Tomorrow’s Jobs

Every other year, the Bureau of Labor Statistics develops projections of the labor force, economic growth, industry employment, and occupational employment under alternative assumptions. These projections, which usually cover a 10- to 15-year period, provide the framework for the discussion of the job outlook in each of the occupational statements in the Handbook. Each of the approximately 250 statements in this edition of the Handbook identifies the principal factors that affect job prospects and indicates how these factors are expected to affect the occupation in the future. This chapter uses the moderate alternative of each of the projections to provide a framework for the individual job outlook discussions.

Population Trends
Population trends affect employment opportunities in a number of ways. First of all, changes in the size and composition of the population influence the demand for goods and services—a growing and aging population has increased the demand for health services, for example. Equally important, population changes produce corresponding changes in the size and characteristics of the labor force.

The U.S. population is expected to grow more slowly over the next 12 years than it did during the previous 12-year period. However, even slower population growth will increase the demand for goods and services, causing greater demand for workers in many occupations and industries.

The age structure will shift toward relatively fewer children and youth and a growing proportion of middle-aged and older people well into the 21st century. Several things account for this. The decline in the proportion of children and youth reflects low birth rates that have prevailed for the past 20 years and that seem likely to continue; the impending large increase in the middle-aged population reflects the maturing of the “baby boom” generation born after World War II; and the very rapid growth in the number of old people is attributable to high birth rates prior to the Great Depression of the 1930’s, together with strides in medical science that have made it possible for most Americans to survive into old age.

Minorities and immigrants will constitute a larger share of the U.S. population in 2000 than they do today. Substantial increases in the number of Hispanics, Asians, and blacks are anticipated, reflecting high birth rates in these population groups as well as net immigration. Substantial inflows of migrants, both documented and undocumented, are expected to continue. The arrival of immigrants from every corner of the world has significant implications for the labor force because immigrants tend to be of working age but of different educational and occupational backgrounds than the U.S. population as a whole.

Population growth varies greatly among geographic regions, which is reflected in differences in the demand for goods and services. Between 1980 and 1988, the population of the Midwest and the Northeast grew by only 1.7 percent and 3 percent, respectively, compared with 12.3 percent in the South and 17.4 percent in the West. These differences reflect the movement of people seeking new jobs or retiring as well as higher birth rates in some areas than in others.

Projections by the Bureau of the Census indicate that the West will continue to be the fastest growing region of the country, increasing about 17 percent between 1988 and the year 2000. In the South, the population is expected to increase about 15 percent. The number of people in the Midwest is expected to remain about the same, while the Northeast is projected to increase slightly, by about 2 percent.

Geographic shifts in the population alter the demand for and the supply of workers in local job markets. Moreover, many areas are dominated by one or two industries, and local job markets may be extremely sensitive to the economic fortunes of those industries. For these and other reasons, local employment opportunities may differ substantially from the projections for the Nation as a whole presented in the Handbook. Sources of information on State and local employment prospects are identified on page 460.

Labor Force Trends
Population is the single most important factor governing the size and composition of the labor force, which comprises people who are either working or looking for work. The civilian labor force totaled 121.7 million in 1988 and is expected to reach 141.1 million in the year 2000. This projected increase—16 percent—represents a slowing in both the number added to the labor force and the rate of labor force growth, largely due to slower population growth (chart 1).

American workers will be an increasingly diverse group as we approach the year 2000: White non-Hispanic men will make up a smaller share of the labor force, and women and minority group members will make up a larger share. White non-Hispanics have historically been the largest component of the labor force, but their share has been dropping and is expected to fall to about 74 percent by 2000. Blacks, Hispanics, and Asian and other racial groups will account for roughly 33 percent of labor force entrants between 1988 and 2000.

Women will continue to join the labor force in growing numbers. In the past, much of the growth in the labor force has been due to dramatic increases in participation by women, who are expected to account for slightly more than half of all entrants through the year 2000. Not only do most American women of working age hold jobs, they tend to continue working despite competing demands for their time. By 2000, 4 out of 5 women between the ages of 25 and 54 will be in the labor force, which then will be almost evenly divided in terms of its composition by sex. Women were only 41 percent of the labor force as recently as 1976; by 2000, they are expected to account for 47 percent.

The changing age structure of the population will directly affect...
The age distribution of the labor force is changing.

The emphasis on education will continue. Three out of the four fastest growing occupational groups will be the executive, administrative, and managerial; professional specialty; and technicians and related support occupations. These occupations generally require the highest levels of education and skill. In contrast, such factors as office and factory automation, changes in consumer demand, and substitution of imports for domestic products are expected to cause employment to stagnate or decline in many occupations that require little formal education—laborers, assemblers, and machine operators, for example. Opportunities for high school dropouts will be increasingly limited, and workers who cannot read and follow directions may not even be considered for most jobs.

Employment Change

Employment is expected to increase from 118.1 million in 1988 to 136.2 million in 2000, or 15 percent. This is only about half the rate of increase recorded during the previous 12-year period.

The 18.1 million jobs that will be added to the U.S. economy by 2000 will not be evenly distributed across major industry and occupational groups, which means that the structure of employment will change. The following sections look at projected employment change from both the industry and occupational perspectives.

Industrial Profile

The shift from goods-producing to service-producing employment is very well known and not at all recent. (See chart 4.) By 2000, nearly 4 out of 5 jobs will be in industries that provide services. Expansion of service sector employment is linked to a number of different factors, including changes in consumer tastes and preferences, legal and regulatory changes, advances in science and technology, and changes in the way businesses are organized and managed. Factors responsible for varying growth prospects in major industry divisions are noted below.

Service-Producing Industries. Services. Services is both the largest and the fastest growing industry division within the service-producing sector (chart 5.) This division provided 34.5 million jobs in 1988; employment is expected to rise 28 percent to 44.2 million by 2000, accounting for almost one-half of all new jobs. Jobs will be found in small firms as well as in large corporations, in all levels of government, and in industries as diverse as banking, hospitals, data processing, and management consulting. The two largest industry groups in this division, health services and business services, are
New technology and a growing and aging population will increase the demand for health services. Because of the rapid expansion of health care employment, 7 of the 10 fastest growing occupations between 1988 and 2000 will be health related. Not all of the health industries will grow at the same rate; outpatient care facilities and offices of "other health practitioners," which includes chiropractors, optometrists, psychologists, and other practitioners will be increasing the fastest. Hospitals, both private and public, will be growing more slowly than all the other health industries, but faster than the average for all industries. Nonetheless, hospitals will continue to employ the most workers among the health care industries.

Another important industry group that is expected to generate many jobs is business services. These industries employed 5.6 million workers in 1988 and are projected to employ 8.3 million in the year 2000. Personnel supply services, which includes temporary help agencies, is the largest industry in this group and will add the most new jobs. Business services also includes the fastest growing industry in the economy—computer and data processing services. This industry is expected to grow five times faster than the average for all industries, due to a rapidly increasing demand from business firms, government agencies, and individuals. A third industry in business services—research, management, and consulting—is expected to have very rapid growth, although not as rapid as computer and personnel supply services.

Education, in both the private and public sectors, is expected to add 1.2 million jobs to the 8.9 million employed in 1988. The increase reflects rising enrollments projected for elementary and secondary schools. The elementary school age population (ages 5-13) will rise by over 2 million between 1988 and 2000, and the secondary school age (14-17) by 1.3 million. On the other hand, the traditional college age population (18-24) has been declining and is projected to continue to decline for the next decade; however, rising enrollments of older students, women, foreign students, and part-time students have offset the absolute decline in the 18-24 population. Not all the increase in employment in education will be for teachers; teacher aides, counselors, technicians, and administrative staff are also projected to increase.

Retail trade. Nearly 3.8 million jobs will be added in retail trade, which will provide 22.9 million jobs in 2000, up 20 percent from the 1988 level. Eating and drinking places will employ the most workers in the retail trade division and also will be among the fastest growing industries. Substantial increases in retail employment are also anticipated in grocery stores, department stores, and miscellaneous shopping goods stores.

Government. Between 1988 and 2000, government employment, excluding public education and public hospitals, is expected to increase 7 percent, from 9 million to 9.6 million jobs. Most of the growth will be in State and local government; the Federal Government is expected to add only 88,000 jobs.

Finance, insurance, and real estate. Employment is expected to increase 16 percent—adding 1.1 million jobs to the 1988 level of 6.7 million. The fastest growing industry within this division is expected to be security and commodity brokers and exchanges, although it will not be growing as fast as in the past.

Wholesale trade. Employment in wholesale trade is expected to rise from 6 million to 6.9 million between 1988 and 2000, an increase of 15 percent.

Transportation, communications, and public utilities. Overall employment in this division is expected to rise 10 percent from the 1988 level of 5.5 million. The three fastest growing industries in this division are arrangement of transportation, freight forwarding, and air carriers, each growing at least three times as fast as the division as a whole. Only modest employment growth is expected in the communications industry. Although output will show an increase, new laborsaving technology will result in very little job growth.

Goods-Producing Industries. Employment in this sector peaked in the late 1970’s and has not recovered from the recessionary period of the early 1980’s and the trade imbalances that began in the mid-1980’s. Although overall employment in goods-producing industries is expected to show little change, growth prospects within the sector vary considerably.

Construction. Construction is expected to add 760,000 jobs between 1988 and 2000. Construction employment is expected to increase by 15 percent, from 5.1 to 5.9 million jobs, in response to economic conditions and demographic trends.

Manufacturing. Manufacturing employment is expected to decline 2 percent from the 1988 level of 19.4 million. The projected loss of
manufacturing jobs reflects productivity gains achieved from increased investment in manufacturing technologies as well as a winnowing out of less-efficient operations.

The composition of manufacturing employment is expected to shift since most of the jobs that will disappear are production jobs. The number of professional, technical, and managerial positions in manufacturing firms will actually increase.

Mining. Mining employment is expected to remain at about the present level of 700,000. Underlying this projection is the assumption that domestic oil production will drop and oil imports will rise sharply.

Agriculture. Employment in agriculture has been declining for many decades and this trend is expected to continue—the number of jobs is projected to decline 4 percent, from 3.3 million to 3.1 million.

The decline in agricultural jobs reflects a decrease of 225,000 in the number of self-employed workers. Wage and salary positions are projected to increase by 91,000—with especially strong growth in the agricultural services industry.

**Occupational Profile**

Continued expansion of the service-producing sector conjures up an image of a work force dominated by cashiers, retail sales workers, and waiters. However, although service sector growth will generate millions of clerical, sales, and service jobs, it will also create jobs for financial managers, engineers, nurses, electrical and electronics technicians, and many other managerial, professional, and technical workers. In fact, the fastest growing occupations will be those that require the most educational preparation.

This section furnishes an overview of projected employment in 12 categories or "clusters" of occupations based on the Standard Occupational Classification (SOC). The SOC is used by all Federal agencies that collect occupational employment data, and is the organizational framework for grouping statements in the *Handbook*.

In the discussion that follows, projected employment change is described as faster, slower, or the same as the average for all occupations. (These phrases are explained on page 2.) While occupations that are growing fast generally offer good opportunities, the numerical change in employment also is important because large occupations, such as retail sales worker, may offer many more new jobs than a small, fast-growing occupation, such as paralegal (chart 6).

**Technicians and related support occupations.** Workers in this group provide technical assistance to engineers, scientists, and other professional workers as well as operate and program technical equipment. Employment in this cluster is expected to increase 32 percent, from 3.9 to 5.1 million, making it the fastest growing in the economy (chart 7). It also contains the fastest growing occupation—paralegals. Employment of paralegals is expected to skyrocket due to increased utilization of these workers in the rapidly expanding legal services industry.

**Professional specialty occupations.** Employment in this cluster is expected to grow 24 percent, from 14.6 to 18.1 million jobs. Much of this growth is a result of rising demand for engineers; computer specialists; lawyers; health diagnosing and treating occupations; and preschool and elementary and secondary school teachers.

**Service occupations.** This group includes a wide range of workers in protective services, food and beverage preparation, and cleaning and personal services. These occupations are expected to grow 23 percent, from 18.5 to 22.7 million, because a growing population and economy, combined with higher incomes and increased leisure time, will spur demand for all types of services.

**Executive, administrative, and managerial occupations.** Employment in this cluster is expected to increase 22 percent, from 12.1 to 14.8 million. Growth will be spurred by the increasing complexity of business operations and by large employment gains in trade and services—industries that employ a higher than average proportion of managers.

Employment in management-related occupations tends to be tied to industry growth. Thus jobs for employment interviewers are projected to grow much faster than the average, in line with the expected growth in the personnel supply industry.

Hiring requirements in many managerial and administrative jobs are rising. Work experience, specialized training, or graduate study will be increasingly necessary. Familiarity with computers is a "must" in a growing number of firms, due to the widespread use of computerized management information systems.

**Marketing and sales occupations.** Employment in this large cluster is projected to increase 20 percent, from 13.5 to 15.9 million jobs. Demand for real estate brokers, travel agents, and securities and financial services sales workers is expected to grow much faster than the average due to strong growth in the industries that employ them. Many part- and full-time job openings are expected for retail sales workers and cashiers due to the large size, high turnover, and faster than average employment growth in these occupations. The outlook for higher paying sales jobs, however, will tend to be more competitive.

**Construction trades and extractive occupations.** Overall employment in this group of occupations is expected to rise from 4.0 to 4.7 million, or 16 percent. Virtually all of the new jobs will be in construction. Employment growth in construction will be spurred by new projects and alterations to existing structures. On the other hand, continued stagnation in the oil and gas industries and low growth in demand for coal, metal, and other materials will result in little change in the employment of extractive workers.

**Mechanics, installers, and repairers.** These workers adjust, maintain, and repair automobiles, industrial equipment, computers, and many other types of equipment. Overall employment in these occupations is expected to grow 13 percent—from 4.8 to 5.5 million—due to increased use of mechanical and electronic equipment. One of the fastest growing occupations in this group is expected to be automotive body repairers, reflecting the growth in the number of lightweight cars that are prone to collision damage. Telephone installers and repairers, in sharp contrast, are expected to record a decline in employment due to laborsaving advances.

**Administrative support occupations, including clerical** is the largest major occupational group. Workers in these occupations perform the wide variety of tasks necessary to keep organizations functioning smoothly. The group as a whole is expected to grow 12 percent, from 21.1 to 23.6 million jobs. However, technological advances are projected to decrease the demand for stenographers and typists, word processors, and data entry keyers. Others, such as receptionists and information clerks, will grow much faster than the average, spurred by rapidly expanding industries such as business services. Moreover, because of their large size and substantial turnover, clerical occupations will offer abundant opportunities for qualified jobseekers in the years ahead.

**Chart 6.** Even though an occupation is expected to grow rapidly, it may provide fewer openings than a slower growing larger occupation.
Employment change will vary widely by broad occupational group.

Chart 7. **Employment change will vary widely by broad occupational group.**

In this chapter you will find many other ways to obtain information about occupations, counseling, education and training, financial aid, and finding a job. Also, look at the end of each occupational statement in the *Handbook*, under Sources of Additional Information, for organizations that have agreed to provide information about that particular occupation.

Career Information

A good place to start collecting the information you will need is from the people closest to you, your family and friends. These personal contacts are often overlooked but can be extremely helpful. They may be able to answer your questions directly or, more importantly, put you in touch with someone who can. This “networking” can lead to an “informational interview” where you can meet with someone who is willing to answer your questions about a career or a company and who can provide inside information on related fields and other helpful hints. This is a highly effective way to learn what type of training is recommended for a certain position, how someone in that position entered and advanced, and what he or she likes and dislikes about the work. While you are developing your network of contacts, you may want to begin exploring other avenues.

Public libraries, career centers, and guidance offices have a great deal of career material. To begin your library search, look in the card catalog or at the computer listings under “vocations” or “careers” and then under specific fields. Also, leaf through the file of pamphlets that describe employment in different organizations. Check the periodicals section, where you will find trade and professional magazines and journals about specific occupations. Familiarize yourself with the activities of potential employers by skimming their annual reports and other information they distribute to the public.

You can also find occupational information on video cassettes, in kits, and through computerized information systems. Check career centers for programs such as individual counseling, group discussions, guest speakers, field trips, and career days.
Assess career guidance materials carefully. Information should be current. Be skeptical of materials produced by schools for recruitment purposes that seem to glamorize the occupation, overstate the earnings, or exaggerate the demand for workers.

You may wish to seek the advice of a counselor. Counselors are trained to help you discover your strengths and weaknesses and guide you through an evaluation of your goals and values so you can begin to determine what you want in a career. The counselor will not tell you what to do, but will administer interest inventories and aptitude tests, interpret the results, and help you explore your options. Counselors also may be able to discuss local job markets and the entry requirements and costs of the schools, colleges, or training programs that offer preparation for the kind of work in which you are interested. You can find counselors in:

- high school guidance offices.
- career planning and placement offices in colleges.
- placement offices in private vocational/technical schools and institutes.
- vocational rehabilitation agencies.
- counseling services offered by community organizations.
- private counseling agencies or private practices.
- State employment service offices affiliated with the U.S. Employment Service.

Before employing the services of a private counselor or agency, seek recommendations or check their credentials. The International Association of Counseling Services (IACS) accredits counseling services for areas throughout the country. To receive the listing of accredited services for your region, call (703)823-9800 or send a self-addressed, stamped envelope to IACS, 5999 Stevenson Ave., 3rd Floor, Alexandria, VA 22304. The Directory of Counseling Services, an IACS publication providing employment counseling and other assistance, may be available in your library or school counseling center.

Professional societies, trade associations, labor unions, business firms, and educational institutions provide a variety of free or inexpensive career material. Many of these are identified in the Sources of Additional Information section of each Handbook statement. For information on an occupation not covered in the Handbook, consult the directories in your library’s reference section for the names of potential sources. You may need to start with The Guide to American Directories or The Directory of Directories. The Encyclopedia of Associations, an annual multimedia publication listing thousands of trade associations, professional societies, labor unions, and fraternal and patriotic organizations, is another useful resource.

The National Audiovisual Center, a central source for all audiovisual material produced by the U.S. Government, rents and sells material on jobs and careers. For a catalog, contact the National Audiovisual Center, 8700 Edgeworth Dr., Capitol Heights, MD 20743. Phone: (301) 763-1896.

For first-hand experience in an occupation, you may wish to intern or take a summer or part-time job. Some internships offer academic credit or pay a stipend. Check with guidance offices, college career resource centers, or directly with employers.

State and Local Information

The Handbook provides information for the Nation as a whole. For help in locating State or area information, contact the State occupational information coordinating committee (SOICC) in your State. These committees may provide the information directly or refer you to other sources. Refer to the chapter beginning on page 460 for addresses and telephone numbers of the SOICC’s.

Forty-six States have career information delivery systems (CIDS). Jobseekers can use the computers, printed material, microfiche, and toll-free hotlines to obtain information on occupations, educational opportunities, student financial aid, apprenticeships, and military careers. Look for these systems in secondary schools, postsecondary institutions, libraries, job training sites, vocational rehabilitation centers, and employment service offices. Ask counselors and SOICC’s for specific locations.

State employment security agencies develop detailed information about the labor market, such as current and projected employment by occupation and industry, characteristics of the work force, and changes in State and local area economic activity. Addresses and telephone numbers of the directors of research and analysis in these agencies are listed in the chapter beginning on page 460.

Education and Training Information

Check with professional and trade associations for lists of schools that offer career preparation in a particular field. The Sources of Additional Information section of many Handbook statements directs you to organizations that can provide training information.

Refer to various directories, such as those that follow, for descriptions of courses of study, admissions requirements, expenses, and student financial aid information for colleges, universities, and other training institutions. Guidance offices, libraries, and large bookstores usually carry copies. Be sure to use the most recent edition because these directories are revised frequently. Guidance offices and libraries also have collections of college catalogs that list their specific programs, requirements, and expenses.

The Directory of Educational Institutions, published annually, lists schools accredited by the Association of Independent Colleges and Schools (AICS). Most AICS-accredited institutions are business schools, offering programs in secretarial science, business administration, accounting, data processing, court reporting, paralegal studies, fashion merchandising, travel/tourism, culinary arts, drafting, electronics, and other subjects. For a copy of the Directory, write: Association of Independent Colleges and Schools, 1 Dupont Circle NW., Suite 350, Washington, DC 20036. Phone: (202) 659-2460.

For information on private trade and technical schools, write to the National Association of Trade and Technical Schools (NATTS). Among its publications are the Handbook of Accredited Private Trade and Technical Schools and a series of pamphlets, including How to Choose a Career and a Career School. For a complete list, write: NATTS, 2251 Wisconsin Ave. NW., Suite 200, Washington, DC 20007.

Information about home study programs is available from The National Home Study Council. It publishes the Directory of Accredited Home Study Schools. Direct requests for the Directory as well as a list of other publications to the National Home Study Council, 1601 18th St. NW., Washington, DC 20009. Phone: (202) 234-5100.

Financial Aid Information

Information about financial aid is available from a variety of sources. Contact your high school guidance counselor and college financial aid officer for information concerning scholarships, fellowships, grants, loans, and work-study programs. In addition, every State administers financial aid programs—contact State Departments of Education for information. Banks and credit unions can provide information about student loans. You also may want to study the directories and guides to sources of student financial aid available in guidance offices and public libraries.

The Federal Government provides grants, loans, work-study programs, and other benefits to students. Information about programs administered by the U.S. Department of Education is presented in The Student Guide to Federal Financial Aid Programs, updated annually. To get a copy, call: 1-800-333-4636 or write: Federal Student Aid Programs, P.O. Box 84, Washington, DC 20044.

Meeting College Costs, an annual publication of the College Board, explains how student financial aid works and how to apply for it. The current edition is available to high school students through guidance counselors.

Need a Lift?, an annual publication of the American Legion, contains career and scholarship information. Single copies may be obtained without charge by calling (317) 635-8411. Multiple copies cost $1 each prepaid (including postage) and can be obtained from:
Information on Finding a Job

It takes some people a great deal of time and effort to find a job they enjoy. Others may walk right into an ideal employment situation. Don’t be discouraged if you have to pursue many leads. Friends, neighbors, teachers, and counselors may know of available jobs in your field of interest. Read the want ads. Consult State public employment service offices and private or nonprofit employment agencies or contact employers directly.

Avoid classified ads. Realize, however, that many job openings are not listed there. They may just give a post office box for sending your resume. This makes followup inquiries very difficult. Furthermore, some ads offer important information. Many offer little or no description of the job, price and ordering information.

Informal job search methods. It is possible to apply directly to employers without a referral. You may locate a potential employer in the Yellow Pages, in directories of local chambers of commerce, and in other directories that provide information about employers. When you find an employer you are interested in, you can file an application even if you don’t know for certain that an opening exists.

Want ads. The "Help Wanted" ads in newspapers list hundreds of jobs. Realize, however, that many job openings are not listed there. Also, be aware that the classified ads commonly do not give some important information. Many offer little or no description of the job, working conditions, or pay. Some ads do not identify the employer. They may just give a post office box for sending your resume. This makes followup inquiries very difficult. Furthermore, some ads offer out-of-town jobs; others advertise employment agencies rather than employment.

Keep the following in mind:

—Do not pin your hopes on finding a job through the classifieds; follow other leads as well.
—Answer ads promptly. The opening may be filled quickly, even before the ad stops appearing in the paper.

Information To Bring to an Interview:

• Social Security number.
• Driver’s license number.
• Resume. Although not all employers require applicants to bring a resume, you should be able to furnish the interviewer with information about your education and previous employment.
• Usually an employer requires three references. Get permission from people before using their names. Try to avoid using relatives. For each reference, provide the following information: Name, address, telephone number, and occupation.

For more information on interviews and resumes, see Resumes, Application Forms, Cover Letters, and Interviews in the Spring 1987 Occupational Outlook Quarterly. A reprint of this article may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Phone (202) 783-3238 for price and ordering information.
**Services for special groups.** By law, veterans are entitled to priority at State employment service centers. Veterans' employment representatives can inform you of available assistance and help you deal with any problems.

Summer Youth Programs provide summer jobs in city, county, and State government agencies for low-income youth. Students, school dropouts, or graduates entering the labor market who are between 16 and 21 years of age are eligible. In addition, the Job Corps, with more than 100 centers throughout the United States, helps young people learn skills or obtain education.

Service centers also refer applicants to opportunities available under the Job Training Partnership Act (JTPA) of 1982. JTPA prepares economically disadvantaged persons and those facing barriers to employment for jobs.

Call the Federal Job Information Center, operated by the Office of Personnel Management, for information about employment with the U.S. Government. The phone number is (202) 653-8468 or write to: Federal Job Information Center, 1900 E St. NW., Room 1416, Washington, DC 20415.

**Private employment agencies.** These agencies can be very helpful, but don't forget that they are in business to make money. Most agencies operate on a commission basis, with the fee dependent upon a successful match. You or the hiring company will have to pay a fee for the matching service. Find out the exact cost and who is responsible for paying it before using the service.

While employment agencies can help you save time and contact employers who otherwise may be difficult to locate, in some cases, your costs may outweigh the benefits. Weigh any guarantee they offer when figuring the cost.

**College career planning and placement offices.** College placement offices facilitate matching job openings with suitable jobseekers. You can set up schedules and use available facilities for interviews with recruiters or scan lists of part-time, temporary, and summer jobs maintained in many of these offices. You also can get counseling, testing, and job search advice and take advantage of their career resource library. Here you will also be able to identify and evaluate your interests, work values, and skills; attend workshops on such topics as job search strategy, resume writing, letter writing, and effective interviewing; critique drafts of resumes and videotapes of mock interviews; explore files of resumes and references; and attend job fairs conducted by the office.

**Community agencies.** Many nonprofit organizations offer counseling, career development, and job placement services, generally targeted to a particular group, such as women, youth, minorities, ex-offenders, or older workers.

Many communities have career counseling, training, placement, and support services for employment. These programs are sponsored by a variety of organizations, including churches and synagogues, nonprofit organizations, social service agencies, the State employment service, and vocational rehabilitation agencies. Many cities have commissions that attend to the concerns of and provide services for these special groups.

**Organizations for Specific Groups**

The organizations listed below provide information on career planning, training, or public policy support for specific groups.

**Handicapped:** President's Committee on Employment of the Handicapped, 1111 20th St. NW., Room 636, Washington, DC 20036. Phone: (202) 653-5044.

**The blind:** Call the Job Opportunities for the Blind Program, a division of the National Federation for the Blind, toll-free, at: 1-800-638-7518.

**Minorities:** League of United Latin American Citizens (LULAC), National Educational Service Centers Inc., 400 First St. NW., Suite 716, Washington, DC 20001. Phone: (202) 347-1652.

**Veterans:** Contact the nearest regional office of the Veterans Administration.

**Women:** U.S. Department of Labor, Women's Bureau, 200 Constitution Ave. NW., Washington, DC 20210. Phone: (202) 523-6652.

**Wider Opportunities for Women:** Contact the nearest regional office of the Wider Opportunities for Women, 1325 G St. NW., Suite 500, Washington, DC 20005. Phone: (202) 637-8400.

**Veterans:** Contact the nearest regional office of the Veterans Administration.

**Women:** U.S. Department of Labor, Women's Bureau, 200 Constitution Ave. NW., Washington, DC 20210. Phone: (202) 523-6652.

**Catalyst,** 250 Park Ave. South, New York, NY 10003. Phone: (212) 777-8900. (Ask for the free referral pamphlet called Career Development Resources.)

**Women:** U.S. Department of Labor, Women's Bureau, 200 Constitution Ave. NW., Washington, DC 20005. Phone: (202) 638-3143.

Federal laws, executive orders, and selected Federal grant programs bar discrimination in employment based on race, color, religion, sex, national origin, age, and handicap. Information on how to file a charge of discrimination is available from U.S. Equal Employment Opportunity Commission offices around the country. Their addresses and telephone numbers are listed in telephone directories under U.S. Government, EEOC, or are available from the Equal Employment Opportunity Commission, 2401 E St. NW., Washington, DC 20507. Phone: (202) 634-6922.

Information on Federal laws concerning fair labor standards such as the minimum wage and equal employment opportunity can be obtained from the Office of Information and Consumer Affairs, Employment Standards Administration, U.S. Department of Labor, Room C-4331, 200 Constitution Ave. NW., Washington, DC 20210.

---

### What Goes into a Resume

A resume should summarize your qualifications and employment history. It is usually required when applying for a managerial, administrative, professional, or technical position. Although there is no set format, it should contain the following information:

- **Name, address, and telephone number.**
- **Employment objective.**
- **Education,** including school name and address, dates of attendance, curriculum, and highest grade completed or degree awarded.
- **Experience,** paid or volunteer. Include the following for each job: Job title, name and address of employer, and dates of employment.
- **Special skills,** knowledge of machinery, honors received, awards, or membership in organizations.
- **Note on your resume that references are available on request.** On a separate sheet, list the names, addresses, and telephone numbers of three references.
Sources of State and Local Job Outlook Information

State and local job market and career information is available from State employment security agencies and State Occupational Information Coordinating Committees (SOICC's). State employment security agencies develop occupational employment projections and other job market information. SOICC's provide or help locate labor market and career information. The following list provides the title, address, and telephone number of State employment security agency directors of research and SOICC directors.

**Alabama**
Chief, Research and Statistics, Alabama Department of Industrial Relations, Industrial Relations Bldg., 649 Monroe St., Room 427, Montgomery, AL 36130. Phone: (205) 261-5461.
