UNITED STATES DEPARTMENT OF LABOR

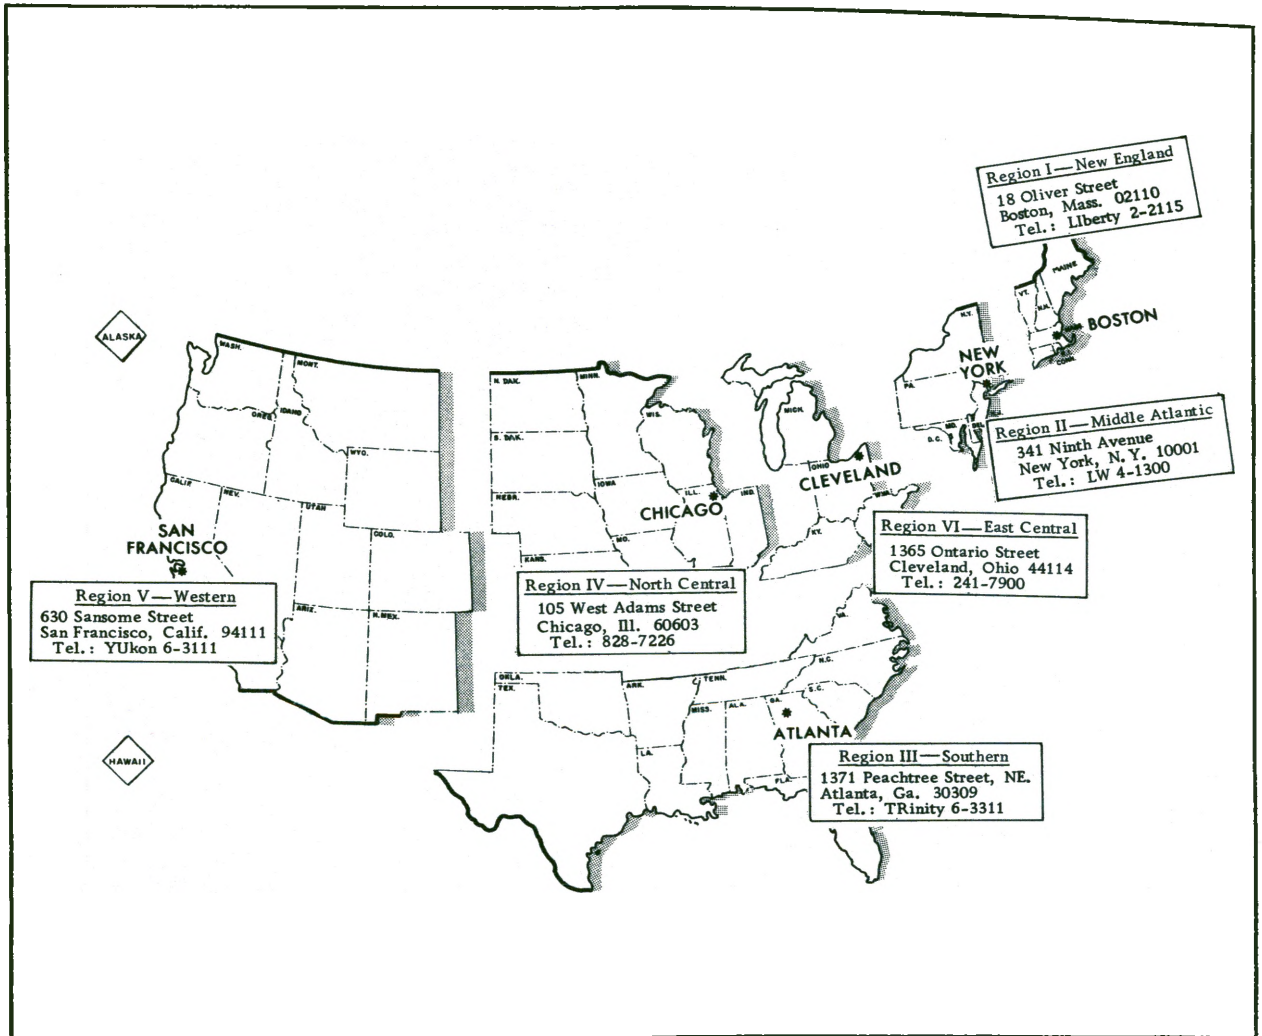

W. Willard Wirtz, Secretary

BUREAU OF LABOR STATISTICS

Ewan Clague, Commissioner

Preface

This bulletin presents estimates of employment, average hourly and weekly earnings, and weekly hours of work of nonsupervisory employees in apparel and accessory stores in June 1962. This survey supplements a similar study conducted in June 1961. This bulletin provides data on changes in earnings and hours of work between the survey periods, during which time the 1961 amendments to the Fair Labor Standards Act, that established a \$1 minimum wage for employees in large retail enterprises, became effective. The survey was part of a broad program of studies initiated by the U. S. Department of Labor for continuing appraisal of Federal minimum-wage legislation.

The statistics were obtained from a nationwide survey of retail trade (excluding eating and drinking places) conducted by the Bureau of Labor Statistics for a June 1962 payroll period. Data are provided separately for men and women; four regions of the United States—Northeast, South, North Central, and West; metropolitan and non-metropolitan areas; and for retail enterprises and establishments by their annual volume of sales. Appendix A provides technical information on the scope and method of the survey, as well as definitions of terms. A copy of the questionnaire used in the survey is shown in appendix B.

A bulletin containing comprehensive statistical data for the entire retail trade industry (except eating and drinking places) is available. Separate bulletins providing data for each of the other major retail groups comprising retail trade will also be issued. (See inside back cover.)

The Wage and Hour and Public Contracts Divisions participated in the planning of the survey and provided the necessary funds. This study was conducted in the Bureau's Division of National Wage and Salary Income by Norman J. Samuels, Chief of the Division, under the general direction of L. R. Linsenmayer, Assistant Commissioner for Wages and Industrial Relations. The analysis was prepared by Alvin Bauman and Joseph K. Cocco, under the immediate supervision of Herbert Schaffer.

Employee Earnings in Retail Apparel and Accessory Stores, June 1962

Summary

Average straight-time earnings were \$1.52 an hour for nonsupervisory workers in the Nation's apparel and accessory stores in June 1962. A tenth of the approximately 600,000 workers within the scope of the Bureau's survey earned less than \$1 an hour, about a seventh were concentrated at \$1 to \$1.05, and a sixth earned \$2 or more an hour. During the survey week nearly a third of the employees worked on a part-time basis (less than 35 hours a week), two-fifths worked from 35 to 40 hours inclusive, while nearly a fifth worked more than 44 hours a week. Average weekly earnings were \$52.83 and ranged from \$12.37 for those employees who worked less than 15 hours to \$89.10 for those who worked 49 or more hours a week.

Among the four geographic regions of the United States, pay levels ranged from \$1.29 in the South to \$1.73 an hour in the West. Men averaged \$1.87 an hour, 53 cents an hour more than women. Metropolitan area workers averaged \$1.59 an hour compared with \$1.24 for nonmetropolitan area workers.

Workers in establishments which, for the most part, were subject to the provisions of the Fair Labor Standards Act averaged \$1.59 an hour, 11 cents more than those in nonsubject establishments.

Among the lines of business for which data are presented separately, employees in men's and boys' clothing stores and shoe stores each averaged \$1.76 an hour. In both of these lines, a sixth of the workers earned less than \$1.05 and three-tenths \$2 or more. In women's ready-to-wear clothing stores, employees had average earnings of \$1.36 an hour. Slightly more than a fourth of the workers earned less than \$1.05, while fewer than a tenth earned \$2 or more an hour.

During the survey week, a fourth of the workers in men's and boys' clothing stores worked on a part-time basis (less than 35 hours), nearly a third worked from 35 to 40 hours, inclusive, and slightly more than three-tenths worked in excess of 44 hours. Part-time employees in shoe stores accounted for about a third of the nonsupervisory work force, while those working between 35 and 40 hours, inclusive, and more than 44 hours each represented almost three-tenths. In women's ready-to-wear clothing stores, a third of the employees also worked less than 35 hours, but nearly a half worked from 35 to 40 hours, inclusive, and fewer than a tenth worked in excess of 44 hours.

Average weekly earnings in men's and boys' clothing stores were \$65.67 and varied from \$13.56 for employees who worked less than 15 hours to \$93.44 for those who worked 49 or more hours. The weekly average in men's and boys' clothing stores exceeded the shoe store weekly average by \$5.06 and was \$19.39 above the average in women's clothing stores. Weekly earnings among employees of the three apparel and accessory store groups differed by less than \$2 for those working less than 15 hours, but exceeded \$10 a week for those working 49 or more hours.

Average hourly earnings in June 1962 for the entire retail apparel group were 2 cents an hour above the \$1.50 wage level recorded in a similar survey a

year earlier. Changes in the distribution of employee earnings occurred primarily at the lower pay levels, mostly in response to the enactment of a \$1 Federal minimum wage which became effective on September 3, 1961, for most workers in large retail enterprises. Between surveys, the proportion of workers paid less than \$1 an hour in apparel stores brought under the Fair Labor Standards Act declined from 9 to 1 percent while in those stores not subject to the act the decline was from 18 to 13 percent.

Characteristics

Apparel and accessory stores are primarily engaged in selling a variety of clothing, shoes, hats, underwear, and related articles for personal wear and adornment. The degree of specializing in certain types of apparel varied from family clothing stores selling a complete line of clothing for men, women, and children to clothing stores selling only one line. There are also shops which may specialize in selling hats, shoes, undergarments, or sportswear. The employment of men and women in many lines of business appeared to be determined largely by the type of clothing sold. For example, nine-tenths of the employees in women's ready-to-wear clothing shops were women, whereas two-thirds of the employees in men's and boys' clothing shops were men. Women, however, comprised more than two-thirds of the work force in all apparel stores. Commission or bonus payment was a common practice and such earnings are included as part of the wage data.

More than 600,000 nonsupervisory employees in the Nation's apparel and accessory stores were included in the survey in June 1962. A third of the apparel workers were employed in the Northeast, slightly more than a fourth in both the South and North Central regions, and an eighth in the West. Nearly two-fifths worked in women's ready-to-wear clothing stores, and more than a sixth each worked in shoe stores and men's and boys' clothing stores. Generally, the regional distribution of employment in each of the separate lines of business was similar to that noted for the major group. Four-fifths of the apparel store workers were employed in metropolitan areas of the United States; similar proportions of workers in men's clothing shops and women's clothing shops were employed in such areas.

Somewhat more than a third of the workers in apparel and accessory stores were employed in establishments covered by the Fair Labor Standards Act; a fourth of the workers in men's and boys' clothing stores and more than two-fifths of those in women's ready-to-wear stores were in covered establishments.

Apparel and Accessory Stores

Average Hourly Earnings

All Nonsupervisory Employees. In retail apparel and accessory stores in the United States, nonsupervisory workers had average straight-time earnings of \$1.52 an hour in June 1962 (table 1). Nearly a tenth of the approximately 600,000 workers included in the survey earned less than \$1 an hour, more than an eighth earned between \$1 and \$1.05,¹ more than two-fifths, less than \$1.25, and a sixth, \$2 or more.

¹ For ease of reading, in this and subsequent discussions of tabulations the limits of the class intervals are designated as from \$1 to \$1.05, or between \$1 and \$1.05, instead of using the more precise terminology of "\$1 and under \$1.05."

Average hourly pay levels among the four broad geographic regions of the United States² were \$1.29 in the South, \$1.47 in the North Central region, \$1.67 in the Northeast, and \$1.73 in the West. Differences among the regions in the distribution of employee earnings were generally more pronounced at the lower than at the higher pay levels. The proportions of workers earning less than \$1.05 an hour, for example, ranged from fewer than a tenth in the West to more than two-fifths in the South, whereas the proportions earning \$2 or more an hour ranged from about a tenth in the South to approximately a fourth in the West. The South accounted for half of the 140,700 workers in apparel and accessory stores who earned less than \$1.05 an hour. In the North Central region, more than a fourth of the workers earned less than \$1.05 and about an eighth earned at least \$2 an hour. Although the proportions of workers at the lower and higher pay levels were approximately the same in the Northeast and West, three-tenths of those in the former region earned less than \$1.25 compared with fewer than a fifth in the latter region.

Men and Women. Women in apparel and accessory stores had average earnings of \$1.34 an hour, 53 cents an hour below those of men (tables 2 and 3). More than a fourth of the women earned less than \$1.05 and nearly half less than \$1.25, about twice the proportions of men with these earnings. Fewer than a tenth of the women compared with a third of the men earned \$2 or more.

On a regional basis, the wage advantage of men over women was 43 cents an hour in the South and varied from 53 to 56 cents among the other regions.

Men's earnings varied among the regions by about the same relative amounts as women's. In the Northeast, men averaged 27 percent more than in the South and women 26 percent more. In the North Central region, men averaged 15 percent more than in the South and women 12 percent more, while in the West, men averaged 31 percent more and women 34 percent more than in the South.

Metropolitan and Nonmetropolitan Areas. Workers in metropolitan areas averaged \$1.59 an hour, 35 cents an hour more than those in nonmetropolitan areas (tables 4 and 5). In the larger size communities, 18 percent of the workers earned less than \$1.05 an hour, 36 percent less than \$1.25, and 19 percent \$2 or more an hour. In the smaller size communities, on the other hand, 45 percent of the workers earned less than \$1.05, 63 percent less than \$1.25, and only 7 percent earned as much as \$2 an hour. Although nonmetropolitan area workers accounted for only a fifth of the work force in the survey, they constituted two-fifths of the workers in the industry who earned less than \$1.05 an hour.

Earnings of metropolitan area workers exceeded those of nonmetropolitan area workers by amounts ranging from 27 cents an hour in the South to 38 cents in the West. However, the pay level of \$1.42 an hour for nonmetropolitan area workers in both the Northeast and West was 6 cents an hour higher than those for metropolitan workers in the South. Earnings of less than \$1.05 an hour were received by more than a third of the workers in metropolitan areas of the South, compared with a fifth and a fourth, respectively, of those in nonmetropolitan areas of the Northeast and West.

Relative differences in wage levels among the regions for metropolitan area workers did not show marked differences from those for nonmetropolitan area workers. Nonmetropolitan area workers averaged 30 percent more in the Northeast than in the South and metropolitan area workers averaged 26 percent

² See appendix A for the States included in each region and for definitions of terms used in this bulletin.

more. Nonmetropolitan area workers averaged 17 percent more in the North Central region than in the South and metropolitan area workers averaged 13 percent more. A similar comparison between the South and the West showed that the differential was slightly greater in metropolitan than in nonmetropolitan areas—32 and 30 percent, respectively.

Enterprise and Establishment Sales-Size Classes. Retail stores, for purposes of this survey, were classified by their annual gross volume of sales (exclusive of excise taxes), and by the sales of their parent enterprises (tables 6 and 7).³ Forty-five percent of the nonsupervisory apparel and accessory store workers were employed in enterprises with \$1 million or more in annual sales, and four-fifths of these workers were in establishments with \$250,000 or more in annual sales. Conversely, two-thirds of the workers employed in enterprises with less than \$1 million in sales were in establishments with less than \$250,000 in annual sales.

Workers employed in enterprises with \$1 million or more in annual sales earned \$1.56 an hour, on the average. A sixth of the workers earned less than \$1.05, two-fifths less than \$1.25, and a sixth, \$2 or more an hour. Workers in establishments with \$250,000 or more in sales which were part of such enterprises averaged \$1.59 an hour and the distribution of their earnings was similar to that noted for the overall enterprise group. Workers in establishments with less than \$250,000 in annual sales which were part of such enterprises averaged \$1.45 an hour. Nearly three-tenths of these workers earned less than \$1.05 and half earned less than \$1.25 an hour.

Workers in enterprises with less than \$1 million in sales averaged \$1.48 an hour. Except for a larger proportion of workers earning less than \$1.05, nearly three-tenths, the proportions earning less than \$1.25 and \$2 or more an hour were approximately the same as noted for the higher sales volume enterprises. There was also a marked similarity in the level and distribution of earnings between the lower and higher sales volume establishments of the enterprise sales-size classes.

The higher earnings in metropolitan areas than in nonmetropolitan areas, previously noted for the Nation's apparel and accessory store workers, persisted when comparisons were made by enterprise and establishment sales-size classes. For example, the differential between the two areas was 34 cents for establishments with sales of less than \$250,000 in both enterprise sales-size classes, 1 cent less than the overall differential.

Weekly Hours of Work

The length of the workweek varied widely among apparel and accessory store employees. During the week studied, nearly a third of the employees worked on a part-time basis (less than 35 hours), two-fifths worked from 35 to 40 hours, inclusive, and nearly a fifth worked in excess of 44 hours a week (table 8).

On a regional basis, the proportions of part-time workers were similar in the West, Northeast, and North Central region ranging from 33 to 37 percent. In the South, however, only 22 percent of the workers were employed on a part-time basis. A workweek of from 35 to 40 hours, inclusive, prevailed for 47 percent of the workers in the West and for 46 percent in the Northeast, but in the

³ Generally, establishments with at least \$250,000 in annual sales which were part of enterprises with at least \$1 million in annual sales were included under the coverage of the 1961 amendments to the Fair Labor Standards Act (FLSA), effective September 3, 1961.

South and North Central regions the proportions on this work schedule were 34 and 38 percent, respectively. A workweek in excess of 44 hours applied to 29 percent of the workers in the South, whereas from 11 to 16 percent worked such hours in the other regions.

Similar proportions of men and women worked on a part-time basis, about three-tenths and a third, respectively. A workweek of from 35 to 40 hours, inclusive, prevailed for fewer than three-tenths of the men, but for almost half of the women. A third of the men, but only about a tenth of the women worked longer than 44 hours a week.

In both metropolitan and nonmetropolitan areas about a third of the employees worked less than 35 hours a week, while more than two-fifths in the former areas and three-tenths in the latter worked from 35 to 40 hours, inclusive. A sixth of the metropolitan area employees, compared to almost a fourth of those in nonmetropolitan areas worked in excess of 44 hours a week (table 9).

About the same proportions of workers in enterprises with \$1 million or more in sales as in those with less than \$1 million in sales (a third and three-tenths, respectively) worked on a part-time basis. However, almost half of the employees in the former sales-size group compared with about a third in the latter, worked from 35 to 40 hours, inclusive. A workweek in excess of 44 hours prevailed for more than a fifth of the workers in enterprises with less than \$1 million in sales compared with about an eighth in the higher volume enterprises (table 10).

Average Weekly Earnings

Nonsupervisory employees in apparel and accessory stores earned an average of \$52.83 a week in June 1962. Weekly earnings ranged from \$12.37 for those who worked less than 15 hours a week to \$89.10 for those who worked at least 49 hours a week (table 8). Weekly earnings were not always determined by the number of hours worked during the week. Employees who worked exactly 40 hours a week averaged \$64.27, while those who worked over 40 but under 44 hours a week earned \$5.01 less.

The patterns of relative wage differentials on a weekly basis generally paralleled those previously noted on an hourly basis for the regions, men and women, and metropolitan and nonmetropolitan areas. For the enterprise-establishment sales-size classes, however, average weekly earnings were higher in establishments with \$250,000 or more in annual sales which were part of enterprises with less than \$1 million in annual sales than in those which were part of enterprises with \$1 million or more in annual sales, whereas average hourly earnings were the same. In establishments with less than \$250,000 in annual sales, average weekly earnings were higher in enterprises with less than \$1 million in annual sales than in those with \$1 million or more in annual sales, whereas average hourly earnings were higher in the higher volume enterprises.

Men's and Boys' Clothing and Furnishing Stores

Average Hourly Earnings

All Nonsupervisory Employees. In men's and boys' clothing and furnishings stores, nonsupervisory employees averaged \$1.76 an hour in June 1962 (table 11). Half of the 103,100 workers included in the survey earned less than

\$1.56, and earnings for the middle 50 percent of the workers ranged from \$1.20 to \$2.08 an hour.⁴ About a tenth of the workers were concentrated at the \$1-\$1.05 wage interval.

Average pay levels, when computed separately for four geographic regions of the United States, were \$1.49 in the South, \$1.67 in the North Central region, \$1.93 in the Northeast, and \$1.97 in the West. Of the 17,100 workers who earned less than \$1.05 an hour, slightly more than two-fifths were employed in the South. Three-tenths of the southern workers earned less than \$1.05, more than two-fifths less than \$1.25, and slightly less than a fifth \$2 or more an hour. By contrast, only a tenth of the workers in the West earned less than \$1.25, while two-fifths earned \$2 or more an hour. The distribution of earnings in the Northeast generally paralleled that in the West, except that the proportion of workers paid less than \$1.25 was almost twice as large as in the West. In the North Central region, a fifth earned less than \$1.05, a third earned less than \$1.25, and about a fourth earned \$2 or more an hour.

Men and Women. Average earnings of \$1.90 an hour for men were 45 cents an hour above those for women (tables 12 and 13). Nearly equivalent proportions of men and women earned less than \$1.05 an hour, about a sixth and a fifth, respectively, although a greater proportion of men than women earned \$1.25 or more an hour, nearly four-fifths and two-thirds, respectively. However, two-fifths of the men, compared with an eighth of the women, had earnings of \$2 or more an hour.

Men's earnings were higher than women's in each of the four regions by amounts ranging from 38 cents in the North Central region to 48 cents in the Northeast. However, men in the South averaged 7 cents an hour less than women in the West. A third of the men in the South, compared with about a twentieth of the women in the West, earned less than \$1.25 an hour.

The pay level for women varied more widely among the regions, on a relative basis, than the pay level for men. Based on pay levels in the South, women's earnings were 33 percent more and men's 25 percent more in the Northeast, 18 and 8 percent more, respectively, in the North Central region, and 44 and 28 percent more, respectively, in the West.

Metropolitan and Nonmetropolitan Areas. Metropolitan area workers averaged \$1.84 an hour, 36 cents an hour above the pay level of nonmetropolitan area workers (tables 14 and 15). A fifth of the metropolitan area workers earned less than \$1.25, about half the proportion of the nonmetropolitan area workers with such earnings; a third of the former group earned \$2 or more an hour, more than twice the proportion of the latter group.

Among the regions, average earnings for metropolitan area workers ranged from \$1.52 in the South to \$2.10 an hour in the West. Nearly a fourth of the metropolitan area workers in the South earned less than \$1.05, and they accounted for more than two-fifths of the metropolitan area workers in the United States with such earnings. Insufficient data were available for separate presentation of nonmetropolitan areas by region.

Enterprise and Establishment Sales-Size Classes. Nearly three-tenths of the workers in men's and boys' clothing stores were employed in enterprises with \$1 million or more in annual sales, and about nine-tenths of the workers in such

⁴ The median and range of earnings for the middle half of the workers was determined by interpolation within a 5- or 10-cent interval shown in the tables.

enterprises were employed in establishments with \$250,000 or more in annual sales. On the other hand, nearly three-fifths of the workers in enterprises with less than \$1 million in annual sales were employed in establishments with less than \$250,000 in annual sales (tables 16 and 17).

In enterprises with \$1 million or more in sales, workers averaged \$1.91 an hour. About a tenth of the workers earned less than \$1.05, a fifth less than \$1.25 and more than a third \$2 or more an hour. Workers in establishments with \$250,000 or more in sales, which were part of such enterprises, averaged \$1.94 an hour and the distribution of their earnings was nearly the same as that noted for the enterprise group.

Workers in enterprises with less than \$1 million in annual sales averaged \$1.70 an hour. A fifth of the workers earned less than \$1.05 an hour, three-tenths less than \$1.25, and more than a fourth \$2 or more an hour. Workers in establishments with \$250,000 or more in annual sales, which were part of such enterprises, averaged \$1.81 compared to \$1.61 for those in establishments with less than \$250,000 in annual sales. In the higher sales volume establishments about an eighth of the workers earned less than \$1.05; fewer than a fourth less than \$1.25; and nearly a third, \$2 or more an hour. In the lower sales volume establishments these proportions were nearly a fourth, a third, and fewer than a fourth, respectively.

Weekly Hours of Work

The length of the workweek varied widely in men's and boys' clothing stores. At the time of the survey, slightly more than a fourth of the employees worked on a part-time basis, another fourth worked exactly 40 hours a week, while slightly more than three-tenths worked in excess of 44 hours a week (table 18).

The incidence of part-time employment was most common in the North Central region, where slightly more than three-tenths of the employees worked less than 35 hours a week. The 40-hour work schedule was most common in the West, where three-tenths of the employees worked such a schedule. A long workweek was most prevalent in the South, where more than two-fifths of the employees worked in excess of 44 hours.

Nearly equivalent proportions of men and women worked on a part-time basis (24 and 28 percent, respectively). Slightly more than a fourth of the women, compared with a fifth of the men, worked exactly 40 hours a week. Substantially larger proportions of men than women worked long hours, nearly two-fifths of the men and only a sixth of the women worked in excess of 44 hours a week.

Little difference existed between the proportions of metropolitan and non-metropolitan area employees working on a part-time basis, about a fourth each. A 40-hour week was also worked by a fourth of the former employees compared with an eighth of the latter. A greater proportion of nonmetropolitan area employees than metropolitan area employees worked in excess of 44 hours, two-fifths and three-tenths, respectively (table 19).

Nearly the same proportion of workers in enterprises with \$1 million or more in sales as in enterprises with less than \$1 million in sales worked on a part-time basis (23 and 26 percent, respectively). Three-tenths of the workers in the larger volume enterprises worked exactly 40 hours a week compared with a fifth of the workers in the smaller volume enterprises, while slightly more than a fifth and a third, respectively, worked in excess of 44 hours (table 20).

Average Weekly Earnings

Weekly earnings averaged \$65.67 in June 1962 and ranged from \$13.56 for those nonsupervisory employees who worked less than 15 hours a week to \$93.44 for those who worked 49 or more hours a week (table 18). Weekly earnings were not always determined by the number of hours worked during the week. For example, employees who worked exactly 40 hours earned \$78.20, while those who worked over 40 and under 44 hours earned \$5.32 a week less.

The pattern of wage differentials on a weekly basis paralleled those previously noted on an hourly basis for the regions, metropolitan and nonmetropolitan areas, and sales-size classes of enterprises and establishments. Generally, the differential was greater when computed on an hourly than on a weekly basis. The differential between men and women, however, was greater on a weekly basis.

Women's Ready-to-Wear Stores

Average Hourly Earnings

All Nonsupervisory Employees. In retail stores selling women's ready-to-wear clothing, nonsupervisory workers averaged \$1.36 an hour in June 1962 (table 21). Earnings for the middle half of the workers ranged from \$1.04 to \$1.54 an hour. A sixth of the 229,100 workers included in the survey were concentrated at the \$1-\$1.05 pay interval.

Average pay levels among the four geographic regions of the United States were \$1.18 in the South, \$1.29 in the North Central region, \$1.49 in the Northeast, and \$1.55 in the West. In the South, a fourth of the workers earned less than \$1, another fourth earned between \$1 and \$1.05, and seven-tenths earned less than \$1.25 an hour. Of the 60,900 workers in the United States who earned less than \$1.05 an hour, slightly more than half worked in the South. By contrast, only a tenth of the workers in the West earned less than \$1.05, and three-fourths earned at least \$1.25 an hour. In the Northeast the same proportions of workers as in the West earned less than \$1.05, but fewer than seven-tenths earned \$1.25 or more an hour. Nearly two-thirds of the workers in the Northeast, compared with about half in the West, earned less than \$1.50 an hour. In the North Central region, an eighth of the workers earned less than \$1, a fifth were concentrated between \$1 and \$1.05, more than half earned less than \$1.25.

Men and Women. Average earnings of \$1.34 an hour for women were 17 cents an hour below those for men. A substantial proportion of both groups was concentrated at the lower wage intervals. For example, slightly more than a fifth of the men and a fourth of the women earned less than \$1.05, while about two-fifths and a half, respectively, earned less than \$1.25 an hour (tables 22 and 23).

In each of the regions, the level and distribution of earnings for women was similar to that noted for all workers. There was an insufficient number of men to warrant presentation of data on a regional basis.

Metropolitan and Nonmetropolitan Areas. Metropolitan area workers averaged \$1.43, 31 cents an hour more than nonmetropolitan area workers. Only a twentieth of the former workers earned less than \$1 compared with three-tenths of the latter workers, while about an eighth and a fifth, respectively, earned from \$1 to \$1.05. Three-fifths of the metropolitan area workers, twice the proportion of nonmetropolitan area workers, earned \$1.25 or more an hour.

Among the regions, pay levels in metropolitan areas ranged from \$1.26 an hour in the South to \$1.61 in the West. Half of the metropolitan area workers who earned less than \$1.05 were employed in the southern region. In nonmetropolitan areas, data were available only for the South and North Central regions where earnings averaged \$1.01 and \$1.13, respectively.

Enterprise and Establishment Sales-Size Classes. Nearly half of the workers in women's ready-to-wear clothing stores were employed in enterprises with \$1 million or more in annual sales, and more than nine-tenths of these were in establishments with \$250,000 or more in annual sales. Nearly two-thirds of the workers in enterprises with less than \$1 million in annual sales were in establishments with less than \$250,000 in annual sales (tables 26 and 27).

Average earnings were \$1.42 an hour for workers employed in enterprises with \$1 million or more in annual sales. About a fifth of the workers earned less than \$1.05, slightly more than two-fifths earned less than \$1.25, and a tenth earned \$2 or more an hour. In establishments with \$250,000 or more in sales, which were part of such enterprises, average earnings were \$1.45 an hour. Except for virtually all the workers earning at least \$1 an hour, the wage distribution was similar to that of the overall enterprise class. In establishments with less than \$250,000 in annual sales, which were part of these enterprises, average earnings were \$1.14 an hour; nearly half of the workers earned less than \$1.05 and seven-tenths less than \$1.25 an hour.

In enterprises with less than \$1 million in annual sales, earnings averaged \$1.30 an hour. A third of the workers earned less than \$1.05 and half less than \$1.25 an hour. Fewer than a tenth earned \$2 or more. In establishments with \$250,000 or more in sales, which were part of such enterprises, earnings were \$1.37 an hour compared with \$1.26 an hour in establishments with less than \$250,000 in annual sales. A fourth of the workers in the former group compared with nearly two-fifths in the latter earned less than \$1.05 an hour. Earnings of \$1.25 or more were received by 54 percent of the workers in the higher volume establishments and by 47 percent in those with the lower sales volume.

Weekly Hours of Work

Four-fifths of the employees in women's ready-to-wear clothing stores worked 40 hours or less during the week studied. A third were employed on a part-time basis (less than 35 hours a week), nearly half worked from 35 to 40 hours, inclusive, and a tenth worked more than 44 hours.

On a regional basis, close to two-fifths of the employees worked on a part-time basis in each of the regions except the South, where about a fifth of the workers were on such a schedule. More than half the workers in the West and Northeast worked from 35 to 40 hours, inclusive, compared with somewhat more than two-fifths in both the South and North Central regions. A workweek of more than 44 hours applied to nearly a fifth of the employees in the South but to fewer than a tenth of those in the other regions.

Part-time work prevailed for identical proportions of men and women—a third. However, two-fifths of the men, compared with nearly half of the women, worked from 35 to 40 hours, inclusive, while about a fifth and a tenth, respectively, worked more than 44 hours a week.

In both metropolitan and nonmetropolitan areas, a third of the employees worked on a part-time basis (table 29). However, employees who worked from 35 to 40 hours, inclusive, accounted for more than half of the work force in

metropolitan areas but for only about a third of that in nonmetropolitan areas. Fewer than a tenth of the metropolitan area workers, compared with about a sixth of those in nonmetropolitan areas were employed more than 44 hours a week.

In both enterprise sales-size groups, a third of the workers were employed on a part-time basis (table 30). However, more than half the employees in enterprises with \$1 million or more in annual sales worked from 35 to 40 hours, inclusive, while in enterprises with a lower sales volume only two-fifths worked such hours. About a twentieth of the employees in the former group compared with an eighth in the latter worked more than 44 hours during the week studied.

Average Weekly Earnings

Average weekly earnings in June 1962 were \$46.28 and ranged from \$11.58 a week for those nonsupervisory employees who worked less than 15 hours to \$83.15 for those who worked 49 or more hours a week (table 28). Weekly earnings were not always determined by the number of hours worked during the week. For example, employees who worked exactly 40 hours averaged \$57.23, while those who worked over 40 but under 44 hours averaged \$5.44 less.

The pattern of wage differentials on a weekly basis paralleled those noted on an hourly basis for the regions, men and women, metropolitan and nonmetropolitan areas, and enterprise and establishment sales-size classes. Generally, the differential was greater when computed on an hourly than on a weekly basis. The differential between men and women, however, was greater on a weekly basis.

Shoe Stores⁵

Average Hourly Earnings

All Nonsupervisory Employees. Nonsupervisory employees in the Nation's retail shoe stores were paid an average of \$1.76 an hour at straight-time rates in June 1962 (table 31). Earnings for the middle half of the employees ranged from \$1.16 to \$2.08 an hour. More than a tenth of the 107,500 workers included in the survey earned between \$1 and \$1.05 an hour.

On a regional basis, earnings averaged \$1.46 in the South, \$1.80 in the North Central region, \$1.92 in the Northeast, and \$1.96 in the West. These differences in regional averages reflect variations in the distribution of individual employee earnings. In the South, about a third of the workers earned less than \$1.05 compared with about a sixth in the North Central region, and fewer than a tenth in both the Northeast and West. Half the southern workers earned less than \$1.25, whereas seven-tenths of the workers in the North Central region, four-fifths of those in the Northeast, and about five-sixths of those in the West, earned at least that amount. At the other end of the pay scale, 15 percent of the workers in the South were paid \$2 or more an hour, but the proportions of workers with such earnings in the other regions were two to three times as great.

Weekly Hours of Work and Average Weekly Earnings

A third of the shoe store employees worked on a part-time basis (under 35 hours), slightly more than a fifth worked exactly 40 hours, while nearly three-tenths worked in excess of 44 hours a week (table 32). Average weekly earnings were \$60.61 and ranged from \$13.24 for shoe store employees who worked less than 15 hours to \$94.02 for those who worked 49 or more hours.

⁵ Insufficient data were available to warrant separate presentation of earnings and hours of work by sex, metropolitan and nonmetropolitan areas, and enterprise and establishment sales-size classes.

Changes in Earnings and Hours of Work, June 1961-June 1962

Apparel and Accessory Stores, Including Men's and Boys' Clothing Stores,
Women's Ready-to-Wear Stores, and Shoe Stores

Average earnings for nonsupervisory workers in apparel and accessory stores in June 1962 were 2 cents an hour above the \$1.50 average recorded a year earlier. During this period, the proportion of workers who earned less than \$1 an hour declined from 15 to 9 percent, or by 36,000 workers. Most of this reduction was offset by an increase in the proportion of workers with earnings ranging from \$1 to \$1.25 an hour, and particularly at the wage intervals of \$1-\$1.05, and \$1.15-\$1.20, where the number of workers expanded by nearly 15,000 and 13,000, respectively.

Regional pay levels increased by 1 cent an hour in the Northeast and 7 cents in the South, but decreased by 1 cent in the North Central region and 4 cents in the West. Although the proportion of workers paid less than \$1 declined in each of the regions, the most striking change occurred in the South where about three-fourths of the total decline took place. The proportion of southern workers concentrated at or just above \$1 an hour nearly doubled, from 12 percent in 1961, and accounted for most of the nationwide increase at that wage interval.

Among the three lines of apparel for which data were available separately, the most pronounced change in the wage distribution occurred in women's ready-to-wear stores. Although the pay level in these stores remained unchanged, the proportion of workers earning less than \$1 an hour declined from 17 to 10 percent, while the proportion at the \$1-\$1.05 wage interval increased from 14 to 17 percent between June of 1961 and 1962. These changes represented approximately two-fifths of the overall industry shifts below and at the \$1 pay level. Shoe stores accounted for 13 percent of the reduction in workers paid less than \$1 an hour and 15 percent of the increase at the \$1-\$1.05 wage interval, and men's and boys' clothing stores, 2 and 7 percent, respectively.

Only in the South did average earnings increase in each of the three apparel lines. As noted for the apparel group as a whole, the South accounted for most of the reduction in workers paid less than \$1 in each of the apparel lines, with the sharpest decline occurring in clothing stores for women. The increased concentration of workers at or just above \$1 an hour was only apparent in women's clothing stores and shoe stores in the South.

Women's earnings in apparel and accessory stores increased by 3 cents an hour from the June 1961 level of \$1.31. The proportion of women earning less than \$1 an hour has reduced by half between survey periods, from a fifth to a tenth, accounting for nine-tenths of the overall reduction in the number of workers with such earnings. Although the proportion of women earning from \$1 to \$1.05 increased by only 1 percentage point, 12,200 workers were involved, accounting for 82 percent of the overall increase at that interval. Changes in the earnings of men, for whom average earnings rose 1 cent an hour, followed a pattern similar to those noted for women, but were less pronounced.

Sex	Average hourly earnings		Percent of employees earning—							
			Less than \$1		\$1 to \$1.05		\$1.25 or more		\$2 or more	
	1961	1962	1961	1962	1961	1962	1961	1962	1961	1962
Apparel and accessory stores										
Men -----	\$1.86	\$1.87	8	5	8	10	76	75	36	35
Women -----	1.31	1.34	19	11	15	16	49	51	7	7
Men's and boys' clothing stores										
Men -----	1.89	1.90	5	5	9	10	81	78	39	39
Women -----	1.38	1.45	11	8	14	13	60	64	8	12
Women's ready-to-wear stores										
Men -----	1.57	1.51	14	8	12	14	60	62	21	15
Women -----	1.34	1.34	17	11	15	16	52	52	8	7

Although the pay level for women in women's ready-to-wear stores remained at \$1.34 an hour, the proportion earning less than \$1 declined by more than a third—from 17 to 11 percent. The concentration at the \$1-\$1.05 wage interval rose only slightly from 15 to 16 percent. In men's and boys' clothing stores, the level of earnings for women rose by 7 cents an hour, from \$1.38 to \$1.45, but the change in the wage distribution below and at the \$1 level was roughly of the same magnitude as in women's ready-to-wear stores. The change below and at the \$1 Federal minimum for men in women's ready-to-wear stores was patterned after that for women. In men's and boys' clothing stores, earnings at this level were distributed similarly in both survey years. Only 5 percent of the men in such stores had earnings of less than \$1 in June 1961.

The hourly pay level for apparel and accessory store workers rose by 1 cent in metropolitan areas and 7 cents in nonmetropolitan areas. In June 1961, a tenth of the workers in the former areas and almost two-fifths in the latter areas received less than \$1 an hour. By June 1962, these proportions were reduced by half and by three-tenths, respectively. Metropolitan area workers accounted for about three-fourths of the total decline in workers with such earnings. Increases in the proportion of metropolitan and nonmetropolitan area workers earning between \$1 and \$1.05 amounted to 1 and 2 percentage points, respectively. The proportion of nonmetropolitan area workers who were paid \$1.25 or more increased by 4 percentage points, while the proportion in metropolitan areas with these earnings was unchanged.

Area	Average hourly earnings		Percent of employees earning—							
	1961	1962	Less than \$1		\$1 to \$1.05		\$1.25 or more		\$2 or more	
			1961	1962	1961	1962	1961	1962	1961	1962
Apparel and accessory stores										
Metropolitan -----	\$1.58	\$1.59	10	5	12	13	64	64	19	19
Nonmetropolitan -----	1.17	1.24	37	26	17	19	33	37	6	7
Men's and boys' clothing stores										
Metropolitan -----	1.81	1.84	6	4	8	8	78	79	32	34
Nonmetropolitan -----	1.50	1.48	13	13	15	19	60	55	18	15
Women's ready-to-wear stores										
Metropolitan -----	1.44	1.43	12	5	12	14	60	60	11	9
Nonmetropolitan -----	1.04	1.12	40	31	22	21	21	30	1	3

In women's ready-to-wear stores, average earnings decreased by 1 cent in metropolitan areas but rose by 8 cents in nonmetropolitan areas. In both areas, however, there were substantial reductions in the proportion of workers paid less than \$1, but little change occurred in the concentration of workers at the \$1 to \$1.05 pay interval. In men's and boys' clothing stores, by contrast, little or no reduction occurred in the proportion of metropolitan and nonmetropolitan area workers earning less than \$1 an hour, although the proportion of nonmetropolitan area workers at the \$1-\$1.05 wage interval increased from 15 to 19 percent.

In the Nation's apparel and accessory stores which became subject to the minimum wage provisions of the Fair Labor Standards Act in September 1961, the proportion of workers who earned less than \$1 an hour declined from 9 to 1 percent and the proportion at or just above the \$1 Federal minimum wage increased from 9 to 14 percent. Nevertheless, the average pay level in these stores declined by 2 cents an hour from the June 1961 average of \$1.61, reflecting a decrease in the proportion of higher paid workers. Wage changes, however, were not solely restricted to the subject stores. The pay level in non-subject stores increased by 3 cents an hour; the proportion paid less than \$1 an hour declined from 18 to 13 percent, while the proportion at \$1-\$1.05 increased from 14 to 15 percent, and those earning \$1.25 or more, from 55 to 57 percent.

Sales-size class	Average hourly earnings		Percent of employees earning—							
			Less than \$1		\$1 to \$1.05		\$1.25 or more		\$2 or more	
	1961	1962	1961	1962	1961	1962	1961	1962	1961	1962

¹ Establishments with annual sales of \$250,000 or more and part of enterprises with annual sales of \$1 million or more.

² All establishments which are part of enterprises with annual sales of less than \$1 million.

The Federal minimum wage had only a limited influence on the distribution of individual earnings in men's and boys' clothing stores since only 5 percent of the workers earned less than \$1 an hour in June 1961. In women's ready-to-wear stores covered by the Fair Labor Standards Act, however, 12 percent of the workers earned less than \$1 an hour in June 1961. Virtually all of the workers were paid at least \$1 an hour in June 1962 and the concentration at the \$1 to \$1.05 wage interval increased from 9 to 15 percent. During this period, the proportion of workers who earned \$1.25 or more declined from 62 to 59 percent, which is reflected in a similar decline for apparel as a whole. By contrast, the proportion earning \$1.25 or more in nonsubject stores increased from 47 to 50 percent during the same period, but changes at or below the \$1 Federal minimum were relatively small.

Hours worked during the selected week in June changed only slightly between 1961 and 1962 for employees in apparel and accessory stores. The proportion of employees who worked more than 44 hours during the selected week decreased from 19 to 18 percent, while those who worked from 35 to 40 hours inclusive increased from 39 to 40 percent. During both periods, 32 percent of the employees worked on a part-time basis.

Changes in the length of the workweek for employees of men's and boys' clothing stores were similar to those noted for the overall industry group. In women's ready-to-wear stores, changes in the length of the workweek were also small but followed a different pattern. No change occurred in the proportion of employees who worked more than 44 hours, while those working from 35 to 40 hours, inclusive, declined from 48 to 47 percent, while those who worked less than 35 hours a week increased from 31 to 32 percent.

Average weekly earnings for apparel and accessory store workers were approximately at the same level in June 1962 as in June 1961, \$52.83 and \$52.31, respectively. However, earnings for employees who worked longer than 44 hours rose by an average of \$3.19 a week, compared with a \$1.45 increase for those who worked part-time and a 45-cent decrease for those who worked from 35 to 40 hours, inclusive.

The level of weekly earnings for workers in men's and women's clothing stores also showed little change between surveys. Earnings in men's clothing stores increased by \$1.47 a week for employees who worked from 35 to 40 hours a week, inclusive, but declined by 12 cents and \$1.61, respectively, for those who worked on a part-time basis and more than 44 hours a week. In women's clothing stores, weekly earnings increased an average of \$1.31 for employees who worked on a part-time basis and by \$4.04 for those who worked more than 44 hours, but declined by \$1.88 for employees who worked from 35 to 40 hours a week, inclusive.

Apparel and accessory stores

Table 1. Distribution and cumulative percent distribution of nonsupervisory employees by average straight-time hourly earnings, United States and regions, June 1962

Average hourly earnings	Number of employees (in thousands)					Cumulative percent of employees

Appendix A: Scope and Method of Survey

Scope of Survey

This bulletin relates to those retail establishments which were classified, according to the 1957 edition of the Standard Industrial Classification Manual, as part of the apparel and accessories group (SIC 56). Stores within this group were further identified as men's and boys' clothing and furnishings stores (SIC 561), women's ready-to-wear stores (SIC 562), and shoe stores (SIC 566). The major group includes retail stores primarily engaged in selling clothing, shoes, hats, underwear, and related articles for personal wear and adornment. Custom tailors carrying stocks of materials, and furriers are included in this group.

Men's and boys' clothing and furnishings stores are primarily engaged in the retail sale of men's and boys' overcoats, topcoats, suits, and work clothing; other stores included specialized in the sale of men's and boys' shirts, hats, underwear, hosiery, gloves, and other furnishings.

Women's ready-to-wear stores are primarily engaged in the retail sale of women's coats, suits, and dresses.

Shoe stores are primarily engaged in the retail sale of men's, women's, children's, and juveniles' shoes.

The 50 States and the District of Columbia are covered. The data reflect the earnings and hours of work of nonsupervisory employees for a representative payroll period ending nearest June 15, 1962.

Sample Design

The sample was designed to yield national and regional estimates for the major industry group and for the lines of business for which separate data are shown. A stratified sample design was used with variable sampling ratios depending on the kind of business and employment size of the sample unit. For example, the sample size for lines of business shown separately was proportionately larger than for those not published and the probability of selection increased with the employment size of the sample unit.

The following tabulation shows the number of units included in the sample of the apparel and accessories group and in the men's and boys' clothing and furnishings stores, women's ready-to-wear stores, and in shoe stores for which separate data are published:

Kind of business	Number of units
Apparel and accessories group -----	4,783
Men's and boys' clothing and furnishings stores -----	1,002
Women's ready-to-wear stores -----	1,314
Shoe stores -----	1,424

Establishment samples were obtained from three different sources: (1) State unemployment insurance listings furnished employer reporting units with eight or more employees. (2) The large chainstore enterprises provided current lists of retail stores and auxiliary units from which a sample of such units was selected. It was necessary to obtain these lists from the large chainstore enterprises because State unemployment insurance listings frequently provide data on a statewide or county basis for such companies rather than on individual establishment basis. (3) The Bureau of the Census sample used in conjunction with its Monthly Survey of Retail Sales covering single-unit retail stores with fewer than eight employees. The Census coverage of small units was necessary to supplement the Bureau's universe lists for retail trade, since State unemployment insurance laws in many States do not cover employers with fewer than four employees.

Method of Collection

The majority of the establishments included in the sample were solicited for information by mail. The largest units were visited in person by field economists of the Bureau of Labor Statistics, as were the smallest units by the Bureau of the Census enumerators acting as agents for the BLS. Personal visits were also made to a sample of the nonrespondents to the mail questionnaire.

Estimating Procedure

Data collected for each sampling unit were weighted in accordance with the probability of selecting that unit. For example, where 1 store out of 10 was selected from an industry-size group, data for that store were considered as representative of the 10 stores in the group. Thus, each segment of the retail trade industry was given its appropriate weight in the total, regardless of the disproportionate coverage of large and small stores.

No assumption has been made that the wage structures of the units not responding to the mail questionnaire were similar to those of the units responding. To minimize the bias resulting from nonresponse, data obtained by personal visits from a sample of nonrespondents were weighted to represent all other nonrespondents in similar industry-size groups. To compensate for schedules with unusable data, their weights were assigned to usable schedules of the same industry-size group and from the same or related area.

All estimated totals derived from the weighting process were further adjusted to the employment levels for June 1962, as reported in the Bureau of Labor Statistics monthly employment series. The published estimates in this report are, thus, consistent with the production worker employment shown in the monthly series. Current regional estimates, which could not be prepared from the monthly series, were based on regional distributions from the most recent Census of Business, prepared by the Bureau of the Census.

The adjustment of the survey totals to the predesignated totals was confined, for the most part, to that segment of the survey for which the sample units were obtained from State unemployment insurance listings. The lists generally were prepared prior to the time of the survey and consequently do not account for units opened or closed after the date of the lists. In the Census and the large chainstore enterprise samples, the best unbiased estimates of totals were presumed to be the weighted-up sample totals, since there was no apparent problem of unrepresented business births in these groups.

Criteria for Publication of Estimates

The results of this survey differ from those that would have been obtained by a complete canvass of all retail operations, since the survey was conducted on a sample basis. These differences may be substantial in those instances where the sample was small. It has not been possible, therefore, to present data for all cases. No earnings distributions are shown for groupings of fewer than 50 stores.

Definitions of Terms

Nonsupervisory employees include all full-time, part-time, seasonal, and casual employees below the supervisory level, such as salespersons, shipping, receiving, and stock clerks, laborers, warehousemen, caretakers, office clerks, driver-salesmen, deliverymen, installation and repairmen, elevator operators, porters, janitors, food service employees, and working supervisors.

Establishment is generally defined as a single physical location where business is conducted. In the case of two separate business entities transacting business at a single physical location (for example, a leased shoe department in a department store), each was treated as a separate establishment. On the other hand, a drug store which also operated a food counter was treated as a single establishment.

Enterprise. Establishments were considered to be part of a larger enterprise if owned by a company operating other establishments engaged in the same general field of business and under its general direction or control. The terms "enterprise" and "establishment" were used synonymously for single-unit companies.

Annual volume of sales excludes excise taxes at the retail level.

Earnings data relate to straight-time earnings and exclude premium pay for overtime and for work on weekends, holidays, and late shifts. Commission and bonus earnings and special sales bonuses, such as "P.M.'S" and "stims" paid quarterly or oftener, are included.

Individual average hourly earnings for employees not paid by the hour (e.g., salary, commissions) were obtained by dividing individual earnings reported by the number of hours worked during the corresponding period.

Individual weekly earnings were obtained by multiplying the individual average hourly earnings by the number of hours worked during a single week in June 1962.

Group average hourly earnings published in this report were obtained by dividing total individual earnings by total individual weekly hours worked.

Group average weekly earnings were obtained by dividing the sum of the individual weekly earnings by the number of employees represented in the group total.

Regions used in this study include the following States: Northeast—Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont; South—Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia; North Central—Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin; and West—Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Metropolitan areas as used in this report refers to those cities and county areas defined by the Bureau of the Budget as "Standard Metropolitan Statistical Areas." Metropolitan areas include those counties containing at least one central city of 50,000 population and those counties around such cities which are metropolitan in character and economically and socially integrated with the county containing the central city. For a more detailed description, see Standard Metropolitan Statistical Areas, 1961, prepared by the Bureau of the Budget.

RETAIL TRADE
Individual Hours and Earnings

BLS USE ONLY

1. COMPANY IDENTIFICATION:

State	Area	F. int. sales	SIC	Wgt.

The data, except for Item 2 which relates to the entire company, should cover all establishments (retail stores, warehouses, central offices, etc.) in the county or area designated to the left.

2. ANNUAL GROSS SALES FOR THE COMPANY OR ENTERPRISE:

Less than \$1,000,000
\$1,000,000 or more

Check the block which indicates the annual gross volume of sales (exclusive of excise taxes at the retail level) from all related activities of the enterprise. Include receipts from stores covered by this report as well as all other related activities. Use the last calendar or fiscal year.

3. ESTABLISHMENT INFORMATION:

Please enter the information requested in the columns below for each separate establishment (retail store, warehouse, or central office) covered by this report. Each retail store in a separate location is considered a separate establishment for the purpose of this survey. However, if the records for main store and suburban branch are kept on a combined basis, they may be considered as one establishment.

- (a) **Location:** Identify each establishment by its street address and city.
- (b) **Type of Retail Activity:** Enter for each establishment the major retail activity such as department store, drug store, gas station, etc.
- (c) **Employment:** Include all full-time, part-time, seasonal, and casual employees who received pay for any part of the payroll period ending nearest June 15, 1962. Exclude employees, such as those in leased department and demonstrators, who received all or a substantial part of their pay from another employer.
Total—Enter total number of employees including officers and other principal executives, such as buyers, department heads, and managers whose work is above the working supervisory level.
Nonsupervisory—Enter total number of employees below the supervisory level, such as salespersons, shipping and receiving clerks, laborers, warehousemen, caretakers, office clerks, driver-salesmen, installation and repairmen, elevator operators, porters, janitors, watchmen, and other employees whose services are closely associated with those listed above. Do not include officers and other principle executives, such as buyers, department heads, and managers whose work is above the working supervisory level.
- (d) **Annual Gross Sales for the Establishment:** Check the column which indicates the annual gross volume of sales (exclusive of excise taxes at the retail level).
- (e) **Weekly Store Hours:** Enter the number of hours that each retail store was open for business to the public during the week of June 10 to 16, 1962.

(a) Location (street address and city)	(b) Type of retail activity	(c) Employment for payroll period ending nearest June 15, 1962		(d) Gross establishment sales (were last year's sales \$250,000 or more?)		(e) Weekly store hours for June 10-16, 1962
		Total	Non-supervisory	Yes	No	

4. PAYROLL PERIOD:

Employment and earnings data reported should correspond to your payroll period (for example, weekly, biweekly, or monthly) ending nearest June 15, 1962. Indicate the dates for the payroll period used. If the length of the payroll period varies among employees, enter the dates affecting the greatest number.

From _____, 19__ to _____, 19__.

5. EARNINGS AND HOURS OF WORK OF NONSUPERVISORY EMPLOYEES:

This study is designed to provide information on hourly earnings and weekly hours of work for both male and female nonsupervisory employees and working supervisors for a payroll period ending nearest June 15, 1962. The number of employees in each establishment for which earnings and hours data are reported should correspond with the number of nonsupervisory employees shown in item 3(c) on page 1. The information requested should be reported separately for each establishment and the establishment identified. Earnings data for food counter, cafeteria, or restaurant workers in Department, Drug, or Variety Stores should be entered only on the blue supplement provided. Data for all other employees should be reported in Item 5 of this form.

Report earnings and hours separately for each employee unless these data are identical for two or more employees. Do not report aggregate earnings and hours for several workers. For convenience of reporting for employees paid on other than an hourly basis, columns 5 through 8 are provided. Data will not, however, be published separately by various methods of pay. Instructions and examples for reporting the necessary data in each column are listed below.

INSTRUCTIONS

(Please read carefully to avoid correspondence)

<p>Complete columns 1, 2, and 3 for all nonsupervisory employees covered by this report.</p>	<p>Column (1)—Indicate whether the employee is male (M) or female (F).</p> <p>Column (2)—Use a separate line for each employee and enter "1," unless two or more employees of the same sex work the <u>same number</u> of hours during the selected week, and receive <u>identical hourly or salary rates</u> (see example 1). Data are to be reported individually for each employee whose earnings are based entirely or in part on commissions or bonuses (see examples 3, 4, and 5).</p> <p>Column (3)—Enter the number of hours worked during the week of June 10 to June 16, 1962. Include hours paid for sick leave, holidays, vacations, etc. These hours should relate to a 1-week period regardless of the length of the payroll period.</p>
<p>Use Column 4 to report earnings of employees paid on an hourly basis.</p>	<p>Column (4)—Enter the base (straight-time) hourly rate. Premium payments for overtime work are excluded from the survey and are not to be reported. This column may also be used to report earnings of employees paid on other than an hourly basis if average straight-time hourly earnings are available.</p>
<p>Use columns 5 and 6 to report earnings of employees paid on a weekly, biweekly, monthly, or semimonthly basis.</p>	<p>Column (5)—Enter for each employee the straight-time earnings for the salary period (weekly, biweekly, monthly, or semimonthly) ending nearest June 15, 1962. Include straight-time pay for overtime, but exclude overtime premium. Do not include "draws" against commission as salary.</p> <p>Column (6)—Enter the number of hours worked during the salary period (weekly, biweekly, monthly, or semimonthly). Include hours paid for sick leave, holidays, vacations, etc.</p>
<p>Use columns 7 and 8 to report earnings of nonsupervisory employees based entirely or in part on commissions and bonuses.</p>	<p>Column (7)—Enter for each employee the total commission and/or bonus earnings, including "PM's," "Stims," or any special bonuses based on sales paid quarterly or oftener by the store. These earnings are to be reported for the commission or bonus period ending nearest June 15, 1962. If the commissions earned during that pay period are not representative of normal commission earnings, a longer period may be used. If store employees receive both commission and bonus payments for an identical period of time, report the combined figure (see example 4). If bonus payments cover a period longer than the commission period, add only the prorated amount of the bonus to the commission earnings that correspond to the commission period (see example 5). For employees paid an hourly rate or salary in addition to commissions or bonuses, it is also necessary to complete column 4, or columns 5 and 6 (see examples 4 and 5).</p> <p>Column (8)—Enter the number of hours worked during the commission or bonus period. (The hours should refer to the total hours worked during the period (weekly, biweekly, monthly, or semimonthly) and not necessarily only to those hours during which commissions or bonuses were earned.)</p>

EXAMPLES ILLUSTRATED ON PAGE 3

- Two women each worked 36½ hours during the selected week, and each were paid a straight-time hourly rate of \$1.05.
- One man worked 40 hours during the selected week, and received a salary of \$125, exclusive of premium pay for overtime, for 88 hours worked during the salary period (½ month).
- One man worked 32½ hours during the selected week and was paid on a straight commission basis, receiving \$215.70 for 168 hours.
- One woman worked 40 hours during the selected week and was paid an hourly rate of \$1.25; she also received \$35 in commissions and \$7.50 in "PM's" for 173.6 hours worked during the commission period (1 month).
- One man worked 37½ hours during the selected week, and was paid a weekly salary of \$75; he also earned commissions of \$102 during a 1-month period (162 hours) and \$150 in bonuses during a 3-month period. Only ½ of the bonus, or \$50 is reported so that the bonus period corresponds to the commission period.
