Preface

The Bureau of Labor Statistics conducted a nationwide survey of retail apparel and accessory stores for a June 1966 payroll period. Data on employment, average hourly and weekly earnings, and weekly hours of work of nonsupervisory employees were obtained and are presented in this bulletin. This information bridges the period since June 1965 when a similar survey was conducted. In addition to data for 1966, the bulletin provides an analysis of changes in employee earnings and hours between the two survey periods, during which time a Federal minimum wage of \$1.25 an hour and a 40-hour standard workweek were applied to certain large retail enterprises which were subject to the Fair Labor Standards Act. The change in the earnings and hours structure recorded by similar surveys conducted in 1956, 1961, and 1962 is also examined. Data are provided for the United States; the Northeast, South, North Central, and West regions; metropolitan and nonmetropolitan areas; men and women; and for retail enterprises and establishments by their annual volume of sales. Appendix A provides technical information on the scope and method of the survey, as well as definitions of terms. A copy of the questionnaire used in the survey is shown in appendix B.

Comprehensive statistical data for all retail trade, for each of the major retail groups which retail trade comprises, and for selected lines of retail business will be available in the individual bulletins listed on the inside back cover.

The survey was part of a broad program of studies initiated by the U.S. Department of Labor's Wage and Hour and Public Contracts Divisions for continuing appraisal of Federal legislation relating to minimum wages and maximum hours standards. In this connection, data from the survey were published in the Report Submitted to the Congress in Accordance with the Requirements of Section 4(d) of the Fair Labor Standards Act—January 1967.

The study was conducted in the Bureau's Office of Wages and Industrial Relations. The analysis was prepared by Joseph K. Cocco, under the general direction of Alvin Bauman.

Employee Earnings and Hours in Retail Apparel and Accessory Stores, June 1966

Summary

Nonsupervisory employees in the Nation's retail apparel and accessory stores averaged \$1.72 an hour at straight-time rates in June 1966. Earnings ranged widely among the 585,700 employees included in the survey; 9 out of 10 earned between \$1 and \$3 an hour. Three-tenths of the employees earned less than \$1.30 an hour, and only one-fifth earned as much as \$2 an hour. The average workweek was 33.4 hours. Nearly two-fifths of the employees worked less than 35 hours a week and one-fourth worked exactly 40 hours. Only one-fifth worked a week in excess of 40 hours. Average weekly earnings were \$57.58, and varied from \$13.57 for those employees who worked less than 15 hours a week to \$92.52 for those who worked 48 hours or more.

Among the four geographic regions of the Nation, average earnings ranged from \$1.47 an hour in the South to \$1.91 an hour in the West. Employees in metropolitan areas averaged \$1.80 an hour, compared with \$1.41 for those in nonmetropolitan areas. Men averaged \$2.07 an hour, 52 cents an hour more than women. Employees in enterprises that had \$500,000 to \$1 million in annual sales, at \$1.84 an hour, averaged 8 cents more than employees in enterprises that had \$1 million or more in sales, 9 cents more than employees in enterprises that had \$250,000 to \$500,000 in sales, and 21 cents more than those in enterprises that had less than \$250,000 in sales. Workers in establishments generally subject to the provisions of the Fair Labor Standards Act, had average hourly earnings of \$1.83, 13 cents more an hour than those in establishments which were not subject to the provisions of the act.

Nonsupervisory employees in women's ready-to-wear stores, shoe stores, and men's and boys' clothing and furnishing stores, for which data are presented separately, averaged \$1.56, \$1.81, and \$1.97 an hour, respectively. The length of the average workweek was 32.5 hours in women's ready-to-wear stores, 33.6 hours in shoe stores, and 35.5 hours in men's and boys' clothing stores. The weekly pay level was \$50.71 in women's ready-to-wear stores, \$60.90 in shoe stores, and \$70.02 in men's and boys' clothing and furnishing stores.

Average hourly earnings for nonsupervisory employees in apparel and accessory stores were 2 cents higher in June 1966 than in June 1965. Between October 1956 and June 1965, however, the average pay level advanced 38 cents, or 4.2 cents a year. The decline in the average workweek, from 33.8 hours in 1965 to 33.4 hours in 1966, reflects a slight movement away from long workweeks (48 hours or more) and towards part-time weeks (less than 35 hours). This movement is a continuation of the pattern of changes in the hours distribution in the survey years since 1956.

Characteristics

The apparel and accessories major industry group includes retail stores primarily engaged in selling clothing, shoes, hats, underwear, and related articles

for personal wear and adornment. Furriers and custom tailors carrying stocks of materials are included in this group. Stores within this group are further identified as men's and boys' clothing and furnishings stores, women's ready-to-wear stores, and shoe stores.

About 585,700 nonsupervisory employees of retail apparel and accessory stores in the United States were included in the survey. Approximately one-sixth of these employees worked in men's and boys' clothing and furnishing stores, nearly two-fifths worked in women's ready-to-wear stores, and one-fifth worked in shoe stores. About one-third of the apparel and accessory store workers were employed in the Northeast, one-fourth each were employed in the South and North Central regions, and about one-sixth were employed in the West. Four-fifths of the employees worked in metropolitan areas. The distribution by regions, and by area population size in the lines of business was similar to that in the overall group. Women accounted for seven-tenths of the employees in all apparel and accessory stores, nearly two-fifths of those in men's and boys' clothing and furnishings stores, nine-tenths of those in women's ready-to-wear stores, and two-fifths of those in shoe stores. Three-tenths of the workers in apparel and accessory stores were employed in establishments which were subject to the provisions of the Fair Labor Standards Act.

Average Hourly Earnings

Nonsupervisory employees in the Nation's retail apparel and accessory stores averaged \$1.72 an hour, at straight-time rates, in June 1966. Earnings for the 585,700 employees surveyed were broadly distributed; 9 out of 10 earned between \$1 and \$3 an hour (table 2). Earnings for the middle half of the work force were more compressed, however, ranging between \$1.28 and \$1.90 an hour. Median earnings,¹ at \$1.51 an hour, were 21 cents below the mean, thus highlighting the disproportionate concentration of employees toward the lower end of the wage scale. Three-tenths of the employees, for example, averaged less than \$1.30 an hour, and one-eighth received less than \$1.25 an hour. Higher earnings were not common in this retail industry. Only about one-fifth of the employees earned as much as \$2 an hour.

Geographically, average earnings ranged from \$1.47 an hour in the South to \$1.91 an hour in the West—in the North Central and Northeast regions earnings averaged \$1.71 and \$1.85 an hour, respectively. The differential between earnings in the South and West reflects decided differences in their distributions of individual employee earnings. For example, over one-half (52 percent) of the employees in the South, but only one-eighth in the West, earned less than \$1.30 an hour. Southern employees accounted for more than two-fifths of the Nation's retail apparel employees paid less than that amount. Pay differences, however, were not confined to the lower paid employees; e.g., one-eighth of the employees in the South compared with three-tenths of those in the West were paid \$2 an hour or more.

Community size also appeared to influence the level of employee earnings. Employees in metropolitan areas averaged \$1.80 an hour, 39 cents higher than those in nonmetropolitan areas (table 3). Whereas earnings of employees in metropolitan areas were broadly distributed, they were concentrated more heavily

¹ That amount below and above which earnings for 50 percent of the employees are found.

toward the lower end of the pay scale in nonmetropolitan areas. Earnings for the middle half of the work force in metropolitan areas ranged from \$1.30 to \$2.01 an hour, a 71-cent spread; in nonmetropolitan areas the same group of employees earned between \$1.08 and \$1.54 an hour, or a 46-cent spread. Nonmetropolitan area employees accounted for only about one-fifth of the retail apparel workers, but represented slightly more than one-third of those paid less than \$1.30 an hour. Differences, although not as sharp, also existed at the higher pay levels. One-fourth of the employees in metropolitan areas and one-tenth of those in nonmetropolitan areas earned \$2 an hour or more.

Among the regions, average earnings of employees in metropolitan areas ranged from \$1.54 an hour in the South to \$1.94 an hour in the West. In nonmetropolitan areas, earnings ranged from \$1.27 to \$1.69 an hour, in the same two regions.

In each region, employees in metropolitan areas earned substantially more than those in nonmetropolitan areas. No concrete relationship appears to exist, however, between their pay differential and the regional wage level. For example, the differential was 25 cents in the West—the highest paying region—and 27 cents in the South, the lowest paying region. Although employees in metropolitan areas earned more than those in nonmetropolitan areas within each region, interregionally this relationship did not always hold true. Employees in nonmetropolitan areas of the West averaged 15 cents an hour more than those in metropolitan areas of the South.

Regardless of the earnings level, however, the wages of employees in metropolitan areas were distributed more broadly than were those in nonmetropolitan areas. For example, even in the lowest paying region, the South, the wages of 7 out of 8 metropolitan area employees, but 9 out of 10 nonmetropolitan area employees were concentrated below \$2 an hour. In the highest paying region, the West, 7 out of 10 employees in urban areas, but 5 out of 6 in less urbanized areas, had earnings below that level.

Men earned an average of \$2.07 an hour, 52 cents an hour more than women (table 4). Wages of men were distributed more evenly than those of women. Earnings for the middle half of the men ranged between \$1.37 and \$2.43 an hour, a spread of \$1.06. The same group of women earned between \$1.27 and \$1.74 an hour, a spread of only 47 cents an hour. A disproportionate share of women were found at the lower pay levels; women accounted for two-thirds of the retail apparel work force but four-fifths of those paid less than \$1.30 an hour. On the other hand, women accounted for only two-fifths of those employees who earned \$2 an hour or more.

In each region, average earnings of men were substantially higher than those of women. Earnings for men ranged from \$1.73 an hour in the South to \$2.27 an hour in the West. Women's average pay level ranged from \$1.35 an hour in the South to \$1.73 an hour in the West. The low wage structure of the South is highlighted by the fact that men in the South averaged the same hourly earnings as women in the West. This relationship is traceable to the substantially larger proportion of men in the South, two-fifths, than women in the West, one-sixth, who were paid less than \$1.30 an hour. At the higher pay levels, however, men in the South prevailed; 25 percent of the Southern men compared with 19 percent of the Western women earned \$2 an hour or more.

No concrete relationship existed between the difference between men's and women's pay level and the regional level of pay. Men earned 54 or 55 cents more than women in every region but the South, where the differential was 38 cents an hour.

The annual volume of sales of the enterprise in which he works has a bearing on an employee's earnings, although the relationship in this industry is rather loose. Enterprises were classified according to whether their annual volume of sales was: (1) \$1 million or more, (2) at least \$500,000 but less than \$1 million, (3) at least \$250,000 but less than \$500,000, and (4) less than \$250,000 (table 5). Employees in enterprises that had \$500,000 to \$1 million in annual sales, at \$1.84 an hour, had the higher average pay level, and those in enterprises that had less than \$250,000 in sales, at \$1.63 an hour, the lowest (table 5). Earnings, however, were nearly identical for employees in those enterprises that had \$1 million or more in sales, \$1.76 an hour, and in those that had \$250,000 to \$500,000 in sales, \$1.75 an hour.

Except for the lower pay levels, a distinct similarity exists among the enterprise groups in the distribution of individual employee earnings. For example, the proportion paid less than \$1.25 an hour ranged from 6 percent in enterprises that had at least \$1 million in sales to 23 percent in enterprises that had less than \$250,000 in sales. The proportions at \$2 an hour or more ranged between 21 percent in enterprises that had less than \$250,000 in sales and 28 percent in enterprises that had \$500,000 to \$1 million in sales.

Regionally, the pattern of earnings by enterprise sales volume generally paralleled the Nation's—that is, highest earnings in enterprises that had \$500,000 to \$1 million in sales and lowest in those that had less than \$250,000 in sales. One notable exception to this pattern was evident. In the West, employees in enterprises that had \$250,000 to \$500,000 in annual sales recorded the highest average pay level, \$2.07 an hour; the pay levels of the three remaining groups ranged between \$1.86 and \$1.95 an hour. The higher pay level in the \$250,000 to \$500,000 group in the West is traceable to the smaller proportion of low-paid employees in that group; e. g., one-fifth earned less than \$1.50 an hour compared with at least three-tenths in each of the other three groups. With little deviation, the same pattern was followed in both metropolitan and nonmetropolitan areas.

Average hourly earnings showed a closer relationship to establishment sales volume (table 6). Employees in establishments that had \$250,000 or more in sales averaged \$1.81 an hour, those in establishments that had \$150,000 to \$250,000 in sales earned \$1.73 an hour, and those in establishments that had less than \$150,000 in sales averaged \$1.57 an hour (table 6).

The variation on the earnings levels reflects the differences encompassed in the distributions of individual employee earnings, particularly at the lower levels. The proportion paid less than \$1.25 an hour, for example, ranged from 6 percent of those in the highest volume establishments to 25 percent of those in the lowest volume establishments. Differences narrowed at the higher pay levels, however. The proportion of employees paid \$2 an hour or more ranged from 18 percent in the lowest volume group to 25 percent in the highest volume group.

In 2 of the 4 regions, the relationship of hourly earnings and establishment sales volume paralleled the nationwide pattern. In the West, however, employees in establishments that had \$150,000 to \$250,000 in annual sales averaged 2 cents an hour less than those in establishments that had less than \$150,000 in sales, \$1.85 and \$1.87 an hour, respectively. In the Northeast, employees in establishments that had annual sales of between \$150,000 and \$250,000, at \$1.91 an hour, earned 1 cent an hour more than employees in establishments that had at least \$250,000 in sales.

In both population size areas the pattern of earnings by establishments sales volume followed the national pattern.

Data also were tabulated for employees in apparel and accessory stores generally subject to and not subject to the \$1.25 an hour minimum wage provision of the Fair Labor Standards Act which was in effect at the time of the survey.² Three-tenths of the retail apparel employees were in establishments subject to the act, where they averaged \$1.83 an hour, 13 cents an hour more than those in stores which were not subject to the act. Of interest in this context are those employees paid less than the legislated minimum wage—only 2 percent of the employees in store subject to the act earned less than \$1.25 an hour in June 1966, but nearly one-fifth of the employees in stores not subject to the act earned less than that amount. One-fifth of the subject employees, however, were concentrated between \$1.25 and \$1.30 an hour, reflecting, in part, the effectiveness of the minimum wage. At the higher wage levels the legislated minimum wage appeared to have little or no effect; e.g., the proportion paid \$2 an hour or more was 24 percent in subject stores and 22 percent in nonsubject stores.

Establishments	Average hourly earnings	Percent of employees earning—				
		Less than \$1.25	Less than \$1.30	Less than \$1.50	Less than \$2.00	\$2.50 or more
Subject to FLSA -----	\$1.83	2.3	21.2	44.2	75.8	12.8
Not subject to FLSA -----	1.70	18.7	34.9	49.3	77.7	10.0

Selected Lines of Business

The apparel and accessory stores major retail group primarily consists of three lines of business: Men's and boys' clothing and furnishings stores, women's ready-to-wear stores, and shoe stores. Combined, these three groups account for about three-fourths of the apparel work force. Although they are part of the same retail group, the pay structures of these three lines of business vary markedly. Average hourly earnings in men's and boys' clothing stores, at \$1.97 an hour, were 16 cents an hour higher than the level in shoe stores, and 41 cents higher than the level in women's ready-to-wear stores (tables 16, 30, and 44). This variation in pay levels mirrors the differences among the lines in the distributions of individual hourly earnings. For example, the proportion of employees in both women's ready-to-wear stores and shoe stores who were paid less

² At the time of the survey, employees of retail establishments that had at least \$250,000 in annual sales which were part of enterprises that had at least \$1 million in annual sales were generally included under the \$1.25 an hour minimum wage provision of the 1961 amendments to the Fair Labor Standards Act.

than \$1.25 an hour (16 percent in each instance) was twice as great as in men's and boys' clothing stores, 8 percent. The proportion paid less than \$1.50 an hour ranged from one-third in men's and boys' shops to nearly three-fifths (56 percent) in women's shops. Up to \$2 an hour these differences were maintained, but above that amount they diminished somewhat.

Line of business	Average hourly earnings	Proportion of employees earning—								
		Under \$1.25	Under \$1.30	Under \$1.40	Under \$1.50	Under \$1.60	Under \$1.75	Under \$2.00	Under \$2.50	\$3.00 or more
Men's and boys' clothing stores -----	\$1.97	8.4	20.9	28.5	32.7	44.2	51.3	63.8	80.7	8.8
Women's ready-to-wear stores -----	1.56	15.9	35.7	48.3	56.4	66.8	75.8	85.5	95.2	1.8
Shoe stores -----	1.81	15.8	29.9	37.8	42.2	51.1	58.1	70.8	85.7	5.5

In each line of business, earnings were lowest in the South and highest in the West. In relative terms, the smallest South-West differential was in women's ready-to-wear stores, 26 percent, and the largest was in shoe stores, 32 percent. In absolute terms, the differential ranged from 35 cents an hour in women's shops to 49 cents an hour in shoe stores.

Average hourly earnings	Men's and boys' clothing and furnishing stores				Women's ready-to-wear stores				Shoe stores			
	North-east	South	North Central	West	North-east	South	North Central	West	North-east	South	North Central	West
Under \$1.00 --	0.2	4.0	1.4	0.1	0.7	12.5	2.7	0.4	0.2	9.6	4.8	0.1

Under \$3.00 --	90.1	94.3	90.9	89.2	97.7	98.9	98.7	97.2	93.2	97.0	95.0	92.1
Average hourly earnings ----	\$2.10	\$1.69	\$1.97	\$2.17	\$1.69	\$1.37	\$1.53	\$1.72	\$2.01	\$1.52	\$1.78	\$2.01

In each line of business employees in metropolitan areas averaged considerably more than their counterparts in nonmetropolitan areas (tables 17, 31, and 45). The pay advantage of employees in metropolitan areas ranged from 29 cents an hour in women's apparel shops to 45 cents an hour in shoe stores.

Men earned more than women in shoe stores and men's and boys' clothing stores—50 and 53 cents an hour, respectively—but in women's ready-to-wear stores, where the bulk of the employees are women, men averaged only 21 cents more an hour than women (tables 18, 32, and 46).

Earnings in men's and boys' clothing shops and women's apparel shops showed less variation by enterprise sales volume than the major group (tables 19 and 33). In both lines, employees in enterprises that had \$1 million or more in sales averaged the most, and those in enterprises that had less than \$250,000 in sales averaged the least; in men's and boys' clothing stores the differential

was 16 cents; in women's apparel shops it was 9 cents. For the major group the differential between the lowest and highest paying enterprises was 21 cents. In shoe stores, however, the differential separating the lowest paying enterprise (less than \$250,000 in sales) from the highest paying enterprise group (\$250,000 to \$500,000 in sales) was 23 cents (table 47).

Greater variation in earnings was found on an establishment sales-size basis (tables 20, 34, and 48). In each line of business employees in establishments that had less than \$150,000 in annual sales had the lowest average pay level and those in establishments that had \$250,000 or more in sales, the highest. However, the differential separating their earnings was sharp, ranging from 17 cents an hour in women's ready-to-wear stores to 40 cents an hour in shoe stores.

Weekly Hours of Work

Apparel and accessory store employees worked an average of 33.4 hours a week in June 1966 (table 7). Short workweeks were the rule in this industry. Nearly two-fifths of the employees worked fewer than 35 hours and more than one-half (53 percent) worked fewer than 40 hours a week. Only one-fifth of the employees worked in excess of 40 hours, and a 40-hour week was only slightly more common, applying to one-fourth of the work force.

Among the regions, the length of the average workweek ranged from 32.5 hours in the Northeast to 35.1 hours in the South. Only 0.4 of an hour, however, separated the average workweeks in the North Central and West regions, 33.3 and 32.9 hours, respectively. Part-time employment (fewer than 35 hours a week) was found most often in the Northeast region, where two-fifths of the employees worked such hours, and was least common in the South, where three-tenths worked fewer than 35 hours a week. Another three-tenths of the southern employees worked longer than 40 hours and these employees represented the largest proportion among the regions with such hours. In comparison, only one-sixth of the employees in the Northeast worked longer than 40 hours.

Employees in nonmetropolitan areas averaged 33.6 hours of work during the survey week, 0.2 of an hour longer than those in metropolitan areas (table 8). The most noteworthy contrast in their hours distribution was found among those employees who worked longer than 40 hours—20 percent in metropolitan areas compared with 28 percent in nonmetropolitan areas.

The nationwide relationship between the hours level in metropolitan and nonmetropolitan areas did not hold on a regional basis. Only in the West did employees in nonmetropolitan areas work longer than those in metropolitan areas, by 0.1 of an hour a week. In the North Central and Southern regions metropolitan area employees worked 0.2 of an hour longer than employees in nonmetropolitan areas, and they worked 0.1 of an hour longer in the Northeast (table 8).

Men worked nearly 3 hours longer than women in retail apparel stores, 35.1 hours and 32.6 hours a week, respectively (table 9). Long workweeks were relatively commonplace among men (37 percent worked more than 40 hours a week) but rare among women (only 14 percent worked those hours). The proportion of men and women employed part time, however, were similar—34 and 39 percent, respectively. Women were concentrated more heavily between 35 and 40 hours, inclusive; 48 percent worked those hours compared with 30 percent of the men.

In each region men worked at least 1.9 hours longer than women and the regional distributions of both were generally similar to the national average.

No concrete relationship appeared between enterprise sales volume and the length of the average workweek. The average workweek ranged from 32.6 hours in enterprises that had \$1 million or more in annual sales to 34.6 hours in those that had \$250,000 to \$500,000 in sales (table 10). Part-time employment was most common in the \$1 million group and least common in the \$500,000 to \$1 million group; 39 and 33 percent of the employees were so engaged. More than 40 hours were worked most frequently in those enterprises that had \$250,000 to \$500,000 in sales and least frequently in the largest volume group, 27 and 17 percent, respectively.

Regionally, and in both metropolitan and nonmetropolitan areas no apparent relationship appeared to exist between the sales volume generated by an enterprise and the length of the average workweek of its employees.

Even on an establishment basis, there was only a loose relationship between the volume of sales and the average length of the workweek (table 11). Employees in establishments that had at least \$250,000 in sales worked an average of 33.9 hours during the selected week; employees in each of the two lower volume establishments averaged 33 hours. Part-time employment applied to from one-third to two-fifths of the employees among the three establishment groups. On the other hand, workweeks in excess of 40 hours applied to from one-sixth to one-fourth of the employees.

In metropolitan and nonmetropolitan areas the pattern was generally the same as that noted for the overall industry. Regionally, however, there was some deviation from the overall. In the West, for example, employees in the lowest volume group worked the greatest number of hours.

Employees in apparel and accessory stores generally subject to the provisions of the Fair Labor Standards Act³ averaged a workweek of 32.6 hours. Employees in stores generally not subject to the act averaged 33.4 hours a week. About one-eighth of the employees in the sector subject to the FLSA worked over 40 hours a week, but one-fourth of those in the sector not subject to the act had such workweeks. Thus, it appears that the maximum hours standard had some effect on the length of the workweek in subject establishments. About one-fourth of each group worked a 40-hour week, and similar proportions (about two-fifths of each group) worked part time.

Establishments	Average weekly hours	Percent working weekly hours of—				
		Under 35	35 and under 40	40	Over 40 and under 48	48 and over
Subject to FLSA -----	32.6	36.7	23.5	26.3	7.5	5.8
Not subject to FLSA -----	33.4	38.1	12.6	25.1	12.7	11.4

³ A 40-hour workweek standard (after which time and one-half pay was required) was implemented for most large retail operations in September 1965.

Selected Lines of Retail Apparel Business

Among the three major lines of business shown separately, the length of the average workweek was 32.5 hours in women's ready-to-wear stores, 33.6 hours in shoe stores, and 35.5 hours in men's and boys' clothing stores (tables 21, 35, and 49).

The shorter workweek in women's apparel shops reflects the low incidence of long hours (over 40); only one-eighth of the employees worked such hours, whereas two-fifths worked part time. Long hours were found with equal frequency in men's and boys' shops and shoe stores—in each one-third of the employees worked more than 40 hours a week. Furthermore, about one-sixth of the employees in men's and boys' shops and one-fifth of those in shoe stores worked at least 48 hours a week. Only 4 percent of the employees in women's shops worked as long as 48 hours a week.

The tendency for employees in the South to work longer weeks was maintained in each of the three lines of business, the shortest average workweek was reported in the Northeast for employees in each line.

Employees in men's and boys' apparel stores in metropolitan areas worked slightly longer hours than those in nonmetropolitan areas, 35.5 and 35.3 hours a week, respectively (table 22). In women's ready-to-wear shops, as well as shoe stores, employees in nonmetropolitan areas worked 0.2 of an hour a week longer (tables 36 and 50).

Men worked approximately 3 hours a week longer than women in 2 of the 3 lines of business, but in women's ready-to-wear stores women worked an average of 1.5 hours a week longer than men, 32.6 hours (tables 23, 37, and 51).

No pattern appeared to exist between enterprises sales and the length of the average workweek (tables 24, 38, and 52). For example, the longest workweek was found among men's and boys' clothing stores and shoe stores that had between \$250,000 and \$500,000 in annual sales and among women's ready-to-wear stores that had \$500,000 to \$1 million in annual sales.

On an establishment basis, the same situation prevailed (tables 25, 39, and 53). That is, no relationship appeared between establishment sales and hours of work. In men's and boys' shops, employees in establishments that had \$150,000 to \$250,000 in sales worked the greatest number of hours, and those in establishments that had less than \$150,000 in sales worked the fewest. However, in shoe stores employees in establishments that had \$150,000 to \$250,000 in sales averaged the shortest workweek; those in establishments that had at least \$250,000 in sales averaged the longest workweek. Thus, the number of hours worked appeared to be generally independent of both enterprise and establishment sales volume.

Average Weekly Earnings

Employees at retail apparel and accessory stores averaged \$57.58 a week at straight-time rates in June 1966 (table 14). Weekly earnings ranged from a low of \$13.57 for those employees who worked fewer than 15 hours to \$95.52 for those who worked 48 hours or more. Average weekly earnings are dependent upon two variables: Average hourly earnings and the number of hours worked

during the week. Nevertheless, average weekly earnings increased with the number of hours worked during the week; i.e., the longer the workweek the greater the weekly earnings. Thus, because they worked a greater number of hours, some employees with lower hourly pay were able to earn more in a week (on a straight-time basis) than others who averaged a higher rate of pay but worked fewer hours.

Among the regions, average weekly earnings ranged from \$51.50 in the South to \$62.83 in the West. The earnings differential between the South and each of the other regions was narrower on a weekly than on an hourly basis, reflecting the effect of the longer average workweek in the South on the weekly wage level there. In each of the regions the group of employees who worked fewer than 15 hours a week registered the lowest earnings; those who worked at least 48 hours registered the highest.

Average weekly earnings in men's and boys' clothing and furnishings stores were \$70.02; in women's ready-to-wear stores, \$50.71; and in shoe stores, \$60.90. The relationship between weekly earnings and weekly hours which existed in the entire apparel groups was found, in varying degrees, in these lines as well (tables 27, 40, and 53).

Hourly Earnings and Weekly Hours

Employees at retail apparel and accessory stores were grouped by their average hourly earnings and, within each earnings group, were distributed by their weekly hours of work (table 12). Tabulating the data in this manner revealed that among lower paid employees (those paid less than \$1.35 an hour) part-time employment was extremely common; one-half of the employees with such earnings worked fewer than 35 hours a week. Among higher paid employees, however, the standard workweek (from 40 to 42 hours inclusive) was more common, and part-time work was rare. Of those employees earning at least \$2.50 an hour, two-fifths worked from 40 to 42 hours inclusive and only one-eighth worked part time. Long workweeks were equally common among the very lowest and highest paid groups of employees (those paid less than \$1 an hour and \$3 an hour or more, respectively)—three-tenths of the employees in each group worked 44 hours or more a week. However, workweeks of this duration became less common as earnings increased from the lowest limit. For example, only 14 percent of the employees paid less than \$1.35 worked as many as 44 hours during the week.

Weekly hours of work	Percent of employees with average hourly earnings of—								
	Under \$1.00	Under \$1.15	Under \$1.25	Under \$1.35	Under \$1.50	\$2.00 and over	\$2.50 and over	\$3.00 and over	
Under 35 -----	42	47	46	50	47	20	14	14	
35 to 40 -----	9	10	11	14	16	14	13	13	
40 to 42 inclusive ---	19	21	22	22	23	38	41	41	
44 and over -----	30	22	22	14	14	28	32	30	
48 and over -----	16	12	12	7	7	17	20	17	

Grouping employees according to the number of hours they worked each week and then distributing them by their average hourly earnings, revealed that average earnings were lowest for those employees who worked on a part-time basis. Employees who worked at least 48 hours a week averaged the most followed by those on a 40-hour week (table 13).

Roughly one-half the part-time employees earned less than \$1.35 and only one-eighth, as much as \$2 an hour. Among the 40-hour employees and those who worked at least 48 hours a week, only one-fourth averaged less than \$1.35, and three-tenths and two-fifths, respectively, earned at least \$2 an hour.

Average weekly hours of—	Average hourly earnings	Percent of employees earning—		
		Under \$1.35	Under \$2.00	\$3.00 or more
Under 15 -----	\$1.47	51	87	2
15 and under 35 -----	1.49	46	87	1
35 and under 40 -----	1.68	31	80	4
40-----	1.83	25	69	7
Over 40 and under 44 -----	1.68	36	75	5
44 and under 48 -----	1.78	30	70	7
48 and over -----	1.89	25	61	8

Employees in the three lines of business shown separately were also grouped by their hourly earnings and distributed by their weekly hours of work (tables 26, 40, and 54) in each line of business. Generally, the distribution of weekly hours among lower paid employees resembled that noted for the major group. Among higher paid employees some differences were apparent. For example, few employees with earnings of \$2 an hour or more in women's ready-to-wear stores worked as many as 40 hours a week, whereas in both men's shops and shoe stores such hours were commonplace among higher paid employees. In women's shops the higher paid employees were more likely to work from 35 to 42 hours, inclusive.

Weekly hours of work	Percent of employees with average hourly earnings of—								
	Under \$1.00	Under \$1.15	Under \$1.25	Under \$1.35	Under \$1.50	\$2.00 and over	\$2.50 and over	\$3.00 and over	
Men's and boys' clothing stores									
Under 35 -----	33	49	47	51	47	16	10	10	
35 to 40-----	3	9	10	10	12	8	7	6	
40 to 42 inclusive -----	8	14	16	19	21	36	40	46

35 to 40-----	5	2	3	7	8	7	5	7	
40 to 42 inclusive -----	21	16	14	18	19	32	38	38	
44 and over -----	32	32	33	22	23	39	43	39	
48 and over -----	22	24	24	15	16	24	26	20	

Furthermore, when employees in each of the lines shown separately were grouped by their weekly hours and distributed by their earnings, much the same pattern emerged (tables 27, 41, and 55). Some contrasts with the major group were evident, however. In women's shops, earnings were nearly identical for employees who worked between 35 and 40 hours, exactly 40 hours, and 48 hours or more a week, ranging between \$1.62 and \$1.64 an hour. In men's and boys' stores employees who worked 40 hours and those who worked 48 hours or more both averaged \$2.13 an hour, substantially more than any other hours group.

In shoe stores, however, employees who worked a 40-hour week recorded the highest average hourly pay level, \$1.95, followed closely by those who worked between 44 and 48 hours, \$1.93 an hour. Employees who worked 48 hours or more averaged less than any other hours group at and above 40.

Average weekly hours	Men's and boys' clothing and furnishing stores	Women's ready- to-wear stores	Shoe stores
Average hourly earnings			
Under 15 -----	\$1.61	\$1.39	\$1.58
15 and under 35 -----	1.57	1.44	1.53
35 and under 40 -----	1.81	1.63	1.72
40-----	2.13	1.62	1.95
Over 40 and under 44 ----	1.90	1.46	1.88
44 and under 48 -----	1.99	1.51	1.93
48 and over -----	2.13	1.64	1.85

Wage Changes, June 1965–June 1966

The average pay level for all nonsupervisory employees in retail apparel and accessory stores advanced by only 2 cents an hour (from \$1.70), or by 1.2 percent, since June 1965, the date of the Bureau's last comprehensive study of such stores.

This small advance in the pay level reflects the lack of change in the distribution of employee's earnings since 1965. For example, earnings for the lowest paid fourth of the employees advanced by 2 cents an hour, from \$1.26 to \$1.28; earnings for the highest paid fourth declined by 1 cent, from \$1.91 to \$1.90. The single most noteworthy change was an increase from 78 to 87 percent in the proportion paid at least \$1.25 an hour. The proportions of employees earning at least \$2 an hour, and at least \$2.50 an hour, however, were 23 and 10 percent, respectively, in both years.

Average hourly earnings increased in the Northeast, North Central, and South by 2, 3, and 5 cents an hour, respectively. The magnitude of the increase in the South is primarily the result of gains among lower paid employees. For example, the proportion paid less than \$1.25 an hour declined from 46 to 28 percent, nearly twice the decline in any other region. However, the South was also the only region where the proportion paid at least \$2 an hour increased by as much as a full percentage point—from 11 to 12 percent. Average earnings in the West declined by 3 cents as a result of losses among higher paid employees. For example, the proportion paid \$2 an hour or more declined from 35 to 30 percent between surveys, and gains among the lower paid employees generally were less than 3 percentage points.

Area	Average hourly earnings		Proportion of employees earning—									
			Under \$1.25		Under \$1.30		Under \$1.50		Under \$2.00		\$2.50 or more	
			1965	1966	1965	1966	1965	1966	1965	1966	1965	1966
United States ----	\$1.70	\$1.72	22.2	13.5	35.2	30.7	50.3	47.9	77.2	77.4	10.2	10.3
Northeast -----	1.83	1.85	9.3	5.2	24.6	20.2	40.9	38.7	73.2	72.7	12.3	12.5
South -----	1.42	1.47	46.4	28.3	60.4	52.2	72.7	68.0	89.2	87.8	5.2	4.9
North Central ----	1.68	1.71	25.8	16.2	38.1	34.6	52.8	50.4	77.6	77.9	9.8	10.0
West -----	1.94	1.91	5.5	3.0	12.7	12.7	30.5	31.4	65.4	70.1	14.1	14.8

Earnings advanced 3 cents an hour (from \$1.77) in metropolitan areas but declined 1 cent an hour (from \$1.42) in nonmetropolitan areas. Thus, the absolute and relative differential between the two areas widened between surveys. Nearly equal gains among the lower paid employees were recorded in the two areas; e.g., the proportion paid less than \$1.25 an hour declined from 17 to 8 percent in metropolitan areas, and from 45 to 35 percent in nonmetropolitan areas. On the other hand, at the higher pay levels there were virtually no changes.

Men's average pay level increased 1 cent an hour since June 1965. During the same period, women's pay level advanced 3 cents an hour. Women, therefore, slightly narrowed, on both an absolute and relative basis, the differential separating their earnings from those of men. The proportion of men paid less than \$1.25 an hour declined from 13 to 10 percent; the proportion of women with such earnings declined from 26 to 15 percent. Once again, little change was evident at the upper end of the wage scale—the proportion of men paid at least \$2 an hour declined by a single percentage point (from 43 percent), and the proportion of women with such earnings was unchanged at 14 percent.

Employees' earnings in retail apparel and accessory stores generally subject to the provisions of the Fair Labor Standards Act advanced by 4 cents an hour compared with a 5-cent advance for employees in stores not subject to the act. As shown on the following tabulation, changes in the earnings distributions followed the pattern noted previously. For example, the proportion paid less

Item	Average hourly earnings		Proportion of employees earning—									
			Under \$1.25		Under \$1.30		Under \$1.50		Under \$2.00		\$2.50 or more

than \$1.25 an hour (the Federal minimum wage at the time of the survey) declined by 14 percentage points (from 16 percent) in the subject sector and by 7 points (from 26 percent) in the nonsubject sector. However, at higher pay levels there was little if any change; the proportion paid at least \$2 an hour in the sector subject to FLSA declined from 25 to 24 percent, but in the sector not subject to the act the proportion with these earnings was unchanged at 22 percent.

The pay level for workers in men's and boys' stores advanced 5 cents (from \$1.92 an hour), and in women's ready-to-wear stores, 1 cent (from \$1.55 an hour). In shoe stores the pay level declined 3 cents an hour (from \$1.84 an hour). Except in shoe stores the changes in the distributions resembled those previously noted for the industry as a whole (as shown by the following tabulation). In shoe stores the earnings of lower paid employees advanced little or not at all. For example, the proportion earning less than \$1.30 an hour actually increased from 28 to 30 percent.

Line of business	Average hourly earnings		Percent of employees earning—									
			Under \$1.25		Under \$1.30		Under \$1.50		Under \$2.00		\$2.50 or more

Changes in Weekly Hours of Work, June 1965—June 1966

Employees in apparel and accessory stores worked a shorter week, by 0.4 of an hour, in June 1966 than June 1965. Reflecting a movement (noted in all retail trade) away from long workweeks and toward more part-time weeks, the proportion of employees working over 40 hours a week declined from 23 to 21 percent, and the proportion working fewer than 35 hours increased from 36 to 37 percent.

The workweek was shortened in the South by 0.5 of an hour, in the North-east by 0.7 of an hour, and in the West by 0.8 of an hour. In the North Central region, however, the workweek was lengthened by 0.7 of an hour. In the North-east and South the proportion of employees who worked over 40 hours a week decreased; the proportion working a 40-hour week increased. Contributing to the slightly longer workweek in the North Central region was an increase, from 24 to 28 percent, in the proportion of employees who worked a 40-hour week and a decrease from 42 to 38 percent in the proportion who worked part time. In the West both the proportion who worked over 40 hours a week and the proportion who worked less than 35 hours a week increased, by 4 and 5 percentage points, respectively. The proportion who worked a 40-hour week declined by 12 percentage points.

The workweek was shortened by 0.3 of an hour in both metropolitan areas and nonmetropolitan areas. Changes in the distribution of hours resembled those noted previously.

Men worked 1 hour less and women 0.1 of an hour less in June 1966 than in June 1965. The proportion of men who worked over 40 hours a week declined, from 40 to 37 percent; the proportion who worked part time increased, from 30 to 34 percent. The unchanged average number of weekly hours for women reflects similarity in the hours distributions in both years.

The average workweek was 0.9 of an hour shorter for employees in establishments generally subject to the provisions of the Fair Labor Standards Act, and 0.5 of an hour shorter for those in establishments generally not subject to the act. As shown on the following tabulation, once again the trend away from long workweeks was evident. In the sector subject to the act the proportion of employees who worked over 40 hours and a 40-hour week declined by 1 and 2 percentage points, respectively, and the proportion working part time increased by 2 points. In the sector not subject to the FLSA the proportion who worked over 40 hours a week declined from 28 to 24 percent and the proportion who worked part time increased from 36 to 38 percent.

Item	Average weekly hours		Porportion of employees working—							
			Under 35 hours		40 hours		Over 40 hours		48 hours and over	
	1965	1966	1965	1966	1965	1966	1965	1966	1965	1966

Women -----	32.7	32.6	38.4	38.5	27.4	27.6	15.3	14.0	4.3	4.6
Establishments:										
Subject to FLSA --	33.5	32.6	34.6	36.7	27.5	26.3	14.2	13.3	5.0	5.8
Not subject to FLSA -----	33.9	33.4	36.4	38.1	24.8	25.1	27.6	24.1	12.3	11.4

The average workweek was shortened by 1.2 hours in men's and boys' clothing and furnishings stores, but by only 0.2 of an hour in shoe stores, and 0.1 of an hour in women's ready-to-wear stores. (See the following tabulation).

Line of business	Average weekly hours		Percent of employees working—							
			Under 35 hours		40 hours		Over 40 hours		40 hours or more	
	1965	1966	1965	1966	1965	1966	1965	1966	1965	1966
Men's and boys' clothing stores ----	36.7	35.5	28.6	31.5	24.7	26.4	38.6	32.8	20.0	16.7
Women's ready-to-wear stores -----	32.6	32.5	39.5	39.2	25.6	25.3	14.2	13.8	4.0	4.2
Shoe stores -----	33.8	33.6	36.5	38.5	21.0	20.4	34.4	33.1	16.5	19.0

The movement away from long workweeks and towards part-time workweeks was apparent at men's and boys' stores. At shoe stores, an increase in the proportion of employees who worked 48 hours or more counteracted the decline in the proportion who worked 35 to 48 hours a week, leaving the average unchanged. At women's stores, however, the unchanged average workweek reflected the similarity in the hours distributions in both survey years.

Changes in Average Weekly Earnings, June 1965—June 1966

On a nationwide basis, employees in retail apparel and accessory stores experienced little change in their average weekly earnings, which rose from \$57.39 in June 1965 to \$57.58 in June 1966.

The small national change obscures the sharper regional changes. Average weekly earnings increased \$1 in the South and \$2.38 in the North Central region. The advance in the South did not reflect fully the increase in average hourly earnings because of the decline in the length of the average workweek in that region. In the North Central region, weekly earnings increased more, on a relative basis, than hourly earnings because the average workweek in June 1966 was longer than a year earlier. Weekly earnings fell 73 cents in the Northeast and \$2.71 in the West during the year. The drop in the Northeast resulted from a decline of 0.7 of an hour in the average workweek for which the slight increase in the hourly pay level did not compensate fully. In the West, where the decline in weekly earnings was much sharper, both the average number of hours of work and the hourly pay level fell by 3 cents. These declines affected straight-time average weekly earnings.

Item	Average hourly earnings		Change ¹		Percent change ¹ in average hourly earnings
	1965	1966	Dollars	Percent	
United States -----	\$57.39	\$57.58	\$0.19	0.3	1
Northeast -----	60.79	60.06	-.73	-1.0	1
South -----	50.56	51.50	1.00	2.0	4
North Central -----	54.70	57.08	2.38	4.0	2
West -----	65.54	62.83	-2.71	-4.0	-2
Men's and boys' clothing stores -----	70.50	70.02	-.48	-1.0	3
Women's ready-to-wear stores -----	50.41	50.71	.30	1.0	1
Shoe stores -----	62.10	60.90	-1.20	-2.0	-2

¹ Increase unless otherwise indicated.

Average weekly earnings declined by 48 cents in men's and boys' clothing stores and by \$1.20 in shoe stores, but increased by 30 cents in women's ready-to-wear stores. The decreased weekly pay level in men's and boys' clothing stores stemmed from the shortening of the average workweek, which the advance in average hourly earnings did not overcome. In shoe stores, lower average hourly earnings and a shorter average workweek acted together to depress the weekly pay level. The increase in average weekly earnings for employees of women's ready-to-wear stores reflects the full effect of higher average hourly earnings, since the length of the average workweek was unchanged.

Changes in Weekly Hours by Hourly Earnings

The average workweek declined, generally, for employees in the middle pay levels, whereas, among the lowest and highest paid groups of employees it increased somewhat between June 1965 and June 1966. As shown on the following tabulation, the average number of weekly hours of work declined by amounts ranging from 0.2 to 1.3 hours for the large group of employees whose earnings fell between \$1.25 and \$2.50 an hour.

Employees with average hourly earnings of—	Average weekly hours of—		
	1965	1966	Change
Under \$1.00 -----	33.1	32.0	-1.1
\$1.00 and under \$1.15 -----	29.9	30.3	+ .4
\$1.15 and under \$1.25 -----	30.7	33.3	+2.6
\$1.25 and under \$1.35 -----	30.1	29.4	-.7
\$1.35 and under \$1.50 -----	33.8	33.3	-.5
\$1.50 and under \$1.75 -----	34.3	33.0	-1.3
\$1.75 and under \$2.00 -----	36.8	35.6	-1.2
\$2.00 and under \$2.50 -----	37.0	36.8	-.2
\$2.50 and under \$3.00 -----	37.7	39.1	+1.4
\$3.00 and over -----	38.8	38.9	+ .1

From the tabulation below it is readily apparent that the decline in average weekly hours experienced by employees who earned between \$1.25 and \$2.50 an hour was generally attributable to an increase in the proportion who worked part time combined with a decline in those who worked from 40 to 42 hours inclusive. Little change occurred in the proportions who worked 48 hours or more. On the other hand, the increase in average weekly hours experienced by the lower and higher paid employees reflects increases in the proportion of employees who worked 48 hours or more. Changes in the proportions of these employees on part-time work were inconsistent among the earnings groups.

Employees with average hourly earnings of—	Percent of employees with weekly hours of—					
	Under 35		40 to 42 inclusive		48 or more

\$1.75 and under \$2.00 -----	22.7	28.0	38.2	34.3	11.7	11.1
\$2.00 and under \$2.50 -----	24.2	23.8	34.9	36.7	15.8	14.6
\$2.50 and under \$3.00 -----	19.7	14.9	36.4	38.2	16.1	21.4
\$3.00 and over -----	15.7	13.5	42.7	43.7	16.6	17.0

Changes in Hourly Earnings by Weekly Hours

Average hourly earnings of employees who worked from 40 to 44 hours inclusive, as well as those of employees who worked 48 hours or more a week, increased by 5 cents an hour over the year between surveys. Employees who worked fewer than 35 hours a week, however, averaged \$1.48 an hour in each year. The proportion of lower paid employees declined in each workweek group. The proportion paid \$2 an hour or more increased slightly in the 40 to 44 and 48 and over hours groups, but declined somewhat among those employees who worked fewer than 35 hours a week.

48 and over-----	1.84	1.89	28	25	38	39	8	8

Changes in Earnings and Hours, October 1956—June 1966

Between October 1956 and June 1966 average hourly earnings in apparel and accessory stores advanced by 40 cents (from \$1.32 in 1956) or by 30 percent.⁴ The yearly advance in the pay level averaged 3.6 cents between 1956 and 1961, 2 cents between 1961 and 1962, 6 cents between 1962 and 1965, and 2 cents between 1965 and 1966. Changes occurred all through the pay scale. However, the more dramatic changes took place at the lower end. The proportion of employees paid less than \$1 an hour, for example, declined from 30 to 4 percent over the 10-year period, and the proportion paid less than \$1.25 an hour declined from 57 to 14 percent. On the other hand, the proportion paid at least \$2 an hour increased by 13 percentage points (from 10 percent), but the proportion paid at least \$3 an hour increased by only 2 points (from 2 percent).

Average hourly earnings increased by 37 cents in both the South and North Central regions, by 42 cents in the West, and by 43 cents in the Northeast. The most striking changes occurred among the low-paid employees in the South, where the proportion paid less than \$1 an hour decreased from over one-half to about one-tenth. Although smaller than in the South, changes at this level in the other regions brought the proportions having such earnings down to no more than 3 percent by 1966. In 1956 the South accounted for nearly one-half of the employees earning less than \$1 an hour, but by 1966 this region accounted for seven-tenths of these employees. On the other hand, the West presented the sharpest changes at the upper end of the pay scale; the proportion paid at least \$2.50 an hour increased from 4 to 15 percent, compared with an increase of no more than 7 percentage points at this level in the other regions.

⁴ See Employee Earnings in Retail Trade in October 1956: Apparel and Accessories Stores, BLS Bulletin 1220-5, Employee Earnings in Retail Apparel and Accessory Stores, June 1961 and June 1962, BLS Bulletins 1338-5, and 1380-5, Employee Earnings and Hours in Retail Apparel and Accessory Stores, June 1965, BLS Bulletin 1501-5.

The distribution of employees by weekly hours of work changed somewhat between 1956 and 1966. A decline of 10 percentage points in the proportion of employees who worked more than 40 hours a week was accompanied by increases of 5 points each in the proportion who worked 35 to 40 hours inclusive and on a part-time basis.

In the Northeast, South, and North Central regions, changes in the distribution of employees by weekly hours of work followed the national pattern in varying degrees. The sharpest decline in the proportion who worked over 40 hours occurred in the South. Nevertheless, the proportion of employees who worked over 40 hours in the South in 1966 was greater than it had been in the Northeast and West 10 years earlier, and only 1 percentage point less than it had been in the North Central region in 1956. Changes in the West deviated somewhat from the pattern elsewhere. Both the proportion who worked over 40 hours a week and from 35 to 40 hours inclusive declined (by 4 and 9 percentage points, respectively); the incidence of part-time work increased (by 12 points).

Appendix A. Scope and Method of Survey

Scope of Survey

This bulletin relates to those retail establishments which were classified, according to the 1957 edition of the Standard Industrial Classification Manual, as part of the apparel and accessories major industry group (SIC 56). Stores within this group were further identified as men's and boys' clothing and furnishings stores (SIC 561), women's ready-to-wear stores (SIC 562), and shoe stores (SIC 566). The major group includes retail stores primarily engaged in selling clothing, shoes, hats, underwear, and related articles for personal wear and adornment. Furriers and custom tailors carrying stocks of materials are included in this group.

Men's and boys' clothing and furnishings stores are primarily engaged in the retail sale of men's and boys' overcoats, topcoats, suits, and work clothing; other stores included specialized in the sale of men's and boys' shirts, hats, underwear, hosiery, gloves, and other furnishings.

Women's ready-to-wear stores are primarily engaged in the retail sale of women's coats, suits, and dresses.

Shoe stores are primarily engaged in the retail sale of men's, women's, children's, and juveniles' shoes.

Geographically, the 50 States and the District of Columbia are covered. The data reflect earnings and hours of work of nonsupervisory employees for a payroll period including June 13, 1966.

Sample Design

The sample was designed to yield national and regional estimates for the major industry group and for the lines of business for which separate data are shown. A stratified sample design was used with variable sampling ratios depending on the kind of business and employment size. For example, the sample size for lines of business shown separately was proportionately larger than for those not published and the probability of selection increased with the employment size of the unit.

The following tabulation shows the number of units included in the sample of the apparel and accessories group and in the men's and boys' clothing and furnishings stores, women's ready-to-wear stores, and in shoe stores for which separate data are published:

Kind of business	Number of units
Apparel and accessories group -----	4, 150
Men's and boys' clothing and furnishings stores -----	973
Women's ready-to-wear stores -----	1, 198
Shoe stores -----	1, 166

Establishment samples were obtained from three different sources: (1) State unemployment insurance listings furnished employer reporting units with four or more employees. (2) The large chainstore enterprises provided current lists of retail stores and auxiliary units from which a sample of such units was selected. It was necessary to obtain these lists from the large chainstore enterprises because State unemployment insurance listings

frequently provide data on a statewide or county basis for such companies rather than on an individual establishment basis. (3) The Bureau of the Census sample used in conjunction with the Monthly Survey of Retail Sales covered single-unit retail stores with fewer than four employees. The Census coverage of small units was necessary to supplement the Bureau's universe list for retail trade, since State unemployment insurance laws in many States do not cover employers with fewer than four employees.

Method of Collection

The majority of the establishments included in the sample were solicited for information by mail. The largest units were visited in person by field economists of the Bureau of Labor Statistics, as were the smallest units by the Bureau of the Census enumerators acting as agents for the BLS. Personal visits were also made to a sample of the nonrespondents to the mail questionnaire.

Estimating Procedure

Data collected for each sampling unit were weighted in accordance with the probability of selecting that unit. For example, where 1 unit out of 10 was selected from an industry-size group, data for that unit were considered as representative of the 10 units in the group. Thus, each segment of the retail trade industry was given its appropriate weight in the total, regardless of the disproportionate coverage of large and small stores.

No assumption has been made that the wage structures of the units not responding to the mail questionnaire were similar to those of the units responding. To minimize the bias resulting from nonresponse, data obtained by personal visits from a sample of nonrespondents were weighted to represent all other nonrespondents in similar industry-size groups. To compensate for schedules with unusable data, their weights were assigned to usable schedules of the same industry-size group and from the same or related area.

All estimated totals derived from the weighting process were further adjusted to the employment levels for June 1966, as reported in the Bureau of Labor Statistics monthly employment series. The published estimates in this report are, thus, consistent with the production worker employment shown in the monthly series. Current regional estimates, which could not be prepared from the monthly series, were based on regional distributions from the most recent Census of Business, prepared by the Bureau of the Census.

The adjustment of the survey totals to the predesignated totals for June 1966 was confined, for the most part, to that segment of the survey for which the sample units were obtained from State unemployment insurance listings. The lists generally were prepared prior to the time of the survey and consequently do not account for units opened or closed after the date of the lists. In the Census and the large chainstore enterprise samples, the best unbiased estimates of totals were presumed to be the weighted-up sample totals, since there was no apparent problem of unrepresented business births in these groups.

Criteria for Publication of Estimates

The results of this survey differ from those that would have been obtained by a complete canvass of all retail operations, since the survey was conducted on a sample basis. These differences may be substantial in those instances where the sample was small. It has not been possible, therefore, to present data for all cases. No earnings distributions are shown for groupings of fewer than 50 stores.

Definitions of Terms

Nonsupervisory employees include all full-time, part-time, seasonal, and casual employees below the supervisory level, such as salespersons, shipping, receiving, and stock

clerks, laborers, warehousemen, caretakers, office clerks, driver-salesmen, deliverymen, installation and repairmen, elevator operators, porters, janitors, food service employees, and working supervisors.

Enterprise is defined as a company which operates, directs, or controls a group of establishments engaged in the same general business. In the case of single unit companies, the single unit was considered the enterprise.

Establishment is generally defined as a single physical location where business is conducted. In the case of two separate business entities transacting business at a single physical location (for example, a leased shoe department in a department store), each was treated as a separate establishment. On the other hand, a drug store which also operated a food counter was treated as a single establishment.

Annual volume of sales excludes excise taxes at the retail level.

Earnings data relate to straight-time earnings and exclude premium pay for overtime and for work on weekends, holidays, and late shifts. Commission and bonus earnings and special sales bonuses, such as "P.M. 's" and "stims" paid quarterly or oftener, are included.

Individual average hourly earnings for employees not paid by the hour (e.g., salary, commissions) were obtained by dividing individual earnings reported by the number of hours worked during the corresponding period.

Individual weekly earnings were obtained by multiplying the individual average earnings by the number of hours worked during a single week in June 1966.

Group average hourly earnings published in this report were obtained by dividing total individual weekly earnings by total individual weekly hours worked.

Group average weekly earnings were obtained by dividing the sum of the individual weekly earnings by the number of employees represented in the group total.

Weekly hours of work are for a 1-week period and include hours paid for vacations, holidays, sick leave, etc.

Group average weekly hours were obtained by dividing total weekly hours worked by total number of nonsupervisory employees.

Regions used in this study include the following: Northeast--Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont; South--Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia; North Central--Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin; and West--Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Metropolitan areas as used in this report refers to those cities and county areas defined by the Bureau of the Budget as "Standard Metropolitan Statistical Areas." Metropolitan areas include those counties containing at least one central city of 50,000 population and those counties around such cities which are metropolitan in character and economically and socially integrated with the county containing the central city. For a more detailed description, see Standard Metropolitan Statistical Areas, 1964, prepared by the Bureau of the Budget.

RETAIL TRADE
Individual Hours and Earnings

BLS USE ONLY

1. COMPANY IDENTIFICATION:

State	Area	Ent. sales	SIC	Wgt.

The data, except for Item 2 which relates to the entire company, should cover all establishments (retail stores, warehouses, central offices, etc.) in the county or area designated to the left.

(Check appropriate box.)

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--------------------------	--------------------------	--------------------------	--------------------------

2. ANNUAL GROSS SALES FOR THE COMPANY OR ENTERPRISE:

Under \$250,000	\$250,000 to \$500,000	\$500,000 to \$1,000,000	\$1,000,000 or more
-----------------	------------------------	--------------------------	---------------------

Check the block which indicates the annual gross volume of sales (exclusive of excise taxes at the retail level) from all related activities of the enterprise. Include receipts from stores covered by this report as well as all other related activities. Use the last calendar or fiscal year.

3. ESTABLISHMENT INFORMATION:

Please enter the information requested in the columns below for each separate establishment (retail store, warehouse, or central office) covered by this report. Each retail store in a separate location is considered a separate establishment for the purpose of this survey. However, if the records for main store and suburban branch are kept on a combined basis, they may be considered as one establishment.

- (a) **Location:** Identify each establishment by its street address and city.
- (b) **Type of Retail Activity:** Enter for each establishment the major retail activity such as department store, drug store, gas station, etc.
- (c) **Employment:** Include all full-time, part-time, seasonal, and casual employees who received pay for any part of the payroll period including June 13, 1966. Exclude employees, such as those in leased departments and demonstrators, who received all or a substantial part of their pay from another employer.
Total—Enter total number of employees including officers and other principal executives, such as buyers, department heads, and managers whose work is above the working supervisory level.
Nonsupervisory—Enter total number of employees below the supervisory level, such as salespersons, shipping and receiving clerks, laborers, warehousemen, caretakers, office clerks, driver-salesmen, installation and repairmen, elevator operators, porters, janitors, watchmen, and other employees whose services are closely associated with those listed above. Do not include officers and other principal executives, such as buyers, department heads, and managers whose work is above the working supervisory level.
- (d) **Annual Gross Sales for the Establishment:** Check the column which indicates the annual gross volume of sales (exclusive of excise taxes at the retail level).

(a) Location (street address and city)	(b) Type of retail activity	(c) Employment for payroll period including June 13, 1966		(d) Gross establishment sales (check appropriate column) Were last year's sales—		
		Total	Non-supervisory	Less than \$150,000	\$150,000 to \$250,000	\$250,000 or more

4. PAYROLL PERIOD:

Employment and earnings data reported should correspond to your payroll period (for example, weekly, biweekly, or monthly) including June 13, 1966. Indicate the dates for the payroll period used. If the length of the payroll period varies among employees, enter the dates affecting the greatest number.

From _____, 19__ to _____, 19__.

5. EARNINGS AND HOURS OF WORK OF NONSUPERVISORY EMPLOYEES:

This study is designed to provide information on hourly earnings and weekly hours of work for both male and female nonsupervisory employees and working supervisors for a payroll period including June 13, 1966. The number of employees in each establishment for which earnings and hours data are reported should correspond with the number of nonsupervisory employees shown in item 3(c) on page 1. The information requested should be reported separately for each establishment and the establishment identified. Earnings data for food counter, cafeteria, or restaurant workers in Department, Drug, or Variety Stores should be entered only on the blue supplement provided. Data for all other employees should be reported in Item 5 of this form.

Report earnings and hours separately for each employee unless these data are identical for two or more employees. Do not report aggregate earnings and hours for several employees. For convenience of reporting for employees paid on other than an hourly basis, columns 5 through 8 are provided. Data will not, however, be published separately by various methods of pay. Instructions and examples for reporting the necessary data in each column are listed below.

INSTRUCTIONS

(Please read carefully to avoid correspondence)

<p>Complete columns 1, 2, and 3 for all nonsupervisory employees covered by this report (see examples 1-5).</p>	<p>Column (1)—Indicate whether the employee is male (M) or female (F).</p> <p>Column (2)—Use a separate line for each employee and enter "1," unless two or more employees of the same sex work the <u>same number</u> of hours during the selected week, and receive <u>identical hourly or salary rates</u> (see example 1). Data are to be reported individually for each employee whose earnings are based entirely or in part on commissions or bonuses (see examples 3, 4, and 5).</p> <p>Column (3)—Enter the number of hours worked during the week of June 6 to June 13, 1966. Include hours paid for sick leave, holidays, vacations, etc. These hours should relate to a 1-week period regardless of the length of the payroll period.</p>
<p>Use column 4 to report earnings of employees paid on an hourly basis (see example 1).</p>	<p>Column (4)—Enter the base (straight-time) hourly rate. Premium pay for overtime work should <u>not</u> be reported. This column may also be used to report earnings of employees paid on other than an hourly basis if average straight-time hourly earnings are available. For employees paid a commission or bonus in addition to an hourly rate, also complete columns 7 and 8 (see example 4).</p>
<p>Use columns 5 and 6 to report earnings of employees paid on a weekly, bi-weekly, monthly, or semimonthly basis (see example 2).</p>	<p>Column (5)—Enter for each employee the straight-time earnings for the salary period (weekly, biweekly, monthly, or semimonthly) including June 13, 1966. Include straight-time pay for overtime, but exclude overtime premium. Do not include "draws" against commission as salary.</p> <p>Column (6)—Enter the number of hours worked during the salary period (weekly, biweekly, monthly, or semimonthly). Include hours paid for sick leave, holidays, vacations, etc. For employees paid a commission or bonus, also complete columns 7 and 8 (see example 5).</p>
<p>Use columns 7 and 8 to report earnings of nonsupervisory employees based entirely or in part on commissions and bonuses (see example 3).</p>	<p>Column (7)—Enter for each employee the total commission and/or bonus earnings, including "PM's," "Stims," or any special bonuses based on sales paid quarterly or oftener by the store. These earnings are to be reported for the commission or bonus period including June 13, 1966. If the commissions earned during that pay period are not representative of normal commission earnings, a longer period may be used. If store employees receive both commission and bonus payments for an identical period of time, report the combined figure (see example 4). If bonus payments cover a period longer than the commission period, add only the prorated amount of the bonus to the commission earnings that correspond to the commission period (see example 5).</p> <p>Column (8)—Enter the number of hours worked during the commission or bonus period. (The hours should refer to the total hours worked during the period (weekly, biweekly, monthly, or semimonthly) and not necessarily only to those hours during which commissions or bonuses were earned.) For employees paid an hourly rate or salary <u>in addition</u> to commissions or bonuses, it is also necessary to complete column 4, or columns 5 and 6 (see examples 4 and 5).</p>

EXAMPLES

(See illustrations on next page)

- Two women each worked 36¼ hours during the selected week, and each was paid a straight-time hourly rate of \$1.05.
- One man worked 40 hours during the selected week, and received a salary of \$125, exclusive of premium pay for overtime, for 88 hours worked during the salary period (½ month).
- One man worked 32½ hours during the selected week and was paid on a straight commission basis, receiving \$215.70 for 168 hours.
- One woman worked 40 hours during the selected week and was paid an hourly rate of \$1.25; she also received \$35 in commissions and \$7.50 in "PM's" for 173.6 hours worked during the commission period (1 month).
- One man worked 37¼ hours during the selected week, and was paid a weekly salary of \$75; he also earned commissions of \$102 during a 1-month period (162 hours) and \$150 in bonuses during a 3-month period. Only ⅓ of the bonus, or \$50 is reported so that the bonus period corresponds to the commission period.
