[1] Percent not shown where base is less than 35,000.

NOTE: Vietnam-era veterans are males who have served in the Armed Forces between August 5,1964 and May 7,1975. Nonveterans are males who never served in the Armed Forces. Although Public Law 96-466 (the Veterans Rehabilitation and Education Amendments of 1980), which became effective October 17, 1980, requires publication of labor market data for veterans who actually served in the Vietnam theater of operations, these data are not presently collected. Because of the widespread interest in statistics for all Vietnam-era veterans, the BLS is continuing publication of annual data for this group since these data are currently available.

[1] Excludes private household workers.

[2] Data for 1966 forward refer to persons 16 years and over; 14 years and over for prior years.

NOTE: Pay status is not available separately for bad weather and industrial dispute; these categories are included in "all other reasons". Estimates for "all other reasons" by pay status may be biased because of high response variance and should be used with caution.

Black and other	1,695	33.6	5.6	71.0	26.5	14.7	5.6	1.57
Males	850	36.1	5.6	72.2	24.0	16.8	6.4	1.61
Females	845	31.0	5.6	69.8	29.1	12.5	4.9	1.53

[1] Percent not shown where base is less than 35,000.

NOTE: The jobseekers total is less than the total unemployed because it excludes persons on layoff or waiting to begin a new wage and salary job within 30 days, groups for whom jobseeking information is not collected. It should also be noted that the percent using each method will always total more than 100 because many jobseekers use more than one method.

C-4. Extent of unemployment during the year by sex, 1958-81—Continued

(Percent)

Extent of unemployment	1974	1975	1976	1977	1978	1979	1980	1981
	Total							
Total who worked during the year	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Year-round workers[1] with 1 or 2 weeks of unemployment	5.4	4.7	4.2	3.8	4.3	5.2	4.9	5.7
Part-year workers[2] with unemployment	94.6	95.3	95.8	96.2	95.7	94.8	95.1	94.3
1 to 4 weeks	27.4	21.2	22.1	24.8	26.0	25.9	20.8	19.5
5 to 10 weeks	22.8	18.8	19.9	21.2	21.8	21.5	20.1	19.7
11 to 14 weeks	11.3	12.4	12.9	12.6	13.9	14.2	13.0	13.7
15 to 26 weeks	20.6	24.0	22.8	21.9	20.7	20.5	23.4	24.1
27 weeks or more	12.6	19.0	18.3	15.9	13.5	12.8	17.8	17.4
Total with 2 or more spells of unemployment[3]	36.0	31.3	32.7	32.6	32.5	32.2	31.7	34.0
2 spells	18.7	16.7	16.9	17.2	17.0	17.0	16.8	18.3
3 or more spells	17.3	14.6	15.8	15.4	15.5	15.2	14.9	15.8
	Males							
Total who worked during the year	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Year-round workers[1] with 1 or 2 weeks of unemployment	6.3	5.5	4.7	4.3	5.0	6.4	6.1	6.1
Part-year workers[2] with unemployment	93.7	94.5	95.3	95.7	95.0	93.6	93.9	93.9
1 to 4 weeks	23.2	17.0	18.2	20.5	20.8	21.2	16.6	16.6
5 to 10 weeks	23.6	18.6	20.1	21.5	22.7	22.4	20.1	19.1
11 to 14 weeks	12.0	13.1	12.9	13.7	15.1	15.0	13.6	13.9
15 to 26 weeks	22.0	26.7	24.1	24.3	22.2	21.6	25.1	25.5
27 weeks or more	13.0	19.3	20.0	15.8	14.3	13.4	18.5	18.8
Total with 2 or more spells of unemployment[3]	40.6	34.0	36.6	36.2	35.0	35.7	34.5	37.3
2 spells	20.4	17.3	18.4	18.7	17.7	18.1	17.6	19.4
3 or more spells	20.3	16.6	18.2	17.5	17.3	17.6	16.9	17.9
	Females							
Total who worked during the year	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Year-round workers[1] with 1 or 2 weeks of unemployment	4.1	3.7	3.5	3.2	3.4	3.6	3.3	5.1
Part-year workers[2] with unemployment	95.9	96.3	96.5	96.8	96.6	96.4	96.7	94.9
1 to 4 weeks	33.2	27.1	27.2	30.4	32.4	32.0	26.7	23.5
5 to 10 weeks	21.6	19.1	19.6	20.7	20.6	20.3	20.1	20.5
11 to 14 weeks	10.5	11.7	13.0	11.1	12.4	13.1	12.3	13.5
15 to 26 weeks	18.6	19.8	20.8	18.5	18.7	19.0	21.0	22.1
27 weeks or more	12.0	18.7	15.9	16.0	12.5	12.0	16.7	15.3
Total with 2 or more spells of unemployment[3]	29.7	27.5	27.5	27.9	29.4	27.7	27.7	29.4
2 spells	16.6	15.9	15.0	15.2	16.2	15.6	15.6	16.7
3 or more spells	13.1	11.6	12.5	12.7	13.2	12.1	12.1	12.8

[1] Worked 50 or more weeks.
[2] Worked less than 50 weeks.
[3] Each continuous period of unemployment of at least 1 week's duration is considered one spell of unemployment. The number of weeks of unemployment during the year represents the total number of weeks accumulated in all spells of unemployment during which a person looked for work and did not work at all.
[4] Not available.

NOTE: Data for 1966 forward refer to persons 16 years and over; 14 years and over for prior years.

[1] Not available.

NOTE: Data in tables C-6 and C-8 refer to the civilian population (including institutional) 14 years and over for 1947-66, 16 years and over beginning with 1967; beginning with 1972, data refer to the civilian noninstitutional population. Male members of the Armed Forces living off post or with their families on post are included in the male population and labor force figures. Data for the years 1947-49 and 1951-55 were collected in April.

NOTE: Data for the years 1948-49 and 1951-55 were collected in April. In tables C-11 through C-13, own children refer to children of the husband, wife, or person maintaining the family. Included are sons, daughters, and adopted children. Excluded are other related children, such as grandchildren, nieces, nephews, and cousins, and unrelated children.

[1] The number of husbands in married-couple families shown here is smaller than the number shown as married, spouse present in other tables because it excludes married couples living in households where a relative is the householder.

[2] This category may also include a wife or other member who is unemployed.

[3] Includes members of the Armed Forces living off post or with their families on post.

[1] Persons whose only extra jobs are as unpaid family workers are not counted as dual jobholders.

NOTE: For the years 1956-58 and 1959-60 data relate to the survey weeks in July and December respectively. Surveys on dual jobholders were not conducted in 1961, 1967, and 1968. Data for 1969 forward refer to persons 16 years and over; 14 years and over for prior years. Data have not been adjusted to reflect 1980 census population controls.

1980	47,740	1,408	39,561	1,859	3,984	928

[1] Excludes private household workers for the years 1973-77.

[2] Four day workers comprise about three-fifths of all workers of fewer than 5 days.

[3] Includes only members of a labor union or an employee association similar to a union prior to 1977. Beginning with 1977 also includes nonmembers whose jobs are covered by a union or employee association contract.

NOTE: Data in tables C-27 through C-29 have not been adjusted to reflect 1980 census population controls.

C-38. Absence rates for full-time nonagricultural wage and salary workers by reason for absence, May, 1973-80

Measure	1973	1974	1975	1976	1977	1978	1979	1980
ABSENT WORKERS								
Total working	55,283	56,248	54,700	56,414	58,422	60,153	64,810	64,043
Total absent	3,614	3,499	3,332	3,630	3,802	3,966	4,336	3,926
Total incidence rates[1]	6.5	6.2	6.1	6.4	6.5	6.6	6.7	6.1
Illnesses or injuries	4.1	3.7	3.7	4.0	3.9	4.1	3.9	3.6
Miscellaneous reasons	2.4	2.5	2.4	2.5	2.6	2.5	2.8	2.6
HOURS LOST								
Weekly hours usually worked	2,344,970	2,382,300	2,303,410	2,374,910	2,473,740	2,549,220	2,745,060	2,693,930
Weekly hours lost	81,549	79,706	78,873	82,222	87,487	89,888	94,641	89,823
Total inactivity rates[2]	3.5	3.3	3.4	3.5	3.5	3.5	3.4	3.3
Illnesses or injuries	2.4	2.2	2.3	2.3	2.3	2.3	2.2	2.1
Miscellaneous reasons	1.1	1.1	1.1	1.1	1.2	1.2	1.2	1.2

[1] Number of workers absent as a percent of the total working.

[2] Number of hours absent as a percent of the total number of hours usually worked.

NOTE: In tables C-38 through C-41, the universe for May 1979 and 1980 is not strictly comparable to that of previous years. Changes in the placement of questions on the questionaire resulted in an increase in the response rate for usual hours. In addition, the remaining nonresponses were allocated in accordance with standard Bureau of the Census procedures. For further information, see "Computer Method to Process Missing Income and Work Experience Information in the Current Population Survey" by Emmett F. Spiers and Joseph J. Knott, American Statistical Association, *Proceedings of the Social Statistics Section, 1969*. Data in these tables have not been adjusted to reflect 1980 census population controls.

[1] Not available.
[2] Beginning in 1977, data refer to black workers only.
[3] For years prior to 1967, percent not shown where base is less than 100,000; for 1967 forward percent not shown where base is less than 75,000.

NOTE: Because the number of 14 to 15 year olds who are not enrolled in schools is very small, the sampling variability for this group is relatively high.

[1] Refers to married, spouse present, widowed, divorced, or separated women.
[2] For years prior to 1967, percent not shown where base is less than 100,000; for 1967 forward percent not shown where base is less than 75,000.
[3] Beginning in 1977, data refer to black workers only.

NOTE: For the years 1960-63, data on school dropouts cover a 9-month period; for 1964 forward a 12-month calendar year. These data also include persons 14 and 15 years of age, not shown separately. Data on graduates refer to October of the year of graduation.

Explanatory Notes

Collection and Coverage

Statistics on the labor force, employment, unemployment, and persons not in the labor force, classified by a variety of demographic, social, and economic characteristics are derived from the Current Population Survey (CPS), which is conducted by the Bureau of the Census for the Bureau of Labor Statistics. A detailed description of the survey appears in *Concepts and Methods Used in Labor Force Statistics Derived From the Current Population Survey*, Bureau of Labor Statistics Report 463.

The Current Population Survey is conducted using a scientifically selected sample of about 60,000 households designed to represent the civilian noninstitutional population. Households are interviewed on a rotating basis so that three-fourths of the sample is the same for any 2 consecutive months, and one-half is the same from year to year.

In addition to providing monthly statistics on the employment status of the population, the survey, through special inquiries repeated annually in the same month, provides detailed supplementary information for particular characteristics of the population. These inquiries include the extent of work experience of the population, the extent of overtime work at premium pay, work schedules, and the prevalence of multiple jobholding. They also include marital and family status of workers; the annual earnings and income of individuals and families; and the employment status of such groups as working mothers with children, high school graduates and dropouts, and recent college graduates.

Respondents are interviewed to obtain information about the employment status of each member of the household 16 years of age and over. (Separate statistics are also collected and published for 14- and 15-year-olds.) The inquiry relates to activity or status during the calendar week, Sunday through Saturday, which includes the 12th day of the month. Actual field interviewing is conducted in the following week.

Inmates of institutions and persons under 14 years of age are not covered in the regular monthly enumerations and are excluded from the population and labor force statistics shown in this bulletin. Data on members of the Armed Forces are obtained from the Department of Defense.

Concepts and Definitions

The concepts and definitions underlying labor force data have been modified, but not substantially altered, since the inception of the survey in 1940; those used since 1967 are as follows:

Employed persons are (1) all civilians who, during the survey week, did any work at all as paid employees, in their own business, profession, or on their own farm, or who worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family; and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, labor-management disputes, or personal reasons, whether they were paid for the time off or were seeking other jobs.

Included in the total are employed citizens of foreign countries who are temporarily in the United States but not living on the premises of an embassy. Excluded are persons whose only activity consisted of work around the house (painting, repairing, or own home housework) or volunteer work for religious, charitable, and similar organizations.

Unemployed persons are all civilians who had no employment during the survey week, were available for work, except for temporary illness, and (1) had made specific efforts to find employment sometime during the prior 4 weeks, or (2) were waiting to be recalled to a job from which they had been laid off, or (3) were waiting to report to a new job within 30 days.

The civilian labor force comprises all civilians classified as employed or unemployed in accordance with the criteria described above. The "total labor force" also includes members of the Armed Forces stationed either in the United States or abroad.

The unemployment rate represents the number unemployed as a percent of the civilian labor force. This measure can also be computed for groups within the labor force classified by sex, age, race, ethnic origin, marital status, etc.

Duration of unemployment represents the length of time (through the current survey week) during which persons classified as unemployed had been continuously looking for work. For persons on layoff, duration of unemployment represents the number of full weeks since

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

the termination of their most recent employment. A period of 2 weeks or more during which a person was employed or ceased looking for work is considered to break the continuity of the present period of seeking work. Measurements of mean and median duration are computed from a distribution of single weeks of unemployment.

Unemployment is also categorized according to the status of individuals at the time they began to look for work. The reasons for unemployment are divided into four major groups. (1) *Job losers* are persons whose employment ended involuntarily who immediately began looking for work, and persons on layoff. (2) *Job leavers* are persons who quit or otherwise terminated their employment voluntarily and immediately began looking for work. (3) *Reentrants* are persons who previously worked at a full-time job lasting 2 weeks or longer but were out of the labor force prior to beginning to look for work. (4) *New entrants* are persons who never worked at a full-time job lasting 2 weeks or longer. Each of these four categories of the unemployed may be expressed as an unemployment rate or proportion of the entire civilian labor force; the sum of the four rates thus equals the overall unemployment rate.

Jobseekers are all unemployed persons who made specific efforts to find a job sometime during the 4-week period preceding the survey week. Jobseekers do not include those persons unemployed because they (1) were waiting to be called back to a job from which they had been laid off or (2) were waiting to report to a new job within 30 days. Jobseekers are grouped by the methods used to seek work, including going to a public or private employment agency or to an employer directly, seeking assistance from friends or relatives, placing or answering ads, or utilizing some other method. Examples of the "other" category include being on a union or professional register, obtaining assistance from a community organization, or waiting at a designated labor pickup point.

Participation rates represent the proportion of the noninstitutional population that is in the labor force. Two types of participation rates are published: The total labor force participation rate, which is the ratio of the total labor force to the total noninstitutional population, and the civilian labor force participation rate, which is the ratio of the civilian labor force to the civilian noninstitutional population. Participation rates are usually published for sex-age groups, often cross-classified by other demographic characteristics such as race and educational attainment.

Employment-population ratios represent the proportion of the noninstitutional population that is employed.

Not in the labor force includes all persons who are not classified as employed, unemployed, or in the Armed Forces. These persons are further classified as engaged in own-home housework, in school, unable to work because of long-term physical or mental illness, retired, and other. The "other" group includes individuals reported as too old or temporarily unable to work, the voluntarily idle, seasonal workers for whom the survey week fell in an off season and who were not reported as looking for work, and persons who did not look for work because they believed that no jobs were available in the area or that no jobs were available for which they could qualify—discouraged workers. Persons doing only incidental, unpaid family work (less than 15 hours in the specified week) are also classified as not in labor force.

For persons not in the labor force, detailed questions are asked about previous work experience, intentions to seek work, desire for a job at the time of interview, and reasons for not looking for work. These questions are asked only in those households that are leaving the sample after their first or second 4-month interviewing period. Prior to 1970, these questions were asked in those households entering the sample for the first time and those returning for the second 4 months of interviewing.

Occupation, *industry*, and *class of worker* for the employed apply to the job held in the survey week. Persons with two or more jobs are classified in the job at which they worked the greatest number of hours during the survey week. The unemployed are classified according to their last full-time civilian job lasting 2 weeks or more. The classifications of occupations and industries used in data derived from the CPS are defined as in the 1970 Census of Population.

The class-of-worker breakdown specifies wage and salary workers, subdivided into private and government workers; self-employed workers; and unpaid family workers. Wage and salary workers receive wages, salary, commission, tips, or pay in kind from a private employer or from a government unit. Self-employed persons are those who work for profit or fees in their own business, profession, or trade, or operate a farm. Unpaid family workers are persons working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by blood or marriage.

Hours-of-work statistics relate to the actual number of hours worked during the survey week. For example, persons who normally work 40 hours a week but were off on the Columbus Day holiday would be reported as working 32 hours even though they were paid for the holiday. For persons working in more than one job, the figures relate to the number of hours worked in all jobs during the week; all the hours are credited to the major job.

The distribution of employment by hours worked relates to persons at work during the survey week. At-

Federal Reserve Bank of St. Louis

work data differ from data on total employment because the latter include persons in the zero-hours-worked category, with a job but not at work. Included in this latter group are persons who were on vacation, ill, involved in a labor dispute, or otherwise absent from their jobs for voluntary, noneconomic reasons.

Persons who worked 35 hours or more in the survey week are designated as working full time. Persons who worked between 1 and 34 hours are designated as working part time. Part-time workers are classified by their usual status at their present job (either full or part time) and by their reason for working part time during the survey week (economic or other reasons). Economic reasons include: Slack work, material shortages, repairs to plant or equipment, start or termination of a job during the week, and inability to find full-time work. Other reasons include: Labor dispute, bad weather, own illness, vacation, demands of home, housework, school, no desire for full-time work, and full-time worker only during peak season. Persons on full-time schedules include, in addition to those working 35 hours or more, those who worked from 1 to 34 hours for noneconomic reasons and usually work full time.

The full-time labor force consists of persons working on full-time schedules, persons involuntarily working part time (part time for economic reasons), and unemployed persons seeking full-time jobs. *The part-time labor force* consists of persons working part time voluntarily and unemployed persons seeking part-time work. Persons with a job but not at work during the survey week are classified according to whether they usually work full or part time.

Labor force time lost is a measure of aggregate hours lost to the economy through unemployment and involuntary part-time employment and is expressed as a percent of potentially available aggregate hours. It is computed by assuming that: (1) Unemployed persons looking for full-time work lost an average of 37.5 hours, (2) those looking for part-time work lost the average number of hours actually worked by voluntary part-time workers during the survey week, and (3) persons on part time for economic reasons lost the difference between 37.5 hours and the actual number of hours they worked.

White and *black and other* are terms used to describe the race of workers. The black-and-other category includes all persons who identified themselves in the enumeration process to be other than white. In the 1980 decennial census, 83 percent of the black-and-other civilian noninstitutional population, 16 years and over, were black; the remainder were primarily American Indians, Alaskan Natives, and Asians and Pacific Islanders. The term black is used in this volume when the relevant data are provided exclusively for the black population.

Hispanic origin refers to persons who identified themselves in the enumeration process as Mexican, Puerto Rican living on the mainland, Cuban, Central or South American, or of other Hispanic origin or descent.

Major activity: going to school and *Major activity: other* are terms used to describe whether the activity of young persons during the reference week is primarily one of going to school or not. These statistics are published for 16-to 21-year-olds.

Vietnam-era veterans are those who served in the Armed Forces of the United States between August 5, 1964, and May 7, 1975. Data are limited to males in the civilian noninstitutional population; i.e., veterans in institutions and females are excluded. *Nonveterans* are males who never served in the Armed Forces.

The poverty areas classification consists of all census geographical divisions in which 20 percent or more of the residents were poor according to the 1970 decennial census. Persons were classified as poor or nonpoor by using income thresholds adopted by a Federal interagency committee in 1969. These thresholds vary by family size, composition, and residence (farm–nonfarm). While poverty areas have a substantial concentration of low-income residents, many poor persons live outside these areas, and, conversely, the areas include many people who are not poor.

The metropolitan areas classification consists of the total of all areas encompassed by Standard Metropolitan Statistical Areas (SMSA's). The metropolitan area total is based on the number of SMSA's as defined in the 1970 decennial census and does not include any subsequent additions or changes. Nonmetropolitan areas refer to the total of all areas outside SMSA's. The nonmetropolitan total is disaggregated into farm and nonfarm components.

In addition to the above concepts and definitions, the criteria below underlie the special labor force data collected annually in supplements to the monthly CPS. Supplementary surveys are conducted in March to get data on work experience of the population during the preceding year, marital and family characteristics of workers, working mothers with children, educational attainment, and the annual earnings and income of individuals and families. Supplementary data were collected in May on multiple jobholding, premium pay, work schedules, shift work, long hours, and absences. As a result of budget cutbacks, the sample size of the May 1981 supplement was reduced by three-fourths, and the supplement was discontinued altogether in May 1982. Weekly and hourly earnings information was collected in May until 1979; for 1979 forward, quarterly and annual averages are available. Data are collected in October on school enrollment and the employment status of high school graduates and dropouts.

Persons with work experience are all civilians who worked at any time during the preceding calendar year

Digitized for FRASER

Federal Reserve Bank of St. Louis

at full- or part-time jobs for pay or profit (including paid vacation and sick leave) or worked without pay on a farm or in a business that was family operated.

Extent of employment represents the proportion of the population who worked and the total number of weeks worked during the preceding calendar year.

Year-round full-time workers are civilians who worked primarily at full-time jobs for 50 or more weeks during the preceding calendar year. Part-year workers are civilians who worked either full or part time for 1 to 49 weeks. These workers are further classified on the basis of their major activity during most of the weeks in which they did not work. These activities include unemployment or layoff, illness or disability (excluding paid sick leave), taking care of home, going to school, retirement, military service, etc.

Nonworkers are persons who did not work during the year. These persons are also classified according to their primary reason for not working, such as illness or disability, home responsibilities, school attendance, inability to find work, retirement, serving in the Armed Forces, and other reasons. They are also classified as to whether or not they looked for work.

Longest job refers to the one held for the greatest number of weeks during the year. For most wage and salary workers, a job is defined as all the time worked for the same employer. The only exception is work for private families (domestic service, child care, odd jobs, etc.) which is counted as a single job regardless of the number of employers. Self-employment and unpaid family work are also designated as jobs for purposes of this survey.

A spell of unemployment represents a continuous period of unemployment of at least 1 week's duration. A spell is terminated by employment or withdrawal from the labor force.

Extent of unemployment represents the number and proportion of the labor force that was unemployed at some time during the year. The number of weeks unemployed is the total number of weeks accumulated during the entire year.

Single, never married; married, spouse present; and *other marital status* are terms used to define the marital status of individuals at the time of interview. Married, spouse present, applies to husband and wife if both were reported as members of the same household even though one may be temporarily absent on business, vacation, on a visit, in a hospital, etc. Other marital status applies to persons who are married, spouse absent; widowed; or divorced. Married, spouse absent, includes persons who are separated because of marital discord, as well as persons who are living apart because either the husband or the wife was employed and living away from home, serving in the Armed Forces, or had a different place of residence for any reason.

Family refers to a group of two or more persons residing together who are related by blood, marriage, or adoption; all such persons are considered as members of one family even though they may include a subfamily, that is, a married couple or a parent-child group related by blood or marriage to the householder and sharing the living quarters. The count of families used in this bulletin includes primary families only, that is, all persons in the household who are related to the householder. Excluded are secondary families which include lodgers, guests, or resident employees living in a household but not related to the householder. Families are classified either as married-couple families or as families maintained by women or men. A family maintained by a woman or a man is one in which the householder is either single, widowed, divorced, or married, spouse absent.

A household consists of all persons—related family members and all unrelated persons—who occupy a housing unit. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when occupied or intended for occupancy as separate living quarters.

A householder is the person (or one of the persons) in whose name the housing unit is owned or rented. The term is never applied to either husbands or wives in married-couple families but relates only to persons in families maintained by either men or women without a spouse.

Multiple jobholders are persons who, during the survey week, (1) had jobs as wage or salary workers with two employers or more, (2) were self-employed and also held wage or salary jobs, or (3) worked as unpaid family workers but also had secondary wage or salary jobs. A person employed only in private households (cleaner, gardener, babysitter, etc.) who worked for two or more employers during the survey week is not counted as a multiple jobholder. Working for several employers is considered an inherent characteristic of private household work. Also excluded are self-employed persons with additional farms or businesses and persons with any additional jobs as unpaid family workers. The primary job is the one at which the greatest number of hours were worked.

Earnings are all money income of $1 or more from wages and salaries and net money income of $1 or more from farm and nonfarm self-employment.

Income represents the total amount of money received in the preceding calendar year from (1) money wages and salaries; (2) net income from self-employment; (3) social security; (4) dividends, interest (on savings and bonds), net rental income, and income from estates and trusts; (5) public assistance; (6) unemployment and workers' compensation, government employee pensions, and veterans' payments; and (7) private pensions,

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

annuities, alimony, regular contributions from persons not living in the same household, net royalties, and other periodic income. The amount received represents income before deductions of personal taxes, social security, savings bonds, union dues, health insurance, and the like. The total income of a family is the sum of the amounts received by all persons in the family.

Median earnings indicate the value which divides the earnings distribution into two equal parts, one part having values above the median and the other having values below the median. The medians as shown in this report are calculated from the corresponding distributions by linear interpolation within the interval in which the median falls. Therefore, because of this interpolation, the median value depends not only on the distribution of income or earnings but also on the income or earnings intervals used in calculating the median.

Hourly earnings refer to the wage rates or straight-time earnings of wage and salary workers paid by the hour. Data relate to earnings from the sole or primary job.

Usual weekly earnings data are provided from responses to the question "How much does . . . USUALLY earn per week at this job before deductions? Included are any overtime pay, commissions, or tips usually received." The response is for the worker's sole or principal job. The term "usual" is as perceived by the respondent. If the respondent asks for a definition of usual, interviewers are instructed to define the term as more than half the weeks worked during the past 4 or 5 months. Data refer to wage and salary workers and the incorporated self-employed, who usually work full time on their sole or primary job.

Shift-work data refer to the period of the day that nonfarm wage and salary workers on full-time schedules work during the survey week. The evening and night shifts are defined as those of which at least half the hours fall between 4 p.m. and midnight, and midnight and 8 a.m., respectively. All full-time schedules of less than 6 or more than 12 hours per shift, however, are defined as miscellaneous shifts, regardless of the day they are scheduled. Data refer only to the shift of the sole or primary job.

Days worked refer to the number of days usually worked per week at the sole or primary job. Data refer to nonfarm wage and salary workers (excluding private household workers) who usually work full time.

Educational attainment applies to years of school completed in regular schools, which include graded public, private, and parochial elementary and high schools, colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which could be expected to advance a person to an elementary certificate; a high school diploma; or a college, university, or professional school degree.

Median years of school completed indicate the value which divides the population group into two equal parts, one part having completed more schooling and one part having completed less schooling than the median. For purposes of computing these medians, the years of school completed are numbered consecutively; for example, the first year of high school is indicated by 9 and the first year of college by 13. The medians are expressed in continuous part-years, although the respondents' answers to the survey questions are in terms of complete, discrete years.

School enrollment statistics are based on replies to the inquiry as to whether the person was enrolled in day or night school in any type of public, parochial, or other private school in the regular school system. Such schools include elementary schools, junior or senior high schools, and colleges or universities. Persons enrolled in special schools not in the regular school system, such as trade schools or business colleges, are not included in the enrollment figures. Persons enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and training courses given directly on the job, are not reported as enrolled in school.

Historical Comparability

Change in lower age limit

The lower age limit for official statistics on the labor force, employment, and unemployment was raised from 14 to 16 years of age in January 1967. Insofar as possible, historical series have been revised to provide consistent information based on the population 16 years and over. For a detailed discussion of this and other definitional changes introduced at that time, including estimates of their effect on the various series, see "New Definitions for Employment and Unemployment," *Employment and Earnings and Monthly Report on the Labor Force*, February 1967.

Noncomparability of labor force levels

In addition to the changes introduced in 1967, there are several other periods of noncomparability in the labor force data: (1) Beginning in 1953, as a result of introducing data from the 1950 census into the estimating procedure, population levels were raised by about 600,000; labor force, total employment, and agricultural employment were increased by about 350,000, primarily affecting the figures for totals and males; other categories were relatively unaffected. (2) Beginning in 1960, the inclusion of Alaska and Hawaii resulted in an increase of about 500,000 in the population and about 300,000 in the labor force—four-fifths of this increase was in nonagricultural employment; other labor force categories were not appreciably affected. (3) Beginning in 1962, the introduction of data from the 1960 census reduced the population by about 50,000 and labor force and employment by about 200,000; unemployment to-

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

tals were virtually unchanged. (4) Beginning in 1972, information from the 1970 census was introduced into the estimation procedures, increasing the population by about 800,000; labor force and employment totals were raised by a little more than 300,000; and unemployment levels and rates were essentially unchanged. (5) A subsequent population adjustment based on the 1970 census was introduced in March 1973. This adjustment, which affected the white and black-and-other groups but had little effect on totals, resulted in the reduction of nearly 300,000 in the white population and an increase of the same magnitude in the black-and-other population. Civilian labor force and total employment figures were affected to a lesser degree; the white labor force was reduced by 150,000, and the black-and-other labor force rose by about 210,000. Unemployment levels and rates were not significantly affected.

In addition, beginning in January 1974, the methodology used to prepare independent estimates of the civilian noninstitutional population was modified to an inflation-deflation approach. This change in the derivation of the estimates had its greatest impact on estimates of 20- to 24-year-old males—particularly those of the black-and-other population—but had little effect on estimates of the total population 16 years and over.

Effective in July 1975, as a result of the immigration of Vietnamese refugees into the United States, the total and black-and-other independent population controls for persons 16 years and over were adjusted upward by 76,000—30,000 males and 46,000 females. The addition of the refugees increased the black-and-other population by less than 1 percent in any age-sex group, and all of the changes were in the other population.

Beginning in January 1978, the introduction of an expansion in the sample and revisions in the estimation procedures resulted in an increase of about a quarter of a million in the overall civilian labor force and employment totals; unemployment levels and rates were essentially unchanged.

Beginning in 1979, the first-stage ratio estimation method was changed in the CPS estimation procedure. The new procedure is described in the Estimating Methods section. Differences between the old and new procedures exist only for metropolitan and nonmetropolitan estimates, not for the total United States.

Beginning in January 1982, the second-stage ratio adjustment methodology was changed in the CPS estimation procedure. The new procedure is described in the Estimating Methods section. The purpose of the change and an indication of its effect on national estimates of labor force characteristics appear in "Revisions in the Current Population Survey in January 1982" in the February 1982 issue of *Employment and Earnings*. In addition, current population estimates used in the second-stage estimation procedure are derived from information obtained from the 1980 census, rather than the 1970 census. This change caused substantial increases in total population and estimates of persons in all labor force catagories. Rates on labor force characteristics, however, remained virtually unchanged. Some 30,000 labor force series were adjusted back to 1970 to avoid major breaks in series. The adjustment procedure used is also described in the February 1982 article cited above. The revisions did not, however, smooth out the breaks in series occurring between 1972 and 1979 that are described above, and data users should make allowances for them in making certain data comparisons. Due to the absence of 1980 census population estimates, data contained in tables C-17, C-18, and C-27 through C-41 have not been adjusted.

Changes in the occupational classification system

Beginning in 1971, the comparability of occupational employment data was affected as a result of changes in the occupational classification system for the 1970 census that were introduced into the CPS. These changes, which reflected recognition of new categories and a refinement of existing ones, resulted in a break in series for many major occupational groups. Comparability was further affected in December 1971, when a question relating to major activity or duties was added to the monthly CPS questionnaire in order to determine more precisely the occupational classification of individuals. This change resulted in several dramatic occupational shifts. As a result of this double break in series in 1971, meaningful comparisons of occupational employment levels cannot be made between 1971-72 and prior years nor between these 2 years. The revisions in the occupational classification system as well as in the CPS questionnaire are believed to have had a negligible effect on unemployment rates. For a further explanation of the changes in the occupational classification system, see "Revisions in Occupational Classifications for 1971" and "Revisions in the Current Population Survey" in the February 1971 and February 1972 issues, respectively, of *Employment and Earnings*.

Changes in the sample design

Since the inception of the survey, there have been various changes in the design of the CPS sample. Most of these changes were made in order to improve the efficiency of the sample design and/or to increase the reliability of the sample estimates.

One major change made after every decennial census is to change the sample design to make use of the recently collected census materials. Also, the number of sample areas and the number of sample persons are increased occasionally. In 1953, the current rotation plan was introduced in which a sample unit is interviewed for 4 months, leaves the sample for 8 months, and then returns to the sample for another 4 months. When Alaska

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

and Hawaii achieved statehood, three more sample areas were added to account for the population in these States. After the 1960 census, selection of a major portion of the sample from census address lists was begun, though a portion of the sample is still collected using area sampling. Following the 1970 census, the ultimate sampling unit was changed from a noncontiguous cluster of six housing units to a usually contiguous cluster of four housing units. In January 1978, a supplemental sample of 9,000 housing units, selected in 24 States and the District of Columbia and designed to provide more reliable annual average estimates for States, was incorporated into the design. A coverage improvement sample, composed of approximately 450 sample household units which represent 237,000 occupied mobile homes and 600,000 new construction housing units, was included in computing the estimates beginning in October 1978 in order to provide coverage of mobile homes and new construction units that previously had no chance for selection in the CPS sample. In January 1980, another supplemental sample of 9,000 households selected in 32 States and the District of Columbia was added to the existing sample. A sample reduction of about 6,000 units was implemented in May 1981. Beginning in January 1982, the sample was expanded by 100 households to provide additional coverage in counties added to SMSA'S, which were redefined in 1973.

Table A provides a description of some aspects of the CPS sample design in use during the different data collection periods. A more detailed account of the history of the CPS sample design appears in *The Current Population Survey: Design and Methodology*, Technical Paper No. 40, Bureau of the Census, or *Concepts and Methods Used in Labor Force Statistics Derived From the Current Population Survey*, Bureau of Labor Statistics Report 463.

Estimation Methods

Under the estimating methods used in the CPS, all of the results for a given month become available simultaneously and are based on returns from the entire panel of respondents. The CPS estimation procedure involves weighting the data from each sample person. The basic weight, which is the inverse of the probability of the person being in the sample, is a rough measure of the number of actual persons that the sample person represents. In States supplemented in the 1978 and 1980 expansions, almost all sample persons within the same sample area have the same basic weight, but the weight may differ across sample areas. The basic weight is the same for almost all sample persons in unsupplemented States. The basic weights are then adjusted for noninterview, and the ratio estimation procedure is applied.

1. *Noninterview adjustment.* The weights for all interviewed households are adjusted to the extent needed to account for occupied sample households for which no information was obtained because of absence, impassable roads, refusals, or unavailability of the respondents for other reasons. This adjustment is made separately by combinations of sample areas within each State and the District of Columbia, and within these, for six groups—two race categories (white, and black and other) within three residential categories. For sample areas which are SMSA'S, these residence categories are the central cities, the urban, and the rural balance of the SMSA'S. For other sample areas, the residence categories are urban, rural nonfarm, and rural farm. The proportion of sample households not interviewed varies from 4 to 5 percent, depending on weather, vacations, etc.

2. *Ratio estimates.* The distribution of the population selected for the sample may differ somewhat, by chance, from that of the population as a whole, in such characteristics as age, race, sex, and residence. Since these characteristics are closely correlated with labor force participation and other principal measurements made from the sample, the survey estimates can be substantially improved when weighted appropriately by the known distribution of these population characteristics. This is accomplished through two stages of ratio estimates as follows:

Table A. Characteristics of the CPS sample, 1947 to date

Time period	Number of sample areas	Households eligible		Households visited not eligible
		Interviewed	Not interviewed	
Aug. 1947 to Jan. 1954	68	21,000	500—1,000	3,000—3,500
Feb. 1954 to Apr. 1956	230	21,000	500—1,000	3,000—3,500
May 1956 to Dec. 1959	330	33,500	1,500	6,000
Jan. 1960 to Feb. 1963	333	33,500	1,500	6,000
Mar. 1963 to Dec. 1966	357	33,500	1,500	6,000
Jan. 1967 to July 1971	449	48,000	2,000	8,500
Aug. 1971 to July 1972	449	45,000	2,000	8,000
Aug. 1972 to Dec. 1977	461	45,000	2,000	8,000
Jan. 1978 to Dec. 1979	614	53,500	2,500	10,000
Jan. 1980 to Apr. 1981	629	62,200	2,800	12,000
May 1981 to present	629	57,800	2,500	11,000

a. *First-stage ratio estimate.* In the CPS, a portion of the 629 sample areas is chosen to represent other areas not in the sample; the remainder of the sample areas represent only themselves. The first-stage ratio estimation procedure was dedigned to reduce the portion of the variance resulting from requiring sample areas to represent nonsample areas. Therefore, this procedure is not applied to sample areas which represent only themselves. The procedure is performed at two geographic levels: First, by the four census regions (Northeast, North Central, South, and West), and second, for each of the 46 States which contains nonsample areas. The procedure corrects for the differences that existed at the time of the 1970 census between the distribution by race and residence of the population in the sample areas and the known race-residence distribution in the portions of the census region or State represented by these areas. The regional adjustment is performed by metropolitan-nonmetropolitan residence and race, while the State adjustment is done by urban-rural status and race.

b. *Second-stage ratio estimate.* In this stage, the sample proportions of persons in specific categories are adjusted to the distribution of independent current estimates of the civilian noninstitutional population in the same categories. The second-stage ratio adjustment is performed to further reduce variability of the estimates and to correct to some extent for CPS undercoverage relative to the decennial census. Prior to January 1982, the second-stage procedure was performed in three steps. In the first step, estimates were adjusted within each State and the District of Columbia to an independent control for the population 16 years and over for the State. The second step, often referred to as the "intermediate second-stage adjustment," involved "nonwhite" persons only and was an adjustment to independent estimates of 48 "nonwhite" age-sex-race categories across the whole Nation. Two race categories were used—black and "other" minority races. The final step, applied to all sample persons, was an adjustment to nationwide independent population estimates within 34 age-sex-groups each for white and "nonwhite" persons. The entire second-stage adjustment procedure was iterated six times to ensure that the sample estimates of the population for both State and national age-sex-race categories were virtually equal to the independent population control totals. Beginning with January 1982 data, the intermediate step of the second-stage adjustment has been discontinued, and the race categories of the final step have been changed from white/nonwhite to black/nonblack. These changes in the second-stage adjustment are expected to have little or no effect on the household data published, except that the estimated totals of population and labor force characteristics for "whites" in selected age categories and for "black and other" are more variable from month to month than previously. This is because the new procedure does not specifically control for "whites" or for "other nonwhites." These changes were made to avoid differences between the CPS and the 1980 census in the classification of persons as white, black, and other. Tabulations show a much higher proportion of persons who classified themselves as "other" in the 1980 census than in the CPS.

The controls by State for the civilian noninstitutional population 16 years and over are an arithmetic extrapolation of the trend in the growth of this segment of the population from the April 1, 1980, census through the latest available July 1 estimate, adjusted as a last step to a current estimate of the U.S. population of this group.

Beginning with the January 1982 estimates, the independent national controls used for the age-sex-race groups in the final step of the second-stage ratio adjustment are prepared by carrying forward the April 1, 1980, total population by age, race, and sex, taking account of the subsequent aging of the population, fertility, mortality, and net immigration, and then subtracting the estimate for the institutional population and Armed Forces. (The April 1, 1980, total population was computed by adding together the resident population, consistent with that published for the 1980 census in *Advance Reports*, Series PHC80-V, and the Armed Forces overseas, as compiled from Department of Defense reports.)

Data on births and deaths between April 1, 1980, and the estimate date are based on tabulations of vital statistics for the resident population made by the National Center for Health Statistics and data on deaths of military personnel overseas from the Department of Defense. Estimates of net civilian immigration are based on data provided by the Immigration and Naturalization Service, the Department of Defense, the Office of Personnel Management, and the Puerto Rico Planning Board. The civilian noninstitutional population is derived by subtracting the Armed Forces and the institutional population for the estimate date from the total including Armed Forces overseas. The institutional population is computed by applying institutional proportions derived from the 1980 census to the total population, including Armed Forces overseas for the estimate date. All computations described above are performed in cells defined by single year of age, race, and sex. The independent national control totals are then obtained by collapsing these cells into broader age groups for the population 16 years and older for use in

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

the revised CPS ratio estimation procedure as described above.

Prior to January 1982, the base population used was corrected for net census undercount before being carried forward, and the estimates generated for the estimate date were then reduced to a level consistent with the census count (the inflation-deflation method). Since estimates of net undercount for 1980 were not available, the inflation-deflation steps were dropped. This change has little impact on the independent estimates, particularly in the first 5 years after the census.

3. *Composite estimate procedure.* In deriving statistics for a given month, a composite estimating procedure is used which takes account of net changes from the previous month for continuing parts of the sample (75 percent), as well as the sample results for the current month. Almost all estimates of month-to-month change are improved by this procedure, and most estimates of levels are also improved, but to a lesser extent.

Rounding of estimates

The sums of individual items may not always equal the totals shown in the same tables because of independent rounding of totals and components to the nearest thousand. Similarly, sums of percent distributions may not always equal 100 percent because of rounding. Differences, however, are insignificant.

Moreover, estimates in this volume in many instances may differ slightly from those previously published or published elsewhere because they reflect computations with new computer techniques which maintain more precision in calculations than the procedures previously used.

Sampling variability

Statistics derived from the CPS are subject to sampling error; that is, the estimates of employment, unemployment, and other labor force measures may differ from the figures that would be obtained if it were possible to take a complete census, even if the same questionnaires and procedures were used. As in any survey, the results are also subject to errors of response, undercoverage, and reporting. These may be relatively large in the case of persons with irregular attachment to the labor force. Particular caution should be exercised in the interpretation of figures based on relatively small estimates as well as small differences between estimates.

The standard error is primarily a measure of sampling variability, that is, of the variations that occur by chance because a sample rather than the entire population is surveyed. It also partially measures the effect of response and enumeration errors but does not measure any systematic biases in the data. The numerical value of a standard error depends upon the size of the sample, the results of the survey, and other factors. However, the numerical value is always such that chances are 68 out of 100 that an estimate from the survey would differ from a complete census by less than the standard error.

Tables B-H provide approximations of the standard errors of various labor force characteristics and should be interpreted as providing an indication of the order of magnitude of the standard error rather than a precise standard error for any specific item. To obtain a 90-percent level of confidence—the confidence limits used by BLS in its analyses of labor force data—the errors should be multiplied by 1.6.

Tables B through F provide generalized standard errors for monthly level and month-to-month change for estimated totals, unemployment rates, and percentages. Table G contains factors for use with table F for computing standard errors, as described below, for monthly level and month-to-month change for percentages. Standard errors for intermediate values not shown in the tables may be approximated by linear interpolation. The standard error for estimated changes from one month to the next is more closely related to the monthly level for the characteristic than to the size of the specific month-to-month change itself. Thus, in order to use the generalized standard errors for month-to-month change as given in the tables of standard errors, it is necessary to obtain the monthly estimate for the characteristic. It should be noted that the tables of standard errors for month-to-month change apply only to estimates of change between 2 consecutive months. Estimates of change for nonconsecutive months are subject to higher standard errors. Table H contains factors for use with tables B, D, F, and G to compute approximate standard errors for levels, labor force participation rates, and percentages as pertaining to the year-to-year change of monthly estimates, quarterly averages, changes in quarterly averages, yearly averages, and changes in yearly averages. Note that standard errors for changes in quarterly and yearly estimates apply only to consecutive quarters and years. For years prior to 1967, the standard errors must be adjusted due to the differences in the sample size. For years prior to 1956, the standard errors should be multiplied by 1.50, and for the 1956-66 period, they should be multiplied by 1.22.

Generalized standard errors associated with the supplementary data on particular characteristics of the population which are collected annually in the same month—work experience, educational attainment, marital and family status of workers, multiple jobholding, etc.—are provided in the annual *Special Labor Force Reports* on the various subject areas.

Standard errors for estimated totals. Tables B and C provide generalized standard errors for monthly totals and for month-to-month change. The figures given in

Table G. Factors to be used with table F to compute approximate standard errors for percentages and month-to-month change in percentages

Characteristic	Factor		Characteristic	Factor	
	Monthly level	Month-to-month change		Monthly level	Month-to-month change
Agricultural employment:			Unemployment:		
Total or full-time labor force	1.26	1.05	Part-time labor force, duration of unemployment, left last job, reentering labor force	1.01	1.21
Part-time labor force	1.26	1.50			
Labor force data other than agricultural employment data and unemployment data:			All other unemployment characteristics:		
			Total or white:		
Total	1.00	.74	Total	.97	1.08
Males only	.93	.84	Both sexes, 16 to 19 years	.97	1.21
Females only	.86	.75	Black and other:		
Both sexes, 16 to 19 years	1.00	1.18	Total	1.04	1.13
Part-time labor force	1.00	1.18	Both sexes, 16 to 19 years	1.04	1.24

Table H. Factors to be used with tables B,D,F, and G to compute the approximate standard errors for levels, rates, and percentages for year-to-year change of monthly estimates, quarterly averages, change in quarterly averages, yearly averages, and change in yearly averages

Characteristics	Factors				
	Year-to-year change of monthly estimate	Quarterly averages	Change in quarterly averages	Yearly averages	Change in yearly averages
Agricultural employment:					
Total or male	1.30	0.89	0.80	0.72	0.70
Female or teenagers (16 to 19 years)	1.30	.83	.80	.58	.70
Part time	1.40	.74	.80	.46	.70
Labor force data other than agricultural employment data and unemployment data:					
Total or white	1.30	.88	.88	.67	.70
Black and other teenagers (16 to 19 years)	1.30	.82	.88	.57	.70
Part time	1.40	.74	.88	.46	.60
Unemployment:					
Total	1.40	.76	.88	.50	.65
Part time	1.40	.69	.88	.39	.54

these tables are to be used for the characteristics as indicated.

Illustration. Assume that in a given month the number of persons working a specific number of hours was 12,000,000, an increase of 400,000 over the previous month. Linear interpolation in the second column of table B shows that the standard error on an estimate of 12,000,000 is about 150,000. The 68-percent confidence interval as shown by these data is from 11,850,000 to 12,150,000. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Recall that the standard error of a month-to-month change is primarily dependent on the size of the monthly estimate. Thus, using linear interpolation in the first column of table C, the standard error on a month-to-month change of 400,000, when the monthly level is approximately 12,000,000, is about 111,000.

Standard errors for rates and percentages. The reliability of an estimated unemployment rate or an estimated percentage computed using sample data for both numerator and denominator depends on both the size of the rate or percentage and the total upon which the rate or percentage is based. Estimated rates and percentages are relatively more reliable than the corresponding estimates of the numerator of the rates or percentages; this is particularly true for percentages of 50 percent or more. As a general rule, percentages are not published when the monthly base is less than 75,000, the quarterly average base is less than 60,000, or the annual average base is less than 35,000.

Tables D and E show generalized standard errors for monthly level and month-to-month change for unemployment rates. Generalized standard errors for estimated monthly percentages and estimated month-to-month change in percentages can be obtained through the use of the standard errors in table F and the factors in table G. First obtain the standard error from table F for the specific percentage and base. The generalized standard error is then calculated by multiplying the standard error from table F by the appropriate factor from table G. When the numerator and denominator of the percentage are in different categories, use the factor indicated by the numerator of the percentage.

Illustration. Assume that in a given month 3.6 percent of a total of 90,771,000 employed persons are employed in agriculture. The standard error on an estimate of 3.6 percent with a base of 90,771,000 is obtained from table F (0.09 percent). The appropriate factor from table G for the numerator of the percentage, agricultural employment, is 1.26. The generalized standard error on the estimated 3.6 percent is then approximately 0.09 x 1.26 = 0.1 percentage point.

Standard errors for year-to-year change of monthly estimates, quarterly averages, changes in quarterly averages, yearly averages, and changes in yearly averages. The approximate standard errors of levels, rates, and percentages involving year-to-year change of monthly estimates, quarterly averages, changes in quarterly averages, yearly averages, and changes in yearly averages may be obtained by using table H in conjunction with the other tables. Standard errors for estimates of change are more closely related to the level of the estimate than to the size of the specific change. Thus, to obtain the standard error of an estimate of an average level, rate, or percentage, or an estimate of a change in level, rate, or percentage, it is first necessary to find the appropriate estimate of level. For an estimate of an average level, rate, or percentage, find the standard error of this estimate. For an estimate of change in level, rate, or percentage, find the standard error of the average of the two estimates affecting the change. Then, after computing the standard error by treating these estimates as monthly estimates and using the procedures above, multiply this result by a suitable factor from table H to obtain the approximate standard error for the average or change.

Illustration. Suppose that one is interested in the year-to-year change of a monthly unemployment rate. Assume that for a certain month the unemployment rate is 6.9 percent, based on a total of 95,676,000 in the civilian labor force, and that a year prior to this the unemployment rate was 6.1 percent, based on a total of 94,254,000 in the civilian labor force. The standard error on the average of the two estimates, 6.5 percent with a base of 94,965,000, is obtained from table D (0.11 percent). The appropriate factor then from table H is 1.40. The approximate standard error on the change of 0.8 percent is then given by 0.11 x 1.40 = 0.15 percentage point.

Seasonal Adjustment

Over the course of a year, the size of the Nation's labor force, the levels of employment and unemployment, and other measures of labor market activity undergo sharp fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays, and the opening and closing of schools. Because these seasonal events follow a more or less regular pattern each year, their influence on statistical trends can be eliminated by adjusting the statistics from month to month. These adjustments make it easier to observe the cyclical and other nonseasonal movements in the series. In evaluating changes in a seasonally adjusted series, it is important to note that sea-

sonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors but are also affected by the uncertainties of the seasonal adjustment process itself. Seasonally adjusted series for selected labor force data are published regularly in *Employment and Earnings.*

The seasonal adjustment program used for labor force series is an adaptation of the standard ratio-to-moving average method. It provides for moving adjustment factors to take account of changing seasonal patterns. For a number of years, BLS has used the X-11 procedure which was originally developed at the Bureau of the Census to seasonally adjust labor force data. A detailed description of the method is given in *The X-11 Variant of the Census Method II Seasonal Adjustment Program,* Technical Paper No. 15, Bureau of the Census (1967).

Beginning in January 1980, BLS introduced two major modifications in the seasonal adjustment methodology. First, the data are being seasonally adjusted with a new procedure called X-11 ARIMA, which was developed at Statistics Canada as an extension of the existing standard X-11 method. A detailed description of the procedure appears in *The X-11 ARIMA Seasonal Adjustment Method,* by Estela Bee Dagum (Statistics Canada, February 1980). Tests have shown that use of the X-11 ARIMA procedure, which places more emphasis on recent data, provides better seasonal adjustments than does the X-11 method alone.

The second change is that seasonal factors are now being calculated for use during the first 6 months of the year rather than for the entire year. In July of each year, BLS calculates and publishes in *Employment and Earnings* a new set of seasonal factors for use in the second half, based on the experience through June. Revisions of historical data for the most recent 5 years are made at the beginning of each calendar year. However, as a result of the revisions to the estimates for 1970-81 based on 1980 census population counts, revisions to seasonally adjusted series in early 1982 were carried back to 1970.

Revised data for the 1970-81 period for a broad range of labor force series were initially published in the February 1982 issue of *Employment and Earnings.* These and many additional series from the time of their inception appear on a monthly and quarterly basis in the D and E sections, respectively, of this bulletin.

All civilian labor force and unemployment rate statistics, as well as the major employment and unemployment estimates, are computed by aggregating independently adjusted series. For example, for each of the three major labor force components—agricultural employment, nonagricultural employment, and unemployment—data for four sex-age groups (males and females under and over 20 years of age) are separately adjusted for seasonal variation and are then added to derive seasonally adjusted total figures. In order to provide seasonally adjusted total employment and civilian labor force estimates, the appropriate series are aggregated. The official unemployment rate for all civilian workers is derived by dividing the estimate for total unemployment (the sum of 4 seasonally adjusted sex-age components) by the civilian labor force (the sum of 12 seasonally adjusted sex-age components). Because of the independent seasonal adjustment of various series, components will not necessarily add to totals. The current seasonal adjustment methodology is described in greater detail in "Revision of Seasonally Adjusted Labor Force Series," in the February 1982 issue of *Employment and Earnings.*

Comparability of the CPS with Related Data

Establishment survey employment statistics

Employment data from the CPS differ in several basic respects from the related series derived from payroll reports from business establishments. The household survey provides information on the labor force activity of the entire civilian noninstitutional population 16 years of age and over, without duplication, since each individual is classified as either employed, unemployed, or not in the labor force. The estimate of employed persons in nonagricultural industries includes, in addition to wage and salary workers, a number of groups who would not appear on establishment payrolls: The self-employed, private household workers, and unpaid workers who worked 15 hours or more during the survey week in family-operated enterprises. Also included are persons with a job but not at work during the survey week because of illness, bad weather, vacation, labor-management disputes, or various personal reasons, whether or not paid for the time absent. The establishment survey estimates of nonagricultural employment relate to the number of paid wage and salary employees, regardless of age, on employer payrolls. Employees who appear on more than one payroll during the survey period are counted separately for each appearance. In the CPS, dual jobholders are counted only once and are classified according to the job at which they worked the greatest number of hours during the survey week. For a comprehensive discussion of the conceptual and definitional differences between the two surveys, see "Comparing Employment Estimates From Household and Payroll Surveys" in the December 1969 issue of the *Monthly Labor Review.*

Agricultural employment estimates from the U.S. Department of Agriculture

The Department of Agriculture estimates, unlike the

CPS, include persons under 16 years of age and count persons more than once if they work on more than one farm during the reporting period.

Establishment survey estimates of hours and earnings

The household survey measures hours actually worked during the survey week. For persons working more than one job, the figures relate to the number of hours worked in all jobs. However, all the hours are credited to the primary job. Persons with a job but not at work are excluded from the hours distributions and the computations of average hours. The payroll survey measures paid hours of production or nonsupervisory workers in the private nonagricultural economy. Employees on paid vacation, paid holiday, or paid sick leave are included and assigned the number of hours for which they were paid during the reporting period. With respect to weekly and hourly earnings, data from the establishment survey cover only production and nonsupervisory workers in private nonagricultural establishments. The CPS weekly earnings data generally cover wage and salary workers who usually work full time, including supervisory and managerial workers in all industries. The CPS hourly earnings data are restricted to workers paid hourly rates, but coverage includes both full- and part-time workers. A fuller discussion of differences between the CPS and establishment survey data on earnings appears in *Weekly and Hourly Earnings Data From the Current Population Survey*, BLS Special Labor Force Report 195 (1977).

Unemployment insurance data

The CPS unemployment data include all persons who did not have a job during the survey week and were looking for work or were waiting to be called back to a job from which they had been laid off, whether or not they were eligible for unemployment insurance. Figures on unemployment insurance claims exclude persons who have exhausted their benefit rights, new workers who have not earned rights to unemployment insurance, and persons losing jobs not covered by unemployment insurance systems (self-employed and unpaid family workers, and some workers in agriculture, domestic services, and religious organizations). In addition, the qualifications for drawing unemployment compensation differ from the definition of unemployment used in the household survey. For example, persons with a job but not at work and persons working only a few hours during the week are sometimes eligible for unemployment compensation but are classified as employed rather than as unemployed in the household survey. For an examination of the similarities and differences between State insured unemployment and total unemployment, see "Measuring Total and State Insured Unemployment" in the June 1971 issue of the *Monthly Labor Review*.
