## LETTER OF TRANSMITTAL

**UNITED STATES DEPARTMENT OF LABOR,  
BUREAU OF LABOR STATISTICS,**  
*Washington, D. C., March 9, 1943.*

**The SECRETARY OF LABOR:**

I have the honor to transmit herewith the second issue of the semiannual bulletins on wholesale prices. It shows individual commodity prices and other detailed statistics relating to prices for the 6 months ending December 1942, and for the year 1942.

A mimeographed report on wholesale prices giving monthly index numbers by groups and subgroups of commodities and average wholesale prices and index numbers of individual commodities will continue to be issued each month. To those who are not now receiving and have need for the monthly report, it will be made available upon request.

The data are collected and the reports are prepared by the Division of Wholesale Prices of the Bureau of Labor Statistics, under the direction of Jesse M. Cutts, Chief.

*A. F. HINRICHs, Acting Commissioner.*

**Hon. FRANCES PERKINS,  
Secretary of Labor.**

WHOLESALE PRICES, JULY THROUGH DECEMBER  
AND YEAR 1942

*Summary*

THE upward movement in commodity prices in primary markets<sup>1</sup> continued through the third year of the second World War. Although the General Maximum Price Regulation, issued late in April 1942, brought under control most of the processed commodities which were not already under price ceilings, a large part of the raw agricultural commodities were not controlled, and the Bureau of Labor Statistics index of prices for nearly 900 series rose 13 percent during 1942 as compared to a gain of 11 percent in 1941. The all-commodity index for 1942 reached a 17-year peak—98.8 percent of the 1926 average.

Except for a slight reaction in June, the index advanced steadily throughout the year, from a low of 96.0 percent of the 1926 average in January to a high of 101.0 percent in December. From January to April, immediately preceding the General Maximum Price Regulation, the all-commodity index rose 2.8 percent, while during the last 8 months—May to December—it rose 2.2 percent. This slowing down was the result of price control over industrial commodities. During the first 4 months of 1942, the index of "all commodities other than farm products and foods" advanced a little more than 1 percent, while the increase amounted to only 0.2 percent from May to December. Market prices for farm products, on the contrary, advanced 3.7 percent from January to April and 9 percent from May to December.

From 1941 to 1942 the farm products group index advanced 28.5 percent, led by increases of 28 percent for livestock and poultry and nearly 21 percent for grains, together with substantially higher prices for cotton and for fresh fruits and vegetables. Average wholesale prices for foods were 20 percent higher than in the preceding year, largely because of increases of 41 percent for fruits and vegetables, about 24 percent for meats, 14 percent for dairy products, 10 percent for cereal products, and higher prices for other important foodstuffs, including eggs and lard.

Of the industrial commodity groups, textile products and chemicals and allied products showed the sharpest increases in 1942—over 14 percent each. Higher prices for cotton goods, woolen and worsted goods, and for clothing largely accounted for the rise in the textile products group index. Marked advances in prices for fats and oils, together with higher quotations for certain imported drugs, and in-

creased taxes on alcohol were mainly responsible for the advance in the chemicals and allied products group index.

The increases for the remaining six groups during the year period were under 10 percent. They ranged from 3 percent for fuel and lighting materials to a little more than 9 percent for miscellaneous commodities.

Average prices for raw materials increased more than 20 percent last year mainly because of the marked rise in agricultural commodity prices. Manufactured commodities advanced about 11 percent, while prices for semimanufactured articles increased over 6 percent.

By the end of 1942 the sharp rise which began shortly after the outbreak of war brought prices of nearly all types of commodities up substantially over their relatively low levels of the summer of 1939. In addition to an increase of over 73 percent for farm products after August 1939, foods advanced 48 percent in this period of a little more than 3 years. Textile products were nearly 43 percent higher, largely because of broad price advances in cotton goods; and chemicals and allied products increased 31 percent, led by a rise of nearly 159 percent for industrial fats and oils. Other group increases from August 1939 to the average for the year 1942 were 27 percent for hides and leather products, 23 percent for building materials, 22 percent for miscellaneous commodities, 19 percent for housefurnishing goods, 11 percent for metals and metal products, and 8 percent for fuel and lighting materials.

Table 1 presents percentage comparisons of the year 1942 index numbers of wholesale prices, by groups and subgroups of commodities, with the year 1941 and with August 1939, together with the index numbers for these periods.

### Wholesale Prices in December 1942

Following the general price picture of 1942, further broad gains in prices for domestic agricultural products dominated the commodity markets in December. Pronounced increases in grains contributed in a large measure to an advance of 0.7 percent in the Bureau of Labor Statistics general index of commodity prices in primary markets during the month. The all-commodity index rose to 101.0 percent of the

1926 average, the highest level reached in nearly 17 years. In the past 12 months, average prices for these commodities advanced nearly 8 percent and were, in December 1942, approximately 35 percent higher than in August 1939.

During the month prices for farm products in primary markets rose 3 percent and foods advanced 0.8 percent. Continued advances in grains were reflected in higher prices for cattle feed, with the result that the miscellaneous commodities group index rose 0.4 percent. Textile products and fuel and lighting materials were 0.1 percent higher, while building materials declined slightly. Few changes occurred in prices for hides and leather products, metals and metal products, chemicals and allied products, and housefurnishing goods. The indexes for these groups remained unchanged at the November level. Higher prices for agricultural commodities were largely responsible for an increase of 2.1 percent in the index for raw materials, which in December was 15 percent above the corresponding month of 1941. Average prices for manufactured commodities increased fractionally during the month, while semimanufactured commodities declined slightly.

Prices for most industrial commodities have fluctuated within a very narrow range since December 1941, under the influence of Government regulation. Agricultural commodities, on the other hand, advanced sharply. Farm products in December were 20 percent higher than in December 1941, with livestock and poultry up 27 percent. "Other farm products," including cotton and certain fresh fruits and vegetables, were 18 percent higher; and grains advanced nearly 11 percent. Average wholesale prices for foods were 15 percent higher than in December 1941, mostly because of increases of 41 percent for fresh fruits and vegetables, 19 percent for meats, and 17 percent for dairy products.

Aside from an increase of 9 percent in the chemicals and allied products group, caused mainly by increased taxes on alcohol, there were no outstanding changes in prices for industrial commodities during 1942.

The increase in farm-product prices in December was led by an advance of 8.5 percent for grains. Quotations for rye were up 19 percent; corn, nearly 12 percent; wheat, over 7 percent; oats, 6 percent; and barley, almost 2 percent. In addition, livestock and poultry increased 2.1 percent with sharp advances reported in prices for sheep and live poultry. Hogs and cows also advanced, while steers averaged lower than in November. Other important farm commodities which increased during the month were cotton, eggs, milk, hops, peanuts, tobacco, hay, seeds, oranges, apples, onions, and sweetpotatoes.

A 2.3-percent increase in prices for fruits and vegetables, together with an advance of 1.4 percent in prices for meats, largely accounted for the rise of 0.8 percent in average prices for foods during December. Important food items which averaged higher were butter, flour, corn meal, oatmeal, most meats, and peanut butter. Increased scaling weight for bread forced the average price of bread down in some markets, although no changes were reported in prices on the baked loaf.

Increased prices were quoted for raw jute, natural gasoline in the Oklahoma fields, and for destination prices on coal, largely because of the transportation tax of 4 cents a ton.

The transportation tax also affected prices for some metals where ceilings were not imposed on a delivered basis. Lower prices were reported for heating equipment.

Sales realization prices on lumber varied during December, with higher prices for certain types of Ponderosa pine, redwood, red gum, and maple flooring. Oak declined slightly. Higher prices were reported for linseed oil, while turpentine and rosin declined.

In the chemicals and allied products group, fertilizer materials rose 0.5 percent and quotations were also higher for oleic acid, as a result of upward revision in Office of Price Administration "ceilings." Butyl alcohol and ergot, on the other hand, declined sharply.

Substantial advances in prices for bran, middlings, and cottonseed and linseed meal resulted in an increase of 7.6 percent in the cattle feed index during December. Boxboard and certain soap products also advanced.

Percentage comparisons of the December 1942 level of wholesale prices with December 1941, November 1942, and August 1939, with corresponding index numbers, are given in table 3.

## Weekly Fluctuations

Weekly indexes of wholesale prices by groups of commodities during 1942 are shown by the index numbers in table 7. These indexes are not averaged to obtain a figure for the month but are computed only to indicate the fluctuations from week to week.

**TABLE 7.—Weekly Index Numbers of Wholesale Commodity Prices by Groups**

### *Daily Index of 28 Basic Commodities*

Index numbers of 28 basic commodities, with average prices for August 1939 used as the base, are presented in table 8. Most of the 28 commodities used in the daily index are basic raw materials and many of them are quoted on organized exchanges or "futures" markets. The new index is, therefore, much more sensitive to changes in market conditions than is the Bureau's regular index because the latter includes a large proportion of fabricated and semifabricated goods whose prices usually fluctuate less frequently and within narrower margins. Of the 28 items included in the new index, 18 were selected because of their importance in world trade; 11 of these 18 are imported in large quantities.

The indexes are calculated for the total 28 basic commodities and 5 important subgroups. They are based on the August 1939 average as 100, and are unweighted geometric means of the individual price ratios of daily quotations.

Following is a list of the commodities included in the combined index and in each subgroup:

#### LIST OF 28 BASIC COMMODITIES

### *Index Numbers of Strategic and Critical Materials*

In table 9 index numbers, by weeks for 1942, are presented for commodities classified in January 1940 by the Army and Navy Munitions Board as strategic and critical for war purposes. A list of the commodities included in the index, together with the weekly index numbers back to 1939, were given on pages 53 to 55 of Wholesale Prices, June 1941 (Serial No. R. 1349).

### *Wholesale Prices and Index Numbers of Individual Commodities, July to December 1942*

Average wholesale prices and index numbers of the individual series included in the Bureau's weighted index for the period, July to December 1942, and the average for the year 1942 will be found in table 12.

Beginning with the July 1935 issue of Wholesale Prices (Serial No. R. 278), the monthly publication of data for individual items in this report was discontinued. The information is available monthly, however, in mimeographed reports and will be furnished upon request.

In the June and December issues of Wholesale Prices since December 1935, there have been published average prices and index numbers for individual series for the preceding 6-month period.
