Introduction 1/

The Baltimore area is one of several important industrial centers in which the Bureau of Labor Statistics conducted occupational wage surveys during the summer of 1951. 2/ Occupations that are common to a variety of manufacturing and non-manufacturing industries were studied on a community-wide basis. Cross-industry methods of sampling were thus utilized in compiling earnings data for the following types of occupations: (a) office; (b) professional and technical; (c) maintenance and power plant; (d) custodial, warehousing, and shipping. In presenting earnings information for such jobs (tables A-1 through A-4) data have been provided separately, wherever possible, for broad industry divisions.

Occupations that are characteristic of particular, important, local industries have been studied as heretofore on an industry basis, within the framework of the community survey. 3/ Earnings data for these jobs have been presented in Series B tables. Union scales (Series C tables) are presented in lieu of (or supplementing) occupational earnings for several industries or trades in which the great majority of the workers are employed under terms of collective bargaining agreements, and the contract or minimum rates are indicative of prevailing pay practices.

Data have also been collected and summarized on shift operations and differentials, hours of work, and supplementary benefits such as vacation and sick leave allowances, paid holidays, nonproduction bonuses, and insurance and pension plans.

1/ Prepared by Paul E. Warwick, Regional Wage Analyst. The planning and central direction of the program was carried on in the Branch of Community Wage Studies of the Bureau's Division of Wages and Industrial Relations.

2/ Other areas studied are: Bridgeport, Dallas, Dayton, and Portland, Oreg. Similar studies were conducted earlier in the year in Atlanta, Boston, Chicago, Denver, New York and the San Francisco-Oakland area.

3/ See appendix for discussion of scope and method of survey.

The Baltimore Metropolitan Area

The Baltimore Metropolitan Area, including Baltimore City and Baltimore and Anne Arundel Counties, had approximately 1,300,000 inhabitants in 1950. Three-fourths of this total was concentrated in the city of Baltimore.

Nonagricultural employees (excluding government) in the Baltimore area totaled over 465,000 during June 1951. Over 40 percent of these were employed in manufacturing establishments which produce a variety of products, including steel, automobiles, aircraft, ships, fabricated metal products, industrial chemicals, and clothing.

The importance of the area not only as a manufacturing but also as a financial and commercial center is indicated by the large number of workers employed in the various branches of trade and finance. Wholesale and retail trade establishments provided employment to 100,000 workers, and approximately another 25,000 were employed in finance, insurance, and real estate. Baltimore harbor is a vital part of the area's industrial, commercial, and transportation activities. Approximately 15 million tons of exports and imports passed through the port in 1950. Facilities include dockside grain elevators and coal piers of large capacity. Recently added ore unloading facilities represent an important increase in the port's economic potential. The combined employment of the communication, public utilities, and transportation industries, including railroads, was more than 50,000, and the services group employed more than 55,000 workers.

Among the industry and establishment-size groups included within the scope of the Bureau's study 3/, two-thirds of the plant workers were employed in establishments having written agreements with labor organizations. Unionization varied widely in the various industries studied. The highest degree of unionization was in durable-goods manufacturing 4/, in which nine-tenths of the workers were covered by written union agree-

4/ See appendix table for listing of durable and nondurable goods industries.

ments. Three-fourths of the workers in nondurable-goods industries were employed in establishments having union contracts. Plant workers in nonmanufacturing industries were not extensively covered by union contract provision, except in the public utilities group where three-fourths of the workers were covered. The proportion of office workers employed under union contract provisions was considerably lower than for plant workers. Only in the public utilities group of industries and in manufacturing was unionization in offices found to any appreciable degree. Three-fifths of the office employees in public utilities and a sixth in manufacturing were employed in establishments with union contracts.

Occupational Wage Structure

A substantial labor surplus prevailed in the Baltimore area from January 1949 through May 1950. Peak unemployment reached 55,000 in July 1949 and again in March 1950. Gradual reemployment during the summer and fall of 1950 resulted in the balanced labor market prevailing at the time of the June 1951 survey.

General wage increases, which in the 6 months immediately preceding hostilities in Korea had affected fewer than 1 in 10 workers, were much more numerous thereafter. By June 1951 all manufacturing establishments visited in the cross-industry survey had granted one or more general increases to plant workers. Four-fifths of the industry's office employees (concentrated in half the establishments) had also received such increases. Only 1 in 3 nonmanufacturing establishments had granted general increases, but these accounted for half the plant workers and two-thirds of the office workers; 4 out of 5 workers in the public utilities group and in wholesale trade received general increases.

Formalized wage and salary structures for time workers were reported in establishments employing approximately 80 percent of plant workers and 70 percent of office workers. Formalized plans providing a range of rates for each job classification affected somewhat more plant workers than did plans providing a single rate for each job. Practically all formal wage plans for office workers provided a range of rates. Individual

determination of rates, although affecting only an over-all 20 percent of plant and 30 percent of office employees, was nevertheless the predominant method of wage determination for time-rated employees of wholesale trade, retail trade, and services establishments.

Established minimum entrance rates for plant workers with no previous work experience were a part of the formalized rate structure of a majority of Baltimore area firms. More than nine-tenths of the plant workers were employed in such establishments. On an all-industry basis, half the plant workers were employed in establishments paying a minimum rate of \$1 or more. This was the minimum standard for nine-tenths of the plant workers in large durable-goods establishments (employing 500 or more workers), and half of those in comparable nondurable-goods plants. In retail trade a fifth, and in services industries a half of plant workers were employed in establishments with a minimum rate of 50 cents or less. A \$1 or higher minimum was reported by establishments accounting for half the employment in the public utilities group. This industry group was, however, the only division in which a significant proportion of the workers were employed in establishments with no minimum entrance rate policy.

Wages and salaries of workers in manufacturing industries were generally higher than those in nonmanufacturing. In 27 of 30 office classifications permitting comparison, average salaries of workers in manufacturing plants exceeded those in nonmanufacturing establishments. Average hourly earnings for plant workers studied in all industries were up to 30 percent higher in manufacturing for 21 of 26 categories for which comparisons were possible. However, specific industrial branches contributing to the general nonmanufacturing average had an average rate, in some instances, exceeding that for the manufacturing group in the same plant or office category.

A fourth of all plant workers in manufacturing establishments were working on late shifts in June 1951. Virtually all such workers were paid a differential over day (first) shift rates, which in three cases in four was in the form of a cents-per-hour premium. Shift premiums of 4 cents for second shift work and 6 cents for third and other late shift work were received by two-thirds of these workers.

Table A-1: *Office Occupations*

(Average straight-time weekly hours and earnings $\frac{1}{2}$ for selected occupations studied on an area basis in Baltimore, Md., by industry division, June 1951.)

1/ Wage scales and hours per week are those in effect on July 16, 1951, for Atlantic and Gulf Coast ship operators under contracts with the National Maritime Union, CIO. Details of changes are given in the footnotes following. The Wage Stabilization Board has to date not approved any similar changes for members of the Seafarers International Union, AFL.

All ratings listed receive additional payment in accordance with the following conditions:

1. On vessels carrying explosives in 50-ton lots or over, 10 percent of basic monthly wages is added while such cargo is aboard, or is being loaded or unloaded.
2. On vessels carrying sulphur in amount of 25 percent or more of dead weight carrying capacity, \$5 per voyage is added. (On vessels carrying sulphur, cement, cyanide, etc., in bulk lots of 1000 tons or over, members of the SIU are paid the same as those on vessels carrying explosives.)

Table C-44: Ocean Transport -
Unlicensed Personnel 1/ - Continued

3. On vessels operating in described areas of China coastal waters, a per diem allowance of \$2.50 and an "area bonus" of 100 percent of daily wages is added. Also, on vessels operating within certain designated areas of French Indo-China coastal waters, a per diem allowance of \$5 is added.
4. On vessels attacked, fired upon or struck by mines of either belligerent, resulting in physical damage to the vessel or injury to a crew member, a "vessel attack bonus" of \$125 shall be paid to each crew member.

2/ The maximum straight-time hours which may be worked per week at sea. At sea, watch men and the steward's department normally work 56 hours a week, and receive overtime pay for 4 hours on Saturday and 8 on Sunday. Day men at sea normally work a 44-hour week. In port, all receive overtime rates for work on Saturday and Sunday. Maximum straight-time hours at sea of 40 a week, approved by WSB effective December 16, 1951, will result in overtime pay for 8 hours on Saturday for all members.

3/ Wages reflect percentage increases of 3.7 effective June 16 and 2.5 effective July 15, 1951, totaling 6.2 based on January 1950 rates. Hours reflect reduction from 48 to 44 a week for watch men and the steward's department effective June 16. These actions were approved by WSB in September and October 1951.

4/ Wages reflect a 6.2 percent increase over January 1950 rates, and hours a reduction from 48 to 44 for watch men and the steward's department, effective July 15, 1951. Both actions were approved by WSB in October 1951. Differences in the contract of the SIU were formerly as follows:

1. Wage scales did not include a \$3.50 a month increase paid NMU members.
2. Carpenters were paid the same as Boatwains, i.e., \$321.30 a month.

5/ Wages reflect a 6.2 percent increase over January 1950 rates, and hours a reduction from 48 to 44 for watch men and the steward's department, effective July 16, 1951. Both actions were approved by WSB in October 1951. The SIU has no contracts with collier operators.

Table C-44: Stevedoring

| Classification | Rate per hour | Hours per week |
|---|---------------|----------------|
| Longshoremen: | | |
| General cargo | \$2.00 | 40 |
| Bulk cargo, cement and lime in bags, including ballast | 2.05 | 40 |
| Copra, damp hides, creosoted lumber and products | 2.15 | 40 |
| Refrigerator space cargo (temperature freezing or lower) | 2.20 | 40 |
| Coal, hauled from ship's hold to bunker | 2.00 | 40 |
| Old coal, restricted spaces | 2.52 | 40 |
| Damaged cargo and explosives | 3.90 | 40 |

2/ Unduplicated total.

* Transportation (excluding railroads), communication, and other public utilities.

** Finance, insurance, and real estate.

Occupational Wage Survey, Baltimore, Md., June 1951

U.S. DEPARTMENT OF LABOR

Bureau of Labor Statistics

Appendix – Scope and Method of Survey

With the exception of the union scale of rates, information presented in this bulletin was collected by visits of field representatives of the Bureau to representative establishments in the area surveyed. In classifying workers by occupation, uniform job descriptions were used; these are available upon request.

Six broad industry divisions were covered in compiling earnings data for the following types of occupations: (a) office clerical, (b) professional and technical, (c) maintenance and power plant, and (d) custodial, warehousing, and shipping (tables A-1 through A-4). The covered industry groupings are: manufacturing; transportation (except railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Information on work schedules and supplementary benefits also was obtained in a representative group of establishments in each of these industry divisions. As indicated in the following table only establishments above a certain size were studied. Smaller establishments were omitted because they furnished insufficient employment in the occupations studied to warrant their inclusion in the study.

Among the industries in which characteristic jobs were studied, minimum size of establishment and extent of the area covered were determined separately for each industry (see following table). Although size limits frequently varied from those established for surveying cross-industry office and plant jobs, data for these jobs were included only for firms meeting the size requirements of the broad industry divisions.

A greater proportion of large than of small establishments was studied in order to maximize the number of workers surveyed with available resources. Each group of establishments

of a certain size, however, was given its proper weight in the combination of data by industry and occupation.

The earnings information excludes premium pay for overtime and night work. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings, including commissions for salespersons, are included. Where weekly hours are reported as for office clerical, they refer to the work schedules (rounded to the nearest half-hour) for which the straight-time salaries are paid; average weekly earnings for these occupations have been rounded to the nearest 50 cents. The number of workers presented refers to the estimated total employment in all establishments within the scope of the study and not to the number actually surveyed. Data are shown for only full-time workers, i.e., those hired to work the establishment's full-time schedule for the given occupational classification.

Information on wage practices refers to all office and plant workers as specified in the individual tables. It is presented in terms of the proportion of all workers employed in offices (or plant departments) that observe the practice in question, except in the section relating to women office workers of the table summarizing scheduled weekly hours. Because of eligibility requirements, the proportion actually receiving the specific benefits may be smaller. The summary of vacation and sick leave plans is limited to formal arrangements. It excludes informal plans whereby time off with pay is granted at the discretion of the employer or other supervisor. Sick leave plans are further limited to those providing full pay for at least some amount of time off without any provision for a waiting period preceding the payment of benefits. These plans also exclude health insurance even though it is paid for by employers. Health insurance is included, however, under tabulation for insurance and pension plans.

ESTABLISHMENTS AND WORKERS IN MAJOR INDUSTRY DIVISIONS AND IN SELECTED INDUSTRIES IN BALTIMORE, MD., 1/, AND NUMBER
STUDIED BY THE BUREAU OF LABOR STATISTICS, JUNE 1951

| Item | Minimum number of workers in establishments studied 2/ | Number of establishments | | Employment | | |
