This publication, Wholesale Prices and Price Indexes, 1959 (BLS Bull. 1295), brings together statistical data on primary market prices published by the Bureau of Labor Statistics for 1959. Indexes for all commodities, major groups, subgroups, product classes, special commodity groupings, and individual items and prices for selected commodities are presented. Included are brief descriptions of the indexes, specifications for items priced, and a short sketch of the movements of prices over the year.

The bulletin was prepared in the Bureau's Division of Prices and Cost of Living. The technical descriptions were prepared under the direction of Allan D. Searle, Chief, Wholesale Price Index Branch. Dorothy K. Newman, Chief of the Branch of Price Economics and Publications, wrote the analysis of price trends.

WHOLESALE PRICES AND PRICE INDEXES, 1959

SUMMARY

MAJOR MOVEMENTS IN PRIMARY MARKET PRICES,
December 1958-December 1959

Wholesale prices appeared to stabilize in 1959, when price increases for the nonagricultural or industrial commodities only slightly outweighed a decline in prices for farm products and processed foods. The small advance of 0.3 percent over prices in 1958 was well below the annual average rise in each of the previous 3 years.

The increase of 1.7 percent in prices for industrial commodities resulted from the economic recovery in 1959, whereas the decline of 4.8 percent in prices for farm products and processed foods developed chiefly when hog production reached a cyclical peak during the year, and meat supplies increased sharply.

Industrial prices in 1959 were influenced by an upsurge in producer and consumer demand created by expanding production, domestic investment, inventory accumulation, and expenditures for consumer commodities (especially durable goods) and services. Pressures on supplies and on prices were intensified during the first half of the year when the strong upward trend in inventory accumulation gained extra momentum in anticipation of a steel strike during the summer.

In addition to strong demand, costs were rising. Price increases for materials occurred at each stage of manufacture. They were sizable, particularly during the first half of the year, for the crude materials for further processing, including such basic commodities as hides, fuels, crude natural rubber, scrap metals, and wastepaper. On the average, unit labor costs (labor compensation per unit of production) rose for the fourth successive year in 1959. ^{1/} Construction costs and corporate profits advanced to record levels. Taxes and rates for local services were rising. Transportation rates were relatively unchanged in 1959 but only after a steady uptrend since 1956.

Major price developments in 1959, particularly in the first half of the year, resembled those in 1955, when the economy was also showing a strong recovery from recession and similar economic and market influences were at play. Average prices rose only slightly in both years, but industrial prices increased appreciably after some leveling out in the previous recession year. At the same time, prices of agricultural products dropped almost 5 percent. Average wholesale prices would have risen much more both in 1955 and in 1959 except for the effect on agricultural prices of a similar near cyclical peak in hog slaughter, pork production, and in cattle numbers. Thus, in 1955, and again in 1959, hog slaughter and pork production reached a peacetime record, and beef production was on an uptrend; supplies of livestock and meats rose substantially; and prices dropped sharply. This was the most important influence in these years on the overall trend of prices for farm products and processed foods.

Industrial Prices

The rise in industrial prices tapered off during the latter half of 1959, when long and virtually industrywide work stoppages in basic steel and copper production ^{2/} and a steeply declining trend in housing starts adversely affected production and employment in a gradually broadening area of the economy. The strong expansion in business activity of the previous 12 months was halted after the second quarter of the year, and pressures on facilities were eased.

The effect on prices is particularly well illustrated in the case of durable goods, for which most of the drop in production and demand occurred. Prices leveled off or declined intermittently during the latter half of 1959 for durable manufactures and materials used in them--the crude materials and materials at the intermediate and finished stages of processing. As 1959 drew to a close, prices for construction materials as a group edged off, especially compared with a year earlier, when construction was booming and prices remained firm even during the normally slack winter season. Despite price declines toward the close of the year, the average price rise for the year was greatest in durable goods in general and construction materials as a special group.

Among specific durable commodity areas, prices (annual averages) rose most in 1959 for machinery and motive products, metals, and lumber. Average prices rose significantly also among some of the industrial nondurable commodities, such as crude natural rubber, wastepaper, hides, skins, and leather; and cotton textiles and apparel. Prices declined principally for petroleum and its products.

Durable commodities

The average price rise for machinery and motive products in 1959 (2.1 percent) was actually the smallest average annual increase since 1954, but it continued the steady uptrend of the past 14 years. In this commodity group, prices rose most for machinery and equipment, such as construction, electrical, metalworking, and "general purpose"--i.e., pumps and compressors, industrial furnaces and ovens, and industrial material handling equipment, among others. Influenced by continuous growth in expenditures for producers' durable equipment, prices continued upward throughout the year for these groups of machinery. Prices for agricultural machinery increased in the first half of the year, declined slightly, when new orders and sales dropped off along with declining farm income, but recovered to a level almost 1 percent above a year earlier by December.

A substantial recovery from relatively low 1958 levels was made in motor vehicle production and sales in 1959. Nevertheless, the 1959 totals did not equal those of the 3 years preceding 1958, and with the introduction of new 1960 models in October 1959, average prices for standard passenger cars and motor trucks declined slightly. In earlier years, prices had usually risen somewhat with the introduction of new models in the fall. By December, average prices for motor vehicles were 1 percent below a year earlier, but average prices for the year, which reflect prices of the 1959 as well as the 1960 models, remained well above corresponding indexes for 1958--2.2 percent. This was, nevertheless, the smallest annual average increase in motor vehicle prices since 1954. The relatively stable or slightly lower prices of 1960 models reflect to some degree the fact that for many models no significant changes were made in engineering and design. In addition, the 1959 automobile market was unsettled by continued competition with foreign make cars and the introduction in the fall of domestic compact cars.

^{2/} The steel strike began on July 15, and production was resumed under an injunction, in accordance with the Taft-Hartley Act (Labor--Management Relations Act, 1947, P.L. 101, 80th Cong., 1st Sess.) on November 7. The work stoppage in copper was virtually industrywide by the last week in August 1959, and continued throughout the year.

After a small decline in 1958, the price rise for metals and metal products in 1959 averaged about the same as in 1957, approximately 2 percent--substantially less than the increases of 1955 and 1956 when expenditures for business capital goods were accelerating sharply. The all-time peak in average prices was reached in November 1959, when the price index for metals and metal products stood at 155.8 percent of the 1947-49 average--the highest price level relative to this base period of any of the commodity groups in the Wholesale Price Index.

As in most years of rising prices for metals and sharply fluctuating metal market conditions, the prices for scrap metals, which are exceedingly sensitive to changes in demand and supply, increased the most. Thus, 1959 prices for iron and steel scrap averaged 6.8 percent above those of 1958, and nonferrous scrap prices were 13.4 percent higher than in 1958.

In general, prices for nonferrous metals and products increased more than those for the ferrous. In fact, prices for steel mill products moved little during the year, the most recent industrywide price increase having taken effect in August 1958. In December 1959, reported prices for domestically produced steel mill products were the same as a year earlier, even though heavy anticipatory buying of iron and steel and their products took place in the first half of the year before the strike in July, and stocks were rapidly reduced in the last half when the strike was underway. In contrast, the acceleration of copper purchases in anticipation of a midyear work stoppage in the copper industry served to bid up prices, already under the influence of heavy demand resulting from the high level of domestic uses. Copper prices rose 8.6 percent between January and June 1959. During July and August, a more optimistic view of labor-management negotiations as well as the record levels of production and stocks resulted in a 4.7-percent drop. After operations were suspended in most of the domestic copper industry in August, prices rose again. Prices of primary copper increased from 29 cents a pound in December 1958 and January 1959 to 33 cents by the end of the year--the highest price since early 1957. Prices for mill shapes and wire and cable followed the trend of primary copper prices and by December 1959 were between 3 and 7 percent above a year earlier.

Prices for lumber and wood products in 1959 were influenced primarily by a record volume of expenditures for residential building. The dollar volume of housing put in place held up throughout most of the year, even after housing starts began to drop sharply in July. In addition, other less important wood-using activities expanded during the recovery from the 1957-58 recession. The 6.9-percent increase in average annual prices for lumber and wood products from 1958 exceeded the 1958-59 price rise for all other commodity groups in the Wholesale Price Index, except for hides, skins, leather, and leather products. Most of the rise occurred in the first half of the year, as construction activity gained momentum. By June, the index for lumber and wood products reached a record 128.9, slightly exceeding the previous peak in 1956, and 10.7 percent above the figure for June 1958. Price declines during the latter half of 1959, the period when lumber prices normally drop somewhat, nevertheless left the index in December about 4 percent above a year earlier.

Nondurable commodities

The 13.6-percent average advance in prices for hides, skins, leather, and leather products was the largest since 1951, during the Korean Conflict period. In 1959, as in 1951, a sharp reduction in the number of cattle and calves slaughtered, and consequently in the supply of hides and leather, occurred simultaneously with a strong increase in demand. The 1959 index average--114.3 (1947-49=100)--was the highest on record, with the exception of the 120.3 reached in 1951.

Prices for textiles and apparel also responded to increased demand in 1959, when, in addition, production was limited to 5-day working schedules in some important sectors of the industry, so that inventories tended to remain relatively low. The dominant influence in the 1959 price uptrend was the sharply advancing cost of cotton fabrics, particularly cotton broadwoven goods, for which prices rose continuously throughout the year. However, the 1959 price rise occurred for virtually all kinds of textiles and apparel, and was the only one of any consequence since 1951, after which the average price level receded appreciably. The post-World War II low (93.1 percent of the 1947-49 average) was reached in November 1958. After that prices rose 3.9 percent to the 1959 peak (96.7) in December. This was still below prices shortly after World War II in the 1947-49 period (100) and in the Korean Conflict year 1951 (110.6).

During the latter two periods of relatively high prices for textiles and apparel, the industry met extraordinarily heavy demand with capacity utilization of plant, a large proportion of which was relatively obsolete. Production costs were soaring. But, because business was booming also, the longrun instabilities and uncertainties in the highly competitive industries encompassed in textile and apparel production were temporarily abated.

Prices for rubber and rubber products as a group averaged about the same as in 1958, masking strong price increases and declines for some important rubber commodities. Prices for tires and tubes in December averaged 13.5 percent lower than a year earlier chiefly because the prices of first line tires had been reduced in the summer to attract buyers of lower quality tires in the tire replacement market. At the same time, prices for crude natural rubber had increased 37.2 percent. Synthetic rubber prices continued the relative stability of the past several years.

The strong price uptrend for crude natural rubber marked a reversal from the declines of the previous 3 years. It resulted from sharply rising consumption in the United States and a substantial increase in purchases by the Communist countries. In addition, world production did not quite match consumption in 1959, although both were at record levels.

Prices for wastepaper rise and fall sharply with shifts in business activity. Wastepaper prices rose 27.4 percent on an annual average basis from 1958 to 1959 in the major Eastern market. Increased demand for its end-products such as paperboard and roofing boosted prices for wastepaper beginning in the latter half of 1958 as recovery from recession got underway. Although business expansion tended to generate increased supplies, seasonal difficulties in collection in the early part of 1959 gave added impetus to the upward price movement, resulting in a rise of over 20 percent in the wastepaper index by the end of the first quarter. Expanded inventories and collections as the year progressed as well as some slackening in business activity led to a drop by the end of the year which nevertheless left the wastepaper index more than 14 percent above the level of a year ago. On the other hand, prices moved up less than 1 percent, on the average, in 1959, for paper and converted paper and paperboard products, despite broadly expanding uses and requirements and record high production during the year. Overcapacity in most parts of the industry, and, in some cases, competition from substitute products tempered price increases despite higher production costs.

Among the few price declines for industrial commodities in 1959, the most significant were for petroleum products. With the exception of an unusually sharp increase in prices for these commodities in 1957, when the Suez Canal was closed and export and domestic demand rose precipitously, prices were on a general downtrend after 1956. This decline was associated not only with a reduction in export demand, but also with a slower rate of increase in total domestic needs in the face of surplus and increasing refining capacity. The process of substituting petroleum products for coal in household heating and for railroad fuel had been largely completed by the middle of the decade and some of the sizable gains in consumption of natural gas have been at the expense of refined products. In addition, in 1959, heightened industrial demand for fuel in the first half of the year was substantially reduced in the last half during the steel strike.

The average price decline from 1958 of almost 1 percent for petroleum and products (including a 3.4-percent drop for crude oil) occurred even though production controls by state regulatory bodies continued and mandatory import quotas of crude and residual oil were introduced beginning with the second quarter of 1959.

Gasoline, the most important segment of the petroleum and products group of commodities priced for the WPI, accounted for a substantial share of the 1959 price decline for the group, especially in the latter half of the year when gasoline prices dropped to the lowest level in almost a decade. Prices for most other petroleum products, and for crude petroleum, declined also in 1959.

Agricultural and Food Prices

The average price index for farm products in 1959, at 89.1 percent of the 1947-49 average represented a 6.1 percent drop from 1958 and was lower than in most postwar years. On the other hand, the 3.5 percent decline in the index for processed foods, to 107.0, left that index well above the level of the postwar period. This difference in relative position between the two indexes, compared with 1947-49, resulted in part from bumper farm crops in recent years, and the much greater increases in productivity in agriculture than for the nonfarm sector of the economy. ^{3/}

In general, except for textile products and apparel, farm products are the only major component in the Wholesale Price Index for which prices have declined in the postwar period; and among the major groups for which prices have risen, the group of processed foods has shown the smallest increase.

In 1959, the chief cause of the price declines for the farm products and processed foods was a sharp rise in the supplies of livestock and meats. Prices for some other commodities declined appreciably also--e.g., eggs; fresh, dried, canned, and frozen fruits; and the fats and oils.

Except for 1944, hog slaughter and pork production were the highest on record in 1959, when the then current hog production cycle reached its peak. Per capita consumption of pork, which had dropped in 1957-58 as production decreased and prices rose, increased substantially in 1959. Comparing annual averages, prices declined about 30 percent over the year for hogs and about 15 percent for most cuts of pork.

As for cattle and beef, the record number of beef cows, heifers, steers, and calves on farms in 1959 provided the potential for increased beef production. However, per capita supplies actually declined, and marketings remained below a year earlier until the last quarter of the year, when prices for cattle and beef (particularly animals and meat of choice quality and lower) fell sharply. By December 1959, these prices in general averaged well below a year earlier.

Wholesale prices for eggs declined to their lowest annual average level in 18 years in 1959--a result of record egg production slightly higher than in 1958, whereas per capita consumption continued the downtrend begun in 1952.

With few exceptions, 1959 fruit crops were larger than in 1958. By December 1959, price decreases from a year earlier ranged from 2.3 percent for fresh fruits to about 25 percent for dried fruits and for frozen fruits and juices. The sharp price declines for the latter two types of processed fruits resulted chiefly from a substantial increase in the output of dried prunes and raisins in 1959 over the relatively small volume produced in 1958, and a record pack of frozen orange concentrate.

Even though domestic consumption of fats and oils has kept pace with the growth in population, and exports reached a new high in the 1958-59 season (October 1 to September 30), production also was at peak and stocks left at the end of the season were up sharply. The increase in production was supported by bumper crops of cotton and soybeans, and near record marketings of hogs, thus producing unusually large quantities of three of the most important fats--lard, soybean oil, and cottonseed oil. By December 1959, prices of animal fats and oils, crude vegetable oils, and refined vegetable oils were about 17 percent below a year earlier. Prices of vegetable oil and products (chiefly margarine and salad dressing) were about 8 percent lower than at the end of 1958.

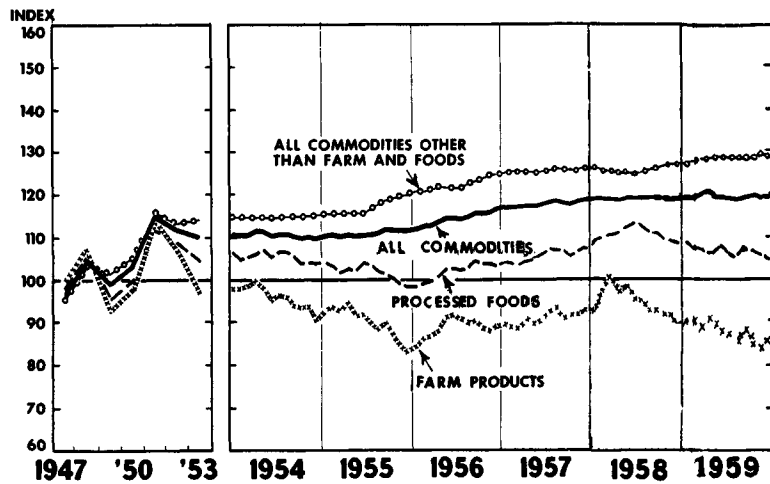

^{3/} For the few specific food processing industries for which data are available, the figures confirm that output per production worker man-hour has been less than in agriculture. See Indexes of Output per Man-Hour for Selected Industries, 1939 and 1947-59, U.S. Department of Labor Bureau of Labor Statistics, July 1960, Tables 9, 13, and 14, pp. 8 and 10; and also, U.S. Department of Labor News Release No. 4155, June 28, 1960, Output per Man-Hour in the Private Economy in 1959.

It should be noted also that when viewed in longer historical perspective, basing prices on a pre-World War II year (1926=100), the price increase for processed foods continued to be less than the increase for farm products during World War II and the immediate postwar period. Only in recent years (since 1953) have price increases for processed foods exceeded those for farm products, relative to 1926, thus reassuming the relationship of most of the 1930's and of 1940-41.

Purpose of Index

The Wholesale Price Index is designed to measure average changes in prices of all commodities sold in primary markets of the United States. Because of its broad scope, it is often used as a general purpose index. However, it is made up of many special groupings or combinations which serve special purposes. In addition, a number of separate special purpose indexes are issued. 2/

"Wholesale," as used in the title of the index, refers to sales in quantities, not prices received by wholesalers, jobbers, or distributors. The index does not measure the price movements of retail transactions, transactions for services (except gas and electricity), construction, real estate, transportation, and securities. Although the sample of priced items does not include printing and publishing, the values for the commodity segment of the industry were included in the weight universe for the first time in 1958. These values were assigned to the pulp, paper, and allied products major group, since the sample of priced items for that group will be expanded to include commodities from the printing and publishing industry. However, the prices of many of the raw and finished materials used in construction or in printing and publishing--lumber, bricks, structural steel, millwork, paper, etc.--are reflected in the index.

Selection of Sample

The price universe for the index is comprised of all commodities produced or imported for sale in the United States. A sample of approximately 1,900 priced items is chosen to furnish an adequate measure of average price changes in the primary markets of the United States. A relatively small sample of priced items would serve this purpose reasonably well. A larger sample is chosen in order to measure price change for the many subgroupings of the index used for special purposes.

The monthly Wholesale Price Index, therefore, is based upon a sample of commodities, a sample of specifications for the commodities, and a sample of reporting sources for the specifications. These samples are selected after consultation with trade associations or with other representatives of industry. Generally, the commodities chosen include those with the largest shipment values as shown by the industrial censuses, although commodities with smaller shipment values are included if their price movements are sufficiently unlike those of other commodities.

The commodities selected are rather broadly defined in the Census of Manufactures. For example, "jelly, pure, grape" and "unalloyed copper plate, sheet, and strip" are designations of Census product codes (7-digit). In order to assure that the measure of price changes reflects only price movement without reflecting the influence of changes in quantity, quality, terms of delivery, or type of buyer, it is necessary to define the items specifically, such as:

"Jelly, pure, grape, 10 oz. jar, 2 dozen jars to case, in lots of more than 25 cases, manufacturer to jobber, f.o.b. distribution point, per case," and "copper sheet, cold rolled, 16 oz., 24 inches x 96 inches, in lots of 5,000 to 10,000 lb., manufacturer to distributor's warehouse, f.o.b. mill with freight allowed, per pound."

1/ For a detailed description of the Wholesale Price Index, see Techniques of Preparing Major BLS Statistical Series (BLS Bull. 1168), chap. 10.

2/ Refer to page 16.

Thus, a sample of specifications is chosen to represent the commodity. The specification describes the characteristics of the commodity which define quality and other price determining factors. The specifications chosen are usually those which describe the largest dollar volume of sales for the commodity.

Finally, the reporter sample is selected to give representation by size of company and by geographic distribution of the industry whenever necessary. In all cases, a minimum of three reporters is sought to permit publication of both prices and item indexes. Above this minimum, the number of reporters selected depends on the variability of pricing practices among individual firms, on the number of firms producing the item, and on the geographic distribution of the industry.

Prices

The prices used in constructing the index are those which apply as nearly as possible to the first significant commercial transaction in the United States. Later transactions for the same item at other stages in the distribution cycle are not included. However, as raw materials are transformed into semifinished and finished goods, they are represented according to their importance in primary markets.

Most prices are obtained by mail directly from the manufacturer or other producer. A few are reported by trade associations, and some are taken from authoritative trade publications or from other Government agencies which collect price quotations as part of their regular work. Table 4 of this volume shows the number of price series from each type of source as of January 1959. Data for 1947-58 are shown in Bulletin 1257, Wholesale Prices and Price Indexes, 1958.

Prices obtained from manufacturers or other producers are subject to the applicable trade and quantity discounts. ^{3/} Cash and seasonal discounts are deducted from the price when it is determined that most buyers avail themselves of the reduced prices. Excise taxes are excluded from the price. Closeout sales prices are normally not used. Free deals or allowances are reflected when possible in arriving at the net price to be included in the index calculation. Nominal prices are used when they are indicative of the market situation and no other price is available.

Before 1952, prices were monthly averages of 1-day-a-week prices. Thereafter, prices have been for the most part, those of the Tuesday of the week which includes the 15th of the month. However, for some commodities, another day may be selected as a more representative trading day, e.g., many farm products are priced as of Monday. Whenever possible, commodities are priced at the production point or at the central marketing point. Prices at delivery point are used only when it is the practice of the industry to quote prices on a delivered basis.

The index is intended to measure price changes between two periods of time, without reflecting the influence of changes in quality, quantity, terms of delivery, level of distribution, unit priced, or source of price. To accomplish this, the commodities included in the index are defined by precise specifications and the index calculations between two periods of time are based on the relative changes in prices of items with identical or nearly identical specifications.

^{3/} For a description of the study of discounts used in the Wholesale Price Index, see Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), Supplementary Inquiry on Wholesale Price Reports, p. 10.

Substitutions of Items

Adherence to specification is especially difficult in a period when there are many changes in the goods marketed, including new items coming on the market and old items disappearing. This is particularly true of manufactured products, such as machinery, household appliances, and furniture. It is also true for nonmanufactured products. Fruits, for example, are marketed in different size containers or grading standards are changed; steel scrap is sold subject to different delivery terms; market grades of livestock are changed.

When new commodities are introduced or when specifications of existing commodities are changed, every effort is made to see that only price changes influence the index. The method of introducing an altered article or a change in selling terms is called a substitution. A substitution may be made by direct comparison or by linking. Each time a change in specification occurs, the Bureau appraises the significance of the change to ascertain whether an actual price change accompanied the specification change. When it can be determined that the specification change was minor and did not involve price-making factors, the substitution is made by direct comparison. This means that any price change between the old and the new item is reflected in the index. When changes in specification are major and no information can be obtained relative to an actual price change, the substitution is made by linking and no change is reflected in the index. This means that the difference in price level is not permitted to affect the index level. Prices before and after the link, however, are not comparable and the decimal part of the code number is changed to show noncomparability. See page 13 for further explanation.

Some durable goods, such as automobiles, have periodic model changes. Price increases of these goods caused by the addition of features formerly sold at extra cost are not reflected in the index. Neither does the index show the effect of price decreases which are achieved by dropping equipment which was formerly a standard feature of such a product. When there are no additions or substitutions of equipment and the new model is reasonably comparable with the old model, a direct comparison is made between the prices of the old and the new models, and the difference in price is reflected in the index.

If it is determined that a major change was made in the specification but that no real price change occurred other than that attributed to the specification change, the substitution is made by linking. The addition or deletion of items from the index, the addition or the deletion of a company from a composite series, or the change in the source of a price is made by linking and no change is reflected in the index level.

When a company that has been reporting prices for a commodity of a specified description discontinues production of that specific item or when the specification becomes unimportant in production value, the Bureau collects price data for a similar item or for one which has replaced the original. This substituted item may or may not vary considerably from the discontinued model. Prices are obtained for both the new and the discontinued series for a 1-month overlap period. If production of an item has been discontinued before its successor is on the market, the Bureau obtains an estimated overlap period price for linking. By means of this overlap price, the change between any two successive periods can be measured for identical specifications.

Often, it can be established that a real price change accompanied the specification change. In such cases, the price in the link month of substitution is estimated so that the

amount of the actual price change is reflected in the index but any price difference which is due to quality change is not reflected. ^{4/}

Collection of Data

The initial collection of data for each commodity specification from each reporting source is usually made by means of a personal visit to the reporting company. At that time, detailed information is obtained concerning the pricing structure of the industry and that for the commodity. This includes information such as:

1. Price-making factors for the commodity.
2. Distribution of sales to the various classes of buyers.
3. The type and amount of discounts or allowances to each class of buyer.
4. The normal size of sale (quantity) to each class of buyer.
5. The terms of delivery to each class of buyer.
6. The usual method of effecting a price change.
7. Applicable excise tax.
8. The market area served for each commodity and for each class of buyer.
9. Type of packaging for each commodity.
10. Means of delivery for each commodity.

After regular reporting has been established, prices are collected by mail, usually on a monthly basis, by means of a shuttle schedule.

Reporting companies are asked to report all changes in list price, excise tax, discounts or allowances, description of the commodity specification, terms of delivery, and class of buyer. This is necessary in order to insure the reflection in the index of all real price changes but to exclude the effect of a change in quality or a change in the selling terms for the commodity.

Weight Universe

The Wholesale Price Index is calculated as a weighted average of price changes. The weights represent the total net selling value of commodities produced and processed in this

^{4/} For example: The September price for a specification for a machinery item used in the calculation of the index was \$2,347.50. In October, a new model of the machine was introduced, priced at \$2,562.60. The new model had a more powerful motor and larger tires valued at \$186.20 more than the value of those used on the former model. For linking, the September price of the new model was estimated at \$2,533.70 (\$2,347.50 September price of former model plus \$186.20 increase in value of motor and tires). The price comparison between September and October was based on the estimated September price of \$2,533.70 and the reported October price of \$2,562.60. Thus a 1.1-percent price increase was reflected in the October index, but the change in price, owing to the quality improvement (more powerful motor and larger tires) was not reflected.

country (or imported for consumption), and flowing into primary markets. ^{5/} The values are f.o.b. production point and are exclusive of excise taxes. The value of interplant transfers, military products, and goods sold at retail directly from producing establishments are also excluded.

The weight universe includes values from industries classified as manufacturing, agriculture, forestry, fishing, mining, quarrying, well operation, and gas and electricity public utilities. It includes values for goods competitive with those produced in the producing sector of the economy, such as waste and scrap materials. All systematic production is included but individually priced items, such as works of art, are excluded.

Civilian goods normally purchased by the Government are included, but production of military goods is excluded. Sales by the Government are excluded because the Wholesale Price Index refers to the private producing sector of the economy. However, Government sales of electric power are included because they are considered competitive with free market sales.

The import values include imports from foreign countries, Puerto Rico, and the Virgin Islands, and estimates of important items from Hawaii and Alaska. In the next weight revision when 1958 value data will be introduced, the net selling value of commodities produced or processed in Alaska and Hawaii will be included as domestic values, and imports into those States from foreign countries will be classified as imports.

Each commodity price series in the index is representative of a class of prices and is assigned its own weight (the shipment value of the commodity), plus the weights of other commodities not directly priced in the index but whose prices are known or assumed to move similarly. Thus, for some commodities--such as ships and railroad rolling stock, and some machinery, which is largely custom made--it is not possible to obtain direct measures of price movement. The weights for such items are assigned to other commodities or groups of commodities for which prices are available. Usually, this assignment is made to priced commodities which have a similar manufacturing process. In so doing, it is assumed that the movements of prices for these commodities are more accurately estimated by changes in prices of items to which their weights are assigned than they would be by changes in the all commodities index.

Weights based upon the industrial censuses for 1947 were used in the index from January 1947 through December 1954. Adjustments were made in January 1955 to align the major group weight totals with the 1952-53 average shipment values. The new weights introduced in January 1958 were based upon the industrial censuses for 1954. ^{6/} Each time the results of a comprehensive industrial Census become available, the weighting structure of the index is revised. The next weight revision will incorporate data from the 1958 Censuses of Manufactures and Mineral Industries. New weights are introduced in December. The reweighted indexes after December are made comparable with indexes for earlier periods by a process of linking.

^{5/} The revised Wholesale Price Index introduced in January 1952, but calculated retroactively to 1947, represented a changed concept in weighting structure. Priced items in the former index (1926=100) were weighted only by their own market value (quantity marketed times price).

^{6/} For a description of the January 1958 weight revision, see BLS Bull. 1257, op. cit., p. 14.

Index Formula

The index is based on the formula: $(1)R_i = \sum q_a P_i / \sum q_a P_0$ where the (P_0) 's are prices in the base period, (P_i) 's are prices in the current period, and the (q_a) 's are quantities of commodities implicit in the value data.

In practice, the index is calculated on a variation of this formula as a weighted average of price relatives for each item:

(2)

$$R_i = R_{i-1} \sum q_a P_{i-1} \frac{P_i}{P_{i-1}} / \sum q_a P_{i-1}$$

where the (R_{i-1}) is the index for the preceding period, the (P_{i-1}) 's are prices in the preceding period, and the (q_a) 's and (P_i) 's are the same as in formula (1).

Thus, in each current calculation of the index, the effective weights which are applied to monthly price relatives are average values of transactions in 1954, adjusted for price change to the preceding period.

It should be noted that when substitute specifications are used in the index calculation, this formula is not a precise representation. The price relative P_i / P_{i-1} becomes P_i / P_{i-1} , where the P_i and the P_{i-1} are prices of the substitute in the current and preceding periods, respectively. That part of the price change due to the specification substitution is therefore not reflected in the index movement. It may be noted further that when index weights are revised, the indicated calculation within the brackets

$$\left[\sum q_a P_{i-1} \frac{P_i}{P_{i-1}} / \sum q_a P_{i-1} \right]$$

for the first calculation of the index after revision is based on the revised weight structure, while the index for the preceding period (R_{i-1}) is the result of calculations before weight revision. The weight adjustment, therefore, is not reflected in the index movement except insofar as it affects future calculations.

Publication and Correction Policy

Publication of Prices and Indexes

The Wholesale Price Index data are published in four forms:

1. Monthly press releases and reports.
2. Annual or other periodic bulletins.
3. Tabulations of historical series.
4. Tables in the Monthly Labor Review.

The first publication of wholesale price data in the press releases and reports are considered preliminary and are so identified. This is necessary because individual reports are often not received in time to be included in the first calculation. Preliminary publication is limited to index numbers. Preliminary prices are not published. Final publication of monthly indexes and prices accompany the publication of preliminary indexes for the succeeding period. Annual average indexes for groups, subgroups, product classes, and special groupings are published as preliminary as soon as possible after December data have

become final. Annual average indexes and prices are published as final in the bulletins on Wholesale Prices and Price Indexes covering 1 or more years.

Monthly prices published by the Bureau are averages of prices obtained directly from reporting firms or from secondary sources, such as trade or Government publications. Monthly prices are not published: (1) When the average price is based on reports from fewer than three companies; (2) for seasonal commodities for those months in which they are not on the market; and (3) if such publication might disclose the activities of an individual firm.

Annual average prices for other-than-seasonal items are based on 10 or more monthly figures published for the same specification. Annual average prices for seasonal items may be based on fewer than 10 published monthly figures. Annual average indexes are based on the published monthly indexes.

New indexes generally are not introduced into publications until at least a year's data are available. New indexes for individual commodities or for commodity groupings are introduced only once a year--in the final January calculation, and with January of the year of introduction as the base period. When prices are obtained for earlier periods, item indexes are calculated and are available on request.

Comparability of Prices and Indexes

Noncomparability in the price series is shown in the code number by the addition of digits after a decimal (e.g., 01-31-01.01). Each successive break in the same series is numbered consecutively (e.g., 01-31-01.02, 01-31-01.03, etc.). Such prices are not comparable with prices quoted for earlier periods because there has been a break in the series resulting from a change in the reporter sample, a modification in the specification, or a change in the unit of quotation, or in the delivery terms. However, the price indexes for the individual commodities are adjusted so that they are continuous and comparable, regardless of breaks in the series of prices.

Specifications. Specification changes during 1959 are shown for each major group in the appropriate section of this bulletin. The specifications represent the composite of the several reporter series included in the average price. Where a specification lists more than one class of buyer or more than one delivery term, the reporter series are not identical. One company's price may be to the jobber, f.o.b. plant; another company's price may be to the wholesaler, f.o.b. plant with freight allowance. The published specification is made broad enough to cover all of the series included in the average price.

A specification change not accompanied by a code change indicates that the change was of a minor nature and prices are comparable before and after the change. Sometimes the decimal part of a code number may be changed and no change in specification is indicated. In this case, a change has been made in source of the price by adding or dropping a reporter series, or the use of an additional discount, previously in effect but not used, has been initiated in the calculation of the index. Prices before and after the change are not comparable.

Correcting Errors in Published Price Indexes and Prices

Sometimes an error in a reported price or in a calculation is found after the prices and indexes have been issued as final. Corrections of previously published prices and indexes are made under the following circumstances:

Corrections in Prices or Item Indexes. A correction of less than 1 percent in a price or in an item index is not published. An error of 1 percent or more in a price or in an item index is corrected and a corrected figure is published in the next subsequent release which normally carries the series affected. When corrections are made in prices, corresponding corrections are made in the item indexes.

Corrections in Summary Level Indexes. A correction which would cause a change of not more than one-tenth of an index point in any grouping index is not published. Adjustment for such errors is made in calculating the current indexes in the release immediately following the discovery of the error by showing the full amount of the change in the current period.

A correction which would require a change of two-tenths or more of an index point in a group, subgroup, product class, stage of processing, durability of product, or any other special index but not more than one-tenth of an index point in the all commodities index is made in the published figures for the grouping and carried with appropriate explanation in the release immediately following the discovery of the error.

An error of no more than one-tenth of an index point in the all commodities index is not corrected but adjustment for the error is made in the calculation of the current month index. An error which affects the published all commodities index by two-tenths or more of an index point is very rare. If such an error does occur, the Bureau considers the statistical, economic, and other factors involved to determine whether to correct the previously published index or to adjust for the error in calculating the current index number.

Relative Importance of Wholesale Price Index Components

The relative importance of an item represents its basic value weight used in the index multiplied by the relative of price change between the weight date to a later date (December 1958, for example) and the result expressed as a percentage of the total for all commodities or for the major group.

Changes in relative importance of an item result from (1) weight revisions such as those of January 1955 and January 1958; (2) minor weight adjustments to take account of the addition of new items or the deletion of an item; and (3) different rates of price change among the various items. If there were no weight revisions or adjustments, and if the prices of all items changed at the same rate, their relative importance in the index would not change.

The relative importance figure for a commodity represents the value of the commodity itself plus the value of imputed commodities (unpriced commodities assumed to have price movements similar to those of the priced item).

Table A shows the relative importance of the major groups after each of the three latest comprehensive weight revisions. Data for items based on the 1954 values introduced in January 1958 are shown in table 5 of this bulletin. Data for items based on earlier weight revisions may be found in earlier bulletins. 7/

Table 5 of this bulletin shows relative importance of items in the Wholesale Price Index as of December 1958 and December 1959 based on the 1954 values introduced in January 1958 but incorporating changes made as of January 1959. Changes are described in the separate chapters of this bulletin. In addition, table 5 shows relative importance as of December 1959 based on 1954 values introduced in January 1958 but incorporating changes made in January 1960. These changes are described in the February 1960 monthly report, Wholesale Prices and Price Indexes.

Information on the use of relative importance data is contained in BLS Bulletin 1214.

Description of Special Commodity Grouping Wholesale Price Indexes

Special commodity grouping indexes are designed to meet special needs of index users. All of them are made by regrouping commodities included in the comprehensive Wholesale Price Index, and except for Construction Materials (formerly titled Building Materials) the weights, since the beginning of the indexes in 1947 have been those used in the Wholesale Price Index.

The composition of each index is described below. Code numbers refer to the Wholesale Price Index commodities or groupings of commodities. Detailed specifications for each of the items and their relative importance in the all commodities index are published in the Wholesale Price Index annual bulletins.

Wholesale Price Indexes by Stage of Processing. This set of indexes formerly designated as Economic Sector Indexes, described in an earlier publication,^{8/} includes all component series of the comprehensive Wholesale Price Index. Index numbers for 1959 appear in the summary section of this bulletin.

Wholesale Price Indexes by Durability of Product. This set of indexes described in an earlier publication,^{9/} includes all component series of the comprehensive Wholesale Price Index. Index numbers for 1959 appear in the summary section of this bulletin.

Construction Materials Index. This index, formerly titled Building Materials, consists of a grouping of selected components of the comprehensive Wholesale Price Index. From 1947 through 1957, it is combined with special weights relating to the use of the included commodities in construction. Beginning in January 1958, the weighting structure was changed to conform to that of the comprehensive Wholesale Price Index. The composition of this index is described in an earlier publication.^{10/} Index numbers for 1959 appear in the summary section of this bulletin.

The special index for all foods (1947-49=100) has been extended back to 1926 by linking with the former index for foods; and the special index for construction materials has been extended back to 1926 by linking with the former index for building materials. The total steel mill products index has been extended back to 1939 by linking with the combined movement of the steel mill products items in the former index. These data are available on request.

The "links" were made by means of conversion factors based on the old and the new series as of January 1947.

The special indexes are calculated by combining the codes listed after each group:

Commodity grouping	Composition of indexes	Bulletin Section
All foods -----	Processed foods (code 02) Fresh and dried fruits and vegetables (code 01-1) Eggs (code 01-6)	2
All fish -----	Unprocessed fin fish (code 02-23) Fresh processed fish (code 02-24) Frozen processed fish (code 02-25) Canned fish (code 02-26)	2
All commodities less farm products ----	Processed foods (code 02) Textile products and apparel (code 03) Hides, skins, leather, and leather products (code 04) Fuel, power, and lighting materials (code 05) Chemicals and allied products (code 06) Rubber and rubber products (code 07) Lumber and wood products (code 08) Pulp, paper, and allied products (code 09) Metals and metal products (code 10) Machinery and motive products (code 11) Furniture and other household durables (code 12) Nonmetallic minerals-structural (code 13) Tobacco manufactures and bottled beverages (code 14) Miscellaneous products (code 15)	Summary
Textile products, excluding hard fiber products -----	Cotton products (code 03-1) Wool products (code 03-2) Manmade fiber textile products (code 03-3) Silk products (code 03-4)	3

$\frac{1}{2}$ The revised Wholesale Price Index (1947-49=100) is the Bureau's official index beginning with January 1952. The revised series, however, was calculated retroactively back to January 1947. For an explanation of the series for earlier periods, see Wholesale Prices and Price Indexes, 1957, BLS Bull. 1235, Summary Volume, p. 4.

^{1/} The Wholesale Price Index (1926=100) is the Bureau's official index through December 1951. The revised series (1947-49=100) is shown in table 2. For an explanation, see BLS Bull. 1235, op. cit., pp 6-9.

^{2/} Chemicals and Drugs before 1926. In 1940, the group Chemicals and Allied Products replaced the group Chemicals and Drugs. The revision which involved expansion of items included, and adjustment of weights, was made for annual indexes from 1926 and for monthly figures from 1933.

SECTION 1. FARM PRODUCTS

Description of Farm Products Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, zeroes appearing in the fourth digit of commodity codes were changed to "1." Thus, all items in subgroup 01-6 (eggs) were recoded. There were no changes in the list of commodities. The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of Items</u>
01	Farm products -----	102
01-1	Fresh and dried fruits and vegetables -----	28
01-2	Grains -----	8
01-3	Livestock and live poultry -----	22
01-4	Plant and animal fibers -----	17
01-5	Fluid milk -----	8
01-6	Eggs -----	4
01-7	Hay, hayseeds, and oilseeds -----	9
01-8	Other farm products -----	6

A new special index, Farm Products and Processed Foods, introduced in January 1959 and calculated back to 1947, combines major groups 01 (farm products) and 02 (processed foods).

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

SECTION 2: PROCESSED FOODS

Description of Processed Foods Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, zeroes appearing in the fourth digit of all commodity codes were changed to "1." Thus, all items in subgroups 02-3 (dairy products and ice cream), 02-5 (sugar and confectionery), and 02-6 (packaged beverage materials) were recoded.

Instant coffee (code 02-61-05) was added to the list of commodities in January 1959. It took part of the weight of roasted coffee (code 02-61-01).

The changes in relative importance caused by the change in sample are shown in the following table:

Code	Commodity <u>1/</u>	Percent of all items in total index (based on 1954 values)		
		Dec. 1958 revised weight	Dec. 1958 former weight	Dec. 1957 former weight
02-6	Packaged beverage materials -----	0.539	0.539	0.595
02-61-01	Coffee, 1-lb. tin -----	.382	.441	.500
02-61-02	Cocoa, 1/2-lb. package -----	.044	.051	.048
02-61-03	Tea, bags -----	.020	.023	.023
02-61-04	Tea, loose -----	.021	.024	.024
02-61-05	Coffee, instant -----	.072	--	--

1/ See page 114 for complete specifications.

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of items</u>
02	Processed foods -----	137
02-1	Cereal and bakery products -----	18
02-2	Meats, poultry, and fish -----	41
02-3	Dairy products and ice cream -----	15
02-4	Canned and frozen fruits and vegetables -----	23
02-5	Sugar and confectionery -----	8

02-72	Crude vegetable oils -----	5
02-73	Refined vegetable oils -----	4
02-74	Vegetable oil end products -----	5
02-8	Other processed foods -----	9

A new special index, Farm Products and Processed Foods, introduced in January 1959 and calculated back to 1947, combines major groups 01 (farm products) and 02 (processed foods).

1/ Refer to Wholesale Prices and Prices Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

SECTION 3. TEXTILE PRODUCTS AND APPAREL

Description of Textile Products and Apparel Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, zeroes appearing in the fourth digit of all commodity codes were changed to "1." Thus, all items in subgroup 03-4 (silk products) were recoded.

Dacron marquisette (code 03-33-14)^{2/} was added to the list of commodities in January 1959. It took the weight of rayon marquisette (code 03-33-11) which was discontinued in January 1959. This change did not affect the relative importance of items in the product class. Fur coats (code 03-51-32) was discontinued in April 1959 and the weight was moved by an estimated price based on the price for fur stoles.

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of Items</u>
03	Textile products and apparel -----	191
03-1	Cotton products -----	55
03-2	Wool products -----	20
03-3	Manmade fiber textile products -----	29
03-4	Silk products -----	2
03-5	Apparel -----	79
03-6	Other textile products -----	6
03-7	Plastic products ^{3/} -----	0

A new special index, Textile Products excluding Hard Fiber Products, introduced in January 1959 and calculated back to 1947, combines subgroups 03-1 (cotton products), 03-2 (wool products), 03-3 (manmade fiber textile products), and 03-4 (silk products).

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

2/ See page 129 for complete specification.

3/ Price movement estimated on basis of price for plastic materials.

SECTION 5. FUEL, POWER, AND LIGHTING MATERIALS

Description of Fuel, Power, and Lighting Materials Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, zeroes appearing in the fourth digit of all commodity codes were changed to "1." Thus, all items in subgroups 05-2 (coke) and 05-4 (electric power) were recoded. Liquefied petroleum gas, Houston (code 05-32-02) was discontinued in April 1959. The weight was assigned to liquefied petroleum gas, Oklahoma (code 05-32-03).

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of Items</u>
05	Fuel, power, and lighting materials -----	51
05-1	Coal -----	9
05-2	Coke -----	8
05-3	Gas fuels -----	3
05-4	Electric power -----	2
05-5	Petroleum and products -----	29

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257) for description for earlier years.

Code	Specification	Unit	Date of change	Code	Specification	Unit	Date of change
05-55	<u>Lubricating oil</u>			05-55-07	Lubricating oil, South Texas, pale, No. 2-3 color, 200 viscosity at 100°, bulk lots, producer to jobber or compounder, f. o. b. South Texas refinery, for domestic or export shipment, Monday price.	gallon	
05-55-01	Lubricating oil, Western Pennsylvania, viscous neutral, No. 3 color, 200 viscosity at 70° F (180 at 100°), 420-425 flash, 25 pour test, bulk lots, producer to jobber or compounder, f. o. b. refinery or terminal. Monday price.	gallon		05-56	<u>Crude petroleum</u>		
05-55-02	Lubricating oil, Western Pennsylvania, bright stock, No. 8 color, 145-155 viscosity at 210°, 25 pour test, bulk lots, producer to jobber or compounder, f. o. b. refinery or terminal. Monday price.	gallon		05-56-01	Crude petroleum, Bradford, Pennsylvania grade, f. o. b. well. Monday price.	barrel	
05-55-03	Lubricating oil, Western Pennsylvania, cylinder stock, 600 steam refined, filterable, bulk lots, producer to jobber or compounder, f. o. b. refinery or terminal. Monday price.	gallon		05-56-02	Crude petroleum, Oklahoma-Kansas, 36.0-36.9° gravity, f. o. b. well. Monday price.	barrel	
05-55-04.01	Lubricating oil, Mid-Continent, neutral, solvent refined, No. 3 color, 200-210 viscosity at 100°, 0-10 pour point, 95 viscosity index, bulk lots, producer to jobber or compounder, f. o. b. Tulsa, Oklahoma. Monday price.	gallon		05-56-03	Crude petroleum, West Texas, sour, 34.0-34.9° gravity, f. o. b. well. Monday price.	barrel	
05-55-05.01	Lubricating oil, Mid-Continent, bright stock, solvent refined, 150-160 viscosity at 210°, 95 viscosity index, 0-10 pour point, bulk lots, producer to jobber or compounder, f. o. b. Tulsa, Oklahoma, for domestic shipment. Monday price.	gallon		05-56-04	Crude petroleum, Gulf Coast, Hastings and other crudes, 33.0-33.9° gravity, f. o. b. well. Monday price.	barrel	
05-55-06.03	Lubricating oil, Gulf Coast, neutral solvent refined, 500 viscosity at 100°, 95 viscosity index, 0-10 pour point, bulk lots, producer to jobber or compounder, f. o. b. U. S. Gulf. Monday price.	gallon		05-56-05	Crude petroleum, California, Signal Hill (Long Beach), 27.0-27.9° gravity, f. o. b. well. Monday price.	barrel	
				05-57	<u>Natural gasoline</u>		
				05-57-01	Natural gasoline, Grade 26-70, bulk lots, producer to blender, f. o. b. Breckenridge, Texas. Monday price.	gallon	
				05-58	<u>Petroleum wax</u>		
				05-58-01.01	Refined wax, 123-145 AMP, in tank cars or tank trucks, not as slabs, bulk lots; refiner to domestic large user or distributor, f. o. b. Atlantic or Gulf Coast refineries. Monday price.	pound	

SECTION 6. CHEMICALS AND ALLIED PRODUCTS GROUP INDEX
Description of Chemicals and Allied Products Group Index 1/

A number of important changes were made in this group index in January 1959. In order to adapt the data to calculation by the electronic computer, zeros appearing in the fourth digit of all commodity codes were changed to 1. Thus all items in subgroup 06-4 (fats and oils, inedible) were recoded.

In addition to the introduction and deletion of series described below, the specifications for a number of commodities were revised to a more representative grade and the specifications for dyes were rewritten to include the new color index classification of the Society of Colorists.

The series for shellac and turpentine were transferred to the organic chemicals product class from the paint materials product class. Methyl ethyl ketone, formerly classified in the organic chemicals product class, was reinstated but transferred to the paint materials product class.

The series for calcium carbonate, pentaerythritol, and xylene were introduced into the paint materials product class but were also retained in the industrial chemicals classification. Ammonium nitrate was introduced into the explosives product class but was also retained in the fertilizer materials classification. Weights, however, were not duplicated.

There was no change in the sample of items priced for prepared paints but the weights for the individual series were revised.

The series for hydrogen peroxide (code 06-31-39) was discontinued and its weight was assigned to move with the product class. For other commodities, weight assignments were made by a reassignment for weights in the entire product class. Changes in the list of commodities are shown in the following table:

Commodity	Code	Date	Action taken
Hydrofluoric acid -----	06-11-04	January 1959	Introduced
Alumina, calcined -----	06-11-10	January 1959	Introduced
Acrylonitrile -----	06-12-12	January 1959	Introduced
Benzene hexachloride -----	06-12-26	January 1959	Introduced
Coal tar pitch -----	06-12-36	January 1959	Introduced
Dodecylbenzene -----	06-12-38	January 1959	Introduced
Diethyl phthalate -----	06-12-42	January 1959	Introduced
Dye, C.I. 14645 (former 203) -	06-12-53	January 1959	Introduced
Dye, C.I. 22590 (former 401) -	06-12-54	January 1959	Introduced
Dye, C.I. 40000 (former 620) -	06-12-58	January 1959	Introduced
Dye, C.I. 59825 (former 1101)-	06-12-59	January 1959	Introduced
Dye, C.I. 69825 (former 1113)-	06-12-60	January 1959	Introduced
Toner, lithol red -----	06-12-62	January 1959	Introduced
Toner, phthalocyanine blue ---	06-12-64	January 1959	Introduced
Monosodium glutamate -----	06-12-74	January 1959	Introduced
Sodium carboxymethyl cellulose -----	06-12-88	January 1959	Introduced
Trichloroethylene -----	06-12-90	January 1959	Introduced

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

Commodity	Code	Date	Action taken
Trieresyl phosphate -----	06-12-92	January 1959	Introduced
Vinyl acetate monomer -----	06-12-94	January 1959	Introduced
Vinyl chloride monomer -----	06-12-96	January 1959	Introduced
Shellac -----	06-12-97	January 1959	Transferred (formerly coded 06-22-51)
Turpentine -----	06-12-98	January 1959	Transferred (formerly coded 06-22-56)
Barytes -----	06-22-01	January 1959	Discontinued
Calcium carbonate -----	06-22-02	January 1959	Introduced (also used in inorganic chemicals class)
Talc -----	06-22-03	January 1959	Introduced
Methyl ethyl ketone -----	06-22-07	January 1959	Reinstated (formerly coded 06-12-72)
Xylene -----	06-22-08	January 1959	Introduced (also used in organic chemicals class)
Soybean oil -----	06-22-37	January 1959	Introduced
Caster oil -----	06-22-38	January 1959	Introduced
Tall oil -----	06-22-39	January 1959	Introduced
Glycerine, synthetic -----	06-22-62	January 1959	Introduced
Pentaerythritol -----	06-22-81	January 1959	Introduced
Lead naphthenate -----	06-22-82	January 1959	Introduced (also used in organic chemicals class)
Nitrocellulose -----	06-22-91	January 1959	Introduced
Polyvinyl acetate -----	06-22-92	January 1959	Introduced
Butadiene styrene -----	06-22-93	January 1959	Introduced
Ammonia, anhydrous -----	06-61-05	January 1959	Introduced
Urea -----	06-61-36	January 1959	Introduced
Cottonseed meal -----	06-61-46	January 1959	Discontinued
Nitrogenous process tankage --	06-61-51	January 1959	Reinstated
Blasting caps, electric delay-	06-72-03	January 1959	Introduced
Blasting caps, regular -----	06-72-11	January 1959	Reinstated
Primacord -----	06-72-22	January 1959	Introduced
Blasting powder -----	06-72-31	January 1959	Discontinued
Dynamite, ammonia gelatine ---	06-72-51	January 1959	Reinstated
Ammonium nitrate -----	06-72-81	January 1959	Introduced (also used in fertilizer material subgroup)
Hydrogen peroxide -----	06-31-39	March 1959	Discontinued

SECTION 8. LUMBER AND WOOD PRODUCTS

Description of Lumber and Wood Products Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, zeroes appearing in the fourth digit of all commodity codes were changed to "1." Thus, all items in subgroup 08-2 (millwork) were recoded.

In January 1959, Larch-Douglas fir dimension (code 08-13-07) and white fir dimension (code 08-13-09) were added to the list of commodities. They replaced the discontinued items, Idaho white pine boards (code 08-13-11) and sugar pine lumber (code 08-13-16). The weights for all items of western pine lumber were revised as were those for redwood lumber and for softwood plywood.

The changes in relative importance caused by the changes in sample are shown in the following table:

Code	Commodity <u>1/</u>	Percent of all items in total index (based on 1954 values)

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of Items</u>
08	Lumber and wood products -----	68
08-1	Lumber -----	49
08-2	Millwork -----	14
08-3	Plywood -----	5

A new special index, Softwood Lumber, was introduced in January 1959, calculated back to 1947. It combines product classes 08-11 (Douglas fir lumber), 08-12 (Southern pine lumber), and 08-13 (other softwood lumber).

SECTION 9. PULP, PAPER, AND ALLIED PRODUCTS

Description of Pulp, Paper, and Allied Products Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, zeroes appearing in the fourth digit of all commodity codes were changed to "1." Thus, all items in subgroups 09-1 (woodpulp) and 09-2 (wastepaper) were recoded.

In January 1959, the two series for insulation board (codes 09-61-01 and 09-61-02) were discontinued. They were replaced by three new series for insulation board (codes 09-61-03, 09-61-05, and 09-61-07).

The changes in relative importance caused by the change in sample are shown in the following table:

Code	Commodity <u>1/</u>	Percent of all items in total index (based on 1954 values)		
		Dec. 1958 revised weights	Dec. 1958 former weights	Dec. 1957 former weights
09-61	Insulation board -----	0.121	0.121	0.119
09-61-01	Insulation board -----	--	.061	.060
09-61-02	Insulation board -----	--	.060	.059
09-61-03	Insulation board, 25/32 inch -----	.052	--	--
09-61-05	Insulation board, 1 inch -----	.033	--	--
09-61-07	Insulation board, ceiling tile, 1/2 inch	.036	--	--

1/ See page 198 for complete specifications.

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of Items</u>
09	Pulp, paper, and allied products -----	57
09-1	Woodpulp -----	5
09-2	Wastepaper -----	4
09-3	Paper -----	10
09-4	Paperboard -----	10
09-5	Converted paper and paperboard products -----	23
09-6	Building paper and board -----	5

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

SECTION 10. METALS AND METAL PRODUCTS

Description of Metals and Metal Products Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, zeroes appearing in the fourth digit of all commodity codes were changed to "1." Thus, all items in subgroup 10-3 (metal containers) were recoded. The title of subgroup 10-5 (plumbing equipment) was changed to "Plumbing fixtures and brass fittings." There was no break in the series and the data are comparable.

In January 1959, prices for steel scrap at San Francisco replaced prices at Los Angeles. Accordingly codes 10-12-1-04, 10-12-2-14, and 10-12-3-24 were discontinued and replaced by codes 2/ 10-12-1-07, 10-12-2-17, and 10-12-3-27, respectively.

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of Items</u>
10	Metals and metal products -----	246
10-1	Iron and steel -----	90
10-2	Nonferrous metals -----	52
10-3	Metal containers -----	4
10-4	Hardware -----	26
10-5	Plumbing fixtures and brass fittings -----	13
10-6	Heating equipment -----	27
10-7	Fabricated structural metal products -----	12
10-8	Fabricated nonstructural metal products -----	22

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

SECTION 11. MACHINERY AND MOTIVE PRODUCTS

Description of Machinery and Motive Products Group Index 1/

There were no major changes in the group in 1959.

In January 1959, three series were added and one was dropped from the motor vehicles subgroup. Distribution cutout (code 11-75-51) of one type was replaced by a distribution cutout of another type (code 11-75-52).^{2/} In August 1959, one series in the motor vehicles subgroup was discontinued.

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of items</u>
11	Machinery and motive products -----	430
11-1	Agricultural machinery and equipment -----	56
11-2	Construction machinery and equipment -----	47
11-3	Metalworking machinery and equipment -----	81
11-4	General purpose machinery and equipment -----	72
11-5	Miscellaneous machinery -----	75
11-7	Electrical machinery and equipment -----	57
11-8	Motor vehicles -----	42

^{1/} Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

11	MACHINERY AND MOTIVE PRODUCTS			11-12-28.07	Hydraulic loader, front end, 1000-2500 lb. maximum lifting load, 10'-16" maximum lift height, equipped with manure bucket, manufacturer to dealer or distributor, f.o.b. factory.	each	
11-1	Agricultural machinery and equipment			11-12-31.08	Cultivator, tractor mounted, 2 row, manufacturer to dealer, f.o.b. factory.	each	
11-11	Farm and garden tractors			11-12-32.03	Cultivator, tractor drawn, 6 1/2'-8 1/2', manufacturer to dealer, f.o.b. factory.	each	
11-11-01.08	Tractor, tricycle, row-crop, under 30 b.h.p., gasoline fuel, manufacturer to dealer, f.o.b. factory.	each		11-12-32.04	Field type, 6' - 8' width.		Dec. 1959
11-11-02.19	Tractor, tricycle, row-crop, 30-39 maximum b.h.p., gasoline fuel, manufacturer to dealer, f.o.b. factory.	each		11-12-33.08	Rotary hoe, pull type, 4 row, flexible rigid hitch, manufacturer to dealer or distributor, f.o.b. factory.	each	
11-11-03.22	Tractor, tricycle, row-crop, 40-54 corrected b.h.p., gasoline fuel, manufacturer to dealer, f.o.b. factory.	each		11-12-41.05	Spraying outfit, power drawn, gasoline engine, 8-10 gal. per minute, manufacturer to dealer, f.o.b. factory or shipping point.	each	
11-11-04.20	Tractor, four wheel, standard, 55 and over b.h.p., diesel or gasoline fuel, manufacturer to dealer, f.o.b. factory.	each		11-12-12.07	Hand sprayer, galvanized tank, 3-4 gal. capacity, manufacturer to dealer or distributor, f.o.b. factory with varying freight allowance.	each	
11-11-04.23	Over 40 b.h.p. diesel fuel.		Nov. 1959	11-12-42.08	3-3 1/2 gal. capacity, f.o.b. factory with specified freight allowance.		Nov. 1959
11-11-11.08	Tractor, tracklaying type, under 55 d.h.p., manufacturer to dealer, f.o.b. factory.	each		11-12-43.12	Power duster, power take-off or gasoline engine, manufacturer to dealer or distributor, f.o.b. factory or f.o.b. factory, freight allowed on specified amounts.	each	
	Under 60 d.h.p.		May 1959	11-12-50.08	Cotton picker, 1 row, tractor mounted, manufacturer to dealer, f.o.b. factory.	each	
11-11-22.14	Garden tractor, riding type, 3-4 wheels, 6-7 maximum continuous h.p.; manufacturer to dealer, f.o.b. factory.	each		11-12-51.10	Combine (harvester-thresher), pull type, 6' - 7' cut, p.t.o. drive, manufacturer to dealer, f.o.b. factory.	each	
11-11-22.16	7 maximum continuous h.p.		Oct. 1959	11-12-52.01	Cotton stripper, 2 row, tractor mounted, 36" to 42" row widths, 2 1/2" - 3" diameter x 34, 15/16" - 38" length of stripper roll, one or two stripper rolls per unit; manufacturer to dealer, f.o.b. factory.	each	
11-11-23.21	Garden tractor, walking type, 2 wheels, 3-7 h.p., manufacturer to distributor or dealer, f.o.b. factory.	each		11-12-52.02	38" - 42" row widths, handled, 38" - 46" length of stripper roll.		Mar. 1959
11-11-24.14	Motor tiller, 2.75 - 3.25 h.p., (in varying quantities), manufacturer to dealer or distributor, f.o.b. factory.	each		11-12-52.03	35"-46" (length of stripper roll)		Dec. 1959
11-11-24.15	2.75 - 4.00 h.p.		Oct. 1959	11-12-53.14	Combine (harvester-thresher), self propelled, 12' - 14' cut, manufacturer to dealer, f.o.b. factory.	each	
11-11-25.03	Motor tiller, walking type, 2 wheels, 9.0 h.p., manufacturer to dealer, f.o.b. factory.	each		11-12-55.12	Corn picker, pull type, 1 row, tractor drawn, manufacturer to dealer, f.o.b. factory.	each

SECTION 12. FURNITURE AND OTHER HOUSEHOLD DURABLES

Description of Furniture and Other Household Durables Group Index 1/

There were no major changes in the group in 1959.

In January 1959, vinyl floor coverings (code 12-32-41) was added to the list of commodities. Its weight was assigned by a redistribution of values within the product class (code 12-32). Sewing machine with imported head (code 12-43-32) was also added. It took its weight from the two series on sewing machines (code 12-43-01) and (12-43-21) which were discontinued in January 1959.

The changes in relative importance caused by the changes in sample are shown in the following table:

Code number	Commodity <u>1/</u>	Percent of all items in total index (based on 1954 values)		
		Dec. 1958 with revised weights	Dec. 1958 with former weights	Dec. 1957 with former weights

SECTION 13. NONMETALLIC MINERALS--STRUCTURAL

Description of Nonmetallic Minerals--Structural Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, all zeroes appearing in the fourth digit of all commodity codes were changed to "1." Thus, all items in subgroups 13-6 (prepared asphalt roofing) and 13-5 (gypsum products) were recoded. There were no changes in the list of commodities.

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of Items</u>
13	Nonmetallic minerals--structural -----	33
13-1	Flat glass -----	4
13-2	Concrete ingredients -----	4
13-3	Concrete products -----	4
13-4	Structural clay products -----	7
13-5	Gypsum products -----	3
13-6	Prepared asphalt roofing -----	4
13-7	Other nonmetallic minerals -----	7

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.

SECTION 14. TOBACCO MANUFACTURES AND BOTTLED BEVERAGES

Description of Tobacco Manufactures and Bottled Beverages Group Index 1/

There were no major changes in the group in 1959. In order to adapt the data to calculation by the electronic computer, zeroes appearing in the fourth digit of all commodity codes were changed to "1." Thus, all items in subgroups 14-1 (cigarettes), 14-2 (cigars), 14-3 (other tobacco manufactures), and 14-5 (nonalcoholic beverages) were recoded.

Filter tip cigarettes, king size, (code 14-11-02) was added to the list of commodities in January 1959. It took 50 percent of the weight of regular cigarettes (code 14-11-01).

The changes in relative importance caused by the change in sample are shown in the following table:

Code	Commodity <u>1/</u>	Percent of all items in total index (based on 1954 values)		
		Dec. 1958 revised weight	Dec. 1958 former weight	Dec. 1957 former weight
14-1	Cigarettes -----	0.733	0.733	0.737
14-11-01	Cigarettes, nonfilter tip, regular size -----	.367	.733	.737
14-11-02	Cigarettes, filter tip, king size -	.366	--	--

1/ See page 262 for complete specifications.

The number of items by subgroups as of January 1959 was as follows:

<u>Code</u>	<u>Grouping</u>	<u>Number of items</u>
14	Tobacco manufactures and bottled beverages -----	19
14-1	Cigarettes -----	2
14-2	Cigars -----	4
14-3	Other tobacco manufactures -----	3
14-4	Alcoholic beverages -----	7
14-5	Nonalcoholic beverages -----	3

1/ Refer to Wholesale Prices and Price Indexes, 1958 (BLS Bull. 1257), for description for earlier years.
