Summary

Fewer workers and man-days of idleness were involved in work stoppages in 1954 than in any year since World War II and fewer stoppages occurred than in any year during that period except 1948 (table 1). A total of 3,468 strikes and lockouts occurred in 1954, involving 1, 530,000 workers and resulting in 22.6 million man-days of idleness. The idleness incurred amounted to 0. 21 percent of the year's available working time—a proportion substantially lower than the postwar average. Strikes ending in 1954 lasted an average of 22.5 calendar days-about as long as the postwar average. Idleness per worker involved was somewhat higher in 1954 than in 1953—14.7 and 11.8 man-days, respectively, but was below most recent years. 2

* This bulletin was prepared by Ann J. Herlihy and Daniel P. Willis, Jr., with the assistance of other members of the staff of the Bureau's Division of Wages and Industrial Relations, under the direction of Lily Mary David. Loretto R. Nolan was responsible for the analysis of the individual strike cases on which the statistics are based, and for the final review of the tables.

The Bureau wishes to acknowledge the widespread cooperation of employers, unions, the Federal Mediation and Conciliation Service, and various State agencies in furnishing information needed for this report.

1 This is the total number of verified strikes. It does not include 13 small disputes for which the Bureau was unable to secure information from the parties that a work stoppage had actually occurred.

All work stoppages known to the Bureau of Labor Statistics and its various cooperating agencies, involving six or more workers and lasting a full day or shift or longer, are included in this report. Figures on "workers involved" and "man-days idle" cover all workers made idle for as long as one shift in establishments directly involved in a stoppage. They do not measure the indirect or secondary effects on other establishments or industries whose employees are made idle as a result of material or (See Appendix B for a service shortages. description of the methodology followed in preparing work stoppage statistics.)

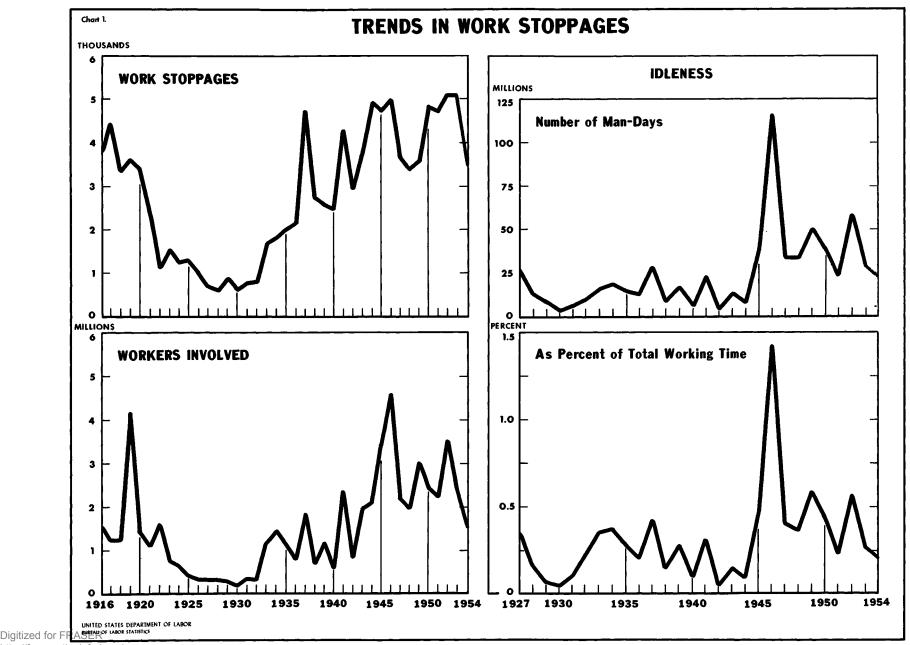

In this bulletin, comparisons with earlier years are limited to the postwar period unless otherwise stated; the terms "postwar" and "recent" are used interchangeably. Eighteenlarge stoppages (each involving 10,000 or more workers) took place during the year compared with 28 such stoppages in 1953 and 35 in 1952 (table 2). Altogether the large stoppages accounted for 28.5 percent of all workers involved in strikes and a third of total idleness. Eleven of the major stoppages continued for less than 2 weeks and only 1 was national in scope. The 83-day Pacific Northwest lumber strike was the largest in terms of total idleness, accounting for about one-sixth of all mandays idle for the year.

The relatively sharp decline in the level of strike activity during 1954 reflected, at least to some degree, the slackening of economic activity. Industrial production declined from peak levels as inventories and defense expenditures were reduced. The gross national product declined slightly (about 2 percent) from 1953 and unemployment was substantially higher. The relative stability in consumer prices also eased the pressure to obtain upward wage adjustments.

Union concern with increased unemployment and the desire of many employers to avoid stoppages and thus help maintain their competitive position were contributory factors in the peaceful negotiation of somewhat smaller increases in wages and supplementary benefits than those typically negotiated in most other postwar years. Thus, major steel producers and the CIO Steelworkers agreed to a 5-cent hourly increase in wage rates and more liberal insurance and pension benefits. Generally, similar agreements were negotiated, without major strikes, by a variety of other industries, including electrical machinery, meatpacking, and paper, and by the operating brotherhoods of the Nation's railroads. On the other hand, relatively poor economic conditions in textiles and coal mining were pervasive influences in keeping levels of strike activity in these industries low.

Industries Affected

The reduced tempo of strike activity was reflected in the fact that every industry group experienced fewer stoppages than in 1953. Similarly, in almost all industries the number of workers and man-days of idleness were lower than in most or all postwar years. The most notable exception was in lumber where the prolonged West Coast strike raised this industry's idleness to a postwar peak. About 4 times as many

http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis

workers and 8 times as many man-days of idleness were recorded in this industry group as in 1953. In contrast with a number of other large industries, wage rates for most workers in the Northwest lumber industry had not been increased during 1953. The strike began in June when lumber producers and the AFL and CIO unions failed to agree on a wage increase after 4 months of negotiations. Except for scattered settlements most of the lumber and sawmill workers remained out until early September, when they agreed to the appointment of a factfinding board proposed by the Governors of Washington and Oregon. Subsequently, the board recommended a $7^{1}/_{2}$ -cent hourly wage increase which was adopted generally in the industry.

In the rubber industry, 2 strikes (1 of 23 days at Firestone Tire and Rubber Co., and 1 of 51 days at Goodyear Tire and Rubber Co.) brought idleness to its highest point in recent years. Except for lumber and rubber, where idleness exceeded 2 percent of total time worked, no other industry group experienced an idleness ratio that exceeded 0.75 of 1 percent of the estimated time worked in 1954 (table 5).

Two long strikes—one in Pittsburgh and another in Port Arthur, Tex.—accounted for the highest level of strike idleness in retail and wholesale trade in recent years. The Pittsburgh department store strike involving several thousand workers began late in 1953 and continued throughout 1954. A few of the 12 AFL locals involved reached agreement late in 1954, but many of their

members did not return to their former jobs pending settlement by the unions that remained on strike.

In construction, which reached peak levels of building activity in 1954, strike idleness, although relatively high, remained below 1952 and 1953. The total number of construction strikes (804) was lower than in 1953, but it included 7 of the year's 18 stoppages of 10,000 or more workers.

By way of contrast, in textiles, despite strikes against wage reductions in several woolen firms (American Woolen Co., the Woonsocket Association of Manufacturers, Inc., and Bachmann Uxbridge Worsted Corp.), idleness was markedly below other years since World War II except for 1953 and 1949, when the industry was also experiencing pronounced economic difficulties.

Typically, mining has had a high incidence of strikes. This industry group experienced more work stoppages in 1954 than any other except construction; trade; and transportation, communication, and other public utilities. However, the number of mining strikes in both 1953 and 1954 showed a sharper decline compared with the period 1946-52 than that for any other industry group.

Unlike earlier years, more idleness occurred in metal mining than in bituminous coal. Although only 9 of the 249 strikes in the mining industry group occurred in metal mining, these few stoppages accounted for 46 percent of the group's total idleness. Most of the metal mining idleness was caused by strikes involving the independent Mine, Mill and Smelter Workers Union at nonferrous metal mining operations of Anaconda Copper Mining Co., and Kennecott Copper Corp.

Most of the coal mining strikes that did occur were brief, localized stoppages growing out of grievances over working conditions. The only large strike in bituminous coal was a 9-day sympathy action of 13,000 workers at mines of 8 companies in Southwestern Pennsylvania, which arose out of a seniority dispute relating to layoff procedures in a mine employing several hundred workers.

The economic problems in anthracite mining, where employment dropped to its lowest level in more than a half century, were reflected in the Panther Valley (Pa.) dispute that signaled the liquidation of the

The agreement reached in November 1954 by the Teamsters' local representing drivers and helpers provided for a wage increase but gave the stores the right to decide when to assign helpers to delivery drivers; the latter provision had been opposed by the union. The issue of parcel post deliveries was resolved by agreement that they would be used only when all drivers are working. A warehouse local affiliated with the Teamsters agreed to a wage increase and a modified union shop, and a lodge of the AFL Machinists settled for a wage increase. The strike ended March 16, 1955, after the unions representing office workers, retail clerks, and restaurant workers agreed to remove their picket lines and continue negotiations with the employers. All other unions involved had reached agreement with the stores prior to this date.

large anthracite producing operations of the Lehigh Navigation Coal Co. After this company had closed its mines in the Panther Valley in early May because of "excessive operating losses," it proposed a reopening of the mines with revised work rules designed to increase the miners' daily production. Acceptance of these proposals was urged by national officials of the United Mine Workers (Ind.), but they were rejected by rank-and-file members of the Tamaqua local who established picket lines which prevented reopening of the mines. sequently, some of the mines were leased to another company, which resumed partial operations with a smaller labor force under a contract negotiated with the United Mine Workers.

Principal Issues

As in other recent years, wages, hours, and supplementary benefits, either alone or in combination with issues involving union status, accounted for about half of all work stoppages and a higher proportion of workers and idleness (table 4). These two groups of issues caused 80 percent of the idleness in 1954; the corresponding proportions in other years since 1945 ranged from 70 to about 95 percent. Most stoppages in this category involved efforts to improve rates of pay and related benefits, but a few were efforts to resist wage reductions (e.g., strikes in the woolen industry).

Of the year's 18 largest strikes, 12 arose primarily from disputes over issues of wages, hours, and/or supplementary benefits. These were the Northwest lumber strike; 5 stoppages in construction; 2 rubber strikes; a New York-New Jersey trucking strike; a 3-day nationwide stoppage of installation equipment employees of Western Electric Co.; a 13-day strike at Sperry Gyroscope Co. in Great Neck, N. Y., and the 2-day October stoppage of New York dockworkers. One of the longest and most bitter strikes over wage and supplementary benefits issues involved employees of the Kohler Co. at Kohler, Wis. It began April 5 and was still in effect at the end of the year.

A 6-month stoppage over wages and related benefits combined with union security, involving several thousand employees of the Dierks Lumber Corp. in Arkansas and Oklahoma, produced considerable violence. The long Pittsburgh department store stoppage also involved similar issues.

The October work stoppage in the Port of New York—the second major dock strike

during the year-occurred over a retroactive wage increase for longshoremen after NLRB certification of the International Longshoremen's Association (Ind.) as the bargaining agent for these workers (on August Because of the long representation 27). struggle between this union and the AFL longshoremen, no change in wages and working conditions had been negotiated when the previous contract expired in October 1953. The longshoremen struck on October 5, 1954, to enforce their demand that, before negotiating a new contract, a wage increase should be granted retroactive to the expiration of the former contract. The stoppage ended on October 6 after the New York Shipping Association agreed to an 8-cent hourly wage increase, retroactive to October 1, 1953, and the union pledged not to strike for 45 days pending negotiations on the new contract.

Union status alone was the major issue in about 12 percent of the strikes, and accounted for about 3 percent of the workers and man-days of idleness. No strikes in this category involved 10,000 or more workers, but there were several smaller long strikes. A drive by the CIO Distributive, Processing and Office Workers Union to organize workers employed in retail stores in Port Arthur, Tex., resulted in a stoppage in late October 1953 that was still in effect at the end of 1954. Another lengthy strike over union security involved efforts of the CIO United Steelworkers to gain recognition and a contract from Buffalo Arms, Inc., at Akron, N. Y., after the union was certified as bargaining agent for the plant's employees. This stoppage also continued into 1955.

As in most postwar years, disputes over day-to-day working conditions, such as work loads, job security, shop conditions and policies, together with protests against court injunctions or administrative actions of government agencies, ranked second to wages and related benefits as strike causes. These disputes accounted for a fourth of all stoppages, 30 percent of workers, and about 14 percent of total idleness in 1954. The 29-day work stoppage of longshoremen in the New York City area in March and the July stoppage at Detroit plants of the Chrysler Corp. contributed about a fifth of the total idleness in this group. Seniority was the major issue in a 146-day stoppage at the wire plant of the Western Electric Co. in Tonawanda, N. Y. lengthening of scheduled flight duty time resulted in a strike of pilots of American Airlines against nonstop transcontinental flights exceeding 8 hours.

The March longshore stoppage began when supporters of the Independent International Longshoremen's Association defied a court injunction obtained by the National Labor Relations Board under the secondary boycott provisions of the Labor Management Previously, Relations (Taft-Hartley) Act. as a result of rivalry with the AFL Longshoremen and Teamsters, the union had declared a boycott of all truck freight handled by the Teamsters at any New York pier. The Teamsters retaliated by establishing picket lines. On March 4, the NLRB obtained a temporary Federal court restraining order directing the independent union to avoid strikes or other actions that would interfere with the loading or unloading of trucks at the piers. Supporters of the independent ILA stopped work on March 5, contending that the restraining order should also have applied to the AFL Teamsters and Longshoremen. Although the NLRB petitioned the court for contempt action against the ILA and some of its officers, the stoppage remained virtually portwide during most of March with occasional clashes occurring between AFL Longshoremen and pickets of the independent union. Endorsement of the strike by officials of the independent ILA, on March 24, and the threat that the strike might spread to other East Coast ports, brought NLRB warnings of further legal action and a joint statement from the Secretary of Labor, the Governor of New York, and other officials that the Federal and State Governments would join in efforts to end the strike. The strike ended April 2 after the NLRB set aside the December 1953 representation election among longshoremen on New York docks 4 and indicated that the independent ILA would have no place on the new ballot if it did not cease "conduct designed to thwart or abuse the processes of the Board."

A 24-day strike of pilots employed by American Airlines, Inc., was called by the AFL Air Line Pilots Association in July to protest scheduling of nonstop Westbound coast-to-coast flights in excess of 8 hours flying time without a relief crew. The union asserted that such flights involved a safety hazard and protested the waiver by the Civil Aeronautics Board of a 23-year-old, 8-hour flying rule thereby enabling scheduled air carriers to make nonstop coast-to-coast

flights with the same crews. The stoppage ended August 23 after the union and the company accepted a proposal by the National (Railway) Mediation Board that a neutral consider the dispute and submit nonbinding recommendations. 5

Protests against diversion of work or movement of plants to other areas produced some of the year's work stoppages, several of which received widespread union support as labor became increasingly concerned with the problem of plant migration. of the most prominent strikes in this group involved employees of the Hat Corporation of America in Norwalk, Conn., who were idle from July 1953 to late May 1954. workers, represented by the United Hatters, Cap and Millinery Workers (AFL) were provided moral and monetary support by a number of AFL and CIO unions. Although the final settlement did not deal with the basic issue—the union's efforts to obtain a job security clause in the contract that would prohibit further diversion of work from the Norwalk area—the company indicated that it would continue to make Norwalk the main base of its major operations in producing felt hats.

A dispute between the American Safety Razor Corp., and the independent United Electrical Workers Union centered on company proposals to transfer its operations from its 50-year-old Brooklyn, N. Y., plant to Staunton, Va. The resulting strike began as a sit-in action on September 30. This phase of the strike ended on October 13 in the face of a court order. Several days later the company announced its intention to close the plant and hasten the transfer of its operations to the new location.

A strike at the Yonkers, N. Y., plant of Alexander Smith, Inc. that began in mid-June was called because of a dispute over

⁴ See Analysis of Work Stoppages, 1953, BLS Bull. 1163 (pp. 31 and 32) for a discussion of the dispute between the dock workers' unions in the Port of New York in 1953.

The dispute was settled in January 1955, when the employer and the union signed an agreement permitting westbound nonstop flights in excess of 8 hours and providing extra pay for pilots on such flights. The agreement reaffirmed an 8-hour, flight-time rule for all other schedules and provided that pilots on nonstop transcontinental flights would receive 50 percent more flight-time credit and pay for all time in excess of 8 hours on a single flight. Extra pay of \$1.50 an hour for the captain and \$1 for the copilot would be earned for the entire time on a flight that takes more than 8 hours.

the employer's proposal for a new wage rate structure at the plant and changes in work-On June 24 the company aning rules. nounced that it would close the plant permanently and transfer production to its other plants. Officials of the Textile Workers Union (CIO) appealed to the Governor of New York for aid in maintaining operations at the 100-year-old Yonkers plant. sequently, the company and the union signed an agreement providing for the temporary resumption of work in Yonkers on a limited scale to complete carpeting already on the looms. By mid-August the company began to lay off workers preparatory to final closing.

Working conditions were relatively more important causes of strike idleness in transportation, communication, and public utilities; primary metals; mining; transportation equipment; textiles; and food than in other industry groups. Only in the first industry group did they exceed wages, hours, and supplementary benefits as the leading cause of idleness.

Strikes over interunion or intraunion matters (including union rivalry, jurisdictional, and sympathy strikes) usually account for a relatively small proportion of total strike activity and in this respect 1954 was no exception. These strikes accounted for 7 percent of all stoppages and 9 percent of the workers but 2 percent of total strike The number of such strikes was idleness. somewhat lower than in the previous 3 years and fewer days of idleness were involved than in any postwar year except 1949 and However, the number of workers idle in such disputes was greater than in most recent years and both the number of work stoppages and workers involved represented a higher proportion of the total resulting from all causes than in any year for which data are available.

Stoppages by State

Idleness resulting from work stoppages in two-thirds of the States was lower in 1954 than in all or almost all postwar years and in only nine States was it unusually high compared with preceding years. The most marked deviations from the national trend occurred in Oregon, Washington, and Montana: The long lumber strike resulted in alltime idleness peaks for the first two States and a nonferrous strike raised Montana idleness to its highest level since 1934 (table 6).

A number of States showed very sharp declines in work stoppage idleness compared with most previous years, with some of the most notable decreases occurring in States where coal mining is important. In 1953 also, the decline in the number of coal mining stoppages in these States similarly affected strike idleness.

Total idleness in Pennsylvania amounted to 13.4 percent of all strike idleness in the United States. The prolonged Pittsburgh department store strike was a major factor in keeping idleness at a high level in this The lumber strike put Washington State. in second place with 9.4 percent of total idleness and Oregon in fifth place with 8 percent. New York and Ohio ranked third and fourth. 6 No other State accounted for as much as 5 percent of the national figure. Idleness exceeded a million man-days in each of 7 States, in comparison with 9 in 1951 and 1953, and 15 in 1952.

New York recorded the largest number of stoppages in 1954—539 compared with 585 in 1953 and 600 in 1952. By contrast, only 387 stoppages were recorded in Pennsylvania compared with 632 in 1953, and 692 in 1952. A total of 100 or more stoppages occurred in each of 12 States compared with 15 in 1953 and 17 in 1952. All States except South Dakota and Wyoming had 10 or more strikes during the year.

A useful measure of strike activity is one that expresses the amount of idleness incurred as a percentage of the estimated total time worked. This type of measure takes into account both the number of workers on strike and the duration of the stoppage in relation to the total number of man-days in the year (average employment multiplied by the number of normally scheduled working days). Such a ratio reflects the relative impact of work stoppages on total available working time more fully than, for example, a comparison of the number of workers on strike to total employment. Data relating idleness to total working time have been computed for a number of years for the nation as a whole; this year, for the first time, similar calculations are

⁶ About a third of the total idleness in New York State occurred in the transportation, communication, and public utilities group, which includes longshoring. Approximately 40 percent of all idleness in Ohio occurred in the rubber industry and about 20 percent of the total idleness in that State was in the construction trades.

presented on a state-by-state basis. To provide some measure of comparison with previous years, data have also been computed for 1952 and 1953. (Table 4, Appendix A.)

As previously reported, the proportion of idleness to total working time in 1954 was about one-fifth of 1 percent (0.21) for the United States as a whole. Among the individual States (including the District of Columbia), 16 experienced a higher idleness ratio and 33 a lower ratio than the national average. The range was from less than 0.01 percent in two essentially nonindustrial States (South Dakota and Wyoming) to 1.87 percent in Oregon, where the impact of the prolonged lumber strike was sharply felt. In most States, however, the proportions fell within a relatively narrow areabetween 0.07 percent and 0.26 percent.

A ranking of States according to their idleness ratios for 1952, 1953, and 1954, reveals widespread year-to-year shifts. In a number of instances these variations in idleness ratios are related to the fact that a relatively small number of stoppages—or even one long or large stoppage-can have a sharp effect for an individual State, particularly where nonagricultural employment Thus, Montana had the third is small. highest proportion of idleness in 1954 (nonferrous mining and smelting and construction stoppages) but ranked sixth from the lowest in 1952. A long strike of construction workers raised the idleness ratio in Delaware to the highest of any State in 1953; on the other hand, it was ninth from lowest in 1954. Only a few States, notably Connecticut, Massachusetts, Nebraska, New York, North Carolina, North Dakota, Ohio, Pennsylvania, Texas, and Utah, maintained a relatively constant position in all 3 years.

The effect that the industrial composition of a State may have upon strike rates is illustrated by the fact that in 1952 most States in which coal mining is relatively important showed comparatively higher proportions of strike idleness than in 1953 and 1954 when widespread reductions in coalmining activity were accompanied by declines in the number and intensity of work stoppages. In other States such as Utah, the idleness was largely traceable to strikes in a few industries -- nonferrous mining, smelting and refining, and construction. For the most part, the declines in idleness ratios recorded in 1954 in most of the diversified industrial States reflected the generally lower level of strike activity which characterized the year.

Stoppages by Metropolitan Area

Over two-thirds of the stoppages, with almost as high a proportion of workers and over half of the total idleness, occurred in the 117 metropolitan areas that recorded 5 or more work stoppages each; most of these stoppages occurred in the larger industrialized areas (table 7). The nationwide decline in strike activity as compared with earlier postwar years was reflected in most of these areas. Only 3 had more than 100 stoppages in 1954—New York-Northeastern N. J. (553), Detroit (139), Philadelphia (104)—compared with 8 such areas in 1953 and 6 in 1952.

In Paducah, Ky., idleness declined sharply compared with the past two years, returning to earlier postwar levels. There were 6,150 man-days of idleness in that metropolitan area in 1954; in 1952 and 1953, 278,000 and 143,000 man-days of idleness respectively, were recorded largely as the result of strikes on the Atomic Energy Commission's construction project. In 1952, 4 stoppages of 10,000 or more workers occurred at this project, whereas in 1953 there were 2.

Minneapolis experienced the second highest idleness ever recorded for that area because of a month-long strike of approximately 9,500 construction workers. The relatively large amount of idleness in Pittsburgh was mostly due to the prolonged department store strike.

A significant increase in idleness in Fall River, Mass., Memphis, Tenn., and New Bedford, Mass., resulted from stoppages in the rubber industry: The companywide Firestone Tire and Rubber strike in August affected the first two cities while the totals for Memphis were also augmented by a local stoppage at this same company in November. A 51-day companywide strike of Goodyear Tire and Rubber Co., affected New Bedford among other areas.

Protracted strikes in the construction industry were largely responsible for the near record idleness in Atlanta, Ga., Ft. Worth, Tex., Macon, Ga., Muskegon, Mich., Reading, Pa., Spokane, Wash., and Tulsa, Okla. In Tulsa the 1954 idleness was the highest ever recorded, with about 80 percent of the total occurring in a 71-day stoppage

Previous to 1952, data were published for cities rather than for metropolitan areas (p. 36).

of 1,000 construction workers. Tulsa was also affected by the 13-day stoppage of 27,000 construction workers in 5 Southwestern States, which also contributed to a rise in idleness over most earlier years in Baton Rouge, La., Galveston, Tex., Shreveport, La., and Beaumont-Port Arthur, Tex. Most of the increase in the latter area was attributable to the prolonged retail trade strike which began in 1953, and to an areawide construction strike of some 6,000 workers that lasted for 3 weeks.

Several areas experienced relatively high idleness in both 1953 and 1954, compared with other postwar years. In Des Moines, Iowa, a 68-day stoppage of construction workers caused approximately three-quarters of the total idleness of 205,000 man-days in 1953. In 1954,2 Firestone Tire and Rubber Co. strikes—1 companywide and 1 local, and a 14-day stoppage of several thousand construction workers accounted for 70 percent of the Des Moines idleness of 136,000 man-days. In the Knoxville, Tenn., area two-thirds of the 1953 idleness of 283,000 man-days resulted from 2 construction strikes at the Oak Ridge AEC project; in 1954 about 70 percent of the 156,000 man-days idle occurred on the same project. Most idleness in Little Rock, Ark., in 1953 occurred in connection with 2 stoppages of 1,000 workers each while in 1954 it was due largely to several month-long construction strikes.

Unions Involved

Unions affiliated with the AFL were involved in 61 percent of the strikes in 1954; a substantial proportion of these occurred in the construction trades. pages involving AFL unions, however, accounted for less than half of the total number of workers involved and man-days of idleness (table 8). CIO affiliates took part in 22 percent of the strikes accounting for about a third of the workers and man-days Approximately 15 percent of of idleness. the stoppages, with 17 percent of the workers and 11 percent of idleness, involved unions that were not affiliated with either the AFL or CIO. As in 1952 and 1953, many of these stoppages were brief, localized strikes in the coal mining industry. Independent unions called 4 strikes of 10,000 or more workers-the Engineers and Scientists of America at Sperry Gyroscope Co., the International Longshoremen's Association in 2 strikes in the Port of New York, and the United Mine Workers in bituminous coal mines in Southwestern Pennsylvania.

Trends During the Year

Conforming to the seasonal pattern of other years, strike activity was heaviest in the second and third quarters of 1954 (table 3). About 60 percent of the strikes occurred in these 2 quarters with slightly more beginning in the April to June period than in the succeeding 3 months. Eight of the 18 largest stoppages, however, began in the July to September quarter and most of the Pacific Coast lumber idleness also occurred during these months, thereby accounting for the relatively high proportion (44 percent) of the year's total idleness recorded during this 3-month period.

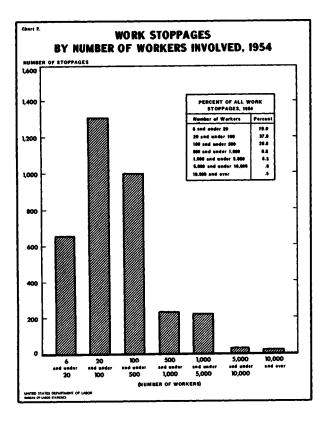

The number of strikes was at its lowest level in the fourth quarter, although mandays idle in this period exceeded that of the January-March quarter.

The last 3 months of the year witnessed several large stoppages: The 2-day strike of New York longshoremen; a 13-day construction strike in the South Central States; and a 5-day truckdrivers' strike in New York and Northern New Jersey. Idleness resulting from these strikes was augmented by the 90-day strike of 12,000 construction workers in the Kansas City area that began in early September and continued into December.

Size of Stoppages

As in previous years, the majority of stoppages involved fewer than 100 workers. Such strikes accounted for almost 60 percent of all stoppages but slightly less than 5 percent of workers and man-days idle (table 9). In contrast, stoppages of 1,000 or more workers involved 70 percent of the workers and accounted for about three-fourths of total idleness. Disputes affecting 1,000 and under 5,000 workers and those of 10,000 or more each accounted for about 30 percent of all workers on strike in 1954. The strikes of 10,000 or more caused a third of total idleness but numbered only one-half of 1 percent of all strikes (tables 2 and 9).

Stoppages of 10,000 workers or more.— The lumber strike in the Pacific Northwest was the largest in 1954, resulting in about 17 percent of all strike idleness. However, the construction industry experienced the largest number of major stoppages (7) as construction activity reached record levels. These stoppages caused about 6 percent of total idleness. The rubber and shipping industries each had 2 stoppages of 10,000 or more. Other strikes of this size were

recorded in each of the following industries: Automobile manufacturing, basic steel, wholesale trade, trucking, scientific instruments, and bituminuous coal mining (table 11).

Three major stoppages lasted more than a month—the 90-day strike of construction workers in the Kansas City area, the 83-day lumber strike, and the 51-day stoppage of Goodyear Tire and Rubber Co. employees in 9 States. Seven large stoppages were concluded in less than a week; another 4 lasted less than 2 weeks; and 4 continued more than 2 weeks but less than a month. None extended into 1955.

Wages and/or other monetary benefits were the dominant issues in 12 of the 18 large strikes. (Five of these were in the construction industry.) Grievances relating to job security, work load, and other working conditions were the major issues in an additional 4 of these stoppages. Of the 2 remaining large strikes, 1 was a jurisdictional dispute, and the other a sympathy action of coal miners in Southwestern Pennsylvania.

The lumber strike was participated in by affiliates of both the AFL and the CIO. American Federation of Labor unions were involved in 8 other major stoppages; affiliates of the Congress of Industrial Organizations in 5 others; and independent unions in 4.

About 3 out of 4 of the stoppages that began in 1954 occurred in a single plant or establishment—approximately the same proportion as in other postwar years. These stoppages affected 41 percent of the workers and accounted for about 29 percent of total idleness. On the other hand, the stoppages that extended to more than 10 establishments comprised only 8 percent of the year's stoppages, but idled 40 percent of the workers for almost half of all strike idleness (table 10).

"National Emergency" Disputes

The emergency machinery provided under the Labor Management Relations (Taft-Hartley) Act for the investigation of disputes was invoked twice by the President in 1954. Both controversies centered about a wage increase for production workers at Atomic Energy Commission facilities operated by Carbide and Carbon Chemicals Co., a division of Union Carbide and Carbon Corp. One of the disputes—involving the CIO United Gas, Coke and Chemical Workers Union at AEC operations in Oak Ridge, Tenn., and Paducah, Ky.—resulted in strike action. The other, involving the AFL Atomic Trades and Labor Council at Oak Ridge National Laboratory and other facilities at Oak Ridge, Tenn., was settled without a work stoppage. In each case, the appointment of boards of inquiry on July 6, 1954, to investigate the disputes followed rejection by the unions of earlier recommendations for wage adjustments by the Atomic Energy Labor Management Relations Panel.

Workers represented by the Gas, Coke and Chemical Workers stopped work on July 7 after rejecting the Panel's recommended 6-cent hourly across-the-board wage increase. The Board of Inquiry reported to the President on July 10 that a "state of crisis" had not been reached but that it

Members of both boards were identical consisting of T. Keith Glennan, president of the Case Institute of Technology, chairman; John F. Floberg, attorney, Washington, D. C.; Paul H. Sanders, professor of law at Vanderbilt University. The boards functioned separately in each of the disputes.

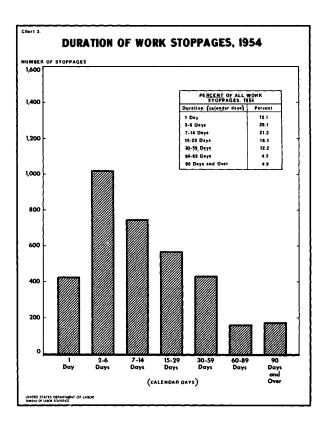

seemed inevitable if the strike continued. On the same day, the workers returned to their jobs after the Secretary of Labor and union officials developed a plan for a Government review of housing, health, and community facilities and other problems affecting the welfare of the workers and their families. The Secretary of Labor also announced that a study would be initiated to seek improvement of labor management relations and strengthening of collective bargaining in the atomic energy field. A resumption of work postponed further action by the Government until August 11, when a Federal district court issued a temporary restraining order to avert a threatened On August 27, the injunction was extended to the full 80-day "waiting" period provided under the Taft-Hartley Act, but agreement had not been reached when the injunction was dissolved on October 30.

The CIO union and the company settled their dispute on November 7 when they agreed to the previously recommended 6-cent hourly basic wage increase, retroactive to April 15, 1954, with provision for an additional 4 cents effective January 15, 1955, together with observance on Friday of certain recognized holidays when they fall on Saturday. Meanwhile, on August 18, the AFL Atomic Trades and Labor Council had reached agreement with the company for a 6-cent hourly, across-the-board increase retroactive to April 15, 1954, with wage reopening available to the union on January 15, 1955. The day after the CIO settlement, the company and the AFL amended their agreement to make it conform with the provisions obtained by the CIO.

Three emergency boards were created by Executive Order in 1954 under the provisions of the Railway Labor Act. However, no major strikes occurred in the railroad industry during 1954.

Duration of Stoppages

On the average, strikes ending in 1954 lasted about 22.5 calendar days—about as long as the average for other years for which data are available, with the exception of the World War II period when most strikes were quickly terminated (table 1). Workers involved in stoppages during the year were idle about 14.7 working days on the average—less than in other postwar years except 1951 and 1953.

About 2 out of 5 stoppages that ended in 1954 lasted less than a week (table 12). These involved the same proportion of the workers and 6 percent of the man-days of idleness. Strikes continuing for a month or more accounted for 22 percent of all strikes, 23 percent of the workers involved, and 68 percent of total idleness. Four stoppages ending during 1954 had lasted more than a year, but the largest of these involved fewer than 150 workers.

Methods of Terminating Stoppages

Almost half of the stoppages ending in 1954 were settled by representatives of the workers and employers without the assistance of an outside agency (table 13). Most of these stoppages, however, were relatively small and brief, accounting for 38 percent of the workers and a fourth of the year's total idleness.

Typically, government mediation and conciliation agencies helped to terminate most of the larger strikes. They assisted in the settlement of 31 percent of the controversies in 1954, but these involved 48 percent of the workers and two-thirds of the man-days of idleness. Less than 1 percent of the strikes, accounting for similar proportions of workers and idleness, were settled with the assistance of nongovernment mediators.

A fifth of all stoppages, including 13 percent of the workers and 6 percent of total idleness, ended with neither formal settlement of the issues nor agreement to negotiate after work was resumed. Included among these were the controversies in which workers returned to their jobs because their efforts appeared hopeless or employers hired new workers to replace striking employees. In about 1 percent of the strikes, the employers affected announced discontinuance of business.

Disposition of Issues

In 84 percent of the strikes the issues in dispute were settled or otherwise disposed of when the strike ended (table 14). This group accounted for 73 percent of the workers and 70 percent of the idleness. In most of these cases agreement was reached on the issues or on their referral to established grievance procedure. This group also includes, however, cases in which the workers returned to their jobs or were replaced by new employees without agreement on the issues or on a plan for their subsequent adjustment.

The parties agreed to resume work while continuing to negotiate in about 8 percent of the stoppages, with 10 percent of the workers and 6 percent of the total idleness. In the remaining situations they agreed to return to work while negotiating with the aid of a third party, submitting the dispute to arbitration, referring the issues to a government agency for decision or election, or referring the dispute to a factfinding board for recommendations.

Available information for earlier periods appears in BLS Bull. No. 1016, Handbook of Labor Statistics, table E-2. For a discussion of the procedures involved in the collection and compilation of work stoppage statistics see BLS Bull. No. 1168, Techniques of Preparing Major BLS Statistical Series, December 1954, ch. 12.

from the parties that an actual work stoppage occurred.

Figures are simple averages; each stoppage is given equal weight regardless of its size.

In this and subsequent tables, workers are counted more than once in these figures if they were involved in more than one stoppage during the year.

The total of 3,468 does not include 13 small disputes for which the Bureau was unable to secure information

¹ The table includes data for each of the metropolitan areas that had five or more stoppages in 1954. Beginning with 1952 data were tabulated separately for 182 metropolitan areas. The information for prior years was confined to city boundaries. The metropolitan areas are principally those on the lists of Standard Metropolitan Areas compiled by the Bureau of the Budget as of January 28, 1949 and June 5, 1950. A few areas were added, including some that had been in the strike series in earlier years. (Lists of these metropolitan areas are available upon request from the Division of Wages and Industrial Relations, Bureau of Labor Statistics.)

Some metropolitan areas include counties in more than one State, and hence an area total may equal or exceed the total for the State in which the major city is located. The Washington, D. C. metropolitan area, which includes the District of Columbia and adjacent counties in Maryland and Virginia, exceeds slightly the 1954 totals for the District of Columbia as shown in table 6, work stoppages by State.

In this table, except as noted below, intermetropolitan area stoppages are counted separately in each area affected, with the workers involved and man-days idle allocated to the respective areas. In the following stoppages it was impossible to secure the information necessary to make such allocations, and accordingly they are not included in the figures for any metropolitan area: Three stoppages involving several thousand employees each in the retail distribution industry in Eastern States; the stoppage of several thousand workers employed by members of the New England Steel Erectors Association in Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont in late August; the stoppage of 1,300 railroad workers in California in November; and the widespread stoppage of workers in the West Coast lumber industry.

TABLE 8. - Work stoppages by affiliation of unions involved, 1954

¹ An establishment, for purposes of this table, is defined as a single physical location where business is conducted or where services or industrial operations are performed; for example, a factory, mill, store, mine, or farm. A stoppage may involve 1, 2, or more establishments of a single employer or it may involve different employers.

TABLE 11.—Analysis of individual work stoppages involving 10,000 or more workers, 19541

Beginning date	Approximate duration (calendar days)	Establishment(s) and location	Union(s) involved	Approximate number of workers involved	Major terms of settlement
March 2	13	Sperry Gyroscope Co., Great Neck, N. Y.	Engineers and Scientists of America (Ind.)	² 12,000	Package of 6.3 percent, including 2.5 percent general wage increase and miscellaneous fringe benefits.
March 5	29	New York Shipping Association, New York, N. Y New Jersey	Int'l. Long- shoremen's Ass'n. (Ind.)	30,000	The president of the union ordered longshoremen to return to work, after the NLRB, on April 1, warned the union it would be declared ineligible for an election to determine the bargaining representative for employees of members of the New York Shipping Association if it did not "cease and desist forthwith to engage in conduct designed to thwart or abuse the processes of the board."
Мау 1	³ 25	Construction industry, Philadelphia area, Pa.	AFL Building Trades Unions (Philadelphia Council)	³ 20,000	Determination of which craft (Steamfitters or Iron Workers) was to be assigned the rigging work in dispute, was to be decided by the presidents of the Plumbers and the Iron Workers Unions.
May l	19	Construction industry, Southwestern Mich.	Intil. Bro. of Carpenters and Joiners (AFL)	19,000	Wage increase of 12 ¹ / ₂ cents an hour, and double time for Saturday, Sunday, and holiday work.
May 10	8	Construction industry, Cleveland area, Ohio	AFL Building Trades Unions (Cleveland Council)	15,000	Wage increase of 12 ¹ / ₂ cents an hour (7 ¹ / ₂ cents retroactive to May 1 and 5 cents effective November 1).
June 21	4 83	Lumber industry, Northern Calif., Idaho, Mont., Oreg., Wash.	Int'l. Wood- workers (CIO); Lumber and Sawmill Workers (AFL)	77,000	Submission of dispute to a factfinding board proposed by the governors of Oregon and Washington; some settle- ments, for varying amounts, negotiated separately on a local basis.
June 23	6	Great Lakes Steel Corp., Detroit area, Mich.	United Steel- workers (CIO)	11,000	Workers voted on June 28 to end strike over work as- signments, on recommenda- tion of international union.
July 1	3	Western Electric Co., (Installation equipment workers), Nationwide	Communications Workers of America (CIO)	13,000	Wage increase of 5 to 7 cents an hour for equipment installers and \$1.50 a week for job clerks, effective June 28 together with some reduction in regional wage differentials.
July 8	51	The Goodyear Tire and Rubber Co., 9 States: Ala., Calif., Ind., Kans., Mass., Mich., Nebr., Ohio, Vt.	United Rubber Workers (CIO)	22,000	Average hourly wage increase of 6 ¹ / ₂ cents.
July 12	9	Bituminous-coal mines, Southwestern Pa.	United Mine Workers (Ind.)		Workers returned after miners from the Nemacolin, Pa., mine of the Buckeye Coal Co., withdrew their picket lines from neighboring mines.

TABLE 11.—Analysis of individual work stoppages involving 10,000 or more workers, 19541 - Continued

Beginning date	Approximate duration (calendar days)	Establishment(s) and location	Union(s) involved	Approximate number of workers involved	Major terms of settlement
July 19	5	Chrysler Corp., Detroit, Mich.	United Automobile Workers (CIO)	47,000	Workers voted on July 23 to return to their jobs after the union's executive board ordered resumption of work and full use of grievance procedures.
July 19	3	Construction industry, Southern Calif.	Int'l. Bro. of Carpenters and Joiners (AFL)	30,000	Wage increase of 7 ¹ / ₂ cents an hour effective August 1; a 5-cent-an-hour employer contribution to the union's health and welfare fund, effective September 1, and an additional 5-cent employer contribution effective May 1, 1955.
August 13	23	Firestone Tire and Rubber Co., 7 States: Calif., Ind., Iowa, Mass., Ohio, Pa., Tenn.	United Rubber Workers (CIO)	21,000	Average hourly wage increase of 6 k cents, with adjustment of a number of "inequities."
September 7	90	Construction industry, Kansas City, Mo. and Kansas City, Kans.	United Ass'n. of Journeymen and Apprentices of the Plumbing and Pipefitting Industry (AFL)	⁵ 12,000	A 12 ¹ / ₂ cent hourly wage increase for pipefitters; a wage increase of 15 cents an hour for plumbers; a travel allowance of 5 cents for each mile beyond a 15-mile zone for pipefitters and plumbers. ⁵
September 10	6	Peter Kiewit Sons' Co., (Atomic Energy Commission construction project), Pike County, Ohio	AFL Building Trades Unions (Portsmouth Council)	18,000	Construction contractor and unions entered into a memorandum of understanding which established procedures for referring disputes relating to work classification to Secretary of Labor.
October 4	13	Construction industry, 5 States: Ark., La., N. Mex., Okla., Tex.	Int [†] l. Bro. of Boilermakers (AFL)	27,000	Wage increase of 7 ¹ / ₂ cents an hour retroactive to September 20; 7 ¹ / ₂ cents a man-hour employer contribution to a health and welfare plan, effective January 3, 1955.
October 5	2	New York Shipping Association, New York, N. Y New Jersey	Int ¹ l. Long- shoremen ¹ s Ass ² n. (Ind.)	20,000	An 8-cent hourly wage increase retroactive to October 1,1953. The union pledged not to strike again for 45 days pending negotiations on a new contract.
October 16	6 5	Trucking companies, Southeastern N. Y., and Northern N. J.	Int'l Bro. of Teamsters (AFL)	30,000	A 25-cent hourly "package" increase, including 20 cents in wages and 5 cents for pensions, welfare, and vacation benefits; plus additional increases over a 12-to 18-month period for workers outside New York City to provide standardized wage scales for the metropolitan area.

¹ More detailed information on these stoppages is carried in the Bureau¹s Monthly Labor Review, in the monthly summary of Current Wage Developments, and elsewhere in this bulletin.

A majority of the workers involved stopped work on June 21, although scattered stoppages occurred in the pre-

At the end of the first week of the strike, the union released members of other unions in the plant from observance of their picket line. About 10,000 production workers resumed work on March 8. Members of the Engineers Association returned to work on March 15.

About 1,000 steamfitters stopped work May 1 on some 35 construction jobs; this stoppage idled about 3,000 other building trades workers. The Building Trades Council's 2-day protest stoppage increased the idleness to approximately 20,000 workers on May 11. The steamfitters continued their stoppage until May 25.

ceeding week. Most workers returned by September 13.

The number idled in this stoppage increased from about 2,000 in early September to a maximum of about 12,000 in late October and early November. Pipefitters reached agreement with the Heating, Piping and Air Conditioning Contractors Association on November 6 but plumbers did not reach agreement with the Associated Plumbing Contrac-

Not reported	68	1.9	6,990	.4	111,000	. 5

Includes (a) those strikes in which a settlement was reached on the issues prior to return to work, (b) those in which the parties agreed to utilize the company's grievance procedures, and (c) any strikes in which the workers returned without formal agreement or settlement.

By referral to a nonbinding ad hoc factfinding board or panel and subsequent negotiations between employer

Federal Reserve Bank of St. Louis

and union. The lumber strike in the Pacific Northwest, involving 77,000 workers was in this category. (See p. 3.)

Includes cases referred to the National or State labor relations boards or other agencies for administrative action or employee elections, rather than factfinding, mediation, or conciliation; and interunion or intraunion disputes for which specific union procedures for adjudication have been developed.

Appendix A

¹ This figure is less than the sum of the figures below because a few stoppages extending into two or more industry groups have been counted in this column in each industry group affected; workers involved and man-days idle were divided among the respective groups.

2 Idleness in 1954 resulting from stoppages which began in the preceding year.

3 Stoppages involving municipally operated utilities are included under "transportation, communication, and other public utilities."

The change in title does not indicate any change from previous years in definition or content of these groups.

This figure is less than the sum of the corresponding figures because a few stoppages, each affecting more than one industry group, have been counted in each industry group affected. Workers involved and man-days idle were allocated to the respective groups.

Includes other finished products made from fabrics and similar materials.

Idleness in 1954 resulting from stoppages which began in the preceding year.

Excludes ordnance, machinery, and transportation equipment.

Includes professional, scientific, and controlling instruments; photographic and optical goods; watches and clocks.

Stoppages involving municipally operated utilities are included under "transportation, communication, and other public utilities."

In the industry groups for which no data are presented the Bureau has not recorded any stoppages during 1954.

This figure is less than the sum of the figures below because a few stoppages extending into two or more industry groups have been counted in this column in each industry group affected; workers involved and man-days idle were divided among the respective groups.

Idleness in 1954 resulting from stoppages which began in the preceding year.

Stoppages involving municipally operated utilities are included under "transportation, communication, and other public utilities."

Appendix B

Scope, Methods, and Definitions 1

The Bureau's statistics include all work stoppages occurring in the continental United States, known to the Bureau of Labor Statistics and its cooperating agencies, involving six or more workers and lasting a full shift or longer. Work stoppages are measured in terms of the number of stoppages, workers involved, and man-days of idleness.

Definitions

Strike or Lockout.—A strike is defined as a temporary stoppage of work by a group of employees to express a grievance or enforce a demand. A lockout is a temporary withholding of work from a group of employees by an employer (or a group of employers) in order to get the employees to accept the employer terms. Because of the complexities involved in most labor management disputes, the Bureau makes no effort to determine whether the stoppages are initiated by the workers or the employers. The terms "strike" and "work stoppage" are used interchangeably in this report.

Workers and Idleness.—Figures on "workers involved" and "man-days idle" include all workers made idle for one shift or longer in establishments directly involved in a stoppage. They do not measure secondary idleness—that is, the effects of a stoppage on other establishments or industries whose employees may be made idle as a result of material or service shortages.

The total number of workers involved in strikes in a given year counts workers more than once if they were involved in more than one stoppage during that year. (Thus in 1949, 365,000 to 400,000 coal miners struck on 3 distinct occasions, accounting for about half of the year's total of 3,030,000 workers.)

In some prolonged stoppages it is necessary to estimate in part the total mandays of idleness, if the exact number of workers idle each day is not known. Whenever possible significant changes in the number of workers idle are secured from the parties for use in computing idleness.

Idleness as Percent of Total Working Time.—In computing the number of workers involved in strikes as a percent of total employment and idleness as a percent of total working time, the following figures for total employed workers have been used:

From 1927 to 1950 employment of all workers except those in occupations and professions in which little if any union organization existed or in which stoppages rarely if ever occurred. In most industries, all wage and salary workers were included except those in executive, managerial, or high supervisory positions, or those performing professional work the nature of which makes union organization or group action unlikely. The figure excluded all self-employed, domestic workers, workers on farms employing fewer than six persons, all Federal and State Government employees, and officials, both elected and appointed, in local governments.

Beginning in 1951 the Bureau's estimates of total nonagricultural employment, exclusive of government have been used. Tests show that idleness computed on the basis of nonagricultural employment (exclusive of government) usually differs by less than onetenth of a percentage point from that obtained by the former method while the percentage of workers idle (compared to total employment) differs by about 0.5 or 0.6 of a point. For example, the percentage of workers idle during 1950 computed on the same base as the figures for earlier years is 6.9 and the percent of idleness is 0.44, compared with 6.3 and 0.40, respectively, computed on the new base.

"Estimated working time" is computed by multiplying the average number of employed workers for the year by the number of days typically worked by most employees. Saturdays (when customarily not worked),

¹ More detailed information on methods of calculation, sources, and classification is available in Bull. 1168, Techniques of Preparing Major BLS Statistical Series, December 1954 (p. 106).

Sundays, and established holidays are excluded in the computations.

The same procedure has been used in preparing the estimates of idleness by State. Although the number of holidays varies somewhat from one part of the country to another and there are other minor differences in the amount of working time from area to area, correction for such differences would not appreciably affect the percentages of idleness presented by State. For example, if idleness computed on the assumption of 6 holidays annually amounted to 2 percent of total working time in a given State, it would amount to only 2.02 percent of working time if allowance were made for 8 holidays; if idleness amounted to less than I percent of total working time the idleness ratios would not be changed at all within the margin of rounding whether 6 or 8 holidays were allowed for.

<u>Duration</u>.—Duration is expressed in terms of calendar days, including nonwork-days, whereas only workdays are used in computing total idleness.

State Data.—In the tabulations relating to individual States, stoppages occurring in more than one State are listed separately in each State affected, but the workers and man-days of idleness are allocated among each of the affected States.

Metropolitan Area Data.—Beginning with 1952, data have been tabulated separately for 182 metropolitan areas. The information for earlier years was confined to city boundaries. The metropolitan area boundaries conform to the Standard Metropolitan Area definitions issued by the Bureau of the Budget as of January 29, 1949, and June 5, 1950. In addition to these areas, a few smaller communities included in the strike series in previous years have been retained.

Some metropolitan areas include counties in more than one State, and, hence, statistics for an area may occasionally equal or exceed the total for the State in which the major city is located (e.g., strike total for the New York-Northeastern New Jersey metropolitan area, which includes greater New York and the surrounding areas as well as eight counties in Northeastern New

Jersey, exceeded the number recorded for New York State in 1953).

Unions involved are those directly participating in the dispute although the count of workers includes all those made idle for one shift or longer in establishments directly involved in the dispute, including members of other unions or nonunion workers.

Sources of Information

Occurrence of Strikes. - Information as to actual or probable existence of work stoppages is collected from a number of sources. Clippings on labor disputes are obtained from a comprehensive coverage of daily and weekly newspapers throughout the country. Information is received from the Federal Mediation and Conciliation Service as well as agencies in various States such as State boards of mediation and arbitration, research divisions of State labor department offices, and local offices of State employment security agencies provided through the Bureau of Employment Security of the U. S. Department of Labor. Some employer associations, companies, and unions also furnish the Bureau with work-stoppage information on a regular basis.

Respondents to Questionnaire.—Each party to a known dispute is requested to furnish the Bureau of Labor Statistics information concerning the number of workers involved in the stoppage, its duration, major issues, and method of settlement. A questionnaire, approved by the Bureau of the Budget, is mailed to the parties to obtain these data.

Limitations of Data.—Although the Bureau seeks to obtain complete coverage of all strikes involving six or more workers and lasting a full shift or longer, information is undoubtedly missing on some of the smaller strikes. Presumably, addition of these missing strikes would not measurably affect the figures for number of workers and man-days of idleness, particularly since these aggregates are rounded.

In its efforts to improve the completeness of the count of stoppages the Bureau has developed, at various periods since the beginning of the series, new sources of information as to the probable existence of such stoppages. These sources have probably increased the number of strikes recorded but have had little effect on the number of workers or total idleness.

The same procedure is followed in allocating data on stoppages occurring in more than one industry group, specific industry, or metropolitan area.

In 1943 the Bureau set up a cooperative arrangement with the Solid Fuels Administration which resulted in reports on several hundred strikes not recorded from anyother sources. These strikes numbered about 5 percent of the total number of strikes in that year. When this agency went out of existence, cooperative arrangements for obtaining reports on work stoppages were made with various coal associations and companies.

Beginning in mid-1950, a new source of strike "leads" was added through a co-operative arrangement with the Bureau of Employment Security of the U. S. Department of Labor by which local offices of State employment security agencies supply monthly reports on work stoppages coming

to their attention. It is estimated that this increased the number of strikes reported in 1950 by about 5 percent and in 1951 and 1952 by approximately 10 percent. Since most of these stoppages were small, they increased the number of workers involved and man-days of idleness by less than 2 percent in 1950 and by less than 3 percent in 1951 and 1952. Tests of the effect of this added source of information have not been made since 1952.

As new, local agencies having knowledge of the existence of work stoppages are established, or changes are made in their collection methods, every effort is made to establish cooperative arrangements with them.
