Occupational Injuries and Illnesses in the United States by Industry, 1980

U.S. Department of Labor Raymond J. Donovan, Secretary

Bureau of Labor Statistics Janet L. Norwood, Commissioner April 1982

Bulletin 2130

Preface

Data for this publication were collected in accordance with the provisions of the Occupational Safety and Health Act of 1970. Estimates represent the injury and illness experience of employers in private sector establishments for 1979 and 1980. Report forms were mailed to employers in the year following the reference year of each survey.

This publication was prepared in the Office of Occupational Safety and Health Statistics by the staff of

the Division of Periodic Surveys, under the direction of William Mead. Data were collected and tabulated in the Office of Statistical Operations with the cooperation of the regional offices of the Bureau of Labor Statistics and State agencies participating in the occupational safety and health statistical grants program.

Material in this publication is in the public domain and may, with appropriate credit, be reproduced without permission.

Definitions
Tables:
Injuries and Illnesses 1. Occupational injury and illness incidence rates by industry, 1979 and 1980
Injuries 4. Occupational injury incidence rates by industry, 1979 and 1980
Illnesses 7. Number of occupational illnesses by industry division and category of illness, 198032
8. Occupational injury and illness fatalities and employment for employers with 11 employees or more by industry division, 1979 and 1980
Appendix A. Scope of survey and technical notes
Tables: A-1. Relative standard errors for measures of occupational injuries and illnesses and occupational injuries by industry, 1980

Definitions

The definitions of occupational injuries and illnesses and lost workdays are from Recordkeeping Requirements under the Occupational Safety and Health Act of 1970.

Recordable Occupational injuries and illnesses are:

- 1. Occupational deaths, regardless of the time between injury and death, or the length of the illness; or
 - 2. Nonfatal occupational illnesses; or
- 3. Nonfatal occupational injuries which involve one or more of the following: Loss of consciousness, restriction of work or motion, transfer to another job, or medical treatment (other than first aid).

Occupational injury is any injury such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from exposure involving a single incident in the work environment.

Occupational illness is any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or disease which may be caused by inhalation, absorption, ingestion, or direct contact.

Lost workday cases are cases which involve days away from work, or days of restricted work activity, or both.

- 1. Lost workday cases involving days away from work are those cases which result in days away from work, or a combination of days away from work and days of restricted work activity.
- 2. Lost workday cases involving restricted work activity are those cases which result in restricted work activity only.

Lost workdays—away from work are the number of workdays (consecutive or not) on which the employee would have worked but could not because of occupational injury or illness.

Lost workdays—restricted work activity are the number of workdays (consecutive or not) on which, because of injury or illness:

- 1. The employee was assigned to another job on a temporary basis; or
- 2. The employee worked at a permanent job less than full time; or
- 3. The employee worked at a permanently assigned job but could not perform all duties normally connected with it.

The number of days away from work or days of restricted work activity does not include the day of injury or onset of illness or any days on which the employee would not have worked even though able to work.

Incidence rates represent the number of injuries and/or illnesses or lost workdays per 100 full-time workers and were calculated as: (N/EH) X 200,000 where:

N = number of injuries and/or illnesses or lost workdays.

EH = total hours worked by all employees during calendar year.

200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

¹ To maintain the comparability of the 1979 survey data with the data published in previous years and with 1980, a statistical method was developed for generating the estimates to represent the small, nonfarm employers in low-risk industries who were not surveyed. The estimating procedure involved averaging the data reported by small employers for the 1975, 1976, and 1977 annual surveys.

² Totals for divisions and 2- and 3-digit SIC codes include data for industries not shown separately.

Standard Industrial Classification Manual, 1972 Edition, 1977 Supplement.
 Annual average employment for nonagricultural industries is based on the employment

⁴ Annual average employment for nonagricultural industries is based on the employment and earnings survey conducted by BLS, in cooperation with the State agencies. The employment estimates for the services division is adjusted to exclude the nonfarm portion of agricultural services and nonclassifiable establishments. Annual average employment for the agriculture, forestry, and fishing division is a composite of data from State unemployment insurance programs and estimates of hired farmworkers engaged in agricultural production provided by the Department of Agriculture. The agricultural production employment estimate as originally published by the Department of Agriculture is adjusted to exclude employment on farms with fewer than 11 employees.
§ The incidence rates represent the number of injuries and illnesses or lost workdays per 100 full-time workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times workers and were calculated as: \(\begin{align*}(MFK) \times 200,000 \times \times

¹⁰⁰ full-time workers and were calculated as: (N/EK) X 200,000, where

⁼ number of injuries and illnesses or lost workdays FH

total hours worked by all employees during calendar year base for 100 full-time equivalent workers (working 40 hours per week, 50 200,000 =

^e Includes fatalities. Because of rounding, the difference between the total and the sum of the rates for lost workday cases and nonfatal cases without lost workdays do not reflect the fatality rate.

⁷ Excludes farms with fewer than 11 employees.

^{*} Excludes tarms with rewer train 11 employees.

* Data conforming to OSHA definitions for coal and lignite mining (SIC 11 and 12) and metal and nonmetal mining (SIC 10 and 14), and for railroad transportation (SIC 40) were provided by the Mine Safety and Health Administration, Department of Labor, and by the Federal Railroad Administration, Department of Transportation. Data for some independent contractors who perform services or construction on mining sites are also included.

n.e.c. = not elsewhere classified, n.a. = data not available,

NOTE: Dashes indicate data that do not meet publication guidelines, or the data were not

¹ Industry division totals include data for industries not shown separately.
² Standard Industrial Classification Manual, 1972 Edition, 1977 Supplement.
³ Excludes farms with fewer than 11 employees.
¹ Data conforming to OSHA definitions for coal and lignite mining (SIC 11 and 12) and metal and nonmetal mining (SIC 10 and 14), and for railroad transportation (SIC 40) were provided by the Mine Safety and Health Administration, Department of Labor, and by the Federal Railroad Administration, Department of Transportation.

¹ To maintain the comparability of the 1979 survey data with the data published in previous years and with 1980, a statistical method was developed for generating the estimates to represent the small, nonfarm employers in low-risk industries who were not surveyed. The estimating procedure involved averaging the data reported by small employers for the 1975, 1976, and 1977 annual surveys.

² Totals for divisions and 2- and 3-digit SIC codes include data for industries not

shown separately.

3 Standard Industrial Classification Manual, 1972 Edition, 1977 Supplement.

4 The incidence rates represent the number of injuries or lost workdays per 100 full-time workers and were calculated as: (N/EH) X 200,000, where

number of injuries or lost workdays

EH 200,000

total hours worked by all employees during calendar year NOTE: Dashes int base for 100 full-time equivalent workers (working 40 hours per week, 50 were not generated.

⁵ Includes fatalities. Because of rounding, the difference between the total and the

Includes fatalities. Because of rounding, the difference between the total and the sum of the rates for lost workday cases and nonfatal cases without lost workdays do not reflect the fatality rates.
 Excludes farms with fewer than 11 employees.
 Data conforming to the OSHA definitions for coal and lignite mining (SIC 11 and 12) and metal and nonmetal mining (SIC 10 and 14), and for railroad transportation (SIC 40) were provided by the Mine Safety and Health Administration, Department of Labor, and by the Federal Railroad Administration, Department of Transportation.
 Data for some independent contractors who perform services or construction on minimum states are also included.

ing sites are also included.

¹ To maintain the comparability of the 1979 survey data with the data published in previous years and with 1980, a statistical method was developed for generating the estimates to represent the small, nonfarm employers in low-risk industries who were not surveyed. The estimating procedure involved averaging the data reported by small employers for the 1975, 1976, and 1977 annual surveys.

NOTE: Dashes indicate data that do not meet publication guidelines.

³ Totals for divisions include data for industries not shown separately.

³ Standard Industrial Classification Manual, 1972 Edition, 1977 Supplement.

⁴ The incidence rates represent the number of lost workday injuries or lost workdays per 100 full-time workers and were calculated as: (N/EH) X 200,000, where

N = number of lost workday injuries or lost workdays
EH = total hours worked by all employees during calendar year
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks

⁵ Also includes cases which involved both days away from work and days of restricted work

 ^{*} Also includes cases which involved both days away from work and days of restricted work activity.
 * The number of days of restricted work activity includes those resulting from cases involving restricted work activity only and days resulting from cases involving days away from work and days of restricted work activity.
 * Excludes farms with fewer than 11 employees.
 * Data conforming to OSHA definitions for coal and lignite mining (SIC 11 and 12) and metal

and nonmetal mining (SIC 10 and 14), and for railroad transportation (SIC 40) were provided by the Mine Safety and Health Administration, Department of Labor, and by the Federal Railroad Administration, Department of Transportation. Data for some independent contractors who per-form services or construction on mining sites are also included.

⁹ Incidence rates less than 0.05.

¹ Annual average employment for nonagricultural industries is based on the employment and earnings survey conducted by BLS in cooperation with State agencies. The employment estimate for the services division is adjusted to exclude the nonfarm portion of agricultural services and nonclassifiable establishments. The employment estimates have been adjusted based on County Business Patterns to exclude establishments with fewer than 11 employees. Annual average employment for the agriculture, forestry, and fishing division is a composite of data from State unemployment

insurance programs and estimates of hired farmworkers engaged in agricultural production provided by the Department of Agriculture. The agricultural production employment estimate as originally published by the Department of Agriculture is adjusted to exclude employment on farms with fewer than 11 employees.

NOTE: Because of rounding, components may not add to the totals.

Appendix A. Scope of Survey and Technical Notes

Scope of survey

The occupational injury and illness data reported through the annual survey are based on records which employers in the following industries maintain under the Occupational Safety and Health Act: Agriculture, forestry, and fishing, SIC 01-09; oil and gas extraction, SIC 13; construction, SIC 15-17; manufacturing, SIC 20-39; transportation and public utilities, SIC 41-42 and 44-49; wholesale and retail trade, SIC 50-59; finance, insurance, and real estate, SIC 60-67; and services, SIC 70-87 and 89. Excluded from the survey are self-employed individuals; farmers with fewer than 11 employees; employers regulated by other Federal safety and health laws; and Federal, State, and local government agencies.

Data conforming to definitions of recordable occupational injuries and illnesses for coal, metal, and nonmetal mining, and railroad transportation are provided by the Mine Safety and Health Administration, Department of Labor, and the Federal Railroad Administration, Department of Transportation.

The Occupational Safety and Health Administration is responsible for the collection and compilation of comparable data for Federal agencies. Although State and local government agencies are not surveyed for national estimates, several States have legislation which enables them to collect data for this sector.

The 1980 survey sample was composed of approximately 285,000 sample units. Original and follow-up mailings resulted in a usable response rate of 93 percent.

Sample

The sample is selected to represent private industries in the States and territories. The survey results are used to produce estimates of the incidence of occupational injuries and illnesses by industry and employment size for the Nation as a whole.

Because the survey is a Federal-State cooperative program and the data must also meet the needs of participating State agencies, an independent sample is selected for each State. The universe frame is stratified into industries and then into employment-size groups. For an industry, the establishments in the sample are distributed to each size group in proportion to the total establishments and the variation within the size group.

The sampling ratios for the various employment-size groups range from all units above a certain size class which are selected with certainty through declining proportions in each smaller employment-size group. The certainty strata are usually the size groups with more than 100 employees, although smaller size groups may be included with certainty depending upon the total employment in the industry. The sampling ratios are used to select a sample within a State-industry-employment-size group estimating cell.

Estimating procedures and weighting

Using a weighting procedure, sample units are made to represent all units in their size class for a particular industry. Each sample member is assigned a weight. Weights are determined by the inverse of the sampling ratios for the size class from which the unit is selected. Each year a small proportion of employees do not return usable report forms. Weights of responding units in a sample cell are adjusted to account for the nonresponding units in the cell. The responding units are then shifted into the estimating cell determined by the employment and business activity reported. Data for each unit are multiplied by the appropriate weight and nonresponse adjustment factor. The products are then aggregated to obtain a total for the estimating cell.

Benchmarking. Data are further adjusted to reflect the actual employment in an industry during the survey year. Since the universe file which provides the sample frame is not current to the reference year of the survey, it is necessary to "benchmark" the data to reflect current employment levels. The benchmarking procedure relates the employment estimate used in sampling to actual employment for 1980. The ratio of the actual employment to the weighted sample employment is called the benchmark factor. The weighted characteristic of the estimating cell is multiplied by the benchmark factor so that the cell becomes more representative of the universe for 1980.

Federal-State cooperation

To eliminate duplicate reporting by respondents and to insure maximum comparability of estimates, survey respondents complete a single reporting form which is then used for national and State estimates.

Industrial classification

Reporting units are classified into industries by their principal product or activity. The data are tabulated according to the 1972 edition of the Standard Industrial Classification Manual, 1977 Supplement.

Reliability of estimates

All estimates derived from a sample survey are subject to two types of errors—sampling and nonsampling.

Sampling errors occur because observations are made only on a sample, not on the entire population. The estimates which are based on the different possible samples of the same size and sample design could differ from each other. As part of the survey's estimation process, the relative standard errors, which are a measure of the sampling error in the estimates, are calculated.

When applied to the estimates, the sampling error serves to define the confidence intervals or ranges that would include the comparable complete coverage value. The chances are about 2 out of 3 that the estimate would have been produced in the range of 1 standard error above to 1 standard error below the estimated value, and about 19 out of 20 that the estimate would have been in the range of 2 standard errors above and below the estimated value.

As an example of the use of relative standard errors, the total case incidence rate for general building contractors (SIC 15) is 15.5 per 100 full-time workers, with a sampling error of 1 percent. The chances are 2 out of 3 that a complete census would produce a rate between 15.7 and 15.3, and the chances are 19 out of 20 that the rate produced from a complete count would be between 15.8 and 15.2. Similarly, the number of occupational injuries and illnesses estimated for SIC 15 was 156,100 with a relative error of 1 percent. Thus, the chances are 2 out of 3 that a census would show a number between 157,700 and 154,500 and 19 out of 20 that the number would be within range of 159,200 and 153,000.

Nonsampling errors in the estimates can be attributed to many sources, e.g., inability to obtain information on all injuries and illnesses from the sample units, mistakes in recording or coding the data obtained, definitional difficulties, etc. To minimize the nonsampling errors in the estimates, the completed forms are screened through comprehensive edit procedures. Apparent inconsistencies are checked through follow-up contacts with the employers.

Publication guidelines

The estimating procedure generates occupational injury and illness estimates for approximately 835 SIC codes. This publication, however, excludes estimates for several industry codes if one of the following situations occurred:

- 1. Estimates for the industry were based on reports from fewer than three companies. Moreover, if three or more companies reported data for the industry, one firm could employ not more than 50 percent of the workers or two companies combined could employ not more than 75 percent.
- 2. 1980 annual average employment for the industry was fewer than 10,000. However, an industry with an annual average employment of fewer than 10,000 was published if the majority of the employment was reported in the survey.
- 3. The relative standard error on lost workday cases for the industry at 1 standard error was more than 15 percent in manufacturing and 20 percent in non-manufacturing.
- 4. Benchmark factor for the industry was less than 0.90 or greater than 1.49.

Data for an unpublished industry were included in the total for the broader industry level of which it is a part. Also, selected items of data were suppressed for publishable industries if the sampling error for the estimate equaled or exceeded 60 percent.

CWD

Monthly Labor Review

the oldest and most authoritative Government research journal in economics and social sciences. Regular features include current labor statistics and developments in industrial relations.

\$23, a year, 12 issues.

Occupational Outlook Quarterly

helps students and guidance counselors learn about new occupations, training opportunities, salary trends, and career couseling programs. Written in nontechnical language and illustrated in color. \$8. four issues.

Employment and Earnings

gives current employment and earnings statistics for the Nation as a whole, for individual States, and for more than 200 areas. Included are household and establishment data, seasonally and not seasonally adjusted. \$31 a year, 12 issues and annual supplement.

CPI Detailed Report

is the most comprehensive report on monthly consumer price indexes and rates of change. Includes data on commodity and service groups for 28 cities.

\$20 a year, 12 issues.

Producer Prices and Price Indexes

includes price movements of both farm and industrial commodities, by industry and stage of processing. Tables and charts give greater detail than available in other published material. \$20 a year, 12 issues and annual supplement.

Current Wage Developments

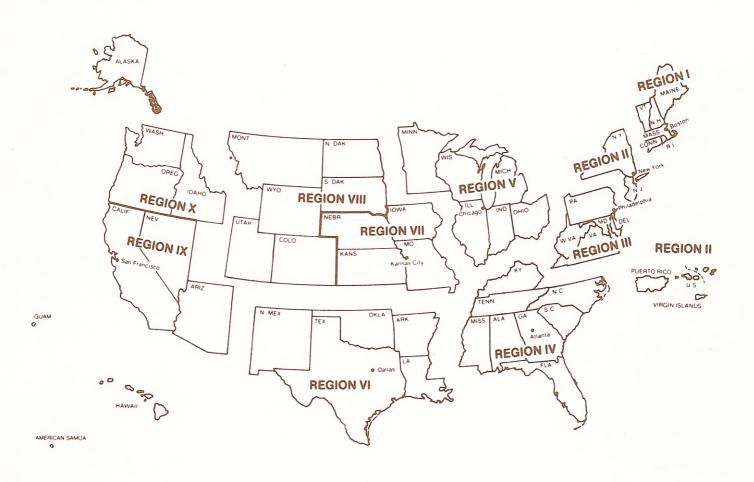

reports on specific wage and benefit changes from collective bargaining agreements. Includes data on strikes or lockouts, major agreements expiring, and compensation changes.

\$14 a year, 12 issues.

BLS periodicals provide timely information on employment, occupations, wages, and prices.

Subscriptions are available from Superintendent of Documents. U.S. Government Printing Office, Washington, D.C. 20402. For subscriptions to foreign countries. add 25 percent to all prices. Make all checks payable to Superintendent of Documents.
