; pranners, female; and assorters, male, did no work other than that at the specified occupation.

TABLE C (10)-AVERAGE CUSTOMARY FULL-TIME HOURS WORKED AND AVERAGE ACTUAL EARNINGS PER《 $-\infty$ PAY PERIOD AND PER HOUR, 1922, BY OCCUPATIONS AND DISTRICTS-TIN-PLATE MILLS.

Table D (10) shows the number of employees and the average and classified earnings per hour, for heaters and doublers, and the number of employees whose average earnings fell in each group of classified rate per hour in 1922, by districts and all districts combined.

The classified earnings per hour for heaters ranged from 60 cents to $\$ 1.75$, with an average of $\$ 1.17$ for all employees. Of the 149 heaters 113 earned from $\$ 1$ to $\$ 1.50$ per hour, 3 earned over $\$ 1.50$, and 33 earned less than $\$ 1$.

The average hourly earnings for the 322 doublers were $\$ 1.045$. The range in earnings was from 40 cents to $\$ 2$, with the largest number in any group, 141 or 44 per cent, shown under the classification of " $\$ 1$ to $\$ 1.25$."

Table $\mathbf{D}$ (10).-AVERAGE and CLASSIFIED EARNINGS PER HOUR FOR TWO SELECTED OCCUPATIONS, 1922, BY DISTRICTS - TIN-PLATE MILLS.
[For explanation of this table, see p. 17.]

Customary turns per week, hours per turn, and full-time hours per week of those employees who regularly worked 7 days per week regardless of the length of turn, or a turn of 12 or more hours regardless of the number of days per week, either all or part of their time, are presented in detail in Table E (10) for the tin-plate mills department. As stated in the general explanation of this table (p. 17), data are presented only for those employees whose customary working time remained the same throughout the pay period although they may have been engaged in more than one occupation. Details are shown for each district and for all districts combined.

Table E (10).-CUSTOMARY TURNS PER WEEK AND HOURS PER TURN OF EMPLOYEES WHO WORKED 7 TURNS PER WEEK OR 12 OR MORE HOURS PER DAY ALL OR PART OF THE TIME, 1922, BY DISTRICTS-TIN-PLA TE MILLS.
[This table includes only employees who worked but one combination of customary days and hours during pay period. For explanation of table see p. 17.]
