

Supplement to Employment and Earnings, States and Areas, Data for 1977-81

U.S. Department of Labor
Bureau of Labor Statistics
September 1982

Bulletin 1370-16

**For more information on
employment and earnings. . .**

State and area news releases by cooperating State agencies present current employment, hours, earnings, and in many instances unemployment data for States and areas. Available free.

Employment and Earnings, a monthly periodical of the Bureau of Labor Statistics, features national, State, and area statistics on employment, unemployment, hours, and earnings, plus timely analyses of current developments. Subscription includes annual supplement.

Supplement to Employment and Earnings, Revised Establishment Data, presents monthly and annual data for nonagricultural industries based on March 1981 benchmarks. Data in the **Supplement**, published in June 1982, supersede data for recent years in BLS Bulletin 1312-11.

Employment and Earnings, United States, 1909-78 (BLS Bulletin 1312-11), based on the 1972 Standard Industrial Classification Manual, presents historical national statistics for nonagricultural industries, including monthly and annual data from the beginning date of each series through 1978.

How to order:

State and area news releases are available free from the State offices listed on the inside back cover. Periodicals and bulletins may be ordered through the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Material in this publication is in the public domain and may, with appropriate credit, be reproduced without permission.

This bulletin was prepared in the Office of Employment Structure and Trends under the direction of John T. Tucker, Chief of the Division of Monthly Industry Employment Statistics. Data were processed under the direction of Brendan J. Powers, Project Manager for Federal/State Monthly Surveys in the Office of Statistical Operations.

	<i>Page</i>
A. Area definitions	309
B. Explanatory notes—Measuring employment, hours, and earnings in States and areas	318
BLS regional offices and cooperating State agencies	Inside back cover

CAUTION

Each year the industry employment series for States and areas are adjusted to more recent benchmarks. (See page 320.) These adjustments may also affect the hours and earnings series since employment levels are used as weights. Except as noted, all series in this volume have been adjusted to March 1981 benchmarks and are based on the 1972 *Standard Industrial Classification Manual*. They may not be comparable with series published previously. Data after March 1981 are subject to revision at the time new benchmarks are introduced. Although most of the cooperating State agencies adjust series to benchmark data for the first quarter of the preceding year, the length of time required to accomplish this task varies among the agencies.

Introduction

This supplement is the 17th reference volume of State and area employment and earnings statistics released by the Bureau of Labor Statistics. The data supersede those published for recent years in **Employment and Earnings, States and Areas, 1939-78** (Bulletin 1370-13) and its supplements. This supplement is the first reference volume to contain employment data for Baltimore City, Maryland and Benton Harbor, Michigan.

Consistent with previous editions, this volume groups together information on employment, hours, and earnings for a State or area.

Employment data relate to the nonfarm sector of the economy, and exclude the Armed Forces, proprietors, the self-employed, domestic workers in private homes, and unpaid family workers. Hours and earnings for manufacturing and mining relate to production workers; for construction, to construction workers; and for the remaining nonagricultural components, to nonsupervisory workers.

Area coverage

This edition presents detailed industry data on 260 major labor areas—most are Standard Metropolitan Statistical Areas. Definitions of all the areas may be found in appendix A.

Sources of data

The Current Employment Statistics Program is a Federal-State undertaking conducted jointly by State employment security agencies, the Bureau of Labor Statistics, and the Employment and Training Administration in the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands.

Data are based on information from payroll records submitted voluntarily to State agencies by a representative sample of industrial, commercial, and government establishments, employing collectively about 36 million workers. Appendix B describes the major characteristics of the program, such as scope, concepts, survey methods, estimating techniques, benchmark adjustments, and limitations.

Industrial classification

The industries shown in this bulletin follow the coding used in the **Standard Industrial Classification Manual, 1972**, of the Office of Management and Budget. Industry titles are generally those recommended by the Office of Management and Budget in its standard list of short titles. All industries in this book are further identified by the appropriate sic code(s). The industries selected for publication by the State agencies are generally those which best reflect the currently significant economic activities in the State or area. New series or industry combinations are introduced as shifts occur in the economy.

Publication of current data

Current State and area statistics are published monthly by State agencies and may be secured upon request to the appropriate agency listed on the inside back cover of this bulletin. Timely statistics are also published by the Bureau of Labor Statistics in the monthly periodical **Employment and Earnings**, which provides employment data for the major nonfarm industry divisions, and hours and earnings in manufacturing for all States and areas shown in this bulletin.

Related national employment statistics

A companion volume, **Employment and Earnings, United States, 1909-78** (Bulletin 1312-11), and **Supplement to Employment and Earnings, Revised Establishment Data**, published in June 1982, contain national data in 4-digit sic industry detail and for major industry groups and divisions. Data in Bulletin 1312-11 are adjusted to March 1977 benchmarks; data in the **Supplement** are adjusted to March 1981 benchmarks and supersede those published for recent years in Bulletin 1312-11.

Footnotes

¹ Data beginning with year noted are not comparable with prior years.

² Area included in Chicago—Gary Standard Consolidated Statistical Area.

³ Adjusted to March 1980 benchmark levels.

⁴ Subarea of Baltimore Standard Metropolitan Statistical Area.

⁵ Hours and earnings based on March 1980 benchmark.

⁶ Subarea of Philadelphia Standard Metropolitan Statistical Area.

⁷ Subarea of Rochester Standard Metropolitan Statistical Area.

⁸ Area included in New York and Nassau—Suffolk combined Standard Metropolitan Statistical Area.

⁹ Subarea of New York Standard Metropolitan Statistical Area.

¹⁰ Subarea of Northeast Pennsylvania Standard Metropolitan Statistical Area.

¹¹ Subarea of Washington, D.C. Standard Metropolitan Statistical Area.

NOTE: Miscellaneous manufacturing (sic 39) is included in nondurable goods in State and area data for the following: Maine, Massachusetts, Rhode Island, Vermont, and New York. All other States and areas include this industry in durable goods.

Appendix B. Explanatory Notes

Measuring Employment, Hours, and Earnings in States and Areas

The Current Employment Statistics Program is an integrated Federal-State undertaking designed to produce estimates of nonfarm employment, hours, and earnings at the national, State, and area levels. It is conducted jointly by State employment security agencies, the Bureau of Labor Statistics, and the Employment and Training Administration in the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands. Estimates are prepared and published monthly for each State and for major areas.

Collection

Federal-State cooperation. Under cooperative arrangements between State agencies and BLS, the respondent fills out only one reporting form, which is used for national, State, and area estimates. This procedure eliminates duplicate reporting on the part of respondents, and together with the use of similar estimating techniques at the national and State levels, promotes geographic comparability of estimates.

State agencies mail the forms to the establishments and examine the returns for consistency, accuracy, and completeness. After the States use the information to prepare State and area series, the source materials are sent to BLS (Washington Office) for use in developing estimates at the national level.

Shuttle schedules. Form BLS 790—"Report on Employment, Payroll, and Hours"—is used to collect employment, payroll, and hours data. The schedule is returned to the respondent each month by the State agency so that the next month's data can be entered on the space allotted for that month. This "shuttle" procedure promotes comparability and accuracy of reporting, since the respondents can see the figures they have reported for previous months.

The BLS 790 provides for entry of data on the number of full- and part-time workers on the payrolls of nonagricultural establishments, and, for most industries, payroll and hours of production and related workers, construction workers, or nonsupervisory workers.

Concepts

Industrial classification. Establishments are classified into industries on the basis of their principal product or activity, in accordance with the **Standard Industrial Classification Manual, 1972**. Since January 1980, the classification is determined from information on annual sales volume collected each year on a supplement to the quarterly unemployment insurance tax reports filed by employers. If an establishment makes more than one product or engages in more than one activity, the entire employment of the establishment is included under the industry indicated by the principal product or activity.

Industry employment. Employment data, except for the Department of Defense, refer to persons on establishment payrolls who received pay for any part of the pay period which includes the 12th of the month. For civilian employees of the Department of Defense, the figures represent the number of persons who occupied positions on the last day of the calendar month; intermittent workers are counted if they performed any service during the month.

The data exclude proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households. Salaried officers of corporations are included. Government employment covers only civilian employees; Federal military personnel are excluded from the estimates of total non-agricultural employment.

Persons on an establishment payroll who are on paid sick leave (when pay is received directly from the firm), on paid holiday or paid vacation, or who work during any part of the pay period even though they are unemployed or on strike during the rest of the period, are counted as employed. Not counted as employed are persons who are laid off, on leave without pay or on strike for the entire period, or who are hired but do not report to work during the period.

Industry hours and earnings. Hours and earnings data are derived from reports of payroll and hours for production and related workers in mining and manufacturing, construction workers in construc-

tion, and nonsupervisory employees in all other industries. When the reported pay period exceeds 1 week, the payroll and hours figures are reduced to a weekly basis. The above items are further defined as follows:

Production and related workers include working supervisors and all nonsupervisory workers (including group leaders and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial and guard services, product development, auxiliary production for plant's own use (e.g., power plant), and record-keeping and other services closely associated with the above production operations.

Construction workers include the following employees in the construction division: Working supervisors, qualified craft workers, mechanics, apprentices, laborers, etc., whether working at the site of construction or in shops or yards, at jobs (such as precutting and preassembling) ordinarily performed by members of the construction trades.

Nonsupervisory employees include employees (not above the working supervisory level) such as office and clerical workers, repairers, salespersons, operators, drivers, physicians, lawyers, accountants, nurses, social workers, research aides, teachers, drafters, photographers, beauticians, musicians, restaurant workers, custodial workers, attendants, line installers and repairers, laborers, janitors, guards, and other employees whose services are closely associated with those of the employees listed.

Payroll covers the payroll for full- and part-time production, construction, or nonsupervisory workers who received pay for any part of the pay period which includes the 12th of the month. The payroll is reported before deductions of any kind, e.g., for old-age and unemployment insurance, group insurance, withholding tax, bonds, or union dues; also included is pay for overtime, holidays, vacations, and sick leave paid directly by the firms. Bonuses (unless earned and paid regularly each pay period), other pay not earned in pay period reported (e.g., retroactive pay), and the value of free rent, fuel, meals, or other payment in kind are excluded.

Hours cover hours worked or paid for during the pay period which includes the 12th of the month, for production, construction, or nonsupervisory workers. Hours include hours paid for holidays and vacations, and for sick leave when pay is received directly from the firm.

Average hourly and weekly earnings. Average hourly earnings for manufacturing and nonmanufacturing industries are on a "gross" basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work, and changes in output of workers paid on an incentive plan. Shifts in total volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general earnings averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings differ from wage rates. Earnings are the actual return to the worker, while rates are the amounts stipulated for a given unit of work or time. The earnings series do not measure the level of total labor cost to the employer since the following are excluded: Irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings by employees not covered under the production worker, or construction worker, or nonsupervisory employee definitions.

Gross average weekly earnings in most cases are derived by multiplying average weekly hours by average hourly earnings. Therefore, weekly earnings are affected not only by changes in gross average hourly earnings, but also by changes in the length of the workweek, part-time work, work stoppages for varying reasons, labor turnover, and absenteeism.

Average weekly hours. The workweek information relates to the average hours for which pay was received, and differs from standard or scheduled hours. Such factors as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect differences in the workweek of component industries.

Estimating methods

Employment. The principal features of the procedure used to estimate employment for the industry statistics are (1) the use of the "link relative" technique, which is a form of ratio estimation, and (2) periodic adjustment of estimated employment levels to new benchmarks.

The "link relative" technique. From a sample of establishments which reported for both the previous and current months, the ratio of current-month employment to that of the previous month is com-

puted. The estimates of employment (all employees, including both production and nonproduction workers) for the current month are obtained by multiplying the estimates for the previous month by these "link relatives."

At the aggregate industry level, i.e., divisions and groups, employment is the sum of the employment estimates for component industries. Annual average employment is the sum of the monthly estimates divided by 12.

Benchmark adjustment. Each year employment estimates are compared with comprehensive counts of employment, which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made. Normally, benchmark adjustments are made annually.

The primary source of benchmark information is the employment data, by industry, compiled quarterly by State agencies from reports of establishments covered under State unemployment insurance laws. These reports, covering about 98 percent of employees on nonagricultural payrolls in the United States, are collected and tabulated by State employment security agencies under the direction of BLS. Benchmark data for the residual are obtained from the records of the Social Security Administration, the Interstate Commerce Commission, and a number of other agencies in private industry or government.

The estimates for the benchmark month are compared with the new benchmark levels, industry by industry. If revisions are necessary, the monthly series of estimates between benchmark periods are adjusted at levels between the new benchmark and the preceding one, and the new benchmark for each industry is then carried forward progressively to the current month on the basis of trends shown in the sample. Under this procedure, the benchmark is used to establish the level of employment while the sample is used to measure the month-to-month changes in the level.

Data for the periods subsequent to the last benchmark are subject to revision.

Hours and earnings. These estimates are based on the same sample used for the employment estimates. The average weekly hours and average hourly and weekly earnings apply only to production, construction, or nonsupervisory workers as distinguished from all employees.

For individual industries, monthly estimates of average weekly hours are obtained by dividing aggregate (total) hours by the number of production workers (or construction, or nonsupervisory workers). Average hourly earnings are computed by di-

viding aggregate payrolls by aggregate hours. Industry group and division averages are obtained by weighting the averages for individual industries by production-worker employment (in the case of average weekly hours) or production-worker hour aggregates (in the case of average hourly earnings) in the particular groups or divisions.

To obtain annual averages of average weekly hours, the 12-month total of aggregate hours (average weekly hours multiplied by production-worker employment) is divided by the 12-month total of employment. The 12-month total of aggregate payrolls (weekly earnings multiplied by employment weights or hourly earnings multiplied by aggregate hours for 12 months) is divided by the 12-month total of aggregate hours to yield average hourly earnings.

Average weekly earnings, except for industries where hours data are not collected, are the product of average weekly hours and average hourly earnings.

The sample

Design. The sampling plan used in the survey is an optimum allocation design known as "sampling proportionate to average size of establishment." Under this design, large establishments fall into the sample with certainty. However, the proportion of total employment covered varies considerably from industry to industry. For example, sample coverage is high (55 percent on the average) in manufacturing industries in which a large proportion of total employment is concentrated in relatively few establishments. On the other hand, coverage is much lower (17 percent) in wholesale and retail trade industries which are made up of many small establishments. The large sample in manufacturing is desirable because manufacturing industries have a greater tendency to vary from regular cyclical or seasonal patterns than do nonmanufacturing industries.

Reliability of the employment estimates. The estimates derived from the employment and payroll survey may differ from the figures that would have been obtained if it were possible to take a complete census using the same schedules and procedures. However, the relatively large size of the samples maintained by the State agencies and the annual adjustment of employment estimates to more recent benchmark levels assure a very high degree of accuracy. One measure of the reliability of an estimate projected from a benchmark is the amount by which it differs from the new benchmark at the next adjustment period. BLS uses this criterion rather than the

standard error of the estimates. Average benchmark revisions to State and area estimates for recent years are presented in table 1. Table 2 indicates the distribution of States and areas by percentage differences between benchmarks and estimates since 1978.

Differences between the benchmarks and the estimates result not only from sampling and response errors but also from changes in the industrial classification of individual establishments (resulting from changes in their product), which are not reflected in the estimate levels until the data are adjusted to new benchmarks. At the more detailed industry levels, particularly within manufacturing, changes in classification are often the major cause of differences. Another cause of differences, generally minor, between the estimates and the benchmarks is improvement in the quality of the benchmark data.

Comparability with other series

County Business Patterns. Data in this publication (Bureau of the Census, U.S. Department of Commerce) differ from BLS establishment statistics in the treatment of central administrative offices and auxiliary units. Differences also may arise because of industrial classification, and reporting practices. In addition, CBP coverage is incomplete for some non-profit activities, and interstate railroads and government are excluded.

Employment covered by State unemployment insurance programs. Most nonagricultural wage and salary workers are covered by unemployment insurance programs. Beginning in January 1972, coverage was expanded to include employees of small firms and selected nonprofit organizations who had not been covered previously. However, certain activities, such as interstate railroads, parochial schools, and churches are not covered by unemployment insurance programs whereas these are included in BLS establishment statistics. Beginning in January 1978, coverage was extended to include almost all State and local government employees.

Statistics on manufactures and business, Bureau of the Census. BLS establishment statistics on employment differ from employment counts derived by the Bureau of the Census from its censuses or annual sample surveys of manufacturing establishments and the censuses of business establishments. The major reasons for noncomparability are different treatment of business units considered parts of an establishment, such as central administrative offices and auxiliary units, the industrial classification of

Table 1. Percentage differences between State and area benchmarks and estimates for employment, by industry division 1978-1981

Industry division	1978		1979		1980		1981	
	State	Area	State	Area	State	Area	State	Area
Total	1.6	1.5	0.9	1.8	0.0	0.4	0.1	0.5
Mining	5.7	9.2	.3	7.8	3.0	4.7	3.0	8.5

Finance, insurance, and real estate	1.8	1.1	.6	3.4	.8	.9	.6	2.0
Services	2.4	2.7	.9	3.6	.3	.7	.3	1.5
Government	1.1	1.1	.9	3.1	.3	.5	0.0	.3

establishments, and different reporting patterns of multiunit companies. There are also differences in the scope of the industries covered, e.g., the Census of Business excludes professional services, public utilities, and financial establishments, whereas these are included in BLS statistics.

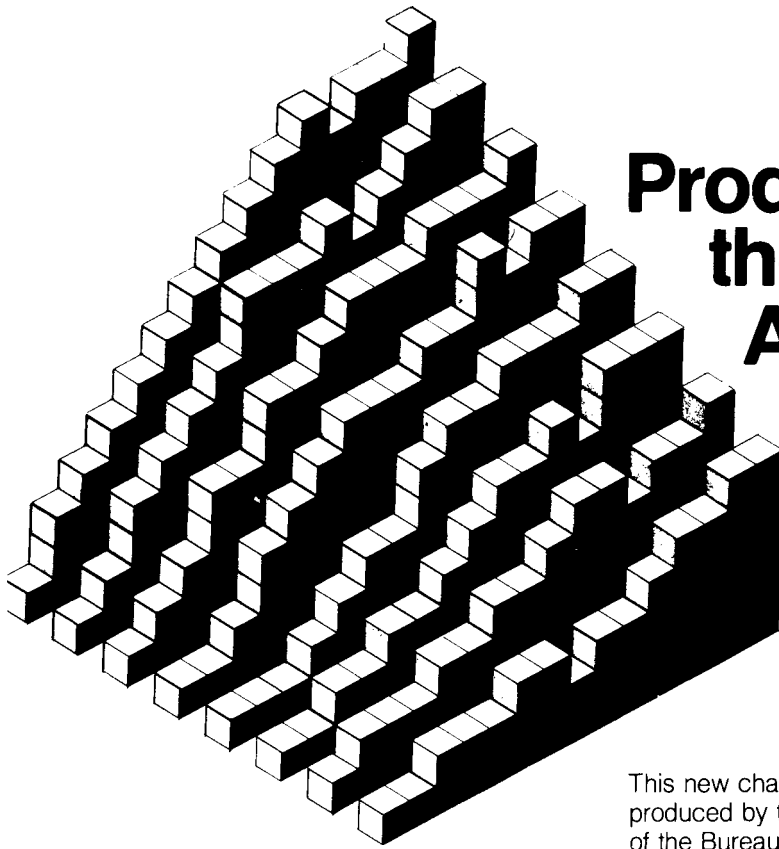

Statistics on State and local government, Bureau of the Census. BLS statistics on State and local government employment differ slightly from the employment counts of the Bureau of the Census in its censuses and annual sample surveys. BLS excludes and Census includes certain nominal employment (such as paid elected officials of small cities) and Federal-State cooperative extension personnel serving under a Federal appointment. BLS classifies employees of local government libraries in "education" whereas Census includes them under "other local functions."

Table 2. Distribution of States and areas by percentage difference between benchmarks and estimates for total nonagricultural employment, 1978-81

Percent difference	1978		1979		1980		1981	
	State	Area	State	Area	State	Area	State	Area
Total	51	234	51	234	50	238	50	248

5.0 percent and over	1	18	0	13	1	13	0	8

Federal Civilian Work Force Statistics bulletin, Office of Personnel Management. The Office of Personnel Management (OPM), publishes this bulletin monthly using data from reports it collects. The BLS Federal employment series by State are derived from statistics based on coverage of unemployment compensation for Federal employees. OPM data exclude and BLS data include Defense Department workers paid from nonappropriated funds, employees of certain local agricultural committees of the Department of Agriculture, and

Federal-State cooperative employees serving under a Federal appointment. OPM data include and BLS data exclude employees paid on a contract or fee basis, and certain interns, student nurses, and other student employees of Federal hospitals. BLS employment (except for Defense Department units) is for the pay period including the 12th of the month whereas the OPM count represents the number of persons employed on the last workday of the month plus all intermittent employees during the month.

Productivity and the Economy: A Chartbook

Productivity. Everybody talks about it. What does it mean? How does it affect wages and costs? What does it have to do with employment?

This new chartbook, produced by the staff of the Bureau of Labor Statistics, answers questions in understandable—yet technically accurate—charts and captions.

The chartbook explains what productivity is, how it has changed over the years, and what factors have contributed to that change.

The 100 page chartbook, priced at \$5.50, is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or you may send your order to the BLS regional office nearest you.
