Preface

The Bureau of Labor Statistics conducts annual surveys of wage rates and scheduled hours of work for specified crafts or jobs as provided in labor-management agreements in four industries: Building construction, printing, local transit, and local trucking. The studies present the wage rates in effect as of July 1, as reported to the Bureau by the appropriate local labor organizations in the cities included in the survey.

Preliminary listings of union wage rates and hours for printing trades workers in each city were issued within a few months of the reference date for the current survey (July 1, 1970). Copies of these are available from the Bureau of Labor Statistics, Washington, D.C. 20212, or any of its regional offices listed on the inside back cover of this report.

The study was conducted in the Bureau's Office of Wages and Industrial Relations. This bulletin, which provides a comprehensive account of the current study and includes indexes of wages and hours for 1907-70, was prepared by Thomas C. Mobley in the Division of Occupational Wage Structures.

Union Wages and Hours:

Printing Industry, July 1, 1970

Summary

On July 1, 1970 union wage rates for printing trades workers in cities of 100,000 inhabitants or more averaged \$4.97 an hour—up 8.3 percent, or 38 cents, over the previous year. The percentage rise exceeded the increase for the year ending July 1, 1969 which was 6.6 percent and was the largest since the years immediately after World War II.

Beginning July 1970, wage-rate indexes from the Bureau's annual printing trades survey were calculated on a 1967=100 base; the base previously used was 1957-59=100. On the new base (1967=100), the all trades index for July 1970 is 121.2.¹ (See table 1.)

The annual survey showed that 93 percent of the workers studied received wage-rate increases during the July 1969-70 period. The increases varied considerably—nearly a fifth of the workers were granted increases of 5 percent or less and a slightly smaller proportion received wage adjustments of 14 percent or more (see table 7). Cents-per-hour increases are shown in table 8.

Wage rates for workers in book and job shops averaged \$4.65 an hour on July 1, 1970, compared with \$5.13 for those in newspaper establishments and \$5.62 for workers in lithography (offset printing) plants. Part of these differences result from the way workers are distributed in the three industry branches among the cities surveyed. For example, Chicago, Los Angeles, Detroit, New York City, and San Francisco—five relatively high pay cities—constituted 53 percent of the workers in lithography, 40 percent in book and job shops, and 25 percent in newspaper establishments. The relative differences in average wage rates for the three industry branches within these cities were generally smaller than the differences for all cities combined.

Since 1960, union wage rates for printing-trades workers have advanced at an annual rate of 4.2 percent. It amounted to 2.9 percent for the first half of the decade contrasted with 5.4 percent during the 1966-70 period. The following tabulation shows the pattern of percent increases in average wage rates for workers in all printing trades; book and job shops; and newspaper establishments during the decade.

Percent increases in average union hourly wage rates, 1960-70

Year	All printing trades workers	Book and job shop workers	Newspaper establishments workers
1960-61-----	3.2	3.4	2.9
1961-62-----	2.9	3.1	2.7
1962-63-----	2.9	3.0	2.8
1963-64-----	2.6	2.9	2.4
1964-65-----	2.8	3.1	2.5
1965-66-----	3.3	3.4	3.1
1966-67-----	4.1	3.5	4.8
1967-68-----	5.0	5.2	5.1
1968-69-----	6.6	6.3	6.6
1969-70-----	8.3	8.2	7.9

Regional and city averages of union wage rates by industry branch are presented in tables 10 and 11 for workers covered by collective bargaining agreements within scope of the survey. These averages are influenced not only by differences in union wage rates for individual cities but also by differences in the occupational composition for a given industry branch among cities. A particular craft may not be covered by a collective bargaining agreement in some cities and thus is excluded from the survey, whereas all or part of the workers in the craft may be covered in other cities. In addition, certain types of work are more prevalent in some cities than others. Table 13 presents, by city and industry branch, wage rates for specific occupations, and provides the best means of intercity comparison at this level.

Average hourly wage rates varied considerably by occupation within each of the industry branches. In book and job shops, they ranged from \$2.90 an hour for bindery women to \$5.73 an hour for photoengravers. Day-work rates in newspaper plants averaged highest (\$5.56) for photoengravers and lowest (\$4.61) for mailers. For nightwork, corresponding averages ranged from \$5.87 to \$4.88 an hour respectively. In lithography (offset) shops, average hourly wage rates varied from a low of \$4.85 for press assistants and feeders to a high of \$5.88 for offset pressmen. Similar relationships existed on a regional basis. Individual wage rates for the various crafts by city and industry branch are presented in table 13.

¹ The index was 159.9 on the 1957-59 base. The U.S. Office of Management and Budget established the new base period for use by Federal government statistical agencies in line with a long standing policy that index bases are to be updated periodically. The change in base period does not affect percentage changes over time, except for rounding differences.

Weekly work schedules at straight-time rates averaged 35.9 hours for all printing trades workers on July 1, 1970. (See table 5.) Averages were about 36 hours in book and job shops and newspaper establishments and 35 hours in lithography shops.

Contract provisions for employer financed health and welfare and/or pension plans applied to most workers surveyed. Where available, information on these plans is presented in table 13, which lists the amount employers contributed by trade and area.

Scope and Method of Survey

Union wage rates and hours are those agreed on through collective bargaining between trade unions and employers, and defined as (1) the basic (minimum) wage rates (excluding holiday, vacation, or other benefit payments regularly made or credited to the worker each pay period) and (2) the maximum schedules of hours at straight-time rates. Rates over the negotiated minimum, which may be paid for special qualifications or other reasons, are not included.

Information presented in this bulletin was based on union rates in effect on July 1, 1970, and covered approximately 120,000 printing trades workers in 69 cities. Data were

obtained primarily from local union officials by mail questionnaire; in some instances, Bureau economists visited local union officials to obtain the desired information.

Based on the 1960 Census of Population, the current survey reflects union wage rates in the printing industry in all cities of 100,000 inhabitants or more, excluding Honolulu. All cities having 500,000 inhabitants or more were included, as were most cities in the 250,000 to 500,000 group. The cities in the 100,000 to 250,000 group selected for study were distributed widely throughout the United States. Data for some of the cities in the study were weighted to compensate for cities not surveyed. To provide appropriate representation in the combination of data, each region was considered separately when city weights were assigned.

Average hourly rates, indicating current levels, were based on wage rates in effect on July 1, 1970. Individual rates were weighted by the number of union members at each rate. These averages are not designed for precise year-to-year comparisons because of fluctuations in membership and in job classifications. Average cents-per-hour and percent changes based on comparable quotations for the various occupational classifications in both periods were weighted by the union membership reported for the current (1970) survey. The index series, designed for trend purposes, was similarly constructed.

¹ Index series designed for trend purposes; periodical changes in union rates are based on comparable quotations for the various occupations in consecutive periods, weighted by number of union members reported at each quotation in the current survey period.

² Combined data for years 1907-10 not available.

³ Lithography workers were included in the index for the first time in 1968. The index excluding these workers was 105.2.

¹ Average rates are based on all rates in effect on July 1, 1970; each union rate was weighted by the number of union members reported at each rate.

² Based on comparable quotations for 1969 and 1970, weighted by the number of union members reported at each quotation in 1970.

Table 7. Percent changes in wage rates by trade

(Percent changes in union hourly rates and percent of printing trades workers affected, July 1, 1969-70)

¹ Relatively few workers in book and job or lithography shops were employed on nightwork; therefore, data on such workers were excluded from the survey.

² Less than 0.05 percent.

³ Workers were distributed as follows: 5.4 percent under 1 percent; 0.4 percent at 1 to 2 percent; and 29.9 percent at 2 to 3 percent.

⁴ Workers were distributed as follows: 32.3 percent under 1 percent; and 4.5 percent at 2 to 3 percent.

¹ The average in the book and job tabulation includes rates for semiskilled—bindery women and press assistants and feeders—as well as the highly skilled journeymen, composing room and pressroom workers, and others. The number of semiskilled workers organized in a city may influence the average for the city.

Table 12. Percent and cents-per-hour changes in wage rates by city and industry branch

(Increases in union hourly rates in the printing trades by city and industry branch, July 1, 1969-70)

See footnotes at end of table.

NOTE: When more than one union rate was in effect for the same occupation in a particular city, letters of the alphabet were used to designate the various agreements. The sequence of the letters does not indicate the relative importance of the agreements or the rates.

¹ Shown in terms of cents per hour or as percent of rate; in actual practice, however, some employer payments are calculated on the basis of total hours or gross payroll. These variations in methods of computation are not indicated in the above tabulation.

² Includes life insurance, hospitalization, and other types of health and welfare benefits; excludes payments into holiday, vacation and unemployment funds when such have been negotiated.

³ Agreement provides for employer financed plan; amount of employer payment not available.

⁴ This rate is effect prior to July 1, 1970; new rate in negotiation at time of survey.

⁵ 37½-hour workweek on July 1, 1969.

⁶ Information not available for rate and hours on July 1, 1969.

⁷ 40-hour workweek on July 1, 1969.

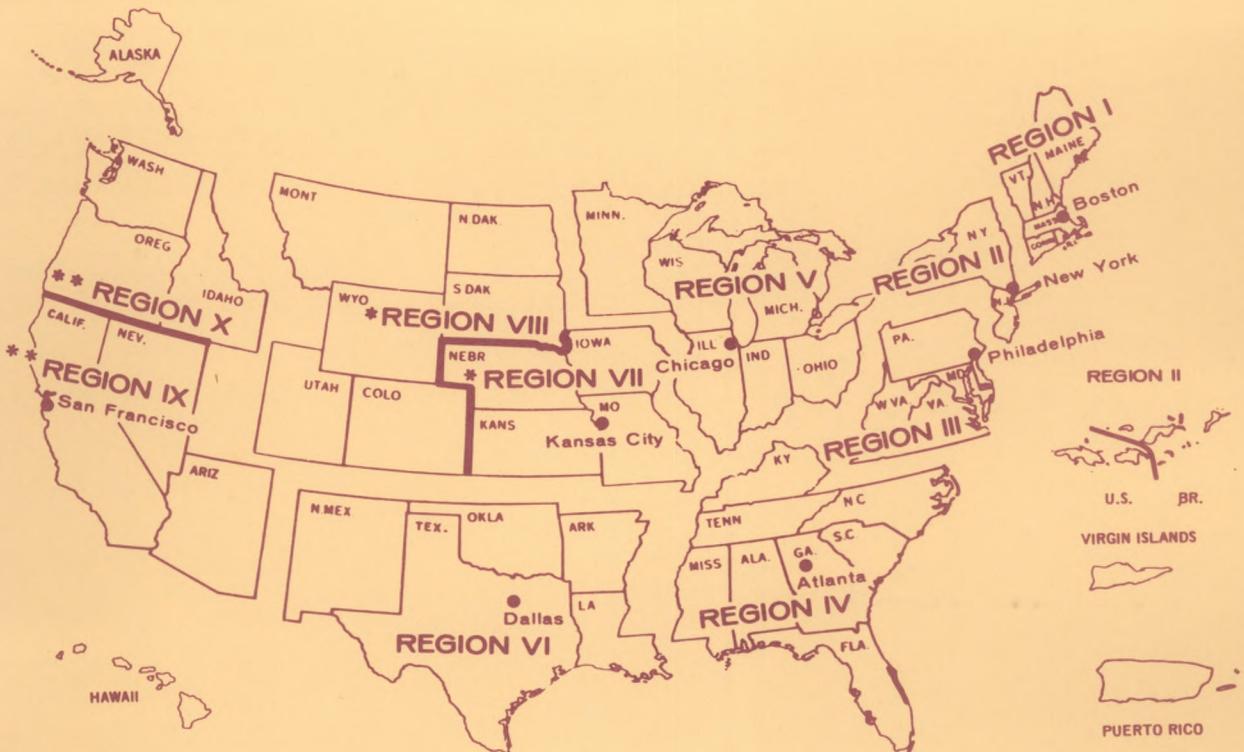

⁸ 36½-hour workweek on July 1, 1969.

⁹ 38½-hour workweek on July 1, 1969.

¹⁰ 38½-hour workweek on July 1, 1969.
