\* NOTE: Similar tabulations (also covering health, insurance, and pension plans) are available in the New York City area reports for April 1951, January 1952, February 1953, and February 1954. The 1954 report also provides tabulations of wage structure characteristics, labor-management agreements, and overtime pay provisions. A directory indicating date of study and the price of the reports, as well as reports for other major areas, is available upon request.

Current reports on occupational earnings and supplementary wage practices in the New York City area are also available for machinery industries (January 1955) and for men's and boys' dress shirts (May 1954). Union scales, indicative of prevailing pay levels, are available for the following trades or industries: Building construction, printing, local transit operating employees, and motortruck drivers.

Introduction

The New York City area is one of several important industrial centers in which the Bureau of Labor Statistics has conducted surveys of occupational earnings and related wage benefits on an areawide basis. In each area, data are obtained by personal visits of Bureau field agents to representative establishments within 6 broad industry divisions: Manufacturing; transportation (excluding railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services.<sup>1</sup> Major industry groups excluded from these studies are government institutions and the construction and extractive industries. Establishments having fewer than a prescribed number of workers were also omitted since they furnish insufficient employment in the occupations studied to warrant inclusion.<sup>2</sup> Wherever possible, separate tabulations are provided for the individual broad industry divisions.

These surveys are conducted on a sample basis because of the unnecessary cost involved in surveying all establishments, and to ensure prompt publication of results. To obtain appropriate accuracy at minimum cost, a greater proportion of large than of small establishments is studied. In combining the data, however, all establishments are given their appropriate weight.

\* This report was prepared in the Bureau's regional office in New York, N. Y., by Frederick W. Mueller under the direction of Paul E. Warwick, Regional Wage and Industrial Relations Analyst.

<sup>1</sup> Central offices are classified to the appropriate industry division. In earlier studies in New York City data for central offices were presented separately, and were not included in the individual industry division estimates. In the current study the majority of central offices were classified in manufacturing; the remainder were in retail trade, public utilities, and wholesale trade. Earnings estimates for some occupations and for supplementary benefits in these divisions and "nonmanufacturing" are, therefore, not entirely comparable with those in previous studies of the New York City area. The estimates for retail trade, although exclusive of limited-price variety stores, include central offices of such stores. A special tabulation of office occupational earnings in central offices appears on page 8 of this bulletin.

<sup>2</sup> See following table for minimum-size establishment covered by study.

Estimates are presented, therefore, as relating to all establishments in the industry grouping and area, but not to those below the minimum size studied.<sup>3</sup>

Occupations and Earnings

Occupational classification is based on a uniform set of job descriptions designed to take account of interestablishment variation in duties within the same job (see Appendix for listing of these descriptions). Earnings data are presented for the following types of occupations: (a) Office clerical; (b) professional and technical; (c) maintenance and powerplant; and (d) custodial and material movement.

Data are shown for full-time workers, i. e., those hired to work a full-time schedule for the given occupational classification. Earnings data exclude premium pay for overtime and for work on weekends, holidays, and late shifts. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings are included. Where weekly hours are reported, as for office clerical occupations, reference is to the work schedules (rounded to the nearest half-hour) for which straight-time salaries are paid; average weekly earnings for these occupations have been rounded to the nearest 50 cents.

Occupational employment estimates refer to the total in all establishments within the scope of the study and not to the number actually surveyed. Because of differences in occupational structure among establishments, the estimates of occupational employment obtained from the sample of establishments studied serve only to indicate the relative importance of the jobs studied. These differences in occupational structure do not materially affect the accuracy of the earnings data.

Establishment Practices and Supplementary Wage Provisions

Information is also presented on selected establishment practices and supplementary benefits as they relate to office and plant workers. The term, "office workers", as used in this bulletin includes all office clerical employees and excludes administrative, executive, professional, and technical personnel. "Plant workers" include working foremen and all nonsupervisory

<sup>3</sup> An exception is made in the tabulation of minimum entrance rates for women office workers which relates to provisions in establishments actually studied.

workers (including leadmen and trainees) engaged in nonoffice functions. Administrative, executive, professional, and technical employees, and force account construction employees who are utilized as a separate work force are excluded. Cafeteria workers and routemen are excluded in manufacturing industries but are included as plant workers in nonmanufacturing industries.

Shift-differential data are limited to manufacturing industries. This information is presented both in terms of (a) establishment policy<sup>4</sup> and (b) effective provisions for workers actually employed on extra shifts at the time of the survey. Tabulations relating to establishment policy are presented in terms of total plant worker employment; estimates in the second tabulation relate only to those workers actually employed on the specified shift.

Supplementary practices, other than minimum entrance rates for women office workers, and shift differentials, are treated statistically on the basis that these are provided to all

<sup>4</sup> An establishment was considered as having a policy if it met either of the following conditions: (1) Operated late shifts at the time of the survey, or (2) had formal provisions covering late shifts.

workers employed in offices or plant departments that observe the practice in question.<sup>5</sup> Because of varying eligibility requirements, the proportion actually receiving the specific benefits may be smaller. Moreover, a practice was considered as applicable to all office or plant workers in an establishment if it applied to a majority of such workers. Because of rounding, sums of individual items in these tabulations do not necessarily equal totals.

The summary of vacation plans is limited to formal arrangements, excluding informal plans whereby time off with pay is granted at the discretion of the employer or the supervisor. Separate estimates are provided according to employer practice in computing vacation payments, such as time payments, percent of annual earnings, or flat-sum amounts. However, in the tabulations of vacation allowances by years of service, payments not on a time basis were converted; for example, a payment of 2 percent of annual earnings was considered as the equivalent of 1 week's pay.

<sup>5</sup> Scheduled weekly hours for office workers (first section of table B-4) are presented in terms of the proportion of women office workers employed in offices with the indicated weekly hours for women workers.

<sup>1</sup> The New York City Area (Bronx, Kings, New York, Queens, and Richmond Counties, N. Y.). The "workers within scope of study" estimates shown in this table provide a reasonably accurate description of the size and composition of the labor force included in the survey. The estimates are not intended, however, to serve as a basis of comparison with other area employment indices to measure employment trends or levels since (1) planning of wage surveys requires the use of establishment data compiled considerably in advance of the pay period studied, and (2) small establishments are excluded from the scope of the survey.

<sup>2</sup> Includes all establishments with total employment at or above the minimum size limitation. All outlets (within the area) of companies in such industries as trade, finance, auto repair service, and motion-picture theaters are considered as one establishment.

<sup>3</sup> Includes executive, technical, professional, and other workers excluded from the separate office and plant categories.

<sup>4</sup> In earlier studies central offices were treated as a separate division in this table, and in the "A" and "B" tables. In the current study central offices are included in the industry division corresponding to the establishments' normal industrial classification.

<sup>5</sup> Also excludes taxicabs, and services incidental to water transportation included in earlier studies.

<sup>6</sup> Estimate relates to real estate establishments only.

<sup>7</sup> Hotels; personal services; business services; automobile repair shops; radio broadcasting and television; motion pictures; nonprofit membership organizations; and engineering and architectural services.

<sup>1</sup> Hours reflect the workweek for which employees receive their straight-time salaries and the earnings correspond to these weekly hours.

<sup>2</sup> Data for central offices which were presented separately in earlier studies are included in the appropriate industry division. For purposes of comparison with earlier studies separate data for central offices are presented in the following table. The effect of including central offices on average weekly earnings was the greatest in manufacturing estimates. Those estimates were increased an average of \$1. See also footnote 1 page 1.

<sup>3</sup> Workers were distributed as follows: 46 at \$100 to \$105; 17 at \$105 to \$110; 24 at \$110 to \$115; 12 at \$115 to \$120.

<sup>4</sup> Workers were distributed as follows: 34 at \$100 to \$105; 58 at \$105 to \$110; 33 at \$110 to \$120; 2 at \$120 and over.

<sup>5</sup> Excludes limited-price variety stores.

<sup>6</sup> Workers were distributed as follows: 16 at \$100 to \$110; 91 at \$110 to \$120; 30 at \$120 to \$130; 30 at \$130 and over.

<sup>7</sup> Workers were distributed as follows: 84 at \$30 to \$32.50; 47 at \$32.50 to \$35.

<sup>8</sup> All workers were at \$100 to \$105.

<sup>9</sup> Workers were distributed as follows: 96 at \$100 to \$105; 60 at \$105 to \$110; 28 at \$110 to \$115; 26 at \$115 to \$120; 41 at \$120 and over.

<sup>1</sup> Hours reflect the workweek for which employees receive their regular straight-time salaries and the earnings correspond to these weekly hours.<sup>2</sup> Workers were distributed as follows: 309 at \$100 to \$110; 155 at \$110 to \$120; 53 at \$120 to \$130; 36 at \$130 and over.Occupational Wage Survey, New York, N. NOTE: This table is presented for comparison with earlier studies and to enable the reader to estimate the effect of the policy introduced in this year's study of including central offices in their appropriate industry group. See also footnote 1, page 1, and footnote 2, table A-1. The data are not exactly comparable to previous studies in that central offices in manufacturing, public utilities, and retail trade employing between 51 and 100 workers, included in the earlier studies, were excluded from the present study.

<sup>1</sup> Estimates include only full-day holidays provided annually.

<sup>2</sup> Excludes limited-price variety stores.

<sup>3</sup> Includes data for real estate in addition to those industry divisions shown separately.

<sup>4</sup> Estimate differs substantially from that in previous studies, due to the exclusion of taxicab companies from the scope of areawide studies (see scope table, page 2, footnote 5).

<sup>5</sup> Limited to provisions in establishments having a formal policy applying when holidays occur on nonworkdays; some of the estimates would be slightly higher if practices determined informally as the situation occurs were included.

Δ Less than 2.5 percent.

U.S. DEPARTMENT OF LABOR

Bureau of Labor Statistics

NOTE: In the tabulations of vacation allowances by years of service, payments other than "length of time", such as percentage of annual earnings or flat-sum payments, were converted to an equivalent time basis; for example, a payment of 2 percent of annual earnings was considered as 1 week's pay.

## APPENDIX: JOB DESCRIPTIONS

The primary purpose of preparing job descriptions for the Bureau's wage surveys is to assist its field staff in classifying into appropriate occupations workers who are employed under a variety of payroll titles and different work arrangements from establishment to establishment and from area to area. This is essential in order to permit the grouping of occupational wage rates representing comparable job content. Because of this emphasis on interestablishment and interarea comparability of occupational content, the Bureau's job descriptions may differ significantly from those in use in individual establishments or those prepared for other purposes. In applying these job descriptions, the Bureau's field representatives are instructed to exclude working supervisors, apprentices, learners, beginners, trainees, handicapped workers, part-time, temporary, and probationary workers.

The operation usually involves a large number of carbon copies of the bill being prepared and is often done on a fanfold machine.

Billor, machine (bookkeeping machine) - Uses a bookkeeping machine (Sundstrand, Elliott Fisher, Remington Rand, etc., which may or may not have typewriter keyboard) to prepare customers' bills as part of the accounts receivable operation. Generally involves the simultaneous entry of figures on customers' ledger record. The machine automatically accumulates figures on a number of vertical columns and computes and usually prints automatically the debit or credit balances. Does not involve a knowledge of bookkeeping. Works from uniform and standard types of sales and credit slips.
