## Preface

As in previous years, the Bureau has again assembled a variety of information on anticipated contract adjustments in this calendar year. Major situations by company and union are identified in which, during 1975, contracts will terminate, deferred wage increases will become due, changes in the Consuner Price Index will be reviewed, and contracts will be reopened. These data take on added dimensions as timely indicators because of some of the important movements that might be expected in an economy subject to rising unemployment and inflationary pressures stemming from a number of sources, including the energy situation.

This bulletin combines articles which appeared in the December 1974 and January 1975 issues of the Monthly Labor Review, and the Bureau's listing of major agreements which expire during the year. Each contract covers 1,000 workers or more. Virtually all of these agreements are on file with the Bureau's Division of Industrial Relations and are open to public inspection. In addition, information was taken from published sources for additional situations where agreements are due to expire.

Table 9 lists agreements scheduled to expire in 1975 by month and table 10 arranges them by industry. Tables 11 and 12 present those additional situations just referred to, due to expire, also by month and by industry. Users should refer to appendix A for a list of common abbreviations; to appendix $\mathbf{B}$ for codes used in identifying the entries by industry, State, union, and employer unit; and to appendix $C$ for a technical note on the data shown in tables 9-12.

Table 13 lists selected 1975 contract reopenings (for wages, benefits, and working conditions) by month for selected collective bargaining agreements each covering 1,000 workers or more.

Expirations that were reported to the Bureau too late to be included in tables 7-10 are listed in table 14.

In several instances, tables 9-12 may list agreements and situations where the parties have been negotiating well before the agreed upon expiration date, as they did in west coast longshore, and may settle early. In such cases their listings have been retained unavoidably under their original expiration dates.

This bulletin was prepared jointly in the Division of Trends in Employee Compensation and the Division of Industrial Relations by Edward J. Wasilewski and Lena W. Bolton.

## Bargaining in 1975

Labor negotiations for 1975 will begin against a continuing background of economic uncertainty and growing union concern over eroding real wages and job security. The months since controls ended on April 30, 1974, have been marked by accelerating price increases, rising unemployment rates, and evidence of growing unrest among union members. Strike activity in recent months has been greater than a year earlier.

Some unions recently have been demanding "catch-up" wages and new or improved cost-ofliving clauses to restore and maintain workers' buying power, and recent "package" settlements have exceeded standards developed under wage controls. In industries and areas threatened by labor surpluses and layoffs, unions have been seeking contract provisions to enhance job security.

Against this background of uncertainty and unrest, a light collective bargaining calendar is in store for 1975. With 3 -year agreements having been concluded in the automobile and trucking industries in 1973, and in the steel and communications industries in 1974, the one industrial sector in which bargaining will be heaviest in the forthcoming year is the fragmented construction industry.

Major contracts in the private nonfarm sector scheduled to expire or be reopened during 1975 cover 2.5 million workers, down sharply from 5.2 million in 1974. Most of these agreements were last negotiated during the economic stabilization period, which began in 1971. The average annual wage adjustment negotiated in those contracts was 6.8 percent; when subsequent cost-of-living adjustments are included, the average annual wage gain was 8.1 percent.

Key industries in which bargaining will take place, besides construction, include retail trade, apparel, gas and electric utilities, transportation services (primarily maritime and airlines), petroleum, food, and lumber.

Nearly 750,000 workers in contract construction are under contracts being renegotiated during the year, mainly during the second quarter.

Early bargaining will focus on 50,000 employees of petroleum refining companies, most of whose contracts expire in January. Agreements covering 80,000 workers in the lumber industry are up for renegotiation in May. Midyear bargaining is scheduled for most workers in the maritime and shipbuilding industries, where agreements cover approximately 20,000 and 40,000 employees, respectively. In June, contracts covering 25,000 employees of New York hotels are scheduled to be reopened. August and September mark the expiration of contracts covering 130,000 workers in the apparel industry.

Other groups scheduled for fall bargaining include national airlines and New York laundries. Also, 270,000 workers, chiefly in the women's apparel industry, may be affected by a wage reopening provision, contingent upon movements in the Consumer Price Index. (Table 1 presents data by month and by principal industry affected, while table 2 presents data by year and industry.)

Although bargaining for major agreements will be relatively light in 1975, four areas are of particular interest-petroleum refining, maritime, west coast longshoring, and the U.S. Postal Service. Past negotiations have not always been concluded peacefully, and in two of the three industries, some disputes were settled only after the Taft-Hartley emergency procedures had been invoked, while the Postal Service's predecessor, the Post Office Department, experienced a national strike in 1970. The history and bargaining patterns of these industries and the Postal Service are briefly outlined in the following sections.

## Petroleum refining

Contract negotiations in the petroleum industry are always significant in the United States-a Nation with almost insatiable energy needs. The 1975 round of talks takes on additional significance when viewed in the context of recent developments-the 5 -month Arab oil embargo, with consequent gasoline and fuel oil shortages; the threat of rationing; and

${ }^{2}$ Two utility agreements covering 22,700 workers are excluded since they have no fixed expiration or reopening date.
${ }^{2}$ Excludes 268,200 workers, 250,700 in the ladies apparel industry, whose contracts provide for possible wage reopeners during the year, based on increases in the Con-
sumer Price Index.
NOTE: Only bargaining situations in the private, nonagricultural economy affecting 1,000 workers or more are considered in this table. Because of rounding, sums of individual items may not equal totals.

The OCAW announced well before November negotiations were to begin that it would seek 3 -year contracts, all expiring on the same date, and demand annual "catch-up" wage increases of $\$ 1.50$ an hour. Other demands included an initial cost-of-living formula, full company payment of hospital-medical insurance, an additional week's vacation for all workers, and significant pension improvements.

## Maritime

In June 1975, major shipping agreements covering about 20,000 licensed and unlicensed seamen are scheduled to expire. Three major unions that negotiate with dry cargo and tanker operators are in-volved-the National Maritime Union, the Seafarers' International Union, and the Maritime Engineers' Beneficial Association. All are AFL-CIO affiliates.

Despite heavy subsidies, the U.S. maritime industry has suffered a marked decline since World War II and at present accounts for only a small proportion of the vessels engaged in U.S. foreign trade. Employment in the industry has been adversely affected not only by competition from foreign vessels, but also by alternate means of transportation and by automation and the containerization of cargoes.

${ }^{1}$ See table 1, footnote 1 for notes on data limitations.
${ }^{2}$ See table l, footnote 2 for notes on data limitations.
NOTE: Only bargaining situations in the private, nonagricultural economy affect-
ing 1,000 workers or more are considered in this table. Because of rounding, sums of individual items may not equal totals.

Seafarers both represent unlicensed seamen, while their affiliates and the Maritime Engineers' Beneficial Association, the Masters, Mates and Pilots (ILA) and the American Radio Association all represent various groups of licensed officers. The National Maritime Union primarily negotiates with two committees representing subsidized dry cargo and tanker
companies operating out of Atlantic and Gulf ports. These committees also negotiate with licensed-officer unions within this area. The Seafarers and most licensed-officer unions negotiate with the American Maritime Association for contracts covering unsubsidized East and Gulf Coast operations, and with the Pacific Maritime Association, representing shipping companies on the west coast. Several companies, such as the Exxon Corp., also conduct separate negotiations with individual unions.

The National Maritime Union's previous contracts were settled about 2 months before the scheduled expiration date of June 15, 1972. The Seafarers and Maritime Engineers' Beneficial Association also settled without work stoppages. Despite recent peaceful settlements, the industry has a history of labor strife. From 1958 to 1971, there were 180 work stoppages, including four major disputes involving 10,000 workers or more. The Taft-Hartley Act was invoked three times nationwide in 1958 and 1961 and on the west coast and in Hawaii in 1962.

Negotiations in 1975 will take place as the Seafarers and the National Maritime Union, former rivals, continue merger discussions begun in May 1974, with the assistance of AFL-CIO President George Meany.

## West coast longshoring

The 2 -year agreement covering about 12,000 longshoremen at west coast ports expires July 1, 1975. Bargaining will be between the International Longshoremen's and Warehousemen's Association (Ind.) and the Pacific Maritime Association (PMA), representing stevedoring companies at ports in California, Oregon, and Washington. The PMA in 1949 succeeded various employers' and shipowners' associations on the Pacific Coast and bargains with the ILWU, the Seafarers, and several other maritime unions.

Until the 1950 's, labor relations in the west coast longshoring industry were (with the exception of the World War II period) marked by frequent negotiation breakdowns and strikes. ${ }^{1}$ With the advent of the PMA, relations gradually improved, and culminated in the Mechanization and Modernization Agreement of 1960. Under the agreement, considered a major achievement in labor relations in a turbulent industry, the ILWU agreed to relax work rules held to be restrictive and permitted the introduction of modern labor-saving technology in ex-
change for PMA guarantees of income security and incentives to retirement.

Strife in the industry was not ended, however, for in 1971-72 the ILWU engaged in an extended work stoppage over mechanization, work jurisdiction, and other issues. The strikers were joined by members of the International Longshoremen's Association in the Nation's first coast-to-coast dock strike. The cooling-off period under the Taft-Hartley Act failed to end the strike, and Congress passed emergency legislation requiring compulsory arbitration of the dispute. ${ }^{2}$ Taft-Hartley had been invoked once before in a west coast dispute-in 1948.

## U.S. Postal Service

Among labor negotiations in the United States, those involving the U.S. Postai Service affect the largest number of workers. An estimated 605,000 employees are covered by the current contract, which expires in July. The four unions which will come to the bargaining table are the American Postal Workers Union, the National Association of Jetter Carriers, the National Rural Letter Carriers Association (Ind.), and the Mail Handlers' Division of the Laborers' Internationai Union.

The Postal Service is a product of the Postal Reorganization Act of 1970. It is an independent agency with a semigovernmental status which can raise capital, establish mail rates and salaries, and engage in collective bargaining with postal unions. The legislation resulted from the historic postal walkout March 18-25, 1970. At one point, Federal troops were called in to maintain mail service. At its height, the stoppage affected 15 States and virtually paralyzed the processing and delivery of mail in several major cities.

In June 1973, a 2-year contract was reached, but not without evidence of dissatisfaction from locals in New York over the absence of wage differentials in high cost-of-living areas. The preference for wage differentials, as contrasted to a national uniform wage, was the issue which led the same locals to begin the 1970 stoppage. ${ }^{3}$

Before the present contract expires, one more semiannual cost-of-living adjustment is due under the agreements' escalator clause, in May.

Demands have not yet been formulated. Some indication of the direction they would take, however, came from the August 1974 convention of the American Postal Workers. Delegates passed a series of resolutions which, taken together, comprise a series of collective bargaining subjects that

Table 3. Continued-Expiration, reopening, and wage adjustment provisions
[Collective bargaining agreements are listed below in order of the Standard Industrial Classification Manual]

${ }^{1}$ Geographical coverage of contracts is interstate unless specified.
2 Unions are affiliated with AFL-CIO, except where noted as independent (Ind.).
${ }^{3}$ Contract term refers to the date the contract is to go into effect, not the date of signing. Where a contract has been amended or modified and the original termination date extended, the effective date of the changes becomes the new effective date of the agreament.
For purposes of this listing, the expiration is the formal termination date established by the agreement. In general, it is the earliest date on which termination of the contract could be effective, except for special provisions for termination as in the case of disagreement arising out of wage reopening. Many agreements provide for automatic renewal at the expiration date unless notice of termination is given. The Labor Manage-
ment Relations Act of 1947 requires that a party to an agreement desiring to terminate or modify it shall serve written notice upon the other party 60 days prior to the expiration date.
4 Date shown indicate the month in which adjustment is to be made, not the month of the Consumer Price Index on which adjustment is based.
${ }^{5}$ Hourly rate increase untess otherwise specified.
${ }^{5}$ Contract terms are not on file with the Bureau of Labor Statistics. Information is based on newspaper accounts.

SOU RCE: Contracts on file with the Bureau of Labor Statistics, Oct. 1, 1974. Where no contracts are on file, table entries are based on newspaper accounts.
could be translated into demands. Among them were double time for holiday work, the 30 -hour workweek, job rights, seniority, working conditions, training, mechanization, and technological changes. The negotiations will take place as the Postal Workers continue to seek a merger with the Letter Carriers.

Table 3 lists key provisions of selected collective bargaining agreements, each affecting 5,000 workers or more, in a wide range of industries and government. These agreements were chosen as representative of contract expirations or reopenings, deferred wage increases, or cost-of-living reviews in 1975.

## Escalator Provisions and Deferred Increases in 1975

Wage-rate increases negotiated in earlier years are scheduled to go to 6.7 million workers under major collective bargaining agreements during 1975. The increases will average 5.1 percent, roughly the same as the average deferred increase received during 1974. The 5.1 -percent increase will be a significant part of 1975's overall increase, which will also include cost-of-living adjustments and first-year increases negotiated during 1975.

The large number of workers receiving deferred increases in 1975, in contrast to the 2.5 million workers to be bargained for during the year, is expected to exert a moderating influence in 1975 because deferred increases tend to be smaller than firstyear negotiated increases.

The dynamic components of wage change-immediate increases gained through bargaining and escalator clauses-will, on the other hand, tend to exert an upward influence on the overall wage change in 1975. Approximately 5.1 million workers under major agreements are now covered by escalator clauses, many under contracts where multiple reviews will take place in 1975.

At the time this article was completed (late November 1974), the Bureau of Labor Statistics had information on 2,038 contracts covering 9.0 million of the 10.2 million workers under all major collective bargaining agreements (those covering 1,000 workers or more). ${ }^{4}$ This article is largely limited to data for these 9.0 million workers. The other 1.2 million workers were covered by agreements which had not yet expired, were still being negotiated, or whose terms were not available. ${ }^{5}$

## Cost-of-living provisions

The accelerated rate of increase in consumer prices in the past 2 years has greatly renewed workers' interest in cost-of-living protection. Such clauses provide for the periodic automatic adjustment of wage rates based upon movements in the Consumer Price Index (CPI). Just over 5 million workers under major agreements, roughly half of the total, are now
covered by such provisions. Clauses covering 724,000 workers were established in bargaining in 1974 alone. ${ }^{6}$

The United Automobile Workers represent the largest number of workers under major agreements with escalator protection. They are followed by the Steelworkers, Teamsters, and Communication Workers, as illustrated in the following tabulation:

| Union | Workers covered |
| :---: | :---: |
| Automobile Workers | 1,080,000 |
| Steelworkers | 620,000 |
| Teamsters | 597,000 |
| Communications Workers | 588,000 |
| Machinists | 229,000 |
| Electrical Workers (IBEW) | 194,000 |
| Electrical Workers (IUE) | 178,000 |
| Retail Clerks | 177,000 |
| Meat Cutters | 145,000 |
| Amalgamated Clothing Workers | 117,000 |

Large blocks of workers are covered under national contracts with large companies; for example, the Automobile Workers with General Motors Corp. ( 400,000 workers) ; the Steelworkers and the Steel Industry Coordinating Committee ( 350,000 workers); the Teamsters and Trucking Employers, Inc. ( 400,000 workers); and the Communications Workers and the American Telephone \& Telegraph Co. ( 500,000 workers). (See table 4 for the industry breakdown.)

In 1975, approximately 4.6 million workers are under contracts calling for cost-of-living reviews. (Altogether 5.1 million workers are under contracts which contain escalator clauses; 90 percent have reviews scheduled during the year.) Some 2.2 million workers will be under contracts specifying annual reviews, while 2.0 million may receive adjustments on a quarterly basis. An additional 283,000 will have reviews conducted semiannually. About 172,000 workers, whose contracts expire in 1975, are scheduled for reviews prior to the expiration. In most cases, workers are better off in receiving more frequent cost-of-living adjustments, rather than at stretched out intervals.

Note: Because of rounding, sums of individual items may not equal totals.

Table 5 shows the type of cost-of-living review as well as the quarter in which reviews are scheduled to take place separately for contracts expiring in 1975 and in later years. As can be seen, the impact of escalation will vary by quarter with the heaviest concentration of reviews scheduled for the third quarter of the year.

Formulas for adjusting wages to price changes generally do not provide for percentage wage increases that equal the percentage rise in prices, although there are a few clauses which do call for full protection. (For example, in the transit industry, some clauses call for the percentage rise in the Consumer Price Index to be applied to existing wage rates.) Also, escalator clauses are usually computed on an index month (or average of index months) that is several weeks old and does not reflect the level of prices at the time the adjustments are made; that is, there is a lag between the index reference period and when the money is actually paid.

Not only do escalator clauses vary in the timing of reviews, but also by the amount received for each incremental jump in the Consumer Price Index. The most prevalent formula, covering some 2.2 million workers, calls for a 1 -cent adjustment for each 0.3point change in the CPI. (With the exception of some 500,000 workers under clauses tied to various Bureau of Labor Statistics city indexes, workers generally are covered by clauses triggered by the Bureau's national CPI. Still, this is more than three times the number of workers tied to city indexes at the start of 1974.) Major industries with this formula (using 1967 as the base year) include autos and steel, where contracts call for quarterly reviews in 1975, with no maximum adjustment. ${ }^{7}$ Contracts in the trucking industry also call for a 1 -cent raise for each 0.3 -point change, but provide for an annual review using 1957-59 as the base period with a floor (minimum guarantee) and a ceiling (maximum limit) in 1975 adjustments. Clauses providing for 1

| Total. | 287 | 2,040 | 310 | 2,249 | 376 | 3,554 | 316 | 2,272 | 547 | 4,416 |

${ }^{1}$ Situations and workers which have at least 1 review in the year.
${ }^{2}$ Includes monthly, combinations of annual, quarterly, combinations of annual and
cent for each 0.4 -point rise in the CPI cover 712,000 workers in various industries. Escalators calling for a 1 -cent wage increase for each 0.3 -percent change cover 262,000 workers, primarily in the electrical manufacturing sector, who are scheduled for an annual review in late 1975. The clause calls for minimum and maximum increases.

Workers in another major industry, communications, are under contracts calling for an annual cost-of-living review in August. The formula calls for an escalator adjustment of 50 cents a week plus 0.6 percent of an employee's scheduled weekly wage rate for each 1-percent rise in the CPI during the preceding 12 months with no ceiling on increases.

Some 1.1 million workers are covered by escalator clauses providing for a minimum guarantee while 1.4 million workers have clauses which set a ceiling on increases. Contracts covering 900,000 workers have minimum guarantees and maximum limits. In this article, guaranteed minimum escalator adjustments are treated as deferred increases. For example, workers receiving a 20 -cent deferred increase plus a 5-cent guaranteed cost-of-living minimum are considered to have received a 25 -cent deferred wage increase, since the 5 -cent guarantee is not contingent upon the rise in the Consumer Price Index.
semiannual, other, and reviews dependent upon the levels of the CPI.
NOTE: Because of rounding, sums of individual items may not equal totals.

## Deferred increases

The number of workers receiving deferred increases this year will be larger than in the past 2 years as tabulation (in millions) following indicates.

|  | Workers |  | Workers |
| :---: | :---: | :---: | :---: |
| 1966 | 4.3 | 1971 | 5.8 |
| 1967 | 4.5 | 1972 | 7.3 |
| 1968 | 5.6 | 1973 | 5.6 |
| 1969 | 7.6 | 1974 | ${ }^{\text {P }} 4.8$ |
| 1970 | 5.7 | 1975 | ${ }^{\text {P }} 6.7$ |
|  |  |  |  |

The average deferred increase for all industries will be 5.1 percent, amounting to 30.4 cents an hour. (See table 6.) Interestingly, as collective bargaining settlements concluded in 1974 provided for substantially larger first-year (immediate) wage increases than did 1973 settlements, deferred increases scheduled for 1975 resulting from these settlements maintained a similar relationship-averaging 5.7 percent under 1974 pacts and 4.4 percent under those concluded in 1973. (Settlements in 1973 were negotiated during the Economic Stabilization Program era, while 1974 settlements largely reflected post-control bargaining.) Two possible explanations for an even wider disparity not existing between the size of the

${ }^{1}$ Includes workers in the following industry groups for which separate data are not shown: Ordnance ( 13,000 ); Tobacco (28,887); Textiles ( 6,600 ); Lumber ( 6,550 ); Furniture (18,200); Paper $(74,250)$; Printing $(36,575)$; Chemicals $(52,889)$; Petroleum Refining ( 3,750 ); Leather ( 48,300 ); and Instruments and Miscellaneous Manufacturing $(35,750)$.
${ }^{2}$ Includes 47,856 workers in the mining industry and 35,050 in Finance, Insurance and Real Estate for which separate data are not shown.
${ }^{3}$ Industry contains too few escalator clauses to merit separate publication of data.
${ }^{4}$ Percent of estimated straight-time average hourly earnings.

Note: Workers are distributed according to the average adjustment for all workers in each bargaining unit considered. Deferred wage increases include guaranteed minimum adjustments under cost-of-living escalator clauses. The number of workers affected in each industry is based on data available in late November 1974, and thus may understate the number of workers receiving deferred wage increases. Only bargaining situations in the private nonagricultural economy covering 1,000 workers or more are considered in this table. Because of rounding, sums of individual items may not equal totals.
deferred increases scheduled for 1975, resulting from 1973 and 1974 bargaining are: (1) the large firstyear "catchup" influence in 1974 settlements somewhat relaxed pressure for large increases in subsequent years; and (2) as previously mentioned in this article, the large number of workers under 1974 settlements containing cost-of-living clauses for the first time.

Deferred increases in the manufacturing sector will average 4.4 percent or 22.2 cents per hour, while those in nonmanufacturing will be 5.9 percent or 39.5 cents. In 1974, the average gains were 4.6
percent in manufacturing and 5.5 percent in nonmanufacturing.

In construction, not only because it will be an active bargaining year, but also because it is such a large industry, 850,000 workers will receive an average deferred increase of 8.0 percent. ${ }^{8}$ In 1974, some 466,000 construction workers received deferred increases averaging 5.3 percent.

Other large groups in nonmanufacturing receiving deferred gains will be 700,000 employees in the communications industry, who will receive a 3.3-percent wage increase in August and 450,000 trucking in-
dustry employees slated for a 30 -cent an hour or one-half cent per mile increase in July.

In manufacturing, about 700,000 workers in the automobile industry will receive a 3 -percent "annual improvement factor" increase in September and some 450,000 workers in the steel industry will receive increases ranging from 16 to 25.3 cents in August; additional increases will go to employees under incentive plans and those working afternoon and night shifts. In addition, approximately 260,000 electrical machinery workers will receive an increase of 16 cents during May or June.

Of the 6.7 million workers scheduled to receive deferred increases, some 338,000 are under contracts which will also expire during the year. About 3 million workers, or 45 percent, will receive increases within the first half of the year. (See table 7.) In recent years, the trend has been for more workers to receive deferred increases in the first part of the year than in the second half.

Table 7. Workers receiving deferred wage increases in 1975 in bargaining situations covering 1,000 workers or more, by month
[Workers in thousands]

| November. | Food stores; construction-...--.-.-..............-- | 196 |
| December. | Electrical equipment; transportation equipment. .-.- | 97 |

${ }^{1}$ This total is smaller than the sum of individual items since 473.500 workers will receive more than 1 increase. The total is based on data available in late November 1974 and thus may understate the number of workers receiving deferred wage increases for the entire year.
NOTE: Only bargaining situations in the private, nonagricultural economy are considered in this table. Because of rounding. sums of individual items may not equal totals.

Continuing the pattern of recent years, the average deferred increase in contracts containing cost-ofliving escalator clauses tends to be smaller than those in contracts without such provisions. However, in view of recent trends in consumer prices, increases in contracts with escalators will be further augmented by the amounts generated under various escalator formulas. The average deferred increase under contracts with escalators-covering some 4.6 million workers-will average 4.4 percent in 1975. The increases under contracts without escalator provisions -covering 2.2 million workers-will average 6.5 percent.

When the cost of deferred benefit improvements is added to the wage increases, the average gain in the combined wage-benefit package in key agreements covering 5,000 workers or more will be 5.7 percent. (See table 8.) The corresponding average gain for 1974 was 6.2 percent.

[^0]${ }^{1}$ Pacific dockworkers still observe "Bloody Thursday" as a holiday, commemorating July 5, 1934, when 2 strikers were killed by police and many were injured. The workers were then represented by the International Longshoremen's Association; west coast longshoremen broke with the ILA in 1937 to form the ILWU.
${ }^{2}$ The ILWU strike began July 1, 1971, was halted in

October under an 80-day Taft-Hartley injunction and resumed in January 1972, finally ending on February 19, 2 days before the compulsory arbitration legislation was signed by President Nixon.
${ }^{3}$ Under the Postal Reorganization Act, strikes are prohibited and compulsory arbitration is required. A bill is now before Congress which would grant the right to strike.
${ }^{4}$ These agreements include multiplant or multifirm agreements covering 1,000 workers or more, even though individual units may be smaller. Although approximately 1 American worker in 5 is a union member, only about 1 in 9 is included in an agreement covering 1,000 workers or more in the private nonfarm sector. Employment data presented were those available at the time this article was written in late November.
${ }^{5}$ Situations for which the necessary information was not available include (a) 83 agreements which expire subsequent to mid-November 1974, covering 701,000 workers; (b) 126 contracts which expired earlier in the year, but where negotiations were continuing, covering 466,000 workers; and (c) 8 contracts whose status was unknown or where the terms of the agreement were not available, covering 37,000 workers.
${ }^{6}$ To these workers should be added some 800,000 production workers in nonunion and small union manufacturing plants. (Comparable data for workers in nonunion and small union nonmanufacturing establishments are not available.) The 5 million includes workers in situations previously containing such clauses, but where agreements had not been renegotiated at the time the article was written. Additionally, some 600,000 postal service employees will
have their earnings adjusted in May by increases in the Consumer Price Index.

This discussion excludes 268,200 workers- 250,700 in the ladies apparel industry-whose contracts provided for possible wage reopeners based on increases in the Consumer Price Index.
${ }^{7}$ The Auto Workers' formula employs a composite CPI. The combined Consumer Price Index for Urban Wage Earners and Clerical Workers (United States City Average) published by the Bureau of Labor Statistics $(1967=100)$ is weighted by 9 and the Consumer Price Index published by Statistics Canada $(1961=100)$, after being brought up to parity with the U.S. 1967 index, is weighted by 1. In addition, 1 cent of each quarterly adjustment is diverted to offset the cost of fringe benefits.
${ }^{8}$ Some 360,000 of these construction workers will receive deferred increases under settlements in which the parties agreed to a total wage and benefit package, with the ultimate allocation between wages and benefits subject to determination by the union. Since the final division was not known at the time this article was written, the entire amount was treated as a wage hike. For example, a 50 -cent wage and benefit package negotiated in 1973 and scheduled to go into effect in June 1975 was treated as a 50-cent deferred wage increase for June.

$1 \& S$ Single company
2 Association agreement.
3\&I Industry area agreement (i.e., group of companies signing the same agreement; no formal association).
4\&M Single company (multiplant) agreement.

## Appendix C. Explanatory Note

Data shown in tables 9 and 10 of this bulletin, listing individual collective bargaining agreements on file with the Bureau of Labor Statistics, differ from the totals presented earlier in tables 1 and 2 for a variety of reasons. Data in tables 1 and 2 include, in addition to those agreements on file, information on collective bargaining agreements from other sources, such as press accounts and direct communication with union and management. Additionally, a collective bargaining situation included in tables 1 and 2 is defined as a bargaining unit covering a total of 1,000 workers or more. The results of bargaining in such a unit, when for example multi-employer or multi-union groups are involved, may be two or more separate collective bargaining agreements each affecting fewer than 1,000 workers. In such cases, the agreements are jointly negotiated and have uniform terms including a common expiration date.

Differences may also exist in employment coverage,
as data in tables 9 and 10 reflect employment obtained at the time of the contract is received by the Bureau, while data in tables 1 and 2 reflect the most recent employment available at the time this article is prepared. Changes in worker coverage totals, in turn, may result in changes in the number of situations classified as "major," that is, those applying to 1,000 workers or more. Finally, contracts covering the railroad and airline industries are not included in the Bureau's agreement file, but are included in tables 1 and 2.

To reconcile the differences between data presented in tables 9 and 10 and in 1 and 2, supplemental tables 11 and 12 have been prepared. They list situations included in tables 1 and 2, but not 9 and 10, and are based upon the concepts used in preparing the former tables. Because of the reasons listed earlier in the note regarding employment differences, absolute comparability is not possible. However, the supplemental tables do aid in reconciling differences between the two series of data.

[^7]
[^0]:    1 The total excludes those workers covered by contracts expiring in 1975 receiving a deferred benefit change only.

    NOTE: Only bargaining situations in the private, nonagricultural economy are considered in this table. Because of rounding, sums of individual items may not equal totals.
