Introduction ^{1/}

The Chicago area is 1 of 40 major labor markets in which the Bureau of Labor Statistics is currently conducting occupational wage surveys. Occupations common to a variety of manufacturing and nonmanufacturing industries were studied on a community-wide basis. Cross-industry methods of sampling were thus utilized in compiling earnings data for the following types of occupations: (a) office; (b) professional and technical; (c) maintenance and power plant; (d) custodial, warehousing, and shipping. In presenting earnings information for such jobs (tables A-1 through A-4) separate data have been provided wherever possible for individual broad industry divisions.

Occupations characteristic of particular, important, local industries were studied on an industry basis, within the framework of the community survey. ^{2/} Earnings data for these jobs have been presented in Series B tables. Union scales (Series C tables) are presented in lieu of (or supplementing) occupational earnings for several industries or trades in which the great majority of the workers are employed under terms of collective-bargaining agreements, and the contract or minimum rates are indicative of prevailing pay practices.

Data were collected and summarized on shift operations and differentials, hours of work, and supplementary benefits such as vacation and sick leave allowances, paid holidays, nonproduction bonuses and insurance and pension plans.

The Chicago Area

Nonagricultural wage and salary employment in the Chicago area (Cook County) totaled approximately 2,150,000 workers in March 1952. Of this total, an estimated 810,000 were employed in manufacturing establishments. Although manufacturing activity in the area is considered highly diversified, the machinery industries (electrical and nonelectrical combined) employed more than a fourth of all manufacturing workers in the area. Other durable-goods industry groups of substantial importance included fabricated metal products, primary metal products, and transportation equipment. ^{3/} In the nondurable-goods segment of manufacturing, food processing plants accounted for more than a tenth of the workers. Additional major segments of the nondurable-goods industries included printing and publishing, apparel, and chemicals.

^{1/} Prepared in the Bureau's regional office in Chicago, Ill., by Woodrow C. Linn under the direction of George E. Votava, Regional Wage and Industrial Relations Analyst. The planning and central direction of the program was carried on in the Bureau's Division of Wages and Industrial Relations.

^{2/} See appendix for discussion of scope and method of survey.

^{3/} See appendix table for listing of durable- and nondurable-goods.

An estimated 1,340,000 wage and salary workers were on the payrolls of Chicago area nonmanufacturing establishments in March. About 330,000 workers were employed in retail trade activities, and an additional 165,000 were employed in wholesale trade outlets. An employment of nearly 200,000 workers in the transportation industries attests to Chicago's importance as the nation's leading railroad center. The services industries employed more than 195,000 persons in such diverse fields as automobile and other repair shops, laundries and cleaning establishments, hotels, theaters, radio and television stations, and business service establishments. Federal, State, and local government agencies reported employment of 184,000 workers in the area, and approximately 126,000 persons were employed in finance, insurance, and real estate establishments. Building construction, off to an early seasonal start, provided jobs for 89,000 workers. Employment in communication and public utilities totaled over 50,000 at the time of the survey.

Among the industries and establishment-size groups surveyed by the Bureau more than 70 percent of the workers in nonoffice jobs were employed in establishments having written agreements with labor organizations. Three of four factory workers in manufacturing establishments were employed in union plants. In nonmanufacturing industries the proportion of nonoffice workers covered by union agreements ranged from more than half in retail and wholesale trade to nearly complete coverage in the transportation (except railroads), communication, and public utilities group. Union contracts covered about 85 percent of the nonoffice workers in services and finance, insurance, and real estate. Unionization was far less extensive among office workers. About a tenth of all office workers in the Chicago area were working under the provisions of collective bargaining agreements. The highest proportion of office workers covered by union agreement provisions was reported in transportation (except railroads), communication, and other public utilities; more than two-thirds the office workers in the industry group were employed under the terms of union contracts.

Occupational Wage Structure

Extensive formal wage adjustments were made by Chicago area establishments between January 1950, the base period for the Wage Stabilization Board's "catch-up" wage formula, and the time of the Bureau's survey. Virtually all plant workers in manufacturing establishments had received one or more general wage increase during the period. These increases totaled 15 to 30 cents an hour for about three-fourths the plant workers studied, with more than a fourth receiving between 25 and 30 cents. More than 40 percent of the nonoffice workers in transportation (except railroads), communication, and other public utilities received similar increases; whereas, workers in wholesale and retail trade and services establishments received smaller general pay increases.

Formal revisions in office workers' salaries were reported in fewer establishments. Office workers in the larger manufacturing establishments frequently were granted increases

comparable to those given plant workers. In other establishments, however, pay raises for office workers were granted on an individual basis in place of general increases.

Wage rates for nearly all Chicago area plant (non-office) workers were determined on the basis of formal rate structures. Wage progression plans setting forth a range of rates for each time-rated job classification were somewhat more common than plans specifying a single or flat rate for each job. Among the industry groups studied, single-rate plans were typical of nondurable-goods manufacturing, wholesale trade, services, and finance. Piece-rate or bonus incentive payment plans covered plant jobs in which nearly 40 percent of the factory workers in manufacturing plants were classified. They were either nonexistent or relatively insignificant among the non-manufacturing industries with the exception of services establishments in which 10 percent of the nonoffice workers were paid incentive rates.

Virtually all formal wage plans reported for office occupations provided a range of salaries for each job. Very few office workers were paid salaries based on single-rate plans, and over a third worked in establishments that determined salaries on an individual basis.

Established minimum entrance rates for hiring inexperienced plant workers were part of the formalized wage structure in a vast majority of the firms studied. Although entrance rates ranged from less than 75 cents to more than \$1.65 an hour, \$1 or more was the minimum rate in establishments giving employment to three-fifths of all plant workers. In manufacturing industries 3 of 4 workers were employed in establishments with entrance rates of \$1 or more. A 75-cent minimum was the lowest rate reported in manufacturing; wholesale trade; and transportation, communication, and other public utilities. Minimum entrance rates of less than 75 cents were found in other non-manufacturing groups studied.

Salaries of office workers in manufacturing industries were generally higher than those in nonmanufacturing. In 27 of the 35 office classifications permitting comparison, average weekly salaries in manufacturing establishments exceeded those in nonmanufacturing. Within the nonmanufacturing group, however, office workers in wholesale trade and transportation (excluding railroads), communication, and other public utilities were paid higher average salaries in most jobs than workers in manufacturing industries. Wage rates for selected custodial, warehousing, and shipping occupations averaged higher in manufacturing industries for 10 of 17 jobs where comparisons were possible. In contrast, average wage rates for maintenance and power plant jobs were higher in nonmanufacturing industries for 10 of 14 job categories permitting comparison.

About a fourth of the plant workers in Chicago area manufacturing industries were employed on late shifts in March 1952. Three-fourths of these workers were on second-shift operations. The prevalence of extra-shift work among nondurable goods manufacturing workers was nearly as great as that in the durable-goods group. Almost all second- and third-shift workers were paid shift differentials, divided almost equally between a uniform cents-per-hour addition to day rates and a uniform percentage over day shift rates.

Regularly scheduled 40-hour workweeks predominated among nonoffice workers in March 1952. Three of four plant workers in manufacturing industries were scheduled to work 40 hours; most of the others were on longer schedules. Among the nonmanufacturing groups, the proportion on this weekly schedule was about the same in public utilities and wholesale trade. In retail trade and services establishments, a much larger proportion were scheduled to work more than 40 hours. Forty-hour weekly schedules existed for two-thirds the women office workers in March, with nearly all of the others working shorter schedules. In finance, insurance, and real estate offices almost two-thirds were scheduled to work less than 40 hours.

A: Cross-Industry Occupations

1/ The study covered establishments with more than 20 workers primarily engaged in manufacturing candy and other confections (Group 2071) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Data relate to a January 1952 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Insufficient data to permit presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

4/ Workers were distributed as follows: 78 at \$.75 to \$.80; 57 at \$.80 to \$.85; 43 at \$.85 to \$.90.

Table B-2337: *Women's and Misses' Coats and Suits 1/*

1/ The study included establishments with more than 20 workers engaged in the production of millwork (Group 2431) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Data relate to a January 1952 payroll period.

2/ Data limited to men workers. All workers were paid time rates.

3/ Excludes premium pay for overtime and night work.

1/ The study covered independent nonferrous foundries (except die-casting foundries) with 8 or more workers. Data relate to an August 1951 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Insufficient data to permit presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

4/ workers were distributed as follows: 1 at \$.75 to \$.80; 6 at \$.85 to \$.90; and 5 at \$.90 to \$.95.

^{1/} The study covered firms with more than 20 workers engaged in the manufacture of cutlery, hand tools, and hardware (Group 342) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Data relate to a January 1952 payroll period.

^{2/} Excludes premium pay for overtime and night work.

^{3/} Insufficient data to permit presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

^{4/} Includes data for operators of other machine tools in addition to those shown separately.

2/ Excludes premium pay for overtime and night work.

3/ Insufficient data to permit presentation of separate averages by method of wage payment; all or predominantly time workers.

4/ Workers were distributed as follows: 24 at \$2.50 to \$2.70; 2 at \$2.70 to \$2.80.

1/ The study covered firms with more than 7 workers engaged in all types of electroplating, plating, and metal polishing (Group 3468) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Data relate to a January 1952 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Insufficient data to permit presentation of separate averages by method of wage payment; all or a majority of workers were paid on a time basis.

4/ Workers were distributed as follows: 16 at \$2.70 - \$2.80; 12 at \$2.80 - \$2.90; 4 at \$2.90 - \$3.00; and 13 at \$3.00 and over.

1/ The study covered establishments with more than 20 workers engaged in the manufacture of nonelectrical machinery (Group 35) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget; machine-tool accessory establishments (Group 3543) with more than 7 workers were also included. Data relate to a November 1951 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Includes data for machine-tool accessories for which separate data are presented.

4/ Insufficient data to permit presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

5/ Includes data for operators of other machine tools in addition to those shown separately.

6/ Workers were distributed as follows: 85 at \$2.60 to \$2.70; 8 at \$2.70 to \$2.80; and 6 at \$2.80 to \$2.90.

7/ Workers were distributed as follows: 13 at \$.90 to \$.95; and 18 at \$.95 to \$1.

8/ Workers were distributed as follows: 12 at \$.90 to \$.95; and 18 at \$.95 to \$1.

1/ The study covered establishments with more than 50 workers engaged in the manufacture of radio, television, and related products including electronic apparatus and component parts (Group 3661) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Data relate to a December 1951 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Insufficient data to permit presentation of separate averages by method of wage payment; all or predominantly time workers.

4/ Workers were distributed as follows: 83 at \$2.50 to \$2.60; 19 at \$2.60 and over.

Occupational Wage Survey, Chicago, Ill., March 1952
U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics

C: Union Wage Scales

(Minimum wage rates and maximum straight-time hours per week agreed upon through collective bargaining between employers and trade-unions. Rates and hours are those in effect in Chicago on dates indicated. Comprehensive listings of union scales of wages and hours for bakeries, building construction, motortruck drivers and helpers, and printing for July 1, 1951 are available on request. Similar information for these industries will be published for July 1, 1952.)

Table C-15: *Building Construction*
July 1, 1952

Classification	Rate per hour	Hours per week
Bricklayers	\$3.175	40
Carpenters	2.950	40
Electricians	3.030	40
Painters	2.750	40
Plasterers	3.175	40
Plumbers	3.000	40
Building laborers	2.150	40

Occupational Wage Survey, Chicago, Ill., March 1952
U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics

Appendix - Scope and Method of Survey

With the exception of the union scale of rates, information presented in this bulletin was collected by visits of field representatives of the Bureau to representative establishments in the area surveyed. In classifying workers by occupation, uniform job descriptions were used; these are available upon request.

Six broad industry divisions were covered in compiling earnings data for the following types of occupations: (a) office clerical, (b) professional and technical, (c) maintenance and power plant, and (d) custodial, warehousing, and shipping (tables A-1 through A-4). The covered industry groupings are: manufacturing; transportation (except railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Information on work schedules and supplementary benefits also was obtained in a representative group of establishments in each of these industry divisions. As indicated in the following table only establishments above a certain size were studied. Smaller establishments were omitted because they furnished insufficient employment in the occupations studied to warrant their inclusion.

Among the industries in which characteristic jobs were studied, minimum size of establishment and extent of the area covered were determined separately for each industry (see following table). Although size limits frequently varied from those established for surveying cross-industry office and plant jobs, data for these jobs were included only for firms meeting the size requirements of the broad industry divisions.

A greater proportion of large than of small establishments was studied in order to maximize the number of workers surveyed with available resources. Each group of establishments

of a certain size, however, was given its proper weight in the combination of data by industry and occupation.

The earnings information excludes premium pay for overtime and night work. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings, including commissions for salespersons, are included. Where weekly hours are reported as for office clerical, they refer to the work schedules (rounded to the nearest half-hour) for which the straight-time salaries are paid; average weekly earnings for these occupations have been rounded to the nearest 50 cents. The number of workers presented refers to the estimated total employment in all establishments within the scope of the study and not to the number actually surveyed. Data are shown for only full-time workers, i.e., those hired to work the establishment's full-time schedule for the given occupational classification.

Information on wage practices refers to all office and plant workers as specified in the individual tables. It is presented in terms of the proportion of all workers employed in offices (or plant departments) that observe the practice in question, except in the section relating to women office workers of the table summarizing scheduled weekly hours. Because of eligibility requirements, the proportion actually receiving the specific benefits may be smaller. The summary of vacation and sick leave plans is limited to formal arrangements. It excludes informal plans whereby time off with pay is granted at the discretion of the employer or other supervisor. Sick leave plans are further limited to those providing full pay for at least some amount of time off without any provision for a waiting period preceding the payment of benefits. These plans also exclude health insurance even though it is paid for by employers. Health insurance is included, however, under tabulation for insurance and pension plans.
