Bulletin 2198

Industry Wage Survey Auto Dealer Repair Shops November 1982

U.S. Department of Labor
Bureau of Economic Analysis
Director, Bureau of Economic Analysis
Washington, D.C. 20540

Preface

This bulletin summarizes the results of a Bureau of Labor Statistics survey of wages and employee benefits in auto dealer repair facilities in November 1982. Separate wage and benefit summaries for the metropolitan areas included in the survey were issued during the spring of 1983. (See the Contents for a listing of the 24 areas studied.) Copies of these summaries are available from the Bureau of Labor Statistics, Washington, D.C. 20212, or any of its regional offices.

This study was conducted in the Bureau's Office of Wages and Industrial Relations. Harry B. Williams of the Division of Occupational Pay and Employee Benefit Levels analyzed the survey data and prepared this bulletin. The Bureau's field representatives obtained the data through personal visits to a probability-based sample of establishments within the scope of the survey.

Fieldwork for the survey was directed by the Bureau's Assistant Regional Commissioners for Operations.

Other reports currently available from the Bureau's program of industry wage studies, as well as addresses of the Bureau's regional offices, are listed at the end of this bulletin.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission.

This bulletin was produced with the assistance of four computer languages developed by the Bureau of Labor Statistics. JOWLS and Table Producing Language tabulated the data, Print Control Language formatted the data to publication standards, and Automatic Typographical Language was used to produce the text.

The bulletin summarizes the results of a survey of
 Labor Statistics Bureau of wages and salaries for
 in such detail as to be useful to the general public.
 and which compares the results for the year 1941
 with those for the year 1940. The survey covers
 the period from 1940 to 1941 for a group of 24
 major industries. The results are presented in

Auto Dealer Repair Shops, November 1982

Earnings and benefits

Diverse employee skills, extensive use of incentive pay plans, and pay differences among individual shops all contributed to the wide range of earnings in automobile dealer repair shops in November 1982. Such pay variations existed both within and among eight occupations selected to represent service and repair activities in these establishments. The eight occupations accounted for two-thirds of the 91,680 nonsupervisory service workers covered by the survey; one-third were in the two automotive mechanic jobs studied.¹

Journeyman auto mechanics, who repair, rebuild, or overhaul major assemblies of cars and light trucks, were numerically the most important, numbering 23,401 workers. Their average straight-time earnings ranged from \$14.52 an hour in San Francisco to \$8.59 in Birmingham (table 3). Most commonly, journeyman mechanics averaged 20 to 40 percent more than automotive service mechanics in the same metropolitan area. Average earnings of service mechanics, who perform minor repairs and tuneups, ranged from \$10.99 an hour in Dallas-Fort Worth to \$6.80 in Boston; in most areas, however, averages were between \$7 and \$9 an hour (table 3).

Among the jobs studied, body repairers or painters had the highest average in 20 of the 24 areas studied. Averages for painters ranged from over \$15 an hour in three areas—Denver-Boulder (\$16.49), Chicago (\$15.61), and Kansas City (\$15.59)—to \$8.60 in New York and \$8.12 in Memphis. In eight areas, hourly averages fell between \$12 and \$15; in seven areas, between \$11 and \$12; and in three areas, Nassau-Suffolk, Philadelphia, and Birmingham, between \$9 and \$11. (Data for painters did not meet publication criteria in Pittsburgh.) For body repairers, who repair damaged bodies and body parts of automotive vehicles, hourly averages ranged from \$14.68 in San Francisco to \$9 in Indianapolis. Averages fell between \$12 and \$14 in 13 areas; and between \$9 and \$12 in the remaining 9 areas. Painters

¹ See appendix A for scope and method of survey, for definitions of terms used in this report, and for definitions of localities surveyed. Earnings data exclude premium pay for overtime and for work on weekends, holidays, and late shifts. See appendix B for occupational descriptions. "Nonsupervisory service workers" include working supervisors and nonsupervisory workers in all departments except the office and auto sales departments. Included are workers in departments such as repair, service, and parts.

typically averaged 8 to 14 percent more than body repairers in the 12 areas where painters held the wage advantage. When body repairers held the edge in an area, their wage advantage was usually 11 percent or less.

Lubricators and new-car get-ready workers were usually the lowest paid, averaging between \$5 and \$8 in a majority of the areas. Averages for new-car get-ready workers exceeded \$9 an hour in St. Louis (\$10.16), San Francisco-Oakland (\$9.78), and Dallas-Fort Worth (\$9.49). Lubricators exceeded \$9 an hour in Denver-Boulder (\$10.60), Los Angeles (\$10.18), St. Louis (\$9.79), Kansas City (\$9.61), and San Francisco (\$9.60).

Service salesworkers, who examine automobiles to determine the need for and cost of repairs, averaged more than \$9 an hour in most of the areas surveyed. Their highest hourly average was found in San Francisco-Oakland (\$13.58) and their lowest in Pittsburgh (\$7.72). Service salesworkers averaged 15 to 30 percent more than parts clerks in each area but Houston, where parts clerks held a slight edge—\$12.27 to \$12.16. Averages for parts clerks, who sell automobile parts to customers and fill service department requisitions, ranged from over \$10 an hour in Houston (\$12.27), San Francisco-Oakland (\$11.90), Dallas-Fort Worth (\$10.56), and St. Louis (\$10.47) to less than \$7 an hour in Detroit (\$6.83), Philadelphia (\$6.69), Milwaukee (\$6.62), and Pittsburgh (\$6.12).

Since June 1978, when the Bureau conducted a similar study of earnings in auto dealer repair shops,² average hourly earnings for most surveyed jobs typically increased between 20 and 40 percent (4.3 to 8 percent a year). Average earnings for parts clerks and service salesworkers generally rose at a faster pace than the other six jobs—typically between 30 and 50 percent (6.1 and 9.7 percent a year). The wage and salary component of the Bureau's Employment Cost Index rose 8.2 percent a year over approximately the same period.

In the six occupational classifications for which data are shown for all areas (excludes service mechanics and painters),³ average pay levels in November 1982 were

² For a report on the earlier survey, see *Industry Wage Survey: Auto Dealer Repair Shops, June 1978*, Bulletin 2060 (Bureau of Labor Statistics, 1980).

³ Data did not meet publication criteria for automotive service mechanics in St. Louis and for painters in Pittsburgh.

most often highest in San Francisco–Oakland and lowest in Birmingham and Pittsburgh. The interarea spread in average earnings, however, differed considerably by occupation. For example, new-car get-ready workers in San Francisco–Oakland averaged 90 percent more than their counterparts in Washington, D.C., whereas the spread between these two areas was 33 percent for journeyman automotive mechanics, 14 percent for body repairers, and 2 percent for painters.

Earnings relationships between occupations within the same area also varied widely by geographic location. To illustrate, body repairers averaged 23 percent more than lubricators in Los Angeles; 60 to 70 percent more in Atlanta, Dallas–Fort Worth, Minneapolis–St. Paul, and Nassau–Suffolk; and at least 90 percent more in Boston, Miami, Pittsburgh, San Francisco, and Washington.

Incentive pay systems, most commonly flat-rate hours plans, determined the earnings for just over one-half of the service workers covered by the study (table 28). Under flat-rate hours plans, which applied to three-tenths of the workers, pay is computed by multiplying the number of flat-rate hours predetermined for each task by an established hourly rate. Group bonus and commission plans together covered one-seventh of the service workers. Other incentive systems in auto dealer repair shops include individual bonus plans and flat-rate percent plans. In the latter, workers receive a stipulated proportion (most often 50 percent) of the labor cost charged to the customer. These flat-rate percent plans applied to less than one-tenth of the workers.

Slightly more than two-fifths of the service workers were paid time rates in November 1982, typically under informal plans providing individual rates in specified occupations. Formal time-rated plans providing single rates for specified jobs were more common in eight areas, including San Francisco, where such plans applied to four-fifths of the workers (table 28).

Where comparisons were possible, workers paid on an incentive basis in auto dealer repair shops nearly always averaged more than those paid time rates in the same job and area (tables 4 to 27). The differences in average earnings, however, varied by occupation. In Boston, for example, journeyman automotive mechanics under incentive systems averaged 23 percent more than those paid time rates; the difference for service salesworkers was 14 percent. Corresponding differences in Detroit were 6 percent for journeyman mechanics and 16 percent for service salesworkers.

Incentive wage systems applied to at least one-half of the workers in each occupation studied except new-car get-ready workers, where the proportion was nearly one-third (table 29). The predominant methods of incentive pay varied by occupation. Incentive paid parts clerks and service salesworkers were primarily on commission while incentive workers in the six remaining

occupations were most often under flat-rate hours systems. Flat-rate percentage plans were also commonly reported for body repairers and painters.

Individual earnings were widely dispersed within the same job and area, especially where the occupation was typically paid on an incentive basis. In nearly all areas, for example, earnings of the highest paid journeyman mechanic exceeded those of the lowest paid by at least \$9 an hour. In San Francisco, where virtually all journeyman mechanics were time rated, their earnings fell within a comparatively narrow range—\$13.00 to \$16.50 (table 27).

These spreads in individual earnings resulted more from disparate pay levels among establishments than from pay differences within establishments. For example, within individual establishments, the earnings of the highest paid body repairer rarely exceeded those of the lowest paid by more than \$6 an hour. However, earnings of the highest paid body repairer in an area exceeded those of the lowest paid by at least \$14 an hour in nearly all areas. As a result of the wide dispersion of earnings within an occupation, there was a considerable overlapping of individual workers' earnings among jobs with substantially different average pay levels (tables 4-27).

Paid holidays were provided to at least nine-tenths of the workers in all areas except Denver–Boulder, where the proportion was about seven-tenths (table 31). Holiday provisions varied widely by area. In seven areas (Boston, Chicago, Minneapolis, Nassau–Suffolk, New York, San Francisco, and St. Louis), at least two-thirds of the workers received 9 or more holidays annually; in most southern areas, provisions for more than 5 days were rare.

Incentive workers, particularly those paid under flat-rate systems, may receive holiday pay which is different than their usual pay. About one-third of the incentive workers were granted holiday pay which was substantially less than their usual pay. Most of the remainder received holiday pay that equaled, or approached, their regular pay. A few incentive workers received holiday pay that was greater than their regular pay.

Virtually all nonsupervisory service workers were in shops providing paid vacations after qualifying periods of service (table 32). Although vacation provisions varied substantially among the areas, typical provisions were 1 week of pay after 1 year of service and 2 weeks after 2 years. Provisions for at least 3 weeks of vacation pay, generally after 10 to 15 years of service, were more common in the Northeastern and North Central areas than in the other two regions. Only in Chicago, Minneapolis, St. Louis, and San Francisco were a majority of the workers covered by 4-week plans.

Virtually all service workers were in establishments providing hospitalization, surgical, basic medical, and major medical insurance for which employers paid at

least part of the cost (table 33). Provisions for life insurance covered nine-tenths of the workers; accidental death and dismemberment insurance, four-fifths; and short-term protection against sickness or accident, two-thirds. As with the other elements of this survey, incidence of certain health and insurance plans varied widely by area. For example, accidental death and dismemberment plans covered from one-half of the workers in Denver to virtually all in St. Louis and San Francisco. Long-term disability insurance was provided to no more than one-fourth of the workers outside of St. Louis, where slightly more than nine-tenths of the workers were covered.

Retirement pension plans (other than social security) applied to at least 90 percent of the workers in Minneapolis-St. Paul, St. Louis, and San Francisco. Elsewhere, pension plans covered a majority of the workers in 8 areas and typically from one-fourth to one-third in the remaining 13.

Nearly one-third of the nonsupervisory service workers were in shops with formal provisions for funeral leave pay. Provisions for jury-duty pay were virtually nonexistent (table 34).

Formal provisions for furnishing and cleaning uniforms, or for paying at least part of the cost of these benefits, were reported by establishments employing 95 percent or more of the service workers (table 34). Provisions varied by geographic location. For example, in 4 of the 5 northeastern areas, employers typically provided uniforms and cleaning; in most areas of the north central and southern regions, employers usually provided monetary allowances; and in the west, the pattern was mixed.

Industry characteristics

The 3,363 auto dealers within the scope of the survey—those with at least 20 workers—employed 173,682 workers in November 1982. In the 24 areas combined, executive, supervisory, and office personnel made up 24 percent of the work force; auto salesworkers made up 19 percent; and the nonsupervisory service workers accounted for 57 percent.

Establishments with total employment of 20 to 49 workers accounted for slightly more than one-third of the service workers; those having 50 to 99 workers, for slightly more than two-fifths; and larger establishments, for just over one-fifth. These proportions varied widely by area, as shown in table 2. Northeastern areas, for example, had much larger proportions of service workers in the smallest dealership classification than did most areas studied in other parts of the country.

Apprentice automotive mechanics and other appren-

tices in formally established programs registered with Federal or State governments accounted for less than 1 percent of the survey employment. Nevertheless, apprentice automotive mechanics were employed in each area. Establishments with apprentices accounted for 83-86 percent of the workers in Chicago, Minneapolis, and San Francisco; between 45-60 percent in Denver, Philadelphia, Pittsburgh, Portland, and Washington; and 40 percent or less in the remaining areas (table 2).

One-third of the areas accounted for about three-fifths of the service workers covered by the study. The Los Angeles-Long Beach area had the largest number (10,083), followed by Washington (8,024), Chicago (7,080), Houston (6,107), Philadelphia (5,924), Detroit (5,623), Dallas-Fort Worth (5,557), and San Francisco (4,579). In the remaining 16 areas, employment of nonsupervisory service workers ranged from 3,898 in New York to approximately 1,000 in Birmingham. (See appendix table A-1.)

Between the June 1978 survey and the current study, employment among the nonsupervisory service workers dropped substantially in most of the 23 areas surveyed both years. The largest declines were reported in Birmingham (44 percent) and New York (38 percent); smallest (less than 10 percent) in Dallas, Houston, and Memphis. Among the other areas, employment declines typically ranged between 23 and 35 percent. In contrast, Washington recorded a 4-percent gain in the work force. (The Phoenix area was not surveyed in 1978.)

Weekly work schedules of 40 hours were common in all areas except Dallas-Fort Worth. There, 54 percent were on longer schedules, notably 45 hours per week (table 30). Other areas reporting at least one-fifth of the workers at 45 hours or more included Atlanta, Denver-Boulder, and Washington.

Just over one-fifth of the service workers were covered by labor-management agreements. The proportion was about nine-tenths in San Francisco and St. Louis; between three-fifths and four-fifths in Chicago, Minneapolis, Nassau-Suffolk, and New York; nearly two-fifths in Kansas City; and one-fourth or less in Boston, Detroit, Milwaukee, Philadelphia, and Pittsburgh (table 2). In the remaining 12 areas, primarily in the South and West, no establishment visited reported a majority of its nonsupervisory service workers under union contracts. The major unions in the industry were the International Association of Machinists and Aerospace Workers (AFL-CIO), and the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America (Ind.). In a few areas, both of these unions had bargaining agreements with the same establishment.

Table 1. Occupational staffing pattern

(Percent distribution of workers in auto dealers by occupational group and size of establishment, 24 areas combined, November 1982)

Occupational group	All establishments	Establishments with—		
		20-49 workers	50-99 workers	100 workers or more
All workers	100.0	100.0	100.0	100.0

7 weeks	-	-	-	-	-	-	-	6	-	-	-	-

¹ For definition of areas, see appendix table A-1, footnote 1.

² Vacation payments, such as percent of annual earnings, were converted to an equivalent time basis. Periods of service were chosen arbitrarily and do not necessarily reflect individual establishment provisions for progression. For example, changes indicated at 10 years may include changes that occurred between 5 and 10 years.

³ Less than 0.5 percent.

⁴ Vacation provisions were virtually the same after longer periods of service.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes indicate that no data were reported.

³ Less than 0.5 percent.

NOTE: Dashes indicate that no data were reported.

Appendix A. Scope and Method of Survey

Scope of survey

The survey included the repair departments of establishments engaged primarily in selling new, or new and used automobiles (SIC 5511 as defined in the 1972 edition of the *Standard Industrial Classification Manual* prepared by the U.S. Office of Management and Budget). Establishments primarily selling trucks and used cars and general automobile repair shops were not included.

Establishments studied were selected from those employing 20 workers or more at the time of reference of the data used in compiling the universe lists. Table A-1 shows the number of establishments and workers estimated to be within the scope of the survey, as well as the number actually studied by the Bureau.

Method of study

Data were obtained by personal visits of the Bureau's field representatives to a probability-based sample of establishments within the scope of the survey. To obtain appropriate accuracy at minimum cost, a greater proportion of large than of small establishments was studied. In combining the data, each establishment was given an appropriate weight. All estimates are presented, therefore, as relating to all establishments in the industry, excluding only those below the minimum size at the time of reference of the universe data.

Establishment definition

An establishment is defined for this study as all outlets of a company operating within the metropolitan area.

Employment

Estimates of the number of workers within the scope of the study are intended as a general guide to the size and composition of the industry's labor force, rather than as precise measures of employment.

Nonsupervisory service workers

The term "nonsupervisory service workers" includes working supervisors and nonsupervisory workers in all departments except the office and auto sales. Included are workers in departments such as repair, service, and parts.

Occupational classification

Occupational classification was based on a uniform set of job descriptions designed to take account of inter-

establishment and interarea variations in duties within the same job. (See appendix B for these descriptions.) The criteria for selection of the occupations were: The number of workers in the occupation; the usefulness of the data in collective bargaining; and appropriate representation of the entire job scale in the industry. Supervisors, apprentices, learners, beginners, trainees, and handicapped, part-time, temporary, and probationary workers were not reported in the data for selected occupations.

Wage data

Information on wages relates to straight-time hourly earnings, excluding premium pay for overtime and for work on weekends, holidays, and late shifts. Incentive payments, such as those resulting from piecework or production bonus systems, and cost-of-living bonuses were included as part of the workers' regular pay. Non-production bonus payments, such as Christmas or year-end bonuses, were excluded.

Average (mean) hourly rates or earnings for each occupation or category of workers were calculated by weighting each rate (or hourly earnings) by the number of workers receiving the rate, totaling, and dividing by the number of individuals. The hourly earnings of salaried workers were obtained by dividing straight-time salary by normal (or standard) hours to which the salary corresponds. Some repair shops in the study were unable to provide normal (or standard) hours data for their employees. In those cases, an estimate of the hours was used to obtain the hourly earnings.

Method of wage payment

Tabulations by method of wage payment relate to the number of workers paid under the various time and incentive wage systems. Formal rate structures for time-rated workers provide single rates or a range of rates for individual job categories. In the absence of a formal rate structure, pay rates are determined primarily by the qualifications of the individual worker. A single rate structure is one in which the same rate is paid to all experienced workers in the same job classification. Learners, apprentices, or probationary workers may be paid according to rate schedules which start below the single rate and permit the workers to achieve the full job rate over a period of time. An experienced worker occasionally may be paid above or below the single

¹ The areas used in this report are defined as follows: **NORTHEAST:** Boston—Suffolk County, 16 communities in Essex County, 34 in Middlesex County, 26 in Norfolk County, and 12 in Plymouth County; Nassau-Suffolk—Nassau and Suffolk Counties, N.Y.; New York—New York City (Bronx, Kings, New York, Queens, and Richmond Counties) and Putnam, Rockland, and Westchester Counties, N.Y., and Bergen County, N.J.; Philadelphia—Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties, Pa., and Burlington, Camden, and Gloucester Counties, N.J.; and Pittsburgh—Allegheny, Beaver, Washington, and Westmoreland Counties, Pa.; **SOUTH:** Atlanta—Butts, Cherokee, Clayton, Cobb, DeKalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Henry, Newton, Paulding, Rockdale, and Walton Counties, Ga.; Birmingham—Jefferson, St. Clair, Shelby, and Walker Counties, Ala.; Dallas-Fort Worth—Collin, Dallas, Denton, Ellis, Hood, Johnson, Kaufman, Parker, Rockwall, Tarrant, and Wise Counties, Texas; Houston—Brazoria, Fort Bend, Harris, Liberty, Montgomery, and Waller Counties, Texas; Memphis—Shelby and Tipton Counties, Tenn.; Crittenden County, Ark.; and DeSoto County, Miss.; Miami—Dade County, Fla.; and Washington—The District of Columbia; Charles, Montgomery, and Prince Georges Counties, Md.; and Alexandria, Fairfax, and Falls Church Cities and Arlington, Fairfax, Loudoun, and Prince William Counties, Va. **NORTH CENTRAL:** Chicago—Cook, DuPage, Kane, Lake, McHenry, and Will

Counties, Ill.; Detroit—Lapeer, Livingston, Macomb, Oakland, St. Clair, and Wayne Counties, Mich.; Indianapolis—Boone, Hamilton, Hancock, Hendricks, Johnson, Marion, Morgan, and Shelby Counties, Ind.; Kansas City—Cass, Clay, Jackson, Platte, and Ray Counties, Mo.; and Johnson and Wyandotte Counties, Kans.; Milwaukee—Milwaukee, Ozaukee, Washington, and Waukesha Counties, Wis.; Minneapolis-St. Paul—Anoka, Carver, Chisago, Dakota, Hennepin, Ramsey, Scott, Washington, and Wright Counties, Minn.; and St. Croix County, Wis.; and St. Louis—St. Louis City; Franklin, Jefferson, St. Charles, and St. Louis Counties, Mo.; and Clinton, Madison, Monroe, and St. Clair Counties, Ill.; **WEST:** Denver-Boulder—Adams, Arapahoe, Boulder, Denver, Douglas, Gilpin, and Jefferson Counties, Colo.; Los Angeles-Long Beach—Los Angeles County, Calif.; Phoenix—Maricopa County, Az.; Portland—Clackamas, Multnomah, and Washington Counties, Oreg.; and Clark County, Wash.; and San Francisco-Oakland—Alameda, Contra Costa, Marin, San Francisco, and San Mateo Counties, Calif.

² Includes only those auto dealerships with total employment of at least 20 workers at the time of reference of the universe data.

³ Data relate to total employment in establishments actually visited.

⁴ Includes executive, professional, office, and other workers in addition to the non-supervisory service worker category shown separately.

rate for special reasons, but such payments are exceptions. Range-of-rate plans are those in which the minimum, maximum, or both of these rates paid experienced workers for the same job are specified. Specific rates of individual workers within the range may be determined by merit, length of service, or a combination of these.

Incentive workers are classified under flat-rate hours, flat-rate percentage, individual bonus, group bonus, or commission plans. Flat-rate hours plans compute pay by multiplying the number of hours established for the job by an hourly rate, regardless of the amount of time actually required to complete the work. Flat-rate percentage plans pay a stipulated percentage of the labor cost charged to the customer. Bonus plans are for production in excess of a quota or for completion of a task in less than standard time, either by an individual or a group. Under commission plans, earnings are based on

a percentage of value of sales or on a combination of a stated salary plus a percentage of sales.

Scheduled weekly hours

Data on weekly hours refer to the predominant work schedule for full-time, nonsupervisory service workers employed on the day shift.

Establishment practices and supplementary wage provisions

Supplementary benefits in an establishment were considered applicable to all service workers if they applied to half or more of such workers in the establishment. Similarly, if fewer than half of the workers were covered, the benefit was considered nonexistent in the establishment. Because of length-of-service and other eligibility requirements, the proportion of workers receiving the benefits may be smaller than estimated.

Paid holidays. Paid holiday provisions relate to full-day and half-day holidays provided annually.

Paid vacations. The summary of vacation plans is limited to formal arrangements and excludes informal plans whereby time off with pay is granted at the discretion of the employer or supervisor. Payments not on a time basis were converted; for example, a payment of 2 percent of annual earnings was considered the equivalent of 1 week's pay. The periods of service for which data are presented represent the most common practices, but they do not necessarily reflect individual establishment provisions for progression. For example, changes in proportions indicated at 10 years of service may include changes which occurred between 5 and 10 years.

Health, insurance, and retirement plans. Data are presented for health, insurance, pension, and retirement severance plans for which the employer pays all or a part of the cost, excluding programs required by law such as workers' compensation and social security. Among plans included are those underwritten by a commercial insurance company and those paid directly by the employer from current operating funds or from a fund set aside for this purpose.

Death benefits are included as a form of life insurance. Sickness and accident insurance is limited to that type of insurance under which predetermined cash payments are made directly to the insured on a weekly or monthly basis during illness or accident disability. Information is presented for all such plans to which the employer contributes at least a part of the cost. However, in New York and New Jersey, where temporary disability insurance laws require employer contributions,¹ plans are included only if the employer (1) contributes more than is legally required, or (2) provides the employees with benefits which exceed the requirements of the law.

Tabulations of paid sick leave plans are limited to formal plans which provide full pay or a proportion of the worker's pay during absence from work because of illness; informal arrangements have been omitted. Sepa-

¹ The temporary disability insurance laws in California and Rhode Island do not require employer contributions.

rate tabulations are provided for (1) plans which provide full pay and no waiting period, and (2) plans providing either partial pay or a waiting period.

Long-term disability insurance plans provide payments to totally disabled employees upon the expiration of sick leave, sickness and accident insurance, or both, or after a specified period of disability (typically 6 months). Payments are made until the end of disability, a maximum age, or eligibility for retirement benefits. Payments may be full or partial, but are almost always reduced by social security, workers' compensation, and private pension benefits payable to the disabled employee.

Medical insurance refers to plans providing for complete or partial payment of doctors' fees. Such plans may be underwritten by a commercial insurance company or a nonprofit organization, or they may be a form of self-insurance.

Major medical insurance, sometimes referred to as extended medical or catastrophe insurance, includes plans designed to cover employees for sickness or injury involving an expense which exceeds the normal coverage of hospitalization, medical, and surgical plans.

Tabulations of retirement pensions are limited to plans which provide regular payments for the remainder of the retiree's life. Data are presented separately for retirement severance pay (one payment or several over a specified period of time) made to employees on retirement. Establishments providing both retirement severance payments and retirement pensions to employees were considered as having both retirement pensions and retirement severance plans; however, establishments having optional plans providing employees a choice of either retirement severance payments or pensions were considered as having only retirement pension benefits.

Paid funeral and jury-duty leave. Data for paid funeral and jury-duty leave relate to formal plans which provide at least partial payment for time lost as a result of attending funerals of specified family members or serving as a juror.

Uniform allowances. Data relate to formal provisions for uniforms worn in lieu of or over the employee's personal clothing.

Appendix B. Occupational Descriptions

The primary purpose of preparing job descriptions for the Bureau's wage surveys is to assist its field representatives in classifying into appropriate occupations workers who are employed under a variety of payroll titles and different work arrangements from establishment to establishment and from area to area. This permits the grouping of occupational wage rates representing comparable job content. Because of this emphasis on interestablishment and interarea comparability of occupational content, the Bureau's job descriptions may differ significantly from those used in individual establishments or those prepared for other purposes. In applying these job descriptions, the Bureau's field representatives were instructed to exclude supervisors, apprentices, learners, beginners, trainees and handicapped, part-time, temporary, and probationary workers.

The titles and code numbers that appear below the job titles in this appendix were taken from the 1980 edition of the *Standard Occupational Classification Manual* (SOC), issued by the U.S. Department of Commerce, Office of Federal Statistical Policy and Standards.

In general, the Bureau of Labor Statistics' occupational descriptions are much more specific than those found in the SOC manual. For example, 3 of the 8 occupations studied separately had the same SOC code (6111). Thus, in comparing the results of this survey with other sources, differences in occupational definitions should be taken into consideration.

Body repairer

(6115: Automobile body and related repairer)

Repairs damaged bodies and body parts of automotive vehicles. Duties involve most of the following: Removing parts and equipment (e.g. upholstery and trim) to gain access to vehicle body and fenders; placing dolly blocks against surface of dented area and beating opposite surface with hammer to remove dents; filling depressions with solder, plastics, or other material; and removing excessively damaged parts, such as fenders, panels, grills, and attaching replacements. In addition, may file, grind, and sand repaired surface; paint repaired surface; and perform such related tasks as replacing broken glass. Excluded are workers who specialize in

body shop estimating, frame repairing and straightening, and bumper straightening.

Lubricator

(873: Garage and service station related occupations)

Lubricates moving parts of automotive vehicles. Work involves: Selecting proper lubricants for various parts of chassis and motors; using grease guns to inject grease into such units as springs, universal joints, and steering knuckles; inspecting fluid level and adding or changing fluid if necessary to such units as steering gear, power steering reservoir, transmission, differential, and rear axle housing; draining oil from crankcase and refilling it; and spraying leaf springs with lubricant. May perform other related duties such as checking radiator coolant level, checking and adding water to battery, replacing battery, repairing tires, changing air and oil filters, and packing front wheel bearings and universal joints, etc.

Mechanic, automotive, journeyman

(6111: Automobile mechanics)

Repairs, rebuilds, or overhauls major automotive assemblies of automobiles and light trucks such as engines, drivetrains and axles, transmissions and transaxles, clutches, fuel injection, and light diesel. Includes workers who customarily are required to work on any of the major automotive assemblies listed above as well as those whose duties are normally limited to a specific major assembly, such as transmissions. The mechanic's work requires training usually acquired through an apprenticeship program or equivalent training and experience. This classification does *not* include workers who only perform minor repair and tuneup of motor vehicles. (See *Mechanic, automotive, service*.) It does, however, include fully qualified journeyman mechanics even though most of their time may be spent on minor repairs and tuneups.

Mechanic, automotive, service

(6111: Automobile mechanics)

Performs minor repair and tuneup of motor vehicles. Work may consist of a combination, or all of the following: *Replacing* and *adjusting* fuel, electrical, and cooling system components, such as carburetor/fuel in-

jection, water pump, distributor, voltage regulator, and alternator; replacing and adjusting system and component parts, such as distributor and window wipers; cleaning spark plug electrodes and setting spark plug gap; replacing defective chassis parts, such as shock absorbers, brakelinings and pads, and wheel bearings; and installing automobile accessories such as oil and air filters, windshield wiper blades, fan belts, and batteries.

This classification does not include workers capable and required to repair major automotive assemblies, even though this type of work constitutes a minor part of their time (see *Mechanic, automotive, journeyman*), or journeyman mechanic helpers.

New-car get-ready workers

(6111: Automobile mechanics)

Inspects and services new automobiles and makes minor repairs and adjustments to place vehicle in saleable condition. Work involves *most* of the following: Inspecting vehicles delivered to dealer for damage and missing components and recording discrepancies; examining vehicles for loose or misaligned trim, doors, hardware, and other items and correcting defects; starting engine and activating power equipment, such as electric windows, seats, and radio to detect faulty unit or system; observing functions of horn, lights, directional signals, cigarette lighter, and other electrical components; touching up minor imperfections in paint; and installing optional equipment specified by customer such as mirrors, carpets and mats, moldings and standard items such as wiper blades and wheel covers. May also apply under-coating material to vehicles and time engine.

Painter

(6115: Automobile body and related repairer)

Repaints automobiles, buses, and trucks, or damaged places on such vehicles: Removes old paint, masks (covers) portions of automobile not to be painted, and sands rough spots. Mixes paint to produce desired color

or may use prepared paints. Applies paint, enamel, or other finishes to metal surfaces with brush or spray gun. May run intermediate coats and polish final coat.

Parts clerk

(4367: Salespersons, parts)

Sells automobile parts to customers and fills requisitions of service department for parts. Duties involve *most* of the following: Ascertaining make, year, and type of part needed, sometimes inspecting damaged part to determine replacement required, or advising customer of part needed according to description of trouble; discussing with customer the use and features of various parts based on knowledge of engines or equipment; using computer or reading catalog for stock number and price of part; advising customer on substitution or modification of parts when replacements are not available; examining returned part to determine if it is defective, exchanging the part or refunding money; filling customer or repair department orders from stock, finding parts by location and stock number from catalog or computer; marking and storing parts in stockroom according to pre-arranged plan; receiving and filling telephone orders for parts; keeping records; and making out sales slips.

Exclude *parts managers*, who, in addition to selling parts, have supervisory responsibility over other parts department employees.

Service salesworkers

(4244: Sales representatives, motor vehicles and supplies)

(Automobile inspector; write-up person)

Examines automobiles driven into service area by customers and determines need for and cost of repairs. Ascertains nature of needed repairs by testing, by questioning customer concerning performance of automobile, or by visual inspection. Estimates cost of repair and prepares itemized work order, listing cost of parts and labor.

Industry Wage Survey Bulletins

The most recent reports providing occupational wage data for industries currently included in the Bureau's program of industry wage surveys are listed below. Copies are for sale from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or from any of its regional offices, and from the regional offices of the Bureau of Labor Statistics shown on the inside back cover. Bulletins that are out of stock are available for reference at leading public, college, or university libraries, or at the Bureau's Washington or regional sales offices.

Chartbooks on the Nation's Workers

Women at Work: A Chartbook—points out that women now account for 43 percent of the labor force, compared with less than 30 percent in 1950. They have obtained jobs in all sectors of the economy but are concentrated in finance, insurance, and real estate; retail trade; health, business, and education services; and State and local government. The chartbook includes information on occupations, earnings, working mothers, women maintaining families, work-life expectancy, and other special topics.

Workers Without Jobs: A Chartbook on Unemployment—presents information on the extent and nature of unemployment in the United States. Figures in the charts disclose how joblessness varies by age, sex, and race. They also depict the proportion of unemployment resulting from loss of a job as opposed to other factors. The average length of unemployment and the impact of unemployment on families are also shown.

* * *

Statistics in both chartbooks are part of a broad array of unemployment and related labor force data available from the Current Population Survey, a sample survey of some 60,000 households conducted for the Bureau of Labor Statistics by the Bureau of the Census.
