AUGUST, 1927

BUILDING PERMITS IN THE PRINCIPAL CITIES OF THE UNITED STATES IN 1926¹

INTRODUCTION AND SUMMARY

Shortly after January 1, 1927, the Bureau of Labor Statistics mailed a questionnaire to each of the 319 cities in the United States which had a population of 25,000 or over, according to the estimate of the Census Bureau as of July 1, 1926. The questionnaire called for the number and the cost of each of the different kinds of new buildings and for the number and the cost of additions, alterations, and repairs to old buildings. The figures here presented apply only to buildings and do not include the cost of the ground on which the building is erected. Further, the figures are restricted to official city limits and do not take into consideration suburban development outside of the corporate limits.

Prior to 1926 forms were sent annually to the 287 cities which had a population of 25,000 or over, according to the 1920 census. The scope of the inquiry was extended this year to include 32 other cities which, according to the estimate of the Census Bureau, have reached a population of 25,000 or over since the last census.

Full reports were received from 294 cities, including 19 of the cities which have reached a population of 25,000 since 1920. Nearly 90 per cent of these cities sent in their reports by mail, either direct to this bureau or to cooperating State bureaus. The latter forwarded the reports obtained by them to the Bureau of Labor Statistics. The States of Illinois, Massachusetts, New Jersey, New York, and Pennsylvania are now cooperating with the Federal bureau in this work. A little over 10 per cent of the reports were obtained by sending agents to compile the data from local records.

Table 1 shows the total number of new buildings and the estimated cost of each of the different kinds of new buildings for which permits were issued in the 294 cities from which schedules were received for the year 1926, the per cent each kind forms of the total number, the per cent that the cost of each kind forms of the total cost, and the average cost per building.

¹ Earlier reports concerning building permits issued in the United States are published in Bulletins Nos. 295, 318, 347, 368, 397, and 424 of the Bureau of Labor Statistics, and in the Labor Review for July, 1921; April, 1922; July, 1923; October, 1923; June, 1924; October, 1924; June, 1925; September, 1925; October, 1925; June, 1926; July, 1926; October, 1926; May, 1927; June, 1927; and July, 1927.

TABLE 1.—NUMBER AND COST OF NEW BUILDINGS AS STATED BY PERMITS ISSUED IN 294 CITIES DURING THE CALENDAR YEAR 1926, BY KIND OF BUILDING

Kind of building	New buildings for which permits were issued				
	Number of buildings	Per cent of total	Estimated cost		
			Amount	Per cent of total	Average per building
RESIDENTIAL BUILDINGS					
One-family dwellings.....	200,531	39.5	\$939,272,815	25.9	\$4,684
Two-family dwellings.....	29,862	5.9	250,811,978	6.9	8,399

Stores and warehouses.....	15,709	3.1	216,481,212	6.0	13,781
All other.....	5,870	1.2	15,346,245	.4	2,614
Total.....	255,620	50.4	1,332,009,693	36.7	5,211
Grand total.....	507,279	100.0	3,625,325,946	100.0	7,147

¹ Less than one-tenth of 1 per cent.

A total of \$3,625,325,946 was spent for new buildings in 1926 in the 294 cities from which reports were obtained. Of this amount \$2,293,316,253, or 63.3 per cent, was spent for residential buildings and \$1,332,009,693, or 36.7 per cent, for nonresidential buildings. In 1925 reports were received from 272 cities having a population of 25,000 and over, and in these cities 64.7 per cent of the total amount expended was for residential buildings and 35.3 per cent for nonresidential buildings.

It should be borne in mind that the costs shown in these tables are estimated costs declared in most cities by the prospective builder at the time of applying for his permit to build. Frequently the figures are under the real cost of the building. Many cities charge fees according to the cost of the building, and this may cause the builder to underestimate the cost. Another cause of underestimation is that builders think that a low estimate may make their tax assessment lower. On the other hand, a builder may overestimate the cost in order to impress prospective buyers.

In some cities the building commissioner checks over the cost reported and requires the builder to correct his figures. In most

cities, however, the estimate given is accepted if it is apparently reasonable.

It should also be remembered that the data show the number of buildings for which permits were issued and that there is often some delay before work starts on the building and considerable time often elapses before the building is ready for occupancy.

More money was spent for the erection of one-family dwellings than for any other class of building, 25.9 per cent of all money spent for the erection of buildings in these 294 cities being spent for one-family dwellings. The next highest expenditure of money was for multifamily dwellings (apartment houses), their cost comprising 21.9 per cent of the total cost of all buildings.

In the nonresidential group more money was spent for office buildings than for any other class in this group. Stores and warehouses were the next in rank in cost in the nonresidential group.

In the number of buildings for which permits were issued, one-family dwellings also assumed the lead, with 39.5 per cent of all buildings. Private garages were the next most numerous class of buildings in these 294 cities, comprising 38.9 of all new buildings.

The average cost of all one-family dwellings in these 294 cities was \$4,684, as compared with \$4,567 in 1925 and \$4,314 in 1924.

Hotels cost more per building than any other class of building, the average cost of new hostleries in 1926 being \$474,765. In the nonresidential group, schools and libraries were the most expensive type, the average cost per building of the educational edifices being \$171,800. The average cost of churches was only \$56,035 while that of amusement buildings was \$140,269.

The average cost of private garages was \$396, the lowest cost per building of any class of building shown.

In these 294 cities there were 279,857 permits issued for alterations, additions, and repairs to old buildings, and the amount expended on these repairs was \$359,555,470. For all buildings, new and repairs to old, there were a grand total of 787,136 permits issued and a total expenditure of \$3,984,881,416. A total of 480,873 families were provided for in new buildings in these 294 cities during 1926.

FAMILIES PROVIDED FOR

Table 2 shows the number and per cent of families provided for by each of the different kinds of dwellings for which permits were issued in 272 identical cities in 1925 and 1926.

TABLE 2.—NUMBER AND PER CENT OF FAMILIES TO BE HOUSED IN NEW DWELLINGS FOR WHICH PERMITS WERE ISSUED IN 272 IDENTICAL CITIES DURING THE CALENDAR YEARS 1925 AND 1926, BY KIND OF DWELLING

Kind of dwelling	Number of new buildings for which permits were issued		Families provided for			
	1925	1926	Number		Per cent	
			1925	1926	1925	1926
One-family dwellings.....	234,899	195,973	234,899	195,973	46.2	41.5
Two-family dwellings.....	38,756	29,039	77,512	58,078	15.3	12.3
One-family and two-family dwellings with stores combined.....	5,784	4,168	9,619	6,985	1.9	1.5
Multifamily dwellings.....	15,109	14,770	171,314	195,474	33.7	41.4
Multifamily dwellings with stores combined..	1,771	1,440	14,803	16,176	2.9	3.4
Total.....	296,319	245,390	508,147	472,686	100.0	100.0

There were 472,686 families provided for by all classes of new dwellings in these 272 cities in 1926 as compared with 508,147 in 1925, a decrease of 7 per cent in housing units.

One-family dwellings, which provided for 234,899 families, or 46.2 per cent of all families provided for in 1925, housed only 195,973, or 41.5 per cent in 1926. In contrast, apartment houses, which provided for 171,314 families in 1925, provided for 195,474 in 1926, this being 41.4 per cent of all families provided for in 1926 as against 33.7 per cent the previous year. Two-family dwellings provided for 77,512 families in 1925 and only 58,078 families in 1926.

Table 3 shows the number and percentage distribution of families provided for in the different kinds of dwellings in the 257 identical cities from which reports were received in each of the six years 1921, 1922, 1923, 1924, 1925, and 1926. For convenience, one-family and two-family dwellings with stores combined are grouped with two-family dwellings, and multifamily dwellings with stores combined are grouped with multifamily dwellings.

TABLE 3.—NUMBER AND PER CENT OF FAMILIES PROVIDED FOR IN THE DIFFERENT KINDS OF DWELLINGS IN 257 IDENTICAL CITIES IN 1921, 1922, 1923, 1924, 1925, AND 1926

Year	Number of families provided for in—				Per cent of families provided for in—		
	One-family dwellings	Two-family dwellings ¹	Multi-family dwellings ²	All classes of dwellings	One-family dwellings	Two-family dwellings ¹	Multi-family dwellings ²
1921.....	130,873	38,858	54,814	224,545	58.3	17.3	24.4
1922.....	179,364	80,252	117,689	377,305	47.5	21.3	31.2
1923.....	207,632	96,344	149,697	453,673	45.8	21.2	33.0
1924.....	210,818	95,019	137,082	442,919	47.6	21.5	30.9
1925.....	226,159	86,145	178,918	491,222	46.0	17.5	36.4
1926.....	188,074	64,298	200,842	462,214	40.7	13.9	45.4

¹ Includes one-family and two-family dwellings with stores combined.

² Includes multi-family dwellings with stores combined.

The total number of families provided for in all classes of dwellings during 1926 in the 257 cities was 462,214. This is a reduction of 6 per cent as compared with 1925, the peak year, but is the second highest number shown in the six-year period and is more than twice as many housing units as were provided in 1921.

The figures in this table would tend to show that we are becoming a race of cliff dwellers, for in the year 1926 accommodations were provided in apartment houses for 209,842 families, or 45.4 per cent of all the families provided for during that year, while one-family dwellings provided for only 188,074 families, or but 40.7 per cent of all families provided for. This is the first year that apartment houses have provided more new family accommodations than have one-family dwellings in these 257 identical cities.

Since 1921 there has been an increase of 105.8 per cent in the number of families provided for in all classes of dwellings. During this same period, however, the number of families accommodated in apartment houses increased 282.6 per cent, while the number provided for in one-family dwellings increased only 43.7 per cent. The number of family units provided for by two-family dwellings increased 65.5 per cent between 1921 and 1926.

BUILDING TREND, 1925 AND 1926

Table 4 shows the number and cost of the different kinds of buildings for the 272 identical cities from which reports were received in 1925 and 1926 and the per cent of increase or decrease in the number and in the cost in 1926 as compared with 1925.

TABLE 4.—NUMBER AND COST OF NEW BUILDINGS FOR WHICH PERMITS WERE ISSUED IN 272 IDENTICAL CITIES DURING THE CALENDAR YEARS 1925 AND 1926, BY KIND OF BUILDING

All other.....	2, 603	8, 897, 366	5, 856	15, 314, 070	+125. 0	+72. 1
Total.....	265, 642	1, 345, 826, 672	249, 742	1, 300, 840, 876	—6. 0	—3. 3
Grand total.....	562, 627	3, 810, 206, 986	495, 703	3, 556, 835, 503	—11. 9	—6. 6

There was a decrease of 11.9 per cent in the number of buildings for which permits were issued in these 272 cities in 1926 as compared with 1925, and a decrease of 6.6 per cent in the amount expended for their erection. In these cities residential buildings decreased 17.2 per cent in number and 8.5 per cent in estimated cost, while non-residential buildings decreased only 6 per cent in number and 3.3 per cent in cost.

While there was an increase in the amounts spent for churches and amusement buildings in 1926 as compared with 1925, the increase in expenditures for amusement buildings was at a much higher rate than that for churches. The amount expended for theaters, etc., increased 14.7 per cent while the amount spent for places of worship increased only 1.8 per cent.

The only two classes of residential buildings to show an increase in the amount expended were apartment houses and apartment houses with stores combined.

There was a notable increase in the amount expended for service stations and for public buildings. The former increased 14.5 per cent in the amount expended and the latter 29.7 per cent.

PER CAPITA EXPENDITURE FOR BUILDINGS—HOUSING IN RELATION TO POPULATION

Table 5 shows the total and the per capita expenditures for new buildings, new housekeeping dwellings, repairs and additions, and for all kinds of buildings in each of the 294 cities for which reports were received for the calendar year 1926; the total number of families provided for, and the ratio of families provided for to each 10,000 of population in these 294 cities; and the total expenditure for all classes of buildings for 272 cities in 1925.

These 294 cities spent for new buildings of all kinds \$3,625,325,946, and of this amount \$2,108,875,695 was for housekeeping dwellings. The amount expended for repairs, etc., was \$359,555,470, and the total expenditure for all classes of new buildings and repairs to old buildings was \$3,984,881,416. In 1925 the 272 cities from which reports were received spent \$4,156,605,144 for all classes of new buildings and repairs.

These 294 cities had a population of 42,700,350 on July 1, 1926, according to the estimate of the Census Bureau. The per capita expenditure for new buildings was \$84.90, of which \$49.39 was for housekeeping dwellings. The per capita expenditure for repairs was \$8.42 and the total per capita expenditure was \$93.32.

The highest per capita expenditure for all classes of buildings was in White Plains, N. Y., where the per capita expenditure was \$493.10. Another suburb of New York City (Mount Vernon) ranked second, with a total per capita expenditure of \$478.37. The third city was St. Petersburg, Fla., where \$379.81 per capita was expended.

Following is a list of the five leading cities in expenditure of money for building operations from 1920 to 1926, inclusive:

1920		1921	
New York.....	\$277, 695, 337	New York.....	\$442, 285, 248
Chicago.....	84, 602, 650	Chicago.....	133, 027, 910
Detroit.....	77, 737, 215	Cleveland.....	86, 680, 023
Cleveland.....	64, 198, 600	Los Angeles.....	82, 761, 386
Los Angeles.....	60, 023, 600	Detroit.....	58, 086, 053

1922		1924	
New York.....	\$645, 176, 481	New York.....	\$836, 043, 604
Chicago.....	229, 853, 125	Chicago.....	308, 911, 159
Los Angeles.....	121, 206, 787	Detroit.....	160, 547, 723
Philadelphia.....	114, 190, 525	Los Angeles.....	150, 147, 516
Detroit.....	93, 614, 593	Philadelphia.....	141, 402, 655
1923		1925	
New York.....	789, 265, 335	New York.....	1, 020, 604, 713
Chicago.....	334, 164, 404	Chicago.....	373, 803, 571
Los Angeles.....	200, 133, 181	Detroit.....	180, 132, 528
Detroit.....	129, 719, 831	Philadelphia.....	171, 034, 280
Philadelphia.....	128, 227, 405	Los Angeles.....	152, 646, 436
1926			
New York.....		\$1, 039, 670, 572	
Chicago.....		376, 808, 480	
Detroit.....		183, 721, 443	
Philadelphia.....		140, 093, 075	
Los Angeles.....		123, 006, 215	

In these 294 cities housing accommodations were provided in new buildings for 480,873 families, or at the rate of 112.6 families to each 10,000 of population. St. Petersburg, Fla., provided for more families according to its population than any other city in the country with a population of 25,000 or over, the ratio there being 700.3 families accommodated by new dwellings to each 10,000 of the city's population.

Following is a list of the five cities having the highest ratio of families provided for to each 10,000 of population, according to the estimated or enumerated population for the year specified, for each year since the compilation of such records.

1921		1924	
Long Beach.....	631. 9	Miami ¹	2, 248. 9
Los Angeles.....	320. 9	Irvington.....	501. 2

¹ The ratio of families provided for in Miami in 1924 was based on the population as estimated by the Census Bureau for that year. In the light of the actual census taken by State enumerators in 1925, it would seem that the estimate for 1924 was below the actual population for that year, hence the ratio here shown for 1924 is probably higher than the actual population in that year would warrant.

² Population not estimated in 1924 or 1925; 1923 estimate used.

¹ Population as of 1920 census.² State census, Jan. 1, 1925.

³ In Milwaukee several items which in other cities are included in the stated cost of a new building, such as electric wiring, plastering, and heating equipment, are reported under installations. This makes the total cost of building construction in Milwaukee lower than it should be.

FOR REPAIRS, AND FAMILIES PROVIDED FOR, IN 294 CITIES IN 1926—Continued

VOLUME OF BUILDING CONSTRUCTION, 1914 TO 1926

The Bureau of Labor Statistics for the past two years has published articles showing the changes in the volume of construction in 130 identical cities, each year since 1914. The 1926 figures are shown herewith. It is the purpose of Tables 6 and 7 to show the extent to which the country as a whole and certain cities individually have overcome the building shortage occasioned by the war-time curtailment of construction.

The values of buildings constructed are obtained from the records of local building officials covering building permits issued in the 130 cities for which the bureau has figures from 1914 to 1926. When applying for a permit to build, the builder or owner is required to state the cost of the proposed building. This cost may sometimes be underestimated, but it is believed that the percentage of any underestimation has continued to be about the same. Also, a building planned is not always constructed within the calendar year in which the permit is issued, and in a few instances perhaps is not constructed at all. However, it is believed that, in the aggregate, permit valuations afford a fair indication of the change in value of buildings constructed from year to year.

In using the figures presented it should be borne in mind that they relate to new construction of all kinds, covering both residential and nonresidential buildings.

Table 6 shows the aggregate value of all buildings for which permits were issued in the 130 identical cities from 1914 to 1926, together with the index numbers of this value, of the cost of building material, of wage rates in the building trades, of the cost of construction of a composite building, of volume of construction, and of population.

TABLE 6.—INDEX NUMBERS OF VOLUME AND COST OF NEW BUILDING CONSTRUCTION IN 130 CITIES, 1914-1926, BY YEARS

[1914 = 100]

Year	Aggregate value of all building construction as shown by permits issued	Index numbers of—						Ratio of cost of material to labor
		Permit valuation	Cost of building material	Wage rates	Cost of constructing a composite building	Amount of construction	Population	
1914.....	\$748, 209, 763	100	100	100	100	100	100	44.1 : 55.9
1915.....	776, 228, 606	104	102	101	102	102	102	44.3 : 55.7
1916.....	980, 323, 685	131	130	104	115	114	104	49.7 : 50.3
1917.....	649, 961, 875	87	171	111	137	64	107	54.9 : 45.1
1918.....	401, 565, 104	54	187	124	152	36	109	54.3 : 45.7
1919.....	1, 258, 875, 108	168	218	142	176	95	111	54.8 : 45.2
1920.....	1, 342, 630, 686	179	287	193	235	76	113	54.0 : 46.0
1921.....	1, 602, 232, 041	214	179	196	189	113	115	41.9 : 58.1
1922.....	2, 427, 734, 079	325	183	183	183	178	118	44.1 : 55.9
1923.....	2, 959, 051, 393	396	205	203	204	194	120	44.3 : 55.7
1924.....	3, 068, 161, 900	410	190	220	207	198	122	40.5 : 59.5
1925.....	3, 550, 572, 815	475	191	228	212	224	124	39.8 : 60.2
1926.....	3, 336, 102, 350	446	188	243	219	204	127	37.9 : 62.1

The index number of the aggregate value of all buildings constructed was obtained by using the cost of buildings (as shown by permits issued) during 1914 as 100. The building material and wage rate indexes are those of wholesale prices of building materials and of union wages in the building trades published by the Bureau of Labor Statistics.

To obtain index numbers of cost of construction it was necessary to get the proportionate cost of material and of labor in building as of some one year, and to apply to these figures the change in price from year to year in the two items, material and labor. According to figures compiled by Mr. Barclay White, a builder of Philadelphia, and presented to both the Philadelphia and the national conference of construction industries early in 1921, labor (both skilled and unskilled) formed 36.99 per cent, and costs of materials, 42.88 per cent, of the cost of building, the remainder of the cost being chargeable to supervision, insurance, engineering, etc. These figures are assumed to be as of 1920.

Mr. White's figures were based on records kept on eight buildings described as follows:

The relative values of the various parts of the building have not been very carefully studied heretofore but we have made an attempt to fix an approximate proportion covering the whole building field in this territory. We have gone about this by taking a composite of building, which includes a reinforced concrete factory building; slow burning or heavy construction warehouse building with brick walls; the typical style of two-story dwelling; detached brick and frame residence; stone schoolhouse with wood floor construction; fireproof institutional building; the apartment house; and the steel frame office building. I think you will agree with me that these eight classifications come pretty near to covering the whole field in private building work.

According to Mr. White's figures the ratio of cost of materials to labor in construction in 1920 was 54 to 46. In 1920 the building-material wholesale price index number of the Bureau of Labor Statistics stood at 287 and the union wage index number at 193. From these figures it was found that the relative cost of material to labor in 1914 was 44.1 to 55.9. The year 1914 is used as the base year in this table as it is the earliest year for which permit valuation figures are available.

Assuming that the percentages of supervision, engineering fees, etc., have not changed, then the actual money costs of these items have advanced at the same rate as the composite increase of building material and wage rates. Adding this cost, therefore, would make no difference in the index numbers for cost in the construction.

The index numbers for the amount of construction were obtained by dividing the aggregate valuation index for each year specified by the cost-of-construction index. The population index number was arrived at by using the population as estimated by the Census Bureau for 1914 as 100 in connection with the estimated or actual figures for the later years.

The chart illustrates in graphic form the information presented in Table 6.

The aggregate value of all building construction, after a decline in 1917 and 1918, climbed steadily until it reached a peak index of 475 in 1925. There was a decline to 446 in 1926. On the other hand, the cost of construction of a typical building reached a peak of 235 in 1920, declined sharply to 189 and 183, respectively, in 1921 and 1922,

POPULATION, PERMIT VALUATION, COST AND AMOUNT OF BUILDING CONSTRUCTION, 1914 TO 1926

but has increased steadily ever since, reaching 219 in 1926. In other words, a house which cost \$5,000 in 1914 would have cost \$11,750 in 1920, \$10,350 in 1924, \$10,600 in 1925, and \$10,950 in 1926.

The deductions following are based on the assumption that the buildings erected in 1914 cared for the new construction needs of the population in that year. If such was the case, then the curve of population increase since that year is the normal line of necessary construction increase. It can readily be seen from the chart how the actual construction has varied from this normal trend. The two lines reached the same point, 102, in 1915. In 1916 the amount of construction was 10 points over the population index. For the next five years, 1917 to 1921, the index of amount of construction fell below the population index. This curtailment of building during the war and early reconstruction years brought about a great shortage of buildings, especially of dwellings.

The low point in building is shown by the index of 36 in 1918, or 73 points below the building requirements for that year as determined by population. The year 1922 was the first year after the war in which there was an excess of new construction over the normal requirements for the year, as measured by 1914 standards. The next four years, 1923, 1924, 1925, and 1926, each showed an excess of new construction over the normal requirements for the specified year, as shown by the population line.

At the end of 1924 the shortage of the war period had been more than made up when judged by 1914 standards. It should be noted here, however, that standards have undoubtedly risen since 1914. Not only money wages, but also real wages, as determined by the purchasing power of wages, have increased and the average man wants a better house than the one he was satisfied with in 1914. He wants movie "palaces" and larger theaters than he then had. Many more automobiles are owned now than in 1914, and so more garages are needed. As business has prospered, new office buildings with up-to-date accommodations have been demanded and larger stores have been constructed. Demands have increased also for other kinds of buildings, so that while the figures show that at the end of 1926 there was a surplus of new construction of 15.4 per cent in this 13-year period over normal demands for new buildings, as measured by 1914 standards, the actual excess of new construction is undoubtedly not that much.

Table 7 lists the 130 cities separately, showing the index on volume of construction and the population index for each year since 1922. The figures for 1914 stand at 100 for both items in all cities. Because of lack of space the figures for 1914 to 1921 are not shown in the table but were used in making the 13-year average.

Unfortunately, comparison of volume of construction with growth of population can not be made in some of the cities because the Census Bureau did not care to estimate the population of certain cities in which conditions were so unusual that the ordinary rules for estimating population changes evidently did not apply. For instance, for Los Angeles the Census Bureau estimated the population up to 1923, for which year the population index was 155 and the building index 565. Thus, while in this article the building construction index for the average of the 13 years can be given, it can not be compared with that of population because after 1923 the

Census Bureau decided not to venture an estimate on population. Detroit, Mich., and Akron, Ohio, are other cities for which the Census Bureau has not made an estimate for each year. However, for most of the cities the population figures are available.

To obtain a total population figure for all of the 130 cities the Bureau of Labor Statistics made an estimate for the few cities omitted from the census estimate. These bureau figures are considered sufficiently sound to include in the total, though perhaps not strong enough to stand criticism if given severally for these cities.

TREND TOWARD APARTMENT-HOUSE LIVING IN AMERICAN CITIES

During recent years there has been a very rapid growth of apartment-house living in American cities. No details are available regarding the actual number of families now living in apartment houses as compared with those living in single dwellings, but the building-permit records of new construction, as compiled by the Bureau of Labor Statistics, show clearly the change that is taking place.

Thus, in 1921, accommodations were provided by new apartment houses for only 24 per cent of all the families provided for during that year, whereas in 1926 the proportion provided for in apartments had risen to 45 per cent. During the same period the provision of single residences dropped from 58 per cent of the total to 40 per cent, and the proportion of two-family dwellings also declined. At present, therefore, it appears that almost one-half of the new housing accommodations being constructed are in the form of apartments and that the proportion has been steadily on the increase during recent years. The details, by years, are given in Table 8. The term "multifamily dwelling" as used in this table and in the other tables means all buildings having distinct housing provisions for three or more families and is equivalent to the more popular though less exact term "apartment house."

TABLE 8.—PER CENT OF FAMILIES PROVIDED FOR IN DIFFERENT KINDS OF
DWELLINGS IN 257 IDENTICAL CITIES, BY YEARS, 1921 TO 1926

Year	Number of families provided for in all classes of dwellings	Per cent of families provided for in—

1926	462, 214	40. 7	13. 9	45. 4

¹ Includes 1-family and 2-family dwellings with stores combined.

² Includes multifamily dwellings with stores combined.

This change in the character of American homes seriously affects the wage earners of the country. The social effect of the change has been frequently commented upon, stress being laid especially upon the fact that an increase in apartment living probably means a decrease in home ownership. Less observed, but also very significant, is the effect that such a fundamental change in type of building has upon the character of the work demanded of those employed in the con-

struction industry. Broadly speaking, the one-family dwelling is primarily a matter of brick and wood, and the workers employed are chiefly bricklayers and carpenters. The large apartment houses, on the other hand, while still demanding the carpenter and bricklayer also calls for structural iron and steel work, for concrete work on a large scale, very often for elaborate stone, tile, and sheet-metal work, and usually for a number of accessory trades which are needed very little or not at all in the building of small residences, particularly those of the cheaper type. As an example, many more carpenters would be required to erect 50 dwelling houses at an average cost of \$10,000 than to erect an apartment at a total cost of \$500,000.

COMPARISON OF CONDITIONS IN CITIES OF OVER 500,000

These contrasts become of still further interest when comparison is made of the building experience of the various cities. Thus while, as noted above, the apartment-house construction of 1926 accounted for almost one-half of the total provision of family living quarters in all American cities combined, the several cities differed greatly in this respect. Such differences are particularly striking in the case of the larger cities. There are in the United States 14 cities of more than 500,000 population. Table 9 shows the relative importance of apartment houses, single dwellings, and one-family dwellings in the construction programs of these cities for the years 1921, 1925, and 1926.

From this table it appears that in 1921 Boston showed a higher percentage of families provided for by new multifamily dwellings than any other city in the country. In that year 54 per cent of all families accommodated in new housekeeping dwellings in Boston were housed in apartments. San Francisco and Chicago each erected a relatively larger number of apartment units that year than did New York. In 1925, however, New York assumed the lead in housing of families in apartment houses, caring for 60.7 per cent of all the families provided for by new dwellings in this class of structure. This proportion still further increased in 1926, when New York provided homes for 133,126 families, and of this number 71.6 per cent were cared for in apartment houses and only 16.2 per cent in one-family dwellings, the remaining 12.2 per cent being provided for in two-family dwellings.

Figures are shown separately for each of the boroughs of New York City. In the Borough of Manhattan, which is Manhattan Island alone, only seven-tenths of 1 per cent of the families provided for in new dwellings were housed in one-family dwellings in 1921, and in 1925 and 1926 only one-tenth of 1 per cent of the total families were cared for in one-family dwellings. The Boroughs of the Bronx and Brooklyn also provided for a much larger number of families in apartment houses than in one-family dwellings in each of these three years. The Borough of Queens, while providing for more families in one-family dwellings than in apartment houses in each year, shows that the preponderance of single-family dwellings over apartment units decreased from 1921 to 1925 and again in 1926. The Borough of Richmond, in contrast to the other boroughs, built no apartment

houses in 1921, and in 1926 only 13.8 per cent of the total number of families accommodated were housed in the multifamily dwellings and 71.7 per cent in one-family dwellings.

In 1921 Philadelphia, long known as a city of homes, showed a larger percentage of new one-family dwellings than any of the other large cities. In that year 93.3 per cent of the total families cared for by new construction were domiciled in single-family dwellings. However, in 1925 Baltimore assumed the lead, with 89.5 per cent of its total new family units of that year in one-family dwellings, and led again in 1926 with 92.4 per cent.

The Pacific coast is represented among the cities of 500,000 and over by Los Angeles and San Francisco. The former city is a far greater builder of separate homes than the latter. In Los Angeles, of the total families provided for in each of the three years shown, provision was made for 50 per cent or more in single-family dwellings. In San Francisco, on the other hand, each year showed a larger percentage of families provided for in apartment houses than in one-family dwellings.

Probably the three outstanding industrial cities of the group of 14 largest cities are Chicago, Detroit, and Pittsburgh, yet in Detroit and Pittsburgh a much larger percentage of families were provided for in one-family dwellings in each of the three years shown than by the group as a whole. Especially is this true of Pittsburgh, where even in 1926 the percentage of families cared for in one-family dwellings erected was 68 per cent. In Chicago, on the other hand, only 17.6 per cent of the families provided for in 1926 were accommodated in one-family dwellings and 69.3 per cent were cared for in apartment houses.

Milwaukee and Washington are cities of approximately the same size. The population of the former was 517,000 and of the latter 528,000 on July 1, 1926, according to the estimate of the Census Bureau. Contrast, however, their method of residential building. In 1926 Milwaukee built 3,629 housing units. Of that number 50.4 per cent were in one-family dwellings, 30.1 per cent in two-family dwellings, and 19.5 per cent in apartment houses, while in Washington 56.3 per cent of the 7,911 new housing units were in apartment houses, 43.3 per cent in one-family dwellings, and only four-tenths of 1 per cent in two-family dwellings.

COMPARISON OF CONDITIONS IN CITIES UNDER 500,000

In Table 10 are shown all the cities having a population of from 25,000 to 500,000 which provided new dwellings for 200 or more families in either 1925 or 1926. The table shows figures for 1921, 1925, and 1926, where data are available for these three years. If the information is not available for 1921, the first year in which such statistics were collected by the bureau, it is shown for the earliest year available. A few of the smaller cities which have reached a population of 25,000 since 1920 are shown only for 1926.

As a rule the percentage of families housed in apartment houses is lower in the cities having a population of less than 500,000 than for the average of all cities. There are some interesting exceptions, however. For example, apartment houses furnish habitation for a large majority of the new families provided for in most cities and towns which are contiguous to large cities. For example, Yonkers, White Plains, and Mount Vernon, which are suburbs of New York, have in the past two years accommodated many more families in new apartment houses than in one-family dwellings.

This was not true, though, in 1921. In that year Mount Vernon built one-family dwellings to accommodate 66.3 per cent of all families provided for and apartments to house only 17.4 per cent. In 1925 these percentages were 15.1 in one-family dwellings and 75.2 in multifamily dwellings, while in 1926 only 6.2 per cent of the families provided for were to live in one-family dwellings and 88.5 per cent in apartment houses. Yonkers follows practically the same trend. In 1921, 76 per cent of the new families provided for were to live in single-family dwellings and only 24 per cent in apartments. In contrast, only 18 per cent of those provided for in 1926 were to dwell in separate homes and 74.3 per cent in apartment houses.

The same thing is true of Oak Park and Evanston, suburbs of Chicago, and Highland Park, a suburb of Detroit. All of these are fast-growing communities, and these figures would seem to show that the desire to own a home is not the only reason that is driving people to the suburbs.

In general, the smaller cities of the Middle West build few apartment houses. A representative of a local chamber of commerce in one of the prosperous middle western cities of about 50,000 population made a statement to the bureau that quite a number of traveling salesmen and others would make his city their home if it had more apartment houses. He stated that as the husbands were away much of the time, the wives of these prospective inhabitants did not want houses, and that while this city is the center of a large trading area, these families moved to other cities although not so convenient, because of the lack of apartment houses in his city.

In the medium and smaller sized cities of New England there is a larger percentage of two-family houses built than in the other sections of the country. It is quite often the practice there for a man to build a two-family house, occupy one unit himself, and rent the other unit to help him pay for the building.

In the cities in Florida which have had such a phenomenal growth in the past few years the one-family dwelling has been the prevailing type of residence. In Miami in 1922, the first year for which reports were received from that city 85.9 per cent of the total families provided

for were in one-family dwellings and 14.1 per cent in apartment houses. In 1925, however, only 38 per cent were housed in one-family dwellings and 56 per cent in apartment houses. The year 1926 saw one-family dwellings again predominating, with 65.4 per cent of the total of families provided for during that year, apartments providing for only 27.4 per cent of the total number of families. In Tampa one-family houses provided for the majority of new family accommodations in all three years, caring for 89.3 per cent in 1922, 74.1 per cent in 1925, and 80.3 per cent in 1926. Apartment houses in that city provided for only 5.5 per cent in 1922, 25.9 per cent in 1925, and 19 per cent in 1926.

Sometimes two cities near each other and of nearly the same size have quite different ratios of single family dwellings to apartment houses. For instance, Fort Worth, Tex., in the three years shown never provided for as many as 10 per cent of new housing units in apartment houses. On the other hand, Dallas, which is about 27 per cent larger than Fort Worth, provided for 33.6 per cent of the new families accommodated in 1926 in apartment houses and for 25.3 per cent in 1925.

With the exception of the suburban cities, it is the general rule that the larger the city the larger the percentage of families provided for in apartment houses. There are a few cities where no apartment houses were built during these three years, among them being Terre Haute, Ind.; Lexington, Ky.; Hamilton, Ohio; Springfield, Ohio; and Richmond, Ind.

GENERAL TABLE

General Table A, pages 44 to 129 shows detailed information in specified cities in 1925 and 1926. The table is divided into three parts.

Part 1 relates to new residential buildings, giving the number and the cost of each kind of dwelling, the number of families provided with dwellings in new buildings, and the ratio of such families to each 10,000 of population, in each city from which data were received for 1925 and 1926. The ratio of families provided for is based on the 1920 census and on the estimated or actual population for the specified year. In 1925 a census was made by the States of Florida, Iowa, Kansas, Massachusetts, New York, and Rhode Island. Where these State enumerations were made the Census Bureau did not estimate the population for that year but used the State census figures. The other figures are estimates made by the Census Bureau of the United States Department of Commerce.

Part 2 of General Table A gives the number and the cost of new nonresidential buildings for each city from which reports were received.

Part 3 shows the number and the cost of additions, alterations, and repairs to old buildings, the number and the cost of installations, and the grand total of all buildings, both new and old.

The number of installation permits and the construction costs were obtained whenever such permits were issued by the building inspector. In a number of cities, however, these permits were issued by offices other than that of the building inspector, and no data were collected from such cities.

In 1925 there were 89,984 installation permits issued in the cities reporting installations, and a total of \$41,851,116 spent for this work. This compares with a total of 94,982 permits and with an expenditure of \$46,364,534 in the cities reporting in 1926.

The bureau attempted to classify additions, alterations, and repairs under the heading of repairs, etc., to housekeeping dwellings, to non-housekeeping dwellings, and to nonresidential buildings. Many of the cities which reported by mail, however, grouped them.

TABLE A.—Number and estimated cost of buildings (new construction, and repairs, alterations, and additions to old buildings) covered by permits issued in 1925 and 1926, by intended use of buildings

LIST OF BULLETINS OF THE BUREAU OF LABOR STATISTICS

The following is a list of all bulletins of the Bureau of Labor Statistics published since July, 1912, except that in the case of bulletins giving the results of periodic surveys of the bureau only the latest bulletin on any one subject is here listed.

A complete list of the reports and bulletins issued prior to July, 1912, as well as the bulletins published since that date, will be furnished on application. Bulletins marked thus () are out of print.*

Conciliation and Arbitration (including strikes and lockouts).

- *No. 124. Conciliation and arbitration in the building trades of Greater New York. [1913.]
- *No. 133. Report of the industrial council of the British Board of Trade on its inquiry into industrial agreements. [1913.]
- *No. 139. Michigan copper district strike. [1914.]
- No. 144. Industrial court of the cloak, suit, and skirt industry of New York City. [1914.]
- No. 145. Conciliation, arbitration, and sanitation in the dress and waist industry of New York City. [1914.]
- *No. 191. Collective bargaining in the anthracite coal industry. [1916.]
- *No. 198. Collective agreements in the men's clothing industry. [1916.]
- No. 233. Operation of the industrial disputes investigation act of Canada. [1918.]
- No. 255. Joint industrial councils in Great Britain. [1919.]
- No. 283. History of the Shipbuilding Labor Adjustment Board, 1917 to 1919.
- No. 287. National War Labor Board: History of its formation, activities, etc. [1921.]
- No. 303. Use of Federal power in settlement of railway labor disputes. [1922.]
- No. 341. Trade agreement in the silk-ribbon industry of New York City. [1923.]
- No. 402. Collective bargaining by actors. [1926.]
- No. 419. Trade agreements, 1925.

Cooperation.

- No. 313. Consumers' cooperative societies in the United States in 1920.
- No. 314. Cooperative credit societies in America and in foreign countries. [1922.]
- No. 437. Cooperative movement in the United States in 1925 (other than agricultural).

Employment and Unemployment.

- *No. 109. Statistics of unemployment and the work of employment offices in the United States. [1913.]
- No. 172. Unemployment in New York City, N. Y. [1915.]
- *No. 183. Regularity of employment in the women's ready-to-wear garment industries. [1915.]
- *No. 195. Unemployment in the United States. [1916.]
- No. 196. Proceedings of the Employment Managers' Conference held at Minneapolis, Minn., January, 1916.
- *No. 202. Proceedings of the conference of Employment Managers' Association, Boston, Mass., held May 10, 1916.
- No. 206. The British system of labor exchanges. [1916.]
- *No. 227. Proceedings of the Employment Managers' Conference, Philadelphia, Pa., April 2 and 3, 1917.
- No. 235. Employment system of the Lake Carriers' Association. [1918.]
- *No. 241. Public employment offices in the United States. [1918.]
- No. 247. Proceedings of Employment Managers' Conference, Rochester, N. Y., May 9-11, 1918.
- No. 310. Industrial unemployment: A statistical study of its extent and causes. [1922.]
- No. 409. Unemployment in Columbus, Ohio, 1921 to 1925.

Foreign Labor Laws.

- *No. 142. Administration of labor laws and factory inspection in certain European countries. [1914.]

Housing.

- *No. 158. Government aid to home owning and housing of working people in foreign countries. [1914.]
- No. 263. Housing by employers in the United States. [1920.]
- No. 295. Building operations in representative cities in 1920.
- No. 368. Building permits in the principal cities of the United States in [1921 to] 1923.
- No. 424. Building permits in the principal cities of the United States. [1924 and] 1925.

Industrial Accidents and Hygiene.

- *No. 104. Lead poisoning in potteries, tile works, and porcelain-enameled sanitary ware factories. [1912.]
- No. 120. Hygiene of the painters' trade. [1913.]
- *No. 127. Dangers to workers from dusts and fumes, and methods of protection. [1913.]

Industrial Accidents and Hygiene—Continued.

- *No. 141. Lead poisoning in the smelting and refining of lead. [1914.]
- *No. 157. Industrial accident statistics. [1915.]
- *No. 165. Lead poisoning in the manufacture of storage batteries. [1914.]
- *No. 179. Industrial poisons used in the rubber industry. [1915.]
- No. 188. Report of British departmental committee on the danger in the use of lead in the painting of buildings. [1916.]
- *No. 201. Report of committee on statistics and compensation-insurance cost of the International Association of Industrial Accident Boards and Commissions. [1916.]
- *No. 207. Causes of death by occupation. [1917.]
- *No. 209. Hygiene of the printing trades. [1917.]
- No. 219. Industrial poisons used or produced in the manufacture of explosives. [1917.]
- No. 221. Hours, fatigue, and health in British munition factories. [1917.]
- No. 230. Industrial efficiency and fatigue in British munition factories. [1917.]
- *No. 231. Mortality from respiratory diseases in dusty trades (inorganic dusts). [1918.]
- No. 234. Safety movement in the iron and steel industry, 1907 to 1917.
- *No. 238. Effects of the air hammer on the hands of stonecutters. [1918.]
- No. 249. Industrial health and efficiency. Final report of British Health of Munition Workers Committee. [1919.]
- *No. 251. Preventable death in the cotton-manufacturing industry. [1919.]
- No. 256. Accidents and accident prevention in machine building. [1919.]
- No. 267. Anthrax as an occupational disease. [1920.]
- No. 276. Standardization of industrial-accident statistics. [1920.]
- No. 280. Industrial poisoning in the making of coal-tar dyes and dye intermediates. [1921.]
- No. 291. Carbon-monoxide poisoning. [1921.]
- No. 293. The problem of dust phthisis in the granite-stone industry. [1922.]
- No. 298. Causes and prevention of accidents in the iron and steel industry, 1910 to 1919.
- No. 306. Occupational hazards and diagnostic signs: A guide to impairments to be looked for in hazardous occupations. [1922.]
- No. 339. Statistics of industrial accidents in the United States. [1923.]
- No. 392. Survey of hygienic conditions in the printing trades. [1925.]
- No. 405. Phosphorus necrosis in the manufacture of fireworks and in the preparation of phosphorus. [1926.]
- No. 425. Record of industrial accidents in the United States to 1925.
- No. 426. Deaths from lead poisoning. [1927.]
- No. 427. Health survey of the printing trades, 1922 to 1925.
- No. 428. Proceedings of the Industrial Accident Prevention Conference, held at Washington, D. C., July 14-16, 1926.

Industrial Relations and Labor Conditions.

- No. 237. Industrial unrest in Great Britain. [1917.]
- No. 340. Chinese migrations, with special reference to labor conditions. [1923.]
- No. 349. Industrial relations in the West Coast lumber industry. [1923.]
- No. 361. Labor relations in the Fairmont (W. Va.) bituminous-coal field. [1924.]
- No. 380. Postwar labor conditions in Germany. [1925.]
- No. 383. Works council movement in Germany. [1925.]
- No. 384. Labor conditions in the shoe industry in Massachusetts, 1920 to 1924.
- No. 399. Labor relations in the lace and lace-curtain industries in the United States. [1925.]

Labor Laws of the United States (including decisions of courts relating to labor).

- No. 211. Labor laws and their administration in the Pacific States. [1917.]
- No. 229. Wage-payment legislation in the United States. [1917.]
- No. 285. Minimum wage legislation in the United States. [1921.]
- No. 321. Labor laws that have been declared unconstitutional. [1922.]
- No. 322. Kansas Court of Industrial Relations. [1923.]
- No. 343. Laws providing for bureaus of labor statistics, etc. [1923.]
- No. 370. Laws of the United States, with decisions of courts relating thereto. [1925.]
- No. 408. Labor laws relating to the payment of wages. [1926.]
- No. 434. Labor legislation of 1926.
- No. 444. Decisions of courts and opinions affecting labor, 1926. (In press.)

Proceedings of Annual Conventions of Association of Governmental Labor Officials of the United States and Canada.

- No. 266. Seventh, Seattle, Wash., July 12-15, 1920.
- No. 307. Eighth, New Orleans, La., May 2-6, 1921.
- *No. 323. Ninth, Harrisburg, Pa., May 22-26, 1922.
- No. 352. Tenth, Richmond, Va., May 1-4, 1923.
- No. 389. Eleventh, Chicago, Ill., May 19-23, 1924.
- No. 411. Twelfth, Salt Lake City, Utah, August 13-15, 1925.
- No. 429. Thirteenth, Columbus, Ohio, June 7-10, 1926.

Proceedings of Annual Meetings of International Association of Industrial Accident Boards and Commissions.

- *No. 210. Third, Columbus, Ohio, April 25-28, 1916.
- No. 248. Fourth, Boston, Mass., August 21-25, 1917.
- No. 264. Fifth, Madison, Wis., September 24-27, 1918.
- *No. 273. Sixth, Toronto, Canada, September 23-26, 1919.
- No. 281. Seventh, San Francisco, Calif., September 20-24, 1920.

Proceedings of Annual Meetings of International Association of Industrial Accident Boards and Commissions—Continued.

- No. 304. Eighth, Chicago, Ill., September 19-23, 1921.
- No. 333. Ninth, Baltimore, Md., October 9-13, 1922.
- No. 339. Tenth, St. Paul, Minn., September 24-26, 1923.
- No. 385. Eleventh, Halifax, Nova Scotia, August 26-28, 1924.
- No. 395. Index to proceedings, 1914-1924.
- No. 406. Twelfth, Salt Lake City, Utah, August 17-20, 1925.
- No. 432. Thirteenth, Hartford, Conn., September 14-17, 1926.

Proceedings of Annual Meetings of International Association of Public Employment Services.

- No. 192. First, Chicago, December 19 and 20, 1913; Second, Indianapolis, September 24 and 25, 1914; Third, Detroit, July 1 and 2, 1915.
- No. 220. Fourth, Buffalo, N. Y., July 20 and 21, 1916.
- No. 311. Ninth, Buffalo, N. Y., September 7-9, 1921.
- No. 337. Tenth, Washington, D. C., September 11-13, 1922.
- No. 355. Eleventh, Toronto, Canada, September 4-7, 1923.
- No. 400. Twelfth, Chicago, Ill., May 19-23, 1924.
- No. 414. Thirteenth, Rochester, N. Y., September 15-17, 1925.

Productivity of Labor.

- No. 356. Productivity costs in the common-brick industry. [1924.]
- No. 360. Time and labor costs in manufacturing 100 pairs of shoes. [1924.]
- No. 407. Labor cost of production and wages and hours of labor in the paper box-board industry. [1925.]
- No. 412. Wages, hours, and productivity in the pottery industry, 1925.
- No. 441. Productivity of labor in the glass industry. [1927.] (In press.)

Retail Prices and Cost of Living.

- *No. 121. Sugar prices, from refiner to consumer. [1913.]
- *No. 130. Wheat and flour prices, from farmer to consumer. [1918.]
- *No. 164. Butter prices, from producer to consumer. [1914.]
- *No. 170. Foreign food prices as affected by the war. [1915.]
- No. 357. Cost of living in the United States. [1924.]
- No. 369. The use of cost-of-living figures in wage adjustments. [1925.]
- No. 445. Retail prices, 1890 to 1926. (In press.)

Safety Codes.

- No. 331. Code of lighting factories, mills, and other work places.
- No. 336. Safety code for the protection of industrial workers in foundries.
- No. 350. Specifications of laboratory tests for approval of electric headlighting devices for motor vehicles.
- No. 351. Safety code for the construction, care, and use of ladders.
- No. 364. Safety code for the mechanical power-transmission apparatus.
- No. 375. Safety code for laundry machinery and operation.
- No. 378. Safety code for woodworking plants.
- No. 382. Code of lighting school buildings.
- No. 410. Safety code for paper and pulp mills.
- No. 430. Safety code for power presses and foot and hand presses.
- No. 433. Safety codes for the prevention of dust explosions.
- No. 436. Safety code for the use, care, and protection of abrasive wheels.
- No. 447. Safety code for rubber mills and calenders. (In press.)

Vocational and Workers' Education.

- *No. 159. Short-unit courses for wage earners, and a factory school experiment. [1915.]
- *No. 162. Vocational education survey of Richmond, Va. [1915.]
- No. 199. Vocational education survey of Minneapolis, Minn. [1916.]
- No. 271. Adult working-class education in Great Britain and the United States. [1920.]

Wages and Hours of Labor.

- *No. 146. Wages and regularity of employment and standardization of piece rates in the dress and waist industry of New York City. [1914.]
- *No. 147. Wages and regularity of employment in the cloak, suit, and skirt industry. [1914.]
- No. 161. Wages and hours of labor in the clothing and cigar industries, 1911 to 1913.
- No. 163. Wages and hours of labor in the building and repairing of steam-railroad cars, 1907 to 1913.
- *No. 190. Wages and hours of labor in the cotton, woolen, and silk industries, 1907 to 1914.
- No. 204. Street-railway employment in the United States. [1917.]
- No. 225. Wages and hours of labor in the lumber, millwork, and furniture industries, 1915.
- No. 235. Industrial survey in selected industries in the United States, 1919.
- No. 297. Wages and hours of labor in the petroleum industry, 1920.
- No. 348. Wages and hours of labor in the automobile industry, 1922.
- No. 356. Productivity costs in the common-brick industry. [1924.]
- No. 358. Wages and hours of labor in the automobile-tire industry, 1923.
- No. 360. Time and labor costs in manufacturing 100 pairs of shoes. [1924.]
- No. 365. Wages and hours of labor in the paper and pulp industry, 1923.
- No. 374. Wages and hours of labor in the boot and shoe industry, 1907 to 1924.
- No. 376. Wages and hours of labor in the hosiery and underwear industry, 1907 to 1924.

Wages and Hours of Labor—Continued.

- No. 394. Wages and hours of labor in metalliferous mines, 1924.
- No. 407. Labor cost of production, and wages and hours of labor in the paper box-board industry. [1925.]
- No. 412. Wages, hours, and productivity in the pottery industry, 1925.
- No. 413. Wages and hours of labor in the lumber industry in the United States, 1925.
- No. 416. Hours and earnings in anthracite and bituminous coal mining, 1922 and 1924.
- No. 421. Wages and hours of labor in the slaughtering and meat-packing industry, 1925.
- No. 422. Wages and hours of labor in foundries and machine shops, 1925.
- No. 431. Union scale of wages and hours of labor, May 15, 1926.
- No. 435. Wages and hours of labor in the men's clothing industry, 1911 to 1926.
- No. 438. Wages and hours of labor in the motor-vehicle industry, 1925.
- No. 442. Wages and hours of labor in the iron and steel industry, 1907 to 1925. (In press.)
- No. 443. Wages and hours of labor in woolen and worsted goods manufacturing, 1910 to 1926. (In press.)
- No. 446. Wages and hours of labor in cotton goods manufacturing, 1910 to 1926.

Welfare Work.

- *No. 123. Employers' welfare work. [1913.]
- *No. 222. Welfare work in British munition factories. [1917.]
- *No. 250. Welfare work for employees in industrial establishments in the United States. [1919.]

Wholesale Prices.

- No. 284. Index numbers of wholesale prices in the United States and foreign countries. [1921.]
- No. 440. Wholesale prices, 1890 to 1926. (In press.)

Women and Children in Industry.

- No. 116. Hours, earnings, and duration of employment of wage-earning women in selected industries in the District of Columbia. [1913.]
- *No. 117. Prohibition of night work of young persons. [1913.]
- *No. 118. Ten-hour maximum working-day for women and young persons. [1913.]
- *No. 119. Working hours of women in the pea canneries of Wisconsin. [1913.]
- *No. 122. Employment of women in power laundries in Milwaukee. [1913.]
- No. 160. Hours, earnings, and conditions of labor of women in Indiana mercantile establishments and garment factories. [1914.]
- *No. 167. Minimum wage legislation in the United States and foreign countries. [1915.]
- *No. 175. Summary of the report on condition of woman and child wage earners in the United States. [1915.]
- *No. 176. Effect of minimum wage determinations in Oregon. [1915.]
- *No. 180. The boot and shoe industry in Massachusetts as a vocation for women. [1915.]
- *No. 182. Unemployment among women in department and other retail stores of Boston, Mass. [1916.]
- No. 193. Dressmaking as a trade for women in Massachusetts. [1916.]
- No. 215. Industrial experience of trade-school girls in Massachusetts. [1917.]
- *No. 217. Effect of workmen's compensation laws in diminishing the necessity of industrial employment of women and children. [1918.]
