WAGES AND HOURS OF LABOR IN METALLIFEROUS MINING, 1924 AND 1931

The results of studies made by the Bureau of Labor Statistics of wages and hours of labor of wage earners in the metalliferous mining industry in the United States in 1924 and in 1931 are presented in this bulletin. The 1924 study covered 137 mines (117 underground and 20 open-pit) and 38,196 wage earners, and the 1931 study, 139 mines (117 underground and 22 open-pit) and 32,195 wage earners. The mines studied produced copper, gold, iron, lead, silver, zinc, and minor metals.

Some so-called open-pit mines are really open-cut mines—that is, hills or mountains are cut down instead of pits being dug below the surface. In either case the ore is taken from the pit or cut by steam shovels and dumped into cars and hauled to the crusher or mills. Production is generally cheaper and less dangerous in mines of this

kind than in underground mines.

Underground mines are of different types, designated as shaft, slope, or drift. A shaft mine is one in which the entrance is a vertical shaft. Cross cuts are made at the various levels into the ore bodies and the ore is brought to the surface through the shaft by means of a skip or cage. A slope mine is entered through a downward incline. A drift mine is one in which the ore vein is followed through a horizontal entrance.

The industry has been divided into the following five districts: Western mixed ores mines, Michigan copper mines, Northern iron

mines, Alabama iron mines, and Tri-State lead and zinc mines.

The "Western mixed ores" mines are in Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, South Dakota, and Utah; the "Michigan copper mines" are in the upper peninsula of that State; the "Northern iron mines" are in the regions near Lake Superior in Michigan and Minnesota; the "Alabama iron mines" are in the northern part of that State; and the "Tri-State lead and zinc mines" are in the southeast corner and the southwest corner of Missouri, the southeast corner of Kansas, and the northeast corner of Oklahoma. The "Western mixed ores" mines were so named because a majority of the mines in the Western States produce ores containing from two to five different metals, with many variations in the combinations. Only 20 of the 61 mines covered in the Western States produced one metal only.

The basic wage data used in compiling this report were, except for a few mines, for a representative pay period in August, September, or October, 1924, and June, July, August, September, or October, 1931.

Trend of Hours and Earnings, by District and State

Table 1 shows average full-time hours per week, earnings per hour, and average full-time earnings per week for the wage earners covered

in 1924 and in 1931, by districts.

The average full-time hours per week of wage earners in this industry were 53.0 in 1924 and 51.6 in 1931. The average hourly earnings—55.9 cents—shown in 1924, remained unchanged in 1931. Average full-time weekly earnings, however, dropped from \$29.63 in 1924 to \$28.84 in 1931, due to the smaller average full-time hours per week in the latter year. These averages are for males only and for the industry as a whole. Females were not employed in any of the mines.

Examination of the data for the various kinds of mines shows that, with the exception of the Northern iron mines, the full-time hours in all groups decreased somewhat between 1924 and 1931, and in all but one group, the Western mixed-ores mines, average earnings per hour also declined. Because of an increase in average full-time hours, the Northern iron mines showed an increase in average full-time weekly earnings, although average hourly earnings decreased. The other four groups of mines showed decreases in such weekly earnings, in varying amounts.

Western mixed-ores mines.—From 1924 to 1931 average full-time hours per week dropped from 53.8 to 50.7; average earnings per hour, however, increased from 59.9 cents to 60.8 cents, while full-time

earnings per week decreased from \$32.23 to \$30.83.

Michigan copper mines.—There was a decrease from 1924 to 1931 in average full-time hours per week from 49.6 to 49.4, in earnings per hour from 49.8 cents to 44.3 cents, and in full-time earnings per week from \$24.70 to \$21.88.

Northern iron mines.—From 1924 to 1931 average full-time hours per week rose from 52.8 to 54.3; earnings per hour, however, dropped from 56.8 cents to 56.0 cents, but full-time earnings per week increased from \$29.99 to \$30.41.

Alabama iron mines.—From 1924 to 1931 there was a decrease in average full-time hours per week from 60.6 to 58.4, in average earnings per hour from 39.3 cents to 37.2 cents, and in full-time earnings per week from \$23.82 to \$21.72.

Tri-State lead and zinc mines.—There was a drop from 1924 to 1931 in average full-time hours per week from 48.6 to 48.2, in earnings per hour from 55.2 cents to 47.7 cents, and in full-time earnings per week from \$26.83 to \$22.99.

Table 1.—Average full-time hours, earnings per hour, and full-time earnings per week in metalliferous mines, 1924 and 1931, by district and State

Average Hours and Earnings, 1924 and 1931, by Kind of Work and Occupation

Table 2 shows average full-time hours per week, earnings per hour, and full-time earnings per week, by occupation, for wage earners in underground and in open-pit mines. There are three different groups of occupations of wage earners in underground mines—underground work, surface work, and underground and surface work.

For the underground mines data are shown for 22 important occupations in underground work; 11 occupations in surface work; and 12 other occupations in which the workers worked underground in some mines, on the surface in other mines, and in still others spent part of their working time underground and part on the surface. For the open-pit mines data are shown for each of 28 occupations. The group of "Other employees," shown for both the underground and open-pit mines, includes those occupations in which there was not a sufficient number of wage earners to warrant separate tabulation.

Underground occupations.—These form the most important group in point of number of wage earners employed. Average full-time hours per week ranged, by occupation, in 1924 from 48.6 for contract drilling-machine operators to 56.5 for pump men, and in 1931 from 48.2 for roof trimmers to 56.5 for trackmen's helpers. Weekly hours were longer in 4 and shorter in 18 occupations in 1931 than in 1924.

Average earnings per hour ranged in 1924 from 42.0 cents for trackmen's helpers to 72.9 cents for contract drilling-machine operators, and in 1931 from 40.3 cents for drilling-machine operators' helpers to 69.4 cents for contract drilling-machine operators. Comparing 1931

¹ Data included in total.

with 1924, it is seen that the average hourly earnings had increased in 7 occupations, and decreased in the other 15 occupations.

In 1924 the range in average full-time earnings per week was from \$23.23 for trackmen's helpers to \$35.43 for contract drilling-machine operators, and in 1931 from \$20.63 for drilling-machine operators' helpers to \$34.08 for contract drilling-machine operators. Six occupations showed greater average full-time weekly earnings in 1931 than in 1924, while in the other 16 occupations such weekly earnings were less than in 1924.

Number of Mines, by Kind of Metals Produced, 1931

Table 3 shows the kind of metal or metals produced by each of the 139 mines covered in the 1931 study of the industry. One metal only was produced in each of 75 mines; 2 metals in 29 mines; 3 in 18 mines; 4 in 11 mines; and 5 metals were produced in each of 6 mines.

The arrangement in Table 3 is alphabetical and in the case of the mines producing two or more metals is in the order of the importance of the metals in such mines.

Copper, gold, and silver were produced in 12 mines. In 11 of these (line 2) the metals in order of importance were copper, gold, and silver, and in 1, (line 7) were gold, silver, and copper. Lead and zinc were produced in 20 mines. Lead was the more important metal in 3, (line 16) and zinc was the more important in 17 mines, (line 29.)

Of the 22 open-pit or open-cut mines, 1 is a copper mine and 2 are copper, gold, and silver mines in the Western mixed-ores district; 16 are iron mines in Minnesota in the Northern iron district; and 3 are iron mines in the Alabama iron district.

Table 3.—Number of mines producing specified kinds of metal

Table 4 gives the distribution of the 103 shaft mines covered in the 1931 study of the industry by classified groups showing the depth in feet from top to bottom of shaft, and the average distance in feet from bottom of shaft to working place in mine.

The depth of the shaft of the mines ranged from 100 and under 200 feet to 5,700 feet. The distance from the bottom of the shaft to place of work in the mines ranged from under 100 feet to 8,000 and under 9,000 feet.

In each of 3 mines the depth of the shaft was 100 and under 200 feet, and the distance from the bottom of the shaft to place of work in 1 of these mines was 100 and under 200 feet and of the other 2 mines 300 and under 400 feet. The depth of the shaft of each of 20 mines was 200 and under 300 feet, while the distance from the bottom of the shaft to the working point in 1 of these mines was 200 and under 300 feet and in the 2 with the longest distance was 2,000 and under 2,500 feet.

Average and Classified Earnings per Hour, 1924 and 1931, by Occupation

Average earnings per hour and the per cent of wage earners at each classified group of such earnings are shown in Table 5 for six of the representative occupations in the industry for the years 1924 and 1931. The number of wage earners in these occupations is 55 per cent of the total covered in 1924 and 52 per cent of those covered in 1931. The percentage distribution of these wage earners illustrates the variations in the trend and spread of average earnings per hour of the wage earners in all occupations in the industry in the two years. The distribution by number of the wage earners covered in these occupations in 1931 is shown by States, in Table B (p. 39).

Company drilling-machine operators earned an average of 59.4 cents per hour in 1924; approximately 4 per cent of them earned less than 45 cents per hour, and about 2 per cent earned 80 cents or more per hour. In 1931 the wage earners in this occupation earned an average of 64.6 cents per hour; 9 per cent of them earned less than

45 cents, and 12 per cent earned 80 cents or more per hour.

Table 6 shows for the laborers covered in the study of the industry in 1931, and also for the wage earners in all occupations, the number and the per cent in each classified group of average earnings per hour.

The largest number of laborers in any one group is 107, or 25 per cent, within the group of 40 and under 42½ cents per hour. The largest number of wage earners in all occupations is 5,067, or 16 per cent at 50 and under 55 cents per hour.

Table 6.—Number and per cent of wage earners in metalliferous mines earning each classified amount per hour, 1931

Full-Time Hours per Week and per Day, 1924 and 1931

The full-time or basic hours per week of a wage earner are those established for him by a regular time of beginning and quitting work on each day of the week. Such hours do not include any overtime that may have been worked or any regular time off duty for meals. They do, however, include any of the regular hours that may have been lost for any cause in a week. Full-time hours per week of individual wage earners in a mine frequently vary as the hours for certain occupations in the mine are more or less than for other occupations.

Table 7 shows for the wage earners covered in 1924 and 1931 in each of six representative occupations, average full-time hours per week and the per cent at each specified number or classified group of

full-time hours per week.

The full-time hours per week of the 5,327 company drilling machine operators included in the 1924 study, averaged 51.4 and the hours of 7 per cent of them were less than 48 per week; of 48 per cent were 48; of 8 per cent were over 48 and under 56; of 32 per cent were 56; and of 6 per cent of them were 60 per week. The average for the 3,684 covered in 1931 was 49.5 per week and the percentage distribution was 5 per cent at less than 45 per week; 16 per cent at 45; 42 per cent at 48; 15 per cent at over 48 and under 56; 20 per cent at 56; and 2 per cent at 60 hours per week. For a similar classification, by number, of the wage earners covered in each of the six occupations in each State in 1931, see Table C (p. 44).

¹ Less than 1 per cent.

The hours per week and on each day, Monday to Friday, Saturday, and Sunday, shown, by States, in Table 8 are the prevailing regular or customary full-time hours of operation of the wage earners at underground work, at surface work, and at underground and surface work in the 117 underground mines covered in 1931; and also of those in the 22 open-pit mines covered in that year. There is a variation of hours of wage earners in different occupations or groups in each of a considerable number of mines. The "prevailing" hours (those of the majority of the wage earners in each of such mines) were used in compiling this table.

Hours per week in the 117 underground mines for underground work ranged from 40 in 2 mines to 60 in 4 mines; for surface work from 40 in 2 mines to 70 in 2 mines; and for surface and underground work from 40 in 1 mine to 70 in 2 mines. Hours per week in open-pit mines were 56 in 3 mines and 60 in 19 mines.

Hours per day for wage earners in underground mines for underground work on each day of the week except Sunday ranged from 7½ to 10, and on Sunday were 7½ or 8 in the 29 mines which were on the 7-day-week basis.

Wage earners in underground work in 3 mines were on the 5-day-week basis with no work on Saturday and Sunday, and in 85 mines were on the 6-day-week basis with no work on Sunday.

Tabulated in a former bulletin as "under 48."
 Less than 1 per cent, tabulated in a former bulletin as "under 48."

Changes in Full-Time Hours per Week Since June 1, 1929

Between June 1, 1929, and the period of the 1931 study (June to October), changes were made in the regular full-time hours of wage earners in six mines. No change was made in the hours of 133 of the 139 mines covered in 1931.

The full-time hours in 3 mines were changed from a 7-day week of 8 hours a day or 56 hours per week to a 6-day week of 8 hours a day, or 48 hours per week, and in the other 3 mines from a 7-day week of 8 hours a day, with two Sundays off duty each month, to the 6-day week of 8 hours a day, or 48 hours per week.

Changes in Wage Rates Since June 1, 1929

Between June 1, 1929, and the period of the 1931 study of the industry, the wage rates of all or a specified part of the wage earners in 85 mines were reduced one or more times. No change was made in the wage rates of any of the wage earners in 54 mines.

Table 9 shows the number of mines in which wage rates were reduced, the wage earners affected, and the per cent or the amount of reduction and the year in which made.

Overtime and Sunday and Holiday Work, 1931

Overtime is any time worked before or after the regular time of beginning and quitting work on each day of the week (including Sundays and holidays for those whose working schedules provide for work on those days), and any time worked during the regular time established for meals, regardless of the rate of pay or amount of time credited for such extra work. Work on Sundays and holidays is overtime only when performed by wage earners whose regular hours do not provide for work on those days.

Of the 139 mines covered in the 1931 study of the industry 99 reported certain of their wage earners as having worked some overtime, and 43 reported extra work on Sundays and holidays by certain wage earners. There was, therefore, no overtime in 40 mines, and

no extra work on Sundays and holidays in 96 mines.

The rate paid for overtime was the same as for regular working time in 92 mines and one and one-half times the regular rate in 7 mines. The rate of one and one-half times the regular rate was paid to the maintenance crew of 5 mines, to cagers, hoist men, pump men,

and maintenance men in 1 mine, and to electricians, pipemen, and

timbermen and helpers in 1 mine.

The rate for extra work on Sundays and holidays was the same as for regular working time in 41 of the 43 mines in which there was such work; in 1 mine the rate was one and one-half times the regular rate, which was paid to electricians, pipemen, timbermen, and timbermen helpers; and in 1 mine to cagers, hoist men, pump men, and maintenance men.

Bonus Systems

A bonus is compensation in addition to earnings at time or piece rates. Bonus systems were found in operation in 51 of the 139 mines studied in 1931.

Table 10 shows the number of mines in which bonus systems were in operation at the time of the study, the wage earners eligible to earn the bonus, the amount of the bonus, and the performance necessary on the part of wage earners to earn it. The basis of the bonus was production in 21 mines, service in 19, time saved in 9, and production and time saved in 2 mines.

Table 10.—Bonus systems of 51 metalliferous mines, 1931

Num- ber of mines	Basis or kind of bonus	Wage earners eligible	Amount of bonus	Bonus earned—
1	Production	bermen.	Varies with condition and type of work.	When production exceeds set standard.
1	do	Miners and muckers	Each unit above set stand- ard at basic rate.	Do.
1	do	Miners, muckers, timber- men, brakemen, motor- men, pipemen, and trackmen.	3½ cents for each ton over 50 per man per day, pro- rated according to time worked.	When production exceeds 50 tons per man per day.
1	do	Mucking-machine opera- tors.	5 cents for each car loaded over 30 per day.	When cars loaded exceed 30 per day.
		Raise and shaft miners	\$1 per man for each lineal foot mined in excess of 100 per month.	When group of 4 men mine more than 100 lin- eal feet per month.
1	do	Miners, muckers, and trammers.	20 cents for each ton in ex- cess of 14 per day, di- vided equally among men working.	When production is more than 14 tons of ore per day.
		Miners and muckers on development work.	Varies with rates per foot for work under different conditions, divided equally among men working.	When production is more than a set standard.
1	do	do	\$5.40 per foot of advance in drift work on \$3.80 per foot in raises for each foot in excess of 3 feet per shift, prorated ac- cording to time worked.	When development advances more than 3 feet per shift.
		Miners, muckers, timber- men and helpers, tram- mers and shifters on de- velopment work.	50 cents per man per shift	When development advances more than 4 feet per shift.
		Hoist men	Three-fourths of 1 cent for each can hoisted over 600 per day.	When more than 600 cans per day are hoisted.
		Hoist men and can hook- ers.		Do.
1	do	Hoist men	1 cent for each can hoisted	Do.
1	do	Hoist men and can hookers.	do	Do.

Table 10.—Bonus systems of 51 metalliferous mines, 1931—Continued

		,		
Num- ber of mines	Basis or kind of bonus	Wage earners eligible	Amount of bonus	Bonus earned—
1	Production	Contract shovelers Mechanical loaders	4 cents for each ton over 22 loaded per day. 6 cents for each ton loaded in excess of set standard for each shaft.	When more than 22 tons per day are loaded. When tons loaded are more than 100 at shaft A, 82 at shaft B, or 87 at
1	do	Maintenance men except watchmen and a few common laborers.	One-half of excess at regular rates.	shaft C. When production is more than set standard.
2	Service	Shovel engineers	10 cents per hour	When service is 1 or more years.
1	do	Locomotive engineers Shovel engineers Locomotive engineers, locomotive cranemen, and dragline operators.	5 cents per hour 10 cents per hour 5 cents per hour	Do. Do. Do.
1	do	Shovel engineers Locomotive engineers and locomotive cranemen.	10 cents per hour 5 cents per hour	Do. Do.
7	do	Shovel engineers Shovel cranemen Locomotive engineers	10 cents per hour 8½ cets per hour 5 cents per hour 5 cen	Do. Do. Do.
4	do	Shovel engineers Shovel cranemen Locomotive engineers and	10 cents per hour 8½ cents per hour 5 cents per hour	Do. Do. Do.
1	do	l locomotive cranemen. Shovel engineers Shovel engineers and track bosses.	10 cents per hour 10 cents per hour	Do. Do.
1	do	Shovel cranemen Locomotive engineers Walking bosses	8½ cents per hour 5 cents per hour 10 to 20 cents per hour	Do. Do. Do.
2	do	Shovel engineers	10 cents per hour	Do.
2	Time saved.	Craners Miners, muckers, timbermen and helpers, and jigger bosses.	8½ cents per hour All time saved at basic rates, prorated accord- ing to time worked.	Do. When task is completed in less than the time allotted.
3	do	Miners on development work.	do	Do.
1	do	Miners, muckers, and tim- bermen.		Do.
2	do	Miners and muckers on development work.	do	Do.
1	Time saved.	Miners, timbermen, shaft men, shaft jigger bosses, Leyner men and helpers, and muckers.	do	Do.
	(Production	Miners, muckers, and timbermen.	15 cents for each car over set number which varies with conditions. All of time saved at basic rates, prorated according to time worked.	When cars trammed (pushed) exceeds set number. When task is completed in less than set time.
1	Time saved	Muckers, miners, mucking-machine operators, and contractor.	All of time saved at basic rates divided as follows: 18.2 per cent to mucker, 27.3 per cent to miner and mucking-machine operator, and 54.5 per cent to contractor.	Do.
1	Time saved.	Miners, muckers, and tim- bermen and helpers.	All of time saved at basic rates, prorated accord- ing to earnings.	Do.
	Production	Trammers	Varies with rates per car under different condi- tions.	When more than a set number of cars are trammed.

Index Numbers of Employment and of Pay Rolls, 1929 to 1931

Index numbers of employment and of pay rolls in the metalliferous mining industry are presented in Table 11 for each of the months and for each of the years in the period, January, 1929, to December,

1931. These numbers were computed from the number of persons employed and the amount of the pay rolls for each month and the average for each year, with the 1929 average as the base or 100 per cent, and are as published by the Bureau of Labor Statistics in its

monthly reports entitled "Trend of employment."

During the period covered by the table the indexes for both employment and pay rolls were highest at 103.8 and 105.6, respectively, in June, 1929, and lowest at 51.2 and 34.3, respectively, in December, 1931. By years, index numbers of employment were 100.0 in 1929, 83.2 in 1930, and 59.1 in 1931; and of pay rolls 100.0 in 1929, 78 in 1930, and 44.8 in 1931.

Scope and Method

Wage figures covering days, hours, and earnings of each of the wage earners found in each occupation in the industry in 1931 were collected by agents of the bureau from the pay rolls and other records of 139 representative metalliferous mines in 15 States. The number of wage earners employed in these States, based on the 1928 report of the United States Bureau of Mines, is approximately 90 per cent of the total number of wage earners in the industry in all States. The number of wage earners (32,195) for which wage figures are given in this bulletin is approximately one-third of the total in the United States. In 1924 similar data were collected from the records of 137 representative mines in 14 of the 15 States covered in 1931.

Table 12 shows the total number of mines and of wage earners in the industry in each of 15 States, in the group designated as "other States," and in all States, according to the United States Bureau of Mines. It also shows the number of mines and wage earners covered

in the 1931 study in each of the 15 States.

Table 12.—Number of wage earners in	metalliferous mines in 1928 and number of
mines and wage earners for which	1931 wage data are shown, by States

Data for each of the mines with a pay period of more than one week were reduced to a 1-week basis.

Average earnings per hour of employees in each occupation as presented in the various tables in this report were computed by dividing the combined earnings of all employees in the occupation in one week by the combined hours worked by all employees in the occupation in the week.

Average full-time hours per week of all employees in each occupation were computed by dividing the combined full-time hours per week of all employees in the occupation by the number of employees in the occupation in one week. Full-time hours per week of each employee were used in arriving at this average, even though some employees worked more or less than full time on account of overtime, sickness, disability, or other cause.

Average full-time earnings per week of employees in each occupation were computed by multiplying the average earnings per hour of all employees in the occupation by the average full-time hours per week. This is on the assumption that the earnings for full time would have been at the same average rate per hour as for the time that was actually worked in one week.

Occupations

The occupations for which days, hours, and earnings are shown in this bulletin are as listed in Tables 2 and A. Each occupation is defined in the glossary, which also gives the mine terms and the bureau's classification of the occupations. (See Appendix, pp. 54 to 64.)

General Tables

In addition to the preceding text tables, five general tables are

presented as follows:

Table A.—Average number of days on which employees worked, average full-time and actual hours and earnings per week, average earnings per hour, and per cent of full time worked, 1931, by occupation, district, and State.

The presentation in parallel columns of "average full-time hours per week" and "average hours actually worked in one week" is for the purpose of easy comparison of the hours that would have been worked in the week had all employees in the occupation worked no more nor less than full time, with the average hours that were actually worked in the week. One shows the full-time hours under normal conditions, while the other shows the hours actually worked in the week by all wage earners covered in each State and in all States combined in 1931.

The table shows (p. 38) that 32,195 wage earners in the 139 mines worked on an average of five days in one week; that their average fultime hours in one week were 51.6; that they actually worked an average of 41.6 hours in one week or 80.6 per cent of full time; that they earned an average of 55.9 cents per hour and \$23.25 in the week; and that, had they worked full time at the same average per hour as was earned in the 41.6 hours, they would have earned an average of \$28.84 per week.

TABLE B.—Average and classified earnings per hour in six specified

occupations, 1931, by district and State.

Table C.—Average and classified full-time hours per week in six specified occupations, 1931, by district and State.

specified occupations, 1931, by district and State.

Table D.—Average and classified hours actually worked in one

week in six specified occupations, 1931, by district and State.

TABLE E.—Average and classified actual earnings in one week in six specified occupations, 1931, by district and State.

Table A.—Average number of days on which employees worked, average full-time and actual hours and earnings per week, average earnings per hour, and per cent of full time worked, 1931, by occupation, district, and State

Appendix

Mine Terms of Occupations, with Definitions, and Classification by Bureau of Labor Statistics

Key to places of employment in and about mine: Surface designated as (S); Underground (U); Surface and Underground (S and U); and Open Pit (O P)

Underground mines

Mine term	Definition	Classified by bureau under—
Air-drill operator, com-	(See Drilling-machine operator, company, U)	Drilling-machine opera- tors, company (U).
pany (U) Air-drill operator, contract (U).	(See Drilling-machine operator, contract, U)	Drilling-machine opera- tors, contract (U).
Air hammerman (U)	(See Jack hammerman, U)	Other employees, (S and U). Do.
Air pumper (S and U) Ash wheeler (S)	Operates pumps which force air into mines for venti- lation purposes. Wheels ashes from fires to dump; is an unskilled sur-	Topmen (S).
Assistant foreman (S	face laborer. (See Working foreman, S and U)	Other employees (S and
and U). Bar loosener (U)	(See Roof trimmer, II)	U). Roof trimmers (U).
Bar man (U) Barn man (S and U)	do Feeds, waters, cleans, and harnesses mules or horses used in and about mines; cleans stable and removes	Do. Other employees (S and
Dail Man (8 and 6)	used in and about mines; cleans stable and removes refuse, and performs other similar duties about the stable.	Ū).
Battery charger (S and U).	Recharges storage batteries used in underground mine locomotives; inspects, renews, and repairs defective parts; and renews chemicals when necessary.	Do.
Batteryman (S and U)Blacksmith (S)	(See Battery charger, S and U) Makes new metal parts and does repair work on mine cars, wagons, etc.; resets and fits horseshoes; sharpens, hardens, and tempers drilling tools, picks, etc.; and does other general blacksmith work.	Do. Blacksmiths (S and U).
Blacksmith's helper (S)	Uses sledge at direction of blacksmith, looks after forge fire, cuts and arranges metal stock, and does any work assigned to him by the blacksmith.	Blacksmiths' helpers (S and U).
Blaster (U)	Uses an electric battery to set off charges in rock or ore after holes have been drilled and charged with explosives. This work is sometimes done by hand, each fuse being lighted senarately	Other employees (S and U).
Boiler cleaner (S)		Do.
Boiler maker (S)	Makes repairs to boilers or engines in machine shops;	Do.
Boiler washer (S) Brakeman (U)	(See Boller cleaner, S) (See Trip rider, U) Has charge of proper ventilation of the mine; builds	Do. Trip riders (U).
Brakeman (U) Brattice man (U)	necessary drattices or walls, usually of wood, which	Other employees (S and U).
Bruno man (U)	to keep the loosened ore pushed down to the	Muckers (U).
Bumper (U)	Pushes large can-shaped containers filled with mined ore to center of shaft opening where the can hooker attaches a hoisting cable to each for the purpose of	Trammers (U).
Cable splicer (S and U)	raising them to the surface.	Other employees (S and
Cager (U)	lowering men or materials between various levels of the mine or various levels and the surface;	U). Cagers (U).
Cager's helper (U)	loading and unloading same on cage or may do	Other employees (S and U).
Can hooker (U)	Works at bottom of shaft; passes hook of hoisting cable through the bale of large can-shaped container filled with ore to hoist it to the surface.	Do.

		
Mine term	Definition	Classified by bureau under—
Car cutter (U)	Works with underground tippleman or dumper operator. His duties consist in uncoupling ore trains in groups of five cars, which are then pushed on the tipple and mechanically dumped at one time. Ore passes through a grizzly or screen and	Other employees (S and U).
Car hooker (U)	form a train which is later hauled to shaft for hoist-	Do.
Car man (U)	railroad cars. (See also Car cutter, U.) (See Trip rider, U) Makes repairs to mine cars either underground or on the surface, the underground repairs generally being minor ones.	Trip riders (U). Other employees (S and U).
Carpenter (S and U)	Builds and repairs wooden structures and does other general carpentry work; may also do timber fram- ing. All work is usually done on the surface but sometimes underground.	Carpenters (S and U).
Carpenter's helper (S and U).	Assists carpenter in repair of buildings and other general carpentry work under carpenter's super-vision.	Carpenters' helpers (8 and U).
Chainer (U)	Attaches hoist chain or cable to or detaches it from ore cars. Chainers are found in mines where grades are too sharp for motors or mules; in such cases loads are pulled up these grades by means of a chain or cable attached to a drum or auxiliary hoist. (See also Rope rider, U.)	Trip riders (U).
Chainer's helper (U)	Assists chainer in attaching and detaching hoist chain or cable used to pull ore cars up steep grades, and does any other work which the chainer may designate.	Other employees (S and U).
Change-house laborer (S).	Assists the dry-house man, around the change room, where workmen change wet and soiled clothing.	Dry-house men (S).
Charge-house man (S) Charger, batteries (S and U).	doing such work as may be assigned to him. (See Dry-house man, S)	Do. Other employees (S and U).
Checker, chute (U) Checker, production (S and U).	(See Chute checker, U). Maintains record of ore-filled containers hoisted to the surface, their number, contents, etc.	Do. Do.
Chute blaster (U) Chute checker (U)	(See Pluggerman, U). Occupation is found in those mines using the "caving method" of mining. The checker keeps a record of the amount of ore drawn from each raise or chute. It is essential that the ore be drawn uniformly, so that the entire ore body will cave in properly. Irregular drawing of ore results in improper caving, considerable dilution, and loss of ore. The checker has authority to seal or close any chute.	Do. Do.
Chute loader (U)		Chute loaders (U).
Chute tapper (U)	Occupation is found only in those mines using the "caving method" of mining. The chute tapper, generally located in a square set above the grizzly level, draws the ore through the finger raises from the undercutting level. From the finger raises (generally 4 per set) the ore passes to the grizzly below and from this level, through raises, it passes to the haulage-level chutes.	Other employees (S and U).
Chute trammer (U) Cleaner, boilers (S)	(See Chute loader, U)(See Boiler cleaner, S)	Chute loaders (U). Other employees (S and U).
	(See Drilling-machine operator, company, U)	Drilling-machine opera- tors, company (U). Do.
Company miner (U) Compressor man (S and U).	Has charge of air compressors which furnish air for the operation of drills and for ventilation of the mines.	Compressor men (S and U).
Contract driller (U)	(See Drilling-machine operator, contract, U)	Drilling-machine opera- tors, contract (U).
Contract miner (U) Conveyor man (S and U).	Operates conveyor used to transport ore from shaft, tipple, etc., to and through sorting plant, or other place in or about the mine; sees that nothing clogs the mechanism, that it operates smoothly; also knows its beavings close and well greened by	Do. Other employees (S and U).
Crane operator (S)	keeps its bearings clean and well greased. Operates yard crane, which is generally used to unload mine timbers and other heavy material.	Do.
Crusher, ore (S)	(See Crane operator, S)(See Ore crusher, S)	Do. Do.
Cutter, fuses (S and U)	(See Fuse cutter, S and U)	Do.

Mine term	Definition	Classified by bureau under—
Demonstrator (S and U).	Demonstrates safe, authorized methods of mining to	Other employees (S and
Ditchman (U)	beginners and others. Removes dirt and rubbish with a shovel from underground drainage ditches; loads dirt and rubbish into ears which are hauled away by motors or mules.	U). Do.
Doorman (U)	Opens and closes safety doors in airways of mine to	Do.
Drag foreman (U)	permit trains, mules, etc., to pass. Is in charge of mechanical loading of ore. In some mines, also operates the "drag," which is a heavy conveyance used to load cre into mine cars.	Do.
Draw boss (U)		Do.
Drift driller (U)	Uses heavy mounted air drill in driving entries or drifts, which are horizontal passageways on the mining or haulage levels of the mine. (See also Drilling-machine operator, company, U.)	Drilling-machine operators, company (U).
Drill runner, company (U).	(See Drilling-machine operator, company, U)	Do.
Drill runner, contract	(See Drilling-machine operator, contract, U)	Drilling-machine operators, contract (U).
Drill runner's helper (U) Drill sharpener (S)	(See Drilling-machine operator's helper, U) (See Tool dresser, S) (See Tool-dresser's helper, S)	Drilling-machine opera- tors' helpers (U).
Drill-sharpener's helper (S).		Other employees (S and U).
Drilling-machine operator, company (U).	Runs any one of several types of drilling machines used in mines. Sets up his machine, drills holes in face of work place; inserts explosives and later sets off the charge, thus shattering the ore, rock, etc., so that it can easily be removed and loaded into mine cars. Drills are generally operated by compressed air, though some electric drills are also used. Driller must be familiar with drills and be able to make needed adjustments and minor repairs, and must also have a thorough knowledge of explosives so that he can place his holes properly and know how much explosives to use. A company driller differs from a contract driller only in the nature of the work he does and the method in which he is paid. He is engaged in development work, such as driving drifts and raises and sinking shafts, and is paid on a day basis; in addition he may receive a bonus, generally based on footage of advance in a specified time. He is also known as a "miner."	Drilling-machine opera- tors, company (U).
Drilling-machine operator, contract (U).	Method of operation is the same as that of company drilling. The difference lies in the nature of the work done and the method of payment. The contract miner is engaged in production work, i. e. getting out ore, and is generally paid at a specified rate per ton, cubic yard, or car of ore produced. In some mines, however, contract miners are paid on a flat day basis.	Drilling-machine opera- tors, contract (U).
Drilling-machine opera- tor's helper (U).	Assists the machine operator in setting up and placing drills, etc., in position at working face, and works under supervision of the driller.	Drilling-machine opera- tor's helpers (U).
Driver (S)	Drives mules or horses about the yard hauling materials and may also transport ore from mine to crusher.	Drivers (S).
Driver, locomotive (U) Driver, mule (U)	(See Motorman, U)	Motormen (U). Drivers, mule (U).
Dry-house man (S)	Is in charge of change room, where workmen may change their wet or soiled clothing and have same	Dry-house men (S).
Dumper (8)	crusher, bins, or other place of disposal; dumps ore	Dumpers (8).
Dumper (U)	Or retuse and returns empty cars to cage. Works inside mine at the grizzly, which is a large screen constructed of heavy iron beams placed a few inches apart, just over the raise or cut eleading to ore bins or cars beneath; opens doors of mine cars, sometimes assisted by trip rider, and dumps ore onto the grizzly; uses a sledge hammer to break oversize lumps which do not pass readily between the bars of grizzly, and a shovel for clean-up purposes; may also select samples of ore from each car or train. In some mines the dumper is known as grizzly worker, monkey, or screen ape.	Other employees (S and U).
Electrician (S and U)	Installs and repairs electrical machinery and light and power wiring.	Electricians (S and U).

Mine term	Definition	Classified by bureau under—
Electrician's helper (S and U).	Assists electrician in maintenance and repair of elec- trical machinery and light and power wiring, work- ing under his direction.	Electricians' helpers (S and U).
Engineer, hoist (S) Engineer, hoist (U) Engineer, stationary (S)	(See Hoist man, S)	Hoist men (S). Hoist men (U). Engineers, stationary (S)
Fan man (S and U) Feeder, mules (S and U).	operating hoists, pumps, or air compressors. Tends air-clarifying system which provides ventilation for the mine. (See Barn man S and II)	Other employees (S and U). Do.
Filer, saws (S)	(See Saw filer, S)	Do.
Fire patrolman (U) Fireman, fighter (S and U).	(See Barn man, S and U)(See Saw filer, S). (See Saw filer, S). (See Mine patrolman, U). Is a traihed fire fighter subject to immediate call at all times in case of fire in and about the mine. May work as a miner when not otherwise occupied.	Do. Do.
Fireman stationary (8)	Fires boiler which furnishes steam for operating stationary engine.	Firemen, stationary (8).
Firewatch miner (U)	Goes through mine with shift boss after each shift; looks for and guards against possible fire danger; Is a regular miner during the shift but reports a half hour later than the regular men and works (as above) a half hour later.	Other employees (S and U).
First-aid station man (S).	Is trained in first-aid work and remains on duty at a specified place on the surface to render first aid to injured workmen.	Do.
Flume man (S and U) Foreman, working (S and U)	(See Pipeman, S and U)	Pipemen (S and U). Other employees (S and U).
Framer, timbers (S) Fuse cutter (S and U)	(See Timber framer, S) Cuts fuse to required length and attaches cap to it. This work is often done by the powderman or by the miner.	Timber framers (S). Other employees (S and U).
Gear man (S)	(See Head-gear man, S)(See Dumper, U)	Do. Do.
Hammerman (S)	(See Dumper, U) Operates power hammer in forge or machine shops, to shape forgings with or without the aid of dies.	Do.
Hammerman, air (U) Handy man shops (S and U).	(See Utility man, S and U)	Do. Do.
Head-gear man (S)	Operates coarse or primary crusher at the tipple; may also supervise loading of crushed ore into ore trains.	Do.
Hoist engineer (S) Hoist engineer (U) Hoist man (S)	(See Hoist man, S). (See Hoist man, U). (See Hoist man, U). Operates hoisting machinery used to lower cages and ore skips into mine and to raise them to the surface from different levels. Men and supplies are handled in cages or elevators, while ore is generally hoisted up in ore skips or buckets. Some mines, however, hoist the mine cars to the surface instead of using ore skips. Hoist man must have complete knowledge of hoisting machinery, must be very dependable and able to act promptly. He is guided in the management of his hoist by electric or bell signals.	Hoist men (S). Hoist men (U). Hoist men (S).
Hoist man (U)	Operates hoisting machinery used in handling ore, refuse, or supplies between different levels of the	Hoist men (U).
Hooker, cans (U)	mine.' (See also Hoist man S.) (See Can hooker, U)	Other employees (S and U).
Hooker, cars (U) Hostler (S)	(See Roller cleaner S)	Do.
Incline-railway operator (S).	do (See Boller cleaner, S) Operates power incline railway used to hoist supplies from mill level to shaft opening on side of a moun- tain.	Do. Do.
Instructor (S and U) Jack hammerman (U)	(See Demonstrator, S and U) Uses an air hammer, underground, to drill holes into large lumps of ore so they may be blasted. Also loads holes with explosives and sets off charge. Some lumps are broken into small pieces by use of the air hammer without aid of explosives.	Do. Do .
Laborer (S) Laborer (U)	(See Topman, S) Does unskilled labor of various kinds about the mine underground.	Topmen (S). Muckers (U).
Laborer, change-house (8).	(See Change-house laborer, 5)	Dry-house men (8).
Laborer, dry-house (8) Lander (8)	Works in shaft house on the surface. Dumps ore- loaded skips which are hoisted from lower levels in the mine, and signals hoist man by means of bells for operation of skip.	Do. Dumpers (8).

143466°—33——5

Mine term	Definition	Classified by bureau under—
Lander (U)	Works with shaft-sinking crew. Is stationed on the level immediately above working place in shaft. Handles muck as it is raised by the winze or temporary hoist used in sinking the shaft, and trams it away.	Muckers (U).
Leader (U)	(See Shaft pusher, U)	Other employees (S and
Leynerman (U)	Operates heavy-type mounted air drill known as "Leyner" (the name of the inventor). This machine is used in driving drifts. (See also Drift driller, U; Drilling-machine operator, company, U.)	U). Drilling-machine operators, company (U).
Loader, chute (U) Loading-machine opera- tor (U).	(See Chute loader, U). Operates machine for loading ore into mine cars. There are two general types of these machines— mechanical shovels and scrapers operated by hoists.	Chute loaders (U). Loading-machine opera- tors (U).
Loosener, roof (U) Machine driller, com- pany (U).	(See Roof trimmer, U) (See Drilling-machine operator, company, U)	Roof trimmers (U). Drilling-machine operators, company (U).
Machine driller, con- tract (U).	(See Drilling-machine operator, contract, U)	Drilling-machine opera-
Machine loader (U)	(See Loading-machine operator, U)	Loading-machine opera- tors (U).
Machine runner, company (U).	(See Drilling-machine operator, company, U)	Drilling-machine opera- tors, company (U).
Machine runner, con- tract (U).	(See Drilling-machine operator, contract, U)	Drilling-machine opera- tors, contract (U).
Machinist (S and U)	Makes necessary repairs and adjustments on ma- chines and operates lathes and other metal-working machines to make needed machine parts.	Machinists (S and U).
Machinist's helper (S and U).	Workman of some degree of skill who assists machinist in the repair and adjustment of machines, working under his direction.	Machinists' helpers (S and U).
Mason (S and U)	Uses stone or brick and mortar or cement to build walls, foundations, etc., about the mine.	Other employees (S and U).
Mechanical-shovel operator (U).	(See Loading-machine operator, U)	Loading-machine opera- tors (U).
Mine patrolman (U)	Goes through all parts of the mine at regular intervals inspecting for fire hazards, weak timbering, or any other dangers.	Other employees (S and U).
Miner, company (U)	(See Drilling-machine operator, company, U)	Drilling-machine opera- tors, company (U).
Miner, contract (U)	(See Drilling-machine operator, contract, U)	Drilling-machine operators, contract (U).
Monkey (U)	(See Dumper, U)	Other employees (S and U).
Motorman (S)	Operates electric or gasoline driven motors on surface tracks to transport timbers and other mine sup- plies from various places about yard to mine	Other employees (S and U).
Motorman (U)	entrance. Operates electric or compressed air motor for hauling empty or loaded mine cars to and from designated places inside the mine.	Motormen (U).
Mucker (U)	Uses hand shovel to load ore, rock, or refuse into mine cars; also works in stopes pushing ore down an inclined floor to raise or chute openings; may	Muckers (U).
Mule (U)	also do any unskilled work underground. Pushes ore-loaded cans or cars away from shoveler to tracks where they may be hauled away by mule or motor.	Trammers (U).
Mule feeder (S and U)		Other employees (S and U).
Nipper (U)	Collects and carries tools from place to place where needed and in general looks after tools underground, and in addition may distribute powder.	Nippers (U).
Oil-house man (S)	Has charge of oil stocks and gets out specified quantities as needed by drillers, oilers, or other workmen.	Other employees (S and U).
Oiler (S and U)		Oilers (S and U).
Ore crusher (8)	Operates ore-crushing machine which reduces ore to smaller sizes; makes adjustments of machinery, cleans and oils bearings, and looks after the dis-	Other employees (S and U).
Ore sorter (S)	tribution of crushed ore. Sorts ore by hand as it comes from the mine, removing rock and other refuse; may also separate into	Ore sorters (S and U).
Painter (S)	various grades ore which has been cleaned. Does necessary painting in the maintenance of buildings and equipment, by hand with a brush or spray machine.	Other employees (S and U).

		
Mine term	Definition	Classified by bureau under—
Patrolman, fire (U)		Other employees (S and U).
Patrolman, mine (U) Pipeman (S and U)	Lays and repairs water and compressed-air pipes both underground and on the surface.	Do. Pipemen (S and U).
Pipeman's helper (S and U).	Helps in handling heavy tools and pipe, cutting and threading pipes, screwing ends, etc., as directed by	Other employees (S and U).
Pluggerman (U)	whenever a bowlder blocks a chute, the plugger- man drills a few holes in it with a jack-hammer drill, loads holes with explosives, and sets them off, blasting the bowlder into small parts which pass freely down the chute.	Do.
Policeman (S) Powder man (U)	(See Watchman, S) Has charge of underground powder magazine and issues explosives to the men as needed.	Watchmen (S). Powder men (U).
Production checker (S and U).	(See Checker, production, S and U)	Other employees (S and U).
Pump man (U)	Is in charge of underground pumping stations operated for the purpose of disposing of surplus water which accumulates in the mines. Considerable mechanical skill is required.	Pump men (U).
Pumper, air (S and U) Pusher (U)		Other employees (S and U). Do.
Pusher (U)	shafts leading from a lower level of the mine up- ward through rock, earth, etc., to ore bed above, or to an upper level of the mine. (See also Drilling- machine operator, company (U).)	Drilling-machine operators, company (U).
Raise-driller's helper (U)	(See Drilling-machine operator's helper, U)	ators' helpers (U).
Repair man, car (S and U). Repair man, general (S	(See Car repair man, S and U)	Other employees (S and U). Do.
and U). Repair man, mechanical. Repair man, shaft (U)	(See Machinist, S and U)(See Shaft repair man, U)	Machinists (S and U). Other employees (S and
Repair man, slopes, rollers (U).	(See Roller man, U)	U). Do.
Rigger (S and U)	General handy man working about the mine doing ordinary repair work which requires moderate skill and experience.	Do.
Rock passer (U)	idle rolls over which hoist cable passes; also oils rolls and replaces or repairs any defective ones.	Muckers (U), Do.
Roller repair man, slopes (U). Roof loosener (U)	(See Roller man, U)	Other employees (8 and U).
Root trimmer (U)	(See Roof trimmer, U) Inspects roofs of working places after a blast and knocks down losse ore or rock to prevent its falling and injuring workmen.	Roof trimmers (U). Do.
Rope man (S and U)	(See Rope splicer, S and U)	Other employees (S and U).
Rope rider (U)	are pulled on an incline (several may be coupled together)—loaded cars going up the incline and empties coming down on parallel tracks; also sees that cars do not become detached when going over rough places or too of incline.	Trip riders (U).
Rope splicer (S and U)	Splices and repairs rope (cable) used on hoisting	Other employees (S and U).
Safety man (U) Sampler (U)	(See Mine patroliman, U). Selects from each car or designated group of cars sample pieces of ore to be analyzed. Each sample is marked with record of location and other necessary data.	Do. Do.
Saw filer (S)	Uses hand file to sharpen teeth of saws used in tim- ber mill or for other purposes; also sets cutting	Do.
Sawmill man (S) Sawyer (S)	width of saws. (See Timber framer, S). Operates power saw in cutting to designated length timbers needed about the mine. Is not a timber framer.	Timber framers (S). Other employees (S and U).
Scraper, hand (U) Scraper, machine (U)	(See Stope scraper, U)(See Loading-machine operator, U)	Muckers (U). Loading-machine operators (U).
Scraper operator (U) Scraper, stopes (U)	do (See Stope scraper, U)	Do. Muckers (U).

	1	
Mine term	Definition	Classified by bureau under—
	(See Dumper, U)	Other employees (S and U).
Screen man (U) Shaft boss (S and U) Shaft driller (U)	do (See Shaft pusher, U) Sinks shafts, which are perpendicular passage ways from the surface to lower levels, generally doing his own drilling, shooting, mucking, and finishing (in timber or concrete). He is assisted by "topman" who handles muck and materials on the upper level, and by shaft-hoist or winze-hoist man who hoists muck and lowers supplies. (Also known as shaft man, shaft sinker, or shaft miner.) Highest paid miner because of great skill required and also because of hazardous nature of work. (See also Drilling machine operator company. II)	Do. Do. Drilling-machine oper- ators, company (U).
Shaft-hoist man (U) Shaft miner, drilling (U)_	also Drilling-machine operator, company, U.) (See Winze-hoist man, U)	Drilling-machine oper-
Shaft miner, repairs (U).	(See Shaft repair man, U)	ators, company (U). Other employees (S and U).
Shaft pusher (U)	Working boss who, when sinking a shaft, serves as a leader and thus "pushes" his men by working harder than others of his group.	Do.
Shaft repair man (U)	Rides cage or other hoisting device to inspect and repair shaft, replacing timbers, guides, guards, or any defective parts: bazardous work.	Do.
	(See Shaft driller, U)	Drilling-machine operators, company (U). Do.
	(See Shaft repair man, U)	l U).
	Has charge of storerooms on the surface, reports low stocks, and hands out supplies as needed.	Do.
	Working foreman in charge of a shift, who also regularly does considerable productive work.	Do.
Shot firer (U) Shovel operator (U)	(See Blaster, U)(See Loading-machine operator, U)	Do. Loading-machine opera- tors (U).
Shuttle man (S)	transfer of timbers and other supplies to and from entrance to mine.	Other employees (S and U).
Sinker-hoist man (U)	Operates shaft or sinker-hoist machinery used in handling ore, rock, refuse, or supplies in shaft- sinking work. (See also Hoist man, S.)	Hoist men (U).
Skinner (U)Skipper (U)	(See Driver, mule, U) Responsible for loading of ore skip and for movement of ore skip from different loading stations in mine to the surface. Most skips are loaded automatically, the skipper merely supervising the loading mechanism, and when skip is loaded signals hoist man to raise it. The skipper is generally assisted by a helper who keeps ore moving down the chutes from storage bins to loading mechanism.	Drivers, mule (U). Skippers (U).
	Assists skipper by keeping open at all times the ore chutes which lead from the ore bins, and does other general work under his direction.	Other employees (S and U).
Slope repair man (U) Sorter, ore (S) Specimen boss (U)	(See Shaft repair man, U). (See Ore sorter, S). Is the first to enter stope after a round has been fired to investigate nature of ore shot down. This occupation is found in "specimen mines," i. e., mines where a precious metal is found in its pure state.	Do. Ore sorters (S and U). Other employees (S and U).
Splicer, cables (S and U) Splicer, rope (S and U)	(See Rope splicer, S and U)	Do. Do.
Splicer, rope (S and U) Stable man (S and U) Station man (U)	(See Barn man, S and U) Has charge of stations which are loading points where materials are loaded in skip or on cage to be raised to the surface.	Do. Station men (U).
Station tender (U) Stationary engineer (S)	(See Station man, U)	Do. Engineers, stationary (S).
Stationary fireman (S)Stope driller (U)	(See Fireman, stationary, S) Operates mounted drill in a room or stope of the mine; drills holes into ore body, loads holes with explosives, and sets off charge; may be assisted by helper, mucker, or another driller working level-handed with him. (See also Drilling-machine operator, contractor (U.).)	Firemen, stationary (S). Drilling-machine operators, contract (U).
Stope driller's helper (U).	(See Drilling-machine operator's helper, U)	Drilling-machine operators' helpers (U).

Mine term	Definition	*Classified by bureau under—
Stope scraper	stones, placing it into mine cars	Muckers (U).
Supply man (U) Swamper (S)	(See Nipper, U)	Nippers (U). Topmen (S).
Tally man (U)	(See Chute checker, U)	U).
Tapper, chute (U) Teamster (S) Timber framer (S)	(See Driver, S)	Do. Drivers (S). Timber framers (S).
Timber framer's helper (S).	Assists framer in handling, cutting, and fitting mine timbers; may be considered as understudy to timber framer.	Other employees (S and U).
Timber sprinkler (U)	Uses spray gun to sprinkle timbers inside mine with	Do.
Timber trammer (S)	chemical solution to prevent fire. Pushes, by hand, a small car to convey mine props or timbers from stock pile to shaft entrance.	Do.
Timberman (U)	Places timbers and supports in stopes and entries, erects ladders, builds ore chutes and doors, and erects framework wherever needed. All under- ground work.	Timbermen (U).
Timberman's helper (U).	Assists timberman in fitting and setting timbers used as supports in passageways or other places in the mine.	Timbermen's helpers (U).
Tinsmith (S and U)	Uses hand tools to cut, shape, rivet, or solder sections of tin, sheet metal, etc., used in repair work about the mine.	Other employees (S and U).
Tipple man (U)		Do.
Tool dresser (S)	Over the raise leading to the storage bill. Operates special machine with dies of specific sizes used to sharpen drills which have previously been heated to required temperature by his helper, then quenches them in oil or water to harden and temper them; in smaller mines tools are sharpened by hand.	Tool dressers (S).
Tool dresser's helper (S)	Looks after heating of stock, and assists the tool dresser in sharpening and tempering tools drills	Other employees (S and U).
Tool sharpener (8) Tool sharpener's helper (S).	etc., working under tool dresser's supervision. (See Tool dresser, S) (See Tool-dresser's helper, S)	Tool dressers (S). Other employees (S and U).
Top lander (S) Topman (S)	(See Lander, S)	Dumpers (S). Topmen (S).
Torch man (S and U)	Uses acetylene torch to weld metal sections or parts, and to mend broken parts.	Other employees (S and U).
Track cleaner (S)	Keeps track and switches free of rock, dirt, and other refuse.	Topmen (S).
Trackman (8)	Lays and repairs surface tracks about mine yards and its railroad siding.	Other employees (S and U);
Trackman (U) Trackman's helper (S)	Lays and repairs tracks used for transportation of mine cars inside the mines.	Trackmen (U).
	(See Trackman's helper, U)	Other employees (S and U). Trackmen's helpers (U).
Trackman's helper (U)	with new ones, and does other work under his direction.	Trackmen's neipers (O).
Train dispatcher (U)	Regulates movement of ore trains on underground main-haulage tracks.	Other employees (S and U).
Trammer (U)	Pushes loaded mine cars from stopes, where motors do not enter or mules are not used, to places where they may be conveniently bauled. This work is sometimes done by the mucker. The trammer may also have to load his own tram.	Trammers (U).
Tramway operator (S)	(See Incline-railway operator, S)	Other employees (S and U).
Trimmer, roof (U) Trip rider (U)	(See Roof trimmer, U). Rides on motors and assists motormen by handling brakes, throwing switches, opening and closing republished does etc.	Roof trimmers (U). Trip riders (U).
Truck operator (8)	ventilation doors, etc. Operates motor trucks in and about yards, doing all kinds of hauling.	Truck operators (8).
Tugger man (U)	Operates hoist machinery used in handling ore, rock, refuse, or supplies underground. (See also Hoist man, S.)	Hoist men (U).

Mine term	Definition	Classified by bureau under—
Utility man (S and U)	Is fairly skilled worker who can take the place of men in any one of several occupations and carry on the work; may also make ordinary repairs requiring	Other employees (S and U).
Wall builder (U)	moderate skill and experience. Experienced mason who uses stone or brick and mortar or cement, etc., to erect stone or concrete walls in some mines where these materials are used for supports instead of timber. (See also Mason,	Do.
Washer, boilers (S)	S and Ü.) (See Boiler cleaner, S)	Other employees (S and U).
	Is stationed at mine entrance or may patrol various points about mine yard to protect mine property, and sometimes keeps a check on those who enter and come out of the mine.	Watchmen (S).
ļ	Weighs each ore-loaded mine car or other container before it is dumped, and maintains records of these weights. This serves the purpose of showing the quantity of ore mined, and affords a basis on which contract prices are paid.	Other employees (S and U).
Wheeler, ash (S) Winze driller (U)	(See Ash wheeler, S). Operates drilling machine to sink winzes, which are small experimental shafts, or passage ways from the surface to lower levels of the mine or from one level to another. Work is done in a manner similar to that done by the regular shaft driller.	Topmen (S). Drilling-machine operators, company (U).
Winze-hoist man (U)	Operates hoist machinery used in handling ore, rock, refuse, or supplies in a small underground shaft or incline. (See also Hoist man, S.)	Hoist men (U).
Working foreman (S and U).	An employee who has supervisory duties, but also regularly does considerable productive work.	Other employees (S and U).
	Open-pit mines	
Blacksmith (O P)	wagons, and general machinery; resets and fits horseshoes; dresses, hardens, and tempers tools; sharpens steel and does all general blacksmith	Blacksmiths (O P).
Blacksmith's helper (O P).	work. Uses sledge at direction of blacksmith, looks after forge fire, cuts and arranges stock, and does any work assigned to him by blacksmith.	Blacksmiths' helpers (O P).
Brakeman (O P) Carpenter (O P)	(See Trip rider, O P)	Trip riders (O P). Carpenters (O P).
Carpenter's helper (OP)	Assists carpenter in a general way and does rough unskilled carpentry work under his supervision.	Carpenters' helper.
Churn-drill operator (O P).	Operates a churn drill, the motive power being furnished by air from compressors; usually called a miner; is assisted by a helper. Drill is generally located on one of the shelves, and drills a vertical hole in the rock, into which explosives are inserted and fired to loosen rock and ore so that it may be easily loaded into cars.	Drilling-machine oper ators (O P).
Churn-drill operator's helper (O P). Craneman, steam shovel (O P).	Assists churn driller in setting up churn drill and works in a general way under his supervision. (See Shovel craneman, O P)	Drilling-machine oper ators' helpers (O P). Shovel cranemen (O P)
Dòbie man (O P) Driller, hand (O P)	(See Shot firer, O P). Uses steel drill and hammer by hand to drill holes in ore, rock, etc., into which explosives are placed for blasting. A knowledge of explosives is necessary in order properly to place holes for blasting. (See Churn-drill operator, O P).	Shot firers (O P). Drillers, hand (O P).
Drilling-churn machine operator (O P).	(See Churn-drill operator, O P)	Drilling-machine oper
Drilling-churn machine operator's helper (O P). Drilling-machine operator (O P).	(See Churn-drill operator's helper, O P)	ators' helpers (O P). Drilling-machine oper
aud (VI).	mine; sets up macnine and crilis a note from a lower level or table into side or flank of an upper level in open pit; must be familiar with drills and be able to make needed adjustments and minor repairs; is generally assisted by a helper. Explosives are inserted into the drill holes and fired, thus loosening rock and ore, so that it may be easily loaded into cars. Drills are operated by compressed air or electricity. (See also Churn-drill operator, O P.)	ators (O P).

Open-pit mines—Continued

Mine term	Definition	Classified by bureau under—
Drilling-machine operator's helper (O P).	Assists drilling-machine operator (O P) in setting up drill, and helps in a general way, working under his supervision.	Drilling-machine operators' helpers (O P).
Dump man (O P) Dumper (O P)	(See Dumper, O P) Stationed at ore bins or on refuse dump; opens car doors or latches, to dump cars, and closes latches or	Dumpers (O P). Do.
Electrician (O P)	doors after dumping. Installs and repairs electrical machinery and light and power wiring.	Electricians (O P).
Engineer, locomotive	(See Locomotive engineer, O P)	Locomotive engineers (O P).
Engineer, steam shovel (O P).	(See Shovel engineer, O P)	Shovel engineers (O P).
Engineer, stock pile (O P).	(See Stock-pile engineer, O P)	Other employees (O P).
Fireman, locomotive (O P).	(See Locomotive fireman, O P)	Locomotive fireman (O P).
Fireman, steam shovel (O P).	(See Shovel fireman, O P)	•
Gopherman (O P)	Uses pick, shovel, and drill to mine and blast ore located in pockets or other isolated parts of mine not accessible for machine drilling; places explosive as well as fires them.	Drillers, hand (O P).
Jack hammerman (O P)	Operates jack hammer with which to drill auxiliary holes into sides of the level to be mined; also drills holes into bowlders which must be broken up. These holes are later charged with explosives and fired.	Drilling-machine operators (O P).
Laborer (O P)	Does general unskilled labor on dumps or in pits; not much training required.	Laborers (O P).
Locomotive en- gineer (O P).	Operates haulage or shifting locomotives, of steam railroad type, to transport ore trains through and about open-pit mines and to and from crushers or mills.	Locomotive engineers (O P).
Locomotive fireman (O P).	Works with locomotive engineer and fires boilers to keep up steam in locomotive engines used for haul- age or shifting purposes in and about open-pit	Locomotive fire- men (O P).
Machinist (O P)	chines used in pit and operates lathes and other metal-working machines to make needed machine	Machinists (O P).
Machinist's helper (O P).	parts. Workman of some degree of skill who assists machinist in the repair and adjustment of machines, working under his direction.	Machinists' helpers (O P).
Miner (O P)	(See Drilling-machine operator, O P; see also Churn-drill operator, O P.)	Drilling-machine opera- tors (O P).
Mounted-drill operator (O P).	(See Drilling-machine operator, O P)	Do.
Mounted-drill opera- tor's helper (O P). Oiler (O P)	(See Drilling-machine operator's helper, O P) Uses oil or grease to lubricate bearings of ore cars, machinery, etc., in open-pit mines.	Drilling-machine opera- tors' helpers (O P). Oilers (O P).
Pipeman (O P)	Lays and repairs water and compressed-air pipes used in open-pit mines.	Pipemen (O P).
Pitman (O P)	Works in pit around shovels or cranes, and assists in a general way, moving up supplies, power lines, water lines, etc.; removes obstructions in path of the steam shovel; levels and blocks shovels when moved to a new place of work; and wheels coal from storage pile to steam shovel for firing boilers.	Pitmen (O P).
Pump man (O P)	Tends pumping machinery at water plant which supplies water for mine and community.	Pump men (O P).
Pumper, water (O P) Repair man (O P)	(See Pump man, O P) Makes minor repairs and adjustments to steam shovels, cranes, and other machinery and equipment which do not require the services of a machinist.	Do. Repair men (O P).
Shot firer (O P)	Blasts rock and ore after it has been drilled and charged with explosives; may set off shots, by using a battery or an electric firing machine; sometimes called a "dobie man"	Shot fires (O P).
Shovel craneman (O P)	Operates, by means of levers, the loading mechanism of a steam or electric shovel.	Shovel cranemen (O P)
Shovel engineer (O P)	Has charge of steam or electric shovel, keeps its ma- chinery in working condition, and supervises moving of shovel from one place to another in the	Shovel engineers (O P).
Shovel fireman (O P)	pit. Fires boiler which furnishes power for operating steam shovel.	Shovel firemen (O P).

Open-pit mines—Continued

Mine term	Definition	Classified by bureau under—
Shovel laborer (O P)	Does unskilled work such as handling timbers and materials used in moving steam shovel from one location to another.	Laborers (O P).
Steam-shovel craneman (O P).	(See Shovel craneman, O P)	Shovel craneman (O P).
Steam-shovel engineer (O P).	(See Shovel engineer, O P)	Shovel engineers (O P).
Steam-shovel fireman	(See Shovel fireman, O P)	Shovel firemen (O P).
Steam-shovel laborer	(See Shovel laborer, O P)	Laborers (O P).
Stock-pile en-	Operates crane used for putting ore on a stock or storage pile.	Other employees (O P).
gineer (O P). Switchman (O P)	Operates and throws switches of railroad tracks where there are no automatically operated switches.	Switchmen (O P).
Track-moving machine operator (O P).	Operates machine which lays and moves tracks in the pit, mechanically, by picking up required por- tion of track and moving it to the desired position without having to uncouple it; also tightens loose ties and restores proper gauge to tracks after being moved.	Other employees (O P).
Trackman (O P)	Lays, moves, and repairs tracks in the pit or on the dump. In some mines the laying and moving of tracks is now done mechanically. (See also Trackmoving machine operator, O.P.)	Trackmen (O P).
Trip rider (O P)	Ride ore trains and locomotives and assists motormen by handling brakes, throwing switches, etc.	Trip riders (O P).
Truck operator (O P)	Operates motor truck in and about open-pit mine, doing all kinds of hauling.	Truck operators (O P).
	Performs duties of caretaker and does general patrol work, watching steam shovels, etc.; also may keep up fires under boilers when temporarily not in use or at night.	Watchmen (O P).
Water-plant operator (O P).	(See Pump man, O P)	Pump men (O P).
