## WHOLESALE PRICES IN 1931

Detailed information on wholesale prices in the United States for the year 1931, and a summary of the principal data for earlier years, are given in this bulletin. Persons desiring the detailed information prior to 1931 are referred to previous bulletins of the Bureau of Labor Statistics.<sup>1</sup> Explanation of the method used in procuring the price data for inclusion in the bureau's reports, and also the method followed in computing the index numbers for the various groups of commodities, will be found in Bulletin No. 493 (pp. 2-6).

In 1931 the index number of wholesale commodity prices, as compiled and issued by the Bureau of Labor Statistics, was expanded and revised to include 784 price series, instead of 550. The revision was extended back to and including January, 1926. The added price series were almost entirely for fully manufactured articles. The 10 major groups—farm products, foods, etc.—were retained, but a rearrangement of commodities within these groups was made in several instances as well as the addition of several subgroups. The former base period—the average price for the year 1926—was retained.

In compiling the index numbers the individual items were weighted according to the importance of each article in the country's markets. The weighting factors for 1930 and 1931 were based on the census of manufactures data as compiled by the Bureau of the Census for the years 1925 and 1927, and, in cases where the census of manufactures data were not available, other official or dependable private sources were used. Beginning with January, 1932, weighting factors based upon the census years 1927 and 1929 were employed. However, in the case of farm products and for agricultural commodities included in the foods group, the 3-year average 1927-1929 was used in determining the weighting factors.

### Movement of Wholesale Prices in 1931

A marked decline in the general level of wholesale prices took place in 1931. Except for a slight steadyng during the summer, the trend was steadily downward throughout the entire year, the net decrease in the 12 months being 12½ per cent. The average for the year 1931 was 15½ per cent below the average for the year 1930.

---

<sup>1</sup> Bulletins Nos. 27, 39, 45, 51, 57, 63, 69, 75, 81, 87, 93, 99, 114, 149, 181, 200, 226, 269, 296, 320, 335, 367, 390, 415, 440, 473, 493, and 521. Current information on wholesale prices is published monthly by the bureau in pamphlet form.

Radical price declines in grains, and in livestock and poultry, occurred during the year. Other farm products, including cotton and wool, also declined sharply. The decrease for the group as a whole within the year was 24 per cent, while the level of the group for the year was 26½ per cent below the average of the preceding year.

Foods declined steadily in price from January to June, reacting somewhat during July and August, and again declining during the latter months of the year. The December average for food as a whole was 17 per cent below the average for December, 1930, while the level for the year was 18 per cent below the level of the year 1930.

Prices of hides and leather products fluctuated during the year until August, after which time a decided slump occurred, with the result that the December price was more than 10 per cent below the average for January. Textile products, including cotton, silk and rayon, and woolen and worsted goods, moved steadily downward throughout the entire year. When compared with the average for the year 1926, many of these commodities had decreased more than 50 per cent.

Fuel and lighting materials moved downward the first half of the year 1931, reacting strongly toward the latter part of the year, leaving average prices in December practically 7 per cent below the level for January. Crude and refined petroleum showed radical price decreases during the first few months, with sharp increases toward the end of the year. The fluctuations in the group of metals and metal products resulted in only a 5½ per cent net decrease for December when compared with January. Prices of all building materials, as well as chemicals and drugs and house-furnishing goods, moved downward during the year. In the group of miscellaneous commodities, including crude rubber and automobile tires, cattle feed, and paper and pulp, prices moved steadily downward until September after which time they rose slightly.

In all of the 10 major groups of commodities, average prices in 1931 were below those of 1930, the decreases ranging from 8 per cent for metals and metal products to practically 26½ per cent in the case of farm products.

In Table 1 index numbers for the subgroups and groups of commodities are shown by years and months for the period from January, 1926, to December, 1931, inclusive. The index numbers are derived from price quotations of 784 commodities and are based on the average prices for the year 1926 as 100. Detailed average prices for 1931 are given in Table 5.

TABLE 1.—*Index numbers of wholesale prices, by groups and subgroups of commodities, and by months, from January, 1926, to December, 1931*

## Trend of Wholesale Prices, 1801 to 1931

In Table 3 is shown the trend of wholesale prices in the United States since the beginning of the last century.

The index numbers for the years 1801 to 1840 are arithmetic means of unweighted relative prices of commodities, compiled by Prof. Alvin H. Hansen, University of Minnesota, and published in detail in Bulletin No. 367 (pp. 235-248) of this bureau.

The index numbers for 1841 to 1889 also are arithmetic averages of unweighted relative prices and have been taken from the Report of Committee on Finance of the United States Senate on Wholesale Prices, Wages, and Transportation, March 3, 1893 (52d Cong., 2d sess., Rept. No. 1394, pt. 1, p. 9). As originally published, these figures were computed with 1860 as the base year. They are here converted to the 1926 base. The prices used are in currency and the number of commodities vary from approximately 150 in the earlier years to 250 in the later years of the period.

From 1890 to 1931 the index numbers are the bureau's regular weighted series. In using the data in this table it should be borne in mind that the figures in the three series here joined are not strictly comparable, since they are based on different lists of commodities in different markets and are, moreover, unweighted for the years prior to 1890. They are believed, however, to reflect with a fair degree of accuracy changes in the general level of wholesale prices over the period stated.

TABLE 3.—*Index numbers of wholesale prices, by years, 1801 to 1931*

[1926 and subsequent years, 784 series]

Year	Index number								
1801	111.8	1828	68.3	1855	68.9	1882	66.1	1909	67.6
1802	91.8	1829	67.6	1856	68.9	1883	64.6	1910	70.4
1803	93.9	1830	65.8	1857	68.5	1884	60.5	1911	64.9
1804	101.5	1831	70.4	1858	62.0	1885	56.6	1912	69.1

1826	71.1	1853	66.4	1880	65.1	1907	65.2		
1827	71.8	1854	68.8	1881	64.4	1908	62.9		

#### Purchasing Power of the Dollar, 1913 to 1931

Monthly changes in the buying power of the dollar expressed in terms of wholesale prices from 1913 to 1931 are shown in Table 4. The figures in this table are reciprocals of the index numbers. To illustrate, the index number representing the level of all commodities at wholesale in the year 1931 with average prices for the year 1926 as the base, is shown in Table 1 to be 73. The reciprocal of this index number is 0.0137 which, translated into dollars, and cents becomes \$1.37. The table shows that the dollar expanded so much in its buying value that \$1 of 1926 had increased in value to \$1.37 in 1931 in the purchase of all commodities at wholesale.

### Average Wholesale Prices of Commodities, 1931

Detailed information for each month of the year 1931 for the 784 items included in the bureau's weighted index series is given in Table 5. In addition to the absolute money prices of individual commodities, index numbers based on average prices in the year 1926 as 100.0 are also shown. In Table 6 will be found comparable yearly data for the years 1926 to 1930, inclusive, for the 234 items added during the year 1931; forced economy in printing necessitated by the drastic reduction in appropriations precludes the publication of the detailed monthly data for this period. Yearly and monthly figures prior to 1931 for the 550 items formerly included have, wherever this information has been collected by the bureau, been published in previous bulletins.<sup>1</sup>

The even pages of Table 5 contain the average money prices for each month, while the odd pages contain the index numbers for each month as compared with the base year, 1926; that is, the per cent that the average price in each month is of the average price in the year 1926. These index numbers have been computed from average prices carried to four decimal places, while the average prices, as here published, have been rounded off to three decimal places. Therefore, the index numbers in some instances show changes that are not reflected in the average prices.

For each commodity the average price for the year was computed by dividing the sum of the quoted prices by the number of quotations. Where a range of prices was found, the mean price for each date was taken and the sum of such means was divided by their number to obtain the average price for the year. For example, the sum of the 52 mean weekly prices for No. 2 hard wheat at Kansas City obtained for 1930 was found to be \$46.775. This total divided by 52 gives \$0.900 as the average price for the year 1930. For monthly averages a similar plan was followed in cases where prices on a particular day of each week were used. For many commodities, however, monthly

<sup>1</sup> Bulletins Nos. 149, 181, 209, 228, 269, 296, 320, 335, 367, 390, 415, 440, 473, 493, 521, and 543.

averages based on daily quotations have been obtainable. First-of-the-month prices have been used for a limited number of articles whose prices are quite stable.

In computing the averages shown in Table 5 the net cash price was used for textiles and all other articles subject to large and varying discounts. In the case of a few commodities, such as plain wire, nails, steel plates, steel sheets, etc., the prices of which are subject to a small discount for cash within 10 days, no deduction has been made.

An explanation of the method employed in constructing the weighted index numbers from the individual commodity prices shown in Table 5 will be found in Bulletin No. 493 (pp. 2-4).

\* Prices of individual articles of furniture are only roughly comparable from month to month and year to year, owing to frequent changes in patterns announced by manufacturers.

**Quantities Used as Weighting Factors and Estimated Values in Exchange**

The quantities used as weighting factors in the construction of the index numbers of wholesale commodity prices of the bureau are shown in Table 7. These weighting factors were introduced in the computations beginning with January, 1932. Individual weighting factors, except for the 234 added price series, which were used for former periods will be found in previous bulletins.

Table 7 also includes the average price of each commodity for the year 1926 together with the weighted aggregate value in exchange of each item. The per cent that each article is of the group in which it is included and of all articles combined is shown in addition to the aggregate value. The percentages also relate to the year 1926.

**TABLE 7.—Base price, quantity used as weight, estimated value in exchange, and relative importance of commodities included in weighted index number of wholesale price**

Group and commodity	Base price (1926 average)	Quantity used as weight (000 omitted)	1926 esti- mated value in exchange (000 omitted)	1926 value ex- pressed as percentage of aggregate value of—

## Appendix

### Wholesale Prices, 1720 to 1889, Inclusive<sup>1</sup>

By G. F. WARREN and F. A. PEARSON

The Bureau of Labor Statistics of the United States Department of Labor has prepared a comprehensive monthly index number of wholesale commodity prices for the period since 1890.

Despite the pioneer work of Juergen, Snider, Cole, Mitchell, Snyder, Hansen,<sup>2</sup> Roelse, the Aldrich committee, and others, no consistent series of monthly index numbers of wholesale prices covering the last century were previously available.

The aim of this study is to prepare a comprehensive monthly index to correspond with the present index numbers of the United States Bureau of Labor Statistics. The index numbers previous to 1797 were prepared by Dr. H. M. Stoker; those since that date by the writers.

Most of the prices are based on quotations at New York City. Prices of 12 commodities were included in the index numbers for 1720; 15 in 1750; 19 in 1770; and 71 in 1787. The number of price series for other representative years is shown in the following table:

*Number of price series used in each group in designated years*

Group	1790	1800	1810	1820	1830	1840	1850	1860	1870	1880	1889
Farm products .....	7	19	25	25	24	24	23	24	24	24	23
Foods .....	24	38	49	49	33	31	30	35	36	36	36
Hides and leather .....	1	2	2	2	2	2	2	2	2	2	2
Textiles .....	14	16	16	12	13	14	14	14	18	18	18
Fuel and lighting .....	4	6	6	6	5	7	7	7	8	8	8
Metals and metal products .....	9	11	12	12	15	18	20	16	16	16	16
Building materials .....	9	17	19	19	17	20	20	20	21	21	21
Chemicals and drugs .....		5	5	5	4	5	5	5	5	5	5
House-furnishing goods .....						5	6	7	10	10	10
Spirits .....	6	8	8	8	7	7	7	7	8	8	1
Miscellaneous .....	12	6	8	8	4	4	5	5	5	5	5
Total .....	71	125	150	150	123	136	139	142	153	153	145
Duplications <sup>1</sup> .....		9	9	9	10	8	5	7	7	7	7
Net total .....	71	116	141	141	113	128	134	135	146	146	138

<sup>1</sup> The reason for duplicates is that, following the Bureau of Labor Statistics method, some farm products that are ready to eat are also included as food; also, some textiles are included in house-furnishing goods, and some metals with building materials.

The commodities in each group were weighted in accordance with their importance at the time. Index numbers are given for the 10 groups used by the United States Bureau of Labor Statistics: Farm products, foods, hides and leather, textiles, fuel and lighting, metals and metal products, building materials, chemicals and drugs, house-furnishing goods, and miscellaneous. In addition a separate group for spirits was constructed. The all-commodities index is based on varying group weights giving an increased weight to farm products, foods,

<sup>2</sup> Warren, G. F., and Pearson, F. A., Wholesale Prices for 135 Years, unpublished manuscript, Cornell University, 1932; and Stoker, H. M., A Monthly Index Number of Wholesale Prices at New York City, 1720-1800, unpublished manuscript, Cornell University, 1932. To be published later as bulletins of Cornell University Agricultural Experiment Station.

<sup>3</sup> See Appendix F (pp. 235-248), U. S. Bureau of Labor Statistics Bul. No. 387, for discussion of index of wholesale prices from 1800 to 1840, as compiled by Prof. Alvin H. Hansen, University of Minnesota.

hides and leather, and spirits in the earlier years, while reduced group weights were given to the other groups.

From November, 1786 to 1797, the all-commodity index was based on 7 groups with 71 commodities. Prior to November, 1786, the number of commodities varied from 8 to 19 and it was not deemed feasible to construct group indexes. The weights of individual commodities were varied from time to time.

Because of limitations of space, only the all-commodities index can be shown here. The following table gives this index by months from January, 1720, to December, 1889, inclusive.

This series of indexes, when combined with the regular series of index numbers of wholesale commodity prices compiled by the United States Bureau of Labor Statistics since 1890, gives a complete series of wholesale price indexes from 1720 to 1931, inclusive.

*Index numbers of wholesale prices of all commodities by months from 1720 to 1889, inclusive*
