NO. 424

WASHINGTON

DECEMBER, 1926

BUILDING PERMITS IN THE PRINCIPAL CITIES OF THE UNITED STATES IN 1925¹

INTRODUCTION AND SUMMARY

Shortly after January 1, 1926, the Bureau of Labor Statistics mailed a questionnaire to each of the 287 cities in the United States which had a population of 25,000 or over, according to the 1920 census, asking for information regarding building permits issued during the calendar year 1925. The questionnaire called for the number and cost of new buildings and for the number and cost of additions, alterations, and repairs to old buildings. The figures here presented apply only to buildings and do not include the ground. Further, the figures are restricted to official city limits and do not take into consideration suburban development.

As in 1924, full reports were received from 274 of these cities, but 2 of the cities which reported for 1924 did not report for 1925. However, schedules were received this year for the first time from Fort Smith, Ark., and Wichita Falls, Tex.

Over 85 per cent of these cities sent in their schedules by mail, either direct to the bureau or to the State bureaus, and the latter forwarded these to the Bureau of Labor Statistics. The States of New York, Massachusetts, Illinois, and New Jersey are now cooperating with the bureau in this work. About 15 per cent of the reports had to be obtained by sending agents to compile the data from city records.

Table 1 shows the total number of *new* buildings and the estimated cost of each of the different kinds of buildings for which permits were issued in the 274 cities from which schedules were received for the year 1925, the per cent that each kind forms of the total number, the per cent that the cost of each kind forms of the total cost, and the average cost per building.

¹ Earlier reports concerning building permits issued in the United States are published in Bulletins Nos. 295, 318, 347, 366, and 397 of the Bureau of Labor Statistics, and in the Monthly Labor Review for July, 1921; April, 1922; July, 1923; October, 1923; June, 1924; October, 1924; June, 1925; September, 1925; October, 1925; June, 1926; July, 1926; and October, 1926.

TABLE 1.—NUMBER AND COST OF NEW BUILDINGS AS STATED BY PERMITS ISSUED IN 274 CITIES DURING THE CALENDAR YEAR 1925, BY KIND OF BUILDING

Kind of building	New buildings for which permits were issued				
	Number	Per cent of total	Estimated cost		
			Amount	Per cent of total	Average per building
RESIDENTIAL BUILDINGS					
One-family dwellings.....	235,168	41.7	\$1,074,031,356	28.2	\$4,567
Two-family dwellings.....	38,784	6.9	324,586,029	8.5	8,399
One-family and two-family dwellings with stores combined.....	5,786	1.0	58,865,118	1.5	10,174
Multi-family dwellings.....	15,119	2.7	709,501,414	18.6	46,928
Multi-family dwellings with stores combined.....	1,771	.3	76,564,025	2.0	43,038
Hotels.....	342	.1	171,798,215	4.5	502,333
Lodging houses.....	120	(1)	1,137,750	(1)	9,481
All other.....	204	(1)	49,000,002	1.3	240,196
Total.....	297,294	52.8	2,465,483,909	64.7	8,293
NONRESIDENTIAL BUILDINGS					
Amusement buildings.....	1,047	.2	116,283,961	3.1	111,063
Churches.....	1,248	.2	63,457,806	1.7	50,848
Factories and workshops.....	4,999	.9	173,378,315	4.5	34,683
Public garages.....	5,196	.9	83,161,501	2.2	16,005
Private garages.....	209,135	37.1	88,221,158	2.3	422
Service stations.....	4,106	.7	13,044,942	.3	3,177
Institutions.....	254	(1)	53,423,157	1.4	210,351
Office buildings.....	1,879	.3	268,904,589	6.9	140,449
Public buildings.....	300	.1	23,570,409	.6	78,568
Public works and utilities.....	615	.2	43,890,487	1.2	71,367
Schools and libraries.....	1,038	.2	163,027,827	4.3	157,060
Sheds.....	17,309	3.1	7,492,546	.2	433

Stores and warehouses.....	15,768	2.8	243,230,401	6.4	15,425
All other.....	2,603	.5	8,897,366	.2	3,418
Total.....	266,002	47.2	1,340,281,355	35.3	5,060
Grand total.....	563,356	100.0	3,811,765,264	100.0	6,766

¹ Less than one-tenth of 1 per cent.

This table shows that of every dollar spent for building in these 274 cities 64.7 cents were spent for residential buildings against 35.3 cents for nonresidential buildings. This is practically the same proportion as was shown in 1924, when 64.6 per cent of the money spent for the erection of buildings was spent for residential buildings and 35.4 per cent for nonresidential buildings.

It should be borne in mind that the costs shown in these tables are estimated costs declared in most cities by the prospective builder at the time of applying for his permit to build. Frequently the figures are under the real cost of the building. Many cities charge fees according to the cost of the building and this may cause the builder to underestimate the cost. Another cause of underestimation is that builders think that a low estimate will make their tax assessment lower. On the other hand, a builder may overestimate the cost and show such statement to a prospective purchaser.

In some cities the building commissioner checks over the cost and requires the builder to correct his figures. In many places, however, the estimate given is accepted if it is apparently reasonable.

It should also be borne in mind that the data show merely the number of buildings for which permits were issued and that there is

more or less delay before work starts on the building, and considerable time often elapses before the building is ready for occupancy.

More one-family dwellings were erected in these 274 cities than any other class of building and more money was spent for their construction than for the construction of any other kind of building. One-family dwellings made up 41.7 per cent of all buildings for which permits were issued and cost 28.2 per cent of the estimated cost of all buildings. Private garages were the next most numerous, comprising 37.1 per cent of all buildings but only 2.3 per cent of the total cost of all buildings. Multi-family dwellings (apartment houses) ranked next to one-family dwellings in estimated cost, \$709,501,414 being spent for their erection, or 18.6 per cent of the total amount expended for the erection of all buildings. More money was spent for the office buildings than for any other class of nonresidential buildings, their estimated cost being 6.9 per cent of the total estimated cost of all new structures.

The last column in the table shows the average cost of each kind of building. These averages range from \$422, the average cost of a private garage, to \$502,333, the average estimated cost of the 342 hotels erected in these 274 cities. The 1924 report (Bulletin No. 397) shows the estimated cost of the 331 hotels for which permits were issued in 1924 was only \$275,531. The 1925 average of over a half million dollars per hotel gives some idea of the large size of hotels now in process of construction in these cities.

The average cost of one-family dwellings in 1925 was \$4,567 compared with \$4,314 in 1924, and the average cost of structures of all kinds was \$6,766 compared with \$5,721 in 1924.

FAMILIES PROVIDED FOR

Table 2 shows the number and the per cent of families provided for by each of the different kinds of new dwellings for which permits were issued in 272 identical cities in 1924 and 1925.

TABLE 2.—NUMBER AND PER CENT OF FAMILIES TO BE HOUSED IN NEW DWELLINGS FOR WHICH PERMITS WERE ISSUED IN 272 IDENTICAL CITIES DURING THE CALENDAR YEARS 1924 AND 1925, BY KIND OF DWELLING

Kind of dwelling	Number of new buildings for which permits were issued		Families provided for			
			Number		Per cent	
	1924	1925	1924	1925	1924	1925
One-family dwellings.....	214,685	234,026	214,685	234,026	47.1	46.2
Two-family dwellings.....	43,981	38,683	87,962	77,366	19.3	15.3
One-family and two-family dwellings with stores combined.....	4,877	5,786	7,755	9,622	1.7	1.9
Multi-family apartments.....	13,076	15,112	134,465	171,270	29.5	33.8
Multi-family apartments with stores combined.....	1,429	1,771	10,908	14,803	2.4	2.9
Total.....	278,048	295,378	455,775	507,096	100.0	100.0

In the 272 cities from which reports were received 507,096 families were provided with living quarters in new buildings in 1925 as compared with 455,775 in 1924, an increase in housing units of over 11 per cent.

One-family dwellings cared for 214,685 families in 1924, or 47.1 per cent of all families provided for, as against 234,026 families, or 46.2 per cent in 1925. Multi-family dwellings which provided 29.5 per cent of all new housing units in 1924 provided for 33.8 per cent in 1925. Two-family dwellings provided for only 77,366 families in 1925 compared with 87,962 in 1924.

Table 3 shows the number and the percentage distribution of families provided for in the different kinds of dwellings in the 257 identical cities from which reports were received in each of the five years, 1921, 1922, 1923, 1924, and 1925. For convenience, one-family and two-family dwellings with stores combined are grouped with two-family dwellings, and multi-family dwellings with stores combined are grouped with multi-family dwellings.

TABLE 3.—NUMBER AND PER CENT OF FAMILIES PROVIDED FOR IN THE DIFFERENT KINDS OF DWELLINGS IN 257 IDENTICAL CITIES IN 1921, 1922, 1923, 1924, AND 1925

Year	Number of families provided for in—				Per cent of families provided for in—		
	One-family dwellings	Two-family dwellings ¹	Multi-family dwellings ²	All classes of dwellings	One-family dwellings	Two-family dwellings ¹	Multi-family dwellings ²
1921.....	130,873	38,858	54,814	224,545	58.3	17.3	24.4
1922.....	179,364	80,232	117,689	377,305	47.5	21.3	31.2
1923.....	207,632	96,344	149,697	453,673	45.8	21.2	33.0
1924.....	210,818	95,019	137,082	442,919	47.6	21.5	30.9
1925.....	226,159	86,145	178,918	491,222	46.0	17.5	36.4

¹ Includes one-family and two-family dwellings with stores combined.

² Includes multi-family dwellings with stores combined.

In 1925 housing accommodations for 491,222 families were provided in new buildings in these 257 cities. The largest number previously provided for in any year was 453,673 in 1923. In 1921 only 224,545 families were provided for, or less than half of the number provided for in 1925.

One-family dwellings provided for 58.3 per cent of the total number of families provided for by all new buildings in 1921. The percentage dropped to a low point of 45.8 in 1923, rose to 47.6 in 1924, and dropped again to 46 in 1925. Except for 1924, the percentage of families provided for in apartment houses was higher each year than the preceding year, rising from 24.4 per cent in 1921 to 33 per cent in 1923. The falling off in this class of dwelling in 1924 to only 30.9 per cent of the total housing provided for was commented on at the time as possibly presaging a different trend—that is, a greater turning to the single-family dwelling. However, the rise of this type of dwelling in 1925 to the high point of 36.4 per cent shows that the apartment house has not yet lost its popularity. More families were provided for in new apartment houses in these 257 cities in 1925 than were provided for in all one-family dwellings and two-family dwellings in 1921, and almost as many as were provided for by one-family dwellings in 1922.

A further illustration of the trend of family habitation toward the apartment house is shown by the fact that the number of families provided for in multi-family dwellings has increased from 54,814 in

1921 to 178,918 in 1925, an increase of 226.4 per cent. In the same period the families accommodated in one-family dwellings increased from 130,873 to 226,159, an increase of only 72.8 per cent.

HOUSING TREND, 1924 AND 1925

Table 4 shows the number and the cost of each of the different kinds of buildings for the 272 identical cities from which reports were received in 1924 and 1925 and the percentage of increase or decrease in the number and in the cost in 1925 as compared with 1924.

TABLE 4.—NUMBER AND COST OF NEW BUILDINGS FOR WHICH PERMITS WERE ISSUED IN 272 IDENTICAL CITIES DURING THE CALENDAR YEARS 1924 AND 1925 BY KIND OF BUILDING

Kind of building	New buildings for which permits were issued				Per cent of increase (+) or decrease (–) in year 1925 compared with year 1924	
	1924		1925			
	Number	Cost	Number	Cost	Number	Cost
RESIDENTIAL BUILDINGS						
One-family dwellings.....	214, 685	\$925, 000, 525	234, 026	\$1, 070, 640, 532	+9.0	+15.7

Office buildings.....	1, 521	188, 504, 006	1, 807	263, 224, 314	+22.7	+39.6
Public buildings.....	291	29, 510, 179	291	28, 382, 859	0.0	–20.8
Public works and utilities.....	660	43, 664, 992	615	43, 890, 487	–6.8	+0.5
Schools and libraries.....	1, 035	158, 718, 052	1, 038	163, 027, 827	+0.3	+2.7
Sheds.....	19, 150	9, 088, 240	17, 248	7, 475, 088	–9.9	–7.8
Stables and barns.....	1, 169	1, 393, 020	565	1, 300, 890	–51.7	–6.0
Stores and warehouses.....	14, 537	184, 631, 512	15, 634	242, 326, 605	+7.5	+31.0
All other.....	2, 783	6, 107, 648	2, 603	8, 897, 366	–6.5	+45.7
Total.....	282, 480	1, 137, 631, 060	265, 521	1, 343, 880, 884	–6.0	+18.1
Grand total.....	561, 149	3, 207, 907, 852	561, 564	3, 805, 427, 154	+0.1	+18.6

In the 272 cities from which reports were received for both 1924 and 1925, permits were issued for 561,564 buildings at an estimated cost of \$3,805,427,154 in 1925 compared with 561,149 buildings costing \$3,207,907,852 in 1924. This is an increase in buildings of one-tenth of 1 per cent and in money expended of 18.6 per cent.

Residential buildings increased 6.2 per cent in number and 18.9 per cent in estimated cost in 1925 as compared with 1924, while nonresidential buildings decreased 6 per cent in number and increased 18.1 per cent in estimated cost.

The amount of money expended for the erection of apartment houses increased 27 per cent in this period compared with an increase of expenditure for single-family dwellings of 15.7 per cent.

The greatest increase (29.3 per cent) took place in the number of "other" residential buildings which include clubs with bedrooms, Y. M. C. A. buildings, etc. They also showed an increase of 90 per cent in the estimated expenditure in 1925 as compared with 1924.

As shown by reports from these 272 cities in 1925, the United States continues to spend more for amusement buildings than for churches, the estimated expenditure for the former class of buildings being \$116,283,961, while that for the latter was only \$63,438,306, increases of 96.4 and 8.6 per cent, respectively.

For the first time since the bureau has been compiling these figures the number of private garages decreased as compared with the previous year, a loss of 16.7 per cent taking place in 1925 as compared with 1924.

VOLUME OF CONSTRUCTION, 1914 TO 1925

The Bureau of Labor Statistics, in the Monthly Labor Review for July, 1925, published an article showing the relative changes in the volume of building construction in 130 identical cities reported by year from 1914 to 1924. The 1925 figures as to volume of construction are now available.² The purpose of Tables 5 and 6 is to show how much the country as a whole and the cities individually have overcome in the past few years the shortage in building occasioned by the war-time curtailment of construction.

In using these figures it must be borne in mind that they relate to new construction of all kinds, covering both residential and non-residential buildings, and are limited to the 130 cities for which the bureau has permit data each year back to 1914. Further, the figures are restricted to city limits and thus do not include buildings erected in suburbs. Some cities, however, have had an enlargement of area in the 12-year period.

TABLE 5.—INDEX NUMBERS OF VOLUME AND COST OF NEW BUILDING CONSTRUCTION IN 130 CITIES, 1914 TO 1925, BY YEAR

[1914=100]

Year	Aggregate value of all building construction, as shown by permits issued	Index numbers of—						Ratio of cost of material to labor	
		Permit valuation	Cost of building materials	Wage rates	Cost of constructing a typical building	Amount of building done	Population	Material	Labor
1914	\$748,209,763	100	100	100	100	100	100	44.1	55.9
1915	776,228,606	104	102	101	102	102	102	44.3	55.7
1916	980,323,085	131	120	104	115	114	104	49.7	50.3
1917	649,961,875	87	171	111	137	64	107	54.9	45.1
1918	401,565,104	54	187	124	152	36	109	54.3	45.7
1919	1,258,575,108	168	218	142	176	95	111	54.8	45.2
1920	1,342,630,686	179	287	193	235	76	113	54.0	46.0
1921	1,602,232,041	214	179	196	189	113	115	41.9	58.1
1922	2,427,734,079	325	183	183	183	178	118	44.1	55.9
1923	2,950,051,393	396	205	203	204	194	120	44.3	55.7
1924	3,068,161,900	410	190	220	207	198	122	40.5	59.5
1925	3,550,672,815	475	191	228	212	224	124	39.8	60.2

² See, also, Monthly Labor Review for June, 1925.

Table 5 shows the aggregate value of all buildings erected, as stated on permits issued in 130 identical cities, from 1914 to 1925, inclusive, together with the index numbers of this value, of cost of building material, of wage rates in the building trades, of cost of construction with material and labor combined, of volume of construction, and of population.

The index number of the aggregate value of all buildings constructed was obtained by using the cost of buildings (as shown by permits issued) during 1914 as 100. The building material and wage rate indexes are those of wholesale prices of building materials and of union wages in the building trades published by the Bureau of Labor Statistics.

To obtain the index numbers of cost of construction it was necessary to get the proportionate cost of material and labor in building as of some one year, and to apply to these figures the change in price from year to year in the two items, material and labor. According to figures compiled by Mr. Barclay White, a builder of Philadelphia, and presented to both the Philadelphia and the National Conference of Construction Industries early in 1921, skilled and unskilled labor together formed 36.99 per cent of the cost of building; and costs of materials, 42.88 per cent. The remainder of this cost is chargeable to supervision, insurance, engineering, etc. These figures are assumed to be as of 1920.

Mr. White's figures were based on records kept on eight buildings described as follows:

The relative values of the various parts of the building have not been very carefully studied heretofore but we have made an attempt to fix an approximate proportion covering the whole building field in this territory. We have gone about this by taking a composite of building, which includes a reinforced concrete factory building; slow burning or heavy construction ware house building with brick walls; the typical style of two-story dwelling; detached brick and frame residence; stone schoolhouse with wood floor construction; fireproof institutional building; the apartment house; and the steel frame office building. I think you will agree with me that these eight classifications come pretty near to covering the whole field in private building work.

According to Mr. White's figures the ratio of cost of materials to labor in construction in 1920 was 54 to 46. In 1920 the building-material wholesale price index number of the Bureau of Labor Statistics stood at 287 and the union wage index number at 193. From these figures it was found that the relative cost of material to labor in 1914 was 44.1 to 55.9. The year 1914 is the base year of the table as it is the earliest year for which permit valuation figures are available.

Assuming that the percentages of supervision, engineering fees, etc., have not changed, then the actual money costs of these items have advanced at the same rate as the composite increase of building material and wage rates. Adding this cost will make no difference in the index numbers for cost in the construction.

The index number for the amount of building done was obtained by dividing the aggregate valuation index for each year specified by the cost-of-construction index. The population index number was arrived at by using the population as estimated by the Census Bureau for 1914 as 100 in connection with the estimated or actual figures for the later years.

The chart on the next page illustrates in graphic form the information carried in Table 5.

As shown by the chart the index of the aggregate value of all buildings constructed reached a peak of 475 in 1925—that is, for every dollar spent in building construction in 1914 there were spent \$4.75 in 1925. On the other hand, the cost-of-construction index climbed steadily until a peak of 235 was reached in 1920 but declined to 183 in 1922, and although rising thereafter the index number was

lower in 1925 than in 1920, being 212 in 1925. In other words, a house which cost \$5,000 in 1914 would have cost \$11,750 in 1920, \$10,350 in 1924, and \$10,600 in 1925.

Assuming that the buildings erected in 1914 cared for the needs of the population at that time, then the line of population increase is the normal line of necessary construction increase. It can be readily seen from the chart how the line of actual construction has varied

from this normal trend. The two lines reached the same point, 102, in 1915. In 1916 the amount of building done was 10 points over the population index. For the next five years, 1917 to 1921, the index of building done fell below the population index. This curtailment of building during the war and the early reconstruction years is what brought about the great shortage of buildings, dwellings especially. The low point in building was 36 in 1918 or 73 points below the building requirements for that year. The year 1922 was the first year after the war in which there was a surplus of building over normal requirements as measured by 1914 standards. The next three years, 1923, 1924, and 1925, each showed an excess of building over normal requirements for the specified year, as shown by the population line. At the end of 1924 the figures show that the shortage during the war period had been more than made up. The 11-year average of building done stood at 115.5 while the average population index for the same period was 111. Now 1925 shows a surplus of 100 points over the normal needs for the year, making the 12-year average (1914 to 1925, inclusive) of building done 124.5 as compared with a 12-year average of normal building requirements of 112; that is, over this period there is a $12\frac{1}{2}$ point surplus of construction over the normal needs of new construction, or in other words in the country as a whole, as indicated by the 130 cities, at the end of 1925, 11.2 per cent more new construction had been done than was necessary to meet normal needs. This conclusion is based on the assumption that the building done in 1914 supplied the needs of that year.

The following table lists the 130 cities separately, showing the index of building done and the population index for each year since 1914. The figures for 1914 stand at 100 for both items in all cities.

Unfortunately, comparison of volume of building with growth of population can not be made in some of the cities because the Census Bureau did not estimate the population of certain cities in which conditions were so unusual that the ordinary rules for estimating the population changes evidently would not apply. For instance, for Los Angeles, the Census Bureau estimated the population up to 1923 for which year the population index was 155 and the building index 565. Thus, while in this report the building construction index for the average of the 12 years is given, it can not be compared with that of population because after 1923 the Census Bureau decided not to venture an estimate on population. Detroit, Mich., and Akron, Ohio, are other cities for which the Census Bureau has not made an estimate for each year. However, for most of the cities the population figures are available.

In arriving at a total of population for the 130 cities as a whole, the last estimate made was used where no estimate was made for the specified year.

1 No estimate of population made by the Bureau of the Census.

EXPLANATION OF GENERAL TABLE

General Table A, pages 14 to 83, shows detailed information concerning building operations in specified cities in 1924 and 1925. The table is divided into three parts.

Part 1 relates to new residential buildings, giving the number and the cost of each kind of dwelling, the number of families provided with dwellings in new buildings and the ratio of such families to each 10,000 of population, in each city from which data were received for 1924 and 1925. It will be noted that the ratio of families provided for is based both on the population according to the 1920 census and on the estimated or actual population for the specified year. The ratio is worked on the two different bases because it is thought some people would prefer the 1920 figures as, in most instances, they are the latest figures compiled by census enumeration. In 1925 a census was made by several of the States—namely, Florida, Iowa, Kansas, Massachusetts, New York, and Rhode Island. Where these State enumerations were made the Census Bureau did not estimate the population but used the State census figures. The other population figures are estimated in most cases, but they are undoubtedly more nearly correct for their respective years than the 1920 census figures would be. The estimates were made by the Census Bureau of the United States Department of Commerce. For some cities this bureau made no estimates.

In 1924 and in 1925 Miami provided for more families in proportion to population than any other city from which reports were received. As Florida was one of the States taking a census in 1925, the exact population for that year is given, and the table shows that Miami provided for 1,342 families to each 10,000 of population.

Following is a list of the five cities having the highest ratio of families provided for to each 10,000 of population according to the estimated or enumerated population for the year specified for each year since the compilation of such records.

1921		1923	
Long Beach.....	631. 9	Irvington.....	432. 1
Los Angeles.....	320. 9	Lakewood.....	381. 3
Pasadena.....	251. 7		
Shreveport.....	249. 8		
Lakewood.....	191. 3		
1922		1924	
Long Beach.....	1, 081. 0	Miami ³	2, 248. 9
Los Angeles.....	441. 6	Irvington.....	501. 2
Lakewood.....	358. 9	Los Angeles ⁴	448. 3
Miami.....	268. 1	San Diego.....	378. 0
East Cleveland.....	267. 6	Long Beach.....	347. 6
1923		1925	
Long Beach.....	1, 038. 1	Miami ³	1, 342. 0
Los Angeles.....	657. 4	San Diego.....	392. 0
Miami.....	611. 1	Tampa.....	379. 3
		Irvington.....	374. 6
		Los Angeles ⁴	331. 0

Ever since 1921 California has had at least two cities in this group of five leading cities. This year Florida joins the select group with two cities to match the California cities.

³ The ratio of families provided for in Miami in 1924 was based on the population as estimated by the Census Bureau for that year. In the light of the actual census taken by State enumerators in 1925 it would seem that the estimate for 1924 was below the actual population for that year, hence the ratio here shown for 1924 is probably higher than the actual population in that year would warrant.

⁴ Population not estimated in 1924 or 1925; 1923 estimate used.

Long Beach, which led all cities in the building of new homes in 1921, 1922, and 1923, fell to fifth place in 1924 and this year dropped out of the list altogether.

The 274 cities which reported in 1924 provided for 508,510 families, or at a rate of 136.3 families to each 10,000 of population according to the 1920 census and 123.4 families to each 10,000 of population according to the estimate for that year. This compares with 455,775 families provided for in the 272 cities reporting for 1924, or a ratio of 122.4 families to each 10,000 of population according to the 1920 census and at a ratio of 112.2 according to the estimated population for 1924.

Part 2 of General Table A gives the number and the cost of new nonresidential buildings for each city from which reports were received.

Part 3 shows the number and the cost of additions and repairs to old buildings, the number and the cost of installations, and the grand total of all buildings, both new and old.

The number of installation permits and the construction cost were obtained wherever issued by the building inspector. In a number of cities, however, these permits were issued by offices other than that of the building inspector and no reports on installation were received from such cities. In 1924 there were 83,790 installation permits issued in the cities reporting installations and a total of \$36,531,135 spent for this work. This compares with a total of 90,071 permits and with \$42,156,913 expended for these installations in 1925.

The bureau attempted to classify additions, alterations, and repairs, under the heading of repairs, etc., for housekeeping dwellings, non-housekeeping dwellings, and nonresidential buildings. Many of the cities which reported by mail, however, grouped them. In 1924 the total amount expended for repairs and alterations was \$349,813,668 compared with \$347,177,432 in 1925.

Following is a list of the five leading cities in expenditure of money for building operations from 1920 to 1925 inclusive:

1920		1923	
New York.....	\$277, 695, 337	New York.....	\$789, 265, 335
