SEP 22 1964

OHIO STATE LIBRARY
DOCUMENT DEPARTMENT

PUBLICATIONS OF INTEREST TO USERS OF EMPLOYMENT AND EARNINGS STATISTICS

STATE AND AREA NEWS RELEASES

. . .monthly reports published by cooperating State agencies presenting current employment, hours, earnings, and in many instances labor turnover data for States and areas

Available without cost - see addresses on inside back cover

EMPLOYMENT AND EARNINGS

. . .monthly report featuring detailed **national** statistics on employment, unemployment, labor force, weekly and overtime hours, hourly and weekly earnings, payroll and manhour indexes, and labor turnover rates

. . .also contains current **State** and **area** data on:

Employment	- by major industry division
Hours and Earnings	- for manufacturing
Labor Turnover	- for manufacturing

Annual subscription: \$3.50 (\$1.50 additional for foreign mailing)

Price per copy: .45

EMPLOYMENT AND EARNINGS STATISTICS FOR THE UNITED STATES, 1909-62 BLS BULLETIN 1312-1

. . .historical volume containing **national** statistics for individual nonagricultural industries. . .monthly and annual data on: all employees, production workers, weekly and overtime hours, hourly and weekly earnings, employment of women, and labor turnover rates - statistics shown from the beginning date of each series through May 1963 - bulletin periodically revised

Price per copy: \$3.50

HOW TO ORDER:

The monthly report **Employment and Earnings** and the historical volume **Employment and Earnings Statistics for the United States, 1909-62** (BLS Bulletin 1312-1), may be ordered through the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402, or any of the BLS Regional Offices listed on inside back cover.

**EMPLOYMENT AND EARNINGS STATISTICS
FOR STATES AND AREAS
1939-63**

**Based on the
1957 Standard Industrial Classification**

ISSUED 1964

**Bulletin No. 1370-1

**For sale by the Superintendent of Documents, U.S. Government Printing Office
Washington, D.C., 20402 - Price \$3.75**

INTRODUCTION

This bulletin is the second comprehensive historical reference volume of State and area employment and earnings statistics released by the Bureau of Labor Statistics, and replaces **Employment and Earnings Statistics for States and Areas, 1939-62** (BLS Bulletin 1370).

This volume is primarily directed toward grouping all information available for a single State or area. A section featuring summary tables has also been provided to facilitate comparison of selected data for all States. The chart immediately preceding the summary tables indicates the percentage change in total nonfarm employment in each State during the period 1939-63.

Employment data relate to the nonfarm sector, excluding proprietors, self employed, and unpaid family workers. Hours and earnings for manufacturing and mining relate to production workers, for contract construction to construction workers, and for the remaining nonagricultural components to nonsupervisory workers.

Sources of the Data

The data presented in the bulletin are based on information from payroll records submitted voluntarily to State agencies cooperating with the BLS by a representative sample of industrial, commercial, and government establishments, employing collectively about 25 million workers. The data provide detailed industry information for States and major areas on the employment, hours, and earnings of nonfarm workers. These statistics indicate the industrial attachment of the employed, their average weekly hours, and how much they earn by the hour and by the week.

State and area data are the product of the Current Employment Statistics Program. This Federal-State undertaking is conducted jointly by State employment security agencies, the Bureau of Labor Statistics, and the Bureau of Employment Security in 43 States and the District of Columbia; in the remaining States, the program is a cooperative endeavor by State Departments of Labor and the BLS.

The cooperating State agencies collect and process the information provided each month by participating employers. These data are used by the State agencies to develop statewide and area estimates, and are sent to the BLS for the preparation of national estimates. The month-to-month changes in employment shown by the reporting establishments in each industry are used to carry forward a total for the industry estimated for a single month each year--a "benchmark." The major source of benchmarks is the contribution (tax) reports filed by employers subject to State unemployment insurance laws. These reports, covering about three-fourths of the total number of nonfarm employees in the United States, are collected and tabulated by State employment security agencies under the direction of the BES. Benchmark data for the remaining portion are obtained by the States

or BLS from information collected under the programs of the Social Security Administration, the Interstate Commerce Commission, and a number of other agencies, both private and government. A new benchmark becomes available each year, and the monthly series are adjusted to this level, both back to the previous benchmark and forward to the current month.

Industrial Classification

The industrial classification system used for all these data is described in the **1957 Standard Industrial Classification Manual**. Data cover the entire available industrial detail, except for "residual" groups (e.g., "other durable goods"). The specific industries selected for publication by the State agencies are generally those which best reflect the currently significant economic activities in the State or area. As shifts occur in the economy, cooperating State agencies may introduce new series for specific industries, or change to industry combinations which reflect the changing situation.

Prior to 1959, State and area industry series conformed to the **1945 Standard Industrial Classification Manual** for manufacturing industries, and to the **1942 Social Security Board Industrial Classification Code** for nonmanufacturing. With the publication of data for January 1959, all series were converted to the **1957 Standard Industrial Classification Manual** coding, and comparable data were provided for 1958.

For periods prior to 1958, State agencies have generally constructed "replacement" series on the 1957 S.I.C., with special attention devoted to broad industrial categories. Historical industry statistics for Michigan, however, have not been recast to conform to the new classification structure. For this State, employment series based on the previous classification structure are shown at the industry division level for the period 1939-57, and overlapping figures for the year 1958 have been included in the footnotes at the end of the statistical tables.

Publication of Current Data

Current State and area statistics are published monthly by State agencies and may be secured upon request to the appropriate agency listed on the inside back cover of this bulletin. Timely statistics are also published by the BLS in the monthly report, **Employment and Earnings**, which provides employment data for the major nonfarm industry divisions, and hours and earnings in manufacturing, for all States and selected areas.

Related National Employment Statistics

Comparable historical national industry statistics have been published in **Employment and Earnings Statistics for the United States, 1909-62** (BLS Bulletin 1312-1), issued in 1963. A successor volume of the national data book including statistics through the latest available month is planned at the time of the next benchmark adjustment.

The major technical characteristics of the Current Employment Statistics Program such as scope, concepts, survey methods, estimating techniques, and limitations are described in the Technical Note following the statistical tables.

This bulletin was prepared in the Division of Industry Employment Statistics, Robert O. Dorman, Chief, and the Division of Data Systems Research and Development, Rudolph C. Mendelssohn, Chief, under the general direction of Harold Goldstein, Assistant Commissioner for Manpower and Employment Statistics, and Dudley E. Young, Deputy Assistant Commissioner for Manpower and Employment Statistics.

CAUTION

Each year the industry employment series for States and areas are adjusted to more recent benchmarks. These adjustments may also affect the hours and earnings series since employment levels are used as weights. Although each of the cooperating State agencies adjusts series to benchmark data for the first quarter of the preceding year, the length of time required to accomplish this task varies among the agencies. Except as noted, all series in this volume have been adjusted to March 1963 benchmarks. Monthly data subsequent to the benchmark period, as well as the resultant annual averages, are subject to future revision.

Stamford, Connecticut	1958	x	
Tulsa, Oklahoma	1957	x	

4/ Federal employment in the Maryland and Virginia sectors of the District of Columbia metropolitan area is included in data for the District of Columbia.

5/ Series not necessarily comparable prior to 1958 due to adoption of the 1957 Standard Industrial Classification system and/or introduction of improved benchmark data. The following estimates for 1958 are comparable with data for prior years:

MICHIGAN-Employment (in thousands):

Total, 2,119.7; mining, 14.1; contract construction, 89.6; manufacturing, 838.3; transportation and public utilities, 138.8; wholesale and retail trade 438.5; finance, insurance, and real estate, 76.5; service and miscellaneous, 243.7; and government, 280.1.

VERMONT-Hours and Earnings:

Manufacturing-weekly earnings, \$68.17; weekly hours, 40.1; hourly earnings, \$1.70.

6/ Area included in New York-Northeastern New Jersey Standard Consolidated Area.

7/ Subarea of New York Standard Metropolitan Statistical Area.

NOTE: For States and areas listed in this bulletin durable goods include SIC-19, 24, 25, 32-39; nondurable goods include SIC 20-23, 26-31. However, for Maine, Massachusetts, New York, Vermont, and Rhode Island and the areas within these States, except New York-Northeastern New Jersey, miscellaneous manufacturing (SIC-39) is included with nondurable goods.

Nassau and Suffolk Counties.....Nassau and Suffolk Counties

New York-Northeastern New Jersey.....New York City (Bronx, Kings, New York, Queens, and Richmond Counties), and Nassau, Rockland, Suffolk and Westchester Counties, N. Y.; Bergen, Essex, Hudson, Middlesex, Morris, Passaic, Somerset, and Union Counties, N. J.

New York SMSA.....Bronx, Kings, New York, Queens, Richmond, Nassau, Rockland, Suffolk and Westchester Counties

New York City.....Bronx, New York, Kings, Queens, and Richmond Counties

Rochester.....Monroe County

Syracuse.....Madison, Onondaga, and Oswego Counties

Utica-Rome.....Herkimer and Oneida Counties

Westchester County.....Westchester County

NORTH CAROLINA

Charlotte.....Mecklenburg County

Greensboro-High Point.....Guilford County

Winston-Salem.....Forsyth County

NORTH DAKOTA
 Fargo-Moorhead.....Cass County, N. D.; and Clay County, Minn. (formerly excluded Clay County, Minn.)

OHIO
 Akron.....Summit County
 Canton.....Stark County
 Cincinnati.....Hamilton County, Ohio; Campbell and Kenton Counties, Ky.
 Cleveland.....Cuyahoga and Lake Counties
 Columbus.....Franklin County
 Dayton.....Greene, Miami, and Montgomery Counties
 Toledo.....Lucas County
 Youngstown-Warren....Mahoning and Trumbull Counties

OKLAHOMA
 Oklahoma City.....Canadian, Cleveland, and Oklahoma Counties (formerly excluded Canadian and Cleveland Counties)
 Tulsa.....Creek, Osage, and Tulsa Counties (formerly excluded Creek and Osage Counties)

OREGON
 Portland.....Clackamas, Multnomah, and Washington Counties, Oreg.; Clark County, Wash.

PENNSYLVANIA
 Allentown-Bethlehem-Easton.....Lehigh and Northampton Counties, Pa.; Warren County, N. J.
 Altoona.....Blair County
 Erie.....Erie County
 Harrisburg.....Cumberland and Dauphin Counties
 Johnstown.....Cambria and Somerset Counties
 Lancaster.....Lancaster County
 Philadelphia.....Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties, Pa.; Burlington, Camden, and Gloucester Counties, N. J.
 Pittsburgh.....Allegheny, Beaver, Washington, and Westmoreland Counties
 Reading.....Berks County
 Scranton.....Lackawanna County
 Wilkes-Barre--Hazleton.....Luzerne County
 York.....York County

RHODE ISLAND
 Providence-Pawtucket.. Central Falls, Cranston, East Providence, Pawtucket, Providence and Woonsocket cities, and Burrillville, Cumberland, Gloucester, Johnston, Lincoln, North Providence, North Smithfield, and Smithfield towns, in Providence County; Narragansett, North Kingstown, and South Kingstown towns in Washington County; Warwick city, and Coventry, East Greenwich, and West Warwick towns in Kent County; Jamestown town in Newport County; all of Bristol County, R. I.; Attleboro city, and North Attleboro and Seekonk town in Bristol County; Bellingham, Franklin, Plainville, and Wrentham towns in Norfolk County; Blackstone and Millville town in Worcester County, Mass. (formerly excluded East Providence city and Gloucester town in Providence County, and South Kingstown in Washington County)

SOUTH CAROLINA
 Charleston.....Charleston County
 Columbia.....Lexington and Richland Counties
 Greenville.....Greenville and Pickens Counties (formerly excluded Pickens County)

SOUTH DAKOTA
 Sioux Falls.....Minnehaha County

TENNESSEE
 Chattanooga.....Hamilton County, Tenn.; Walker County, Ga.
 Knoxville.....Anderson, Blount, and Knox Counties; portion of Oak Ridge in Roane County
 Memphis.....Shelby County, Tenn. and Crittenden County, Ark. (formerly excluded Crittenden County, Ark.)
 Nashville.....Davidson, Sumner, and Wilson Counties (formerly excluded Sumner and Wilson Counties)

TEXAS
 Dallas.....Collin, Dallas, Denton, and Ellis Counties
 Fort Worth.....Johnson and Tarrant Counties
 Houston.....Harris County
 San Antonio.....Bexar County

UTAH
 Salt Lake City.....Bountiful, Centerville, Farmington, North Salt Lake, South Bountiful, and West Bountiful precincts in South Davis County; Salt Lake County

VERMONT
 Burlington.....Chittenden County; Grand Isle and South Hero towns in Grand Isle County
 Springfield.....Athens, Grafton, Londonderry, Rockingham (includes Bellows Falls), Westminster, and Windham towns in Windham County; Andover, Baltimore, Cavendish, Chester, Ludlow, Reading, Springfield, Weathersfield, Weston, West Windsor, and Windsor towns in Windsor County

VIRGINIA
 Newport News-Hampton.....Newport News and Hampton cities and York County
 Norfolk-Portsmouth... Norfolk and Princess Anne Counties; Norfolk, Portsmouth, South Norfolk, and Virginia Beach cities
 Richmond.....Richmond city, and Chesterfield, Hanover and Henrico Counties (formerly excluded Hanover County)
 Roanoke.....Roanoke city and Roanoke County

WISCONSIN
 Green Bay.....Brown County
 Kenosha.....Kenosha County
 La Crosse.....La Crosse County (employment)
 La Crosse city (hours and earnings)
 Madison.....Dane County
 Milwaukee.....Milwaukee, Ozaukee and Waukesha Counties (formerly excluded Ozaukee County)
 Racine.....Racine County

WYOMING
 Casper.....Natrona County
 Cheyenne.....Laramie County

Technical Note

Measuring Employment, Hours, and Earnings in States and Areas

INTRODUCTION

The Current Employment Statistics Program is an integrated Federal-State undertaking, designed to produce estimates of nonfarm employment, hours, and earnings at the national, State, and area levels. It is conducted jointly by State employment security agencies, the Bureau of Labor Statistics, and the Bureau of Employment Security in 43 States and the District of Columbia; in the remaining States, the program is a cooperative endeavor by State Departments of Labor and the BLS. The Bureau of Labor Statistics has contracted with these State agencies for collecting the data from establishments. Estimates are prepared and published monthly for each State and major areas.

COLLECTION

Federal-State Cooperation. Under cooperative arrangements with State agencies, the respondent fills out only one schedule, which is used for national, State, and area estimates. This eliminates duplicate reporting on the part of respondents, and together with the use of identical techniques at the national and State levels, insures maximum geographic comparability of estimates.

State agencies mail the forms to the establishments and examine the returns for consistency, accuracy, and completeness. After the States use the information to prepare State and area series, the data are sent to the BLS for use in developing estimates at the national level.

Shuttle Schedules. Form BLS 790--Monthly Report on Employment, Payroll, and Hours--is used to collect employment, payroll, and man-hours data. These schedules are of the "shuttle" type, with space for each month of the calendar year. The schedule is returned to the respondent each month by the State agency so that the next month's data can be entered. This procedure promotes maximum comparability and accuracy of reporting, since the respondent can see the figures he has reported for previous months.

The BLS 790 provides for entry of data on the number of full- and part-time workers on the payrolls of nonagricultural establishments and, for most industries, payroll and man-hours of production and related workers or nonsupervisory workers for the pay period which includes the 12th of each month.

CONCEPTS

Industrial Classification. Establishments are classified in accordance with the 1957 *Standard Industrial Classification Manual* into industries on the basis of their principal product or activity as determined from information on their annual sales volume. This information is collected each year on an industry class supplement to the monthly report. In case of an establishment making more than one product or engaging in more than one activity, the entire employment of the establishment is included under the industry indicated by the most important product or activity.

Industry Employment. Employment data, except for the Department of Defense, refer to persons on establishment payrolls who received pay for any part of the pay period which includes the 12th of the month. For civilian employees of the Department of Defense establishments, the figures represent the number of persons who occupied positions on the last day of the calendar month; intermittent workers are counted if they performed any service during the month.

The data exclude proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households. Salaried officers of corporations are included. Government employment covers only civilian employees; Federal military personnel are excluded from the estimates of total nonagricultural employment.

Persons on an establishment payroll who are on paid sick leave (when pay is received directly from the firm), on paid holiday or paid vacation, or who work during any part of the pay period and are unemployed or on strike during the rest of the period, are counted as employed. Not counted as employed are persons who are laid off, on leave without pay or on strike for the entire period, or who are hired but do not report to work during the period.

Industry Hours and Earnings. Hours and earnings data are derived from reports of payroll and man-hours for production and related workers in mining and manufacturing, construction workers in contract construction, and nonsupervisory employees in all other industries. When the pay period reported is longer than 1 week, the payroll and man-hour figures are reduced to a weekly basis. The above items are further defined as follows:

Production and related workers include working foremen and all nonsupervisory workers (including leadmen and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial and watchman services, product development, auxiliary production for plant's own use (e.g., power plant), and recordkeeping and other services closely associated with the above production operations.

Construction workers relate to the following employees in the contract construction division: Working foremen, journeymen, mechanics, apprentices, laborers, etc., whether working at the site of construction or in shops or yards, at jobs (such as precutting and preassembling) ordinarily performed by members of the construction trades.

Nonsupervisory employees include employees (not above the working supervisory level) such as office and clerical workers, repairmen, salespersons, operators, drivers, attendants, service employees, linemen, laborers, janitors, watchmen, and similar occupational levels, and other employees whose services are closely associated with those of the employees listed.

Payroll covers the payroll for full- and part-time production, construction, or nonsupervisory workers who received pay for any part of the pay period which includes the 12th of the month. The payroll is reported before deductions of any kind, e.g., for old-age and unemployment insurance, group insurance, withholding tax, bonds, or union dues; also included is pay for overtime, holidays, vacations, and sick leave paid directly by the firms. Bonuses (unless earned and paid regularly each pay period), other pay not earned in pay period reported (e.g., retroactive pay), and the value of free rent, fuel, meals, or other payment in kind are excluded.

Man-hours cover man-hours worked or paid for, during the pay period which includes the 12th of the month, for production, construction and nonsupervisory workers. The man-hours include hours paid for holidays and vacations, and for sick leave when pay is received directly from the firm.

Gross Average Hourly and Weekly Earnings. Average hourly earnings for manufacturing and non-manufacturing industries are on a "gross" basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work, and changes in output of workers paid on an incentive plan. Shifts in total volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general earnings averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings differ from wage rates. Earnings are the actual return to the worker for a stated period of time, while rates are the amounts stipulated for a given unit of work or time. The earnings series, however, do not measure the level of total labor costs to the employer since the following are excluded: Irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings by employees not covered under the production-worker or nonsupervisory-employee definitions.

Gross average weekly earnings are derived by multiplying average weekly hours by average hourly earnings. Therefore, weekly earnings are affected not only by changes in gross average hourly earnings, but also by changes in the length of the workweek, part-time work, stoppages for varying causes, labor turnover, and absenteeism.

Average Weekly Hours. The workweek information relates to the average hours for which pay was received, and differs from standard or scheduled hours. Such factors as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect differences in the workweek of component industries.

ESTIMATING METHODS

EMPLOYMENT. The principal features of the estimating procedure used to prepare estimates of employment for the industry statistics are (1) the use of the "link relative" technique, which is a form of ratio estimation, (2) periodic adjustment of employment levels to new benchmarks, and (3) the use of a modified cutoff type of sample.

The "Link Relative" Technique. From a sample of establishments, which reported for both the previous and current months, the ratio of current month employment to that of the previous month is computed. The estimates of employment (all employees, including both production and nonproduction workers) for the current month are obtained by multiplying the estimates for the previous month by these "link relatives."

At the aggregate industry level, i.e., divisions and groups, employment is the sum of the employment estimates for component industries. Annual average employment is the sum of the monthly estimates divided by 12.

Benchmark Adjustment. Each year employment estimates are compared with comprehensive counts of employment, which provide "benchmarks" for the various industries defined as nonagricultural, and appropriate adjustments are made as indicated. Normally, benchmark adjustments are made annually.

The primary source of benchmark information is the employment data, by industry, compiled quarterly by State agencies from reports of establishments covered under State unemployment insurance laws. These reports, covering about three-fourths of the total nonfarm employment in the United States, are collected and tabulated by State employment security agencies under the direction of the Bureau of Employment Security. Benchmark data for the residual are obtained from the records of the Social Security Administration, the Interstate Commerce Commission, and a number of other agencies in private industry or government.

The estimates relating to the benchmark month are compared with the new benchmark levels, industry by industry. If revisions are necessary, the monthly series of estimates are adjusted between the new benchmark and the preceding one and the new benchmark for each industry is then carried forward progressively to the current month on the basis of trends shown in the sample. Thus, under this procedure, the benchmark is used to establish the level of employment, while the sample is used to measure the month-to-month changes in the level.

Data for the periods subsequent to the last benchmark are subject to revision.

HOURS AND EARNINGS. These estimates are based on the sample that reported on employment. Estimates of average weekly hours and average hourly and weekly earnings apply only to production or nonsupervisory workers as distinguished from all employees.

For individual industries, monthly estimates of average weekly hours are obtained by dividing man-hours by production workers (or nonsupervisory workers), and average hourly earnings are compiled by dividing payrolls by man-hours. Industry group and division averages are obtained by weighting the averages for individual industries by production-worker employment or production-worker man-hour aggregates in the particular groups or divisions.

To obtain annual averages of average weekly hours, the 12-month total of aggregate man-hours (average weekly hours multiplied by production-worker employment) is divided by the 12-month total of employment. The 12-month total of aggregate payrolls (weekly earnings multiplied by employment weights or hourly earnings multiplied by aggregate man-hours) is divided by the 12-month total of aggregate man-hours to yield average hourly earnings.

Average weekly earnings, except for industries where man-hours data are not collected, are the product of average weekly hours and average hourly earnings.

THE SAMPLE

Design. The sample design used in the current employment statistics program is that of a modified cut-

off sample. In a cutoff design, all establishments in a category are listed in descending sequence by number of employees. A cutoff point is selected in terms of the number of employees in an establishment, and only establishments above the cutoff point are included in the design. Sample selection is made by the cooperating State agencies at the area level with supplementation for establishments in sections of the State lying outside of the defined areas. The national sample is then primarily the sum of all the State samples.

In cutoff sampling, the general objective is to obtain a sample comprising a large enough proportion of universe employment so that satisfactory estimates can be prepared. Since employer participation in the BLS 790 program is voluntary, some establishments above the cutoff may have declined to report. To replace these in the design, reports are solicited from the next largest establishments below the cutoff until the desired employment coverage is attained.

As a result of these procedures, the sample consists of heavy representations of the largest establishments in each industry with a considerable representation of smaller establishments as well. In the context of the employment and payroll statistics program, with its emphasis on producing timely data at minimum cost, a sample must be obtained which will provide coverage of a sufficiently large segment of the universe to provide reasonably reliable estimates that can be published promptly and regularly. The present sample meets these specifications for most industries. With its use, State agencies are able to produce preliminary estimates each month for many industries and for many geographic levels within a few weeks after reports are mailed by respondents.

Reliability of the Employment Estimates. One measure of the reliability of an employment estimate projected from a benchmark is the amount by which it differs from the new benchmark at the next adjustment period. The BLS uses this criterion instead of the standard error of the estimates, since it is not possible to compute a mathematically precise statement of error unless the estimates are based on a probability sample.

A consistently high degree of reliability of estimates prepared by State agencies is maintained by the relatively large percentage of the employment universe covered by the sample, and the annual adjustment of employment estimates to benchmark levels.

Differences between the benchmarks and the estimates, result from not only sampling and response errors but also from changes in the industrial classification of individual establishments (resulting from changes in their product), which are not reflected in the estimate levels until the data are adjusted to new benchmarks. At the more detailed industry levels, particularly within manufacturing, changes in classification are the major causes of benchmark adjustments;

however, they become of less importance at broader aggregations of industries. Another cause of differences, generally minor, between the estimates and the benchmark arises from improvements in the quality of benchmark data.

For employment, the sum of the State figures may differ slightly from the equivalent official U.S. totals on a national basis, because some States have more recent benchmarks than others and because of the effects of differing industrial and geographic stratification.

COMPARABILITY WITH OTHER SERIES

County Business Patterns. Data in this joint publication by the U.S. Departments of Commerce and Health, Education, and Welfare, differ from BLS establishment statistics in the treatment of central administrative offices and auxiliary units, in industrial classification, and reporting differences. In addition, CBP coverage is incomplete for some nonprofit activities, and interstate railroads and government are excluded.

Employment Covered by State Unemployment Insurance Programs. Not all nonfarm wage and salary workers are covered by the unemployment insurance programs. All workers in certain activities, such as interstate railroads, are excluded. In addition, small firms in covered industries are also excluded in 32 States. In general, these are establishments with fewer than four employees.

Statistics on Manufactures and Business, Bureau of the Census. BLS establishment statistics on employment differ from employment counts derived by the Bureau of the Census from its censuses or annual sample surveys of manufacturing establishments and the censuses of business establishments. The major reasons for some noncomparability are different treatment of business units considered parts of an establishment, such as central administrative offices and auxiliary units, the industrial classification of establishments, and different reporting patterns of multiunit companies. There are also differences in the scope of the industries covered, e.g., the *Census of Business* excludes contract construction, professional services, public utilities, and financial establishments, whereas these are included in BLS statistics.
