Preface

Data for this publication were collected in accordance with the provisions of the Occupational Safety and Health Act (OSHA) of 1970.

These data are based on the definitions of occupational injuries and illness described in the booklet, *Recordkeeping Requirements under the Williams-Steiger Occupational Safety and Health Act of 1970* issued by the U.S. Department of Labor in 1971. The recordkeeping forms in that booklet applied to work-related injuries and illnesses which occurred on or after July 1, 1971, through December 31, 1974.

This bulletin was prepared in the Office of Occupational Safety and Health Statistics, Theodore J. Golonka, Assistant Commissioner, by the staff of the Division of Periodic Surveys, under the direction of William Mead. Data were collected and tabulated in the Office of Statistical Operations and Processing with the cooperation of the Regional Offices of the Bureau of Labor Statistics, and participating State agencies identified in appendix C. Selected State data on occupational injuries and illnesses are presented in appendix D.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics and cite the name and number of the publication.

Results of 1974 Survey

Injury and illness incidence rates

In 1974, occupational injuries and illnesses occurred at a rate of 10.4 for each 100 full-time workers in the private sector (table 1).¹ This means that, on the average, 1 out of every 10 private sector employees suffered a nonfatal injury or illness or was killed because of hazards in the work environment. This ratio has remained unchanged since 1972.

The estimates include the experience of approximately 65 million workers in the private sector of the American economy covered by the Occupational Safety and Health Act of 1970, and of workers in mines and on railroads who are covered by other Federal legislation.²

The all-industry injury and illness rate of 10.4 represented a 5.5 percent decrease from the 1973 rate of 11.0 (table 2). This decrease was attributable partly to a decline in the rate of cases resulting in no loss of worktime. Lost workday cases (generally the more serious cases involving days away from work, or work limitations) remained virtually the same. In addition, shifting employment patterns caused by the recession accounted for as much as 1/3 of this decline. Proportions of employment and hours worked decreased in the high rate industries of contract construction and manufacturing, and increased in the low rate industries of wholesale and retail trade; finance, insurance, and real estate; and services.

Rates for the major industry divisions ranged from 2.4 in finance, insurance, and real estate to 18.3 in contract construction (chart 1). Total injury and illness incidence rates for agriculture, forestry, and fisheries;³ mining; contract construction; manufacturing; wholesale and retail trade; and services decreased between 1973 and 1974; included in these were the three industry divisions that had increases in rates between 1972 and 1973 (chart 2). Only three of the eight industry divisions, however, showed a decline in the lost workday case rate, whereas such rates for the other five remained the same or showed slight increases.

About three-fourths of the major industry groups (2-digit SIC's) within the eight major divisions showed decreases in total injury and illness incidence rates; these include fatalities, lost workday cases, and nonfatal cases without lost workdays. Only one-third showed a decrease in the lost workday case rate.

Among 3-digit manufacturing and nonmanufacturing SIC levels for which incidence rates are published, about 70 percent of the industries registered a change in incidence rate of less than 10 percent between 1973 and 1974.

Text table 1. Injury and illness incidence rates, by industry division, United States, 1972-74

Industry	Incidence rates per 100 full-time workers		
	1972	1973	1974
Private sector	10.9	11.0	10.4
Agriculture, forestry, and fisheries	-	11.6	9.9
Mining	-	12.5	10.2
Contract construction	19.0	19.8	18.3
Manufacturing	15.6	15.3	14.6
Transportation and public utilities	10.8	10.3	10.5
Wholesale and retail trade	8.4	8.6	8.4
Finance, insurance, and real estate	2.5	2.4	2.4
Services	6.1	6.2	5.8

NOTE: Estimates for 1973 and 1974 include data for agricultural production (SIC 01), all of mining (SIC 10-14), and railroads (SIC 401). With the exception of oil and gas extraction (SIC 13), data for these activities were not included in the 1972 estimates. In addition, data for agricultural services, forestry, and fisheries (SIC 07-09) were included in the services division for 1972.

Of the total, approximately 40 percent showed a decrease of less than 10 percent, 30 percent showed an equivalent increase (chart 3).

Contract construction registered a large variation in rates over the three years (text table 1). The rate for the division rose 4.2 percent from 19.0 in 1972 to 19.8 in 1973, and then decreased by 7.6 percent to 18.3 in 1974.

¹ Unless otherwise indicated, incidence rates refer to total occupational injuries and illnesses. See appendix E for definitions of incidence rates and recordable occupational injuries and illness.

² Data conforming to definitions of recordable occupational injuries and illnesses under the Occupational Safety and Health Act for coal and lignite mining (SIC 11 and 12) and metal and nonmetal mining (SIC 10 and 14) were provided by the Mining Enforcement and Safety Administration of the U.S. Department of the Interior; data for railroads (SIC 401) were furnished by the Federal Railroad Administration of the U.S. Department of Transportation.

³ The agriculture, forestry, and fisheries division includes data for agricultural production (SIC 01) and agricultural services, forestry, and fisheries (SIC 07-09). Injury and illness estimates for agricultural production (SIC 01) represent the experience of hired workers. Regulations issued under the Occupational Safety and Health Act (20 CFR 1975) exempted members of the immediate family of the farm employer from coverage.

Also, estimates for hired labor employed by agricultural service firms, such as fertilizer applicators, harvesters, herbicide and pesticide applicators, and other types of work performed under contract are included in agriculture services and hunting (SIC 07).

Incidence rates for all three major industry groups within contract construction declined between 1973 and 1974, whereas between 1972 and 1973, only the rate for heavy construction contractors decreased—from 19.6 to 19.3. Rates for virtually all of the 3-digit construction industries decreased from 1973 to 1974, with rates ranging from 11.6 in painting, paperhanging, and decorating to 26.2 in roofing and sheet-metal work.

Manufacturing, the largest industry division in the private sector, containing nearly 31 percent of the work force, had a rate of 14.6 per 100 full-time workers. The manufacturing rate has been declining since 1972; the 1974 rate was about 5 percent lower than the rate of 15.3 registered in 1973, which in turn was about 2 percent below the rate of 15.6 for 1972.⁴ Incidence rates in 1974 for the 21 major industry groups within manufacturing ranged from 7.1 in apparel and other textile products to 22.2 in lumber and wood products—an industry which has experienced the highest occurrence of job-related injuries and illnesses over the years (chart 4). Among these major industry groups, 15 had lower incidence rates in 1974 than in 1973, including nine industries that also experienced decreases in rates between 1972 and 1973. Rates in five industry groups increased, while the rate for stone, clay, and glass products remained unchanged.

Of the 4-digit manufacturing industries experiencing high rates of occurrence of injuries and illnesses (above 20.0), approximately 58 percent registered decreases between 1973 and 1974; only 28 percent registered increases. This compares to 44 percent and 53 percent respectively, between 1972 and 1973.

In the agriculture, forestry, and fisheries; mining; wholesale and retail trade; and services divisions only two major industry groups—eating and drinking places and auto re-

pair, services, and garages experienced increases in rates between 1973 and 1974. The transportation and public utilities division registered an increase during the same period—even though 5 of the 9 major industry groups in that division recorded decreases. Increases in the occurrence of cases in trucking and warehousing and transportation by air more than offset the declining rates in the other industry groups. Rates for finance, insurance, and real estate remained unchanged between the 2 years.

About 74 percent of the major industry groups in these nonmanufacturing industry divisions experienced decreases in the total case incidence rate between 1973 and 1974; only about 37 percent of the comparable industries (which excluded agricultural production, most of mining, and railroads) showed decreases between 1972 and 1973. In these industry divisions, the highest rates among 3-digit industries occurred in water transportation services, 26.2; sanitary services, 23.2; and miscellaneous transportation services, 22.5.

Target industries

Five industries previously selected by the Occupational Safety and Health Administration for priority scheduling of inspections because of a history of unusually high injury rates—roofing and sheet-metal work; meat products; lumber and wood products; miscellaneous transportation equipment; and water transportation services—were handled routinely in 1974 in the general scheduling of inspections. The 1974 survey indicates that changes in rates for these five industries were about the same as for others in the same industry groups (text table 2).

⁴ The 1972 survey, which covered the first full year of employer recordkeeping, provides base-year data.

Text table 2. Occupational injury and illness incidence rates for industries selected in the target industry program, United States, 1974 and 1973

Industry	SIC code ¹	Incidence rates per 100 full-time workers					
		Total cases		Lost workday cases		Nonfatal cases without lost workdays	
		1974	1973	1974	1973	1974	1973
Roofing and sheet-metal work	176	26.2	27.7	11.5	11.6	14.6	16.0
Meat products	201	28.2	27.2	11.3	10.2	16.9	16.9
Lumber and wood products	24	22.2	24.1	9.0	9.2	13.2	14.8
Miscellaneous transportation equipment	379	29.8	35.5	9.5	10.6	20.3	24.9
Water transportation services	446	26.2	26.2	14.0	13.0	12.2	13.2

¹ Standard Industrial Classification Manual, 1967 Edition.

NOTE: For definition of incidence rate, see appendix E.

Incidence rates by employment size

Employers with fewer than 50 or more than 1,000 employees had lower incidence rates in 1974 than employers in the midsize employment categories (table 3 and chart 5). Lower rates were particularly characteristic of employers with 1 to 19 employees and those with 2,500 employees or more. The highest overall incidence rates occurred in establishments having between 100 and 249 employees reflecting a pattern of injury and illness experience which has remained constant since 1972.

The incidence rate for small establishments (those with fewer than 20 employees) was 5.5, less than half the rate of 14.1 for medium size firms (with 100 to 249 employees). However, there was a wide variation among the establishments in this employee size class. For example, nearly 9 percent of these small size establishments experienced incidence rates of greater than 20.0 (chart 6). This means that, on the average, 1 out of every 5 of these employees suffered a job-related fatality or non-fatal injury or illness—over double the ratio for all size classes combined.

There was no difference in the distribution of injury and illness incidence rates by employment size among most industry divisions. Contract construction, manufacturing, and wholesale and retail trade had the highest occurrence of cases in establishments with 100 to 249 employees for both 1973 and 1974. However, in agriculture, forestry, and fisheries, rates generally increased with establishment size for both years. Rates by establishment size for mining—only available for 1974—also peaked in establishments where the number of employees ranged between 100 and 249.

In the private sector during both 1973 and 1974, about 25 percent of the employees in establishments constituting over 70 percent of the worksites experienced virtually no injuries or illnesses. The percent of establishments experiencing 0.0 incidence rates⁵ varied inversely with establishment size, whereas the percent of establishments with rates between 0.1 and 9.9 varied directly with the number of employees in the establishment. The percent of establishments experiencing incidence rates of greater than 10.0 was the highest in the midsize employment categories.

Quartile rates are useful for analysis because the mean rate (overall rate) has an inherent bias—a few reporting units with a high incidence of cases tend to inflate the rate for an industry.⁶ For example, secondary nonferrous metals—an industry with one of the highest overall rates, had a mean rate of 31.4; however, at least one-half of the establishments had a rate less than 16.1; one-quarter of the establishments experienced virtually no injuries and illnesses; and one-quarter had a rate greater than 38.5 (text table 3). A look at the all-industry data shows that establishments employing between 100 and 249 employees

⁵ A rate of 0.0 implies that no case of an injury or illness was reported, or, if recordable cases occurred, they were insignificant in terms of the exposure hours as the rate calculated was less than .05 per 100 full-time workers. Consequently, incidence rates of less than .05 in table 4 appear as 0.0, indicating, for all practical purposes, no recordable cases.

⁶ For definitions of mean, median, and quartile rates see appendix E.

The number of employers by employment size represented by the median, and first and third quartile incidence rates can be derived from County Business Patterns, U.S. Summary (Bureau of Census publication).

Text table 3. Distribution of injury and illness incidence rates for 10 industries with highest overall rates, United States, 1974

Industry	Incidence rates per 100 full-time workers				
	SIC	Mean	Median	1st quartile	3rd quartile
Secondary nonferrous metals	334	31.4	16.1	0.0	38.5
Iron and steel foundries	332	30.4	29.3	15.5	47.8
Miscellaneous transportation equipment	379	29.8	21.7	2.3	40.6
Logging camps and logging contractors	241	29.2	20.5	0.0	44.8
Meat products	201	28.2	17.5	0.0	34.2
Nonferrous foundries	336	27.6	20.6	6.6	34.7
Roofing and sheet-metal work	176	26.2	15.2	0.0	36.8
Water transportation services	446	26.2	0.0	0.0	23.3
Ship and boat building and repairing	373	24.5	14.9	0.0	33.3
Fabricated structural metal products	344	24.4	17.1	0.0	34.1

NOTE: For definitions of mean, median, and first and third quartile rates see appendix E.

had a median rate of 10.5 as compared to the mean rate of 14.1. One-half of all units in this size category had rates between 3.6 and 21.1 (table 4).

Incidence rates by category of illness

For the third straight year occupational illnesses occurred at a rate of 0.4 per 100 full-time workers or about 4 cases per 1,000 (table 5).⁷ By industry division, the rates ranged from a high of 7 cases per 1,000 full-time workers in agriculture, forestry, and fisheries to a low of 1 in finance, insurance, and real estate. Manufacturing experienced the second highest rate of 6 cases per 1,000 workers.

The highest rate among major industry groups occurred in forestry, with a rate of 10 per 1,000. Agricultural services and hunting, chemicals and allied products, and rubber and plastics products, not elsewhere classified, all had a rate of 9. In 1973 these industries experienced similar levels of illness rates.

It should be noted that the *incidence* of occupational illnesses measured by the annual survey refers to the number of *new* illness cases which occur during a year. Cases are recorded only in the year in which they are diagnosed and recognized as work related.

Despite some progress in identification, the reporting of illnesses continues to present difficulties. Whereas an injury occurs at a specific time and ordinarily is discovered readily, an occupational illness may develop years after an employee has left the firm where he or she contracted the illness; subsequently, the employee may work for different employers and be exposed to different conditions. Therefore, some illnesses of occupational origin may not be recognized and reflected in the estimates.

Among all categories of illnesses,⁸ skin diseases or disorders occurred most frequently, with a rate of 2 cases per 1,000 employees, and have been the leading category of occupational illness since 1972. This is likely attributable in part to the speed with which symptoms appear after contact with irritants, facilitating quick recognition of these cases. The agriculture, forestry, and fisheries, and manufacturing industry divisions experienced the greatest occurrence of this type of illness, with rates of 4 and 3 cases per 1,000, respectively.

In all divisions, dust diseases of the lungs, respiratory conditions due to toxic agents, poisoning, and disorders due to repeated trauma did not show measurable rates. Rates of 1 for disorders due to physical agents were estimated for agriculture, forestry, and fisheries; contract construction; and manufacturing.

Incidence rates by month

Both the 1973 and 1974 survey report forms requested data on the monthly distribution of job-related injuries and illnesses. Monthly incidence rates, based on 200,000 hours of exposure, were derived from the monthly data and approximations of employee-hours worked by month.⁹

Incidence rates for 1974 show modest seasonal variations in all industry divisions, with the highest rates in the summer months, and the lowest rates at the end of the year (table 6 and chart 7). Two-thirds of the divisions experienced their highest occurrence of job-related injuries and illnesses during July. In manufacturing nearly one-half of the major industry groups (2-digit SIC) had highest rates during August. These patterns were similar to those experienced during 1973.

Number of injuries and illnesses

In 1974, approximately 5.9 million work-related injuries and illnesses occurred in the private sector industries—a decrease of about 3 percent, or 163,000 cases from 1973 (table 7). The decrease between 1973 and 1974 was entirely in cases that did not involve lost worktime. Injuries and illness that resulted in lost workdays—generally the more serious cases—remained at approximately the same level—2 million per year.

Almost one-half of the cases were in manufacturing industries, employing almost one-third of the workers (chart 8). Wholesale and retail trade, the next largest industry division, with more than one-fourth of the total employment, had one-fifth of all injuries and illnesses. The contract construction and services industries combined accounted for another one-fifth of all injuries and illnesses, and one-fourth of the total employment. These distributions have remained fairly constant since 1972.

One-third of all work-related injuries and illnesses in 1974 resulted in lost workdays—i.e., absence from work or work limitations (chart 9). This proportion held for the majority of the industry divisions except agriculture, forestry, and fisheries; mining; and transportation and public utilities where the proportions were 46, 50, and 45 percent, respectively.

Ninety-seven percent of all recorded cases were injuries; illnesses constituted the remaining 3 percent (tables 8 and 9). This ratio did not change from 1973. By industry division, this ratio varied from 98 percent of the cases being injuries and 2 percent illnesses in contract construction, transportation and public utilities, and wholesale and retail trade to 93 percent injuries and 7 percent illnesses in agriculture, forestry, and fisheries (text table 4).

About 200,400 occupational illnesses were estimated for 1974; skin diseases or disorders made up about 45

⁷ Hereafter in this section, incidence rates of occupational illnesses represent the number of illnesses per 1,000 full-time workers although tables 1 and 5 show the rates per 100 full-time workers. Incidence rates are changed to this base because the rates generated per 200,000 hours of exposure are, in general, quite small.

⁸ For definitions and examples of occupational illness categories, see appendix E.

⁹ Monthly employee-hours were derived by applying percentage distribution factors to the annual hours worked figure for all employees estimated from the survey data. These distribution factors were based on the number and average weekly hours of production workers by month for the industry.

Text table 4. Injuries or illnesses as a percent of total cases, by industry division, United States, 1974

Industry	Injuries	Illnesses
Private sector	97	3
Agriculture, forestry, and fisheries	93	7
Contract construction	98	2
Manufacturing	96	4
Transportation and public utilities	98	2
Wholesale and retail trade	98	2
Finance, insurance, and real estate	97	3
Services	96	4

NOTE: Separate injury and illness detail for coal and lignite mining (SIC 11 and 12), and metal and nonmetal mining and quarrying (SIC 10 and 14) were not available for inclusion in the estimates for the private sector.

percent of the total (table 10 and chart 10). Dust diseases of the lungs, with the least number of occurrences, averaged 28 lost workdays per lost workday case—the highest average for an occupational illness. Illnesses caused by poisoning and disorders due to repeated trauma resulted in the highest proportion of cases involving lost worktime or restricted work activity—over 40 percent for each illness category.

Fatalities

Between 1973 and 1974, work-related fatalities increased by about 4 percent—from 5,700 to 5,900. In view of the sampling process, however, this change may not be statistically significant.

Contract construction, manufacturing, and transportation and public utilities accounted for approximately 65 percent of the deaths in 1974. Contract construction and transportation and public utilities industries alone experienced over 40 percent of total fatalities while accounting for only 13 percent of private sector employment. On an overall basis, the rise of fatalities in agriculture, forestry, and fisheries; contract construction; and services was partially offset by a decline in wholesale and retail trade.

The number of illness-related fatalities more than doubled since 1973—from 300 to 700, whereas deaths due to injuries decreased by 200. (These comparisons exclude data for most of mining provided by the Mining Enforcement and Safety Administration of the U.S. Department of the Interior, which were not identified as to injury or illness origin.)

Worktime lost

During 1974, occupational injuries and illnesses caused the loss of an estimated 31.1 million workdays or the equivalent of a full year's work for about 125,000 employees (table 7).¹⁰ This number of lost workdays was about 6 percent greater than the 29.3 million days registered for 1973. Lost worktime includes not only days an employee was absent from the job because of work-related injury or illness, but also days the employee was working but could not perform all regularly assigned duties. By

measuring the number of *days* lost, as opposed to the number of lost workday *cases*, it is possible to gauge the severity of job-related injuries and illnesses as well as the occurrence of recorded cases.

One such measure of severity, the average lost workdays per lost workday case, provides the average length of time an employee was away from work or could not perform all regularly assigned duties because of a job-related injury or illness. Average lost workdays per lost workday case ranged from a high of 19 in transportation and public utilities to a low of 13 in finance, insurance, and real estate; with an average of 16 for all industries combined.

Because these averages tend not to reflect minor variations in lost worktime, an incidence rate of lost workdays based on 200,000 hours of exposure on the job provides a more meaningful indicator of injury and illness severity. For example, using average lost workdays per lost workday case, manufacturing averaged 15 lost days per case as compared to 16 for the private sector. However, on an incidence rate basis, the severity of the manufacturing loss was 33 percent higher than that for the private sector. Incidence rates of lost workdays for the major industry divisions ranged from 10.2 in finance, insurance, and real estate to 99.8 in contract construction.

The incidence rate of lost workdays for the private sector rose 2 percent between 1973 and 1974—from 53.3 to 54.6. Approximately 60 percent of the major industry groups (2-digit SIC's) showed increases in lost workday rates between 1973 and 1974; only 40 percent showed decreases.

Among published 3- and 4-digit industry levels, water transportation services registered the highest incidence rate of lost workdays for the second straight year—with 506.1 workdays lost for each 100 full-time workers during 1974, or approximately 5 days per employee. This was approximately 70 percent greater than the next highest rate of 296.2, registered in logging camps and logging contractors (chart 11). Roofing and sheet metal and secondary non-ferrous metals followed with rates of 218.4 and 202.3, respectively.

Worktime lost from job-related injuries and illnesses as a percentage of total workdays in the private sector was lower than days of idleness resulting from work stoppages; this represents a reversal of the pattern established for 1973 (text table 5). However, 5 of the 8 industry divisions in 1974 experienced a greater percentage of lost worktime resulting from injuries and illnesses than from days of idleness resulting from work stoppages; this was offset by the greater proportions of days of idleness from work stoppage, in the mining, contract construction, and manufacturing industries.

State estimates

In addition to producing national estimates on job-related injuries and illnesses, the annual survey is designed to provide information necessary for the generation of State

¹⁰ This estimate is based on a work year of 250 days.

Text table 5. Worktime lost from job-related injuries and illnesses, and days of idleness, from work stoppages, by industry division, United States, 1973 and 1974

Industry	Percent of total worktime lost from—			
	Injuries and illnesses		Work stoppages ¹

estimates by participating States.¹¹ This bulletin contains 43 State tables which provide incidence rates and average lost workdays per lost workday case at the 2-digit SIC level (appendix D).

Incidence rates by State

In 1974, approximately 84 percent of the States included in this bulletin registered decreases in overall rates—approximately 6 times the number of States registering increases. However, these decreases can not be solely attributed to the elimination of safety hazards in the work environment—a portion is attributable to shifts in employment caused by the recession. As previously mentioned, the Nation experienced decreases in the proportion of employees working in high-rate industries, such as manufacturing and contract construction, accompanied by increases in industries with relatively low rates of injuries and illnesses. The total impact of the recession on the levels of job-related injuries and illnesses varied depending upon the distribution of employment among industries by State.

The decrease of injuries and illnesses was recorded primarily in those cases involving no lost worktime. Only 36 percent of the States registering decreases in overall rates experienced a corresponding decrease in the lost workday case rate, 44 percent registered increases, while 19 percent experienced no change.

Among industry divisions, similar patterns in rates were experienced by the States as were reported for the Nation as a whole. In most States the highest rates recorded were in contract construction; finance, insurance, and real estate consistently registered lower rates than the other industry divisions. However, selected industries tended to have a great influence on divisional rates in

several States. Manufacturing industries experienced rates higher than the other divisions in those States where employment in the division was dominated by high rate industries. For instance, the rate for the manufacturing division was highest in Montana, where nearly 40 percent of manufacturing employment is in the high rate lumber and wood products industry. In Oregon, the manufacturing rate decreased 4 percent despite significant increases in the rates for several industry groups (primary metal products; machinery, except electrical; transportation equipment; and instruments and related products) largely because of the declining rate in lumber and wood products—an industry constituting nearly 40 percent of Oregon manufacturing employment. In Alaska, the rate for construction industries decreased from 25.9 to 19.0, or 27 percent—largely due to the decrease of nearly 47 percent in the rate for heavy construction contractors, for the most part attributable to the Alaskan pipeline construction. Pipeline related increases in hours of exposure on the job without like increases in job-related injuries and illnesses caused the downward movement.

State comparisons

Overall private sector incidence rates ranged from 6.9 per 100 full-time workers in the District of Columbia to a high of 15.0 in Oregon. However, caution is necessary in making State-to-State comparisons or in comparing the rates of one State to corresponding rates for the entire Nation, because of variations in the size of firms and in-

¹¹ The 1974 survey involved a sample of about 650,000 establishments. Of these, approximately 400,000 are selected so that States participating in the program on an operational basis will have sufficient information to generate State estimates.

dustries. Estimates at the level of industry detail shown in the State tables (industry division and 2-digit SIC) give an accurate picture of an industry's injury and illness experience, but do not reflect the effects that differences in industry makeup—that is, the proportion of the work force in hazardous 3- or 4-digit industries and the variation in technical production among industries—have on the rates. In making comparisons of aggregated State data, differences in industry mix also must be considered.

By comparing incidence rates at the manufacturing division level, for example, one could derive the impression that a State with a concentration of employment in manufacturing industries with high incidence rates has a poor record in job safety and health; conversely, a State with a high concentration of employment in low rate manufacturing industries might appear to be extremely safety conscious.

The Standardized Industry Mix (SIM) is designed to alleviate this problem by adjusting the injury and illness experience of one State to reflect a common industry mix with other States, or with the Nation as a whole. By eliminating differences in industry makeup, the analyst may make a more accurate comparison of injury and illness experience.

The SIM is generated by recalculating industry estimates for each State to a common employment base at levels lower than the target estimate. By using U.S. 2-digit employment data or other appropriate levels as weights, data may be adjusted and then combined for a division. Or, if the 2-digit levels are the target, the 3-digit industries would be adjusted and then combined for each 2-digit level.

For example, in North Carolina the rate of 10.6 for manufacturing industries was 27 percent lower than the national rate of 14.6. A large part of this difference, however, was due to the high proportion of manufacturing employment (35 percent) in textile mill products—a relatively

Text table 6. Unadjusted and SIM-adjusted private sector incidence rates in eight States, 1974¹

State	Unadjusted incidence rate	SIM adjusted incidence rate
Decrease:		
Connecticut	10.3	10.0
Indiana	10.7	9.3
Pennsylvania	10.2	9.5
New Jersey	10.5	10.0
No change:		
Arizona	13.5	13.5
Increase:		
Florida	12.5	12.7
Montana	12.6	14.9
New Mexico	10.8	12.2
National private sector rate	10.4	

¹ SIM=Standardized Industry Mix.

low rate industry. When the effect of this concentration of employment was eliminated by SIM—with the experience of North Carolina firms producing textile mill products being given the same weight as for the Nation as a whole—the rate increased to 12.1.

Private sector rates adjusted by SIM for the 43 States included in this bulletin resulted in increases in the rate for 37 percent of the States; no change in 2 percent of the States; and decreases in 60 percent of the States. Text table 6 shows examples of the varying effects of standardization on the unadjusted State incidence rates.

NOTES:

Between 1973 and 1974 there was no change in the overall incidence rate for finance, insurance, and real estate.

Data for railroads (SIC 401) were not available for inclusion in the 1972 estimates for the transportation and public utilities division, but were

included in the estimates for that division for 1973 and 1974.

Comparisons are not shown for the agriculture, forestry, and fisheries and mining divisions because comparable date were not available for 1972.

Services, n.e.c.-----	899	n.a.	2.0	.7	1.3	1.8	.6	1.2	.1	-	(*)

^{1/} Industry totals (Division, 2 and 3-digit SIC codes) include data for industries not shown separately.

^{2/} Standard Industrial Classification Manual, 1967 Edition.

^{3/} Annual average employment for nonagricultural industries are based on the establishment survey conducted by the U. S. Department of Labor's Bureau of Labor Statistics, in cooperation with State agencies. Annual average employment for the agriculture, forestry, and fisheries division is a composite of estimates from the BLS survey and estimates provided by the Statistical Reporting Service, U. S. Department of Agriculture.

^{4/} The incidence rates represent the number of injuries and illnesses per 100 full-time workers, and were calculated as: (N/EH) X 200,000, where

N = number of injuries and illnesses, injuries, or illnesses

EH = total hours worked by all employees during calendar year

200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

^{5/} Includes fatalities. Because of rounding, the difference between the total and the sum of the rates for lost workday cases and nonfatal cases without lost workdays may not reflect the fatality rate.

^{6/} Separate injury and illness detail for coal and lignite mining (SIC 11-12), and metal and nonmetal mining and quarrying (SIC 10 and 14) were not available for inclusion in the totals for the private sector.

^{7/} Data conforming to the OSHA definitions for coal and lignite mining (SIC 11 and 12) and metal and nonmetal mining (SIC 10 and 14), and for railroads (SIC 401) were provided by the Mining Enforcement and Safety Administration, U. S. Department of the Interior, and by the Federal Railroad Administration, U. S. Department of Transportation, respectively.

NOTES: Asterisks indicate incidence rates less than .05 per 100 full-time workers. Dashes indicate no data reported, data not available, or data that do not meet publication guidelines.

n.a. = employment estimates are not available

n.e.c. = not elsewhere classified

SOURCE: Bureau of Labor Statistics, U. S. Department of Labor.

Structural clay products, n.e.c-----	3259	22.2	-	10.1	-	12.1	-	162.8	-
Pottery and related products-----	326	18.0	18.1	6.7	6.5	11.2	11.6	99.0	85.3
Vitreous plumbing fixtures-----	3261	26.5	29.4	11.7	12.4	14.7	17.0	149.3	135.7
Vitreous china food utensils-----	3262	11.6	11.6	4.5	5.4	7.1	6.1	66.0	72.9
Fine earthenware food utensils-----	3263	14.4	13.9	6.9	5.9	7.4	8.0	136.3	112.4
Porcelain electrical supplies-----	3264	18.1	17.4	5.8	5.1	12.3	12.3	130.1	66.1
Pottery products, n.e.c-----	3269	15.1	14.1	4.4	3.6	10.7	10.5	51.2	51.9
Concrete, gypsum, and plaster products---	327	19.1	19.8	7.5	7.3	11.5	12.4	123.3	108.4
Concrete block and brick-----	3271	20.1	20.8	8.4	8.1	11.6	12.0	131.9	98.3
Concrete products, n.e.c-----	3272	23.9	25.6	10.0	9.6	13.9	15.9	156.0	127.5
Ready-mixed concrete-----	3273	16.5	17.3	6.1	6.3	10.4	10.9	103.4	106.9
Gypsum products-----	3275	8.4	9.2	2.3	2.3	6.1	6.9	57.9	58.6
Cut stone and stone products-----	328	21.0	19.2	7.4	6.7	13.6	12.5	121.8	114.6
Miscellaneous nonmetallic mineral products-----	329	18.2	16.0	6.5	5.2	11.7	10.7	115.3	101.0
Abrasive products-----	3291	23.4	-	8.3	-	15.1	-	113.7	-
Asbestos products-----	3292	15.5	14.2	6.1	4.3	9.4	9.8	105.1	87.0
Gaskets and insulations-----	3293	17.4	17.3	5.6	4.1	11.8	13.2	102.9	73.3
Minerals, ground or treated-----	3295	18.6	17.7	6.6	6.2	12.0	11.5	133.3	156.8
Mineral wool-----	3296	15.6	16.7	5.6	5.8	10.0	10.9	122.3	121.2
Nonclay refractories-----	3297	20.8	19.2	8.1	7.8	12.7	11.4	136.8	120.2
Nonmetallic mineral products, n.e.c-----	3299	12.6	-	3.6	-	9.0	-	72.5	-
Primary metal industries-----	33	19.7	20.8	6.8	6.3	12.9	14.5	110.8	107.1
Blast furnace and basic steel products---	331	15.0	16.3	4.4	4.3	10.6	12.0	80.9	82.4
Blast furnaces and steel mills-----	3312	13.4	15.0	3.6	3.6	9.8	11.3	72.3	75.6
Electrometallurgical products-----	3313	20.1	-	6.9	-	13.1	-	127.5	-
Steel wire and related products-----	3315	23.0	23.6	10.0	9.1	13.0	14.5	149.2	140.7
Cold finishing of steel shapes-----	3316	27.4	29.7	8.8	9.3	18.6	20.4	127.5	144.2
Steel pipe and tubes-----	3317	27.3	27.3	10.1	8.8	17.1	18.5	129.4	121.6
Iron and steel foundries-----	332	30.4	32.0	11.6	10.3	18.8	21.7	163.1	156.7
Gray iron foundries-----	3321	32.0	33.8	12.3	11.3	19.7	22.4	165.8	165.5
Malleable iron foundries-----	3322	32.0	36.0	12.6	9.1	19.4	26.9	178.7	128.3
Steel foundries-----	3323	26.2	25.5	9.8	8.3	16.4	17.2	150.9	147.6
Primary nonferrous metals-----	333	15.2	13.1	5.2	4.4	10.0	8.7	116.5	102.7
Primary copper-----	3331	12.2	10.6	4.8	4.0	7.4	6.6	156.4	119.4
Primary aluminum-----	3334	15.0	12.0	4.6	3.8	10.4	8.2	95.1	83.7
Primary nonferrous metals, n.e.c-----	3339	18.4	18.9	5.8	5.6	12.6	13.2	90.1	108.6

See footnotes at end of table.

Table 2. Occupational injury and illness incidence rates, private sector, by industry, United States, 1974 and 1973—Continued

Industry 1/	SIC code 2/	Incidence rates per 100 full-time workers 3/							
		Total cases 4/		Lost workday cases		Nonfatal cases without lost workdays		Lost workdays	
		1974	1973	1974	1973	1974	1973	1974	1973
Secondary nonferrous metals-----	334	31.4	30.5	12.8	12.8	18.6	17.7	202.3	203.8
Nonferrous rolling and drawing-----	335	16.1	17.1	5.5	5.1	10.6	12.0	97.0	93.2
Copper rolling and drawing-----	3351	15.4	14.2	6.1	4.9	9.2	9.3	117.0	98.4
Aluminum rolling and drawing-----	3352	15.8	18.4	4.7	4.5	11.1	13.9	93.7	82.4
Nonferrous wire drawing and insulating	3357	16.3	17.1	5.9	5.8	10.4	11.4	97.8	96.0
Nonferrous foundries-----	336	27.6	29.0	11.1	9.9	16.5	19.0	151.8	134.9
Aluminum castings-----	3361	28.8	31.5	11.9	10.7	16.9	20.7	161.0	152.9
Brass, bronze, and copper castings----	3362	28.9	29.2	11.6	10.7	17.3	18.5	141.0	121.3
Nonferrous castings, n.e.c.-----	3369	23.1	-	8.5	-	14.6	-	140.1	-
Miscellaneous primary metal products----	339	23.8	26.4	8.5	8.9	15.3	17.5	137.7	132.3
Iron and steel forgings-----	3391	26.1	26.8	9.2	9.4	16.9	17.4	157.2	143.0
Primary metal products, n.e.c.-----	3399	20.7	23.3	7.7	7.7	13.0	15.5	104.1	104.6
Fabricated metal products-----	34	21.2	22.7	6.8	6.4	14.4	16.3	99.0	92.0
Metal cans-----	341	19.1	19.9	5.6	4.8	13.4	15.1	98.0	88.9
Cutlery, hand tools, and hardware-----	342	18.0	17.7	5.6	5.0	12.4	12.7	82.3	74.4
Cutlery-----	3421	16.3	15.4	4.1	4.2	12.2	11.2	50.5	56.8
Hand and edge tools, n.e.c.-----	3423	22.4	21.7	7.1	6.3	15.3	15.4	98.9	97.9
Hardware, n.e.c.-----	3429	15.8	16.0	4.9	4.4	10.9	11.6	78.4	65.9
Plumbing and heating, except electric---	343	19.2	23.1	5.5	6.1	13.7	17.0	85.2	80.8
Plumbing sanitary ware-----	3431	23.0	27.4	6.9	8.4	16.0	19.0	103.4	97.7
Plumbing fittings and brass goods----	3432	16.4	19.4	4.9	5.2	11.5	14.2	69.3	70.5
Heating equipment, except electric---	3433	19.6	24.0	5.4	5.9	14.2	18.1	88.7	81.6
Fabricated structural metal products----	344	24.4	26.6	7.9	7.9	16.4	18.7	114.5	111.9
Fabricated structural steel-----	3441	25.6	27.5	9.8	9.2	15.7	18.3	143.8	140.0
Metal doors, sash, and trim-----	3442	24.9	25.7	7.3	7.6	17.6	18.0	115.1	103.0
Fabricated plate work-----	3443	22.7	24.6	6.6	6.5	16.1	18.1	96.9	93.3
Sheet-metal work-----	3444	24.6	29.2	7.8	8.1	16.8	21.1	103.5	116.1
Architectural metalwork-----	3446	23.3	24.6	7.6	7.6	15.6	17.0	102.4	96.1
Miscellaneous metalwork-----	3449	26.3	28.2	9.0	9.3	17.3	18.9	126.6	114.4
Screw machine products, bolts, etc-----	345	18.6	18.7	5.5	5.0	13.1	13.7	72.6	67.7
Screw machine products-----	3451	18.6	20.5	4.8	4.9	13.8	15.6	53.6	61.6
Bolts, nuts, rivets, and washers-----	3452	18.6	17.1	6.1	5.0	12.5	12.1	88.4	72.5
Metal stampings-----	346	20.5	23.2	6.7	5.9	13.7	17.3	99.2	88.5
Metal services, n.e.c.-----	347	19.8	22.4	6.9	6.6	12.9	15.8	93.7	80.8
Plating and polishing-----	3471	19.7	22.6	7.2	6.8	12.5	15.8	97.3	77.3
Metal coating and allied services----	3479	20.0	21.9	6.2	6.2	13.7	15.7	85.6	88.5
Miscellaneous fabricated wire products--	348	20.3	21.6	7.2	6.8	13.1	14.8	96.9	80.4
Miscellaneous fabricated metal products-	349	20.8	20.2	6.4	6.0	14.4	14.2	99.2	95.1
Metal barrels, drums, and pails-----	3491	23.6	-	8.2	-	15.4	-	150.1	-
Valves and pipe fittings-----	3494	21.5	18.8	6.3	5.5	15.2	13.3	95.8	93.4
Metal foil and leaf-----	3497	20.5	22.0	6.6	6.5	13.9	15.5	111.4	76.1
Fabricated pipe and fittings-----	3498	22.4	25.9	6.6	7.4	15.8	18.5	99.7	113.5
Fabricated metal products, n.e.c.-----	3499	18.9	20.0	5.8	6.1	13.1	13.9	82.9	85.2
Machinery, except electrical-----	35	16.8	17.7	4.8	4.3	12.0	13.4	65.2	60.5
Engines and turbines-----	351	14.1	16.0	3.2	3.2	10.9	12.8	49.4	54.7
Steam engines and turbines-----	3511	15.3	-	2.8	-	12.5	-	43.7	-
Internal combustion engines, n.e.c.---	3519	13.4	15.8	3.5	3.2	9.9	12.5	52.9	57.9
Farm machinery-----	352	20.5	21.7	7.3	7.2	13.2	14.5	86.1	80.4
Construction and related machinery-----	353	20.8	21.2	6.6	5.4	14.2	15.7	95.5	75.9
Construction machinery-----	3531	19.8	21.8	6.2	5.1	13.6	16.7	93.8	69.8
Mining machinery-----	3532	24.3	22.4	7.9	5.7	16.4	16.7	101.1	84.0
Oil field machinery-----	3533	21.8	22.9	7.6	6.3	14.2	16.6	111.6	92.2
Elevators and moving stairways-----	3534	17.0	14.6	4.5	3.6	12.5	11.0	61.7	57.4
Conveyors and conveying equipment----	3535	24.7	19.3	7.9	5.3	16.8	14.0	97.1	77.3
Hoists, cranes, and monorails-----	3536	20.6	19.8	6.8	6.1	13.8	13.7	100.9	92.8
Industrial trucks and tractors-----	3537	19.8	20.9	5.8	6.1	14.0	14.7	87.0	73.7
Metalworking machinery-----	354	16.3	15.8	3.9	3.1	12.3	12.7	54.7	46.1
Machine tools, metal cutting types---	3541	17.2	13.2	4.8	3.0	12.4	10.2	63.3	53.9
Machine tools, metal forming types---	3542	17.3	-	5.8	-	11.5	-	89.8	-
Special dies, tools, jigs, and fixtures	3544	16.5	17.1	3.2	2.6	13.3	14.5	42.3	38.2
Machine tool accessories-----	3545	14.0	15.3	3.3	2.8	10.7	12.5	46.2	34.1
Metalworking machinery, n.e.c.-----	3548	16.7	16.3	4.5	3.7	12.2	12.5	66.6	55.1

See footnotes at end of table.

Table 2. Occupational injury and illness incidence rates, private sector, by industry, United States, 1974 and 1973—Continued

Industry 1/	SIC code 2/	Incidence rates per 100 full-time workers 3/							
		Total cases 4/		Lost workday cases		Nonfatal cases without lost workdays		Lost workdays	
		1974	1973	1974	1973	1974	1973	1974	1973
Special industry machinery-----	355	18.9	19.6	5.2	4.5	13.7	15.1	69.4	59.5
Food products machinery-----	3551	20.9	20.5	7.1	5.3	13.8	15.2	66.5	59.3
Textile machinery-----	3552	16.5	18.2	4.4	4.0	12.1	14.2	56.8	48.5
Woodworking machinery-----	3553	23.2	21.5	6.5	5.7	16.7	15.8	102.8	94.5
Paper industries machinery-----	3554	21.5	20.5	4.9	5.0	16.6	15.5	79.6	80.6
Printing trades machinery-----	3555	15.1	16.2	3.5	3.0	11.5	13.2	53.4	48.8
Special industry machinery, n.e.c.---	3559	19.1	21.1	5.0	4.6	14.1	16.5	77.4	61.0

1/ Industry totals (Division, 2 and 3-digit SIC codes) include data for industries not shown separately.

2/ Standard Industrial Classification Manual, 1967 Edition.

3/ The incidence rates represent the number of injuries and illnesses, or lost workdays, per 100 full-time workers, and were calculated as: (N/EH) X 200,000, where

N = number of injuries and illnesses, or lost workdays
 EH = total hours worked by all employees during calendar year
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

4/ Includes fatalities. Because of rounding, the difference between the total and sum of the rates for lost workday cases and nonfatal cases without lost workdays may not reflect the fatality rate.

5/ Data conforming to the OSHA definitions for coal and lignite mining (SIC 11 and 12) and metal and nonmetal mining (SIC 10 and 14), and for railroads (SIC 401) were provided by the Mining Enforcement and Safety Administration, U.S. Department of the Interior, and by the Federal Railroad Administration, U.S. Department of Transportation, respectively.

NOTES: Dashes indicate no data reported or data that do not meet publication guidelines.

n.e.c. = not elsewhere classified

1/ The incidence rates represent the number of injuries and illnesses per 100 full-time workers, and were calculated as (N/EH) X 200,000, where

N = number of injuries and illnesses
 EH = total hours worked by all employees during the calendar year
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

2/ For 1973, incidence rates by employment - size groups for the private sector exclude data for coal and lignite mining (SIC 10 and 12) and metal and nonmetal mining and quarrying (SIC 10 and 14). The "all sizes" estimate for the private sector in 1973 includes all of mining (SIC 10 - 14).

3/ Comparable data are not available for 1973.

4/ Rate for units with 1,000 or more employees.

NOTES: Dashes indicate no data reported or data that do not meet publication guidelines.

1/ Industry totals (Division and 2-digit SIC codes) include data for industries not shown separately.

2/ Standard Industrial Classification Manual, 1967 Edition.

3/ The incidence rates represent the number of injuries and illnesses per 100 full-time workers.

4/ The mean incidence rate is calculated as: (N/EH) X 200,000, where

N = number of injuries and illnesses
 EH = total hours worked by all employees during calendar year
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year),

The median incidence rate is the middle measure in the distribution; half of the establishments have an incidence rate more than the median rate; half have an incidence rate less than the median rate.

The middle range (interquartile) is defined by 2 measures; a fourth of the establishments have a rate less than the first quartile rate and a fourth have a rate more than the third quartile rate.

5/ Data conforming to OSHA definitions for coal and lignite mining (SIC 11 and 12) and metal and nonmetal mining (SIC 10 and 14) and for railroads (SIC 401), were provided by the Mining Enforcement and Safety Administration, U.S. Department of the Interior, and by the Federal Railroad Administration, U.S. Department of Transportation, respectively.

NOTES: Asterisks indicate that quartile rates were not derived because fewer than 25 establishment reports were included in the industry employment-size group.

1/ Industry division totals include data for industries not shown separately.

2/ Standard Industrial Classification Manual, 1967 Edition.

3/ The incidence rates represent the number of illnesses per 100 full-time workers, and were calculated as: $(N/EH) \times 200,000$ where

N = number of illnesses

EH = total hours worked by all employees during calendar year

200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

4/ Includes data for the following illness categories which are not shown separately: dust diseases of the lungs (pneumoconioses), respiratory conditions due to toxic agents, and poisoning (systemic effects of toxic materials). The incidence rates for these illness categories are not presented because the rates for an overwhelming majority of the 2-digit SIC levels were less than .05 per 100 full-time workers. These categories are not included in the classification "all other occupational illnesses."

5/ Separate illness data for coal and lignite mining (SIC 11-12), and metal and nonmetal mining and quarrying (SIC 10 and 14) were not available for inclusion in the estimates.

6/ Data conforming to OSHA definitions for railroads (SIC 401), which is included in railroad transportation, were provided by the Federal Railroad Administration, U.S. Department of Transportation.

NOTES: Asterisks indicate an incidence rate less than .05 per 100 full-time workers. Dashes indicate no data reported or data that do not meet publication guidelines.

1/ Standard Industrial Classification Manual, 1967 Edition.

2/ The incidence rates represent the number of injuries and illnesses per 100 full-time workers, and were calculated as: (N/EH) X 200,000, where

N = number of injuries and illnesses
 EH = total hours worked by all employees during month or calendar year
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

The monthly incidence rates were derived from the monthly distribution of injury and illness data collected on the 1974 survey form (OSHA No. 103) and approximations of employee-hours worked by month. Monthly employee-hours were derived by applying percentage distribution factors to the annual hours worked figure for all employees estimated from the survey data. These distribution factors were based on the number of production workers and the average weekly hours of production workers for the industry by month.

3/ Incidence rates for "private sector" by month include data for occupational injuries and illnesses for the agriculture, forestry, and fisheries division, and oil and gas extraction (SIC 13), but exclude coal and lignite mining (SIC 11-12), and metal and nonmetal mining and quarrying (SIC 10 and 14).

NOTE: n.e.c. = not elsewhere classified

1/ Industry division totals include data for industries not shown separately.

2/ Standard Industrial Classification Manual, 1967 Edition.

3/ Separate injury and illness data for coal and lignite mining (SIC 11-12), and metal and nonmetal mining and quarrying (SIC 10 and 14) were not available for inclusion in the estimates for the private sector.

4/ Data conforming to OSHA definitions for coal and lignite mining (SIC 11 and 12) and metal and nonmetal mining (SIC 10 and 14), and for railroads (SIC 401), which is included in railroad transportation, were provided by the Mining Enforcement and Safety Administration, U.S. Department of the Interior, and by the Federal Railroad Administration, U.S. Department of Transportation, respectively.

NOTES: Asterisks are shown for estimates of fewer than 50 cases. Dashes indicate no data reported, data not available, or data that do not meet publication guidelines. Because of rounding, the components may not add to the totals.

Approximations of average lost workdays per lost workday injury and illness case for 3 and 4-digit SIC levels can be derived by dividing the incidence rate of lost workdays for injuries and illnesses by the incidence rate for lost workday injury and illness cases appearing in table 1.

Lost workdays for the 2-digit SIC levels shown in this table can be approximated by multiplying estimates of the number of lost workday cases by the average lost workdays per lost workday case.

SOURCE: Bureau of Labor Statistics, U.S. Department of Labor.

Appendix A. Scope of Survey and Technical Notes

Scope of survey

The survey relates to employers in the following private industries: Agriculture, forestry, and fisheries, SIC 01-09; oil and gas extraction, SIC 13; contract construction, SIC 15-17; manufacturing, SIC 19-39; transportation and public utilities, SIC 41-49; wholesale and retail trade, SIC 50-59; finance, insurance, and real estate, SIC 60-67; and services, SIC 70-89, except SIC 88. Excluded from the survey were self-employed individuals; railroad employers; employers covered by the Coal Mine Health and Safety Act and the Metallic and Nonmetallic Mine Safety Acts; and Federal, State, and local government units.

Data conforming to OSHA definitions for coal, metal, and nonmetal mining and railroads were obtained from other Federal agencies which have statutory authority affecting occupational safety and health. The Mining Enforcement and Safety Administration, U.S. Department of the Interior, furnished data for most of mining; the Federal Railroad Administration, U.S. Department of Transportation, furnished data for railroads. In a separate reporting system, agencies of the Federal Government are filing reports comparable to those of private industry with the Secretary of Labor. At this time, State and local government agencies are not represented in the national sample.

About 253,000 national sample units were selected to participate in the survey; of these, about 33,000 questionnaires were not included in the final count because the units were no longer in operation, were not within the scope of the survey, were included at another location, were sent duplicate forms, or were not mailable. Second mailings and telephone calls to nonrespondents resulted in replies from approximately 92 percent of these, or about 202,000 units. The 1974 occupational injury and illness national estimates included reports from about 64,000 manufacturing and 138,000 nonmanufacturing units.

Survey questionnaire

The 1974 survey questionnaire requested information concerning average employment during the calendar year; total employee-hours worked; type of business activity; number of occupational injuries and illnesses by month; the first month of an OSHA compliance inspection; injuries and seven categories of occupational illnesses by fatalities, lost workday cases, and nonfatal cases without lost workdays; and the number of cases in which employees were transferred or terminated as a result of a job-related injury or illness.

Sample design

The sample was selected to produce estimates of the number of occurrences and incidence rates of occupational injuries and illnesses in the States and for the Nation as a whole.

Because separate estimates by industry are required by the Occupational Safety and Health Administration, the universe was stratified into industries according to the 1967 edition of the *Standard Industrial Classification Manual*, published by the Office of Management and Budget.

A sample size necessary to produce a certain level of precision in the estimate of incidence rates was then determined for each industry. Measures of the variability of incidence rates calculated in previous occupational injuries and illnesses surveys, along with the number of establishments in the industry and employment in large establishments, were used to calculate a sample size for each industry. The number of employees in large establishments was then used as a control on the sample size. When industries were dominated by a few large establishments, smaller samples were necessary if the large establishments were included in the sample with certainty. Industries with higher expected incidence rates tended to be subject to more variability and, therefore, were allotted a proportionately larger sample than industries with lower rates.

Within an industry, the number of injuries and illnesses an establishment experiences varies with the employment of the establishment. Accordingly, the universe of establishments within an industry was stratified by employment and an optimum allocation was achieved by distributing the sample to each employment-size group proportionate to the total employment in the size group. The sampling ratios for various employment-size groups range from all units above a certain size-class selected with certainty through declining proportions in each smaller employment-size group. Sample sizes were then adjusted to produce integral sampling ratios.

Because the survey is a Federal-State cooperative program and the data must also meet the needs of participating State grant agencies, the universe was then stratified into States prior to sample selection. The ratios determined for each industry-employment-size group were used to select a sample within a State-industry-employment-size group sampling cell. A segment of each State sample was used to generate national estimates.

Estimating procedures

The injury and illness data for all reporting units in each industry-employment-size group were expanded by the

inverse of the sampling ratio and benchmarked to the appropriate employment level in each industry to obtain the estimates. A benchmark factor for each estimating cell was derived by dividing the benchmark total employment by the weighted average employment derived from the sample. The factor served to adjust for additions to the universe and nonresponse within each industry-employment-size cell.

Federal-State cooperation

Under grant arrangements with State agencies, respondents complete a single reporting form which is used to generate both national and State estimates. This eliminates duplicate reporting by respondents and, together with the use of identical techniques at the national and State levels, ensures maximum comparability of estimates.

Industrial classification

Reporting units are classified into industries by their principal product or activity, determined from information entered in section V (Nature of Business) of the survey questionnaire. For a reporting unit making more than one product or engaging in more than one activity, data for the unit are included under the industry indicated by the most important product or activity.

Rounding of published estimates

The original tabulations on which data of the number of recorded fatalities, and nonfatal injuries and illnesses are based show all estimates to the nearest whole unit. Estimates appearing in tables 7 and 8 are rounded to the nearest thousand. Derived percents are computed after the estimates have been rounded to the nearest thousand.

Reliability of estimates

Estimates based on a sample may differ from figures that would have been obtained had a complete census of establishments been possible, using the same schedules or procedures. As in any survey, the results are subject to errors of response and reporting, as well as sampling variability. Errors of response and reporting are minimized through comprehensive edit procedures and followup contacts with employers.

The relative error is a measure of sampling variability; that is, variations which occur by chance because only a sample of the establishments are in the survey. In conjunction with the estimates, the relative standard error serves to define the confidence intervals or ranges that would include the comparable complete-coverage value. The chances are about two out of three that a complete census would produce an estimate in the range of one standard error below to one standard error above the estimated value. The relative standard errors shown in table A-1 apply to the national estimates of fatalities appearing in table 7. Relative standard errors in table A-2 apply to both

national incidence rates appearing in table 1, table 2 (1974 incidence rates), table 3 (1974 "all sizes"), table 4 (mean incidence rate for "all sizes"), table 5 (total occupational illnesses), and table 6 (1974 annual average); and to national estimates of the number of occupational injuries and illnesses appearing in tables 7, 8, and 9 ("total"). These relative errors approximate the relative errors of the incidence rates. Because of the complex two-stage ratio estimation procedure, most relative errors were computed using a simplified form of the variance estimation formulas. The more complex variance formulas were used for a few of the items, resulting in some higher estimates and some lower estimates of relative errors as compared to the simplified method.

As an example of the use of these relative errors, general building construction (SIC 15) has an estimated incidence rate for total cases of 19.1 per 100 full-time workers and a relative error of 3 percent. The chances are 2 out of 3 that a complete census would produce a rate between 18.5 and 19.7; the chances are 19 out of 20 that the rate produced from a complete count would be between 18.0 and 20.2. For the number of job-related injuries and illnesses resulting in lost workdays, the published rate is 5.7 per 100 full-time workers with a 4 percent relative error. The chances are 2 out of 3 that a census would show a rate between 5.5 and 5.9 and 19 out of 20 that the rate would be between 5.2 and 6.2. Similarly, the number of occupational injuries and illnesses estimated for SIC 15 was 175,300 with a relative error of 3 percent. Thus, the chances are 2 out of 3 that a census would show a number between approximately 170,000 and 180,600 and 19 out of 20 that the number would be within a range of approximately 164,800 to 185,800.

Publication guidelines

The BLS tabulating system generates occupational injury and illness estimates for approximately 800 SIC industry levels. This bulletin, however, excludes estimates for several 2-, 3-, and 4-digit SIC levels if one of the following situations occurred:

1. Estimates for the industry level were based on reports from fewer than three companies. Moreover, if three or more companies reported data for the industry, the employment of one firm could not constitute 50 percent or more of the employment for the industry, or two companies combined could not equal or exceed 75 percent of the industry employment.
2. 1974 annual average employment for the industry was fewer than 10,000. However, industries with annual average employment of fewer than 10,000 were published if the majority of the employment for an industry was reported in the survey.
3. Relative standard error for lost workday cases at one standard deviation was more than 15 percent for the industry level.

4. Benchmark factor for the industry level was less than .90 or greater than 1.49.

Data for an unpublished industry are included in the total shown for the broader industry level of which it is a part.

In addition to deleting industries, selected items of data were suppressed for publishable industries when the relative standard error for the estimate reached or exceeded 60 percent.

Table A-1. Relative standard errors for fatalities, private sector, by industry division, United States, 1974

Industry	Relative standard error (percent) ^{1/}

^{1/} See discussion of reliability of estimates on p. 76.

NOTES: Asterisks are shown for estimates with a relative standard error of less than .5, or for estimates with a relative standard error of zero. Dashes indicate no data reported or data that do not meet publication guidelines.

Relative standard errors were not calculated for the mining division, coal and lignite mining (SIC 11-12), metal and nonmetal mining and quarrying (SIC 10 and 14), and railroads (SIC 401).

n.e.c. = not elsewhere classified

SOURCE: Bureau of Labor Statistics, U.S. Department of Labor.

Gentlemen:

The Williams-Steiger Occupational Safety and Health Act of 1970 requires the Secretary of Labor to collect, compile, and analyze statistics on occupational injuries and illnesses. This is accomplished through a joint, Federal-State survey program with States that have received Federal grants for collecting and compiling statistics. Establishments are selected for this survey on a sample basis with varying probabilities depending upon size.

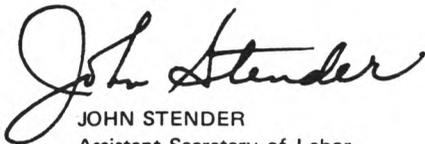

You have been selected to participate in the nationwide Occupational Injuries and Illnesses Survey for 1974. Under the Occupational Safety and Health Act, your report is mandatory.

The following items are enclosed for your use: (1) Instructions for completing the form; (2) Form OSHA No. 103 and a copy for your files; and (3) An addressed return envelope. Please complete Form OSHA No. 103 and return it within three weeks in the envelope provided.

If you have any questions about this survey, contact the survey collection agency indicated on Form OSHA No. 103.

Thank you for your cooperation with this important survey.

Sincerely,

JOHN STENDER
Assistant Secretary of Labor

**INSTRUCTIONS FOR COMPLETING FORM OSHA NO. 103
1974 OCCUPATIONAL INJURIES AND ILLNESSES SURVEY
(covering calendar year 1974)**

SURVEY REPORTING REGULATIONS

Title 29, Part 1904.20-22 of the Code of Federal Regulations requires that: each employer shall return the completed survey form, OSHA No. 103, within 3 weeks of receipt in accordance with the instructions shown below.

FAILURE TO COMPLY WITH THE REPORTING REQUIREMENTS MAY RESULT IN THE ISSUANCE OF CITATIONS AND ASSESSMENTS OF PENALTIES.

Change of Ownership - When there has been a change of ownership during the report period, the records of the current owner and the preserved records of the previous owner are to be incorporated in the report. Explain fully under "Comments."

Partial-Year Reporting - For establishments which were not in existence for the entire report year, the report should cover the portion of the period during which the establishment(s) was in existence. Explain fully under "Comments."

SECTION I - ESTABLISHMENTS INCLUDED IN THIS REPORT

This report should include only those establishments located in, or identified by, the Report Location or Identification designation which appears below your mailing address. This designation may be a geographical area, usually a county or city, or it could be a brief description of your operation within a geographical area. If you have any question concerning the coverage of this report, please contact the agency identified on the OSHA No. 103 report form.

Enter in Section I the number of establishments (as defined below) included in this report.

DEFINITION OF ESTABLISHMENT

An **ESTABLISHMENT** is defined as - a single physical location where business is conducted or where services or industrial operations are performed. (For example: a factory, mill, store, hotel, restaurant, movie theater, farm, ranch, bank, sales office, warehouse, or central administrative office.)

For firms engaged in activities such as construction, transportation, communication, or electric, gas and sanitary services, which may be physically dispersed, reports should cover the place to which employees normally report each day.

Reports for personnel who do not primarily report or work at a single establishment, such as traveling salesmen, technicians, engineers, etc., should cover the location from which they are paid or the base from which personnel operate to carry out their activities.

SECTION II - AVERAGE EMPLOYMENT IN 1974.

Enter in Section II the **average** of full and part-time employees you had during calendar year 1974 in the establishment (s) included in this report. Count all classes of employees, including seasonal, temporary, administrative, supervisory, clerical, professional, technical, sales, delivery, installation, construction, and service personnel, as well as operating and related workers.

Average employment should be computed by summing the employment from all payroll periods during 1974 and then dividing that sum by the number of such payroll periods. For example, if you have monthly payroll periods, add the employment for the 12 periods and divide this sum by 12 to derive your **average** employment for 1974.

SECTION III - TOTAL HOURS WORKED IN 1974

Enter in Section III the **total** number of hours actually worked by all classes of employees during 1974. Be sure to include **ONLY** time on duty. **DO NOT include any non-work time** even though paid, such as vacations, sick leave, holidays, etc. The hours worked figure should be obtained from payroll or other time records wherever possible; if **hours worked** are not maintained separately from **hours paid**, please enter your best estimate. If actual hours worked are not available for employees paid on commission, salary, by the mile, etc., hours worked may be estimated on the basis of scheduled hours or 8 hours per workday. (Example - If a group of 10 salaried employees worked an average of 8 hours per day, 5 days a week, for 50 weeks of the report period the total hours worked for this group would be $10 \times 8 \times 5 \times 50 = 20,000$ hours for the report period.)

SECTION IV - SUPPORT ACTIVITIES PERFORMED FOR OTHER ESTABLISHMENTS OF YOUR COMPANY

It is necessary to know whether this report includes any establishment (s) whose **primary** function is to provide supporting **services** to other establishments of **your** company. The more important examples include central administrative (headquarters or district) offices; research, development, or testing facilities; and storage (warehouses).

Answer "No" if (a) services are not the primary function of any establishment(s) included in this report or (b) if services are provided but only on a **contract or fee basis** for the general public or for other business firms.

Answer "Yes" **only** if supporting services are provided to other establishments of **your** company. Also, indicate the primary type of service or support provided by checking as many boxes as apply. For example, if one separate establishment is a central administrative office and another is a warehouse, check both (1) and (3). If several supporting services are performed in one establishment at a single location, check the one box which best describes the primary activity.

SECTION V - NATURE OF BUSINESS IN 1974

In order to assign the appropriate nature of business code, we must have information about the specific economic activity carried on by the establishment (s) included in your report during calendar year 1974.

NOTE: If more than one establishment is included (as indicated in Section I), information in Section V should reflect the combined activities of all such establishments. One code will be assigned which best indicates the nature of business of the group of establishments as a whole.

Item 1: General Activity - Enter the principal activity during 1974 in general terms such as manufacturing, construction, trade, finance, services, etc.

Item 2: Specific Activity - List in order of importance the **specific** products, lines of trade, types of services, or other economic activities. Provide as much detail as possible. Opposite each entry, please enter the approximate percentage of **1974** annual dollar value of production, sales receipts, etc., as appropriate. Reliable estimates are acceptable.

SECTION VI - RECORDABLE INJURIES AND ILLNESSES

Check the appropriate box. If you checked "Yes" complete the remainder of the questionnaire. If you checked "No" complete Section VII, Part B and Section IX.

SECTION VII - MONTHLY DATA OF RECORDABLE INJURIES AND ILLNESSES

Part A: To complete this part count the number of cases recorded on the LOG OF OCCUPATIONAL INJURIES AND ILLNESSES (OSHA No. 100) keeping the total separate by month. This information can be compiled by reviewing the dates entered in column 2 of the Log.

Part B: Enter the first month in 1974 in which your establishment(s) had an OSHA compliance inspection. Include inspections under the Occupational Safety and Health Act by Federal or State inspectors and other inspections which provide penalties for violation of safety standards. Do not include inspections limited to elevators or boilers.

SECTION VIII - INJURY AND ILLNESS SUMMARY

This section can be completed quickly and easily by copying the data already entered on your form Summary of Occupational Injuries and Illnesses (OSHA No. 102) for 1974, which you should already have completed for each establishment. NOTE: If this report includes **more** than one establishment, the separate OSHA No. 102 summaries for each must be added and the sums entered in Section VIII. However, you should first make sure that each OSHA No. 102 form has been correctly prepared. The OSHA No. 102 form is the summary of cases which have been entered on the Log of Occupational Injuries and Illnesses (OSHA No. 100) during **calendar year 1974**. Please review the Log to make sure that all entries are correct and complete. Each case should be included in only **one** of the three types: Fatalities (Log column 8); Lost Workday Cases (Log columns 9 and 10); or Nonfatal Cases **Without** Lost Workdays (Log columns 11 and 12). The Summary (OSHA No. 102) should have been completed by summarizing, separately, occupational injuries (code 10) and the seven categories of occupational illnesses (code 21 through 29) according to instructions on the back of the Summary form. Please remember that, if an employee's loss of workdays is still continuing at the time the summary is completed, you should estimate the number of **future** workdays he will lose and add this estimate to the actual workdays already lost.

SECTION IX

Please complete all parts, including telephone number. Then return the OSHA No. 103 form (but NOT your file copy) in the self-addressed envelope.

THIS REPORT IS MANDATORY UNDER PUBLIC LAW 91-596
 IT WILL BE USED ONLY FOR ADMINISTRATIVE AND STATISTICAL PURPOSES

OMB APPROVAL NO. 44-R1492
 Approval Expires December 1975

1974 OCCUPATIONAL INJURIES AND ILLNESSES SURVEY

(Covering Calendar Year 1974)

COMPLETE THIS REPORT WHETHER OR NOT THERE WERE
 ANY RECORDABLE OCCUPATIONAL INJURIES OR ILLNESSES.

SIC Wt.

I. ESTABLISHMENTS INCLUDED IN THIS REPORT

This report should include only those establishments located in, or identified by, the Report Location or Identification which appears below your mailing address on this form. Enter the number of establishments (see definition on page 1) included in this report:

II. AVERAGE EMPLOYMENT IN 1974

Enter the average number of employees during calendar year 1974. Count all classes of employees, including seasonal, temporary, part-time, etc. See instructions for examples of computing your average employment. (Round to the nearest whole number)

III. TOTAL HOURS WORKED IN 1974

Enter the total number of hours actually worked by all employees during 1974. DO NOT include any non-work time even though paid, such as vacations, sick leave, holidays, etc. (Round to the nearest whole number)

IV. SUPPORT ACTIVITIES PERFORMED FOR OTHER ESTABLISHMENTS OF YOUR COMPANY

Does this report include any establishment (s) whose primary function is to provide support activities or services exclusively for other establishments of your company?

(1) No (2) Yes

If yes, indicate the primary type of service or support provided (check as many as apply).

- (1) Central administrative office
- (2) Research, development, or testing
- (3) Storage (warehouse)
- (4) Other - Specify _____

V. NATURE OF BUSINESS FOR 1974

1. Indicate the general type of activity performed during 1974 by the establishment(s) included in this report (i.e., manufacturing, wholesale trade, retail trade, construction, services, finance, etc.):

2. Enter in order of importance the principal products manufactured, lines of trade, specific services, or other description of specific activities for 1974.

For each entry, also include the approximate percent of total 1974 annual value of production, sales, or receipts.

- (1) _____ %
- (2) _____ %
- (3) _____ %
- (4) _____ %
- (5) _____ %
- (6) _____ %

VI. RECORDABLE INJURIES AND ILLNESSES

Did you have any recordable injuries or illnesses during calendar year 1974? (Check one)

- (1) No - complete Section VII, Part B and Section IX
- (2) Yes - complete Sections VII, VIII and IX

VII. MONTHLY DATA OF RECORDABLE INJURIES AND ILLNESSES

A. Of the Total Recordable Occupational Injuries and Illnesses (Section VIII, Line 31 columns 3, 4, and 7), how many occurred in the following months?

Calendar Year 1974

Jan. _____	July _____
Feb. _____	Aug. _____
Mar. _____	Sept. _____
Apr. _____	Oct. _____
May _____	Nov. _____
June _____	Dec. _____

B. If your establishment(s) had an OSHA compliance inspection during calendar year 1974, please enter the month of

inspection _____

REPORT LOCATION OR IDENTIFICATION →

--	--

VIII. INJURY AND ILLNESS SUMMARY (Covering Calendar Year 1974)

- INSTRUCTIONS:**
- This section may be completed by Copying data from OSHA Form No. 102 "Summary, Occupational Injuries and Illnesses" which you are required to complete and post in your establishment.
 - Leave Section VIII blank if there were no recordable injuries or illnesses during 1974.
 - Code 30 - Add all Occupational Illnesses (Code 21+ 22+ 23+ 24+ 25+ 26+ 29) and enter on this line for each column (3) through (8).
 - Code 31 - Add Occupational Injuries (Code 10) and the sum of all Occupational Illnesses (Code 30) and enter on this line for each column (3) through (8).

		FATALITIES (deaths)	LOST WORKDAY CASES			NONFATAL CASES WITHOUT LOST WORKDAYS*	
Code (1)	Category (2)		Number of Cases (4)	Number of Cases Involving Permanent Transfer to Another Job or Termination of Employment (5)	Number of Lost Workdays (6)	Number of Cases (7)	Number of Cases Involving Transfer to Another Job or Termination of Employment (8)
10	OCCUPATIONAL INJURIES						
21	OCCUPATIONAL ILLNESSES	Occupational Skin Diseases or Disorders					
22		Dust Diseases of the Lungs (Pneumoconioses)					
23		Respiratory Conditions Due To Toxic Agents					
24		Poisoning (Systemic Effects of Toxic Materials)					
25		Disorders Due To Physical Agents (Other Than Toxic Materials)					
26		Disorders Due To Repeated Trauma					
29		All Other Occupational Illnesses					
30	SUM of ALL OCCUPATIONAL ILLNESSES (Add Codes 21 thru 29)						
31	TOTAL OF ALL OCCUPATIONAL INJURIES AND ILLNESSES (Add Codes 10+30)						

* Nonfatal Cases Without Lost Workdays - Cases resulting in: Medical treatment beyond first-aid, diagnosis of occupational illness, loss of consciousness, restriction of work or motion, or transfer to another job (without lost workdays).

Appendix D. State Data on Occupational Injuries and Illnesses

Data for the following States were available for inclusion in this bulletin:

D- 1. Alaska	D-15. Louisiana	D-29. Oregon
D- 2. Arizona	D-16. Maine	D-30. Pennsylvania
D- 3. Arkansas	D-17. Maryland	D-31. South Carolina
D- 4. California	D-18. Massachusetts	D-32. South Dakota
D- 5. Connecticut	D-19. Minnesota	D-33. Texas
D- 6. Delaware	D-20. Mississippi	D-34. Utah
D- 7. District of Columbia	D-21. Missouri	D-35. Vermont
D- 8. Florida	D-22. Montana	D-36. Virginia
D- 9. Hawaii	D-23. Nebraska	D-37. Washington
D-10. Idaho	D-24. New Hampshire	D-38. West Virginia
D-11. Indiana	D-25. New Jersey	D-39. Wisconsin
D-12. Iowa	D-26. New Mexico	D-40. Wyoming
D-13. Kansas	D-27. North Carolina	D-41. American Samoa
D-14. Kentucky	D-28. North Dakota	D-42. Guam
		D-43. Virgin Islands

Following are the footnotes which apply to the State tables:

¹ Industry division totals include data for industries not shown separately.

² *Standard Industrial Classification Manual*, 1967 Edition.

³ Annual average employment for nonagricultural industries are based on the establishment survey conducted by the U.S. Department of Labor's Bureau of Labor Statistics, in cooperation with State agencies. Annual average employment for the agriculture, forestry, and fisheries division is a composite of estimates from the BLS survey and estimates provided by the Statistical Reporting Service, U.S. Department of Agriculture.

⁴ The incidence rates represent the number of injuries and illnesses per 100 full-time workers, and were calculated as: $(N/EH) \times 200,000$, where

N = number of injuries and illnesses

EH = total hours worked by all employees during the calendar year

200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

⁵ Because of rounding, the sum of the rates for lost workday cases and nonfatal cases without lost workdays may not equal the total. In addition, the difference between the components may not reflect the fatality rate.

⁶ For 1973, the data include agricultural production (SIC 01) and oil and gas extraction (SIC 13) when such data were available, but excludes railroads and other mine activities. For 1974, the data include all industries with the exception of railroads (SIC 401).

NOTES: Asterisks indicate an incidence rate less than .05 per 100 full-time workers. Dashes indicate no data reported, data not generated, or data that do not meet publication guidelines.

For 1973, agricultural services, forestry, and fisheries (SIC 07-09) is included in the services division total for those States which did not generate estimates for the agriculture, forestry, and fisheries division. For 1974, these industries are included in the agriculture, forestry, and fisheries division; data for the services division are not comparable from year to year in all States.

Employment estimates were not available for American Samoa, Guam, and the Virgin Islands from the establishment survey conducted by the U.S. Department of Labor's Bureau of Labor Statistics, in cooperation with State agencies.

n.a. = employment estimates are not available.

n.e.c. = not elsewhere classified.

Table D-1. Alaska: Occupational injury and illness incidence rates, and average lost workdays per lost workday case, by industry, 1974 and 1973

Appendix E. Glossary of Terms

- Average lost workdays per lost workday case** The number of workdays lost divided by the number of lost workday cases.
- Cooperative program** A program jointly conducted by the States and the Federal Government to collect occupational injury and illness statistics.
- Employment-size group** A grouping of establishments with a specified range of employment.
- Incidence rate** Number of injuries and illnesses, or lost workdays experienced by 100 full-time workers. The rate is calculated as:

$$\frac{N}{EH} \times 200,000, \text{ where,}$$

N = number of occupational injuries and illness, injuries, illnesses, or lost workdays
 EH = total hours worked by all employees during calendar year
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

The *median* incidence rate is the middle measure in the distribution—half of the establishments have an incidence rate more than and half less than the median rate. The *middle range* (interquartile) is defined by two measures—a fourth of the establishments have a rate less than the first quartile and a fourth a rate more than the third quartile rate.

- Lost workdays** The number of days the employee would have worked but could not because of occupational injury or illness. The number of lost workdays does not include the day of injury. The number of days includes all days (consecutive or not) on which, because of the injury or illness: (1) the employee would have worked but could not, or (2) the employee was assigned to a temporary job, or (3) the employee worked at a permanent job less than full time, or (4) the employee worked at a permanently assigned job but could not perform all duties normally assigned to it.
- Medical treatment** Includes treatment administered by a physician or by registered professional personnel under the standing orders of a physician. Medical treatment does NOT include first-aid treatment (one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, and so forth, which do not ordinarily require medical care) even though provided by a physician or registered professional personnel.
- Occupational illness** Any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact, and which can be included in the categories listed below. The following categories were used by employers to classify recordable occupational illnesses:
- (21) Occupational skin diseases or disorders
 Examples: Contact dermatitis, eczema, or rash caused by primary irritants and sensitizers or poisonous plants; oil acne; chrome ulcers; chemical burns or inflammations; etc.

- (22) Dust diseases of the lungs (pneumoconioses)
Examples: Silicosis, asbestosis, coal worker's pneumoconiosis, byassinosis, and other pneumoconiosis
- (23) Respiratory conditions due to toxic agents
Examples: Pneumonitis, pharyngitis, rhinitis or acute congestion due to chemicals, dusts, gases or fumes; farmer's lung; etc.
- (24) Poisoning (systemic effects of toxic materials)
Examples: Poisoning by lead, mercury, cadmium, arsenic, or other metals; poisoning by carbon monoxide, hydrogen sulfide or other gases; poisoning by benzol, carbon tetrachloride, or other organic solvents; poisoning by insecticide sprays such as parathion, lead arsenate; poisoning by other chemicals such as formaldehyde, plastics, and resins; etc.
- (25) Disorders due to physical agents (other than toxic materials)
Examples: Heatstroke, sunstroke, heat exhaustion and other effects of environmental heat; freezing, frostbite and effects of exposure to low temperatures; caisson disease; effects of ionizing radiation (isotopes, X-rays, radium); effects of nonionizing radiation (welding flash, ultraviolet rays, microwaves, sunburn); etc.
- (26) Disorders due to repeated trauma
Examples: Noise-induced hearing loss; synovitis, tenosynovitis, and bursitis; Raynaud's phenomena; and other conditions due to repeated motion, vibration, or pressure.
- (29) All other occupational illnesses
Examples: Anthrax, brucellosis, infectious hepatitis; malignant and benign tumors, food poisoning, histoplasmosis, coccidioidomycosis, etc.

Occupational injury

Any injury such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from exposure in the work environment.

Recordable occupational injuries and illnesses

Any occupational injuries or illnesses which result in:

- (1) **FATALITIES**, regardless of the time between the injury and death, or the length of the illness; or
- (2) **LOST WORKDAY CASES**, other than fatalities, that result in lost workdays; or
- (3) **NONFATAL CASES WITHOUT LOST WORKDAYS**, which result in transfer to another job or termination of employment, or require medical treatment, or involve loss of consciousness, or restriction of work or motion. This category also includes any diagnosed occupational illnesses which are reported to the employer but are not classified as fatalities or lost workday cases.

Report form

Refers to survey form OSHA No. 103 which is completed and returned by the selected sample unit.

Standard industrial classification (SIC)

A classification system developed by the Office of Statistical Standards, Office of Management and Budget, Executive Office of the President for use in the classification of establishments by type of activity in which engaged. Each establishment is assigned an industry code for its major activity which is determined by the product or group of products, or services rendered. Establishments may be classified in 2-digit, 3-digit, or 4-digit industries, according to the degree of information available.

State (when mentioned alone)

Refers to a State of the United States, the District of Columbia, American Samoa, Guam, Puerto Rico, and the Virgin Islands.

Statistical grant agencies

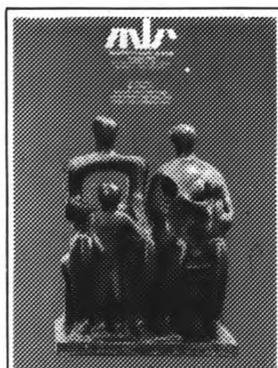

Those agencies designated by the Governor to participate in the BLS Federal-State statistical program. The States and jurisdictions share half the costs with the Federal Government in collecting, processing, and analyzing a body of data relevant to administering Federal and State occupational safety and health legislation.
