Bulletin 2225

Preface

This bulletin presents detailed income and expenditure data from the Interview component of the new, ongoing Consumer Expenditure Survey. Data from the Diary component were published in 1983 in *Consumer Expenditure Survey: Diary Survey, 1980-81*, Bulletin 2173. Data for both components were collected during 1980 and 1981, the first two years of the survey program. BLS will publish integrated data from both the Diary and Interview components of the Consumer Expenditure Survey showing total expenditures of urban consumer units classified by selected characteristics.

The consumer expenditure survey program now provides a continuous and comprehensive flow of data on the buying habits of American consumers for use in a wide variety of economic research and analysis, and in support of future revisions of the Consumer Price Index. To meet the needs of users, BLS makes the data available in news releases, bulletins, articles in the *Monthly Labor Review*, and public-use computer tapes. A selected listing of publications and tapes is given at the end of this bulletin.

The bulletin was prepared in the Office of Prices and Living Conditions under the general direction of Eva E. Jacobs, Chief of the Division of Consumer Expenditure Surveys, and Stephanie Shipp, Chief of the Branch of Information and Analysis. Major contributions in preparing tables and text were made by William Passero, Beth Harrison, John Rogers, Alice Lippert, Kirk Kaneer, Ray Gieseman, Ana Lavalley, Raphael Branch, and Maureen Boyle. All processing of data was completed under the direction of Katrina Reut, Chief of the Branch of Production and Control, and Stephen Wright, Chief of the Branch of Consumer Expenditure Surveys and Cost Weights. Statistical assistance on data reliability and estimation of weights was provided by Curtis Jacobs and Paul Hsen of the Statistical Methods Division. Faye Posey and Lucinda Walker contributed in processing the text.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission.

Interview Survey, 1980-81

Historical background

Expenditure surveys undertaken by the Bureau of Labor Statistics date back to the late 19th century. They arose from the need for information by U.S. Government policymakers. The first survey was conducted from 1888 to 1891 as a result of tariff negotiations between the United States and European countries. Comprehensive surveys were conducted in 1901 and 1917-19 in response to concern over the effects of rapidly rising prices on living costs during those periods. The 1901 survey provided food expenditure data in sufficient detail to enable the construction of a food price index. The 1917-19 survey extended detailed coverage to all categories of family expenditure. It was from information obtained in the 1917-19 survey, which focused on wage earners and salaried workers living in urban areas, that BLS developed its first cost-of-living index, which evolved into the Consumer Price Index (CPI).

Studies in the late 1920's and early 1930's showed that consumption patterns of American consumers had changed markedly since the 1917-19 survey. These changes, combined with the needs of public policy planners attempting to restore economic order in the 1930's, underscored the necessity for new information on consumption patterns. During 1934-36, BLS participated in two separate surveys. One provided the basis for an extensive analysis of the distribution of income and expenditures and their relationship to such variables as region, occupation, family composition, and race. The second, a more limited survey, was used for revision of the CPI and the selection of a new list of items to be priced in the index.

During 1941-42, BLS and the Department of Agriculture cooperated in conducting a nationwide survey of the civilian noninstitutional population to provide data on which to base governmental decisions affecting the civilian economy during World War II. It was the first BLS survey in which the entire sample population was chosen using scientific sampling methods.

From 1944 to 1949, BLS tested alternative techniques and methodologies designed to improve subsequent expenditure surveys. As a result, many statistical improvements were incorporated in the expenditure survey of 1950, which covered the civilian noninstitutional population living in urban areas.

The 1960-61 survey, more ambitious than any of its predecessors, covered all

urban and rural families and single consumers. Data were collected in interviews in which respondents were asked to recall the previous year's expenditures. The detail of food expenditures was obtained from a 7-day recall. The release of a general-purpose public use tape containing findings from the 1960-61 survey marked the first time micro data had been released on tape by BLS.

Unlike previous surveys, the 1972-73 survey was carried out by the Bureau of the Census under contract to BLS. It was also the first BLS expenditure survey consisting of two separate components: a Quarterly Interview panel survey and a Diary survey. The decision to adopt the diary/interview format was based on testing of collection methodology performed by BLS, the Census Bureau, and the Survey Research Laboratory of the University of Illinois. These tests revealed that data of high quality could be obtained if questionnaires were tailored so that information on larger, more easily recalled expenditures was collected by periodic recall, as done in the quarterly interview, and for small, less expensive items, by day-to-day recordkeeping, as done by the diary.

The 1980-81 survey

The new, ongoing survey is the first major survey of consumer expenditures since 1972-73. The new survey, like the previous one, consists of two separate components, each with its own questionnaire and sample: 1) A Quarterly Interview survey in which each of the consumer units in the sample is visited by an interviewer every 3 months over a 12-month period, and 2) a Diary survey in which consumer units are asked to complete a diary of expenses for two consecutive 1-week periods.¹ This bulletin presents the data collected in the Quarterly Interview component for 1980 and 1981. Diary data were published in 1983 (see Bulletin 2173, *Consumer Expenditure Survey: Diary Survey, 1980-81*).

As in 1972-73, data collection for both components of the survey was carried out by the Bureau of the Census under contract to the Bureau of Labor Statistics. The Interview survey obtains data on the types of expenditures respondents can be expected to recall for a period of 3 months or longer. These would include relatively large expenditures, such as those for property, automobiles, and major appliances, and those which occur on a regular basis,

¹ See appendix A for definition of consumer unit.

such as rent, insurance premiums, and apparel. The Interview survey also obtains data on expenditures incurred on trips.

The Diary survey is designed to obtain data on frequently purchased items, such as food and beverages, both at home and in eating places; tobacco; housekeeping supplies; nonprescription drugs; and personal care products and services. These items are less likely to be recalled accurately by respondents over longer periods of time. Expenditures incurred while away from home overnight or longer are excluded from the Diary.

While the new survey and the 1972-73 survey are similar in many respects, there are differences between them. One major difference is the ongoing nature of the new survey, with rotating panels of respondents interviewed on a continuous basis. This provides more timely information on consumption patterns of different kinds of consumer units. Also, in the new survey, students living in college- or university-regulated housing report their own expenditures separately, rather than as part of their parents' households. It is believed that the expenditures of students were underreported or inaccurately reported in the 1972-73 survey. The concept of the consumer unit "head" has also changed in the new survey. Previously, husbands were automatically considered to be the heads of consumer units in which both husband and wife were present. The new survey adopts the term "householder" or "reference person", defined as the first member of the consumer unit mentioned by the respondent as an owner (or renter) of the premises at the time of the initial interview. This is in accordance with procedures for other government surveys such as the Current Population Survey.

The expenditure and income data are presented in 30 tables. Eighteen of the tables show the 1980-81 average expenditures for the urban population tabulated by selected socioeconomic characteristics.² Data for 1980 and 1981 are shown separately in 12 tables.

Highlights of Interview survey results in 1980-81

- About half of the total expenditures of American urban households were for housing and transportation. For the lowest income groups, housing costs represented a much larger percentage of the total than for the highest income group.
- About 60 percent of the households were homeowners. They spent 27 percent of total housing costs on utilities and public services. Renters spent about 20

² Due to budget constraints, rural primary sampling units were eliminated from the sample beginning in October 1981. Since the survey is ongoing and comparability over time is important, only expenditures for the urban population are published for 1980 and 1981. In order to compare with National Income and Product Accounts, estimates of total population for 1980 and 1981 were constructed (see section on comparisons with other data).

percent on utilities, reflecting in part the fact that many renters had some utilities included in rent.

- About 85 percent of households owned at least one vehicle, with the average almost two vehicles per household. Gasoline accounted for about one-third of total transportation costs.
- Transportation costs as a proportion of total expenditures were higher for the youngest consumers—about 23 percent—than for the oldest consumers—about 16 percent. Proportions spent for transportation were higher for multiple-earner consumer units than for those with one earner.
- Consumers in the West showed the lowest share of total expenditures going for utilities, partly because that region had a relatively large number of renters. On the other hand, consumer units in the West spent relatively more for shelter than consumer units in other regions.
- Although the average family size for the single-parent household was slightly over three, expenditures of this group were only about 60 percent of the average for all three-person families.
- Households in the over-65 age group spent a higher proportion on food, housing, and health care than any other age group. The under-25 age group spent a higher proportion of their expenditures on education, entertainment, and other transportation than any other age group.
- Households in the age groups from 25 to 64 years spent an average of about 8 percent of their total expenditures on Social Security and other pension payments and personal insurance.

Highlights of changes since 1972-73

- Average annual expenditures increased over 80 percent for urban consumers between 1972-73 and 1980-81 (text table 1). Several major components—homeowner costs, fuels and utilities, and gasoline—more than doubled. These components were significantly affected by the changes in house prices, interest rates, and energy prices in the period between the surveys.
- Housing costs increased to almost 30 percent of total spending in 1980-81 from 28 percent in 1972-73.
- The share of total energy-related components—fuels, utilities, and public

services, and gasoline—increased from 10 percent to 14 percent of total expenditures.

- Automobile transportation costs continued their rise in importance in the household budget, from 17.5 percent to almost 19 percent. To put this change in perspective, costs for automobile transportation were about 62 percent of food

Life and other personal insurance	367	265	-28
Retirement, pensions, Social Security	451	999	122

¹ 1972-73 expenditure categories were adjusted to correspond with 1980-81 definitions (see appendix C).

costs in 1960-61. Auto transportation costs exceeded food costs by 5 percent in the 1972-73 survey and by 7 percent in 1980-81.

- Other components that more than doubled during the period were food away from home, reading, and miscellaneous expenditures, including accounting and legal services. The increase of over 200 percent in alcoholic beverages, historically severely underreported, probably reflects improved reporting rather than increased consumption.

- Social Security and other government and private pension contributions increased by over 100 percent. During this period, Social Security employee contribution rates and the level to which they were applied both rose substantially. In addition, there was a proliferation of private pension plans, many of which required some employee contribution.

- Expenditures for apparel and upkeep declined as a share of total expenditures. This can be partially attributed to a slower than average rate of price increase for apparel items and decreasing family size.

- The small decline in the health care share is probably accounted for by the spread of employer-financed health insurance plans.

- The proportion of total expenditures accounted for by each income group changed little between 1972-73 and 1980-81. In both survey periods, the lowest 20 percent accounted for about 9 percent of the aggregate expenditures of all families; the highest 20 percent, for about 35 percent.

Interpreting the data

In interpreting the expenditure data, several factors should be considered. First, they are averages for the total urban population. An individual consumer unit may not have purchased a car or a major appliance or paid for health insurance during the survey period. Even if the purchase was made, an individual consumer unit may have spent substantially more or less than the average. Income, age of family members, geographic location, and individual preferences are among the factors which influence expenditures. Even within a group with similar characteristics, there may be significant variation.

Second, expenditures reported here are the direct out-of-pocket expenditures of consumer units. Indirect expenditures may be significant. For example, rental contracts often include utilities. In 1980-81, for 21 percent of renters, electricity was included in rent, and for 31 percent, gas was included. These renters would record no direct expense for these utilities. In addition, consumer units with members whose employers pay for health insurance or life insurance would

have lower direct expense for these items than those who pay the entire amount themselves. These factors should be considered when relating averages to individual circumstances.

Third, approximately 95 percent of expenditures are covered in the Interview. Excluded are nonprescription drugs, household supplies, and personal care items. The Interview survey must be integrated with the Diary survey to provide a complete picture of expenditures. Several years of data from both the Diary and Interview components are also required to construct the complete picture of consumer spending needed to update the market basket for the Consumer Price Index.

When comparing 1980-81 data with those for 1972-73 (see appendix C), users should keep in mind the difference in the treatment of the student population. Although including students as separate consumer units in the new survey has relatively little effect on estimates for the total population, estimates for some population groups, such as one-person consumer units and those under age 25, are significantly affected. To assist readers in making comparisons, the relevant tables in appendix C show estimates excluding students.

Price change. Changes in consumer spending are related to the underlying economic and social environment of the periods being compared. One major economic shock was the oil crisis, which took place at the end of the 1972-73 survey period and resulted in sharp increases in oil prices. The ramifications of these price increases throughout the economy caused consumers to alter their consumption patterns substantially.

Text table 2 shows the changes in expenditures and changes in components of the Consumer Price Index from 1972-73 to 1980-81. The definitions and coverage of the CPI do not completely conform to the components of the expenditure survey. The change in the total CPI is not compared because the concept of homeownership cost is not comparable and because cash contributions and personal insurance are not included in the CPI. In examining price change by component, price increases for oil-related fuels and utilities and for gasoline stand out. These changes are reflected in the large increase in expenditures for these components. Changes in the costs of owning a home (interest, taxes, insurance, and maintenance and repair) are more difficult to measure. However, we do know that interest rates and house prices increased substantially during this period, and maintenance and repair prices doubled in the CPI.

Changes in income. A major influence on consumers is a change in real income, that is, the change in income adjusted for change in prices. Between 1972-73 and 1980-81, income reported in the Interview surveys increased 61 percent before income taxes.³

There is no completely correct price index for deflating income, but it is com-

Text table 2. Percent changes in selected annual expenditures of urban consumer units, Interview survey, and changes in Consumer Price Index for All Urban Consumers, 1972-73 to 1980-81¹

¹ 1972-73 expenditures were adjusted to correspond with 1980-81 definitions (see appendix C).

² Estimated.

mon practice to use the CPI for this purpose.⁴ The CPI increased by about 20 percentage points more than income reported in the survey for the similar time period.⁵ The apparent decline in real income on this basis was accompanied by a somewhat smaller decline in expenditures, if the CPI is similarly applied to that total. Several factors might account for the apparent decline in real income. Among them are the smaller family size in 1980-81 and a younger average population. Also, students, who were counted as separate consumer units in 1980-81, have a lower average income than nonstudents. Average before-tax income increased by 63 percent between 1972-73 and 1980-81 when students are excluded.

Any analysis which refers to income from household surveys must take into account the special problems involved in obtaining responses to income questions. The number of consumer units classified as incomplete income reporters

³ Income averages are derived only from complete income reporters (see appendix A for definitions).

⁴ Robert Gillingham and John S. Greenlees, "The Incorporation of Direct Taxes into a Consumer Price Index," in *Price Level Measurement*, W. Erwin Diewert and Claude Montmarquette, eds. (Statistics Canada, 1983), pp. 619-654. See also Jack E. Triplett, "Escalation Measures: What is the Answer? What is the Question?" in *Price Level Measurement*, pp. 457-487.

⁵ Income is reported for the last 12 months and therefore includes 1979 income for many 1980 respondents. 1980 was used as the midpoint for measuring the comparable change from 1972-73 to 1980-81 in the Consumer Price Index.

(see appendix A) rose from 6 percent to 16 percent from 1972-73 to 1980-81. These may be either refusals or lack of information on the part of the respondent about income of all family members. In addition, there has always been underreporting of property income, that is, interest, dividends, and rent. Since there has been an increase in refusals to questions about major sources of income, it is reasonable to suspect that, even for those consumer units counted as complete income reporters, there may have been some deterioration in the reporting of total income. The problems associated with reporting of income are well known and documented in other surveys.⁶

The average income for complete income reporters is an approximation of average income for all respondents. Therefore, in all tables, only income data for complete income reporters are included.

Demographic changes. Changes in the makeup of the population also affect spending patterns. The decade between surveys saw members of the postwar baby-boom generation entering the work force. The group of consumer units in the 25 to 34 age group rose from 20 to 24 percent of the population, while the older, peak-earning age group, 45 to 54, declined from 18 to 14 percent of the population (chart 1). The decline in family size continued (chart 2), from an average of 3.1 persons in 1960-61 to 2.8 in 1972-73 to 2.7 in 1980-81. Geographic shifts took place as well, primarily away from the Northeast region to the South (chart 3). Another trend was the rise in two-earner consumer units (chart 4), from 36 percent to 43 percent of family units. Since different segments of the population have different patterns of expenditures, such social and economic changes may have a significant impact on the overall pattern of consumer spending.

Comparisons with other data sources

As part of the evaluation of the survey results, BLS compared aggregate expenditure estimates obtained from the Interview survey with alternative, independent sources of data.

Personal consumption expenditures in National Income and Product Accounts. Historically, the principal source of independent estimates used for these comparisons has been the personal consumption expenditures (PCE) component of the National Income and Product Accounts, prepared by the Bureau of Economic Analysis, U.S. Department of Commerce. Since the Commerce estimates cover the total population, comparisons are made on that basis⁷ and on the basis of aggregates rather than averages.

The PCE estimates represent the market value of goods and services purchased by the entire personal sector in the United States. The series is derived by complex methods which trace the flow of goods and services through the economy. While the data are not directly subject to the quantifiable sampling errors found in household surveys, they are subject to errors in the source data and to difficulties in applying complex procedures for allocating these data among the final demand sectors.⁸

Differences in concept and coverage require adjustments to both BLS and Commerce data to permit a comparison. With these adjustments, comparisons can be made for many categories of consumer spending.⁹ The degree of concordance varies by component, as noted in text table 3. Where differences in concept are so great as to make the comparison meaningless, such as for health care or education, the data are not shown.

Text table 3 shows aggregates for selected expenditure categories in the 1972-73 and 1980-81 Interview surveys, adjusted for comparability with Commerce data, and the resulting ratios. The ratios indicate that the Interview survey, with few exceptions, produced lower estimates of consumer expenditures for the major categories of consumption than those recorded in the Commerce series. However, the relationship between the two series over time has remained generally constant. The deterioration in the ratio for the apparel component is a cause for concern, and BLS will continue to investigate this area.

Residential Energy Consumption Survey. The Energy Information Administration of the U.S. Department of Energy (DOE) publishes data collected in the Residential Energy Consumption Survey (RECS) on expenditures for electricity, natural gas, fuel oil and kerosene, and liquefied petroleum gas. Data on motor fuel are collected and published separately. To make the comparison, time periods and fuel types were matched to the extent possible. However, some difference is to be expected because imputations are made in the DOE surveys for the money value of utilities included in residential rents, and for motor fuels for households which did own vehicles but did not report expenditures.

⁸ At each stage of the flow, cost and profit margins are estimated to arrive at a final market value of goods and services sold to consumers. The primary source of data is the Census of Manufactures and other economic censuses. Since these censuses are available only every 5 years, each component of the series is updated between censuses from various other secondary sources. Once new data are available from the census, the components of personal consumption expenditures are revised to accord with this benchmark. (The 1972 Census of Manufactures is the current benchmark.) Estimates also may be revised as other source data become available and are incorporated more frequently. In the past, revisions for some components have resulted in substantial changes. A detailed description of the derivation of personal consumption expenditures, as well as the other components of the National Income and Product Accounts, is found in *Development of National Income Measures, Supplement to Survey of Current Business* (Bureau of Economic Analysis, 1954).

⁹ For a detailed comparison of the 1972-73 Consumer Expenditure Survey and the Commerce series, see Robert B. Pearl, "Reevaluation of the 1972-73 U.S. Consumer Expenditure Survey", Technical Paper No. 46 (Bureau of the Census, July 1979).

⁶ See Current Population Reports, P-60, No. 142 (Bureau of the Census, 1984), p. 214.

Reading	4,399	11,089	.56	.70
Tobacco	9,152	14,718	.72	.67
Miscellaneous	4,865	16,848	.37	.55

¹ Total rent in the Interview survey is contract rent, which includes utilities for some renters. In PCE, data are for space rent, excluding any charges for utilities.

² The Interview survey concept covers direct costs of utilities and fuels by homeowners and renters. PCE data cover total expenditures for utilities and fuels even if paid by landlords.

³ Various subcategories were combined to approximate equivalent content.

⁴ PCE concept of dealer margin as the purchase value of used cars could not be matched. Vehicle purchases, trade-ins, and sales from Interview survey data were combined to obtain an approximate total for new and used cars.

NOTE: Estimates are for the total population, urban and rural.

The comparison shows that the Interview estimates for household fuels were lower than those from the Energy Department survey for the total population but were higher for motor fuels (text table 4). For the three household fuel categories combined, the Interview estimate of \$65.9 billion was about 12 percent lower. This is in the direction one would expect from the differences in estimation methodology. The Interview estimate for motor fuels was about 3 percent higher than that of the Energy Department.

Diary survey (1980-81). Only data collected in the Interview survey are presented in this bulletin. Some components shown here were also included in

the bulletin published earlier (Bulletin 2173) which presented results from the 1980-81 Diary survey. However, expenditure amounts for components common to both the Interview and Diary surveys may be different for several reasons.

For *food-at-home* expenditures, respondents in the Interview survey are asked a "global" question, that is, to estimate the number of trips they made to the grocery store for the 3-month period prior to the Interview survey, the average expenditures per trip, and how much of the expenditure was for nonfood items, which is then subtracted from the total. Food expenditures at specialty and convenience stores are added to give an estimate of food at home. In the Diary survey, respondents keep an itemized record of daily expenditures on food and other items. Food-at-home estimates from the Interview survey were about 22 percent to 23 percent higher than the Diary survey estimates in 1980 and 1981.

The opposite result was obtained for expenditures for *food away from home*, which are also collected with a global question in the Interview survey. Expenditures for food away from home (including trips) in the Interview survey were about 4 percent lower than the Diary survey estimates in 1980 and about 5 percent lower in 1981. Expenditures for food while on trips are reported in the Interview survey but not in the Diary survey. Expenditures for food while on trips accounted for approximately 17 percent of food-away-from-home expenditures in the Interview survey for both 1980 and 1981.

Expenditures on *energy* items—natural gas, electricity, fuel oil and other fuels, and gasoline and motor oil—are also collected in both the Interview and Diary surveys. For 1980, average expenditures in the Interview survey were

Text table 4. Estimates of consumer expenditures for energy from Interview survey and Department of Energy survey

(In billions)

Item	Interview survey	Department of Energy survey ¹
Household fuels ²	\$65.9	\$74.8
Natural gas	16.4	19.3
Electricity	37.3	40.1
Fuel oil and other fuels	³ 12.2	⁴ 15.4
Motor fuels ⁵	97.5	94.4

¹ Data for household fuels from *Residential Energy Consumption Survey: Consumption and Expenditures, April 1980 through March 1981*; data for motor fuels from *Residential Energy Consumption Survey: Consumption Patterns of Household Vehicles, June 1979 through December 1980, and Supplement: January 1981 to September 1981* (Energy Information Administration, U.S. Department of Energy).

² April 1980 through March 1981.

³ Includes fuel oil, kerosene, bottled or tank gas, wood, and miscellaneous fuels.

⁴ Includes fuel oil, kerosene, and liquid petroleum gas.

⁵ January 1980 through September 1981.

NOTE: Estimates are for the total population, urban and rural.

about 13 percent higher for both natural gas and electricity than in the Diary survey. Larger differences were shown for fuel oil and other fuels, as Interview expenditures were about 23 percent below the Diary in 1980. For gasoline and motor oil, on the other hand, Interview expenditures were about 25 percent higher than the Diary. In 1981, the differences in expenditures between the surveys were smaller for all four energy items. Natural gas was higher in the Interview by 8 percent and electricity by 4 percent; expenditures for fuel oil and other fuels were lower by 15 percent. Gasoline and motor oil expenditures were higher by 13 percent. Gasoline on trips was not included in the Interview totals in text table 5 to allow comparison with Diary estimates.

Income data are collected in both the Diary and Interview surveys. A comparison of income data published for the 1980-81 Diary survey and the 1980-81 Interview survey shows the Interview data to be higher. This is mostly because average income published from the Diary survey includes both complete and incomplete reporters of income while averages from the Interview survey, published in this bulletin, are only for complete reporters of income. A comparison of

Text table 5. Estimates of average annual expenditures by urban families for energy items, Interview and Diary surveys, 1980 and 1981

Item	Interview survey		Diary survey	
	1980	1981	1980	1981
Natural gas	\$213.39	\$247.04	\$189.28	\$228.28
Electricity	417.60	482.69	368.68	462.80
Fuel oil and other fuels	125.62	132.75	162.76	156.00
Gasoline and motor oil ¹	1,071.55	1,043.54	860.60	922.48

¹ Gasoline on trips not included.

Interview and Diary income data for complete income reporters shows the Interview data to be only slightly higher, \$19,989 versus \$19,188. The income value may be somewhat higher because more detailed income questions are asked in the Interview survey and because they are asked twice—at the second and fifth interview. Income questions in the Diary survey are asked only once.

Appendix A. Glossary

Population

The civilian noninstitutional urban population of the United States as well as that portion of the institutional population living in the following group quarters: Boarding houses, housing facilities for students and workers, staff units in hospitals and homes for the aged, infirm, or needy, permanent living quarters in hotels and motels, and mobile home parks.

Urban population

All persons living in Standard Metropolitan Statistical Areas (SMSA's) and in urbanized areas and urban places of 2,500 or more persons outside of SMSA's. Urban, defined in this survey, includes the rural populations within SMSA's.

Student population

Students living in college- or university-regulated housing, usually dormitories.

Consumer unit

A consumer unit comprises either: (1) all members of a particular household who are related by blood, marriage, adoption, or other legal arrangements; (2) a person living alone or sharing a household with others or living as a roomer in a private home or lodging house or in permanent living quarters in a hotel or motel, but who is financially independent; or (3) two or more persons living together who pool their income to make joint expenditure decisions. Financial independence is determined by the three major expense categories: housing, food, and other living expenses. To be considered financially independent, at least two of the three major expense categories have to be provided by the respondent.

Householder or reference person

The first member mentioned by the respondent when asked to "Start with the name of the person or one of the persons who owns or rents the home." It is with respect to this person that the relationship of other consumer unit members is determined.

Income

The combined income earned by all consumer unit members 14 years old or over during the 12 months preceding the interview. The components of income are described later in this glossary.

Complete income reporters

The distinction between complete and incomplete income reporters is based in general on whether the respondent provided values for major sources of income, such as wages and salaries, self-employment income, and social security income. Even complete income reporters may not have provided a full accounting of all income from all sources. It should be noted that the current definition of complete income reporting is different from the 1972-73 definition. A consumer unit reporting zero income in 1972-73 was considered a complete respondent so long as there was no evidence of intent to refuse the income question. In the 1980-81 survey, across-the-board zero income reporting was designated as invalid, and the consumer unit was categorized as an incomplete reporter. In all tables, income data are for complete income reporters only.

Quintiles of income before taxes

For each time period represented in the tables, complete income reporters are ranked in ascending order according to the level of total before-tax income reported by the consumer unit. The ranking is then divided into five equal groups. Incomplete income reporters are not ranked and are shown separately.

Geographic regions

Data are presented for four major regions—Northeast, North Central, South, and West. Consumer units are classified by region according to the address at which the family was residing during the time of their participation in the survey. The regions comprise the following States:

Northeast—Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

North Central—Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South—Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West—Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Size of consumer unit

The number of persons whose usual place of residence, at the time of the interview, is the sample unit.

Composition of consumer unit

The classification of interview families according to: (1) relationship of other family members to reference person; (2) age of the children of reference person; and (3) combination of relationship to reference person and age of children. Stepchildren and adopted children are included with the reference person's own children.

Age

The age of the reference person.

Earners

A consumer unit member, 14 years or older, who reported having worked at least 1 week during the 12 months prior to the interview date.

Housing tenure

The family's principal place of residence during the survey. "Owner" includes families living in their homes, cooperatives, or condominium apartments or townhouses. "Renter" includes families paying rent as well as families living rent-free in lieu of wages.

Race

The race of the reference person of the consumer unit. All families are included in two racial groups, black and "white and other." The "other" group comprises such races as American Indian, Japanese, and Chinese.

Education of householder

The number of years of formal education of the reference person on the basis of the highest grade completed. If enrolled at the time of the interview, the grade being attended is the one recorded. Persons not reporting the extent of their education are classified as never attended or not reported.

Number of vehicles owned

The number of automobiles, trucks, vans, campers, motorcycles, trailers, and planes owned by members of the consumer unit, including vehicles used partially for business, but excluding those used entirely for business.

Total expenditures

The transaction cost, including excise and sales taxes, of goods and services acquired during the interview period. Estimates include expenditures for gifts, but exclude purchases or portions of purchases directly assignable to business purposes. Also excluded are periodic credit or installment payments on goods or services already acquired. The full cost of each purchase is recorded even though full payment may not have been made at the date of purchase. Total expenditures is equal to the 1972-73 concept of consumption cost plus gifts, contributions, and personal insurance.

Expenditures for trips or vacations for consumer units who are away overnight or longer are included. Expenditures on trips are included in their appropriate category. For example, food purchases are included under food, the purchase of an airline ticket is included in transportation, and so on. This differs from 1972-73, where expenses for vacation and pleasure trips are included in their own section. Expenses on the trip that are paid for or reimbursed by a business, employer, or person outside the consumer unit are not included.

Food at home refers to the total cost of food spent at grocery stores or other food stores during the interview period for consumption at home. It is calculated by multiplying the number of visits to a grocery or other food store by the average amount spent per visit. It excludes the purchase of nonfood items.

Food away from home includes all meals (breakfast, lunch, brunch, and dinner) at restaurants and carryouts plus meals (breakfast or lunch) at school, board, meals as pay, special catered affairs such as weddings, bar mitzvahs, and confirmations, and meals away from home on trips.

Alcoholic beverages includes beer and ale, wine, whiskey, gin, vodka, rum, and other alcoholic beverages.

Owned dwellings includes interest on mortgages, property taxes and insurance, refinancing and prepayment charges, ground rent, expenses for property management/security, homeowners insurance, fire insurance and extended coverage, landscaping expenses for repairs and maintenance contracted out (in-

cluding periodic maintenance and service contracts), and expenses of materials for owner-performed repairs and maintenance for dwellings used or maintained by the consumer unit, but not dwellings maintained for business or rent. Mortgage principal payments are repayments of loans and are shown in the addenda.

Rented dwellings includes rent paid for dwellings, rent received as pay, parking fees, maintenance, and other expenses.

Other lodging includes all expenses for vacation homes, school, college, hotels, motels, cottages, trailer camps, and other lodging while out of town.

Fuel, utilities, and public services includes natural gas, electricity, fuel oil, wood, kerosene, coal, bottled gas, water, garbage and trash collection, sewerage maintenance, septic tank cleaning, and telephone charges.

Household operations includes the following:

Domestic services includes babysitters, day care tuition, care of invalids, and domestic and other duties;

Other household expenses includes termite and pest control products, moving, storage, and freight expenses, repair of household appliances and other household equipment, reupholstering and furniture repair, rental and repair of lawn and gardening tools, and rental of other household equipment.

Housefurnishings and equipment includes the following:

Household textiles includes bathroom, bedroom, kitchen, dining room and other linens, curtains and drapes, slipcovers and decorative pillows, and sewing materials;

Furniture includes living room, dining room, kitchen, bedroom, and nursery furniture and porch and lawn and other outdoor furniture;

Floor coverings includes installation and replacement of wall-to-wall carpets, room-size rugs, and other soft floor covering;

Major appliances includes refrigerators, freezers, dishwashers, stoves, ovens, garbage disposals, vacuum cleaners, microwaves, air conditioners, sewing machines, washing machines and dryers, and floor cleaning equipment;

Small appliances/miscellaneous housewares includes small electrical kitchen

appliances, portable heating and cooling equipment, china and other dinnerware, flatware, glassware, silver and other serving pieces, nonelectric cookware, and plastic dinnerware. Excludes personal care appliances;

Miscellaneous household equipment includes typewriters, luggage, window coverings, clocks, lamps and other light fixtures, lawnmowers and garden equipment, other hand and power tools, office equipment for home use, floral arrangements and house plants, rental of furniture, closet and storage items, household decorative items, infants' equipment, outdoor equipment, and small miscellaneous furnishings.

Men's and boys' apparel includes coats, jackets, sweaters, vests, sportcoats, tailored jackets, trousers, slacks, shorts and short sets, sportswear, shirts, underwear, nightwear, hosiery, uniforms, and other accessories.

Women's and girls' apparel includes coats, jackets, furs, sportcoats, tailored jackets, sweaters, vests, blouses, shirts, dresses, dungarees, culottes, slacks, shorts, sportswear, underwear, nightwear, uniforms, hosiery, and other accessories.

Apparel for children under 2 includes coats, jackets, snowsuits, underwear, diapers, dresses, crawlers, sleeping garments, hosiery, footwear, and other accessories for infants.

Footwear includes articles such as shoes, slippers, boots, and other similar items. It excludes footwear for children under 2 and footwear used for sports such as bowling or golf shoes.

Other apparel products and services includes material for making clothes, shoe repairs, alterations and repairs, patterns and notions, clothing rental, clothing storage, dry cleaning, laundry sent out, watches, jewelry, and repairs to watches and jewelry.

Vehicle purchases (net outlay) includes the net outlay (purchase price minus trade-in value) on new and used domestic and imported cars and trucks; other vehicles include attachable campers, trailers, motorcycles, private planes.

Vehicle finance charges includes the dollar amount of interest paid for a loan contracted for the purchase of vehicles described above.

Gasoline and motor oil includes gasoline, diesel fuel, and motor oil.

Maintenance and repairs includes tires, batteries, tubes, lubrication,

filter, coolant, additives, brake and transmission fluid, oil change, brake repair, front end alignment, wheel balancing, steering repair, shock absorber replacement, clutch and transmission repair, electrical system repair, exhaust system repair, body work and painting, motor repair, repair to cooling system, drive train repair, drive shaft and rear end repair, other maintenance and service, and auto repair policy.

Vehicle insurance includes the premium paid for insuring cars, trucks, and other vehicles.

Public transportation includes fares for mass transit, buses, trains, airlines, taxis, private school buses, fares paid on trips for trains, boats, taxis, buses, and airlines.

Vehicle rent, licenses, and other charges includes leased and rented cars, trucks, motorcycles, campers, trailers, and aircraft, inspections, State and local registration, drivers' license fees, parking fees, towing charges, landing and docking fees, and tolls on trips.

Health insurance includes health maintenance plans (HMO's), Blue Cross/Blue Shield, commercial health insurance, Medicare, Medicare supplemental insurance, and other health insurance.

Medical services includes hospital room and services, physician's services, service of practitioner other than physician, eye and dental care, lab test, x-rays, nursing, therapy services, convalescent or nursing home care, and other medical care.

Prescription drugs and medical supplies includes prescription drugs, medical supplies, eyeglasses, supportive equipment, rental of medical equipment.

Fees and admissions includes fees for participant sports; admissions to sporting events, movies, concerts, plays; club membership, recreational lessons or instructions; rental of movies, recreation expenses on trips.

Television, radio and sound equipment includes television sets, video recorders, video cassettes, tapes, disc players, video game hardware, video game cartridges, cable TV, radios, phonographs, tape recorders and players, sound components, records and tapes, musical instruments, and rental and repair of TV and sound equipment.

Other entertainment supplies, equipment, and services includes indoor exer-

cise equipment, bicycles, trailers, campers, camping equipment, hunting and fishing equipment, sports equipment, winter sports equipment, water sports equipment, boats, rental and repair of sports equipment, photographic equipment, film, repair and rental of photo equipment, pets, pet services, veterinary expense, toys, games, hobbies, and playground equipment.

Personal care includes wigs and hairpieces, electric personal care appliances, personal care services for females and males, rent and repair of electric personal care appliances. (Personal care products are in the Diary.)

Reading includes subscriptions for newspapers, magazines, and book and record clubs; and purchase of single copy newspapers and magazines, books, and encyclopedias and other reference books.

Education includes tuition, fees, books, supplies, and equipment for public and private nursery schools, elementary and high schools, colleges and universities, and other schools.

Tobacco and smoking supplies includes cigarettes, cigars, pipe tobacco, chewing tobacco, and other smoking products and accessories.

Miscellaneous includes safety deposit box rental, checking account fees and other bank services, legal fees, accounting fees, funerals, cemetery lots, union dues, occupational expenses, and finance charges other than for mortgage and vehicles.

Cash contributions includes cash contributed to persons outside the consumer unit and to religious, educational, charitable, or political organizations.

Life, endowment, annuities and other personal insurance includes premiums for whole life and term insurance; endowments; income and other life insurance; premiums for personal liability, accident and disability, and other nonhealth insurance other than for homes and vehicles.

Retirement and pensions, social security includes all social security taxes paid by employees; employees' contributions to railroad retirement, government retirement, and private pension programs; retirement programs for the self-employed.

Sources of income and personal taxes

Money income before taxes is the total money earnings during the 12 months prior to the interview date. It includes the following components:

Wages and salaries includes total money earnings for all consumer unit members, 14 years or older, from all jobs including civilian wages and salaries, Armed Forces pay and allowances, piece-rate payments, commissions, tips, National Guard or Reserve pay (received for training periods), and cash bonuses, before deductions for taxes, pensions, union dues, etc.

Self-employment income includes net business and farm income, which consists of net income (gross receipts minus operating expenses) from a profession or unincorporated business or from the operation of a farm by an owner, tenant, or sharecropper. If the business or farm is a partnership, only an appropriate share of net income is recorded. Losses are also recorded.

Social security, private and government retirement includes the following: (1) payments by the Federal Government made under retirement, survivors', and disability insurance programs to retired persons, to dependents of deceased insured workers, or to disabled workers, and (2) private pensions or retirement benefits received by retired persons or their survivors, either directly or through an insurance company.

Interest, dividends, rental income, and other property income includes interest income on savings or bonds; payments made by a corporation to its stockholders; periodic receipts from estates or trust funds; net income or loss from the rental of property, real estate, or farms; and net income or loss from roomers or boarders.

Unemployment and workers' compensation, veterans' benefits includes income from unemployment compensation and workers' compensation, and veterans' payments including educational benefits but excluding military retirement.

Public assistance, supplemental security income, food stamps includes public assistance or welfare, including money received from job training grants; supplemental security income paid by Federal, State, and local welfare agencies to low-income persons who are age 65 or over, blind, or disabled; the purchase value of food stamps.

Regular contributions for support includes alimony and child support as well as any regular contributions from persons outside the consumer unit.

Other income includes money income from care of foster children, cash scholarships, fellowships, or stipends not based on working; and meals and rent as pay.

Federal income taxes includes Federal income taxes withheld in the survey year to pay for income earned in survey year plus additional taxes paid in survey year to cover any underpayment or underwithholding of taxes in the year prior to the survey.

State and local income taxes includes State and local income taxes withheld in survey year to pay for income earned in survey year plus additional taxes paid in survey year to cover any underpayment or underwithholding of taxes in year prior to survey.

Other taxes includes personal property and other personal taxes paid, including social security taxes for the self-employed paid in the survey year to cover any underpayment or underwithholding of taxes in the year prior to the survey.

Addenda

Other money receipts includes lump-sum payments from estates, trusts, sale of house furnishings, refunds from overpayment on social security, refunds from insurance policies, and refunds from property taxes.

Mortgage principal paid on owned property includes the reduction of mortgage principal on a mortgage obtained prior to the interview quarter for a home or any other property. This is not included in homeowner costs but is considered repayment of a loan.

Gifts of goods and services includes gift expenditures: (1) clothing for females and males over 2 years old, and infants under 2 years old; (2) jewelry and watches; (3) small appliances and miscellaneous housewares; (4) blankets, sheets, towels, and table linens; and (5) all other gifts. These items have already been defined. Their values are given so they can be subtracted from the expenditure totals when comparisons with 1972-73 are made.

Appendix B. Survey Methods

Description of survey

The 1980-81 survey, like the 1972-73 survey, consists of two separate components: 1) a Quarterly Interview panel survey in which each consumer unit in the sample is interviewed every 3 months over a 12-month period, and 2) a Diary or recordkeeping survey completed by the sample consumer units for two consecutive 1-week periods. Each component has its own questionnaire and independent sample.

There are several new features of the ongoing survey. New households are introduced into the sample on a regular basis as other families complete their participation. For the survey as a whole, 20 percent of the sample is dropped and a new group added each quarter. This rotating procedure is designed to improve efficiency now that the survey is continuous. Another new feature of the survey is that students living in college- or university-regulated housing report their own expenditures directly while at school rather than being considered part of their parents' households.

The Interview survey collects detailed data on an estimated 60 to 70 percent of total household expenditures. In addition, global estimates, that is, expense patterns for a 3-month period, are obtained for food and other selected items. These global estimates account for an additional 20 to 25 percent of total expenditures. In the Diary survey, respondents are requested to report all expenditures made during their 2-week participation in the survey. All data collected in both surveys are subject to Census and BLS confidentiality requirements, which prevent the disclosure of respondents' identities.

The Quarterly Interview portion of the survey was designed to collect data on major items of expense, household characteristics, and income. The expenditures covered by the survey were those which respondents could be expected to recall fairly accurately for 3 months or longer. Each sample household was interviewed once per quarter for five consecutive quarters. Data collected in each quarter were considered independent so that annual estimates are not dependent upon the participation of a consumer unit for the full five quarters. Data collection activities have been conducted on a continuous basis since October 1979.

For the initial interview, information is collected on demographic and family

characteristics and on the inventory of major durable goods of each consumer unit. Expenditure information is also collected in this interview, using a 1-month recall. It is used along with the inventory information solely for bounding purposes, that is, to classify the unit for analysis and to prevent duplicate reporting of expenditures in subsequent interviews.

The second through fifth interviews use uniform questionnaires to collect expenditure information in each quarter. Wage, salary, and other information on the employment of each household member is also collected in the second and fifth interviews. In the fifth and final interview, an annual supplement is used to obtain a financial profile of the household. This profile consists of information on the income of the household as a whole, including unemployment compensation, alimony and child support, and changes in assets and liabilities.

Households which moved away from their sample address between interviews were dropped from the survey. New households which moved into the sample address were screened for eligibility and included in the survey if found qualified.

Sample design

The samples for the consumer expenditure surveys are national probability samples of households designed to be representative of the urban U.S. civilian population. The eligible population is composed of all civilian noninstitutional persons (see appendix A for a detailed definition of the eligible population).

The first step in sampling was the selection of primary sampling units (PSU's) which consist of counties (or parts thereof), groups of counties, or independent cities. The set of sample PSU's used for the survey is composed of 101 areas, of which 85 have been previously defined and selected by the BLS for the CPI. The PSU's in this part of the design represent only the urban part of the United States and are classified according to the following four categories: 'A' PSU's, which comprise 27 certainty areas (i.e., they are self-representing) and are primarily large metropolitan areas; 20 'B' PSU's, defined as metropolitan areas with a total 1970 population of over 400,000; 22 'C' PSU's, defined as metropolitan areas

with a total 1970 population of 400,000 or less; and 16 'D' PSU's, defined as urban places in all nonmetropolitan areas. Since these PSU's were selected with probability proportional to urban population and therefore do not represent the nonmetropolitan rural population, it was necessary to supplement this design with 16 additional PSU's (denoted as 'E' PSU's) representing the rural population of the country. The B, C, and D PSU's were selected using a controlled selection procedure to insure a distribution across States and other stratifying characteristics. Due to budget constraints in 1981, the rural areas outside of SMSA's (E PSU's) of the sample were temporarily discontinued. These are included again beginning in 1984.

The sampling frame (that is, the list from which housing units were chosen) for this survey was generated from the 1970 census 100-percent-detail file, augmented by new construction permits and techniques used to eliminate recognized deficiencies in coverage in that census. All Enumeration Districts (ED's) from the 1970 Census that failed to meet the criterion for good addresses and all ED's in nonpermit issuing areas are grouped into the area segment frame.

The sample design is a rotating panel survey in which approximately 8,400 addresses are contacted in each of the five calendar quarters. Allowing for bounding interviews, which are not included in estimates, and for nonresponse (including vacancies), the number of usable interviews per quarter is targeted at 4,800. Each quarter, one-fifth of the units interviewed are new to the survey. After being interviewed for five consecutive quarters, each panel is dropped from the survey.

Response rates

Response rates were relatively high in the 1980-81 consumer expenditure survey, although they were slightly below the 1972-73 survey levels. There are two general categories of nonresponse:

Type A nonresponses include refusals, temporary absences, and noncontacts.

Types B and C nonresponses include housing vacancies, housing under construction, housing with temporary residents, destroyed or abandoned housing, and units converted to nonresidential use.

Type A nonresponses were considered to be 'eligible' units since those units were able to participate but either chose not to do so or could not be contacted. Types B and C nonresponses were not counted as eligible units since these addresses no longer existed or were otherwise out of scope.

Table B-1 analyzes the level of response of the housing units designated for interview in the 1972-73 and 1980-81 surveys. Of the 51,126 housing units eligi-

Table B-1. Analysis of response in the 1972-73 and 1980-81 Interview surveys

Sample unit	1972-73	1980-81
Housing units assigned for the survey	25,627	58,898
Less: Type B or C nonresponses	3,080	7,772
Equals: Eligible units	22,547	51,126
Less: Type A nonresponses	2,572	8,296
Equals: Interviewed units	19,975	42,830
Percent of eligible units interviewed	89	84

ble for interview in the 1980-81 Interview survey, 42,830, or 84 percent, were actually interviewed. This compares to 89 percent in 1972-73. Of the 58,898 units assigned for interview in 1980-81, 7,772, or 13 percent, were classified as Type B or C nonresponses. Type B or C nonresponses accounted for 3,080 units, or 12 percent of the 25,627 total units assigned for interview in 1972-73. Type A nonresponse rates of 16 percent in 1980-81 and 11 percent in 1972-73 are considered relatively low for this type of survey.

Weighting

Each sample household included in the survey represents a given number of households in the U.S. population, which is the universe. The translation of sample households into the universe of households is known as weighting. However, since the unit of analysis for the survey is a consumer unit, the final weight is at the consumer unit level.

There are five basic steps in determining the weight for each consumer unit for which an interview is obtained:¹

1. The basic weight assigned to an address is the inverse of the probability of selection of the housing unit.
2. A weight control factor is given to each interview if subsampling is performed in the field.
3. A noninterview adjustment is made for interviews which could not be collected from occupied housing units because of refusals or because no one was home (type A). The adjustment is performed as a function of region, tenure, family size, and race.
4. A ratio adjustment is made at the national level to adjust for age, sex, and race levels.

¹ A technical description of the weighting procedure is available upon request.

5. A final weight adjustment is made to account for the composition of the consumer unit.

Data collection and processing

Data collection was carried out by the Census Bureau under contract with BLS. In addition to its collection duties, the Census Bureau was responsible for field editing and coding, consistency checking, quality control, and transmitting the data to BLS. BLS performed additional review and editing procedures in preparing the data for publication.

Census activities. Census data collection activities have been conducted on a continuing basis since October 1979 for the Quarterly Interview survey. Due to differences in format and design, the Interview survey and the Diary survey are collected and processed separately.

Upon completion by respondents and interviewers, the Interview questionnaires are returned to the regional offices, where codes are applied to identify demographic characteristics, expenditures, income and assets, and other items such as make and model of automobile and trip destination. Upon completion of the clerical processing, the data are keyed and transmitted to the Census Processing Center in Washington, D.C., where they pass through a detailed computer preedit. Information on missing sections of questionnaires, inconsistencies, and errors is transmitted back to the regional offices for reconciliation by the field staff through office review or interviewer followup. Corrections are keyed and transmitted to Washington, and again cycled through the computer preedit. This continues until errors identified by the preedit no longer appear. Once a panel month's preedit is complete, selected data are transcribed to the next quarter's questionnaire. The current quarter's questionnaire is sent to the Data Preparation Division in Jeffersonville, Indiana, for microfilming and storage.

The data then go through another series of complex computer edits and adjustments which include the identification and correction of data irregularities and inconsistencies throughout the questionnaire. Other adjustments convert mortgage and vehicle payments into principal and interest using associated data on the interest rate and term of the loan, eliminate business and other reimbursed expenses, apply appropriate sales taxes, and derive weights for individual questionnaires. In addition, demographic and work-experience items (except income) are imputed when missing or invalid. All data changes and imputations are identified with flags on the Interview data file. Final tapes of the edited and

coded data are then transmitted to BLS on a monthly basis.

Bureau of Labor Statistics activities. The Bureau of Labor Statistics, upon receipt of the data from the Bureau of the Census, conducts an extensive review to ensure that severe data aberrations are corrected. The review takes place in several stages: A review of counts and means by region; a review of family relationship coding inconsistencies; a review of selected extreme values (both high and low) for expenditure and income categories; and a verification of the various data transformations performed by BLS. Cases of questionable data values or relationships are investigated by looking up questionnaires on microfilm. Errors discerned through this procedure are corrected prior to release of the data for public use.

Three major types of data adjustment routines—imputation, allocation, and time adjustment—are carried out to improve the estimates derived from the Interview survey. Data imputation routines account for missing or invalid entries and affect all fields in the data base except income and assets. Missing or invalid attributes as well as expenditures are imputed. Allocation routines are applied when respondents provided insufficient detail to meet tabulation requirements. For example, combined group expenditures for fuels and utilities are allocated among the components of that group such as gas. Time adjustment routines are used to classify expenditures by month prior to aggregation of the data to calendar-year expenditures. Tabulations are made before and after the data adjustment routines to analyze the results.

Reliability of data

Sample surveys are subject to two types of errors, nonsampling and sampling. Nonsampling errors can be attributed to many sources, such as definitional difficulties, differences in the interpretation of questions, inability or unwillingness of the respondent to provide correct information, mistakes in recording or coding the data obtained, and other errors of collection, response, processing, coverage, and estimation for missing data. The full extent of the nonsampling error is unknown.

Sampling errors occur because observations are not taken from the entire population. The sample estimate and its estimated standard error enables one to construct confidence intervals used to perform tests of hypotheses. Tables with coefficients of variation and other reliability statistics are available on request. However, since these are cell specific, these tables are extensive.

Appendix C. Comparison of 1972-73 and 1980-81 Surveys

Tables C-1 through C-5 compare the 1980-81 survey data with results from the 1972-73 survey. Adjustments were made to the data to account for differences in concepts and definitions between the surveys. The most important adjustments to the previously published 1972-73 data are summarized below, and a detailed concordance between the surveys is given in table C-6.

- The population is limited to the urban population as defined in 1980-81.
- ‘Total expenditures’ include total consumption, as defined in 1972-73, plus personal insurance, retirement and pension payments (including Social Security payments), and gifts and contributions.
- Gifts of goods are now included with the appropriate component. For example, apparel gifts are included with apparel expenditures. The value of these gifts is shown in the addenda on each reference table.
- Expenditures while on trips, including those for food, lodging, gasoline, and

other transportation, are included with the appropriate component rather than with recreation.

- Consumer units that responded to the income question but reported zero income are considered to be incomplete income reporters. In the 1972-73 survey, zero responses were considered valid.
- Only income data for complete reporters are shown in the tables. The average income for complete income reporters is an approximation of average income for all respondents. In 1972-73, average income data were published for all respondents, complete and incomplete.

Table C-6 compares 1972-73 expenditure groupings, as they were shown in table B-2 of Bulletin 1997, published in 1978, with the new 1980-81 format. The left column shows the 1980-81 format. The next column shows which 1972-73 item codes need to be combined to match or approximate the 1980-81 level.

Table C-1. Selected characteristics and annual expenditures of urban consumer units classified by QUINTILES OF INCOME BEFORE TAXES, Interview survey, 1972-73 and 1980-81

Item	All consumer units	Complete reporting of income						Incomplete reporting of income

Interview Survey, 1972-73, Bulletin 1997 Volumes 1 and 2 (1978)	Volume 1 consists of four tables which classify all U.S. families by family income before taxes (income class), family income before taxes (decile class), age of family head, race of family head. Six additional tables cross-classify families by family income before taxes for six family size groupings. 681 pages. NTIS Accession No. PB 84231851, paper copy, \$47.00; microfiche, \$9.50.

Title, number, and date of publication

Coverage

Bulletin 1997—
Continued

Volume 2 contains four tables which cross-classify family income before taxes for four geographic regions—Northeast, North Central, South, and West. 321 pages. NTIS Accession No. PB 84231869, paper copy, \$26.50; microfiche, \$4.50.

Interview Survey, 1972-73, Bulletin 1985 (1978)

Family income and expenditures classified by family characteristics; one-way and cross tabulations. 29 tables, 510 pages. NTIS Accession No. BP 85134443, paper copy, \$37; microfiche, \$4.50.

Diary Survey, July 1972-July 1974, Bulletin 1959 (1977)

Family income and expenditures for food detail and other selected categories. 129 tables, 33 for total U.S. and 24 for each of four regions. 387 pages. NTIS Accession No. PB 83169128, paper copy, \$29.50; microfiche, \$4.50.

Public use tapes

Public use tapes for the Diary and Quarterly Interview are available from the 1980-81 survey. Seven public use tapes are available from the 1972-73 survey including Diary survey public use and food quantity tapes; Quarterly Interview survey-summary, detailed, consumer durables, and clothing and household textiles tapes; and an integrated survey tape. Information about the tapes is available from the BLS national office.

Standard error tables

Standard error tables applicable to data in the above BLS bulletins are available from the BLS national office upon request. These are cell specific and therefore extensive.

Employee Benefits in Medium and Large Firms, 1983

U.S. Department of Labor
Bureau of Labor Statistics
Bulletin 2213

The Bureau of Labor Statistics issues its 1983 bulletin on employee benefits in medium and large firms. This survey is the fifth in an annual series.

Data available

- Incidence and detailed characteristics of 11 private sector employee benefits paid for at least in part by the employer: Lunch and rest periods, holidays, vacations, and personal and sick leave; sickness and accident, long-term disability, health, and life insurance; and private retirement pension plans.
- Incidence data on 18 other employee benefits, including stock, savings and thrift, and profit sharing plans; employee discounts; and educational assistance.
- Data presented separately for three occupational groups—professional-administrative, technical-clerical, and production workers.

Coverage

- Major benefits in medium and large firms, nationwide.
- Minimum employment in establishments covered is generally 100 or 250 employees, depending on the industry.

Source of data

- Sample of about 1,500 establishments in a cross-section of the Nation's private

industries; primarily by personal interview.

Uses

- Benefit administration in public and private employment.
- Union contract negotiations.
- Conciliation and arbitration in public and private sectors.
- Development of legislation affecting the welfare of workers.
