Preface

As in previous years, the Bureau has assembled a variety of information on anticipated union contract adjustments in this calendar year. Major situations by company and union are identified in which, during 1976, contracts will terminate, deferred wage increases will become due, changes in the Consumer Price Index will be reviewed, and contracts will be reopened. These data take on added dimensions as timely indicators because of some of the important movements that might be expected in an economy still subject to high unemployment and inflationary pressures, despite some signs of easing in recent months.

This bulletin combines articles which appeared in the December 1975 and January 1976 issues of the *Monthly Labor Review* (with minor revisions) and the Bureau's listing of major agreements which expire during the year. Each contract covers 1,000 workers or more. Virtually all of these agreements are on file with the Bureau's Division of Industrial Relations and are open to public inspection. In addition, information was taken from published sources for additional situations where agreements are due to expire.

Table 9 lists agreements scheduled to expire in 1976 by month and table 10 arranges them by industry. Tables 11 and 12 present the additional information taken from published sources, also by month and industry. Users should refer to appendix A for a list of common abbreviations; to appendix B for codes used in identifying the entries by industry, State, union, and employer unit; and to appendix C for a technical note on the data shown in tables 9-12.

Table 13 lists 1976 contract reopenings (for wages, benefits, and working conditions) by month for selected collective bargaining agreements each covering 1,000 workers or more.

Expirations that were reported to the Bureau too late to be included in tables 9-12 are listed in table 14.

In several instances, tables 9-12 may list agreements and situations where the parties settle in advance of the scheduled expiration date, having been negotiating well before that date. However, they will still be listed under their original expiration dates.

This bulletin was prepared jointly by Peter G. Kuhmerker and Lena W. Bolton, in the Division of Trends in Employee Compensation and the Division of Industrial Relations.

Bargaining in 1976

At the start of a relatively heavy 1976 schedule of bargaining, economic indicators point toward a continuing, if slow, recovery from the Nation's worst recession since the 1930's. Unemployment, while remaining above 8 percent, is down from a May 1975 peak of 9.2 percent; inflation has moderated from 1974's double digit rate. At the same time, many critical problems remain. United States industrial production is still far below capacity. Future prices and supplies of energy and food and the financing of municipal services remain uncertain.

Major contracts—those covering 1,000 workers or more—in the private nonfarm sector scheduled to expire or be reopened during 1976 cover at least 4.4 million workers, up from 2.5 million in the light bargaining year of 1975. Most of the workers are under contracts negotiated during the economic stabilization period, which ended in April 1974; the average duration of these contracts is 30 months.

The absence of Federal constraints that affected the previous wage settlements, and the earnings erosion by inflation that has since occurred in many of the industries scheduled for bargaining point to substantial 1976 wage demands. However, demands could be tempered by the desire to avoid actions that might trigger more layoffs or a return to wage controls.

The bulk of this year's major collective bargaining will occur between March and September in eight key industries—construction, food, apparel, rubber, farm equipment, electrical equipment, automobiles, and trucking. Major apparel contracts have varying expiration dates—for 65,000 Ladies' Garment Workers, agreements expire in January for another 100,000 in May, and for 100,000 Clothing Workers in September.

In March, three Teamster trucking agreements—two national and one local—covering 450,000 workers, come up for renewal. These are followed by contract expirations at the four major rubber companies (Goodyear, Firestone, B. F. Goodrich, and Uniroyal) in April. Also expiring in April are major

construction industry contracts for 143,000 workers. May will witness even heavier bargaining in construction, as 334,000 workers, nearly one-half of all those in the industry whose contracts come up for renegotiation in 1976, will be affected.

At midyear, national agreements will terminate in the electrical machinery industry. Nine contracts between General Electric and various unions, representing 140,000 workers, expire in late June. Two weeks later, in July, seven agreements with Westinghouse covering 65,000 workers will terminate.

August bargaining in the food industry will cover 46,000 meatpackers nationwide; contracts for an additional 9,000 Meat Cutters will run out by the end of the year. If prior years are an indication, bargaining in the industry will center on one of the three largest meatpacking companies—Armour, Swift, or Wilson.

September will be the heaviest month of bargaining in 1976. Contracts between the "Big Three" auto manufacturers and the Auto Workers (UAW) expire on September 14; and for the first time in recent years the American Motors' contract expiration will coincide with those of General Motors, Ford, and Chrysler. In total, these negotiations will encompass approximately 725,000 workers. At the end of September, contracts covering 95,000 UAW members expire with the three major manufacturers of farm and construction equipment (International Harvester, Deere, and Caterpillar). Table 1 presents contract expiration data for major bargaining units by month and by principal industry affected, while table 2 presents this information by year and industry.

Bargaining in 1976 will be influenced by the degree to which wage gains under expiring contracts were reduced by price increases. The BLS Consumer Price Index, for example, rose 8.8 percent in 1973, 12.2 percent in 1974, and at a 7.1 percent annual rate in the first 10 months of 1975.

The following tabulation presents the average annual percentage wage adjustment in major con-

Table 1. Calendar of major collective bargaining activity

¹ Eight agreements covering 39,500 workers are excluded since they have no fixed expiration or reopening date.

² Excludes 254,500 workers, 218,500 in the ladies' apparel industry, whose contracts provide for possible wage reopeners during the year, based on increases in the Consumer Price Index.

³ Bargaining units for which the necessary information was not available include 136 agreements which expired prior to November

1, 1975 (when data for this article were tabulated) covering 410,000 workers, and 53 contracts which expire between November 1, and December 31, 1975, covering 140,000 workers.

NOTE: Only bargaining units in the private, nonagricultural economy affecting 1,000 workers or more are considered in this table. Because of rounding, sums of individual items may not equal totals.

NOTE: Only bargaining units in the private, nonagricultural economy affecting 1,000 workers or more are considered in this table. Because of rounding, sums of individual items may not equal totals.

tracts expiring in 1976—reflecting fixed amounts agreed upon at the bargaining table and then including subsequent cost-of-living escalator adjustments.¹

	<i>Negotiated change</i>	<i>Negotiated change plus adjustments</i>
All contracts	5.8	7.4
Contracts with escalator clauses	5.2	7.9
Contracts without escalator clauses	6.6	6.6

It is evident that workers under contracts with escalator clauses have, on the average, fared better than those under contracts without such provisions. Nevertheless, even with escalators, many wage increases have not kept pace with price increases.² It should be remembered that considerations such as frequency of reviews and the presence of “caps” or limits in some clauses cause wide variations in the amounts received under cost-of-living adjustment provisions. For example, workers in the automobile (and related) industries and meatpacking industries, who are under “non-capped” escalator clauses, were able to keep up somewhat better with inflationary pressures since the signing of their contracts in 1973. However, workers in the trucking and electrical equipment industries, who come under “capped” escalator clauses, have witnessed some decline in purchasing power during this period. In

the rubber industry, where workers are not covered by escalator clauses, real wages have dropped considerably.

The settlement patterns of major bargaining situations are outlined briefly in the following sections.

Trucking

National negotiations will take place between Trucking Employers, Inc., and the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.) over terms covering over-the-road and local cartage drivers. Supplemental provisions are negotiated on a regional basis. In 1970, the Independent Chicago Truck Drivers and several Teamsters locals in the Chicago area settled after the national Teamster accord and obtained superior terms, which prompted the Teamsters to reopen their contracts with Trucking Employers, Inc. In 1973, however, the Chicago drivers' contracts were extended to coincide with the national agreements, and the settlements were similar.

¹ The full impact of these adjustments is not yet reflected in these data, as some contracts expiring in 1976 have additional reviews scheduled under present contracts. The data reflect adjustments made through October 1975.

² Since contracts expiring in 1976 were last negotiated at various times, a direct comparison on an aggregate basis with the Consumer Price Index is not possible, as there is no one point of reference.

The 1973 truckdrivers' agreements include cost-of-living clauses, but they permit adjustments only to a specified maximum—11 cents per hour annually; consequently, the truckers' earnings have failed to keep pace with inflation. The Federal 55-mile-per-hour speed limit has adversely affected earnings of over-the-road truckdrivers paid on a mileage basis, while employers have been squeezed by greatly increased fuel costs and continued competition from railroads, barges, and other forms of shipping.

There have been only five major strikes in the industry since 1958. The more recent, occurring in 1970, involved "selective" walkouts over the terms of the Chicago area agreements.

Automobile manufacturing

Agreements between the Big Three automakers—General Motors Corp., Ford Motor Co., and Chrysler Corp.—and 700,000 members of the United Automobile, Aerospace and Agricultural Implement Workers of America (UAW, Ind.) are scheduled to expire in September. For the first time in recent years, the American Motors Corp. agreement, covering 10,000 workers, will expire simultaneously. The industry has been among those hit hardest by the recession, because of public resistance to rising auto prices and a shift to smaller, often imported vehicles. Although the earnings of those still working have kept pace with inflation better than in many other industries, temporary or indefinite layoffs involved more than 200,000 workers at the peak in January 1975 and have declined slowly. The heavy layoffs have depleted the negotiated Supplementary Unemployment Benefit Funds at Chrysler and General Motors, and the union petitioned for and obtained relief for many of its Chrysler members under the 1974 Trade Act, which provides compensation to workers for loss of jobs from imported goods.

Union negotiations with the automakers have followed a consistent pattern. The union, while bargaining simultaneously with all three major concerns, selects one as a "target" to strike if no settlement is reached by expiration time. The other companies are permitted to continue production, thus putting pressure on the struck company to settle. The terms obtained from the target company usually are accepted, with some modifications, by the other auto firms.

Although the big auto agreements are not scheduled to end until September, the UAW has already informed company executives that top priority in

bargaining will be given to spreading the work through reducing hours of work, with no reduction in pay. The demand, which has not been a major issue for many years, is reported to be getting considerable support from UAW members.

There have been 40 major work stoppages in the industry during 1960–73, involving 10,000 workers or more. The 1970 strike against General Motors was the longest (134 days) and accounted for over a quarter of all strike idleness during that year. The September 1973 settlement at Chrysler ended a 9-day national walkout. General Motors settled in November, narrowly averting a strike of 20 key plants.

Rubber

About 98,000 rubber industry workers are covered by 17 major agreements expiring during 1976. The "Big Four" contracts (Firestone Tire and Rubber Co., B. F. Goodrich Co., Uniroyal, Inc., and Goodyear Tire and Rubber Co.) which expire in April, account for almost three-fourths of the workers.

The past bargaining structure in rubber has been similar to that of the automobile industry, with the United Rubber Workers (URW) selecting a target "Big Four" company to set the pattern for settlements with the other companies. Goodyear was settled first in the last three rounds of negotiations. Workers at Goodrich, however, refused to accept the 1973 Goodyear terms and a 3½-week strike resulted. Since the last negotiations, union and company representatives have been attempting to develop an industrywide bargaining structure.

Because a major part of the industry's output consists of tires for new passenger cars, it has been hard hit by declining auto production. Unlike wage settlements in the automobile industry and many others, the 1973 rubber agreements made no provision for cost-of-living adjustments. Since then, rubber industry wages, formerly about on a par with those in the auto industry, have fallen behind. Perhaps significantly, in mid-1975 URW President Peter Bommarito appointed two committees, one to study URW bargaining procedures and the other to study the union's strike benefit program.

Strikes have been numerous in the industry. There were 20 major stoppages (involving 10,000 workers or more) in the 1950–73 period. Of these, 13 occurred in the 1950's, only 3 in the 1960's, and 4 in the 1970's.

Electrical machinery, equipment, and supplies

Contracts covering about 340,000 workers in the electrical machinery, equipment, and supplies industry are scheduled to expire in 1976. Expiring in June are agreements covering 140,000 employees between the General Electric Co. and various unions, primarily the International Union of Electrical, Radio and Machine Workers (IUE, AFL-CIO), the United Electrical, Radio and Machine Workers of America (UE, Ind.), and the International Association of Machinists and Aerospace Workers (IAM, AFL-CIO). In July, agreements covering 65,000 workers expire at Westinghouse Electric Corp. Unions involved are the IUE, the UE, the International Brotherhood of Electrical Workers (IBEW, AFL-CIO), and the Federation of Westinghouse Independent Salaried Unions (Ind.). Other large agreements expiring include General Motors Corp. and the IUE (25,000 workers) in September, and in December, RCA Corp. and the IBEW (17,500 workers) and Hughes Aircraft Corp. and the United Brotherhood of Carpenters and Joiners of America (CJA, AFL-CIO) (8,000 workers).

Bargaining is more dispersed in this industry than in most other major industries scheduled for 1976 talks. A number of unions bargain with most of the larger firms. In 1966, the three unions representing most workers in the industry—IUE, UE, and IBEW—together with a number of other unions, established a coordinated bargaining committee to strengthen their bargaining positions. General Electric Co. has been the pattern setter for major portions of the industry. However, IUE agreements with electrical divisions of the automobile industry usually are patterned after the Auto Workers' agreements, and contracts of Western Electric Co., largely IBEW, but including some with the Communications Workers of America (CWA, AFL-CIO), have much in common with telephone agreements. The agreements with Western Electric, supplier of communications equipment for the Bell System, do not expire until August 1977.

Like the workers in the trucking industry, most workers in the electrical industry have "capped" cost-of-living clauses in their agreements, and their earnings have not kept pace with consumer price rises. At the same time, severe cutbacks in production and layoffs have resulted from the recession.

Work stoppages have been frequent in this industry. Employers often have been willing to accept protracted strikes rather than agree to large wage increases. During 1950-73, 31 major strikes occurred, 19 of them during the 1966-73 period.

Farm and construction machinery and equipment

Renegotiation of contracts between major farm and construction machinery and equipment manufacturers and the Auto Workers will begin about the same time as the automobile talks and will involve terms covering more than 100,000 workers.

The International Harvester Co., Deere & Co., and Caterpillar Tractor Co. contracts expire in September, with the Massey-Ferguson, Inc., contract expiring in October and the Allis Chalmers Corp. agreement in November. However, not all major contracts with the Auto Workers expire next year. Contracts covering 7,000 workers at J. I. Case Co. and 2,000 at White Motor Corp. will remain in effect until June and April 1977, respectively. Several other major agreements will be negotiated with other unions, especially the International Association of Machinists (IAM, AFL-CIO).

Deere, International Harvester, and Massey-Ferguson are the largest farm equipment producers. They also manufacture related products, for example, International Harvester, heavy-duty trucks; Allis Chalmers and Massey-Ferguson, construction equipment; and Deere, industrial equipment.

Bargaining is conducted by the union with each individual company, although there is great similarity in all the settlements. Negotiations in this industry usually follow the pattern of the major automobile settlements and are generally not reached until after the signing of a national automobile contract.³ In general, the industry has been affected by the recession to a much smaller degree than the auto industry, and, in following the last auto settlement, workers have kept pace with the rises in prices.

There have been five work stoppages involving 10,000 workers or more in the 10-year period from 1964 to 1973—Allis Chalmers in 1964, Deere in 1967, International Harvester in 1971 and 1973, and Caterpillar in 1973. Economic benefits were the major issues in each strike.

Table 3 lists key provisions of selected collective bargaining agreements, each affecting 5,000 workers or more, in various industries and in government. These agreements were chosen as representative of contract expirations, reopenings, deferred wage increases, or cost-of-living reviews during 1976.

³ Deere was the first to settle after Chrysler in the last round of negotiations; International Harvester followed Ford; and Caterpillar followed General Motors.

¹ Geographical coverage of contracts is interstate unless specified.

² Unions are affiliated with AFL-CIO, except where noted as independent (Ind.).

³ Contract term refers to the date the contract is to go into effect, not the date of signing. Where a contract has been amended or modified and the original termination date extended, the effective date of the changes becomes the new effective date of the agreement.

For purposes of this listing, the expiration is the formal termination date established by the agreement. In general, it is the earliest date on which termination of the contract could be effective, except for special provisions for termination as in the case of disagreement arising out of wage reopening. Many agreements provide for automatic renewal at the expiration date unless notice of termination is given. The Labor Manage-

ment Relations Act of 1947 requires that a party to an agreement desiring to terminate or modify it shall serve written notice upon the other party 60 days prior to the expiration date.

⁴ Date shown indicate the month in which adjustment is to be made, not the month of the Consumer Price Index on which adjustment is based.

⁵ Hourly rate increase unless otherwise specified.

⁶ Contract terms are not on file with the Bureau of Labor Statistics. Information is based on newspaper accounts.

SOURCE: Contracts on file with the Bureau of Labor Statistics, Oct. 1, 1975. Where no contracts are on file, table entries are based on newspaper accounts.

Scheduled wage increases and escalator provisions in 1976

Wage-rate increases negotiated in prior years are scheduled to go to 5.5 million private nonfarm workers under major collective bargaining agreements (those covering 1,000 workers or more⁴) during 1976. The average increase will be 5.4 percent, compared with the 5.1-percent average deferred increase received by 6.7 million workers in 1975.

More than 4.6 million of the 5.9 million workers under major contracts containing cost-of-living escalator clauses are scheduled to have at least one review—and possible pay raise—in 1976. In addition, at least 4.4 million workers are covered by contracts expiring or subject to renegotiation under wage reopeners in 1976, about 2 million more than in 1975. Key negotiations are expected in the automobile and farm equipment manufacturing industries (covering 820,000 workers), trucking (450,000 workers), electrical equipment manufacturing (205,000 workers), rubber products manufacturing (70,000 workers), and meatpacking (55,000 workers).

As of early November 1975, the Bureau of Labor Statistics had information on 2,066 contracts covering 9.6 million of the 10.2 million workers under major collective bargaining agreements. This section is largely limited to data for these 9.6 million workers. The remaining workers were covered by agreements that expired later in 1975, were still being negotiated, or whose terms had not yet been released.⁵

⁴ These agreements include multiplant or multifirm agreements covering 1,000 workers or more, even though individual units may be smaller. Although approximately 1 American worker in 5 is a union member, only about 1 in 9 is included in an agreement covering 1,000 workers or more in the private nonfarm sector. Employment data presented are those available in November 1975.

Cost-of-living escalators

The third consecutive year of high inflation reinforced union efforts to obtain cost-of-living escalator clauses. About 58 percent (5.9 million⁶) of all workers under major contracts in the private nonfarm sector are covered by such provisions, which provide for the periodic, automatic adjustment of wage rates according to movements in the Consumer Price Index. Escalator clauses covering more than 600,000 workers were established in settlements reached in 1975. (Nearly 1 million workers came under such provisions as a result of bargaining concluded during 1974.)

Most of the workers who came under escalator clauses in 1975 were represented by the Railway Clerks, United Transportation Union, Retail Clerks,

⁵ Information was not available for 53 agreements that expired after Nov. 1, 1975, covering 140,000 workers; 108 contracts that expired earlier in the year but where negotiations were continuing, covering 323,000 workers; and 28 contracts whose status was unknown or where the terms of the new agreement were not available, covering 87,000 workers.

⁶ About 1.3 million workers under smaller union contracts and 72,000 workers in nonunion manufacturing plants were also covered by escalators. The 5.9 million workers include those under expired contracts containing such clauses, where agreements had not been renegotiated at the time the article was written. Additionally, about 600,000 postal employees will have their earnings adjusted in May and November according to increases in the Consumer Price Index.

This discussion excludes 254,500 workers—218,500 of them in the ladies' apparel industry—whose contracts provided for possible wage reopeners based on increases in the Consumer Price Index.

For an analysis of cost-of-living escalator provisions, see H. M. Douty, *Cost-of-Living Escalator Clauses and Inflation* (Council on Wage and Price Stability, 1975), summarized in "Does inflation ride escalators? Not yet, pay council study finds," *Monthly Labor Review*, November 1975, pp. 65-66.

and Machinists. The following tabulation shows the union affiliation of workers covered by cost-of-living clauses:

<i>Union</i>	<i>Workers covered</i>
Auto Workers	1,069,000
Steelworkers	640,000
Teamsters	630,000
Communications Workers	590,000
Machinists	284,000
Retail Clerks	242,000
Electrical Workers (IBEW)	200,000
Electrical Workers (IUE)	174,000
Meat Cutters	157,000
United Transportation Union	135,000
Railway Clerks	134,000
Mine Workers	120,000
Clothing Workers	118,000
All others	1,441,000

Many workers are covered by national agreements with major companies or with industry associations; for example, the Auto Workers with General Motors, Ford, and Chrysler (covering 715,000 workers); the Steelworkers with the Steel Industry Coordinating Committee (350,000 workers); the Teamsters with Trucking Employers, Inc. (400,000 workers); and the Communications Workers with American Telephone & Telegraph Co. (500,000 workers). The proportion of workers covered by escalator provisions increased greatly in 1975 in three industries—railroads, retail food stores, and printing. Table 4 lists the proportion of workers covered by cost-of-living clauses in individual industries.

One or more cost-of-living reviews are scheduled for 1976 for more than 4.6 of the 5.9 million workers covered by escalator provisions. Most of the remaining 1.3 million workers are covered by agreements expiring in 1976 that do not have a review scheduled this year before contract expiration. Most prominent in this group are 511,000 workers in trucking and 228,000 in the electrical equipment industry.

Table 5 shows the frequency of reviews, and the quarters for which they are scheduled, for contracts expiring in 1976 and for those expiring in later years. Major fluctuations in quarterly totals of cost-of-living reviews are attributable to the timing of reviews in certain key industries. For example, the largest drop in quarterly reviews scheduled for contracts expiring in 1976 is in the third quarter. This drop reflects the expiration of Auto Worker contracts in the fall in the automobile and farm equipment industries, reviews for these contracts being

limited to the first two quarters. In the third quarter, however, for contracts expiring both in 1976 and in later years, the number of workers covered is slightly higher than in the second, partly because of 700,000 workers in the communications (telephone) industry whose annual review will occur in August. Only 1.5 million workers are under contracts that call for cost-of-living reviews in the fourth quarter of 1976. However, this total could rise substantially if new agreements in the auto industry call for the continuation of quarterly reviews.

Of the 5.9 million workers currently covered by escalator provisions, 2.4 million (primarily in the transportation equipment and steel industries) are under quarterly reviews, and 2.5 million (mainly in communications, trucking, and electrical equipment) are under annual reviews. An additional 824,000 workers (primarily in the railroad industry) are under contracts calling for semiannual reviews. The remaining workers come under a variety of other provisions.

Most cost-of-living adjustments are based on changes in specified monthly levels of the CPI, although contracts in the automobile industry use a 3-month average of a combined U.S.-Canadian consumer price index.⁷ About 90 percent of the workers are under contracts that use national CPI data; the other 10 percent come under contracts that specify city indexes. Most of the workers in this latter group are under contracts specifying the New York City, Los Angeles-Long Beach, or San Francisco-Oakland indexes. The most common base used is 1967=100, which applies to two and one-half times as many workers as are covered by contracts that specify the 1957-59=100 base. Virtually all agreements negotiated in 1975 that provided for escalator clauses called for the 1967 base year.

The formula for calculating cost-of-living adjustments affecting the largest number of workers (approximately 2.4 million) is 1 cent for each 0.3-point change in the CPI. (Of these, 1.8 million workers are under formulas using the 1967 base year.) A 1-cent change for each 0.4-point change

⁷ The Auto Workers formula employs a composite price index. The Consumer Price Index for Urban Wage Earners and Clerical Workers (United States City Average) published by the Bureau of Labor Statistics (1967=100) is weighted by 9 and the Consumer Price Index published by Statistics Canada (1961=100), after being brought up to parity with the U.S. 1967 index, is weighted by 1. In addition, 1 cent of each quarterly adjustment is diverted to offset the cost of fringe benefits.

in the CPI covers 1.2 million workers. (Included in this total are 400,000 railroad workers under agreements specifying this formula for all but the final adjustment, in July 1977, which will be 1 cent for each 0.3-point rise.) Another 270,000 workers come under formulas calling for 1 cent for each 0.3-percent change in the CPI. About 2 million workers are under agreements that employ other formulas, including more than 700,000 workers in the telephone industry who receive 50 cents a week plus 0.6 percent of their scheduled weekly wage for each full 1-percent rise in the CPI (1967=100) during the preceding 12 months.

The factor that generally has the greatest overall effect on the size of cost-of-living adjustments is the presence or absence of "caps" or maximums in the formula. Approximately 2.1 million workers are currently under contracts with such ceilings, more

than one-half million more workers than in 1974. Most of this rise can be attributed to escalator provisions in railroad industry contracts and other 1975 agreements with reestablished or first-time escalator provisions.⁸ Among contracts concluded in 1975 that continued escalator provisions, there was no significant movement to or from maximums. About 1.1 million workers are covered by escalator clauses that provide for a guaranteed minimum increase. Contracts covering 913,000 workers have both guaranteed minimums and maximum limits.

As would be expected, escalator clauses are more common, and the proportion of workers covered by such provisions is higher, among long-term con-

⁸ Railroad industry settlements concluded in 1959 and 1960 did not continue cost-of-living escalator provisions from previous agreements.

Note: Because of rounding, sums of individual items may not equal totals.

tracts, as union negotiators try to protect real wages from erosion caused by inflation in later years. The proportions of workers covered by escalators under 1- and 2-year agreements are 3 and 19 percent, respectively. Of the 5.9 million workers covered by agreements containing cost-of-living clauses, 5.5 million are under 3-year agreements; they account for 74 percent of all workers under 3-year contracts.⁹

Deferred increases

The number of workers receiving deferred increases will drop by about 1.3 million workers from last year, because more workers will be covered by new agreements in 1976 than in 1975. The large number of workers under 3-year contracts has tended to create a cyclical trend in the number of employees receiving deferred increases, as the following tabulation (in millions) indicates:

	<i>Workers</i>		<i>Workers</i>
1966	4.3	1971	5.8
1967	4.5	1972	7.3
1968	5.6	1973	5.6
1969	7.6	1974	5.4
1970	5.7	1975	^p 6.7
p = preliminary.		1976	^p 5.5

The average deferred increase for all industries in 1976 will be 5.4 percent, or 36.4 cents, as shown in table 6. Contracts negotiated in 1975 provided for an average 6.4-percent increase for 2.1 million workers in 1976; 3.4 million will receive a 4.8-percent average increase as a result of 1974 settlements. One reason for the disparity in size of the average increase under contracts negotiated in these 2 years is the "front-loading" of wage increases in long-term contracts—wage increases, on a percentage basis, generally decline considerably from the first to the second year of a contract and, to a lesser extent, from the second to the third. A secondary cause may be that some of the agreements reached during 1974 that provide for increases in 1976 were concluded while the Economic Stabilization Program was in effect.

Deferred increases in 1976 will be appreciably higher in the nonmanufacturing sector than in manufacturing—5.8 percent compared with 4.8 percent. In cents-per-hour terms, the averages for these two

⁹ For purposes of this bulletin, contracts lasting 6 and under 18 months are considered 1-year contracts; 18 and under 30 months, 2-year contracts; and 30 and under 42 months, 3-year contracts.

¹ Contracts that have at least 1 review in the year.

² Includes monthly, combinations of annual and quarterly, combinations of annual and semiannual, other, and reviews dependent upon the levels of the Consumer Price Index.

³ Includes only those reviews through the termination of the present agreements; it does not assume the continuation of existing reviews after contract expiration dates.

NOTE: Because of rounding, sums of individual items may not equal totals.

broad sectors will be 43.1 and 26.4 cents, respectively. A major influence in nonmanufacturing is the construction industry, where 928,000 workers will receive an average of 8.1 percent, or 74.8 cents¹⁰. If the influence of construction were excluded, the average deferred increase for nonmanufacturing would drop to 4.6 percent, or 30.6 cents. Deferred wage increases in construction will remain steady relative to 1975—8.1 percent in 1976 and 8.0 percent last year. This above-average deferred increase in construction should be considered in conjunction with the scarcity of cost-of-living clauses in the

industry relative to other major sectors of the economy.

The deferred increases in construction are counterbalanced, to a degree, by smaller wage increases scheduled in communications and railroads. Ap-

¹⁰ About 486,000 of these construction workers will receive deferred increases under settlements in which the parties agreed to a total wage and benefit package, with the ultimate allocation between wages and benefits subject to determination by the union. Because the final division was not known at the time this bulletin was written, the entire amount was treated as a wage increase.

¹ Includes workers in the following industry groups for which separate data are not shown: Ordnance (26,000); tobacco (28,000); textiles (18,000); lumber (76,000); furniture (12,000); printing (25,000); chemicals (36,000); petroleum refining (51,000); rubber (6,000); leather (55,000); and instruments and miscellaneous manufacturing (21,000).

² Includes 168,000 workers in mining and 35,000 in finance, insurance, and real estate for which separate data are not shown.

³ Industry contains too few escalator clauses to permit separate publication of data.

⁴ Percent of estimated straight-time average hourly earnings.

NOTE: Workers are distributed according to the average adjustment for all workers in each bargaining unit considered. Deferred wage increases include guaranteed minimum adjustments under cost-of-living escalator clauses. The number of workers affected in each industry is based on data available in early November 1975, and thus may understate the number of workers receiving deferred wage increases. Only bargaining units in the private nonagricultural economy covering 1,000 workers or more are considered in this table. Because of rounding, sums of individual items may not equal totals.

proximately 700,000 workers in the communications industry will receive a 3.3-percent increase in August; they will also have an annual cost-of-living adjustment during that month. About 400,000 workers in the railroad industry will receive a 3-percent increase in April and cost-of-living adjustments in January and July. In November, 120,000 bituminous coal miners will receive a 3-percent increase, along with quarterly escalator reviews beginning in February.

About 2.2 million workers in the manufacturing sector will receive deferred increases in 1976. Approximately 420,000 workers under contracts negotiated by the Steelworkers with the steel industry will receive increases ranging from 16 to 28.4 cents in August, in addition to quarterly cost-of-living reviews. Workers in the can, aluminum, and aerospace industries will also receive deferred increases along with quarterly escalator reviews. In February, 34,000 workers represented by the Steelworkers in the can industry will receive deferred increases ranging from 17 to 25.4 cents; 61,000 workers (represented by various unions) in the aluminum industry will receive from 16 to 23.8 cents in June. In October, aerospace workers will get a 3-percent deferred increase. Workers in the lumber industry will receive a considerably larger increase, 65 cents, in June, but no cost-of-living adjustment. Table 7 gives the distribution of workers receiving deferred increases by month and principal industry.

Table 7. Workers receiving deferred wage increases in 1976 in bargaining units covering 1,000 workers or more, by month

[Workers in thousands]

Effective month	Principal industries affected	Workers covered
Total ¹		5,481
January	Construction; apparel	569
February	Food stores; fabricated metals; transportation equipment	267
March	Food stores	286
April	Railroads	724
May	Construction	442
June	Construction; lumber; aluminum	825
July	Construction; food stores	565
August	Communications; steel	1,441
September	Food stores	252
October	Aerospace; transportation	342
November	Mining	256
December	Construction	110

¹ This total is smaller than the sum of individual items because 604,000 workers listed will receive more than 1 increase. The total is based on data available as of early November 1975, and thus may understate the number of workers receiving deferred wage increases for the entire year.

Of the 5.5 million workers receiving deferred increases in 1976, 294,000 are also under contracts

that will expire during the year. About 237,000 workers are covered by agreements expiring after 1976 that do not provide for a scheduled wage increase this year; however, of these, 28,000 are under contracts providing for at least one cost-of-living review during the year. Of those workers receiving deferred increases, 3.4 million will also be affected by cost-of-living reviews; these reviews will narrow, and may even offset, the difference between the 4.2-percent average deferred increase for workers who are covered by escalator provisions and the 7.5-percent deferred increase for those who are not.

In agreements covering 5,000 or more workers, the combined deferred wage and benefit increase will be 5.1 percent in 1976. (See table 8.) The average gain was 5.7 percent in 1975 and 6.2 per-

Table 8. Workers receiving deferred wage and benefit increases in 1976 in bargaining units covering 5,000 workers or more, by size of increase

[Workers in thousands]

Average deferred wage and benefit increase as a percent of existing wage and benefit expenditures	Workers covered
All settlements providing deferred changes ¹	3,440
Under 3 percent	171
3 and under 4 percent	1,217
4 and under 5 percent	759
5 and under 6 percent	168
6 and under 7 percent	448
7 and under 8 percent	243
8 and under 9 percent	192
9 and under 10 percent	114
10 and under 11 percent	93
11 and under 12 percent	13
12 percent and over	24
Mean increase (percent)	5.1
Median increase (percent)	4.0

¹ The total excludes those workers covered by contracts expiring in 1976 receiving a deferred benefit change only.

NOTE: Only bargaining units in the private, nonagricultural economy are considered in this table. Because of rounding, sums of individual items may not equal totals.

cent in 1974. The decline since 1974 is, in part, the result of the increasing number of workers in the larger bargaining units who are now under contracts with cost-of-living escalator provisions.

Effective wage changes

Precise estimates of the total effective wage change for 1976 are impossible at this time because of the difficulty of predicting the rate of inflation and the economic climate that may prevail at the time of various contract negotiations. It is possible, however, to sketch the relative importance of the three sources of wage-rate change: Increases resulting from new settlements, from prior settlements, and from cost-of-living adjustments.

Because of the large number of workers covered by agreements expiring in 1976 (compared with 1975), new settlements will undoubtedly play the largest role in determining the total effective wage change. The second strongest influence on this change will probably be wage increases scheduled for 1976 under contracts reached in earlier years, closely fol-

lowed in importance by increases under cost-of-living reviews. The rise in the number of workers covered by escalator provisions and the pickup in collective bargaining activity combine to create a much more unpredictable wage picture this year than in 1975, when the 6.7 million workers receiving deferred increases had a moderating effect.

NOTE: Agreements covering employees or operations wholly within one State will be designated by the State code listed.

The regional code (10, 20, 30, 40, 50, 60, 70, 80, 90) is used where an agreement covers employees or operations in two States

or more but does not go beyond the limits of the regions.

The interstate code (00) is used where the agreement covers employees or operations in two States or more in more than one region.

Employer Units

- 1 Single company.
- 2 Association agreement.
- 3 Industry area agreement (i.e., group of companies signing the same agreement; no formal association).
- 4 Single company (multiplant) agreement.

Appendix C. Explanatory Note

Data shown in tables 9 and 10 of this bulletin, listing individual collective bargaining agreements on file with the Bureau of Labor Statistics, differ from the totals presented earlier in tables 1 and 2 for a variety of reasons. Data in tables 1 and 2 include, in addition to those agreements on file, information on collective bargaining agreements from other sources, such as press accounts and direct communication with union and management. Additionally, a collective bargaining situation included in tables 1 and 2 is defined as a bargaining unit covering a total of 1,000 workers or more. The results of bargaining in such a unit, when for example multi-employer or multi-union groups are involved, may be two or more separate collective bargaining agreements each affecting fewer than 1,000 workers. In such cases, the agreements are jointly negotiated and have uniform terms including a common expiration date.

Differences may also exist in employment coverage,

as tables 9 and 10 reflect employment data obtained at the time the contract is received by the Bureau, while tables 1 and 2 reflect the most recent employment data available at the time this bulletin was prepared. Changes in worker coverage totals, in turn, may result in changes in the number of situations classified as "major," that is, those applying to 1,000 workers or more. Finally, contracts covering the railroad and airline industries are not included in the Bureau's agreement file, but are included in tables 1 and 2.

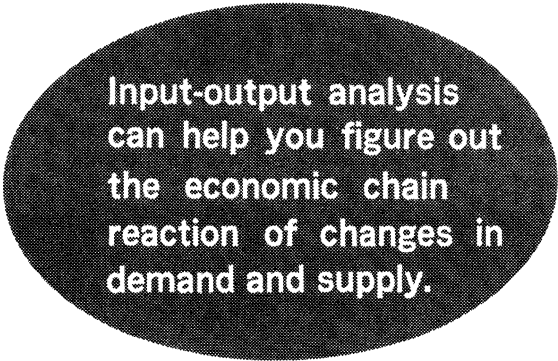

To reconcile the differences between data presented in tables 9 and 10 and in 1 and 2, supplemental tables 11 and 12 have been prepared. They list situations included in tables 1 and 2, but not 9 and 10, and are based upon the concepts used in preparing the former tables. Because of the reasons listed earlier regarding employment differences, absolute comparability is not possible. However, the supplemental tables do aid in reconciling differences between the two series of data.
