

WAGE CALENDAR 1974

Bulletin 1810

U.S. DEPARTMENT OF LABOR
Peter J. Brennan, Secretary

Bureau of Labor Statistics
Julius Shiskin, Commissioner

1974

For sale by the Superintendent of Documents,
U.S. Government Printing Office, Washington, D.C. 20402 Price: \$1.15

Stock No. 2901-01313

Preface

As in previous years, the Bureau has again assembled a variety of information on anticipated contract adjustments in this calendar year. Major situations by company and union are identified in which, during 1974, contracts will terminate, deferred wage increases will become due, changes in the Consumer Price Index will be reviewed, and contracts will be reopened. These data take on added dimensions as timely indicators because of some of the important movements that might be expected in an economy subject to controls and inflationary pressures stemming from a number of sources, including the energy situation.

This bulletin combines articles which appeared in the December 1973 and January 1974 issues of the *Monthly Labor Review*, and the Bureau's listing of major agreements which expire during the year. Each contract covers 1,000 workers or more. Virtually all of these agreements are on file with the Bureau's Division of Industrial Relations and are open to public inspection. In addition, information was taken from published sources for additional situations where agreements are due to expire.

Table 7 lists agreements scheduled to expire in 1974 by month and table 8 arranges them by industry. Tables 9 and 10 present those additional situations just referred to, due to expire, also by month and by industry. Users should refer to appendix A for a list of common abbreviations, to appendix B for codes used in identifying the entries by industry, State, union and employer unit, and to appendix C for a technical note on the data shown in tables 7-10.

Table 11 lists selected 1974 contract reopenings (for wages, benefits, and working conditions) by month for selected collective bargaining agreements each covering 1,000 workers or more.

Expirations that were reported to the Bureau too late to be included in tables 7-10 are listed in table 12.

In several instances, tables 7-10 may list agreements and situations where the parties have settled before the agreed upon expiration date, such as occurred in aluminum and can. In such cases, the listing has been retained, but early settlement has been noted in a footnote.

This bulletin was prepared jointly in the Division of Trends in Employee Compensation and the Division of Industrial Relations by John L. Gurney and Lena W. Bolton.

Wage Calendar, 1974

The year 1974, which begins with uncertainty over the continuation of existing wage and price controls, will also be one of heavy collective bargaining activity. Following a period of relative labor peace, negotiators will come to the bargaining table in an economic climate which has been dominated by rapidly rising prices, a tightening labor market, and, in contrast, fears expressed over the possibility of a recession induced or exacerbated by an energy crisis. Amid these conflicting signs, there was speculation whether declines in the size of collective bargaining settlements in 1973 would continue in the new year or whether unexpected contract reopenings might be triggered by changes in stabilization or energy policies.

One aspect of the bargaining climate already certain is the size of deferred wage increases—those negotiated in prior years to go into effect during 1974. Such deferred increases will average 5.0 percent, essentially unchanged from last year's gain of 4.9 percent. However, the number of workers receiving these gains will be relatively low—4.75 million, compared with 7.6 million in the peak year 1969. Deferred increases generally affect fewer workers in years when many contracts come up for negotiation. This year's decline also may be due in part to the recent increase of short-term contracts, especially in the construction industry.

Altogether at least 5.2 million workers will be covered by major collective bargaining agreements that either expire this year or contain wage reopening provisions.¹ (Major agreements cover 1,000 workers or more.) Bargaining in the steel, can, aluminum, construction, communications, electrical machinery, aerospace, longshoring, railroad, and mining industries will dominate the scene, with the results likely to affect stabilization efforts and wage decisions throughout the economy. Most of the agreements expiring this year were last negotiated in 1971. During that year, when pressure for wage settlements to recoup lost purchasing power was dominant, substantial settlements were achieved in many of the industries which are now up for renegotiation. In addition, cost-of-living escalator clauses were incorporated into several key industry contracts and have provided for periodic wage adjustments to keep up with rising prices. In part, because of these factors, the catchup pressures which existed in 1971 should not

be as much in evidence during 1974.² (However, clauses permitting the reopening of contracts this year due to a national emergency, such as an energy crisis, exist in at least 148 contracts, covering more than a million workers.)

The last time negotiations were concluded by bargainners scheduled to meet again this year, the average contract duration was 31 months and the average annual rate of wage change (including subsequent cost-of-living increases) was 7.8 percent. Bargainers in manufacturing last agreed to contracts with an average 34-month duration and 8.6 percent annual wage gains. In nonmanufacturing, contracts called for an average duration of 29 months and annual increases of 7.2 percent. Construction contracts averaged 30 months in length, providing 7.0 percent annual wage gains.

A total of 4.3 million workers are covered by contracts which neither expire nor provide for a wage reopening in 1974. Nearly all, however, will receive deferred wage increases agreed upon when their contracts were negotiated. The number of workers covered by escalator clauses remains near the 1973 level of 4.1 million. (Workers covered by deferred increases, escalator clauses, or contracts scheduled to expire in 1974 are not necessarily in three mutually exclusive groups: Some contracts include both deferred increases and escalator provisions or may provide for such increases at some time during the year the contract is due to expire.)

¹ Such clauses provide for the time or the circumstances under which negotiations can be requested, prior to the expiration of the contract. Reopenings are usually restricted to wage issues and, perhaps, other specified economic issues, not to the contract as a whole.

The *emergency* reopening clauses mentioned in the text provide that the contract or specific provisions of the agreement may be reopened in the event that significant occurrences happen in the economy, society, or bargaining unit, such as war, national disaster, critical business reverses, or the imposition of controls on wages or prices. In late December 1973, the Teamsters' union demanded that its national contract with the trucking industry be reopened to increase wages of over-the-road truckers whose earnings were being affected by the fuel-shortage.

² For a discussion of previous settlement patterns in some of the industries scheduled to bargain in 1974, see Lena W. Bolton, "Bargaining ahead: Major contracts expiring in 1974," *Monthly Labor Review*, December 1973, pp. 43–51. The article also includes a table of selected contracts covering 5,000 workers or more which have expiration, reopening, and wage-adjustment provisions effective in 1974.

Data included in this article reflect wage increases scheduled to become effective in 1974, as well as information on contract expirations and reopenings. Deferred increases have been tabulated as they were negotiated by the parties, without regard to possible subsequent action by stabilization authorities.

At the time this article was completed (late November 1973) the Bureau of Labor Statistics had information on 1,973 contracts covering 9.2 million of the 10.3 million workers under major private collective bargaining agreements in all industries but farming.³ The remaining 1.1 million workers, who were generally excluded from the data in this article, were covered by agreements scheduled to expire later in 1973, still being negotiated, not yet approved by the appropriate stabilization agency, or whose terms were not yet available.⁴

Bargaining

Bargaining during the year will start off lightly and quicken in pace as the year progresses. (See table 1.) The number of workers covered under contracts to be renegotiated will exceed last year's, when contracts covering some 4.75 million workers were negotiated. In the normal 3-year cycle of bargaining there are usually 2 heavy years, followed by 1 year of light bargaining. This year would normally be the second of 2 heavy years of bargaining. However, the number of workers under contracts up for renegotiation in 1974 has been further increased due to the fact that some short-term contracts negotiated last year (in construction and railroads) will again be up for renegotiation.

Early in the year, representatives of the major can companies and their 33,000 employees will meet at the bargaining table, as contracts expire in February. In recent settlements, the can contracts have set the pattern for aluminum and steel negotiations later in the year. This year the steel industry has adopted a new arbitration agreement which establishes on an experimental basis voluntary final and binding arbitration for unresolved collective bargaining issues. The new bargaining policies

³ These agreements include multiplant or multifirm agreements covering 1,000 workers or more, even though individual units may be smaller. Although approximately 1 American worker in 5 is a union member, only about 1 in 9 is included in an agreement covering 1,000 workers or more in the private nonfarm sector.

⁴ Situations for which the necessary information was not available include (a) 66 agreements which expire subsequent to late November 1973, covering 303,500 workers; (b) 99 contracts which expired earlier in the year, but where negotiations were continuing, covering 459,475 workers; (c) 120 contracts in which a settlement had been reached, but had not yet been approved by the appropriate stabilization agency, covering 357,415 workers; and (d) 35 contracts whose status was unknown or where the terms of the agreement were not available, covering 72,230 workers.

are expected to help maintain a continuance of the industrial peace evident during 1973. Other major industry contracts which will be renegotiated during the coming year cover 800,000 construction workers, with bargaining set for April–September; nearly 600,000 Bell Telephone System employees, bargaining in July; some

¹ Two utility agreements covering 22,550 workers are excluded since they have no fixed expiration or reopening date.

² Excludes 300,000 workers, 270,000 in the ladies apparel industry, whose contracts provide for possible wage reopeners during the year based on increases in the Consumer Price Index.

NOTE: Only bargaining situations in the private, nonagricultural economy affecting 1,000 workers or more are considered in this table. Because of rounding, sums of individual items may not equal totals.

500,000 railroad employees, bargaining in December; and 115,000 men's clothing workers, bargaining in May. (See table 2.)

Of the 9.2 million workers whose contracts have been studied, only 95,000 are covered by agreements that extend beyond 1974 and do not provide for specific deferred increases or for an unconditional wage reopening. Nearly all of these workers may receive a wage change at some time during the year, however. For example, con-

tracts covering a number of workers in the textile industry do not contain a specific date for a wage reopening, but characteristically are reopened after the nonunion sector of the industry grants a general wage increase. Also in some industries, a rise in the Consumer Price Index may trigger a reopening. This type of reopening provision covers about 300,000 workers, primarily in the ladies' apparel industry, and may provide for an unscheduled increase during the year.

¹ See table 1, footnote 1 for notes on data limitations.

² See table 1, footnote 2 for notes on data limitations.

NOTE: Only bargaining situations in the private, nonagricultural economy affecting 1,000 workers or more are considered in this table. Because of rounding, sums of individual items may not equal totals.

Deferred wage increases

The number of workers receiving deferred increases this year will be about the same as last year but below the level of earlier years, as the following tabulation shows:

	<i>Workers (in millions)</i>		<i>Workers (in millions)</i>
1966.....	4.3	1971.....	5.8
1967.....	4.5	1972.....	6.7
1968.....	5.6	1973.....	4.9
1969.....	7.6	1974.....	4.75
1970.....	5.7		

Of the 4.75 million workers scheduled to receive deferred increases, some 800,000 are under contracts which will also expire during the year. About 2.7 million workers, or 53 percent, will receive their increases within the first half of the year. (See table 3.) Nearly 385,000 of these workers will receive additional gains during the second half of the year.

Table 3. Workers receiving deferred wage increases in 1974 in bargaining situations covering 1,000 workers or more, by month

[Workers in thousands]

Effective month	Principal industries affected	Workers
Total ¹		4,758
January.....	Railroads; petroleum.....	853
February.....	Stone, clay, and glass.....	168
March.....	Food.....	171
April.....	Construction; machinery (except electrical).....	290
May.....	Electrical equipment; apparel.....	459
June.....	Apparel; lumber.....	691
July.....	Trucking (automobile transportation); rubber.....	930
August.....	Electrical equipment; food.....	85
September.....	Transportation equipment; food.....	944
October.....	Food stores; machinery (except electrical).....	195
November.....	Electrical equipment.....	220
December.....	Electrical equipment.....	99

¹ This total is smaller than individual items since 385,115 workers will receive two increases. The total is based on data available in late November 1973 and thus may understate the number of workers receiving deferred wage increases.

NOTE: Only bargaining situations in the private, nonagricultural economy are considered in this table. Because of rounding, sums of individual items may not equal totals.

The average increase will be 5.0 percent, or 25.3 cents per hour. ⁵ Deferred increases in the nonmanufacturing sector will average 5.5 percent, or 30.8 cents per hour, while the corresponding gains in manufacturing will be 4.6 percent or 20.3 cents. (See table 4.) In 1973, the average increases were 5.3 percent and 4.4 percent, respectively. Some 466,000 construction workers will receive deferred increases averaging 5.3 percent. ⁶ Other large groups receiving deferred gains will be 500,000 railroad employees and some 492,000 trucking industry employees. In manufacturing about 700,000 workers in the auto

industry will receive a 3.0-percent deferred increase and 327,000 electrical machinery workers will receive an increase averaging 5.5 percent.

The presence of a cost-of-living escalator provision in a contract often tends to reduce the size of the scheduled deferred increase. Deferred increases under contracts without escalator clauses cover 2.8 million workers and will average 5.4 percent, while those under contracts with escalator clauses cover 1.9 million workers and average only 4.5 percent. However, depending on the course of consumer prices, increases in the latter contracts may be augmented by the individual escalation formulas.

Fringe benefits—such as retirement and health insurance payments—now constitute nearly a fourth of total compensation. When the cost of deferred benefit improvements is combined with the wage increases, the average gain in the total wage-benefit package will be 6.2 percent in agreements covering 5,000 workers or more. (See table 5.) The comparable average increase for 1973 was 5.4 percent.

Cost-of-living escalator provisions

The number of workers covered by cost-of-living clauses, at 4 million, ⁷ will be almost the same as were covered in 1973. This is about double the number under such clauses during the midsixties. The wages of 3 million workers are scheduled for cost-of-living reviews during 1974. Reviews will be conducted quarterly for 1.9 million workers, semiannually for about 93,000, and annually for 987,000, with the remainder scheduled for reviews in other sequences. Some 1 million workers are under clauses which do not schedule reviews, as their contracts expire during the year.

Some of the major industries where cost-of-living reviews are scheduled in 1974 include the following: The

⁵ The averages referred to in the text are arithmetic means. Both means and medians are shown in the tables.

⁶ Some 75,000 of these construction workers will receive deferred increases under settlements in which the parties agreed to a total wage and benefit package, with the ultimate allocation between wages and benefits subject to determination by the union. Since this allocation was not known at the time this article was written, the entire amount was treated as a wage increase.

⁷ To these workers should be added some 600,000 production workers in nonunion and small union manufacturing plants. (Comparable data for workers in nonunion and small union non-manufacturing establishments are not available.) The 4 million includes workers in those situations previously containing such clauses, but where agreements had not been renegotiated at the time this article was written or, if an agreement had been reached it had not yet been approved by appropriate stabilization authorities, where applicable. It was assumed that escalator clauses would be continued in these contracts. Additionally, some 600,000 postal service employees will have their earnings adjusted by increases in the Consumer Price Index.

NOTE: Only bargaining situations in the private, nonagricultural economy are considered in this table. Because of rounding, sums of individual items may not equal totals.

steel industry, where reviews will take place in March and June (before the contracts expire on July 31) with

no maximum limit on increases; the auto industry, with quarterly reviews with neither a minimum guarantee nor a maximum limit; and the trucking industry, where contracts provide for an annual review in July with a minimum and a maximum adjustment. Other sectors of the economy where cost-of-living escalator clauses are prevalent include the farm and construction equipment industries; the aluminum, copper, and can industries; electrical equipment; meatpacking; and the communications (telephone) industry.

With the exception of some 115,000, workers tied to various Bureau of Labor Statistics' city indexes, workers are covered by clauses tied to the Bureau's National Consumer Price Index. Some 1.4 million workers are covered by escalator clauses providing for a minimum guarantee while 1 million workers are covered by clauses which set a maximum limit on increases. In addition, some 857,000 workers will have both minimum guarantees and maximum limits. In this article, guaranteed minimum escalator adjustments are generally treated as deferred increases. For example, workers receiving a 10-cent deferred plus a 3-cent guaranteed cost-of-living minimum are considered to have received a 13-cent deferred wage increase.

Bargaining Ahead

The outcome of a relative handful of the collective bargaining negotiations scheduled next year will probably have significant effects throughout the Nation's economy. During 1974, union and management representatives will come to the bargaining table to work out the terms of 123 major agreements, each covering 5,000 workers or more and many in vital sectors of the economy. Of the expiring contracts, 65 are in manufacturing, 1 is in mining, 6 are in transportation, 30 are in communications, 3 are in utilities, and 18 are in service industries. Together they represent 45 percent of the 273 agreements of this size in the United States, and cover 1.8 million of the 4.5 million workers under major contracts.¹ Workers represented next year at major bargaining tables constitute about 2 percent of the total work force.

Naturally, the climate for these 1974 negotiations in part will be set by the state of the economy—at present somewhat unsettled. Although business activity and employment are at or near record levels, some economists predict a downturn and possible recession in 1974. At the same time, inflation continues to be a major problem, despite the various measures that have been taken to obtain price stability. Another important element in the bargaining climate will be the size of deferred wage increases scheduled for the upcoming year. These will be discussed in a forthcoming article.²

In most major 1973 negotiations to date, labor unions—perhaps because strikes have become increasingly costly, perhaps because cost-of-living clauses cushion the effects of inflation for many members, or perhaps because of stabilization policies—have exercised relative restraint in their wage demands.³ Major negotiations in the trucking, West Coast longshoring, and electrical machinery industries have been concluded peacefully.⁴

Since the major negotiations scheduled for 1974 will involve a different grouping of industries and unions, and may take place in a different economic context, it is impossible to predict whether the 1973 pattern of relatively modest union wage demands and peacefully concluded agreements will continue into 1974. The bargaining will involve a number of key industries, including basic steel, aluminum and can, East and Gulf Coast long-

shoring, telephone, aerospace, and coal mining. In the past, the negotiators in these industries have often failed to reach agreement, with consequent strikes and occasional invocation of the Taft-Hartley Act. The history and bargaining patterns in these industries are briefly outlined in following sections.

Steel industry

One of the most important 1974 negotiations involves the major steel producers and the United Steelworkers of America. Contracts for 10 companies,⁵ covering an estimated 350,000 workers, will expire August 1, 1974. The companies bargain together as the Coordinating Committee Steel Companies.

Despite a history of peaceful steel settlements since 1960,⁶ steel users, mindful of earlier labor strife (including a 116-day strike in 1959 ended by a Taft-Hartley injunction) have continued to stockpile steel in anticipation

¹ Based on agreements on file with the Bureau of Labor Statistics, exclusive of those with railroads, airlines, and government.

² Deferred wage increases and other aspects of collective bargaining in 1974 will be discussed by John L. Gurney of the Bureau of Labor Statistics in the January issue.

³ An examination by the Bureau of Labor Statistics of 643 settlements covering 1,000 workers or more in private nonagricultural industry indicated first-year wage increases averaging 6.0 percent for the first 9 months of 1973, down from a 1972 average of 7.3 percent. The administration has set 5.5 percent as a guideline for wage settlements (or 6.2 percent including non-wage benefits).

⁴ This period of labor peace was interrupted Sept. 15, 1973, by a strike of 117,000 Chrysler workers. The company and the United Automobile Workers reached tentative agreement 2 days later, but the workers remained idle until after the agreement was ratified Sept. 23. The settlement included a pension after 30 years of service, regardless of the worker's age, and concession on compulsory overtime.

⁵ Allegheny Ludlum Industries, Inc., Armco Steel Corp., Bethlehem Steel Corp., Inland Steel Co., Jones and Laughlin Steel Corp., National Steel Corp., Republic Steel Corp., United States Steel Corp., Wheeling-Pittsburgh Steel Corp., and Youngstown Sheet and Tube Co.

⁶ On at least one occasion, settlement was reached well in advance of contract termination. The 1962 agreement was ratified Mar. 31, 1962, to become effective July 1, 1962, following expiration of the previous contract.

of a possible stoppage. Customer stockpiling has tended to disrupt steel production in two ways: By requiring overtime to meet the demand during negotiations; and by causing layoffs following negotiations until customer inventories reach levels low enough to prompt new orders. In addition, steel users have imported quantities of steel they might normally have ordered from domestic producers.

To avoid these disruptions, company and union negotiators agreed early in 1973 to a different bargaining approach which they have termed the "Experimental Negotiating Agreement." For the 1974 negotiations only, workers are guaranteed minimum wage increases of 3 percent in 1974, 1975, and 1976, although greater increases can be negotiated. The cost-of-living clause negotiated in 1971 will continue, and national issues still unresolved as of contract expiration will be settled by an impartial arbitration panel. In addition, each worker employed as of August 1, 1974, will receive a onetime bonus of \$150 from the gains expected from avoiding stockpiling. A right to strike or lockout over local plant issues is retained, but such limited actions, should they occur, are not likely to significantly disrupt steel production. The negotiators have expressed hope that the Experimental Negotiating Agreement will alleviate the layoff problem, which in the past extended for several months for some workers, and the growing import problem.⁷

Aluminum and can industries

Historically, the negotiations and final terms of basic steel agreements have been influenced by earlier Steelworker settlements in the aluminum, can, and copper industries. What effect steel's new Experimental Negotiating Agreement may have on this pattern is not known. The 1974 bargaining will involve two major can agreements and three aluminum agreements, each covering 5,000 workers or more. Steelworker agreements expiring in February with the American and Continental Can Cos. cover about 30,000 workers, and Steelworker and Aluminum Workers of America agreements expiring in May with the Aluminum Co. of America, Reynolds Metals Co., and Kaiser Aluminum and Chemical Corp. cover about 40,000.

Labor and management in the aluminum industry have recently announced that they intend to move up contract talks by more than 3 months to December 1973, in hope of completion early in 1974. If there is no settlement by February 1, 1974, the parties will call upon the president of the Steelworkers and the chief executive officers of the companies to resolve differences. Like steel's Experimental Negotiating Agreement, aluminum's plan is designed to avoid stockpiling and layoff disruptions.

In the 1971 round of negotiations, the wage increases, improved pensions, new cost-of-living clause, and other gains negotiated for the canworkers set the pattern for the other industries in this group. Both the can and copper settlements were reached only after serious strikes involving over 30,000 workers in each industry.⁸ The aluminum settlement, achieved without disruption, generally followed the can industry's terms, but added a job classification study estimated to result in an average upgrading cost of 5 cents per worker.

Longshore industry

Although the longshore industry employs a smaller number of workers than other major industries, bargaining disputes may have far-ranging effects on domestic and foreign trade. About 43,000 workers on the East and Gulf Coast will be affected by collective bargaining agreements expiring in September and October 1974. Four major agreements negotiated by the International Longshoremen's Association, each covering at least 5,000 workers in New York, New Orleans, Baltimore, and the West Gulf ports, account for approximately three-fourths of all longshoremen, including those on the West Coast.

Strikes in this industry have led Presidents to invoke emergency procedures of the Taft-Hartley Act eight times—more than in any other industry. All disputes have been over contracts, but one in 1953 also involved a rivalry between the International Longshoremen's Association (then Ind.) and the International Brotherhood of Longshoremen (AFL), which was organized after the ILA was expelled from the AFL on corruption charges. Virtually all the Nation's ports were shut down briefly in October 1971, when East and Gulf Coast longshoremen joined West Coast longshoremen, who had been on strike since July. President Nixon then invoked the Taft-Hartley injunction for the first time since assuming office. In the 1971 negotiations a primary issue was the union's demand that all ports receive a guaranteed annual income similar to that in the New York port. At the end of negotiations, the South Atlantic and Gulf Coast ports received no guarantee. Following settlement, the Pay Board reduced first-year pay scales by 15 cents an hour.

The ILA has repeatedly and unsuccessfully asked for a national contract with no local variations. Formerly, each port conducted separate negotiations, but in 1957 the New York Shipping Association was empowered to

⁷ For additional information, see I. W. Abel, "Basic steel's experimental negotiating agreement," *Monthly Labor Review*, September 1973, pp. 39-42.

⁸ Strike data for these industries are not available, as the Bureau records strike statistics to the 3-digit Standard Industrial Classification only.

bargain for ports from Maine to Virginia on wages, hours, pension and welfare contributions, and the duration of the contract; each port continued to negotiate all other issues. In 1971, the Council of North Atlantic Shipping Association was formed, representing all North Atlantic Coast ports,⁹ and now bargains with the ILA for a master contract covering containerization, as well as terms previously negotiated by the New York Shipping Association.

Telephone industry

During the summer of 1974, virtually all of the 32 telephone industry agreements covering 5,000 workers or more are scheduled to expire—2 in June, 25 in July, and 3 in August. The Communications Workers of America, the International Brotherhood of Electrical Workers (both AFL-CIO) and five independent telephone unions¹⁰ will be negotiating contracts for approximately 600,000 workers.

The Bell System accounts for nearly 90 percent of the workers in the industry. In previous bargaining there has been a recognizable pattern of settlement within the System: One major subsidiary settles and the others follow with little change in terms. Three nationwide strikes—in 1947, 1968, and 1971—and numerous smaller strikes have occurred in this industry. Opposition to settlement terms of the last agreement resulted in a lengthy strike in New York, but final terms were similar to those of other agreements in the Bell System. The emergency provisions of the Taft-Hartley Act were invoked only once—in 1948—to prevent a threatened strike of long-lines telephone workers. Recent strikes have had little effect on service owing to the high degree of automation in the telephone industry.

Aerospace industry

Three-fourths of the collective bargaining agreements covering 5,000 workers or more in the aerospace industry expire in 1974. The International Union of United Automobile, Aerospace and Agricultural Implement Workers of America (Auto Workers) and the International Association of Machinists and Aerospace Workers (Machinists) will meet with six major aerospace companies¹¹ to negotiate new contracts covering 107,000 workers. Employment in this industry has dropped considerably as Government outlays have declined since 1969.

In 1959, the Auto Workers and Machinists established a joint bargaining committee prior to contract negotiations with the Boeing, Lockheed, McDonnell Douglas, and Rockwell International companies. Since then, these unions have usually adopted a series of common objectives; however, each union negotiates separately with each

company. A settlement pattern has been evident in the industry for the past two decades: One company settles first and the other companies negotiate similar agreements with their respective unions.

This industry has been characterized by a long and stormy history of strikes. In the past 20 years, most of the 18 major stoppages (those involving 10,000 workers or more) primarily were over noneconomic factors—principally union security and job security. Only in the strikes of 1968 and 1969 were economic factors the primary issues. The Taft-Hartley injunction was invoked twice in 1962 and once in 1963, 1966, and 1967.

After the last aerospace contracts were negotiated in 1971, the Pay Board rejected the terms of the first-year wage increase. The contract called for an increase of 51 cents an hour, but only 34 cents was approved, with a stipulation that the 17 cents be deferred until the second year of the contract. The rollback cost the average union member about \$350. The Federal District Court and a Special Federal Court of Appeals found the Pay Board has erred. The case is now before the Cost of Living Council.¹²

Coal industry

In 1974, for the first time, the major agreement in the coal industry will be negotiated under the reform leadership of Arnold R. Miller, recently elected president of the United Mine Workers of America. The agreement, between the Mine Workers and the Bituminous Coal Operators' Association,¹³ covers about 80,000 workers and is scheduled for renegotiation in November 1974. The association claims to represent almost all soft coal producers in the industry, and the Mine Workers claim over 90 percent of all coalminers.

The Nation's supply of coal comes largely from the Appalachian area,¹⁴ which produces about 70 percent of all soft coal. After a long period of decline, the coal industry is again beginning to grow—since 1961 annual

⁹ The six principal ports are New York, Baltimore, Philadelphia, Boston, Providence, and Hampton Roads (Va.).

¹⁰ Telephone Traffic Union (New York); Union of Telephone Workers (New York); Federation of Telephone Workers of Pennsylvania; Federation of Women Telephone Workers of Southern California; and Connecticut Union of Telephone Workers.

¹¹ The companies are Bendix Corp., Boeing Co., Lockheed Aircraft Corp., McDonnell Douglas Corp., Rockwell International and United Aircraft Corp. Seattle Professional Engineering Employees Association also bargains with Boeing.

¹² At the time of preparation of this article. In September, the Council appointed a special panel, which was expected to make recommendations on the case by the middle of December 1973.

¹³ Other associations and individual producers also endorsed this agreement.

¹⁴ West Virginia, Pennsylvania, Kentucky (eastern), Ohio, Virginia, Tennessee, Maryland, and Alabama.

production has increased steadily while the supplies of competitive fuels, especially gas and oil, are diminishing and their cost is skyrocketing. Coal is the only plentiful domestic resource available to bridge the gap between the demand for energy and the supply of gas and oil.

Here again is an industry with a continuous history of strikes. In the 1950's the industry averaged 314 work stoppages per year, involving a total of 136,000 workers; in the 1960's the average dropped to 184, involving 82,000 workers. In the middle 1960's and in 1970 the downward trend was reversed and reached the early

1950's levels. The last strike, in 1971, was the longest since 1949, when President Truman asked Congress for special legislation to allow the Government to seize and operate the mines. The Taft-Hartley Act has been invoked twice, but not since 1948.

The table which follows lists key provisions of selected collective bargaining agreements, each affecting 5,000 workers or more, in a wide range of industries, excluding construction. These agreements were chosen as representative of contract expirations or reopenings, deferred wage increases, or cost-of-living reviews in 1974.

¹ Geographical coverage of contracts is interstate unless specified.

² Unions are affiliated with AFL-CIO, except where noted as independent (Ind.).

³ Contract term refers to the date the contract is to go into effect, not the date of signing. Where a contract has been amended or modified and the original termination date extended, the effective date of the changes becomes the new effective date of the agreement.

For purposes of this listing, the expiration is the formal termination date established by the agreement. In general, it is the earliest date on which termination of the contract could be effective, except for special provisions for termination as in the case of disagreement arising out of wage reopening. Many agreements provide for automatic renewal at the expiration date unless notice of termination is given. The Labor Management Relations Act of 1947 requires that a party to an agreement desiring to terminate

or modify it shall serve written notice upon the other party 60 days prior to the expiration date.

⁴ Date shown indicates the month in which adjustment is to be made, not the month of the Consumer Price Index on which adjustment is based.

⁵ Hourly rate increase unless otherwise specified.

⁶ Contract terms are not on file with the Bureau of Labor Statistics. Information is based on newspaper accounts.

⁷ The Ford Agreement was subject to ratification and the General Motors agreement had not been concluded by Nov. 14, 1973.

SOURCE: Contracts on file with the Bureau of Labor Statistics, Oct. 1, 1973. Where no contracts are on file, table entries are based on newspaper accounts.

Definition of Codes

SIC Codes

- 9 Fisheries
- 10 Metal mining
- 11 Anthracite mining
- 12 Bituminous coal and lignite mining
- 13 Crude petroleum and natural gas
- 14 Mining and quarrying of nonmetallic minerals, except fuels
- 15 Building construction—general contractors
- 16 Construction other than building construction—general contractors
- 17 Construction—special trade contractors
- 19 Ordnance and accessories
- 20 Food and kindred products
- 21 Tobacco manufactures
- 22 Textile mill products
- 23 Apparel and other finished products made from fabrics and similar materials
- 24 Lumber and wood products, except furniture
- 25 Furniture and fixtures
- 26 Paper and allied products
- 27 Printing, publishing, and allied industries
- 28 Chemicals and allied products
- 29 Petroleum refining and related industries
- 30 Rubber and miscellaneous plastics products
- 31 Leather and leather products
- 32 Stone, clay, glass, and concrete products
- 33 Primary metal industries
- 34 Fabricated metal products, except ordnance, machinery, and transportation equipment
- 35 Machinery, except electrical
- 36 Electrical machinery, equipment, and supplies
- 37 Transportation equipment
- 38 Professional, scientific, and controlling instruments; photographic and optical goods;
watches and clocks
- 39 Miscellaneous manufacturing industries
- 40 Railroad transportation
- 41 Local and suburban transit and interurban passenger transportation
- 42 Motor freight transportation and warehousing
- 44 Water transportation
- 45 Air transportation
- 48 Communication
- 49 Electric, gas, and sanitary services
- 50 Wholesale trade

NOTE: Agreements covering employees or operations wholly within one State will be designated by the State code listed.

The regional code (10, 20, 30, 40, 50, 60, 70, 80, or 90) is used where an agreement covers employees or operations in two States or more but does not go beyond the limits of the regions.

The interstate code (00) is used where the agreement covers employees or operations in two States or more in more than one region.

Definition of Codes—Continued

Union Codes

- 1 Single company.
- 2 Association agreement.
- 3 Industry area agreement (i.e., group of companies signing the same agreement; no formal association).
- 4 Single company (multiplant) agreement.

Appendix C. Explanatory Note

Data shown in tables 7 and 8 of this bulletin, listing individual collective bargaining agreements on file with the Bureau of Labor Statistics, differ from the totals presented earlier in tables 1 and 2 for a variety of reasons. Data in tables 1 and 2 include, in addition to those agreements on file, information on collective bargaining agreements from other sources, such as press accounts and direct communication with union and management. Additionally, a collective bargaining situation included in tables 1 and 2 is defined as a bargaining unit covering a total of 1,000 workers or more. The results of bargaining in such a unit, when for example multi-employer or multi-union groups are involved, may be two or more separate collective bargaining agreements each affecting fewer than 1,000 workers. In such cases, the agreements are jointly negotiated and have uniform terms including a common expiration date.

Differences may also exist in employment coverage, as data in tables 7 and 8 reflect employment obtained at

the time of the contract is received by the Bureau, while data in tables 1 and 2 reflect the most recent employment available at the time this article is prepared. Changes in worker coverage totals, in turn, may result in changes in the number of situations classified as "major," that is, those applying to 1,000 workers or more. Finally, contracts covering the railroad and airline industries are not included in the Bureau's agreement file, but are included in tables 1 and 2.

To reconcile the differences between data presented in tables 7 and 8 and in 1 and 2, supplemental tables 9 and 10 have been prepared. They list situations included in tables 1 and 2, but not 7 and 8, and are based upon the concepts used in preparing the former tables. Because of the reasons listed earlier in the note regarding employment differences, absolute comparability is not possible. However, the supplemental tables do aid in reconciling differences between the two series of data.
