INDEX	32

* NOTE - Additional occupational earnings reports are available upon request for auto repair shops (May 1951), ferrous foundries (June 1951), paints and varnishes (May 1951), power laundries (May 1951), women's cement process shoes - slip lasted (August 1951), women's cement process shoes - conventional lasted (August 1951).

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. - Price 25 cents

Introduction 1/

The St. Louis area is 1 of 40 major labor markets in which the Bureau of Labor Statistics is currently conducting occupational wage surveys. Occupations common to a variety of manufacturing and nonmanufacturing industries were studied on a community-wide basis. Cross-industry methods of sampling were thus utilized in compiling earnings data for the following types of occupations: (a) office; (b) professional and technical; (c) maintenance and power plant; (d) custodial, warehousing, and shipping. In presenting earnings information for such jobs (tables A-1 through A-4) separate data have been provided wherever possible for individual broad industry divisions. 2/

Occupations characteristic of particular, important, local industries were studied on an industry basis, within the framework of the community survey. Earnings data for these jobs have been presented in Series B tables. Union Scales (Series C tables) are presented in lieu of (or supplementing) occupational earnings for several industries or trades in which the great majority of the workers are employed under terms of collective-bargaining agreements, and the contract or minimum rates are indicative of prevailing pay practices.

Data were collected and summarized on shift operations and differentials, hours of work, and supplementary benefits such as vacation and sick leave allowances, paid holidays, non-production bonuses, and insurance and pension plans.

The St. Louis Metropolitan Area

The St. Louis Metropolitan Area, consisting of the city of St. Louis, St. Louis and St. Charles Counties in Missouri, and Madison and St. Clair Counties, Illinois, was the ninth largest standard metropolitan area in the United States in 1950. The total population of the area numbered 1,681,300, a gain of 17 percent over 1940. The population of the city of St. Louis increased about 5 percent during the decade, reaching a total of 856,800.

1/ Prepared in the Bureau's regional office in Chicago, Ill., by Walter C. Lemon under the direction of George E. Votava, Regional Wage and Industrial Relations Analyst. The planning and central direction of the program was carried on in the Bureau's Division of Wages and Industrial Relations.

2/ The construction and extractive industries and government institutions were excluded from the study; see appendix for discussion of scope and method of survey.

This leading city of the Mississippi Valley is situated on the Mississippi River a short distance below the mouth of the Missouri, and serves as the hub of the inland waterways system which provides service south to New Orleans, north to Minneapolis, northeast to Chicago and the Great Lakes, east to Pittsburgh, and west to Kansas City - thus serving as a major transfer point between barge lines and railroads. St. Louis, the terminus of 18 trunk line railroads, is the second largest transportation center in the United States. Twenty-two motor bus lines and six commercial air lines furnish additional transportation facilities. Highway freight is serviced by 293 truck lines.

In January 1952 the number of wage and salaried workers in nonagricultural employment in the metropolitan area was estimated to be more than 693,000. About 40 percent of this total were employed in the wide variety of manufacturing establishments located in the area. Total manufacturing employment was divided almost evenly between firms producing durable and nondurable goods. 3/ The wide diversification of manufacturing is further emphasized by the fact that no single industry group employed 15 percent of the workers.

The primary-metals industry accounted for the greatest number of workers in the durable-goods manufacturing group, with approximately 29,000 employees engaged in the production of steel, iron and steel castings, reinforcing bars, pipes and tubing, wire, nonferrous castings, and other miscellaneous primary products of ferrous and nonferrous metals. Other prominent durable-goods industries included those producing electrical machinery and transportation equipment, each of which industries employed in excess of 21,000 workers; nonelectrical machinery manufacturing with 20,000 workers employed the next largest number in the durable-goods group, and fabricated metal manufacturing followed, with well over 19,000 workers.

The most important segment of the nondurable-goods industry group was the processing of food and related products (primarily meat packing, beverages, grain mill, and bakery products) which furnished employment to more than 36,000 persons in January. Other major nondurable industries included chemicals, apparel, footwear, and printing and publishing.

Because of splendid transportation facilities and a very extensive trade territory, St. Louis is one of the leading distribution centers of the United States. Of the estimated 420,000 wage and salary workers on the payrolls of her nonmanufacturing establishments in January 1952, more than 105,000 were employed in retail trade. Wholesale trade furnished employment for an additional 50,000 workers.

3/ See appendix table for listing of durable- and nondurable-goods industries.

Approximately 70,000 employees were included in various segments of transportation, communication, and other public utilities. Of this total, railroads accounted for almost 28,000. Service industries employed 40,000 persons in such diverse fields as automobile and other repair shops, laundries, cleaning and dyeing establishments, hotels, theatres, radio and television stations, and business service establishments. Finance, insurance, and real estate operations employed an estimated 30,000 workers. Federal, State, and local government offices and institutions accounted for more than 42,000 employees.

Union organization was very extensive in the industries and establishment-size groups covered in the St. Louis area as is indicated by the fact that practically all the non-office workers were employed in plants having written agreements with labor organizations. In durable-goods manufacturing industries too, virtually all factory workers were employed in union plants. Labor-management agreements covered nearly all plant workers in the transportation (except railroads), communication, and other public utilities group. In other nonmanufacturing industries union agreements covered about four-fifths of the workers in services, three-fourths in wholesale trade, and approximately a third in finance.

Unionization was relatively insignificant among St. Louis office workers. Only in the transportation, communication, and other public utilities group, in which nearly three-fourths of all office employees worked in establishments having written agreements covering office workers, was unionization in offices found to any appreciable degree. No more than 10 percent of the office workers in each of the other industry groups were employed under union contract terms.

Occupational Wage Structure

During the period between January 1, 1950, the base period for the Wage Stabilization Board's 10 percent "catch up" wage formula, and January 1952, a great majority of the establishments in the St. Louis area had made some formal upward adjustments in wage rates for nonoffice workers. In durable-goods manufacturing establishments, approximately seven-eighths of the plant workers had received total increases of 10 to 30 cents an hour, with more than a third of the workers receiving pay raises totaling 15 to 20 cents.

In nondurable-goods industries more than 40 percent of all plant workers included in the survey received increases amounting to 20 to 25 cents. Although a majority of the plant workers received cents-per-hour raises, percentage increases also were commonly reported. Formal wage increases for office workers also were extensive, especially in the manufacturing

and public utilities industry groups. In many instances, office employees were granted pay increases on an individual basis, rather than general increases.

Formalized wage and salary structures were reported in establishments employing approximately 95 percent of St. Louis nonoffice workers. Among the industry groups studied, plans providing a single or flat rate for time-rated plant jobs were typical of nondurable-goods manufacturing; transportation (except railroads), communication, and other public utilities; and services. In other industry groups wage progression plans providing for a range of rates for each job were more common than single-rate plans. Nearly a fourth of all plant workers were paid incentive rates; in manufacturing industries more than a third were working under incentive plans. In nonmanufacturing industries incentive plans were relatively insignificant or nonexistent.

For office workers, plans providing a range of rates for each job classification covered about three-fifths of the workers. Virtually all the remaining workers were employed in establishments that determined salaries on an individual basis.

Established minimum entrance rates for hiring inexperienced plant workers were part of the formalized rate structure in virtually all of the firms within scope of the survey. Entrance rates ranged from 60 cents to more than \$1.65. Approximately half the plant workers were employed in establishments with entrance rates of \$1.05 and over, and more than a fifth of the plant workers were employed in establishments with minimum rates above \$1.20 an hour.

Wages and salaries of workers in manufacturing industries were generally higher than in nonmanufacturing. In 18 of the 25 office classifications permitting comparison, average salaries of workers in manufacturing plants exceeded those in nonmanufacturing establishments. Average hourly earnings for plant jobs studied in all industries were higher in manufacturing for 17 of 22 job categories for which comparisons were possible.

One-fifth of all plant workers in manufacturing industries were working on late shifts in January 1952. Almost all these workers received shift premium payments expressed either in cents-per-hour or as a percentage of day rates. The most common second-shift differential was 5 cents.

More than four-fifths of the women office workers were scheduled to work 40 hours a week in January 1952. In the finance, real estate, and insurance, and services industries, a shorter workweek was scheduled for a significant number of office employees. The scheduled workweek for about three-fourths of St. Louis plant workers was 40 hours. A large majority of the remaining plant workers were scheduled to work more than 40 hours.

A: Cross-Industry Occupations

Table A-1: Office Occupations

(Average straight-time weekly hours and earnings 1/ for selected occupations studied
on an area basis in St. Louis, Mo., by industry division, January 1952)

1/ Hours reflect the workweek for which employees receive their regular straight-time salaries and the earnings correspond to these weekly hours.

2/ Includes 3 workers at \$120 and under 125; 2 at \$125 - 130; 1 at \$130 - 135; 6 at \$135 - 140 and 6 at \$140 and over.

3/ Includes 2 workers at \$120 and under 125; 2 at \$125 - 130; 1 at \$130 - 135; 1 at \$135 - 140 and 1 at \$140 and over.

Occupational Wage Survey, St. Louis, Mo., January 1952

U.S. DEPARTMENT OF LABOR

Bureau of Labor Statistics

NOTE: Wherever possible earnings data have been presented separately for broad industry divisions. Data could not be shown separately for retail trade due to the omission of department and limited-price variety stores; the remainder of retail trade is appropriately represented in data for all industries combined and for nonmanufacturing.

Occupational Wage Survey, St. Louis, Mo., January 1952

U.S. DEPARTMENT OF LABOR

Bureau of Labor Statistics

NOTE: Wherever possible earnings data have been presented separately for broad industry divisions. Data could not be shown separately for retail trade due to the omission of department and limited-price variety stores; the remainder of retail trade is appropriately represented in data for all industries combined and for nonmanufacturing.

1/ The study covered regular (inside) and contract shops with 6 or more workers in part of industry group 2337 as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Establishments manufacturing fur coats or single skirts were excluded from the study. Cutting shops with 4 or more workers were included. Data relate to a September 1951 payroll period.

2/ Excludes premium pay for overtime and night work.

2/ Insufficient data to permit presentation of separate averages by method of wage payment.

- (a) All or predominantly time workers.
- (b) All or predominantly incentive workers.

1/ The study covered establishments with more than 7 workers engaged in the manufacture of women's, misses', children's, and infants' trimmed hats from felt or straw hat bodies and purchased millinery material. Data relate to a March 1952 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Workers were distributed as follows: 8 at \$0.75 and under .80; 2 at \$0.85 - .90; 2 at \$0.90 - .95.

4/ Workers were distributed as follows: 2 at \$2.80 and under 2.90; 7 at \$4 - 4.10.

2/ Insufficient data to permit presentation of separate averages by method of wage payment.

- (a) All or predominantly time workers.
- (b) All or predominantly incentive workers.

1/ The study included establishments with more than 20 workers in the machinery (nonelectrical) industry (group 35) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget; machine-tool accessory establishments with more than 7 workers were included in the study. Data relate to a November 1951 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Insufficient data to permit presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

4/ Includes data for operators of other machine tools in addition to those shown separately.

1/ The study covered establishments with more than 20 workers in the insurance industry (Group 63) as defined in the Standard Industrial Classification Manual (1949 edition) prepared by the Bureau of the Budget.

2/ Hours reflect the workweek for which employees receive their regular straight-time salaries and the earnings correspond to these weekly hours.

3/ Includes 11 workers at \$90 - 95; 6 at \$95 - 105; 3 at \$100 - 105; 5 at \$110 - 115; 2 at \$115 and over.

Occupational Wage Survey, St. Louis, Mo., January 1952
U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics

C: Union Wage Scales

(Minimum wage rates and maximum straight-time hours per week agreed upon through collective bargaining between employers and trade-unions. Rates and hours are those in effect on dates indicated.)

Table C-15: Building Construction

January 2, 1952

Classification	Rate per hour	Hours per week
Bricklayers	\$3.450	40
Carpenters	2.750	40
Electricians	2.750	40
Painters	2.600	40
Plasterers	3.000	40
Plumbers	2.750	40
Building laborers	1.850	40

Table C-205: Bakeries

July 1, 1951

Classification	Rate per hour	Hours per week
Bread and cake - Hand shops:		
Leadmen or first hands	\$1.425	40
Second hands, benchmen	1.312	40

Occupational Wage Survey, St. Louis, Mo., January 1952
U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics

Appendix - Scope and Method of Survey

With the exception of the union scale of rates, information presented in this bulletin was collected by visits of field representatives of the Bureau to representative establishments in the area surveyed. In classifying workers by occupation, uniform job descriptions were used; these are available upon request.

Six broad industry divisions were covered in compiling earnings data for the following types of occupations: (a) office-clerical, (b) professional and technical, (c) maintenance and power plant, and (d) custodial, warehousing, and shipping (tables A-1 through A-4). The covered industry groupings are: manufacturing; transportation (except railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Information on work schedules and supplementary benefits also was obtained in a representative group of establishments in each of these industry divisions. As indicated in the following table only establishments above a certain size were studied. Smaller establishments were omitted because they furnished insufficient employment in the occupations studied to warrant their inclusion.

Among the industries in which characteristic jobs were studied, minimum size of establishment and extent of the area covered were determined separately for each industry (see following table). Although size limits frequently varied from those established for surveying cross-industry office and plant jobs, data for these jobs were included only for firms meeting the size requirements of the broad industry divisions.

A greater proportion of large than of small establishments was studied in order to maximize the number of workers surveyed with available resources. Each group of establishments

of a certain size, however, was given its proper weight in the combination of data by industry and occupation.

The earnings information excludes premium pay for overtime and night work. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings, including commissions for salespersons, are included. Where weekly hours are reported as for office clerical, they refer to the work schedules (rounded to the nearest half-hour) for which the straight-time salaries are paid; average weekly earnings for these occupations have been rounded to the nearest 50 cents. The number of workers presented refers to the estimated total employment in all establishments within the scope of the study and not to the number actually surveyed. Data are shown for only full-time workers, i.e., those hired to work the establishment's full-time schedule for the given occupational classification.

Information on wage practices refers to all office and plant workers as specified in the individual tables. It is presented in terms of the proportion of all workers employed in offices (or plant departments) that observe the practice in question, except in the section relating to women office workers of the table summarizing scheduled weekly hours. Because of eligibility requirements, the proportion actually receiving the specific benefits may be smaller. The summary of vacation and sick leave plans is limited to formal arrangements. It excludes informal plans whereby time off with pay is granted at the discretion of the employer or other supervisor. Sick leave plans are further limited to those providing full pay for at least some amount of time off without any provision for a waiting period preceding the payment of benefits. These plans also exclude health insurance even though it is paid for by employers. Health insurance is included, however, under tabulation for insurance and pension plans.

ESTABLISHMENTS AND WORKERS IN MAJOR INDUSTRY DIVISIONS AND IN SELECTED INDUSTRIES IN ST. LOUIS, MO., 1/
AND NUMBER STUDIED BY THE BUREAU OF LABOR STATISTICS, JANUARY 1952
