BUREAU OF LABOR STATISTICS

Ewan Clague, Commissioner

For sale by the Superintendent of Documents, U. S. Government Printing Office
Washington 25, D. C. Price 30 cents

Letter of Transmittal

UNITED STATES DEPARTMENT OF LABOR,
BUREAU OF LABOR STATISTICS,
Washington 25, D. C., July 21, 1949.

The SECRETARY OF LABOR:

I have the honor to transmit herewith a report on primary market prices during the year 1947. This bulletin presents a record of each of the primary market price indexes published in 1947. The data shown in this bulletin are first released in mimeographed reports giving preliminary information. These reports are available on request. A summary of primary market price movements in 1947 was published in the March 1948 issue of the Monthly Labor Review.

This bulletin was prepared in the Prices and Cost of Living Division. The tables showing price data were prepared in the Statistical Services Section under the direction of Barbara M. Frye.

EWAN CLAGUE, Commissioner.

Hon. MAURICE J. TOBIN,
Secretary of Labor.

Wholesale Prices, 1947

Description and Use of Primary Market Price Data

The wholesale price data of the Bureau of Labor Statistics for the most part represent prices at primary market levels—that is, at the levels of the first commercial transaction for each commodity. Most of the quotations are the selling prices of manufacturers or producers, or prices on organized exchanges, and are not prices charged by wholesalers to retailers. Prices are for commodities—tangible goods (including gas and electricity). Prices of services, real estate, transportation, and securities are not included. The word “wholesale” used in connection with this index refers to sales in large lots.

Wherever feasible, prices are obtained f. o. b. point of production or sale unless an industry normally sells on another basis, e. g., delivered. For farm products, some foods, and certain industrial raw materials, prices are those quoted in organized commodity markets. The price series maintained by the Bureau of Labor Statistics are defined in terms of specifications which include a detailed description of the commodity at stated terms of trade and to a specific type of purchaser. Many of the series represent 1 quotation from 1 seller, since for many articles prices of major producers tend to move together. For some commodities, however, quotations from as many as 50 sellers are averaged to give a representative price.

For most fabricated goods, prices are obtained directly from sellers. For other commodities

which have recognized markets, quotations are taken from trade journals which are accepted by the trade as authoritative sources of prices.

The primary market price data collected by the Bureau are used in making a number of price indexes, of which the most important is the wholesale price index. This index is based on prices of slightly less than 900 major commodities combined into 49 subgroups, 10 major groups, and 5 economic groups. All types of commodities, from raw materials to finished industrial and consumer goods, are represented. Indexes are published monthly for all groups and subgroups but weekly only for the 10 major groups and 5 economic groups. Because of differences in methods of calculation during earlier periods, the monthly and weekly¹ indexes are not directly comparable as to level. The weekly index, however, serves as an indicator of the direction and magnitude of current price changes.

The Wholesale Price Index

The wholesale price index is calculated as a fixed base weighted aggregate using prices in 1926 as 100. Most of the quantity weighting factors for the index are based on market sales during the years 1929 and 1931. The exceptions are: agricultural commodities—the average of sales in the years 1929, 1930, and 1931; tires and tubes (revised) (see Appendix A)—the number of tires and tubes shipped for replacement use in the year 1946; motor vehicles—1941 new car registrations.

Policy on Revisions and Corrections of Index

After the end of World War II, the Bureau of Labor Statistics undertook a complete reappraisal of the wholesale price index to determine the adequacy of its present over-all structure and of the coverage of the groups and subgroups in the light of postwar patterns of production and distribution. As a result, it was decided that a full-

scale revision of the index would be made as soon as possible. Plans for the general revision were initiated to introduce weights based on the postwar

¹ The Bureau of Labor Statistics has developed a new weekly index which was released for the first time on November 19, 1948, and replaced the weekly index referred to above. It is designed as a counterpart of the monthly comprehensive index, and eliminates the discrepancies that existed between the level of the monthly and the old weekly index.

economy, to improve sampling and weighting techniques, to add certain new commodities, to make certain changes in the basic classification of commodities (particularly in the special groupings), and to reexamine the base period (currently, the average for the year 1926 is the base). These plans cannot be fully developed and carried out, however, until data from the 1947 Census of Manufactures become available.

Previous major revisions were made chiefly to expand the reporting and commodity coverage and to change weighting patterns to allow for shifts in the composition of the economy. The last general revision was made in 1931, when 234 commodities were added. Several major revisions involved changes in the method of calculation. The present method of computation, known as the "fixed-base weighted aggregative method," was inaugurated in 1937, and replaced the "chain-type method" which had been in use from 1914. Despite these major revisions, the continuity of the index has been preserved as nearly as possible down through the years, and every effort will be made to preserve it in the future.

At different times during the period 1937 to 1941, a number of new commodities were added to the index to improve the coverage of certain existing subgroups and to make possible the creation of several new subgroups. After World War II started, however, this activity was virtually suspended, partly because production of certain manufactured products for civilian use was discontinued, and also because it was necessary for the Bureau to devote all its facilities to special wartime projects.

Revision Policy

Work has progressed during the past 2 years on the review and revision of samples of commodities and of reporters in the various subgroups. This work will be used in the forthcoming general revision of the entire index. Major revisions in coverage (including the redistribution of weights within subgroups) were completed during 1947² for three subgroups—motor vehicles, tires and

² A revised series for agricultural machinery and equipment was introduced into the index in February 1948, and the subgroup was revised retroactively to January 1946. The revision of the agricultural machinery subgroup is described in a special appendix attached to the regular report on the wholesale price index for May 1948. The revised series may be obtained upon request.

tubes, and furniture. As each subgroup revision was completed, the revised sample was incorporated into the calculation of the index. The first months in which the subgroup revisions were introduced into the pertinent group and the all-commodity indexes were as follows: October 1946, the motor vehicles subgroup into the metals and metal products group; June 1947, the tires and tubes subgroup into the miscellaneous group; November 1947, the furniture subgroup into the housefurnishings goods group.

The all-commodity and the affected group indexes were not revised retroactively. However, the revised motor vehicle subgroup was computed for all months starting with January 1942, tires and tubes from February 1939 and furniture from January 1943.

The revisions of the housefurnishings and tires and tubes subgroups are described in appendixes A and B on pages 64 and 65. The revision of the motor vehicles subgroup is described in Wholesale Prices, 1946 (Bulletin 920). The letter "r" is placed by each revised subgroup in all current publications to call attention to the fact that the indexes shown are based on revised data.

The revised subgroup indexes were derived and introduced into the group indexes by a process known as "linking," in which the index numbers based on the revised subgroup sample were made mathematically identical at one point in time with the index numbers based on the old subgroups. This involved the following steps:

1. A "link month" was selected for each subgroup. This was a month considered appropriate for equalizing the index for the revised subgroup with the original index computed from the old sample.

2. Aggregates were computed for both the old and new subgroup samples. (Aggregates are the sum of the products of the price of each individual commodity multiplied by its assigned weight.)

3. A constant was obtained by dividing the old aggregate by the new aggregate.

4. This constant was applied to each of the individual weights for the new sample. By using these adjusted weights in the computation of the subgroup aggregate for the new sample, the resulting aggregate automatically equaled the subgroup aggregate computed from the old sample. Since each weight in the new sample was multi-

plied by the same constant factor, the relationship among the items in the new sample was not changed. Also, the relationship of the new sample to all other groups and subgroups in the index was maintained unchanged from the relationship which existed between the old sample and the other groups and subgroups. Therefore in the "link month" it made no difference whether the old subgroup sample or the adjusted new subgroup was used in computing the group and combination indexes.

5. The adjusted weights for the new sample were then used for each month covered by the revision, in order to compute the revised subgroup indexes. These adjusted weights will also be used in future computations of the subgroup and other indexes.

In the month when a revised subgroup is introduced into the calculation (usually some time later than the "link month"), the levels of the all-commodity and affected group indexes may be quite different from what they would have been had the unrevised subgroup sample been used. If the introduction of a revised subgroup results in a significant difference in the group index and in the all-commodity index for the month in which it occurs, the Bureau will indicate in a footnote, whenever indexes for that month are published, what the indexes would have been if the original samples had been used.

As revisions of other subgroups are completed, the bureau will continue to follow the policy of currently introducing them into the all-commodity and the respective group indexes. Retroactive revisions will not be made in the all-commodity and group indexes except possibly for the 2 months for which preliminary indexes have been issued. This policy is being followed in order to avoid repeated revisions of previously published group and all-commodity indexes as additional subgroup revisions are completed.

The policy of publishing revised subgroup indexes for the entire period covered by the revision will be continued for other subgroups as they are revised. Special reports will be issued for each revised subgroup, presenting the revised indexes and describing in full the nature of the revision. All subsequent revisions appearing in regular publications will be noted with an "r" as previously explained for the subgroups already revised.

When the general revision of the wholesale price index is made—possibly in 1950—the all-commodities index and all group indexes will be revised retroactively at one time for the entire period covered by the over-all revision. The public will be advised well in advance as to when this full-scale revision of the index will be put into effect, and the reports presenting the revised indexes will describe in detail the nature of the general revision and its relationship to the present wholesale price index.

Correction Policy

In the current calculation of the wholesale price index, the Bureau makes every effort to use the best possible price information for the commodities included. It is necessary in certain instances, however, to correct previously published index numbers because of late reports, incorrect reports, or other errors in prices previously used. For this reason, the Bureau currently issues the wholesale price index on a preliminary basis for 2 months. Corrections received during the first month after the first preliminary publication of the index for a given month are incorporated in the second preliminary publication, and the index numbers that have been corrected are noted with a "c". In the third publication of the index for a given month, any additional corrections received during the past month are also made in the index, and the letter "c" is used to indicate those index numbers that have been corrected since the previous publication.

When the wholesale price index for a given month has been published for the third successive time, the index is no longer considered preliminary and is not ordinarily subject to correction. However, in the middle of each year, corrected index numbers will be calculated for each month of the preceding calendar year (and for the average of that year), which will take account of all corrections that may have accumulated since the third publication of the index for each month. These will be the final corrections in the index numbers for the months in the calendar year covered, and the corrected indexes will be published in the annual bulletin on wholesale prices for that year. Changes in index numbers issued in the annual bulletins will be made only as the result of a major revision, in accordance with the revision policy described above.

Purchasing Power of the Dollar

The purchasing power of the dollar is a concept in common use. It must be defined in terms of the commodities and services purchased, and clearly related to a stated base. It may be measured for a single commodity or for a large number of commodities taken together. As prices increase, the purchasing power of the dollar decreases; and vice versa.

Any of the indexes in this bulletin may be used to measure changes in the purchasing power of the dollar in terms of the commodities included in each index. The computation of

changes in the purchasing power of the dollar based on any index consists of dividing the index number for the period selected as the basis for comparison by the index number for each of the other periods which are being compared with this base period. For example, the comprehensive wholesale price index was 142.0 in January 1947 and 163.2 in December 1947 (1926=100). Based on this index, the purchasing power of the January 1947

dollar was \$0.87 in December 1947 ($\frac{142.0}{163.2} = 0.87$).

Index Numbers by Group of Commodities, Monthly and Weekly

Table 1 of this volume shows monthly index numbers by group and subgroup of commodities for 1947, and table 2 shows annual index numbers by group and subgroup for selected years. Weekly index numbers of primary market prices by commodity groups and by economic groups are presented in table 3. The commodities included in the economic groups "Raw materials," "Semimanufactured articles," and "Manufactured products" are:

Raw Materials.—All farm products, bananas, cocoa beans, coffee, pepper, hides and skins, rayon staple, raw silk, hemp, jute, sisal, coal, crude petroleum, iron ore, scrap steel, gravel, sand, crushed stone, crude sulfur, phosphate rock, nitrate of

soda, tankage, copra, crude rubber.

Semimanufactured Articles.—Oleo oil, raw sugar, vegetable oil, leather, print cloth, tire fabric, cotton yarn, rayon yarn, silk yarn, worsted yarn, artificial leather, jute yarn, bar iron, steel bars, steel billets, malleable castings, pig iron, wire rods, skelp, steel strips, aluminum, antimony, ingot copper, pig lead, nickel, quicksilver, brass rods, copper rods, silver, pig tin, pig zinc, barytes, butyl acetate, carbon black, iron oxide black, Prussian blue, chrome green, chrome yellow, ethyl acetate, copal gum, China wood oil, linseed oil, rosin, turpentine, whiting, plaster, tar, coal tar, camphor, fish scrap, oils, inedible tallow, wood pulp, paraffin wax.

Manufactured Products.—All other commodities.

INDEXES OF COMMODITY GROUPS

^{*}Revised series begins this month.

¹ Unrevised subgroup indexes shown for all months presented in this table.

Revised series published in 1948 is available on request.

The furniture revision was introduced into the housefurnishing group in this month. If this revision had not been made, the index for this group would have been 133.2 for November 1947.

Unrevised series through October 1947, revised series November and December 1947. See Appendix B for description of the furniture subgroup re-

vision. Revised index numbers since January 1943 are shown in table 10.

The tires and tubes revision was introduced into the miscellaneous group in this month. If the revision had not been made, the index for this group would have been 116.6 for June 1947.

Unrevised series through May 1947; revised series June through December 1947. See Appendix A for description of the tires and tubes subgroup revision. Revised index numbers since January 1939 are shown in table 9.

TABLE 2.—Annual index numbers of primary market prices, by group and subgroup of commodities
[1926=100]

Group and subgroup	1947	1946	1945	1944	1943	1942	1941	1939	1929
All commodities	152.1	121.1	105.8	104.0	103.1	98.8	87.3	77.1	95.3
Farm products	181.2	148.9	128.2	123.3	122.6	105.9	82.4	65.3	104.9
Grains	210.8	155.6	129.7	126.9	116.3	92.9	76.9	58.6	97.4
Livestock and poultry	210.4	155.6	132.5	124.6	128.7	117.8	91.6	72.2	106.1
Other farm products	154.6	142.0	124.3	120.7	119.8	101.6	77.8	62.6	106.6
Foods	168.7	130.7	106.2	104.9	106.6	99.6	82.7	70.4	99.9
Dairy products	161.0	145.8	111.1	110.5	111.1	100.0	87.3	69.5	105.6
Cereal products	155.8	114.5	95.2	94.8	93.7	89.2	80.7	74.8	88.0
Fruits and vegetables	136.8	129.9	122.8	121.3	121.3	95.5	67.5	62.0	97.8
Meats	213.2	145.9	107.8	106.1	110.3	111.8	90.4	77.2	109.1
Other foods	148.1	111.0	96.6	95.0	97.3	92.3	78.9	64.1	93.9
Hides and leather products	182.4	137.2	118.1	116.7	117.5	117.7	108.3	95.6	109.1
Shoes	177.4	141.7	126.4	126.3	126.4	125.7	113.6	102.6	106.3
Hides and skins	209.8	147.4	117.0	109.9	114.7	117.6	108.4	84.6	112.7
Leather	190.9	128.6	102.2	101.3	101.3	101.3	97.9	87.5	113.2
Other leather products	139.3	117.0	115.2	115.2	114.9	104.7	97.1	106.4	
Textile products	141.7	116.3	100.1	98.4	97.4	96.9	84.8	69.7	90.4
Clothing	135.6	119.3	107.4	107.1	107.0	106.9	92.6	82.0	90.0
Cotton goods	200.6	150.5	121.4	115.7	112.7	112.4	94.2	67.2	98.8

¹ The Bureau of Labor Statistics initiated a new weekly wholesale price index on Nov. 19, 1948, and discontinued the above weekly index with the release of Nov. 18, 1948. A statement describing the new index and comparing it with the above weekly index, was presented in the September 1948 issue of the Monthly Labor Review.

Special Primary Market Price Indexes

Daily Index of Spot Market Prices

An index based on spot market prices of 28 commodities is computed daily and is available each weekday except Saturday at 6 p. m. by telephone or by collect telegram. A weekly summary of these indexes and the actual commodity prices is issued each Friday. These daily indexes for the year 1947 are shown in table 4. A list of commodities included and the method used in calculating the index are given on pages

16 and 17 of Wholesale Prices, 1946 (Bulletin No. 920).

Special indexes of primary market prices of soap, paper and pulp, and paint and paint materials are computed monthly. These index numbers, from 1926 through 1946, together with a description of each index, were presented in Wholesale Prices, 1946 (Bulletin No. 920). Comparable data for the year 1947 are presented in table 8 (pp. 62, 60, and 44).

TABLE 4.—*Daily indexes of spot market prices of 28 commodities*

Indexes of Specified Commodities

Special indexes of manufacturers' prices of standard machine tools, construction machinery, and general and auxiliary machinery and equipment were discontinued early in 1947. These indexes for the few months of 1947 for which data are available are shown in tables 5, 6, and 7.

Comparable data have been published in previous wholesale price publications, beginning with Wholesale Prices, June 1941 (Serial No. R 1349) for the index of prices of machine tools; Wholesale Prices, 1944 (Bulletin No. 870) for the index of prices of construction machinery; and Wholesale Prices, 1945 (Bulletin No. 877) for the index of prices of auxiliary machinery and equipment.

TABLE 5.—*Index numbers of manufacturers' prices of standard machine tools*

[August 1939=100]

GENERAL INDEX BY YEAR AND MONTH, 1939-47

Month	1947	1946	1945	1944	1943	1942	1941	1940	1939
January	137	118	118	118	118	118	114	106	100

Primary Market Prices, Index Numbers, and Relative Importance of Individual Commodities

Table 8 shows monthly and annual average prices, index numbers, and the relative importance for the year 1947 for commodities included in the wholesale price index.

The prices shown are averages of quotations for one day each week from two or more sellers of the commodity. Prices are "net" after the deduction of applicable discounts.

"Relative importance for the year 1947" is the value aggregate for each commodity expressed as a percentage of the value aggregate of all commodities in the index in 1947. The relative importance of each commodity in the index changes as the rate of price change varies among commodities, since it is based on the product of the quantity-weighting factor and the current price. In 1947, raw materials had a relative importance of 32.26 percent of all commodities, semimanufactured articles 8.17 percent, and manufactured products 59.57 percent.

Certain commodities are included in more than 1 commodity group. Prices of 23 commodities are

included in both the farm products and foods indexes, and prices of 23 other commodities are included in both the metals and metal products and building materials groups. The duplicated commodities are listed in table 8 under the foods and building materials groups, with reference to where price data are shown. These 46 commodities are counted only once in the all-commodities index. The relative-importance figures shown for the farm products and metals and metal products groups and subgroups include these duplicated commodities. The relative-importance figures for the foods and building materials groups and subgroups do not include the duplicated commodities.

Changes in specifications are indicated by changes in the digit following the decimal in the code number used to designate the commodity. Such changes are treated so that the individual commodity indexes, but not the prices, for the new specification generally are comparable with those for the old specification.

TABLE 8.—*Primary market prices*

Code No.	Commodity—Description and terms of sale	Unit
FARM PRODUCTS		
1.1	Grains:	
3	Barley, No. 2 malting, Minneapolis.....	Bushels.....
4.1	Corn, No. 3 yellow, Chicago.....	do.....
5.1	Oats, No. 3 white, Minneapolis.....	do.....
7	Rye, No. 2, Minneapolis.....	do.....
9-1 ²	Wheat:	
10	No. 2 hard winter, Kansas City.....	do.....
11	No. 1 dark northern spring, Minneapolis.....	do.....
12	No. 1 hard white, Portland, Oreg.....	do.....
13	No. 2 soft red winter, St. Louis.....	do.....

⁸ Revised subgroup indexes shown for all months presented in this table.⁹ Revised series begins with this month.¹ No base price.² No quotation.³ New series.⁴ Reintroduction of earlier specifications (during the war period, prices on a substitute series of different specifications were used to represent price movements for this commodity. The substitute series has now been replaced by the series formerly used).⁵ 1935-39=100.⁶ Less than 0.005 percent.⁷ The indexes for the furniture series are based on prices for a number of qualities. Materials, finishes and sizes, or, in the case of sewing machines, different levels of distribution. Average prices for combinations of such different specifications are not available. The indexes for each series are so computed that changes in specifications do not affect the level of the indexes.⁸ Description gives thread count and weight of the grey cloth and finished width.⁹ The furniture revision was introduced into the housefurnishing goods group in this month. If this revision had not been made, the index for this group would have been 133.2 for November 1947.¹⁰ Unrevised series through October 1947. Revised series November and December 1947. See Appendix B for description of the furniture subgroup revision. Revised index numbers are shown in table 10.¹¹ The tires and tubes revision was introduced into the miscellaneous group in this month. If this revision had not been made, the index for this group would have been 161.6 for June 1947.¹² Unrevised series through May 1947. Revised series June through December 1947. See Appendix A for description of the tires and tubes subgroup revision. Revised index numbers are shown in table 9.¹³ 1939=100.¹⁴ Unrevised subgroup indexes shown for all months presented in this table. Revised series published in 1948 is available on request.

APPENDIX A

Revision of Tires and Tubes Subgroup

During the war when the production of tires and tubes for civilian use was curtailed and the prices were controlled by the Government, the Bureau carried forward the 1941 prices of highway tires in its wholesale price index. When postwar shipments of tires for civilian use approximated those before the war, the index of tires and tubes was revised to include off-highway as well as highway tires. Since the new product and company sample included a larger number of producers and additional types of tires (tractor) and excluded the less popular sizes, the revised series was computed back to January 1939.

Former Tire and Tube Price Index

Prices for passenger car tires were first introduced into the wholesale price index in the 1926-27 general revision. At that time the prices were carried back to 1913 and a monthly index for tires computed from that date. This index for tires was based on unweighted average prices of all sizes of three types of passenger car tires produced by three large manufacturers. In computing the subgroup index for tires, the prices as reported by the three manufacturers were weighted in accordance with the relative importance of each type of tire produced for sale.

Truck and bus tires and tubes as well as passenger car tubes were introduced into the index in the 1930-31 revision. Prices were carried back to 1926 and the index recomputed to include the new series from that date.

Revised Tire and Tube Price Index

The revised tire and tube price index is com-

posed of three composite price series for tires and three for tubes—passenger car, truck and bus, and tractor. The company sample includes the four largest producers. The prices represent the manufacturer's net price to large distributors on their most popular size of first-grade passenger car, truck and bus, and tractor tire and tube.

An unweighted composite average price is computed for each type of tire and tube reported on by the four companies. In computing the index, this average price is weighted according to the relative importance of each type of tire and tube to the total number of tires and tubes shipped for replacement use in the year 1946. Prices on the new basis were obtained back to January 1939 and the revised index computed. In addition to the subgroup index for tires and tubes with 1926 as the base period, a further break-down into separate indexes for tires and tubes was calculated using 1939 as the base.

The cooperation of the reporters was obtained with the understanding that index numbers only would be published. Therefore, the primary market prices for tires and tubes are not available for distribution.

The revised index numbers for tires and tubes combined (1926=100) and for tires and for tubes separately (1939=100) are shown in table 9 for the period January 1939 through December 1947. The published indexes for the miscellaneous group, for the special groupings (such as "all commodities except farm products," etc.), and for all commodities combined, do not reflect the effects of this revision in the tires and tubes subgroup prior to June 1947.

Revision of Furniture Subgroup

Bedding

During 1947, the Bureau reviewed the sample of reporting manufacturers and the list of articles included in the bedding component of the wholesale price index. The revisions which resulted from this review were relatively minor. One large manufacturer was added to the sample of reporters and three small manufacturers excluded. Two articles, for which production had increased substantially since the last revision in 1941, were added to the list. These two articles were inner-spring mattresses (code 717-1) and sofa beds (code 717-2). Prices for the new articles are included in the wholesale price indexes shown in table 10 from January 1935 to December 1947.

Wood Household Furniture

From 1926 through December 1942, price reports from a small sample of manufacturers located in three production centers were used in the computation of the wood household furniture indexes of the Bureau's wholesale price index. As World War II progressed and manufacturers restricted production to fewer patterns, it became increasingly apparent that the number of price reports the Bureau received was too limited to measure accurately the price movement of individual articles of wood household furniture. The volume was, however, satisfactory for measuring changes for all articles combined. Accordingly, the Bureau discontinued publishing the

information for the individual items of furniture from various dates in 1943 through December 1945, but continued to use the price reports from the small number of manufacturers to calculate the indexes for the furniture subgroup and the housefurnishing goods group.

Between spring of 1943 and summer of 1945, the Bureau obtained price reports from additional furniture manufacturers, increasing the sample to about 50 manufacturers representing 10 major production areas and some scattered localities. These new price reports were incorporated into the index in January 1946 as an "interim" revision. When the interim revision was made, no indexes for earlier years were recomputed. The price reports from new reporters were linked to the December 1945 prices. Thus, the changes in prices put into effect by the new reporters—resulting from the 5 percent industry-wide increase granted to wood household furniture manufacturers under OPA Order No. 1052, in December 1943, and the individual company adjustments granted by OPA prior to January 1946—were not reflected in the "interim" indexes.

In the January 1948 revision the following changes were made in the list of articles included in the wood household furniture component:

1. Deletion of bedroom benches and chairs (codes 714 and 715).

2. Addition of bedroom chests (code 714-1).

3. Separation of the dresser and vanity series (code 716) into two series (716-1 and 716-2).

4. Deletion of dining room servers, and the separation of the buffet and china cabinet series (code 719) into two series (719-1 and 719-2).

5. Deletion of kitchen chairs and kitchen tables (codes 723 and 725).

6. Revision of the kitchen cabinet series (code 722) to limit the series to cabinet bases.

7. Addition of dinette sets (code 721-1).

A more comprehensive revision of the wood household furniture subgroup was completed in January 1948. The indexes for all months and years after December 1942 were recomputed, incorporating all reports from the larger sample of manufacturers. This recomputation enabled the Bureau to reflect price changes—put into effect by the new reporters between January 1943 and December 1945—in the indexes for the individual items, the furniture subgroup, and the housefurnishing goods group.

Revised index numbers for the furniture subgroup from January 1943 through December 1947 are shown in table 10. The revised furniture subgroup which was presented for the first time in January 1948, has been computed back to January 1943. This revision does not affect the housefurnishing goods group or the *all commodity* indexes prior to November 1947.

Wood Office Furniture

No revisions have been made in the wood office furniture component of the furniture subgroup.
