PREFACE

This bulletin summarizes the results of a Bureau of Labor Statistics survey of wages and supplementary wage practices in the men's and boys' suit and coat manufacturing industry in April 1967.

Separate releases were issued earlier for: Baltimore, Boston, Chicago, Cincinnati, Kentucky, Los Angeles—Long Beach, New York, N.Y., Philadelphia, Rochester, St. Louis, and Southern New Jersey. Releases were also issued for regular (inside) and cutting shops and for contract shops in Baltimore, New York, N.Y., and Philadelphia. Copies of the area releases are available from the Bureau of Labor Statistics, Washington, D.C. 20212, or any of its regional offices.

This study was conducted in the Bureau's Office of Wages and Industrial Relations in the Division of Occupational Wage Structures. The analysis in this bulletin was prepared by Joseph C. Bush. Field Work for the survey was directed by the Bureau's Assistant Regional Directors for Operations.

Other reports available from the Bureau's program of industry wage studies, as well as the addresses of the Bureau's eight regional offices, are listed at the end of this bulletin.

INDUSTRY WAGE SURVEY----

MEN'S AND BOYS' SUITS AND COATS, APRIL 1967

Summary

Straight-time earnings of production and related workers in the men's and boys' suit and coat manufacturing industry averaged \$2.28 an hour in April 1967.¹ Earnings of the 98,354 workers covered by the Bureau of Labor Statistics survey were dispersed widely; the middle half of the workers earned from \$1.71 to \$2.70 an hour. Contributing to the relatively wide dispersion of individual earnings were such factors as differences in establishment pay levels among and within regions and areas,² the extensive use of incentive wage systems, and the wide range of skill requirements in the industry.

Among the occupations studied separately, average hourly earnings ranged from \$3.41 for cloth cutters and markers to \$1.74 for janitors and \$1.75 for work distributors, three jobs largely staffed by men. Sewing-machine operators, most of whom were women, accounted for two-fifths of the industry's work force and averaged \$2.31 an hour in coat fabrication, \$2.11 in trouser fabrication, and \$1.81 in vest fabrication.

A large majority of the industry's workers were provided 7 paid holidays a year; paid summer and Christmas vacations; and health, insurance, and retirement benefits.

Industry Characteristics

The survey included establishments primarily engaged in manufacturing men's, youths', and boys' suits, separate tailored coats, overcoats and topcoats, uniforms (except athletic uniforms), and suit vests. Establishments primarily engaged in manufacturing separate trousers were not included. Those exclusively engaged in manufacturing trousers for suits and uniforms were included only if owned by a suit manufacturing company. Thus, establishments producing trousers on a contract basis for another company were excluded. The large majority of the suit and uniform manufacturers made their trousers on the premises or in a wholly-owned establishment. Establishments that had at least some of their trousers made by others accounted for only one-eighth of the total employment of shops fabricating suits and/or uniforms. Regionally, the proportions were one-third in New England, one-fifth in the Border States, one-tenth in the Middle West and Southeast, and slightly smaller proportions in the other regions shown separately.

Establishments primarily engaged in manufacturing suits employed three-fourths of the workers in the industry. As indicated in the following tabulation, these establishments accounted for a majority of the workers in all regions except New England, where the proportion was 45 percent.

Percent of production workers in establishments primarily engaged in manufacturing—					
	Men's suits	Men's tailored jackets	Men's over- coats and topcoats	Boys' suits	Uniforms
United States	74	12	3	2	7
New England	39	22	19	6	12
Middle Atlantic	73	12	5	1	7
Border States	78	18	—	—	4
Southeast	69	22	1	4	4
Great Lakes	91	1	1	—	7
Middle West	46	—	—	21	33

NOTE: The survey also covered establishments primarily engaged in manufacturing products other than those shown above, such as boys' separate jackets, overcoats and topcoats, and suit vests.

¹ The earnings data contained in this bulletin exclude premium pay for overtime and for work on weekends, holidays, and late shifts.

² See table in appendix A for definition of regions, and individual area tables for definitions of areas used in this survey.

The Middle Atlantic region accounted for 53 percent of the 98,354 workers covered by the survey. The Border States and the Great Lakes regions each employed 14 percent of the workers. The Southeast was

the only other region accounting for as much as 5 percent of the industry's work force.

The industry was concentrated largely in a relatively few metropolitan areas. Five areas accounted for nearly one-half of the workers covered by the study: New York and Philadelphia employed 15,454 and 14,187 workers, respectively. Baltimore, Chicago, and Rochester each employed between 5,000 and 6,500. In addition to these areas, the study developed separate information for Boston, Cincinnati, Los Angeles—Long Beach, St. Louis, and for Southern New Jersey and Kentucky. Establishments primarily making suits employed a large majority of the workers in Kentucky and in all but one of the nine metropolitan areas studied separately. In Boston, nearly one-half of the workers were employed in establishments primarily producing overcoats and topcoats and most of the remainder were in shops making suits. A majority of the workers in Southern New Jersey were in establishments manufacturing uniforms.

Three types of shops were included in the survey:

1. *Regular or "inside" shops*, most important in terms of employment, own the material and perform all or nearly all of the manufacturing operations. Four-fifths of the workers in regular shops were employed in establishments in which cutting and sewing operations were performed on the premises; nearly all of the remainder were in shops sewing materials which were cut in other shops of the same company.

2. *Cutting shops* own the material, cut the cloth, and deliver it to contract shops. Cutting shops employed less than 5 percent of the industry's work force and have been grouped with regular shops for purposes of this study.

3. *Contract shops* perform the tailoring operations for manufacturers. Contract shops employed slightly more than one-fifth of the industry's production workers and were located principally in the Middle Atlantic region, particularly in or near New York City and Philadelphia.

More than 150 distinct operations are required to make a suit, and more than 75 to make an overcoat. Although smaller shops combine operations into a single job, the number of occupational classifications is still relatively large. After a suit has been designed and patterns made in various sizes, garment parts are marked, cut, and then prepared for sewing by fitters who sort, match, and trim small parts, and mark locations for pockets, buttons, belt loops, etc. Workers engaged in sewing are usually assigned a specific task in the assembly process, such as sewing on buttons, sewing backs to fronts, or setting in sleeves. Periodically during

the process, seams are pressed and the garment is inspected for proper workmanship.

Workers engaged in sewing operations, performed either by hand or machine, made up slightly more than one-half of the industry's production workers. Sewing-machine operators accounted for two-fifths of the production workers, and greatly outnumbered hand sewers, who usually are employed in the fabrication of higher priced garments.

Women accounted for seven-tenths of the production workers and were employed largely as sewing-machine operators and hand finishers. Other jobs predominantly staffed by women included final inspectors, hand buttonhole makers, and thread trimmers. Men, on the other hand, accounted for a majority of the workers in such jobs as cutters and markers, finish pressers, underpressers, packers, and work distributors. The proportions of men in the industry varied from one-sixth of the workers in the Border States to slightly over one-third in the Middle Atlantic regions. In the selected areas, the proportions of men in the industry ranged from 52 percent in New York to 20 percent in Baltimore. Approximately three-eighths of the workers in the areas with significant employment—Chicago, Rochester, and Philadelphia—were men.

Individual piecework was the basis of wage payment for nearly three-fourths of the production workers.³ The proportions of workers paid individual piece rates were slightly more than one-half in the Middle West, three-fifths in New England, about three-fourths in the Middle Atlantic and Great Lakes regions, and approximately four-fifths in the Border States and Southeast regions. Among the selected areas, the proportions ranged from approximately three-fifths in the New York and Cincinnati areas to nearly seven-eighths in Rochester (table 24).

Establishments having collective bargaining agreements covering a majority of their production workers accounted for nine-tenths of the industry's work force. The proportions of workers in union establishments were two-fifths in the Southeast, nearly three-fifths in

³ Piecework rates typically applied to sewing-machine operators, hand sewers, and pressers; workers in cutting and marking jobs, sewing-machine adjusters, janitors, and work distributors usually were paid time rates. Differences in average earnings for piece rate jobs cannot be used as an accurate measure of differences in rates of pay per unit of work produced. Earnings not only reflect the piecework rates for a given job, but also the productivity of the workers performing the task. Worker productivity is affected by work experience, effort, workflow, and other factors that the individual may or may not control.

the Middle West, nine-tenths in the Border States and Great Lakes, and almost all in the other selected regions. Among the selected areas, the proportions ranged from nearly two-fifths in St. Louis to over 95 percent in all other areas. In Kentucky, nearly three-fourths of the workers were employed in union establishments. Nearly all contracts were with the Amalgamated Clothing Workers of America.

Average Hourly Earnings

Straight-time hourly earnings of the production and related workers covered by the study averaged \$2.28 in April 1967,⁴ 7½ percent higher than in October 1963 when a similar study was conducted.⁵ Much of this increase was due to a general wage adjustment granted under the terms of a collective bargaining agreement between the Amalgamated Clothing Workers of America (ACWA) and the Clothing Manufacturers Association of the U.S.A. The agreement covered a large majority of the industry's production workers. Effective June 1, 1965, workers on a 40-hour week received an increase of 12.5 cents an hour and those on a 36-hour week, an increase of 13.9 cents. The agreement also provided for a wage increase effective June 5, 1967, which is not reflected in the earnings data in this bulletin, 10 cents an hour for workers on a 40-hour week and 11.1 cents for those on a 36-hour week.

⁴ The straight-time average hourly earnings in this bulletin differ in concept from the gross average hourly earnings published in the Bureau's monthly hours and earnings series (\$2.34 in April 1967). Unlike the latter, the estimates presented here exclude premium pay for overtime and for work on weekends, holidays, and late shifts. Average earnings were calculated by summing individual hourly earnings and dividing by the number of individuals; in the monthly series, the sum of the man-hour totals reported by establishments in the industry was divided into the reported payroll totals.

The estimate of the number of production workers within scope of the study is intended only as a general guide to the size and composition of the labor force included in the survey. It differs from the number published in the monthly series (105.5 thousand in April 1967) by the exclusion of establishments employing fewer than five workers and jobbers and because the advance planning necessary to make the survey requires the use of lists of establishments assembled considerably in advance of data collection. Thus, establishments new to the industry are omitted, as are establishments originally classified in the men's and boys' suit and coat industry but found to be in other industries at the time of the survey. Also omitted are establishments manufacturing men's and boys' suits and coats, but classified incorrectly in other industries at the time the lists were compiled.

⁵ For an account of the earlier survey, see *Industry Wage Survey: Men's and Boys' Suits and Coats, October 1963*, BLS Bulletin 1424.

Production workers in the Middle Atlantic region, slightly more than one-half of the industry's work force, averaged \$2.43 in April 1967 (table 1). Averages in the Great Lakes region and Border States, the only other regions accounting for as much as one-tenth of the industry's employment, were \$2.29 and \$2.11, respectively. Workers averaged \$2.28 in New England, \$1.87 in the Middle West, and \$1.83 in the Southeast. Men averaged more than women in each of the regions by amounts ranging from 37 cents an hour in the Southeast to nearly 80 cents in the Middle Atlantic and New England regions. Women were employed largely as sewing-machine operators and hand finishers. Men were predominant in higher paying jobs, such as cutters and markers, and finish pressers.

Differences in average pay levels for men and women may be the result of several factors, including variation in the distribution of the sexes among establishments and among jobs with disparate pay levels. Differences noted in averages for men and women in the same job and area may reflect possible minor differences in duties. Job descriptions used in classifying workers in wage surveys usually are more generalized than those used in individual establishments because allowance must be made for possible minor differences among establishments in specific duties performed. As noted earlier, earnings in some jobs are determined largely by production at piece rates. Variations in incentive earnings for individuals or sex groupings may be traceable to differences in work experience, effort, workflow, or other factors which the worker may or may not control.

Production workers in metropolitan areas averaged \$2.37 an hour—43 cents more than those in smaller communities. Among regions where earnings data could be compared by community size, metropolitan area workers in the Middle Atlantic and Border States averaged more than those in the smaller communities, whereas in the Southeast, the opposite relationship prevailed.

There was no consistent regional relationship between earnings levels in establishments that had 250 workers or more and those in smaller establishments. In the Great Lakes region, for example, workers in establishments that had 250 workers or more averaged 16 cents an hour more than those in smaller establishments; on the other hand, workers in smaller shops in the Middle Atlantic region held a 17-cent average wage advantage over the larger establishments. In the latter region, the high-wage New York area accounted for 51 percent of the employment in establishments that had fewer than 250 workers and for only 18 percent of the employment in larger establishments.

Workers in the regular and cutting shops averaged \$2.25 an hour, compared with \$2.39 for those in contract shops. The nationwide relationship, however, results primarily from the fact that a few comparatively high-wage areas accounted for a much greater proportion of the employment in contract shops than in regular and cutting shops. The New York area, for example, made up three-tenths of the employment in contract shops, but slightly less than one-eighth of the employment in regular and cutting shops. In Baltimore, workers in regular and cutting shops averaged 19 cents an hour more than those in contract shops, which typically do not employ the relatively high-paid cutting and marking jobs. In the other areas where comparisons could be made (New York and Philadelphia), average earnings of the two shop groups were nearly identical.

Among the nine metropolitan areas surveyed separately, hourly averages for production workers ranged from \$2.01 for St. Louis to \$2.68 for New York. Averages for the remaining areas were grouped between \$2.22 and \$2.60. The averages for all production workers in Southern New Jersey and Kentucky were \$2.20 and \$1.90 an hour, respectively. (See tables 7-23.)

Individual earnings of over nine-tenths of the workers covered by the survey were within a range of \$1.40 and \$3.50 an hour (table 2). At the lower end of the earnings array, about one-tenth earned less than \$1.50 an hour, and nearly one-fifth, less than \$1.60.⁶ The proportions earning less than \$1.60 were greater in the Southeast and Middle West than in the other selected regions.

⁶ The Federal minimum wage for manufacturing establishments was \$1.40 an hour at the time of the survey. It was raised to \$1.60 an hour effective February 1, 1968.

Occupational Earnings

Sewing-machine operators, accounting for two-fifths of the work force, averaged \$2.31 an hour in coat fabrication, \$2.11 in trouser fabrication, and \$1.81 in vest fabrication. Within these three fabrication categories, earnings also varied considerably according to the specific sewing operation performed. In coat fabrication in the Middle Atlantic region, for example, operators sewing in sleeves averaged \$2.93 an hour, compared with \$2.73 for those setting and tacking pockets, and \$2.35 for those joining undercollars, sleeve linings, or piecing pockets. Women accounted for seven-eighths of the sewing-machine operators; the proportions of women in the job varied, however, by region—ranging from nearly four-fifths in the Middle Atlantic to over nine-tenths in the Border States, Middle West, and Southeast. In the selected areas, the proportion of women operators ranged from nearly three-fifths in New York to more than nine-tenths in St. Louis.

Cloth cutters and markers, nearly all men and highest paid of the occupations studied separately, averaged \$3.41 an hour. Men were also in the majority in the other jobs for which averages of \$3 an hour or more were recorded, such as machine finish pressers in coat fabrication (\$3) and cloth cutters (\$3.22). Lowest job averages were recorded for janitors (\$1.74) and work distributors (\$1.75) both of which usually were staffed by men.

Differences in pay levels are illustrated in the following tabulation for selected regions and areas of industry concentration. The averages for five selected jobs are expressed as percentages of their respective nationwide averages.

Relative pay levels (Nationwide average hourly earnings = 100)									
Region	<u>Coat fabrication</u>					<u>Trouser fabrication--</u>			Cutters and markers, <u>cloth</u>

Relative pay levels
(Nationwide average hourly earnings = 100)

Selected Area	<u>Coat fabrication</u>					<u>Trouser fabrication—</u>			Cutters and markers, <u>cloth</u>
	<u>Sewing-machine operators</u>		<u>Finishers, hand</u>	<u>Pressers, finish, hand</u>	<u>Sewing-machine operators</u>				
	Total	Women			Men	Total	Women	Men	
New York	125	116	108	103	107	127	119	111	101
Los Angeles—Long Beach .	116	118	94	115	104	115	116	91	107
Philadelphia	113	113	97	103	108	103	103	94	107
Boston	112	110	102	105	103	—	—	—	109
Chicago	108	112	92	106	92	110	111	95	100
Rochester	106	110	88	116	—	117	119	—	102
Cincinnati	99	105	78	94	124	94	96	—	95
Baltimore	98	103	83	96	98	100	102	77	97
Southern New Jersey	95	99	83	98	—	—	—	—	108
St. Louis	87	93	—	94	—	89	91	—	—

Occupational pay relationships also varied by area. Average hourly earnings of machine finish pressers (coat fabrication) exceeded the average of janitors by 159 percent in Southern New Jersey, and 124 percent in Cincinnati, compared with 61 percent in Rochester and 33 percent in Chicago. The relationship ranged from 78 to 117 percent in the remaining areas.

Occupational averages were also tabulated by size of community (table 4), by type of shop (table 5), and by size of shop (table 6).

Earnings of individual workers varied greatly within the same job and area. For some jobs, particularly those typically paid under incentive systems, there was considerable earnings dispersion even within the same establishment. In many instances, the difference between the highest and lowest paid workers in the same establishment and job exceeded \$1 an hour.

Establishment Practices and Supplementary Wage Provisions

Data were obtained on work schedules and selected supplementary wage provisions including paid holidays and vacations, retirement pensions, life insurance, and hospitalization and surgical benefits.

Scheduled Weekly Hours. Work schedules of 40 hours a week were in effect in establishments employing 96 percent of the production workers at the time of the survey. The 40-hour week was the predominant work schedule in each of the selected regions and areas (table 25). Provisions for late-shift work were almost nonexistent in the industry.

Paid Holidays. Paid holidays were provided by establishments accounting for virtually all production workers in four regions, for nine-tenths of those in the Middle West, and for three-fifths of the workers in the Southeast (table 26). The most common provision in each region was 7 paid holidays a year. Provisions for 6 paid holidays, however, applied to significant proportions of workers in the Southeast (one-fifth) and Middle West (nearly two-fifths). For workers in establishments covered by ACWA contracts, holiday pay was computed as follows: For time rated employees, the rate of pay for each holiday is one-fifth of the employee's current weekly rate, and for incentive paid workers, the pay equals 8 times the employee's straight-time average hourly earnings, as computed for determining the first week's summer vacation pay (see below).

Paid Vacations. Paid vacations, after qualifying periods of service, were provided to virtually all production workers (table 27). Workers covered by ACWA contracts were typically provided summer vacation pay: One-half week's pay after 6 but less than 9 months of service, three-fourths week's pay after 9 months but less than 1 year of service, and 2-weeks' pay after 1 year of service. The first week of vacation pay is computed as follows: For time rated workers, the employee's current regular weekly rate; for incentive workers, 40 times the employee's straight-time average hourly earnings for the 4 consecutive busiest weeks of the vacation year. The second week's vacation pay, which shall not exceed the vacation pay for the first week, amounts to 2½ percent of the employee's straight-time earnings during the previous calendar year. Also, employees with 1 year of

service receive Christmas vacation pay equal to the pay for the second week for their preceding summer vacation. If the employee was not eligible for the second week of pay for the preceding summer vacation, he receives 2½ percent of his straight-time earnings during the 12 months ending November 30 of the current vacation year.

Health, Insurance, and Pension Plans. Health and welfare benefits for production workers in the industry in most instances were provided through the Amalgamated Social Insurance Fund to which employers contributed 4.1 percent of gross wages each pay period (table 28). Employee benefits provided by the fund included \$2,000 life insurance, accident and health insurance, and medical care and hospitalization. Medical care and hospitalization benefits also are provided for the families of employees.

The services of an ACWA health center were available to employees in six areas—Baltimore, Chicago, Eastern Pennsylvania, New York, N.Y., Philadelphia, and

Rochester. To maintain these centers, employers in New York contribute five-sixteenths of 1 percent of gross wages and each worker pays \$12 annually to the center; in Philadelphia, employers contribute 1-1/8 percent of gross wages and workers make an initial contribution of \$20. Employer contributions to the centers in the remaining areas are: 1-1/2 percent of gross wages in Chicago; 1.267 percent in Rochester; 1 percent in Baltimore; and one-fourth of 1 percent in Eastern Pennsylvania.

Retirement pension benefits (other than benefits available under Federal social security) were provided by establishments employing 95 percent of the industry's production workers. Establishments having agreements with ACWA contributed 5.4 percent of gross wages to the Amalgamated Retirement Fund. The fund provides retirement benefits of \$75 a month to qualified workers beginning at age 65. Workers may retire at age 62, or on disability, if otherwise eligible, at proportionately reduced benefits.

TABLE 10.--OCCUPATIONAL EARNINGS: BOSTON, MASS.¹--ALL SHOPS--Continued

[illegible]

¹ The Boston Standard Metropolitan Statistical Area consists of Suffolk County, 15 communities in Essex County, 30 in Middlesex County, 20 in Norfolk County, and 9 in Plymouth County.

² Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.

³ Insufficient data to warrant publication of separate averages by method of wage payment, predominantly incentive workers.

⁴ Workers were distributed as follows: 7 at \$4.60 to \$4.80; 1 at \$4.80 to \$5; and 3 at \$5 to \$5.20.

⁵ Includes sewing-machine operators in addition to those shown separately.

(Number and average straight-time hourly earnings² of workers in selected occupations in men's and boys' suit and coat manufacturing establishments, April 1967)

See footnotes at end of table.

¹ The Chicago Standard Metropolitan Statistical Area consists of Cook, DuPage, Kane, Lake, McHenry, and Will Counties, Ill.² Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.³ Includes sewing-machine operators in addition to those shown separately.⁴ Insufficient data to warrant publication of separate averages by method of wage payment, predominantly incentive workers.

See footnotes at end of table.

TABLE 15. --OCCUPATIONAL EARNINGS: NEW YORK, N. Y. --ALL SHOPS--Continued

36

² The New York Standard Metropolitan Statistical Area consists of New York City (Bronx, Kings, New York, Queens, and Richmond Counties) and Nassau, Rockland, Sullivan, and Westchester Counties, N.Y.

3. Workers were distributed as follows: 2 at \$5 to \$5.10; 10 at \$5.10 to \$5.20; 6 at \$5.

4 Workers were distributed as follows: 8 at \$5.40 to \$5.80; 10 at \$5.80 to \$6.20; and 2 at \$6.20 and over.

4 Workers were distributed as follows: 8 at \$5 to \$5.40 and 10 at \$5.40 to \$5.80

5 Insufficient data to warrant publication of separate averages by method of wage payment: (a) predominantly timeworkers or (b) predominantly incentive workers

6 Workers were distributed as follows: 13 at \$5 to \$5.10; 1 at \$5.10 to \$5.20; 6 at \$5.20 to \$5.30; and 2 at \$5.30 and over.

7 Includes coming working accounts in addition to those who were not.

⁷ Includes sewing-machine operators in addition to those shown separately.

8 Workers were distributed as follows: 1 at \$5 to \$5.40; 10 at \$5.40 to \$5.80; 2 at \$5.80 to \$6.20; and

(Number and average straight-time hourly earnings² of workers in selected occupations in men's and boys' suit and coat manufacturing establishments, April 1967)

¹ The New York Standard Metropolitan Statistical Area consists of New York City (Bronx, Kings, New York, Queens, and Richmond Counties) and Nassau, Rockland, Suffolk, and Westchester Counties, N.Y.

² Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.

³ Workers were distributed as follows: 11 at \$5 to \$5.40; 1 at \$5.40 to \$5.80; 5 at \$5.80 to \$6.20; and 2 at \$6.20 and over.

⁴ Includes sewing-machine operators in addition to those shown separately.

⁵ Workers were distributed as follows: 2 at \$5 to \$5.40; and 3 at \$5.40 to \$5.80.

⁶ Workers were distributed as follows: 6 at \$5.40 to \$5.80; 2 at \$5.80 to \$6.20; 1 at \$6.20 to \$6.60; and 4 at \$6.60 and over.

⁷ Workers were distributed as follows: 2 at \$5 to \$5.40; and 2 at \$6.20 to \$6.60.

⁸ All workers were at \$5 to \$5.40.

⁹ Insufficient data to warrant publication of separate averages by method of wage payment, predominantly timeworkers.

(Number and average straight-time hourly earnings² of workers in selected occupations in men's and boys' suit and coat manufacturing establishments, April 1967)

¹ The Philadelphia area consists of Philadelphia and Delaware Counties, Pa., and Camden County, N.J.² Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.³ Workers were distributed as follows: 5 at \$4.60 to \$5; 7 at \$5 to \$5.40; and 4 at \$6 and over.⁴ Includes sewing-machine operators in addition to those shown separately.⁵ Insufficient data to warrant publication of separate averages by method of wage payment, predominantly incentive workers.⁶ All workers were at \$5.60 to \$6.

(Number and average straight-time hourly earnings² of workers in selected occupations in men's and boys' suit and coat manufacturing establishments, April 1967)

¹ The Philadelphia area consists of Philadelphia and Delaware Counties, Pa., and Camden County, N.J.² Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.³ Insufficient data to warrant publication of separate averages by method of wage payment, predominantly incentive workers.⁴ Workers were distributed as follows: 3 at \$4.60 to \$5; 1 at \$5 to \$5.40; and 4 at \$6 and over.⁵ Includes sewing-machine operators in addition to those shown separately.

(Number and average straight-time hourly earnings² of workers in selected occupations in men's and boys' suit and coat manufacturing establishments, April 1967)

See footnotes at end of table.

¹ The Southern New Jersey area consists of Atlantic, Burlington, Cape May, Cumberland, Gloucester, and Salem Counties, New Jersey.

² Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.

³ Insufficient data to warrant publication of separate averages by method of wage payment; (a) predominantly timeworkers, or (b) predominantly incentive workers.

⁴ Workers were distributed as follows: 1 at \$4.20 to \$4.40; 6 at \$4.40 to \$4.60; 4 at \$4.60 to \$4.80; 5 at \$4.80 to \$5; and 2 at \$5 and over.

⁵ Workers were distributed as follows: 13 at \$4.20 to \$4.40; 30 at \$4.40 to \$4.60; 9 at \$4.60 to \$4.80; and 5 at \$5 and over.

⁶ Includes sewing-machine operators in addition to those shown separately.

TABLE 24.--METHOD OF WAGE PAYMENT

(Percent of production workers in men's and boys' suit and coat manufacturing establishments by method of wage payment¹, United States, selected regions, and areas, April 1967)

2 weeks.....	5	2	1	1	41	4	19
3 weeks.....	3	-	(⁴)	6	-	14	19
Workers in establishments providing no paid vacations.....	1	-	-	1	1	1	-

¹ Includes data for regions in addition to those shown separately.

² The first week of vacation pay is computed as follows: For time rated-workers, the employee's current regular weekly rate; for incentive workers, 40 times the employee's straight-time average hourly earnings for the 4 consecutive busiest weeks of the vacation year. The second week's vacation pay, which shall not exceed the vacation pay for the first week, amounts to 2 1/2 percent of the employee's straight-time earnings during the previous calendar year. The Christmas vacation pay equals the pay for the second week of their preceding summer vacation. If the employee was not eligible for the second week of pay for the preceding summer vacation, he receives 2 1/2 percent of his straight-time earnings during the 12 months ending November 30 of the current year. A few ACWA establishments, had different vacation provisions, most in the method of computing vacation pay.

³ Vacation payments such as percent of annual earnings and flat-sum amounts were converted to an equivalent time basis. Periods of service were chosen arbitrarily and do not necessarily reflect the individual establishment provisions for progression. For example, changes in proportions indicated at 5 years may include changes occurring between 1 and 5 years.

⁴ Less than 0.5 percent.

NOTE: Because of rounding, sums of individual items may not equal totals.

TABLE 28.--HEALTH, INSURANCE, AND PENSION PLANS

(Percent of production workers in men's and boys' suit and coat manufacturing establishments having contracts with Amalgamated Clothing Workers of America (ACWA) and in other establishments with specified health, insurance, and pension plans, United States and selected regions, April 1967)

Type of plan ¹	United States ²	New England	Middle Atlantic	Border States	Southeast	Great Lakes	Middle West	Pacific
All production workers.....	100	100	100	100	100	100	100	100
Workers in establishments having contracts with ACWA.....	89	97	99	91	40	82	51	97
(Employers having contracts with ACWA contributed 4.1 percent of gross wages payable each pay period to the Amalgamated Social Insurance Fund. Employee benefits provided by the fund included \$2,000 life insurance, accident and health insurance, and medical care and hospitalization. Medical care and hospitalization were also provided for the families of the employees. Employers having contracts with ACWA contributed 5.4 percent of gross wages to the Amalgamated Retirement Fund which provides benefits of \$75 a month to qualified workers beginning at age 65. Workers may retire at age 62, or on disability if otherwise eligible, at proportionately reduced benefits) ³								
Workers in other establishments providing:	11	3	1	9	60	18	49	3
Life insurance.....	10	-	1	8	48	17	48	-
Accidental death and dismemberment insurance..	5	-	(⁴)	-	29	12	11	-
Sickness and accident insurance or sick leave or both ⁵	5	-	1	6	12	13	38	-
Sickness and accident insurance.....	5	-	1	6	12	13	38	-
Sick leave (full pay, no waiting period)....	(⁴)	-	(⁴)	-	-	-	-	-
Sick leave (partial pay or waiting period)...	-	-	-	-	-	-	-	-
Hospitalization insurance.....	9	1	1	8	49	14	41	2
Surgical insurance.....	9	1	(⁴)	8	49	13	41	2
Medical insurance.....	6	1	1	6	20	13	41	2
Catastrophe insurance.....	3	-	-	-	8	10	19	2
Retirement pension.....	6	-	(⁴)	6	29	13	19	-
No health, insurance, or pension plan.....	-	-	-	-	-	-	-	-

¹ Includes only those plans for which at least part of the cost is borne by the employer. Legally required plans such as workmen's compensation and social security were excluded; however, plans required by State temporary disability insurance laws were included if the employer contributed more than is legally required or the employees received benefits in excess of legal requirements.

² Includes data for regions in addition to those shown separately.

³ A few ACWA establishments, had different health, welfare, and pension benefits. Most differences were the amounts the establishment contributed to the social and retirement funds.

In addition, services of a union health center were available to employees in six areas - Baltimore, Chicago, Eastern Pennsylvania, New York City, Philadelphia, and Rochester. To maintain these centers, employers in New York City contribute 5/16 of 1 percent of gross wages and each worker pays \$12 annually to the center; in Philadelphia, employers contribute 1 1/8 percent of gross wages and workers make an initial contribution of \$20. Employer contributions to the centers in the remaining areas are: 1 1/2 percent of gross wages in Chicago; 1.267 percent in Rochester; 1 percent in Baltimore; and one-fourth of 1 percent in Eastern Pennsylvania.

⁴ Less than 0.5 percent.

⁵ Unduplicated total of employees receiving sick leave or sickness and accident insurance shown separately.

APPENDIX A: SCOPE AND METHOD OF SURVEY

Scope of Survey

The survey covered establishments primarily engaged in manufacturing men's, youths', and boys' suits, coats, and overcoats (part of industry 2311 as defined in the 1957 edition of the *Standard Industrial Classification Manual and Supplements*, prepared by the U.S. Bureau of the Budget). Included in the study were establishments manufacturing tailored suits, separate coats or jackets, overcoats and topcoats, uniforms, and suit vests. Jobbers, who perform only entrepreneurial functions, such as buying material, arranging for all manufacturing to be done by others, and selling the finished product, were excluded from the survey, as were separate auxiliary units such as central offices.

The establishments studied were selected from those employing five workers or more at the time of reference of the data used in compiling the universe lists (Unemployment Insurance listings compiled by the various States).

The number of establishments and workers actually studied by the Bureau, as well as the number estimated to be within scope of the survey during the payroll period studied, are shown in the following table.

Method of Study

Data were obtained by personal visits of Bureau field economists under the direction of the Bureau's Assistant Regional Directors, Division of Operations. The survey was conducted on a sample basis. To obtain appropriate accuracy at minimum cost, a greater proportion of large than of small establishments was studied. In combining the data, however, all establishments were given their appropriate weight. *All estimates are presented, therefore, as relating to all establishments in the industry, excluding only those below the minimum size at the time of reference of the universe data.*

Establishment Definition

An establishment, for purposes of this study, is defined as a single physical location where industrial operations are performed. An establishment is not necessarily identical with the company, which may consist of one establishment or more.

Employment

The estimates of the number of workers within the scope of the study are intended as a general guide to the

size and composition of the labor force included in the survey. The advance planning necessary to make a wage survey requires the use of lists of establishments assembled considerably in advance of the payroll period studied.

Production Workers

The term "production workers," as used in this report, includes working foremen and all nonsupervisory workers engaged in nonoffice functions. Administrative, executive, professional, and technical personnel, and force-account construction employees, who were utilized as a separate work force on the firm's own properties, were excluded.

Occupations Selected for Study

Occupational classification was based on a uniform set of job descriptions designed to take account of interestablishment and interarea variations in duties within the same job. (See appendix B for these descriptions.) The occupations were chosen for their numerical importance, their usefulness in collective bargaining, or their representativeness of the entire job scale in the industry. Working supervisors, apprentices, learners, beginners, trainees, handicapped, part-time, temporary, and probationary workers were not reported in the data for selected occupations but were included in the data for all production workers.

Wage Data

The wage information relates to average straight-time hourly earnings, excluding premium pay for overtime and for work on weekends, holidays, and late shifts. Incentive payments, such as those resulting from piece-work or production bonus systems and cost-of-living bonuses were included as a part of the workers' regular pay; but nonproduction bonus payments such as Christmas or yearend bonuses were excluded.

Average hourly rates or earnings for each occupation or other group of workers, such as men, women, or production workers, were calculated by weighting each rate (or hourly earnings) by the number of workers receiving the rate, totaling, and dividing by the number of individuals. The hourly earnings of salaried workers were obtained by dividing their straight-time salary by normal rather than actual hours.

Estimated Number of Establishments and Workers in the Men's and Boys' Suit and Coat
Manufacturing Industry and Number Studied, April 1967

Region ¹ and area ²	Number of establishments ³		Workers in establishments		
	Within scope of survey	Studied	Within scope of study		Studied
			Total ⁴	Production workers	Total ⁴
United States ⁵	681	301	110,584	98,354	82,105

Southern New Jersey	18	12	3,699	3,461	2,648

¹ The regions used in this study are: New England - Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont; Middle Atlantic - New Jersey, New York, and Pennsylvania; Border States - Delaware, District of Columbia, Kentucky, Maryland, Virginia, and West Virginia; Southeast - Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, and Tennessee; Great Lakes - Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin; and Middle West - Iowa, Kansas, Missouri, Nebraska, North Dakota, and South Dakota.

² Standard Metropolitan Statistical Areas as defined by the U.S. Bureau of the Budget thru April 1966, except Philadelphia and Southern New Jersey. See individual area tables (7 through 23) for area definitions.

³ Includes only establishments employing five workers or more at the time of reference of the unemployment insurance listings.

⁴ Includes executive, professional, office, and other workers excluded from the production worker category shown separately.

⁵ Includes data for regions in addition to those shown separately. Alaska and Hawaii were excluded from the study.

Size of Community

Tabulations by size of community pertain to metropolitan and nonmetropolitan areas. The term "metropolitan area," as used in this bulletin, refers to the Standard Metropolitan Statistical Areas as defined by the U.S. Bureau of the Budget through April 1966.

Except in New England, a Standard Metropolitan Statistical Area is defined as a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more. Contiguous counties to the one containing such a city are included in a Standard Metropolitan Statistical Area, if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England the city and town are administratively more important than the county, and are therefore the geographical units used in defining Standard Metropolitan Statistical Areas.

Method of Wage Payment

Tabulations by method of wage payment relate to the number of workers paid under the various time and incentive wage systems. Formal rate structures for time-rated workers provide single rates or a range of rates for individual job categories. In the absence of a formal rate structure, pay rates are determined primarily with reference to the qualifications of the individual worker. A single rate structure is one in which the same rate is paid to all experienced workers in the same job classification. Learners, apprentices, or probationary workers may be paid according to rate schedules which start below the single rate and permit the workers to achieve the full job rate over a period of time. Individual experienced workers may occasionally be paid above or below the single rate for special reasons, but such payments are regarded as exceptions. Range of rate plans are those in which the minimum and/or maximum rates paid experienced workers for the same job are specified. Specific rates of individual workers within the range may be determined by merit or length of service, or a combination of various concepts of merit and length of service. Incentive workers are classified under piecework or bonus plans. Piecework is work for which a predetermined rate is paid for each unit of output. Production bonuses are based on production in excess of a quota or for completion of a job in less than standard time.

Scheduled Weekly Hours

Data refer to the predominant work schedule for full-time production workers employed on the day shift.

Supplementary Wage Provisions

Supplementary benefits were treated statistically on the basis that if formal provisions were applicable to at least one-half of the production workers in an establishment, the benefits were considered applicable to all such workers. Similarly, if fewer than half of the workers were covered, the benefit was considered nonexistent in the establishment. Because of length-of-service and other eligibility requirements, the proportion of workers receiving the benefits may be smaller than estimated.

Paid Holidays. Paid-holiday provisions relate to full-day and half-day holidays provided annually.

Paid Vacations. The summary of vacation plans is limited to formal arrangements, excluding informal plans under which time off with pay is granted at the discretion of the employer or the supervisor. Payments not on a time basis were converted; for example, a payment of 2 percent of annual earnings was considered the equivalent of 1 week's pay. The periods of service for which data are presented were selected as representative of the most common practices, but they do not necessarily reflect individual establishment provisions for progression. For example, the changes in proportions indicated at 5 years of service may include changes which occurred after 4 years.

Health, Insurance, and Pension Plans. Data are presented for health, insurance, and pension plans for which all or a part of the cost is borne by the employer, excluding programs required by law, such as workmen's compensation and social security. Among the plans included are those underwritten by a commercial insurance company, those provided through a union fund, or those paid directly by the employer from his current operating funds or from a fund set aside for this purpose.

Death benefits are included as a form of life insurance. Sickness and accident insurance is limited to that type of insurance under which predetermined cash payments are made directly to the insured on a weekly or monthly basis during illness or accident disability. Information is presented for all such plans to which the employer contributes at least a part of the cost. However, in New York and New Jersey, where temporary disability insurance laws require employer contributions,⁷ plans are included only if the employer (1) contributes more than is legally required, or (2) provides the employees with benefits which exceed the requirements of the law.

⁷ The temporary disability insurance laws in California and Rhode Island do not require employer contributions.

Tabulations of paid sick-leave plans are limited to formal plans which provide full pay or a proportion of the worker's pay during absence from work because of illness; informal arrangements have been omitted. Separate tabulations are provided according to (1) plans which provide full pay and no waiting period, and (2) plans providing either partial pay or a waiting period.

Medical insurance refers to plans providing for complete or partial payment of doctors' fees. Such plans may be underwritten by a commercial insurance com-

pany or a nonprofit organization, or they may be self-insured.

Catastrophe insurance, sometimes referred to as extended medical insurance, includes the plans designed to cover employees in case of sickness or injury involving an expense which goes beyond the normal coverage of hospitalization, medical, and surgical plans.

Tabulations of retirement pensions are limited to plans which provide regular payments for the remainder of the retiree's life.

APPENDIX B: OCCUPATIONAL DESCRIPTIONS

The primary purpose of preparing job descriptions for the Bureau's wage surveys is to assist its field staff in classifying into appropriate occupations workers who are employed under a variety of payroll titles and different work arrangements from establishment to establishment and from area to area. This permits the grouping of occupational wage rates representing comparable job content. Because of this emphasis on interestablishment and interarea comparability of occupational content, the Bureau's job descriptions may differ significantly from those in use in individual establishments or those prepared for other purposes. In applying these job descriptions, the Bureau's field economists are instructed to exclude working supervisors, apprentices, learners, beginners, trainees, handicapped, part-time, temporary, and probationary workers.

CUTTING

CUTTER, CLOTH

Cuts cloth (other than linings) by hand or machine after pattern has been outlined on material by the marker. Workers who mark and cut are to be classified as cutters and markers.

CUTTER, LINING

Cuts out body linings, stays, sleeve linings, and/or other parts of the inner lining from single or multiple layers of fabric. May also mark the outline for the cutting operation.

CUTTER AND MARKER, CLOTH

Arranges patterns on material (other than linings) and marks outlines of pattern with chalk *and* cuts material by hand or machine. May assemble various parts of garment, matching stripes or plaids where required; and may also spread or lay up layers of fabric.

MARKER

Arranges patterns on materials to be cut and marks outline with chalk.

PATTERN CUTTER

Cuts patterns from paper or fiberboard by following markings made by pattern grader.

SPREADER

Spreads (lays up) multiple layers of cloth smoothly and evenly on a cutting table by hand or with the aid of

a spreading machine. Cuts each ply to length from the bolt of material.

COAT FABRICATION

BASTER, ARMHOLE, HAND

Bastes lining and padding into shoulders and around armholes of coats by hand.

BASTER, EXCEPT ARMHOLE, HAND

Arranges and hand-sews parts of garments together with long stitches, usually to hold parts together temporarily until they are stitched by others.

BUTTON SEWER, HAND

Sews buttons to garments by hand, using needle and thread. In addition, may match buttons or mark locations of buttons.

BUTTONHOLE MAKER, HAND

Sews buttonholes in garments by hand.

COLLAR SETTER, HAND

Bastes top collar and under collar to neck of coat and tacks collar corner by hand; and tacks gorge seam open.

FINISHER, HAND

Performs one or more of the following hand operations: Sewing or felling lining to lining, or lining to cloth at the armholes, shoulders, sleeve bottoms, body lining, top collar and under collar to neck of coat, and felling

corners where it is impractical or undesirable for the various machines to be used—such as corners between facing and bottom turnup, openings with thick seams, etc.

FITTER

(Trimmer)

Sorts, matches, and trims garment parts and linings preparatory to the sewing operations. This classification excludes workers who do only single operations such as stamping, marking sizes, marking stitches, etc.

INSPECTOR, FINAL

(Examiner)

Examines and inspects completed coats prior to pressing or shipping. Work involves: Determining whether the coats conform to shop standards of quality and marking defects such as dropped stitches, bad seams, etc. In addition may make minor repairs.

Thread trimmers who may only casually inspect garments are not included in this classification. In many shops manufacturing inexpensive garments there will be no inspectors falling within this description; in those shops whatever inspection is carried on usually is performed by thread trimmers.

PAIRER AND TURNER

Pairs or brings together parts of the garment for assembly, or turns various parts, excluding front edges and collars.

PRESSER, FINISH

Performs the *final* pressing operations on completed coats by means of a handpressing iron, or a pressing machine which is heated by gas or steam. Workers who press only a portion of the completed garment are also included in this classification.

Workers are to be classified according to the type of pressing equipment used.

Presser, finish, hand

Presser, finish, machine

SEWING-MACHINE OPERATOR

Operates a standard industrial machine or a special-purpose sewing machine to perform the stitching involved in making parts of garments, in joining various

garment sections together, or in attaching previously completed garment parts to partially completed garments.

Sewing-machine operators working on coat fabrication are to be classified according to the following breakdown:

Baste edges—Bastes front edges and bottoms, just after the front edge of the coat has been turned, with a temporary removable chainstitch.

Baste, jump-stitch machine, armhole—Bastes armholes with jump-stitch machine inside and outside including sleeve head.

Baste, jump-stitch machine, canvas—Bastes on canvas, shoulder pads, and bridle with jump-stitch machine.

Baste, jump-stitch machine, facings—Attaches facings to coat with jump-stitch machine.

Baste, jump-stitch machine, linings and yokes—Bastes lining at side and bottom, bastes vent or vents (if any), and bastes yokes to back with jump-stitch machine.

Book edges—Books or turns in raw seam edges with a serging machine.

Button sewing—Operates a button-sewing machine that automatically sews buttons to garments or garment parts.

Buttonhole making—Operates a buttonhole machine that automatically cuts and stitches buttonholes in garments or garment parts.

Collar preparing, except piecing or padding—Bastes topcollar to undercollar and bastes edge all around with jump-stitch machine.

Collar setting—Bastes topcollar and undercollar to neck of coat by machine; *or* sews topcollar to gorge and across neck with a plain sewing machine and bastes *or* sews undercollar to neck with a zigzag machine.

Facing tacking—Tacks facing to front with blind-stitch machine.

Fell body lining, bottom and side—Fells (joins) body lining to cloth forepart at side seams and bottom of coat with a machine designed to join parts by means of a blind stitch which does not show on the front side of the cloth.

Join shoulder, cloth—Joins shoulder of cloth forepart to back.

Join side seams—Joins back to forepart (front) of garment.

Join undercollar, join sleeve lining, or piece pockets—Includes operators who join undercollar cloth and undercollar canvas; *or* join top-sleeve lining to under-sleeve lining; *or* sew cloth and lining facings

to the pocket lining and may also make the cash pocket.

Lining maker, body—Sews lining to facing and makes inside breast pocket by machine (double-needle knife machine or Reese pocket machine).

Pad collar and lapels—Joins (pads or quilts) collar and lapel or forepart to canvas by numerous rows of blind stitching.

Pocket setting and tacking—Sews flap and beason to front, cuts open, turns, tacks corners, and sews around silesia pocket; sets outside welt, cuts open, tacks corners, and sews around silesia pocket.

Sew darts, cloth—Sews the “darts,” “gores,” or “clams” in the body at the waist of coat front (cloth).

Sew edge tape—Sews narrow tape down front edge of coat and across bottoms after facing is first attached to front by hand or machine basting. Usually performed on sewing machine with cutting attachment.

Sew in sleeve—Sews completed sleeves to the body of the coat.

Sleeve making, cloth—Sews in seam of cloth, makes turnups with wigan, sews elbow seam, and makes sleeve vent by machine.

Tape armholes—Sews a narrow tape and/or bias strip to the armholes of either, or both, front and back parts of coat.

Other sewing-machine operators, not elsewhere classified.

SHAPER, EDGE AND BOTTOM, CLICKER MACHINE

Pairs fronts, places them on block, sets metal die on fronts, and clicks machine.

SHAPER, EDGE AND BOTTOM, HAND

Marks and trims lapels, front edge, and bottom of coat with shears. Lapels are marked by means of a special pattern or “shaper.” The lower part of the front edge and bottoms also may be marked with the aid of special patterns.

SHAPER, UNDERCOLLAR, CLICKER MACHINE

Places undercollars on block of machine (stacked two or more), places metal die on top of undercollars, and clicks machine.

SHAPER, UNDERCOLLAR, HAND

Marks and trims undercollar by hand with the aid of a special pattern known as an “undercollar shaper.”

TAILOR, ALL-AROUND

Performs several or all of the hand basting, hand sewing, and sewing-machine operations included in the making of a coat.

THREAD TRIMMER AND BASTING PULLER

Trims loose thread ends and removes basting threads of coats prior to pressing.

Workers who also carefully examine and inspect garments are classified as inspectors, final.

UNDERPRESSER

Uses hand iron, machine iron, or powered press to press various parts of coat such as armholes, darts, long seams, short seams, etc., during the fabricating process.

TROUSER FABRICATION

INSPECTOR, FINAL

(Examiner)

Examines and inspects completed trousers prior to pressing or shipping. Work involves: Determining whether the trousers conform to shop standards of quality and marking defects such as dropped stitches, bad seams, etc. In addition, may make minor repairs.

Thread trimmers who may only casually inspect garments are not included in this classification. In many shops manufacturing inexpensive garments there will be no inspectors falling within this description; in those shops whatever inspection is carried on usually is performed by thread trimmers.

PRESSER, FINISH

Performs all the *final* pressing operations, both tops and legs, on completed trousers, by means of steam pressing machine. Workers who press only a portion of the completed garment are *not* included in this classification.

SEWER, HAND

(Finisher)

Performs sewing operations by hand including sewing on buttons, making buttonholes, sewing on size tickets, stitching edges, closing openings that have been left by various hand and machine operations, etc.

SEWING-MACHINE OPERATOR

Sewing-machine operators working on trouser fabrication are to be classified according to the following breakdown:

Attach fly—Attaches either/or both right and left fly to trousers.

Attach waistband—Attaches cloth waistband all around top of trousers.

Attach zipper—Sews zipper to either/or both left and right flies.

Bartacking—Sews bartacks at various parts of garment, such as at ends of pocket openings, at the bottom of fly opening, at top and bottom of belt loops, and/or buttonhole ends for reinforcement, on a specially designed sewing machine.

Join inseams—Joins front and back legs at inner seam.

Join outseams—Joins front and back legs at outer seam.

Join seatseams—Joins right and left halves of trousers at the center, back, or seatseams.

Make pockets—Makes either complete front, side, or back pockets, or complete pockets exclusive of sewing facings (piecings) to pocket linings.

Piecing flies—Performs operations for preparing the fly prior to attaching fly to trousers, exclusive of zipper sewing.

Piecing pockets—Sews cloth facings to pocket linings before linings are sewed to the trousers.

Serging—Makes covering (or overlocking, overcasting, or serging) stitch over raw edges of cloth on a special machine to prevent raveling.

Sew on waistband lining—Sews waistband lining to cloth waistband, or to top of trousers when there is no separate cloth waistband, on a plain or special machine.

Stitch pockets—Stitches around edge of pocket lining, after the pockets have been turned, as a reinforcing seam.

Other sewing-machine operators, not elsewhere classified.

THREAD TRIMMER AND BASTING PULLER

Trims loose thread ends and removes basting threads of trousers prior to pressing.

Workers who also carefully examine and inspect garments are classified as inspectors, final.

UNDERPRESSER

Uses hand iron, machine iron, or a powered press to press garment parts such as pockets, seams, etc., during the fabricating process.

VEST FABRICATION

BUTTON SEWER, HAND

Sews buttons to garment by hand using needle and thread. In addition, may match buttons or mark location of buttons.

FITTER

(*Trimmer*)

Sorts, matches, and trims garment parts and linings preparatory to the sewing operations. *Excludes* workers who do only single operations such as stamping, marking sizes, marking stitches, etc.

PAIRER AND TURNER

Pairs or brings together parts of the vest for assembly or turns out parts as complete vest.

PRESSER, FINISH

Performs the *final* pressing operations on completed vests by means of a hand pressing iron or a pressing machine which is heated by steam. Presses back, edges, front, and neck of garment.

SEWING-MACHINE OPERATOR

Sewing-machine operators working on vest fabrication are to be classified according to the following breakdown:

Back making—Prepares the back (linings) of the vest by sewing together the inside and outside linings.

Button sewing—Operates a button-sewing machine that automatically sews buttons to vests.

Buttonhole making—Operates a buttonhole machine that automatically cuts and stitches buttonholes in vests.

Dart sewing, cloth—Sews the “darts,” “gores,” or “clams” at the waist of vest.

Edge basting or stitching—Bastes or stitches front edges and bottoms after front edge of vest has been turned; also stitches armholes.

Edge tape sewing—Sews tape to front edges and bottoms after lining is basted; also tapes armholes.

Joining—Joins back to foreparts of vest and joins shoulders of cloth forepart to shoulders of back lining.

Lining basting—Bastes lining to fronts of vest.

Lining making—Sews lining to cloth facing; also prepares small parts, such as neckpiece, welt, etc.

Pocket setting and tacking—Sets welts (or flaps) on fronts (cloth) of vest, cuts open, tacks, and sews around silesia.

Other sewing-machine operators, not elsewhere classified.

UNDERPRESSER

Uses hand iron, machine iron, or powered press to press back, darts, neck seams, pocket seams, welts, etc., during the fabrication process.

MISCELLANEOUS

ADJUSTER

(Sewing-Machine repairman)

Adjusts and repairs sewing machines used in the establishment. Work involves *most of the following*: Examines machines faulty in operation to diagnose source of trouble; dismantles or partly dismantles machines, replacing broken or worn out parts or performing other repairs, and reassembles machines; adjusts machines to function efficiently by turning adjustment screws and nuts; regulates length of stroke of needle and horizontal movement feeding mechanism under needle; replaces or repairs transmission belts; prepares specifications for major repairs and initiates orders for replacement parts; and uses a variety of handtools in fitting and replacing parts. May also do adjustments on pressing machines.

JANITOR

Cleans and keeps in an orderly condition factory working areas and washrooms, or premises of an office,

apartment house, or commercial or other establishment. Duties involve a *combination of the following*: Sweeping, mopping, or scrubbing, and polishing floors; removing chips, trash, and other refuse; dusting equipment, furniture, or fixtures; polishing metal fixtures or trimmings; providing supplies and minor maintenance services; and cleaning lavatories, showers, and restrooms. Workers who specialize in window washing are excluded.

PACKER

Places finished garments in shipping containers. In addition may also seal or close container, and/or place shipping or identification marks on container.

STOCK CLERK, GARMENTS

Receives completed garments, stores garments according to size, style, and color; and prepares garments for shipment. May also assemble parts (coats, vests, and trousers) into complete garments and keep records of garments received and prepared for shipment.

This classification does not include stockroom helpers or employees who supervise stock clerks and helpers.

STOCK CLERK, PIECE GOODS

Receives bolts of cloth (piece goods) and checks the receipts against orders; arranges the cloth in bins or on shelves according to style, quality, and color; and issues cloth to cutting department according to requisitions. May also keep inventory records of stock and notify the proper official when cloth is needed; and issue linings and findings such as buttons, thread, and tape.

This classification does not include stockroom helpers or employees who supervise stock clerks and helpers.

WORK DISTRIBUTOR

(Bundle carries)

Carrier or trucks garments in various stages of completion to the worker who is to perform the next operation on the garment. May exercise some discretion in distributing work, but has no supervisory responsibilities.

Industry Wage Studies

The most recent reports for industries included in the Bureau's program of industry wage surveys since January 1950 are listed below. Those for which a price is shown are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D. C., 20402, or any of its regional sales offices. Those for which a price is not shown may be obtained free as long as a supply is available, from the Bureau of Labor Statistics, Washington, D. C., 20212, or from any of the regional offices shown on the inside back cover.
