Preface

The Bureau of Labor Statistics conducts annual surveys of wage rates and straight-time hours of work in selected cities of 100,000 inhabitants or more for specified crafts or jobs as provided in labor-management agreements in the construction, printing, local transit, and local trucking industries. A biennial survey of grocery stores also is included in this program. Wage rates and hours presented are those in effect the first workday in July, as reported to the Bureau by the appropriate local labor organizations in each city included in the survey.

Preliminary listings of union wage rates and hours for local truckdrivers and helpers in each city were issued earlier. Copies of these are available from the Bureau of Labor Statistics, Washington, D.C. 20212, or any of its regional offices listed on the inside back cover of this bulletin.

This study was conducted in the Bureau's Office of Wages and Industrial Relations. Carl Barsky of the Division of Occupational Wage Structures prepared this bulletin, which provides a comprehensive account of the current study. In addition, it includes trend indexes of wage rates and hours for 1936-75. Fieldwork for the survey was directed by the Assistant Regional Commissioners for Operations.

Local Truckdrivers and Helpers, July 1, 1975

Summary

Union wage rates for local truckdrivers and helpers in cities of 100,000 inhabitants or more averaged \$6.81 on July 1, 1975—an increase of 7.5 percent from a year earlier.¹ The increase, which was the smallest since 1968-69, raised the Bureau's wage rate index for local truckdrivers and helpers to 190.0 (1967=100) (table 1).

Wage rates for truckdrivers, nine-tenths of the workers covered by the survey, averaged \$6.87, compared with \$6.27 for helpers (table 2). Among the factors influencing wage rate variation were region, city size, and type of delivery.

Industry characteristics

The 1975 local trucking survey covered about 366,000 drivers and 35,000 helpers who were active union members² in the 152 cities with populations of at least 100,000, excluding Honolulu, as recorded in the 1970 census. Excluded were drivers and helpers in smaller cities, those paid on a mileage or commission basis, and over-the-road drivers operating either between cities or between various parts of the United States.³

Slightly under half of the drivers surveyed were covered by the nationwide general freight agreement with the International Brotherhood of Teamsters, Chauffeurs, and Warehousemen, Ind.⁴ Most bargaining in the trucking industry, however, is conducted at a local or regional level. Individual trucking locals (in most cases affiliated with the Teamsters) usually negotiate with one company, or a group of firms, for separate wage rates and benefits by type of hauling, such as building and heavy/highway construction, building materials and supplies, parcel service, and grocery operations. (The two construction groups mentioned accounted for one-fifth

¹ See appendix A for procedures used to compute average wage rates and changes in rates.

² Includes those working or available to work at designated contract rates; excludes retirees and members in institutions.

³ For a discussion of compensation in intercity trucking, see Ralph and Estelle James, *Hoffa and the Teamsters* (Princeton, N.J., D. Van Nostrand Company, Inc., 1965), pp. 321-56.

⁴ See footnote 6 for a brief description of how the nationwide agreement evolved and the latest contract terms.

of the survey's drivers.)

Drivers' helpers, who ride on the truck and assist in loading and unloading, were most commonly engaged in moving and storage services and in the delivery of general freight, groceries, and beer (or other alcoholic beverages). In recent years, many local contracts either have eliminated the distinction between drivers and helpers or have set the same rates for the two classifications. (See the section on driver/helper wage comparisons under "Type of delivery" for examples.)

Survey findings

Wage trends. Between 1974 and 1975, wage rates advanced 7.5 percent for all workers⁵ (table 2). The increase was 7.5 percent for drivers and 7.0 percent for helpers.

Text table 1 presents wage changes over the past 10 years. Increases were relatively modest in the first four years of this period—3.5 to 6 percent; they peaked during 1969-72 at 10-12½ percent, and then receded to around 7½-8 percent in the last 3 years. The 1974-75 advance was the smallest since 1968-69.

Text table 1. Annual percent increases in average union hourly wage rates for local truckdrivers and helpers, 1965-75

Year	Drivers and helpers	Drivers	Helpers
July to July:			
1965-66	3.5	3.5	3.6
1966-67	5.9	5.9	6.3
1967-68	5.2	5.3	5.2
1968-69	5.9	5.9	5.8
1969-70	10.0	10.0	10.0
1970-71	12.5	12.4	13.4
1971-72	9.9	10.0	9.7
1972-73	7.9	7.9	8.4
1973-74	8.2	8.3	7.7
1974-75	7.5	7.5	7.0

⁵ For an account of the earlier survey, see *Union Wages and Hours, Local Truckdrivers and Helpers, July 1, 1974*, Bulletin 1882 (Bureau of Labor Statistics, 1975).

About 97 percent of the drivers and helpers received wage rate increases between July 1, 1974, and July 1, 1975 (table 4). More than half of the workers received increases of between 40 and 50 cents. In relative terms, increases most commonly fell between 6 and 7 percent (table 5).

Regionally, increases ranged from 8.7 percent in the Pacific and Mountain States to 6.5 percent in New England, the Southeast, and the Middle West (table 7). With few exceptions, average increases for all workers fell between 6 and 8 percent in each of the cities studied (table 11). Cents-per-hour changes by city are shown in table 9.

Average wage rates. Union wages rates for truckdrivers and helpers combined averaged \$6.81 on July 1, 1975. For truckdrivers, the average was \$6.87, compared with \$6.27 for helpers.

Wage rates for most drivers were within a relatively narrow range (table 3). Just under one-fifth had hourly rates of \$6.40 to \$7. Nearly half had rates between \$7 and \$7.40 (primarily general freight drivers under the master agreement). Helpers' rates were more widely distributed—about one-tenth had rates between \$4 and \$5; one-fourth between \$5 and \$6; two-fifths between \$6 and \$7; and one-fifth had rates of \$7 or more.

Type of delivery. For the first time in the trucking survey, separate averages were developed by type of delivery—for nine driver classifications common to all parts of the country. These nine classifications accounted for four-fifths of the drivers covered by the survey. As shown in text table 2, the highest nationwide wage level among these categories was for building and heavy/highway construction (\$7.58). General freight drivers, who accounted for nearly half of all drivers in the survey, averaged \$7.15.⁶ Drivers hauling alcoholic beverages and bakery goods were the lowest paid of the nine classifications studied—under \$6 an hour.

Individual city averages are heavily influenced by the proportion of drivers in higher and lower rated classifications. Such variations can even result in disparate wage levels for drivers in cities of the same general population

⁶General freight drivers negotiate on a nationwide basis for increases in wages. However, some variations in hourly rates exist because some locals had higher or lower wage rates when national bargaining was initiated for general freight drivers in 1964. Also, differentials are paid for driving certain kinds of trucks.

In early April 1976, a new general freight agreement was reached. Terms of the settlement included an increase of \$1.65 an hour over 3 years, an unlimited cost-of-living adjustment, and an increase of \$17 per week in benefits. For more details, see *Current Wage Developments*, April 1976, p. 1.

size located in the same region. Baltimore and Washington, for example, are both located in the Border States region and have a similar population size. Drivers in the former city, however, averaged 15 percent more than those in the latter. Much of this difference results from the varying importance of general freight drivers (at the same rate of \$7.11) in the two cities—56 percent in Baltimore compared with 21 percent in Washington. Text table 3 shows the relationship of rates for general freight drivers to other selected classifications for cities permitting such comparisons.

Driver-helper pay relationships also were influenced by type of delivery. Although drivers averaged 10 percent more than helpers, much of the differential reflects the distribution of drivers and helpers among cities and trucking operations with disparate pay levels, rather than differences in the contract rates paid the two classifications within the same city and type of operation (table 12). As shown in text table 4, general freight drivers enjoyed less than a 4-percent advantage over their helpers in 27 of 37 cities permitting comparison; no city reported as much as an 8-percent differential for this classification. These relationships generally held for moving or moving and storage, furniture, beer and other alcoholic beverages, and grocery drivers; only a few instances of driver/helper wage differentials equal to or higher than the 10-percent national spread were reported for these classifications.

Regional variations. Average wage rates for local truckdrivers ranged from \$6.41 in the Mountain States to \$7.14 in the Pacific States. The interregional spread for

³ Includes retail and wholesale operations.

⁴ Includes instances where drivers and helpers were paid the same rate.

NOTE: When more than 1 contract rate was in effect for a specified trucking operation, the city was classified according to the largest differential reported.

drivers' helpers was substantially greater; their rates ranged from \$3.77 in the Southeast to \$6.99 in the Pacific States (table 7).

Unlike its effect on differences in city averages, the varying proportion of general freight drivers was not the important factor in regional wage variations. Averages

for other than general freight drivers ranged from \$5.37 in the Southeast to \$7.09 in the Pacific States, a regional ordering similar to that for all drivers. As shown in text table 5, wage rates varied widely by region for several of the selected types of delivery; they were generally highest in the Pacific and lowest in the South.

Text table 5. Percent of truckdrivers in selected types of delivery and average hourly wage rates, selected regions, July 1, 1975

¹ Includes data for drivers in classifications not shown separately.

Population size. Wage levels for drivers and helpers varied little when combined within four city size groups. Average wage rates for drivers ranged from \$6.94 in cities of 500,000 to 1 million inhabitants to \$6.79 in the smallest group studied—100,000 to 250,000. For helpers, the range was \$6.65 in cities of 250,000 to 500,000 to \$5.90 in the largest six cities—those with at least 1 million inhabitants (table 8). Within city size groups, however, there were significant spreads in city averages, reflecting regional influences on wage levels and the relative importance of the various types of delivery. The latter factor largely accounted for the fact that some of the smallest cities had higher averages, especially for helpers, than the biggest cities.⁷

⁷See *Local Truckdrivers and Helpers, 1974* for example.

Employer contributions to funds. Nearly all local truckdrivers and helpers in the survey were provided benefits through insurance or pension funds either fully or partially paid for by the employer (table 12). These payments were usually the same for all drivers and helpers, covered by one agreement regardless of classification.

Hours of work. About 97 percent of the drivers and helpers were covered by agreements providing for a maximum of 40 hours per week at straight-time rates (table 6). Among the rest, the most common schedule was 37½ hours—found chiefly among newspaper delivery drivers. Schedules of more than 40 straight-time hours usually applied to grocery and bakery drivers and helpers.

² Less than 0.05 percent.

NOTE: Because of rounding, sums of individual items may not equal totals. Variations in the size of annual increases from

survey to survey may reflect, in part, variations in the timing of negotiations. Data do not include increases made later that are retroactive to July 1 or before; such retroactive increases are included in the wage rates reported in the following year's survey.

Table 5. Percent changes in wage rates: United States

(PERCENT DISTRIBUTION OF LOCAL TRUCKDRIVERS AND HELPERS BY PERCENT CHANGE IN UNION HOURLY WAGE RATES, JULY 1, 1974-JULY 1, 1975)

CHANGE IN HOURLY RATE	DRIVERS AND HELPERS	DRIVERS	HELPERS
TOTAL.....	100.0	100.0	100.0
INCREASE.....	97.2	97.3	96.4
UNDER 4 PERCENT.....	1.5	1.4	2.8
4 AND UNDER 5 PERCENT.....	9.3	9.5	7.7

NOTE: When more than 1 union wage rate was in effect for the same classification in a particular city, letters of the alphabet were used to designate the various agreements. The sequence of the letters does not indicate the relative importance of the agreements or rates. Dashes indicate no data, or no data reported.

¹ Basic (minimum) wage rates (excluding holiday, vacation pay, or other benefits made or regularly credited to the employee) agreed upon through collective bargaining between employers and unions. Wage rates shown represent rates available and payable on July 1 of the survey year, and do not include increases made later that are retroactive to July 1 or before.

² Shown in terms of cents per hour or as percent of rate; in actual practice, however, some employer payments are calculated on the basis of total hours or gross payroll. These variations in method of computation are not indicated in the above tabulation. Amounts shown include contractually-authorized deductions from negotiated wage rates, as well as direct employer contributions to specific benefit funds. Excluded, however, are voluntary deductions from wage rates authorized by individual employees.

³ Includes life insurance, hospitalization and other types of health and welfare benefits; excludes payments into holiday, vacation, and unemployment funds when such programs have been negotiated.

⁴ Rate in effect prior to July 1, 1975. New contract in negotiation at time of survey.

⁵ \$7.600 + \$.10 per yard over 8.

⁶ Part of basic rate transferred to pension fund.

⁷ Rate in effect prior to July 1, 1974; new rate in negotiation at that time;

⁸ New rate structure - 1974 rates listed below

1st 60 days	3.470
61-120 days	3.570
121-180 days	3.670
181-240 days	3.770
241-300 days	3.870
After 300 days	3.970

⁹ Driver categories reduced to two from three reported for July 1974. These were: Driver, 2 Axle; Driver, 3 Axle; Double Duty.

¹⁰ Agreement extended 6 months to include July 1, 1975.

¹¹ Negotiated lower rate.

¹² Includes contributions for insurance and pension; separate data not available.

¹³ Includes employer contribution to an Early Retirement Fund.

¹⁴ Weekly hours changed from 48 in 1974.

¹⁵ Guaranteed 42 hours at 43 hours pay.

¹⁶ Guaranteed 44 hours at 46 hours pay.

¹⁷ Top rate reached after 60 days in 1975.

* Agreement provides for this benefit; amount of employer payment not available.

† Revision of data reported previously.

NOTE: Dashes indicate no data, or no data reported.

Appendix. Scope and Method of Study

Union wage rates and hours reported in this bulletin were agreed on through collective bargaining between trade unions and employers, and are defined as (1) the basic, or minimum, wage rates (excluding holiday, vacation, and other benefit payments made regularly or credited to the worker each pay period) and (2) the maximum schedules of hours at straight-time rates. Wage rates in excess of the negotiated minimum, which may be paid for special qualifications or other reasons, are excluded.

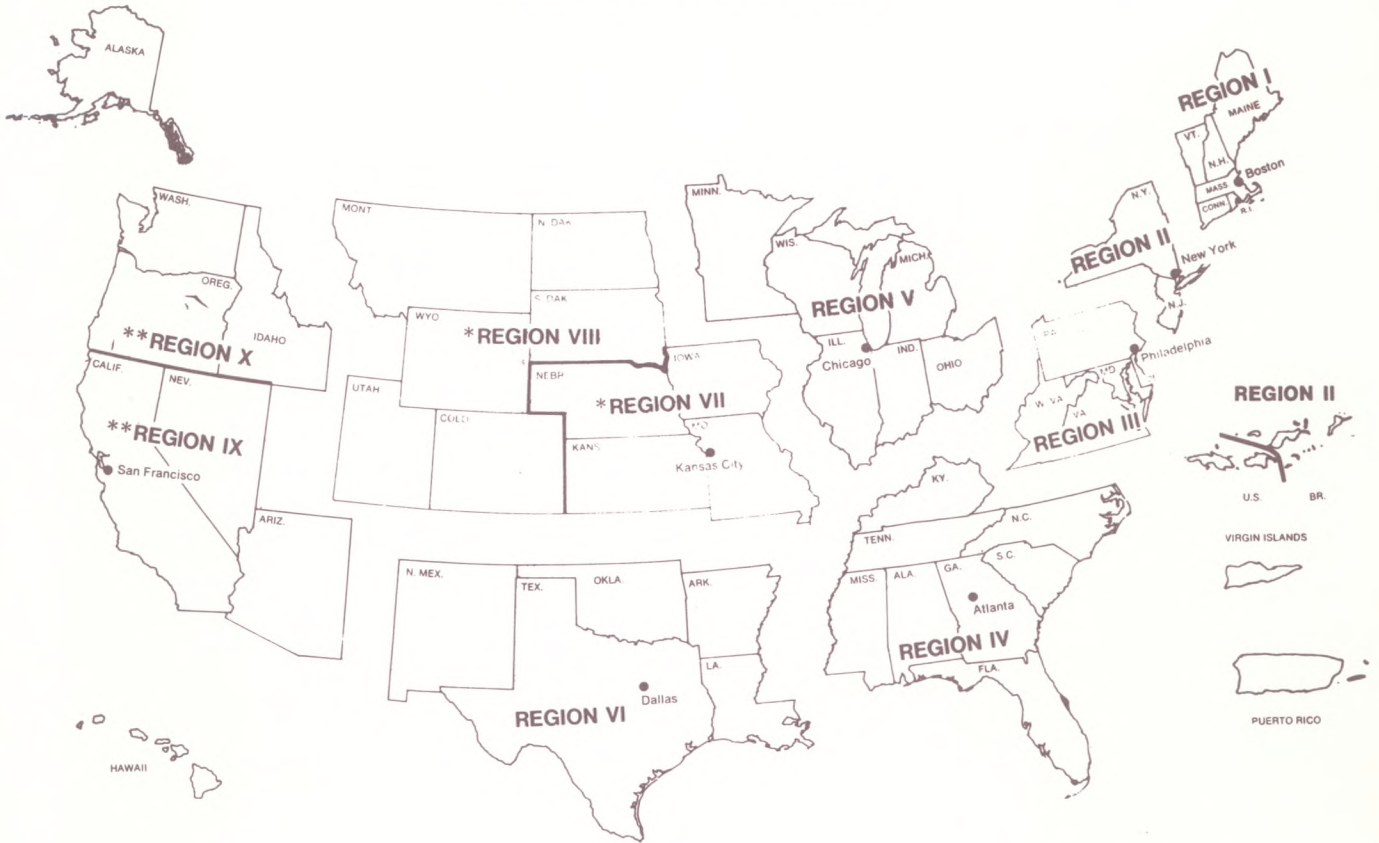

The 1975 survey covered about 366,000 drivers and 35,000 helpers who were active union members in all cities of 100,000 inhabitants or more (except for Honolulu). The information presented is based on data collected for approximately 280,000 local truckdrivers and 30,000 helpers in the 70 cities studied. The study excludes local city drivers paid on a mileage or commission basis as well as over-the-road drivers operation either between cities or between various parts of the United States. Data were obtained primarily from local union officials by mail questionnaire. In some instances, however, Bureau economists visited local union officials to obtain the desired information.

The current survey is designed to reflect the union wage rates of local truckdrivers and helpers in all cities of 100,000 inhabitants or more, excluding Honolulu, as recorded in the 1970 Census of Population. Included are all cities of 500,000 inhabitants or more and most cities of 250,000 to 500,000 inhabitants. Data for cities studied are weighted to compensate for cities not surveyed. In order to provide appropriate regional representation, each region was considered separately when city weights were assigned.

Average wage rates, designed to show current levels, are based on wage rates in effect in each city on the first work day in July 1975, weighted by the number of union members at each rate in the area. These averages are not designed for precise year-to-year comparisons because of fluctuations in membership and in the classifications studied. Average cents-per-hour and percent changes from July 1, 1974, to July 1, 1975, however, are based on comparable quotations for the various job classifications in both periods, weighted by the memberships reported for the current (1975) survey. The index series designed for trend purposes is constructed similarly.
