BULLETIN OF THE U. S. BUREAU OF LABOR STATISTICS

NO. 357

WASHINGTON

MAY, 1924

COST OF LIVING IN THE UNITED STATES.

INTRODUCTION AND SCOPE OF THE REPORT.

In 1918-19 the United States Department of Labor, through the Bureau of Labor Statistics, working in cooperation with the National War Labor Board, made an investigation into the cost of living in industrial centers in the United States. This investigation covered white families in 92 cities or localities in 42 States, the cities varying in size from New York to small country towns of a few thousand population. In selecting these places it was the aim of the bureau to get representative data that would show living conditions in all sections of the country and in all kinds of localities. The results of this investigation are published in this report.¹ Tables showing changes in cost of living up to December, 1923, are included.

The data for this study were secured, as in the former studies, through personal visits by agents of the bureau to the homes of wage earners and small-salaried men, where, by means of interviews with the wife or other members of the family, information was obtained relative to the income and expenditures of the family for a period of one year. The period covered ranged from the year ending July 31, 1918, to the year ending February 28, 1919. Seventy-five per cent of the work covered practically the year 1918.

¹ In addition to the information on cost of living given in the present report, the Sixth and Seventh Annual Reports of the Commissioner of Labor, published in the years 1890 and 1891, respectively, in connection with statistics of cost of production of iron, steel, bituminous coal, coke, iron ore, limestone, cotton goods, woolen goods, and glass, furnished extensive tabulations of data relative to the cost of living of employees engaged in those industries. In the Sixth Annual Report the information relating to cost of living was collected from 3,260 families (representing 16,581 persons), the heads of which were employed in the iron, steel, and cognate industries. In the Seventh Annual Report information was gathered from 5,284 families (representing 27,577 persons), the heads of which were employed in the cotton, woolen, and glass industries. It is thus seen that the whole number of families investigated for the two reports was 8,544, while the number of persons represented was 44,158.

In 1901-2 the then Department of Labor made another study of the cost of living, covering 25,440 workmen's families (124,188 persons) located in the principal industrial centers of the United States. This study was distributed over 33 States and the proportion of families in each geographical division corresponded very closely to its importance in an industrial sense. The families investigated were selected without reference to industry, but it is believed that the data given relative to the cost of living were fairly representative of the conditions that existed among wage earners in the whole country. This report was published as the Eighteenth Annual Report of the Commissioner of Labor.

In addition to these studies the Bureau has made several less comprehensive local studies of cost of living, the results of which have been published in the MONTHLY LABOR REVIEW.

The following table shows the localities covered and the number of families studied:

In the selection of families to be included in the inquiry the requirements to be met were, that—

1. The family must be that of a wage earner or salaried worker, but not of a person in business for himself. The families taken should represent proportionally the wage earners and the low or medium salaried families of the locality. 2. The family must have as a minimum a husband and wife and at least one child who is not a boarder or lodger. 3. The family must have kept house in the locality for the entire year covered. 4. At least 75 per cent of the family income must come from the principal breadwinner or others who contribute all earnings to the family fund. 5. All items of income and expenditures of members other than those living as lodgers must be obtainable. 6. The family may not have boarders nor over three lodgers, either outsiders or children living as such.² 7. The family must have no subrental other than furnished rooms for lodgers. 8. Slum or charity families or non-English speaking families who have been less than five years in the United States should not be taken.

² Does not refer to or include relatives, servants, nurses, etc., temporarily in the home, who were furnished board free.

In some of the accompanying tables data are presented by geographical divisions of the country. These divisions and the cities in each are as follows:

LOCALITIES COVERED, BY GEOGRAPHICAL DIVISIONS.

North Atlantic States.	North Central States.	South Central States.
Boston, Mass. Bridgeport, Conn. Buffalo, N. Y. Chambersburg, Pa. Dover, N. J. Fall River, Mass. Johnstown, N. Y. Lawrence, Mass. Manchester, N. H. Newark, N. J. New York, N. Y. South Atlantic States.		Western States.
Atlanta, Ga. Baltimore, Md. Charleston, S. C. Charleston, W. Va. Charlotte, N. C. Fredericksburg, Va. Jacksonville, Fla. New Bern, N. C. Norfolk, Va. Richmond, Va. Roanoke, Va. Savannah, Ga. Winston-Salem, N. C.		Astoria, Oreg. Bakersfield, Calif. Bisbee, Ariz. Butte, Mont. Cripple Creek District, Colo. Denver, Colo. Eureka, Calif. Everett, Wash. Los Angeles, Calif. Portland, Oreg. Pueblo, Colo. Sacramento, Calif. Salt Lake City, Utah. San Francisco and Oakland, Calif. Seattle, Wash. Spokane, Wash. Trinidad, Colo.

The sources of income are shown as follows: Earnings of husband, wife, children, and dependents; income from lodgers, garden and poultry, gifts, rent and investments, and other sources.

Data showing expenditures have been grouped under six divisions, namely: Food, clothing, housing, fuel and light, furniture and furnishings, and miscellaneous items. Each group was subdivided into a number of items in order to show as specifically as possible just what articles were purchased.

Tables 1 and 2, following, are summaries of the results of this investigation.

SUMMARY.

AVERAGE FAMILY INCOME AND EXPENDITURES FOR ALL FAMILIES.

In addition to giving the average number of persons per family in each income group of families, Table 2 shows the average "equivalent adult males" per family. For explanation of this term see page 70.

⁸ Not including 301 families in which rent is combined with fuel and light.

SUMMARY.

AVERAGE FAMILY EXPENDITURES FOR EACH CITY, BY INCOME GROUPS.

Table 3 shows for each city by income groups the amount and per cent of expenditure for each of the six groups of items under which expenditures are shown. This table also shows, for each income group, the number of families having a surplus or deficit, and the average amount of each. The average surplus or deficit for all families in each group is also shown.

There is a noticeable agreement among the several cities in the per cent of expenditure for the respective groups of items. As between income groups, the actual amount spent for food increased with the income, while as a rule the per cent of expenditure devoted to food decreased with the increase of income. The per cent expended for clothing clearly increased with the income, while miscellaneous expenditures, which include insurance, church, lodges, labor organizations, charities, street-car fares, movies, doctor and hospital bills, and all other expenses not provided for in any of the specific groups named, increased with the income but not with the same degree of regularity. The per cent of expenditure for rent and for fuel and light, decreased slightly with the increase of income, and up to a certain point there was an increase in the per cent of expenditure for furniture and house furnishings.

While no limit was set as to the size of families to be studied, there is a remarkable agreement in the average size of all families scheduled in the several localities. With less than a dozen exceptions, this average size ranged from 4.5 to 5.3 persons, and in by far the larger number of cases the range was from 4.8 to 5.1 persons.

There is a greater difference between the averages for the income groups, the range for the United States being from 4.3 to 6.4 persons per family as shown in Table 2. As a rule the higher income groups have larger families. This is probably due to the fact that the families having larger incomes are older families, while the families having lower incomes are of younger people whose families have not yet attained their ultimate size.

ANALYSIS OF GENERAL TABLES.

In this study particular attention was paid to the family income. Not only is the amount of income which a family receives important, but the sources of that income call for serious consideration.

Two families may have equal total incomes. In one case the income may be derived wholly from the wages or salary of the husband. The wife's time may be devoted to her domestic and social duties—care of the home and children, and such neighborhood or other work as she may be interested in. The children are in school. In the case of the second family, the husband's earnings may be insufficient to support the family and it becomes necessary for the wife to devote more or less of her time to working for pay, or for the children to stop school and go to work to supplement the income of the husband and father.

A well-tended vegetable garden, or a poultry yard, may not only add to a family's income, but be a source of profit in the pleasure derived from caring for it. On the other hand, the presence of lodgers in a family may, by crowding and otherwise, have a deleterious effect.

It has been found that in one of the 92 localities included in the survey the average earnings of the husbands constituted more than 95 per cent of the total average income; in 49 localities they constituted 90 and under 95 per cent of the total income; in 29 localities, 85 and under 90 per cent; in 10 localities, 80 and under 85 per cent; and in 3 localities, 75 and under 80 per cent. In 76 localities the average total earnings per family were 95 per cent or more of the family's total income; and in 16 localities, 90 and under 95 per cent.

In considering the sources of income and the importance of each source with relation to the total family income, it should be kept in mind that families of the following types were excluded: (1) Those in which there were children who lived as boarders, that is, paid a certain sum per week or per month for board and spent the remainder of their earnings or salary as they saw fit; (2) those which kept any boarders or more than three lodgers; and (3) those in which the total earnings of the family did not equal 75 per cent or more of the total income. The object in so doing was to secure families dependent for support, as largely as possible, upon the earnings of the husband. It will be seen that a large number of families was therefore excluded, thus materially affecting the percentage of families having earnings from children and income from lodgers and showing a larger percentage of the total income as coming from the earnings of the husband than would otherwise be the case. Another effect of the above exclusions was to reduce the actual amount per family earned by children and received from boarders or lodgers that would be shown in a cross section of a community including all the types mentioned.

Several general tables are included in this report as follows:

Table A.—Sources and amounts of family incomes in one year, by cities and income groups.

This table shows by income groups for each of the 92 localities included in the study, the average income from the earnings of the husband, the number of families having income from the earnings of wife, children, and dependents, from lodgers, garden, poultry, etc., gifts, rents and investments, and from other sources. The table shows also the average income per family from each of these sources based on the number of families having such income, as well as the average based on all families studied.

Table B.—Average quantity of specified articles of food consumed per family in one year, by geographical divisions.

This table shows the average quantity of each of 128 articles of food consumed by 11,900 families. Because certain items of food consumption were not reported, 196 families have been omitted from this table. The average size of the 11,900 families was 4.9 persons.

The figures in the first column of Table B are based on the average consumption per family. Of course not all members of a family consume the same quantity of food. Careful studies and comparisons of food consumption have led to the assumption that, as a rule, using the food consumed by an adult male (one 15 years of age or over) as a basis or 1.00 the relative consumption of food is as follows:

Adult male.....	1.00
Adult female.....	.90
Child 11 to 14 years.....	.90
Child 7 to 10 years.....	.75
Child 4 to 6 years.....	.40
Child 3 years or under.....	.15

On this basis, the families included in Table A contained an average of 3.32 "equivalent adult males"; that is, they would consume as much food as 3.32 males 15 years of age or over.

The second column of Table B shows the average quantity of food consumed per equivalent adult male. The third and fourth columns show, respectively, the number and per cent of families using each specified article of food, while the last column shows the average quantity consumed by the families using such article. Thus we have two figures of consumption per family, the first an average based upon all families included in the study and the other an average based upon the number of families using the particular article shown. In this table, except where otherwise stated the quantities are expressed in pounds.

The figures in the last line in the table show the average number of lunches purchased per family during the year.

The data in this table are shown for five geographical divisions and for the United States as a whole.

Table C.—Quantity of and expenditure for clothing purchased per family in one year, by sex, age, and income groups.

Because there is such a wide difference in the clothing of males and females and of adults and children, it seemed best to present the data on clothing by age and sex groups. It was also desirable to show them

by income groups. After all these divisions were made, the data for any single group for any one city or even for all the cities in a geographical group were so thin as to be of little value. An experimental tabulation showed that even between the southern and the northern groups of cities, with the exception of a few articles, the differences are negligible, and that the most satisfactory presentation is one which includes all the data for the 92 cities. Hence Table C has been prepared on this basis.

At the beginning of each sex and age group of this table is a statement showing the number of families in each income group of that section of the table. In the case of children, the statement also shows the number of children and the average number of children per family in each group. To illustrate: In the section of the table "Male children 15 years and over," under income group "\$1,200 and under \$1,500," the figures show that there were 243 families having male children 15 years old and over, that there were 261 such children in the group, and that the average number of such children per family in the group was 1.1. Of course the same families will often appear in more than one group, because a family may have both male and female children falling in different age groups.

In the body of the table, as in Table B, two sets of figures are given, one including all families in the wage group, the other including only the families purchasing the article in question. The table shows in connection with each article of clothing, the average number purchased by all families, the average expenditure per family, and the average expenditure per article. In the groups of children and dependents, the average number of articles per person and the expenditure per person are also shown. Following these facts are four columns showing the number of families in the group who purchased the article under consideration, the per cent that this number is of all families in the income group, the average number of articles purchased per family, and the average expenditure per family. In the case of some items, as jewelry and other clothing, the "number of articles" and "expenditure per article" are not given.

Table D.—Number of families living in houses or apartments having specified number of rooms, and average amount paid for rent in one year, by cities and income groups.

The question of rents is, to a greater extent than most items of expense, a local question, so that average figures for geographical divisions or other combinations are apt not to be satisfactorily representative of any individual locality. For this reason data on this subject are shown for each city. Table D shows for each income group in each city the number of families living in houses and in apartments, the average size of the families, the number of rooms per family, the number of families living in houses and in apartments having a specified number of rooms, and the average rent paid during the year per house or apartment, per room, and per person. Families who live in houses or apartments owned by themselves, and families living in houses or apartments where the cost of either heat or light, or both, are included in the rent, have been omitted from this table.

The summary of the table shows that of the 8,561 families reported in Table D, 5,191 families live in houses and 3,370 live in flats or apartments. In a number of the smaller towns no families were found living in apartments.

Table E.—Quantity of and expenditure for fuel and light per family in one year, by cities and income groups.

Like housing, the question of fuel and light is to a considerable extent a local one. In one city anthracite coal is the principal article of fuel, in another city bituminous coal, in another gas, and so on. For this reason the data for this group of expenditures are shown by cities. Table E shows, for each income group in each city, the number of families, the average number of rooms per family, and the average quantity and expenditure per family for each article of fuel and light. Families whose expenditure for fuel and light were included with rent have been omitted. Figures are shown for 11,793 families, of which 8,195 lived in houses and 3,598 lived in flats or apartments.

Table F.—Quantity of and expenditure for furniture and house furnishings per family in one year, by income groups.

Like Tables B and C, this table shows data for "all families" and for "families purchasing." It shows for the United States, by income groups, the average number of specified articles purchased and the average expenditure per article and per family.

At the beginning of the table is a statement showing the number of families and the average number of persons per family in each income group.

Table G.—Expenditure for miscellaneous items in one year, by geographical divisions and income groups.

This table shows the average expenditure per family in one year for a number of miscellaneous items. In the nature of the case in very few of these items could the number or quantity be shown, and no attempt has been made to show this for any item.

At the beginning of the table, as in some of the other tables, is a statement showing the number of families and the average number of persons per family in each income group.

CHANGES IN THE COST OF LIVING

When the bureau made its study in 1918-19 it also secured prices in certain cities on a large number of articles for December each year from 1914 to 1917, inclusive. In other cities it obtained prices for 1917 only. In 32 of these cities it has continued to get prices from one to four times each year since 1917. With the prices for December, 1914, and December, 1917, respectively, as a base, percentages of increase or decrease have been computed and the results published in the Monthly Labor Review. Summaries for the United States have also been made from the figures for the 32 cities. These results are shown in General Tables H, I, and K.

Table H.—Changes in cost of living in 19 cities from December, 1914, to December, 1923.

Table I.—Changes in cost of living in 13 cities from December, 1917, to December, 1923.

Table K.—Changes in cost of living in the United States from 1913 to December, 1923.

The prices of food and of fuel and light (which include coal, wood, gas, electricity, and kerosene) are furnished the bureau in accordance with arrangements made with establishments through personal visits of the bureau's agents. In each city food prices are secured from 15 to 25 merchants and dealers, and fuel and light prices from 10 to 15 firms, including public utilities. All other data are secured by special agents of the bureau who visit the various merchants, dealers, and agents and secure the figures directly from their records. Four quotations are secured in each city (except in Greater New York, where five are obtained) on each of a large number of articles of clothing, furniture, and miscellaneous items. Rental figures are secured for from 375 to 2,000 houses and apartments in each city, according to its population.

In studying these tables it should be borne in mind that the figures for the 19 cities in Table H are based on the prices prevailing in December, 1914, the figures for the 13 cities in Table I are based on the prices prevailing in December, 1917, while the figures for the United States shown in Table K are a summarization of the figures in Tables H and I, computed on a 1913 base.

It will be noted that from the beginning of the studies to June, 1920, there was, with an occasional exception, a steady increase in prices, becoming much more decided during the latter part of that period. From June, 1920, to March, 1922, there was a decrease during each period covered by the tables. During the latter part of this time the decreases were very small. From March to June, 1922, and from June to September of the same year the changes were small, being increases in some cities and decreases in others. From September to December, 1922, an increase was shown in each of the 32 cities.

From December, 1922, to March, 1923, the changes ranged from a decrease of 2.9 per cent to an increase of 0.8 per cent, the average for the United States being a decrease of 0.4 per cent.

During the period from March to June, 1923, the changes ranged from a decrease of 0.9 per cent to an increase of 2.8 per cent, the average for the United States being an increase of 0.5 per cent. This brought the cost of living to within three-tenths of 1 per cent of what it was in December, 1922.

During the three months from March to June, 1923, the price of food increased in 28 of the 32 cities, clothing increased in 22 of the cities, and furniture increased in all of the cities. Housing increased in 17 and decreased in 12 cities, miscellaneous items increased in 11 and decreased in 15 cities, while fuel and light increased in 2 cities and decreased in 28 cities. In a few cities one or more of the groups of items remained the same in June as in March.

From June to September, 1923, there was an increase in every city, the range being from 0.2 per cent to 2.7 per cent. The average increase for the United States was 1.4 per cent. Food and clothing increased in every city, rents increased in 25 cities. The other groups of items increased in the majority of cities, but decreased in a few.

From September to December, 1923, the changes range from 1.3 per cent decrease to 1.4 per cent increase, the average for the United States being an increase of 0.6 per cent. There was an increase in all but five of the cities. In 23 cities there was an increase in the cost of food; in clothing there was an increase in 12 cities and a decrease in 13; in housing there was an increase in 27 cities; in fuel and light an increase in 24 cities; while in furniture and miscellaneous items the increases and decreases were fairly divided among the cities.

GENERAL TABLES.

465

The following table, K, shows the increase in the cost of living in the United States from 1913 to December, 1923. These figures are a summarization of the figures for the 32 cities, the results of which appear in the preceding tables, computed on a 1913 base.

TABLE K.—CHANGES IN COST OF LIVING IN THE UNITED STATES, 1913 TO DECEMBER, 1923.

Item of expenditure.	Per cent of total expenditure.	Per cent of increase from 1913 (average) to—																			
		Dec., 1914.	Dec., 1915.	Dec., 1916.	Dec., 1917.	Dec., 1918.	June, 1919.	Dec., 1919.	June, 1920.	Dec., 1920.	May, 1921.	Sept., 1921.	Dec., 1921.	Mar., 1922.	June, 1922.	Sept., 1922.	Dec., 1922.	Mar., 1923.	June, 1923.	Sept., 1923.	Dec., 1923.
